

GROVE'S  
DICTIONARY OF MUSIC  
AND MUSICIANS

FIFTH EDITION

EDITED BY

ERIC BLOM

VOLUME II

C—E

LONDON  
MACMILLAN & CO LTD

NEW YORK · ST MARTIN'S PRESS

1954

*This book is copyright in all countries which  
are signatories to the Berne Convention*

---

First Edition, planned and edited by Sir GEORGE GROVE,  
D.C.L., in four volumes, with an Appendix edited by  
J. A. Fuller-Maitland, and an Index by Mrs. Edmond  
Wodchouse, 1878, 1880, 1883, 1889.

Second Edition, edited by J. A. FULLER-MAITLAND, in five  
volumes, 1900.

Third Edition, edited by H. C. COLLES, in five volumes,  
1927.

Fourth Edition, edited by H. C. COLLES, in five volumes,  
with Supplementary Volume, 1940.

Fifth Edition, edited by ERIC BLOM, in nine volumes, 1954.

# C

**C.** The name of the first degree or keynote of the natural scale of C. It is the same in German, the French name being *Ut* or much more rarely *Do* and the Italian *Do*.

The further nomenclature is as follows :

	English	French
C♯:	C sharp.	Ut dièse.
Cx:	C double sharp.	Ut double dièse.
C♭:	C flat.	Ut bémol.
C♭♭:	C double flat.	Ut double bémol.
	German	Italian
C♯:	Cis.	Do diessa.
Cx:	Cisis.	Do doppio diessa.
C♭:	Ces.	Do bemolle.
C♭♭:	Ceses.	Do doppio bemolle.

C is the tonic of the keys of C major and C minor, and the note bounding the scales of these two keys. In the modal system C is the final of the 13th and 14th modes (Ionian and Hypoionian), the dominant of mode III (Phrygian), of mode V (Lydian), of mode VIII (Hypomixolydian) and of mode X (Hypoaeolian).

The key of C was used throughout the classical period for certain transposing instruments of the orchestra, such as horns and trumpets with, of course, the employment of accidentals as they arose; but it is now more usual to give key signatures to the parts, a part for horns in F when the music is, for example, in A major, being written as if in the key of E major with a signature of four sharps.

G., rev.

**C CLEF.** This clef, which formerly took this form , but now more commonly

this , always indicated "middle C" (c') the place of that note on the stave being indicated by the placing of the clef to enclose the line on which it is to appear. For at one time or another this clef has been placed on any line of the stave. All but two positions are now obsolete, but the soprano C clef is still frequently found in old scores of vocal music, where it was used for that voice.

. The two positions still in use are those of the alto clef: , now used almost exclusively for the viola, and of the tenor clef: , used for the middle notes of the cello and the upper notes of the bassoon, as well as occasionally for other instruments, including double bass (high notes) and tenor trombone.

G., rev.

See also Notation.

**ÇA IRA.** One of the earliest of French revolutionary songs, first heard, according to Castil-Blaze, Fétis and others, on the night of 5-6 Oct. 1789, when the Parisians marched to Versailles. It is said, though without documentary support, that the words were suggested to a street singer called Ladré by General La Fayette, who remembered Franklin's favourite saying at each stage of the American insurrection. Special research on the subject<sup>1</sup> has proved that the words were by Ladré, perhaps the most renowned of popular singers of the day. The burden of the song was then as follows :

Ah ! ça ira, ça ira, ça ira !  
Le peuple en ce jour sans cesse répète  
Ah ! ça ira, ça ira, ça ira !  
Malgré les mutins, tout réussira.

At a later period the burden, though more ferocious, was hardly more metrical :

Ah ! ça ira, ça ira, ça ira !  
Les aristocrat<sup>s</sup> à la lanterne ;  
Ah ! ça ira, ça ira, ça ira !  
Les aristocrat<sup>s</sup> on les pendra.

Other versions exist.

The tune — the length and compass of which show that it was not composed for the song — is that of a then new *contredanse*, 'Le Carillon national', the production of Bécourt, a violinist belonging to the orchestra of the Théâtre des Beaujolais, who composed the dances :

<sup>1</sup> Constant Pierre, 'Les Hymnes et les chansons de la Révolution: aperçu général et catalogue avec notices historiques, analytiques et bibliographiques' (Paris, 1904).

A copy of this *contredanse* (for 2 violins) in the library of the Paris Conservatoire seems to have been published after 1 Apr. 1790.

G. C., rev. M. L. F.

The tune quickly became popular in England, and many copies are found in sheet music and in collections of airs. One sheet, published by A. Bland, gives it with the French words as: 'Ah Ça Ira dictum populaire ou carrillon national chanté à Paris à la Fédération de 14 juillet 1790'. Thus and other copies have a strain following on and additional to the one printed above. The melody was employed in an opera entitled 'The Picture of Paris', arranged by Shield and produced at Covent Garden on 20 Dec. 1790. It was adopted (1793) as the quickstep of the 14th Regiment (now West Yorkshire Regiment), and we know from Thompson's book of marches of 1794 that it was commonly current in the army by that year. For many years afterwards, under the name 'The Downfall of Paris' or 'The Fall of Paris', it was used for a pianoforte piece with many variations.

F. K., adds.

**CABA, Eduardo** (b. Potosí, 13 Oct. 1890).

Bolivian composer. He studied first in Bolivia and then in Buenos Aires with Melgar and Boero. Then the Bolivian government sent him to Spain, in 1927, where he studied with Turina and Perez Casas. On his return to South America he lived in Buenos Aires and Montevideo for a time until, in 1942, he was appointed director of the Conservatorio Nacional de Música y Declamación of La Paz. Among his works are a ballet, 'Kallana'; a symphonic poem, 'Potosí', in four parts; 'El poema del charango' for pianoforte and orchestra; and numerous instrumental pieces, songs, etc. All Caba's compositions have a conscious Bolivian-Indian flavour.

N. F.

**CABALETTA (Cabballetta, Cavaletta)** (Ital., from *cavatina*, dim. of *cavatina*). A short, quick movement forming the final section of an aria or other vocal piece designed in several consecutive parts, usually increasing in speed, fashionable in 19th-century Italian and Italianate opera. Violetta's "Sempre libera degg'io" at the end of "Ah, fors'è lui" ('Traviata', Act I), is the most famous example.

W. H. C., adds.

**CABANILLAS (Cavanillas), José** (b. ?; d. Urgell, 1725).

Spanish (Catalan) organist and composer. He held an appointment at the cathedral of Urgell, in the Pyrenees, from 1670 until his death. He was a prolific composer for the organ. Works by him exist in the Biblioteca de la Diputació at Barcelona; a Toccata has been reprinted by Mitjana ('La Musique en Espagne', p. 2091 ff.).

J. B. T.

**CABANILLES, Juan (Joan)** (b. Algemesi [Valencia], 4 Sept. 1644; d. Valencia, 29 Apr. 1712).

Spanish organist and composer. At the age of twenty-one he was appointed organist to the metropolitan cathedral at Valencia in succession of his teacher Jerónimo de la Torre. He held this post until his death, and on 22 Sept. 1668 he was ordained priest. Apart from giving some concerts in France, where his work was well known and appreciated, he does not seem to have travelled abroad.

Cabanilles is considered the most illustrious genius of the Spanish organ school of the second half of the 17th century. The best Spanish organists of that time and of the early 18th century were formed either directly or indirectly in his school. José Elías was among the best of his pupils. Only one-third of his compositions for the organ has been preserved in manuscript, also some *villancicos* of a religious character. The works which have so far become known consist of some 120 *tientos*, a series of *tocatas*, *pasacalles* and *gallardas*, together with hundreds of *versos* (variations on Gregorian psalm tones) in fugal style. Kastner (see Bibl. below) shows reasons why the Iberian organists preferred the *ricercar* type of the *tiento* to the fugue and thematic to harmonic workmanship. Cabanilles must be regarded as one of those who paved the way for the sonata and as one of the greatest organists in Europe before J. S. Bach; but his work recalls rather the personality and the talent of Buxtehude.

In his compositions Cabanilles aimed at continuing the Spanish tradition of attaining to the highest artistic expression with a minimum of technical application, and it is due to this Hispanic tradition that his music, written in the second half of the 17th century, frequently appears to date from fifty years earlier; but in other cases he is in advance of his time, as in some of the *tientos de falsas*, where he uses dissonances which rarely occur in the music of the other great European composers of his time. It must also be borne in mind that the Spanish organ of that period had not acquired the pedal keyboard and was still restricted to the rudimentary bass of one diatonic octave, just as in the 16th century. For this reason parts for pedals very rarely occur in his works, and when they do he uses only sustained notes of the diatonic scale.

A complete edition of Cabanilles's works, edited by Higinio Anglés, is in process of publication. Three volumes have so far appeared, all at Barcelona: I 25 *tientos* (1927); II *Tocatas, pasacalles, gallardas, pasos, xécarra*, etc. (1935); III 25 *tientos* (1936). H. A. (ii).

**CABBILLIAU.** See CABBILLIAU.

**CABEL** (properly **Cabu**) (born **Dreulle**),

**Marie (Joseph)** (b. Liège, 31 Jan. 1827,

d. Maisons Laffitte, 23 May 1885).

Belgian soprano singer. She was taught

singing by her husband and later at the Paris

Conservatoire, 1848-49. In the latter year she

made her début at the Opéra-Comique, with

little effect, in two of Halévy's operas, 'Val

d'Andorre' and 'Les Mousquetaires de la

reine'. After singing in Brussels for three

years, with great success, and at Lyons and

Strasbourg, she appeared at the Théâtre-

Lyrique in Paris on 6 Oct. 1853, as Toinon,

on the production of 'Le Bijou perdu' (Adam).

She also appeared in new operas, *viz.* 'La

Promise' (Clapissou), 16 Mar. 1854, and

'Jaguarita l'Indienne' (Halévy), 14 May

1855. In 1854 she visited England with the

Lyrique company. She made her first London

appearance on 7 June in 'Le Bijou perdu', and

had a great success in the 'Promise', Doni-

zetti's 'Fille du régiment' and Auber's

'Sirène'. On 23 Feb. 1856 she reappeared

at the Opéra-Comique as the heroine on the

production of 'Manon Lescaut' (Auber), be-

came a great favourite there and was the

original Dinorah (Meyerbeer) in 1859. From

1861 to 1863 she was again at the Lyrique, and

from 1864 to 1870 at the Opéra-Comique,

where she was the original Philine in Ambrose

Thomas's 'Mignon' and Hélène in Auber's

'Le Premier Jour de bonheur'. In 1871 she

sang at concerts in London and in 1872 at the

Opera Comique, London, in light French

opera. She played in the French provinces

until 1877, but in 1878 was struck with

paralysis, from which she never wholly re-

covered. Her voice was not large, but

sympathetic and of extraordinary flexibility,

and she was a very clever actress

Her brother was Edmond (Antoine Auguste)

Dreulle (b. Namur, 18 Nov. 1832; d. Brussels,

1888), a tenor who sang in Paris at the Opéra-

Comique and the Théâtre-Lyrique and took

the part of Hylas in 'Les Troyens à Carthage',

according to Berlioz's *Memoirs*. A. C.

**CABELIAU (Cabeliamo).** See CABBILLIAU.

**Cabell, James Branch.** See Taylor (J. D., 'Jurgen',

symph. poem).

**CABEZÓN (Cabeçón),** Spanish family of

musicians.

(1) **Antonio de Cabezón** (b. Castrillo de

Matajudíos nr. Burgos, 30 Mar. 1500; d.

Madrid, 26 Mar. 1566), organist, clavichordist

and composer. He became blind when still a

young child. About 1521 he went to Palencia,

where he probably studied with García de

Baeza, the cathedral organist. In 1526 he was

appointed organist and clavichordist to the

Empress Isabel, consort of Charles V. At

that time the Spanish court frequently resided

at Valladolid, where Cabezón met his col-

league Tomás de Santa María, with whom he

was to exchange so many ideas about composi-

tion and the technique of keyboard instru-

ments. It was also in this town that Cabezón

first met the vihuelist Luis de Narváez and

many other important Spanish musicians.

Probably he also made the acquaintance there

of the great Spanish mystic Fr. Luis de

Granada through Santa María. About 1538

he married Luisa Núñez of Avila, who came

of a distinguished family of that town, where

Cabezón also resided. The Núñez family had

a house in the same parish to which the families

of St. Teresa and Tomás Luis de Victoria

belonged and where Cabezón too acquired a

house. It is more than probable that the blind

organist mixed with the Ahumadas and per-

sonally met St. Teresa. Cabezón's contact with

some of the great Spanish mystics of his time

and the religious demands of the Spanish court

help to explain the lofty style of his music.

After the death of the empress in 1539

Cabezón alternately served Prince Philip and

his sisters until, in Jan. 1548, Philip appointed

him exclusively to his service. From Oct. 1548

until July 1551 Cabezón as well as the Spanish

royal chapel accompanied Prince Philip on

his journey through Italy, Germany and the

Netherlands. The second journey, on which

he accompanied Philip to England, and to the

Netherlands again, began in July 1554. He

returned to Spain early in 1556

About 1560 Cabezón moved his household

from Avila to Madrid, where he remained

until his death. He travelled a great deal in

Spain, accompanying royalties. Thanks to

his life at court and his travelling, he not only

met most of the important Spanish musicians

of his time, but also many a great foreign

master. It should not be overlooked that the

Spanish chapel of the Empress Isabel and later

of Philip II several times met the Flemish

chapel of Charles V, which naturally produced

musical interchange.

As research concerning Spanish instru-

mental music in recent years has shown, it

looks back on a long tradition that was in

many respects autochthonous—a very im-

portant point for a proper judgment of the

merits of Cabezón as one of the outstanding

16th-century composers of keyboard music.

His innovations are not due to his contacts

with foreign composers, because, as is shown

by works composed long before his travels, he was already an accomplished composer and organist many years before he left Spain for the first time. As early as 1539 Cristóbal de Villalón wrote about Cabezón, saying that more cannot be expressed in art than is done by him, since he had achieved perfection in composition. Cabezón's influence on foreign schools has lately been traced by several musicologists, and he must be considered one of the chief mentors who helped to develop the musical forms as well as the technique of keyboard music. The great technical skill of the Spanish organ school of the 16th century, however, does not exclude the possibility that, like almost all other schools of that time, it may have undergone the aesthetic influence of Josquin des Prés.

The first to publish works by Antonio de Cabezón was Luis Venegas de Henestrosa, who included a series in his 'Libro de cifra nueva' (Alcalá de Henares, 1557), which H. Angles republished in his 'La música en la corte de Carlos V' (Barcelona, 1944). Although Venegas only puts the name of "Antonio" to these works, without mentioning Cabezón, there can be no doubt that they are by him, as several of them can be found in MS Mus. No. 242, a 16th-century collection of music for keyboard instruments now belonging to the Coimbra University Library, where these compositions are stated as being by Antonio de Cabezón *el ciego*. Besides the two collections mentioned, a great part of Antonio's compositions were published in 1578 by his son Hernando, whose book is entitled:

Obras de musica para tecla arpa vihuela, de Antonio de Cabezon, musico de la camara y capilla del Rey Don Philippe nuestro Señor. Recopiladas y puestas en cifra por Hernando de Cabezon su hijo. . . . Impresas en Madrid . . . Francisco Sanchez, año de M.D.LXXVIII. Besides containing many liturgical pieces and glosses on sacred and secular compositions by several Flemish masters, it includes some extremely fine sets of variations based on Spanish songs. The instrumental style displayed by Cabezón is surprisingly rich and very advanced for his time. His style is noble and concentrated throughout, always achieving a very great intensity of expression. As his works were intended also for the *vihuela* and the harp — he was in touch with the best vihuelists and harpists of his day — he much enriched the literature for both these instruments. One very short sacred composition for 5 voices by Antonio de Cabezón exists in the 'Cancionero musical de la Casa de Medinaceli' and has been edited in the second volume of this 'Cancionero' by Miguel Querol Gavalá.<sup>1</sup> Most of Antonio's compositions included in Hernando's book have been published by Pedrell in his 'Hispaniae schola musica

<sup>1</sup> Like the Venegas de Henestrosa book, this is issued by the Instituto Español de Musicología.

sacra', which does not always respect the originals. Hernando's collection too will shortly be republished in its entirety.<sup>2</sup>

BIBL. — KASTNER, SANTIAGO, 'Antonio de Cabezón' (Barcelona, 1952).

(2) **Juan de Cabezón** (b. Castrillo de Matajudíos nr. Burgos, ?; d. Madrid, 18 May 1566), composer, brother of the preceding. He entered the chapel of Philip II as organist on 15 July 1546. Like Antonio he accompanied the prince and later king on all his journeys through Europe and lived some time with the Spanish king in Brussels. His nephew Hernando's edition of Antonio's 'Obras' includes one composition as being by Juan, but the style of the following piece seems to indicate that this is also by him. To judge by these compositions, Juan too was a musician of outstanding gifts.

(3) **Agustín de Cabezón** (b. Avila, ?; d. ?), composer, nephew of the preceding, son of (1). He was probably older than his brother Hernando (4). In 1547 he entered the royal chapel as a choir-boy, and later he also took part in the journey to England and the Netherlands. He died before 1564. No works of his are known.

(4) **Hernando de Cabezón** (b. Madrid, [bapt. 7 Sept.] 1541; d. Valladolid, 1 Oct. 1602), keyboard player and composer, brother of the preceding. He succeeded his father (1) in his post, which he took over on 10 June 1566. Hernando was a worthy successor of his great father and one of the favourite musicians of Philip II of Spain. He accompanied the king on many of his journeys through Spain and also went to Portugal in 1581–82 to join his sovereign. In his book Hernando includes several compositions of his own which show him to be a great composer cultivating the same balanced instrumental style as his father's. The notation of the printed works uses throughout the Spanish cipher tablature for the organ, also used in the editions of Venegas de Henestrosa, Correa de Arauxo and several manuscripts of old Hispanic keyboard music. After the death of Philip II, Hernando de Cabezón served Philip III until his death.

S. K.

**CABILLIAU** (Cabillau, Cabbillai, Cabellau, Cabelliamo). A Flemish musicians' name appearing on various publications probably attributable to two different 16th-century composers: Georges Cabillau (b. Oudenarde, ?; d. ?); and Peter Cabelliamo (b. ?; d. ?), known to have been at Amsterdam. Nothing is known of their lives, but according to van der Straeten a singer in the chapel of Margaret of Austria, regent of the Netherlands, named Joachim de Tollenaere, was called Cabillau, and the same authority says that this musician was in the chapel of Charles V in 1528.

<sup>2</sup> *Ibid.*

Motets under this name appear in Susato's 'Liber nonus Ecclesiasticarum' (1554), chansons in Phalèse's 5th book of 4-part chansons (1555) and Waelrant's 'Jardin musical' (1556); a chanson for 4 voices, 'En espérant de parvenir', was scored by Coussemaker (see Bibl.). E. B.

BIBL.—COUSSEMAKER, C. E. H. DE, 'Notice sur la collection musicale de Cambrai' (1843).

# CABINET PIANOFORTE. See PIANO-FORTE.

**Cable, George Washington.** See Delius ('Koanga', opera). Gilbert (H., 'Dance in Place Congo', ballet). Koanga (Delius, opera).

**CABO, Francisco** (b. Nájara, Valencia, 1768; d. Nájara, 21 Nov. 1832).

Spanish organist and composer. After being organist at the parish church of Santa Catarina at Valencia and the cathedral at Orihuela, he was in 1810 appointed cantor of the cathedral choir at Valencia. In 1816 he became senior organist there and in 1830 succeeded Andreu as *maestro de capilla*.

Cabo was among the best composers of the Valencian school and a worthy follower of Comes. His compositions, whether for unaccompanied voices, or for voices and organ or orchestra, exhibit an unusual degree of elegance and spontaneity. A list is given by Alcahalí, 'Diccionario biográfico de músicos valencianos' (Valencia, 1903). J. B. T.

**CABRETTE.** See BAGPIPE (FRANCE).

**CACCIA** (Ital. = hunt, chase). An Italian form of 14th-century poetry and, in music, a light forerunner of the madrigal. The words dealt with hunting, either realistically or metaphorically (i.e. the pursuit of love), as a similar species of song, the *pescia*, dealt with angling. The music was in the form of a canon for two treble voices (chasing each other), usually with an independent tenor part in longer notes below. There is little doubt that the English word "Catch", for similar canons of the 17th and 18th centuries derives from *caccia*. E. B.

BIBL.—'Fourteenth-Century Italian Caccie', ed. by Thomas W. Marrocco (Cambridge, Mass., 1942). See also Madrigal (Italy).

**CACCINI, Francesca** (b. Florence, 18 Sept. 1588; d. ?).

Italian singer and composer, daughter of Giulio Caccini. She was a pupil of her father and appeared as a singer at Florence court festivities at an early age. According to a letter from Monteverdi (28 Dec. 1610) La Cecchina—as she was usually called—also played the lute, guitar and harpsichord. She accompanied her father on his visit to France in 1604 together with her sister Settimia (who later became the wife of A. Ghivizzani). The visit lasted until the following year, and Francesca won the special favour of the queen, Maria de' Medici. After her return Francesca

married the composer Giovanni Battista Signorini (before 1612); they had two daughters who also sang at court when still in their childhood. She died, probably at Florence, some time after 1626.

Works by Francesca Caccini which remained unpublished are the sacred opera (*azione sacra*) 'Il martirio di Sant' Agata', and the ballets 'Il ballo delle zingane' (1614) and 'Rinaldo innamorato' (1616). In the 'Ballo delle zingane' (Florence, 24 Feb. 1615),<sup>1</sup> she herself appeared in the part of one of the gypsies. In 1618 her 'Primo libro delle musiche a una e due voci' was printed at Florence (containing sacred and secular songs, also some motets).<sup>2</sup> The next year she wrote music for the younger Michelangelo's comedy 'La fiera' (performed on 11 Feb. 1619) and three years later she collaborated with Giovanni Battista da Gagliano in 'Il martirio di Sant' Agata' (10 Feb. 1662); the librettist, Jacopo Cicognini, mentions Francesca's share in the preface to the libretto, concluding with the words "... donna eminente e singolare ormai del modo per tale è conosciuta e ammirata".

Francesca's last and most ambitious work, the opera-ballet 'La liberazione di Ruggiero dall' isola d' Alcina', places her among the number of the very earliest opera composers and gives her the distinction of being the first woman to try her hand at the new species. The libretto is by Ferdinando Saracini. The short opera was produced at the Villa Poggio Imperiale, near Florence, on 2 Feb. 1625, in honour of the visit of the Polish Prince Władysław Sigismund to the Tuscan court, and published in the same year<sup>3</sup>, it is in many ways an interesting and remarkable achievement, showing the strong influence of Giulio Caccini's and Monteverdi's music. As well as being the first opera composed by a woman, it is one of the first to take a subject, no longer from antiquity, but from Ariosto's romantic epic; though in the domain of the decorative choreographic and choral opera it cannot compare, needless to say, with Monteverdi's works or with those of the contemporary Roman operatic composers. A few other single airs by her are printed in contemporary collections (such as Fabio Costantini's 'Ghirlandetta amorosa', Orvieto, 1621). The cantata 'Rinaldo innamorato' was in Baini's collection and passed after his death to the library of the Congregazione della Minerva, Rome. A. L., adds.

<sup>1</sup> A copy of the libretto (words by Saracini), dated 1614 (Julian style), is in the BM; the music is lost.

<sup>2</sup> Only one book of songs was published, not two as stated in several books of reference.

<sup>3</sup> New edition Northampton, Mass. (1945), as No. 7 of 'Smith College Music Archives', ed. by Doris Subert.

**CACCINI, Giulio**<sup>1</sup> (b. Rome, c. 1545; d. Florence, [buried 10] Dec. 1618).

Italian singer and composer, father of the preceding. He was a pupil of Scipione de' Vecchi, called delle Palle (or della Palla), in Rome and entered the service of the Medici court at Florence in 1564, as "musico" (chiefly as a singer, but occasionally he was employed as instrumentalist and as musical director). Apart from a visit to Rome in 1592 and a journey to Paris from Sept. 1604 to the spring of 1605, undertaken by command of the Queen of France, Maria de' Medici, he stayed at Florence all his life, often accompanying the court to their annual sojourns at Pisa and Leghorn.

In a document dated 28 June 1565, in the Gonzaga Archives at Mantua, Caccini is referred to as "Giulio Romano, better known under the name of Caccini", which indicates that he was already establishing himself as a singer. He is first mentioned in the Florence chronicles in 1579, as joint composer (with Pietro Strozzi, Alessandro Striggio and Claudio Merulo) of Rinuccini's 'Maschere d'Amazzoni', performed at the wedding of the Grand Duke Francesco de' Medici with Bianca Capello. He also sang in one of the intermezzi, already as a "canto famoso". Ten years later, in 1589, he played the harp and conducted the music of intermezzi at another Medici wedding, that of the Grand Duke Ferdinando with Christina of Lorraine. By that time Caccini belonged, as a prominent member, to the circle of poets and musicians who gathered at the palace of Giovanni de' Bardi, Count of Vernio, to speculate on the nature of the lost music of the Greeks. Caccini was not the "inventor" of monody — a claim sometimes put forward by his pupils and admirers — but it was he who, following the lead of Vincenzo Galilei, gave increased importance to music for a single voice. It appears from a passage in Bardi's 'Discorso mandato . . . a Giulio Caccini . . .' (c. 1580?) that it was Bardi who first encouraged Caccini to compose in this new manner. The recitatives he composed and sang to the accompaniment of the chitarrone amid the enthusiastic applause of the musical assemblies meeting at the houses of

Bardi, and later of Jacopo Corsi, were a novelty of immense significance. From small beginnings he proceeded to detached scenes written by Bardi, and thence to higher flights. When the opera 'Euridice', written by Rinuccini and set to music by Peri, was performed at Florence in 1600, Caccini succeeded in getting certain numbers of his own composition included in it (as appears from the preface to Peri's score, 1601); Caccini even set the whole of Rinuccini's libretto afresh, but though he succeeded in seeing his own score in print a few weeks before Peri's (probably in Jan. 1601), there was no performance of it until nearly two years later (Palazzo Pitti, 5 Dec. 1602), and it remained an isolated one. There is much evidence of a close rivalry between Peri and Caccini, the two earliest composers of the new species of opera, and of strong jealousy on Caccini's part. When Corsi succeeded Count Bardi as the social leader of the "new music" at Florence — after Bardi's appointment as *maestro di camera* to Pope Clement VIII in Rome in 1592 — Peri became the favourite composer and Caccini saw himself degraded to second place. Besides 'Euridice' he also reset, after Peri, Rinuccini's 'Dafne' (the very first opera libretto, of 1597) — which apparently was never performed and is lost. His claims for this music, announced several years later in the preface to his 'Nuove musiche e nuova maniera di scriverle', may well have been designed to bolster up a fading reputation at the Florentine court, and must be treated with great reserve.

The first work of Caccini's which actually appeared on the stage (at the Palazzo Vecchio, on 9 Oct. 1600, three days after Peri's 'Euridice') was 'Il rapimento di Cefalo', to a libretto by Gabriello Chiabrera, and this was not wholly his, but written in collaboration with Stefano Venturi del Nibbio, Luca Bati and Pietro Strozzi. Caccini's share included 3 airs and 2 choruses, which were published in his 'Le nuove musiche' (Florence, 1602. dedication dated 1 Feb. 1601, i.e. old style<sup>2</sup>), which also contains ten separate airs and twelve madrigals, together with three fragments used as illustrations in the preface. This is one of the most important publications of its time and stands at the head of a long series of editions of chamber monodies, many of them influenced by Caccini's methods. Some of the airs are strophic variations, a device not developed by other composers until some years later; the madrigals, all

<sup>2</sup> Reprinted Venice, 1602 (1607 according to the colophon, which is presumably the correct date); Venice, 1608 (the airs only — a fact which argues greater popularity for them than for the madrigals); Venice, 1615; facsimile of the first edition, Rome, 1930, edited by Francesco Mantica, with a note by G. Barni, and Rome, 1934, with an introduction by F. Vattelli; ed. by G. Perinello in 'Raccolta Nazionale delle Musiche Italiane', Vols. X-XIII (Milan, 1919).

<sup>1</sup> Usually called Giulio Romano in contemporary sources.

through-composed, are the principal vehicle for Caccini's new technique for the emotional underlining of the texts, mainly through the use of "affective" embellishments, called *gorge*. This new technique and many other points besides are dealt with in the preface, one of the most illuminating treatises of the time and one of the most important in the history of singing.<sup>1</sup>

Caccini later published two other collections of vocal music. The 'Fuggiloto musicale . . . madrigali, sonetti, arie, canzoni & scherzi, per cantare nel chitarrone, clavicembalo o altro strumento' went into a second edition at Venice in 1613, but the date of original publication is unknown. This work — the title means "pastime" — contains, besides 16 monodies, 13 songs for two voices in its second part. The 'Nuove musiche e nuova maniera di scriverle' (Florence, 1614<sup>2</sup>), which also has an important preface, continues in the main the characteristics of the 'Nuove musiche'; it contains 29 airs and madrigals for solo voice.<sup>3</sup> One of the airs and another new one were published in Antonio Brunelli's 'Scherzi, arie, canzonette e madrigali' (Venice, 1614), and Robert Dowland included in 'A Muscicall Banquet' (London, 1610) two songs from the 'Nuove musiche' of 1602, one being the celebrated 'Amarilli mia bella'. Several of Caccini's songs, some never published, are to be found in manuscripts at, *inter alia*, Brussels, Florence and Tenbury. The most interesting feature of these collections is that several songs, notably those in Brussels (Conservatoire MS 704) and Tenbury (MSS 1018-19), as well as those in 'A Muscicall Banquet', are provided with written-out accompaniments of contemporary or slightly later date, the most striking feature of which is their great simplicity. Caccini was, of course, one of the first composers to use the *basso continuo*, and when he figures his bass-line he does so very fully, often using compound figuring. We know almost nothing of the fruits of the thirty years' study of counterpoint which Caccini mentions in the preface to the 'Nuove musiche', although a group of fifty-five 3-part *villanelle* in Tregian's anthology (B.M., MS Egerton 3665) are possibly his work.<sup>4</sup> He is represented by at least one song in all modern anthologies covering the history of music; of more recent publications 'La Flora', edited by Knud Jeppesen (Copenhagen, 1949), is

particularly rich in songs from his publications of 1602 and 1614.

Caccini had ceased writing for the stage after 1600, for lack of opportunity to have his works produced (as court festivals on a large scale did not recur at Florence until many years later), but also no doubt because he recognized the dramatic superiority of the younger generation of opera composers, especially Peri, who was later to write a good deal of stage music at Florence, Monteverdi and Gagliano. His influence on the development of aria and recitative, through his published collections, nevertheless remained considerable, and has been, after a long period of semi-oblivion, strongly emphasized in recent times.

In his own country and in Paris he achieved great renown as a singer, and his reputation as a composer, though perhaps overshadowed by Peri's and Gagliano's at Florence during his lifetime, lasted longer into the 17th century in several European countries than that of almost any of his Italian contemporaries. Pietro Della Valle's lack of enthusiasm is certainly exceptional; René Ouvrard's remarks<sup>5</sup> give an idea of his repute at a late date. Much of his fame was due to one song, 'Amarilli mia bella', evidence of whose popularity is continually found in publications and manuscripts as far afield as England, Germany and Holland. And after all, Caccini's 'Euridice', if not the first opera, was the first to come off a printing-press; and even if, unlike Peri's setting, it has never so far been thought worth reviving, it will retain its historical importance.<sup>6</sup>

**CADENCE.** (I) In medieval music what is now called a Cadence or Close<sup>1</sup> was known as *Clausula*.

(1) The most important close employed in polyphonic music is the *clausula vera*, or true cadence, terminating on the final of the mode. The *clausula plagalis*, or plagal cadence, is rarely used, except as an adjunct to this, following it, at the conclusion of a movement, in the form of a peroration. A close, identical in construction with a true cadence, but terminating upon some note other than the final

of the mode, is called a *clausula ficta*, *subsidiaria* or *media*, i.e. a false, subsidiary or medial cadence. A *clausula vera*, or *ficta*, when accompanied, in the counterpoint, by a suspended discord, is called a *clausula diminuta*, or diminished cadence.

Though the *clausula vera* is the natural homologue of the perfect cadence of later music, and may, in certain cases, correspond with it note for note, it is not constructed upon the same principles — for the older progression belongs to what has been aptly called the "horizontal system", and the later one to the "perpendicular or vertical system".<sup>2</sup> In the *clausula vera*, the *canto fermo* must necessarily descend one degree upon the final of the mode; the counterpoint, if above the *canto fermo*, exhibiting a major sixth in the penultimate note; if below it, a minor third. In the *clausula diminuta*, the sixth is suspended by a seventh, or the third by a second. In either case the cadence is complete, though any number of parts may be added above, below or between its two essential factors. The constitution of the perfect cadence is altogether different. It depends for its existence upon the progression of the bass from the dominant to the tonic (see below); each of these notes being accompanied by its own fundamental harmony, either with or without the exhibition of the dominant seventh in the penultimate chord. But, by the addition of a sufficient number of free parts, the two cadences may be made to correspond exactly, in outward form, through the joint operation of two dissimilar principles; as in the following example, in which a *clausula vera*, represented by the semibreves, is brought, by the insertion of a fifth below the penultimate note of the *canto fermo*, into a form identical with that of the perfect cadence.

A close, formed exactly like the following, but terminating upon the mediant of the mode, is called a *clausula media*. In like manner, a *clausula ficta*, or *subsidiaria*, may terminate upon the dominant, or participant of the mode, or upon either of its conceded modulations<sup>3</sup>:

The form of *clausula plagalis* most frequently employed by the polyphonists was that in which, after a *clausula vera*, the last note of the *canto fermo* was prolonged, and treated as an inverted pedal-point. It is used with peculiarly happy effect in mode IV — the plagal derivative of the Phrygian — in which the

<sup>1</sup> It is necessary to be very cautious in the use of these two English words, which, in the 16th century, were not interchangeable. Morley, for instance, at pp. 73 and 127 of his 'Plaine and Easie Introduction' (2nd ed., 1608) applies the term "Close" to the descent of the *canto fermo* upon the final of the mode, and "Cadence" to the dissonance with which this progression is accompanied, in the counterpoint, when the form employed is that known as the *clausula diminuta*. In cases like this it is only by reference to the Latin terms that all danger of misconception can be avoided.

<sup>2</sup> See MODES.

<sup>3</sup> See HARMONY.

impression of a final close is not very strongly produced by the *clausula vera* :

The dominant of this mode is the fourth degree above its final, corresponding with the modern subdominant. And, as this forms so important an element in the treatment of the inverted pedal, later composers apply the term plagal to all cadences in which the subdominant precedes the tonic bass. The term serves its purpose well enough; but it rests upon an erroneous basis.

In all the *clausulae* hitherto described, the two essential parts form together, in the final note, either an octave or unison. There is yet another class in which the parts form a fifth.

Morley<sup>1</sup> seems inclined to class these among the true closes, but most early writers regard them as *clausulae fictae, vel irregulares* :

(2) MEDIAL CADENCE (*Clausula in medio modi*).—In plainsong melodies the medial cadence sometimes leads to a close so satisfactory that it almost sounds final; as in the second ending of the first tone :

In polyphonic music it is susceptible of infinite variety of treatment, as may be seen from the following examples.

In the selection of these examples we have confined ourselves exclusively to true cadences, for the sake of illustrating the subject with the greater clearness: but the old masters constantly employed cadences of other kinds, in this part of the mode, for the purpose of avoiding the monotony consequent upon the too frequent repetition of similar forms :

<sup>1</sup> 'Plaine and Easie Introduction', p. 74 (2nd ed., 1608).

(3) MEDIAL AND RADICAL CADENCE.—Besides its use as described above, the term "medial" has been applied to closes in which the leading chord is represented by an inverted instead of a fundamental harmony:

(1 and 2 are inversions derived from *Authentic*, 3 and 4 from *Imperfect*, 5 and 6 from *Plagal* cadences.) (See below.)

Though cadences of this kind are in constant use, they are not now given their old name. Most writers have preferred to describe them as *inverted* cadences, specifying, when necessary, their precise derivation. The opposite term, *radical cadence*, was reserved for closes in which the root of each chord appears in the bass.

W. S. R.

(II) The decline of modal polyphony, and the gradual evolution of harmonic or homophonic values based on the classical major and minor scales, led to a new orientation of technical devices that had been given precise definition in the older systems. In medieval polyphony a cadence or close was a polyphonic problem. It involved a harnessing of individual parts, each of which had to be guided to the desired end without loss of distinction and within the defined conventions of the particular mode in use. This was a task of considerable nicety, and hence every discovery that impressed composers as having a peculiar fitness for the purposes of a conventional ending quickly became a common factor in the prevailing technique. The term cadence thus gathered to itself a precise meaning. It represented a method of ending which embodied the composite experience of many minds. The highly rigid characteristics which gave a mode its artistic values were to a similar degree recognizable in the cadences which were proper to it, and it was therefore not difficult to describe and label a modal cadence with considerable exactitude.

The application of a specialized grammar of

this kind to a later and profoundly different system gave rise to many inconsistencies in the use of technical terms, and of these the changed and frequently ambiguous definitions of cadences are typical. Polyphonic significance largely disappeared and cadences became more and more akin to devices of punctuation. The term was thus applied to certain harmonic formulae which were held to embody the stable elements of a key, and all cadences became technically common to all keys. In a fixed key-system a cadence is logically therefore a kind of musical full-stop, and those cadences which admit of simple harmonic definition are conventions of universal application. It is when the attempt is made to extend the use of this term to less formal devices that the exact definition of it breaks down. The essence of a cadence, traditionally, is finality. Hence a cadence which is not final, at least so far as its immediate context is concerned, is inherently ambiguous and can only be very approximately defined. It will be convenient to discuss the various harmonic formulae, to which this term has been applied, in order of rigidity.

(1) PERFECT CADENCE (AUTHENTIC).—The leading chord is that of the dominant, and the cadence may be either major or minor

Of the countless variations of these formulae the following are typical:

BRAMHMS, *Symphony I*, III.

WAGNER, *'Die Walküre'*, II

(2) PERFECT CADENCE (PLAGAL).—The leading chord is that of the subdominant:

WAGNER, 'Tristan', III

For *major* endings to *minor* cadences see TIERCE DE PICARDIE.

(3) PHRYGIAN CADENCE.—This is the name sometimes given to a formula for harmonizing melodies in Mode III (Phrygian) using the notes proper to the mode, save for the introduction of the major third into the final chord:

Actually the formula occurs more often in relation to a dominant chord than a tonic one, particularly in 18th-century music unconcerned with modal considerations. A typical instance is the progression of two chords between the two movements of Bach's third Brandenburg Concerto (in G major)

(4) MIXED CADENCE.—A final progression which contains within the last three or four chords both dominant and subdominant harmony. In classical usage the final cadence was, of course, *either* authentic or plagal. The example from 'Tristan' above is mixed to this degree. There are later examples of a mixed cadence (see No. 16, from 'Petrushka', below), but the theorists who invented the term had no conception of so uncompromising a combination.

(5) IMPERFECT CADENCE OR HALF-CLOSE.—This formula is a very common feature in the harmonization of classical melodies, where the end of a phrase may require dominant harmony without involving real modulation. The function of a comma or semicolon in prose is a near analogy. Tonic followed by dominant is the harmonic analysis of this cadence:

MOZART, 'Quartet in G', (K 387).

This term has also been applied to temporary modulations into the dominant, thus:

BEETHOVEN, 'Symphony, No. 5'

Such a stretching of the definition is characteristic of the new wine in the old bottles. Whether this cadence is inferentially perfect or imperfect depends solely on the key-signature chosen (of G, that is, or of C). It is only when the key-feeling is otherwise well established that the term "imperfect cadence" can have exact meaning, and this fact involves an inherent ambiguity in that the quality to be defined does not belong essentially to the cadence itself

(6) INTERRUPTED CADENCE.—Under this heading have been grouped innumerable passages in which what might be called a "leading" chord, in the sense already noted, is resolved irregularly. An interrupted cadence is not a cadence at all, in the strict sense, and though the term will sometimes describe with fair usefulness a harmonic elasticity that may be related to a more rigid tradition, its precise significance is for the most part confined to the element of surprise. The form often given as typical is

instead of

But it is obvious that *any* second chord other than that of the tonic may be considered as an interruption, and in the fluid texture of modern harmony such features are the rule rather than the exception. In Handel the old name for this cadence, *inganno* (deception)<sup>1</sup>, is illustrated by the following passage from the organ Fugue in B minor:

and there are innumerable examples of a like nature in the music of the classical period.

<sup>1</sup> In German the interrupted cadence is still called *Trugschluss* (deceptive close).

To Wagner the device was a most useful means of achieving musical continuity throughout a movement which might contain many sections of varied dramatic character :

WAGNER, 'Tristan'

Frequently, however, there is no such stereotyped anticipation of a conventional ending, and the use of the term "cadence" to describe what is more essentially a connecting link in the chain of keys or of ideas robs the word of its historical meaning and makes its application arbitrary.

(7) The prevailing tendency of modern technique has been a revolt against classical conventions, of which the orthodox cadences are a type. Since the key-systems of the classics became axiomatic, finality has tended to depend on a feeling of essential balance in the structure of a movement, rather than on the prescribed use of particular formulae. Given adequate preparation in this sense, the final chord or chords may be approached from almost any angle, and the last statement of key may be attenuated to a single chord, or indeed to a single note :

RICHARD STRAUSS, 'Don Quixote'

DELIUS  
'On hearing the first  
cuckoo in Spring'

Contemporary composers have gone farther still, in that they have invested with a degree of finality chords which are traditionally complex, and such chords are used as the ultimate statements of tonality. This practice has synchronized with the deliberate choice of ambiguous or unsolved endings. The following examples will make the tendency clear. They represent the complete liquidation of all

that has hitherto been implied by the term cadence :

STRAVINSKY, 'Petrushka'

DEBUSSY, 'Pelléas et Mélisande'

STRAUSS, 'Also sprach Zarathustra'

G. D.

BIBL — CORDER, FREDERICK, 'Closes' (Proc. Mus. Ass., Vol. XV, 1889);  
LEE, E. MARKHAM, 'Cadences and Closes' (Proc. Mus. Ass., Vol. XXXI, 1905).

**CADENCE** (Fr.). See ORNAMENTS, B (iii); C (ii); D (iv-vi).

**CADENT.** See ORNAMENTS, C (ii) (a); D (iv).

**CADENZA** (Ital.). In its simplest acceptance the term stands for a flourish of indefinite form, introduced upon a bass note immediately preceding a close of some finality; that is, occupying the position of full stop either to an entire movement or to an important section of one. The custom was most probably originated by singers, who seized the opportunity afforded by the chord of  $\sharp$  on the dominant immediately preceding the final close of an aria or scena to show off the flexibility, compass and expressive powers of their voices to the highest advantage; so that, the piece coming to an end immediately afterwards, the audience should have the impression of astonishment fresh in their minds to urge them to applause.

The idea thus originated spread widely to all kinds of music, and in course of time its character changed considerably, though the flourish of which it is composed remained its conspicuous feature. In instrumental music it fulfils a peculiar office, being frequently introduced where a pause in the more important matter of the movement is desirable, without breaking off or allowing the minds of the audi-

ence to wander. Thus it occurs at points where the enthusiasm of the movement has been worked to such a heat that it is necessary to pause a little before returning to the level of the natural ideas of the themes, as in Liszt's Hungarian Rhapsody in A major and Chopin's 'Nocturnes' in F minor and C# minor. Chopin uses cadenzas frequently when the main business of the movement is over, in order to prevent the close, which follows immediately, from being too abrupt. At other times they occur as a connecting link between two movements, or between an introduction and the movement following it, where for certain reasons it is expedient to pause a while on some preparatory chord and not to start serious operations before the minds of the audience have settled to the proper level.

The greater cadenza, which is a development of the vocal flourish at the end of a vocal piece already spoken of, is that which it is customary to insert at the end of a movement of a concerto for a solo instrument. Like its vocal predecessors the concerto cadenza usually starts from a pause on a  $\frac{4}{4}$  chord on the dominant, preparatory to the final close of the movement, and its object is to show off the skill of the performer. Such cadenzas may occur either in the first or last movement, and even in both, as in Mozart's Concerto in D minor and in Beethoven's in G major. With regard to their form there is absolutely no rule. They should contain manifold allusions to the chief themes of the movement, and to be successful should be either brilliant or very ingenious; containing variety of modulation, but rather avoiding progressions which have been predominant in the movement itself; and the more they have the character of abandonment to impulse the better they are. It was formerly customary to leave the cadenzas for improvisation, and certainly if the frenzy of inspiration could be trusted to come at the right moment, impromptu cadenzas would undoubtedly be most effective in the hands of real masters of the situation. Moreover, it is chiefly in the sense of their being the exposition of the player's special capacities that they are defensible, for so far as the composer is concerned the movement generally offers full opportunities for display of the powers of the executant.

Still, custom is generally stronger than reason, and it was long before cadenzas began to show signs of dying out. And as the art of extemporization for various reasons considerably declined, it became more and more habitual for composers to write their own cadenzas in full, as Beethoven did in the E $\flat$  major Concerto and Schumann in his A minor Concerto.

**CADMAN, Charles Wakefield** (b. Johnstown, Pennsylvania, 24 Dec. 1881; d. Los Angeles, 30 Dec. 1946).

American organist, critic and composer. His father was employed in a steel works and his home was a poor one, without a pianoforte for the first thirteen years of his life. But both his parents were musical, and he contrived to study music at Pittsburgh in 1899-1909, his masters including Luigi von Kunitz and Emil Paur. He then became known as an organist there, as conductor of the Pittsburgh Male Chorus and, in 1908-10 as music critic to the 'Pittsburgh Dispatch'. About the time he came of age he had been interested by Nellie Richmond Eberhart in American-Indian music, and a visit to the Omaha Indian Reservation so strengthened that interest that he began to make a serious study of the music of various tribes. He made gramophone records of Indian music and lectured on it and on Indian customs. In 1909 he published a set of 'Four American-Indian Songs' to words by Mrs. Eberhart, one of which, 'The Land of the Sky-blue Water', was made exceedingly popular by Lillian Nordica.

After a tour in Europe in 1910, during which he lectured in London and Paris, Cadman was appointed church organist at Denver, Colorado, but he retired in 1907 and lived mainly at Los Angeles, wholly devoted to composition and to the furthering of musical education. He was one of the founders of the Hollywood Bowl.

His Indian opera 'Shanewis' ('The Robin Woman') was produced at the Metropolitan Opera in New York on 23 Mar. 1918 and repeated the following year, being the first American opera to appear there in two consecutive years. Among his other operas the most notable was 'A Witch of Salem', produced at Chicago on 8 Dec. 1926.

Cadman received the Mus.D. degree from the University of Southern California in 1924. The two operas just named have been frequently given in New York and Chicago, and his orchestral works have been widely played in the U.S.A. The 'American Suite' for strings was produced at the Saratoga Springs Festival in 1937 and he himself played the pianoforte part in the fantasy 'Dark Dancers of the Mardi Gras' with the New York Philharmonic in Dec. of that year.

## CATALOGUE OF WORKS

### OPERAS

'The Garden of Mystery', 1 act (1915).

'The Land of Misty Water.'

'The Garden of Death.'

'Shanewis' ('The Robin Woman'), 2 acts (libretto by Nellie Richmond Eberhart) (1917).

- 'A Witch of Salem', 2 acts (lib. by Eberhart) (1924).  
'The Willow Tree', radio opera (1925).  
'Ramala.'

## CHORAL WORKS

- 'The Vision of Sir Launfal', cantata for male voices (1910).  
'The Sunset Trail' for mixed voices (1925).  
'The Father of Waters' for mixed voices (1928).

## ORCHESTRAL WORKS

- 'Thunderbird Suite' on American-Indian Themes (1914).  
'Oriental Rhapsody' (1917).  
'To a Vanishing Race' for stgs (1925).  
'American Suite' on folksongs, for stgs. (1937).  
Symphony, E. m. (1939).  
Overture 'Huckleberry Finn goes Fishing' (after Mark Twain) (1945).

## SOLO INSTRUMENT AND ORCHESTRA

- Fantasy 'Dark Dancers of the Mardi Gras', for pf (1938).  
'Aurora Borealis' for pf. (1942).  
'A Mad Empress Remembers' for cello (1944).

## CHAMBER MUSIC

- Trio, D. ma., for vn., cello & pf. (1914).  
String Quartet (1917).

## VIOLIN AND PIANOFORTE

- Sonata, G. ma. (1930).

## PIANOFORTE MUSIC

- 'Idealized Indian Themes' (1912).  
Sonata, A. ma. (1915).  
Suite 'The Rubayyât of Omar Khayyâm' (1921).

## SONGS

- 'Four American-Indian Songs' (Nellie Richmond Eberhart) (1909).  
1. The Land of the Sky-blue Water.  
2. At Dawning.  
3. Far off I hear a lover's flute.  
4. The moon drops low.  
Cycle 'From Wigwam and Teepee' (Indian) (1914).  
Cycle 'Sayonara' (Japanese) (1919).  
Cycle 'The Willow Wind' (Chinese) (1922).  
Also over 300 separate songs.

**CÆCILIAN SOCIETY.** This Society was instituted in London in 1785 by a few friends who met weekly at each other's houses for the practice of hymns and anthems, but subsequently, having some instrumentalists among them, they united for the performance of sacred works on a more extended scale, and especially of Handel's oratorios. In 1791 an organ was erected in the Society's room in Friday Street, and after meeting at Plasterers' Hall, Painters' Hall, Coachmen's Hall and the Paul's Head, they obtained the use of Albion Hall, London Wall, where they met until the dissolution of the Society in 1861.

For many years the Society gave the only performances of the Handel and Haydn oratorios to be heard in London (except during Lent at the theatres of Covent Garden and Drury Lane), and its work may be said to have been taken up by the Sacred Harmonic Society, which was founded nearly thirty years before the dissolution of the older body. The

first conductor of the Society was an amateur named Vincent, who filled the office for upwards of thirty years, when he was succeeded by Thomas Walker, whose place was taken by his son Joseph Walker. James Shoubridge was the last conductor.

G. M

CAEDMAR (Opera) *See* BANTOCK.CAEN, Arnold<sup>1</sup> (b. ?; d. ?).

Netherlands (?) 15th-16th-century composer. He settled in Italy early in the 16th century. In Petrucci's 'Motetti della corona' (1519) he figures with three important motets for 4 voices under the name of Acaen, a contraction of initial and surname copied by Aaron and by Cerone in his 'Melotheo'. Sebastian Ochsenkuhn's book of lute tablature (1558) contains some motets by "A. Caen", and Montanus and Neuber's 'Magnum opus' (1559), where he is called Arnoldus Caen, the motet 'Hierusalem luge', 5 v. (Part II, No. 27), of which manuscript copies exist (or existed) at Brieg and Breslau. A motet, 'O Regna Coelorum', 5 v., is in a manuscript choir-book in the National Library, Vienna.

E. v. d. s.

CÆSAR (actually William Smegergill) (b. ?; d. ?).

English 17th-century composer. He was a chorister at Ely under Amner in 1615.<sup>2</sup> He composed some songs published in 'Select Muscull Ayres and Dialogues' (1653) and other collections of the period. Wood (MS Notes, Bodl.) speaks of him as a Roman Catholic and "a rare lutenist". W. H. H.

CÆTANI, Roffredo, Prince of Bassiano (b. Rome, 13 Oct. 1871).

Italian composer. His musical studies were pursued privately under the tuition of De Sanctis, Tacchinardi and Sgambati. Cætani devoted himself mainly to the composition of chamber music. His published works include two Quartets, a Trio, a Sonata for violin and pianoforte, a Quintet and various pianoforte pieces. In 1915 he wrote the text and music of an opera, 'Hypatia', given at Weimar on 23 May 1926. He also wrote several unpublished orchestral works.

F. B.

CAFARO (Caffaro), Pasquale (b. San Pietro in Galatina nr. Lecce, c. 1715<sup>3</sup>; d. Naples, 25 Oct. 1787).

Italian composer. He was destined by his

<sup>1</sup> The spelling Acaen or Acaen is a mistake for A. Caen; *see* Ambros, III, 261.

<sup>2</sup> Gibbons, 'Ely Records', p. 49.

<sup>3</sup> By general agreement the date usually given is 8 Feb. 1706. Giacomo Leo in his book on Leonardo Leo, however, says that among the contracts drawn up by the notary Tufarelli between the Conservatorio della Pietà dei Turchini at Naples and certain pupils is one concerning Pasquale Cafaro "da Galatina in provincia di Lecce", who entered the institution in 1735, declaring himself to be 20 years old and undertaking to serve for 5 years. According to this Cafaro would have been born about 1715. It is possible that the correct date is 8 Feb. 1716, and that an early misprint has misled everyone since, but only reference to the registers of births at Galatina could settle the matter.

parents for a scientific career, but his bent towards music showed itself too strongly for contradiction, and he was entered at the Neapolitan Conservatorio della Pietà dei Turchini in 1735. His teacher there must have been Fago, and not Leo, as was earlier believed. Having made a success as a composer of oratorios and operas, he became second master at his old Conservatory in 1759, a post he retained until his death. In 1768 he became supernumerary *maestro di cappella* at the royal chapel, with a salary of 20 ducats a month, and in 1771 he followed Giuseppe di Maio, deceased, as first *maestro*, at 30 ducats per month. He was also music-master to Maria Carolina of Austria, consort of the King of Naples, Ferdinand IV.

Grace, purity of style and poverty of invention are the characteristics of his work. The following is a list of Cafaro's oratorios, operas and other works in dramatic form:

## ORATORIOS

- 'Il figlio prodigo' (1745).
- 'Il trionfo di Davide' (1746).
- 'L'invenzione della croce' (1747)
- 'Betulia liberata' (n.d.).

Two further oratorios, without proper titles, are in the library of the Paris Conservatoire.

## OPERAS

- 'Ipermestra' (18 Dec. 1751 and 26 Dec. 1761).
- 'La disfatta di Dario' (20 Jan. 1756).
- 'L'incendio di Troia' (20 Jan. 1757).
- 'Arianna e Teseo' (Jan. 1766).
- 'Creso' (Carnival 1768).
- 'L'Olimpiade' (12 Jan. 1769).
- 'Antigono' (13 Aug. 1770).

All except 'Creso' (which was given at the Teatro Regio, Turin) were first produced at the Teatro di San Carlo, Naples.

## CANTATAS AND OTHER OCCASIONAL WORKS

(All performed at Naples)

- 'Ercole ed Acheloo' (20 Jan. 1769).
- 'La giustizia placata' (1769).
- 'Il natal d'Apollon' (4 Jan. 1775)
- 'La felicità della terra' (n.d.)

Cantatas for the king's (Ferdinand IV) birthday (12 Jan.) in 1764 and 1766, for the queen's birthday (13 Aug.) in 1770, for the transfer of the blood of St Gennaro in 1770

A 'Stabat Mater' was printed at Naples in 1785. In addition to these there are in existence many pieces of church music by Cafaro, consisting of masses, psalms, motets, etc., of acknowledged merit. An 'Amen' for 5 v. by him is included in Novello's 'Fitzwilliam Music'.

A. L. & F. W. (ii).

**CAFFARELLI** (real name **Gaetano Maiorano**) (b. Bitonto, 12 Apr. 1710; d. Naples, 31 Jan. 1783).

Italian male soprano singer. The older biographical accounts say that his genius was recognized when he was a boy by one Caffaro, who sent him to Norcia to be prepared for the career of an *evirato* and on his return took him into his own house and gave him elementary instruction in reading, writing and music. This Caffaro has been unthinkingly identified with the composer Pasquale Cafaro, without

consideration of the fact that, according to the same authorities, Cafaro was three years younger than Caffarelli himself. The rectification of the dates of the singer's birth (1710 for 1703) and the composer's (1715 for 1706) makes Cafaro the junior by five years, so that it is quite certain that, as a boy of about seven, he can have had nothing to do with the castration of one of about twelve. The early "benefactor" from whom the singer took his name can be identified, almost with certainty, as the Signor Domenico Cafarelli, "Razionale della Nunziatura", at whose expense another boy, Francesco Maiorano, "alias Cafarelli", was entered in the Neapolitan Conservatorio dei Poveri on 8 May 1732. A third boy of the same name, Pasquale Maiorano, "alias Cafarelli", like the singer himself a native of Bitonto, entered the same Conservatory on 5 Nov. 1738, sponsored by Cardinal Spinelli. The identity of surname, alias and town of origin can hardly be coincidental, and it looks as if those responsible for Gaetano's castration were trying to repeat their success with his younger brothers.

Caffarelli was sent to Naples to study under Porpora, who is said to have kept him for five or six years to the study of a single page of exercises and at the end of this time to have dismissed him with the words "Go, my son: I have nothing more to teach you. You are the greatest singer in Europe." This has, however, all the appearance of a typical Neapolitan legend. In 1726, when he was not yet sixteen years of age, Caffarelli made his début at the Teatro delle Dame in Rome as Alvida in 'Valdemaro' by Domenico Sarro. Other early appearances were in Pollarolo's 'Nerina' at the Teatro San Samuele, Venice, in 1728, in Feo's 'Arianna' at the Teatro Regio, Turin, in 'Didone abbandonata' by Sarro at the Teatro Ducale, Milan, and in 1730 in two of Porpora's operas, 'Mitridate' and 'Siface', at the Teatro Capranica, Rome. In the librettos of these operas he is described as "virtuoso di camera" to the Grand Duke of Tuscany, which corroborates a story<sup>1</sup> that for a time, like Galuppi, he formed part of the retinue of the unspeakable Gian Gastone, the last of the Medici.

After several years of triumphs in the theatres of Rome, Venice, Milan and Bologna, Caffarelli returned in 1734 to Naples and settled there. After appearing in Leo's 'Il castello d'Atlante' at the Teatro San Bartolomeo at the beginning of July he applied for, and obtained, a post in the royal chapel. Later in the same year he sang the part of Farnaspe in Pergolesi's 'Adriano in Siria'. In 1738 he spent six months in England, appearing at the King's Theatre in Handel's

<sup>1</sup> 'Vita di G. Gastone I, settimo ed ultimo Granduca della R. Casa de' Medici.' (Reprinted Florence, 1886.)

'Faramondo' and 'Serse', the pasticcio 'Alessandro Severo', in Pescetti's 'La conquista del vello d'oro' and Veracini's 'Partenio'. It is said that he was never in good health or voice while in London and disappointed expectations. At the close of the season he returned to Naples. In the summer of 1739 he obtained leave to go to Madrid, but he was back again in Naples in the following year.

Caffarelli was everywhere known and disliked for his bad manners, vanity and insolence. Already in 1739, shortly before his visit to Madrid, he had been involved in a brawl with another singer during a performance in a Neapolitan church, in consequence of which he had been officially reprimanded and for a time confined to his house. Early in 1741, during the performance of Latilla's 'Olimpia nell'isola d'Ebada', he showed such disregard for the other singers and for the audience that at the conclusion of the opera he was arrested and sent to prison.

From 1741 onwards he sang regularly at the San Carlo theatre, Naples, in many operas, including the notable first performance of Sarro's 'Alessandro nell'Indie' on 20 Jan. 1743, when a live elephant appeared with him on the stage. Naples was his home and headquarters, but he travelled widely in Italy, singing at Florence in 1747-48, in Rome in 1748-49, at Turin, Venice and Lucca in 1750, at Venice again in 1751 and at Modena in 1753. In this year he requested permission to go to France. Louis XV had invited him, through the French ambassador to Naples, to entertain the dauphine during the last months of her pregnancy. Besides private concerts for the dauphine, he sang in Paris in Hasse's opera 'Didone abbandonata' and oratorio 'I pellegrini al Sepolcro' and gave a public concert in the Tuileries. He fought a duel, after a quarrel concerning the respective merits of French and Italian music, with the poet Ballot de Sauvot and wounded his man. Back in Naples, Caffarelli appeared for the last time in an opera there on 30 May 1754. He sang after this, however, in several operas by Pérez at Lisbon in 1754-55. In the latter year he survived the Lisbon earthquake of 1 Nov., returned to Italy and decided to retire, except for occasional appearances by royal command at concerts or in the royal chapel. He had made an enormous fortune, purchased a dukedom and had two palatial establishments, one at San Donato, in the province of Otranto, and another at Naples, in the Vico del Carminello sopra Toledo, over the gate of which he had inscribed: "Amphion Thebas, ego domum", to which a Neapolitan wit added "Ille cum, sine tu!" He died at Naples, not at San Donato, as is often stated. F. W. (ii).

Bibl.—FAUSTINI-FASINI, E., 'Gli astri maggiori del bel canto napoletano: Gaetano Majorano detto "Caffarelli"', ('Note d'Archivio', Rome, May-June, July-Oct. & Nov.-Dec. 1938).

**CAFFARO, Pasquale.** See CAFARO.

**CAFFI, Francesco** (b. Venice, 14 June 1778; d. Padua, Feb. 1874).

Italian musical historian and composer. He was councillor of the Court of Appeal at Milan until 1827, when he retired to Venice and devoted himself to musical historical research. His principal work is on the sacred music at the ducal chapel of St. Mark's, Venice, from 1313 to 1797: 'Storia della musica...', 2 vols. (1854-55). He also wrote a number of monographs of famous musicians. A history of the theatre remained incomplete. He composed a cantata, 'L'armonia richiamata'.

E. v. d. s.

Bibl.—SALVAGNINI, A., 'Francesco Caffi, musicologo veneziano' (Rome, 1905).

**CAFFIAUX, (Dom) Philippe Joseph** (b. Valenciennes, c. 1722; d. Paris, 26 Dec. 1777).

French musical historian. He was a Benedictine monk of Saint-Maur. He wrote a history of music, advertised for publication in 1756, but remaining in manuscript until it was found by Fétis in the Bibliothèque Nationale in Paris.

E. v. d. s.

**CAGE, John** (b. Los Angeles, California, 15 Sept 1912).

American composer. He received his general education at Detroit (Michigan), Los Angeles and at Pomona College. He studied the pianoforte with Fannie Charles Dillon at Los Angeles and in Paris with Lazare-Lévy. In composition he worked with Richard Buhlig, Arnold Schoenberg, Adolph Weiss and Henry Cowell.

Cage has taught in the Faculties of the Cornish School, Seattle, Mills College, California, The School of Design, Chicago, and at Black Mountain College, North Carolina. He has collected instruments, organized and directed percussion orchestras, giving concerts of percussion music throughout the country. He is the inventor of the "prepared piano", a process of transforming both the pitch and timbre of pianoforte tone by attaching a variety of metal, wood, rubber, bamboo and other objects to the strings at different degrees and distances from the damped point. The effect is rather that of a miniature gamelan or a gong and percussion ensemble.

Cage has written on art and new music for such publications as 'Modern Music', 'The Tiger's Eye', 'Dance Observer', 'Musical America' and 'The New York Herald Tribune'. He was lecturer on music at the Vassar Intercollegiate Arts Conference (1948), was awarded both a Guggenheim Fellowship and the Award of the Society of Arts and Letters in 1949. He is member of the Ameri-

can Composers Alliance and lives in New York.

It is difficult to relate the music of John Cage to the standards of the everyday musical world. Structurally it follows laws rather than rules. From Schoenberg Cage retains such elements as a non-thematic, non-harmonic basis, but whereas "atonalism" took over media evolved from a settled tonal procedure, so that often a mere process of avoidance results rather than a new creative statement, Cage precedes his creative process by a frankly mechanical transforming device, and is thus free to apply the laws of composition to utterly unprecedented material. Rhythms and rhythmic units are often his forms, and silences his dramatic points. Cage is widely known and watched with interest in his own country as an experimental composer.

## CATALOGUE OF WORKS

### STAGE WORKS

(MAINLY WITH "PREPARED PIANO")

25 Ballets in 1 act for a solo dancer (1934-39).

'Quest' (1935).

'Marriage at the Eiffel Tower' (1936)

'Imaginary Landscape' (1938).

'America was Promised' (1938)

'Fads and Fancies in the Academy' (1940).

'Horror Dream' (1941).

'Ad lib' (1943).

'Credo in Us' (1943).

'Four Dances' (1944).

'Four Walls' (1944).

'Daughters of the Lonesome Isle' (1945).

'Lidice' (1945).

'The Feast' (1946).

'Dromenon' (1947).

'The Seasons' (1947).

### BROADCAST MUSIC

'The City Wears a Slouch Hat' (Kenneth Patchen) (1942)

### FILM MUSIC

Sequence for Marcel Duchamp (1947)

### MUSIC FOR PERCUSSION ORCHESTRA

Quartet (1935).

Trio (1936).

'First Construction' (1937).

'Second Construction' (1938).

2 'Imaginary Landscapes' (1939).

'Third Construction' (1940).

'Double Music' (with Lou Harrison) (1940).

'Imaginary Landscape' No. 3 (1941).

'Amores' (1942).

### CHAMBER MUSIC

Duet for 2 flutes (1934).

Music for wind insts. (1936).

'Living-Room Music' (1940).

'Prelude for Six' (1946).

Also various instrumental and vocal pieces, music for 2 pfs, &c.

P. G.-H.

**CAGLIOSTRO** (Opera). See ROOKE.

**CAGLIOSTRO IN WIEN** (Operetta). See STRAUSS (J.).

**CAGNONI, Antonio** (b. Godiasco, Voghera, 8 Feb. 1828; d. Bergamo, 30 Apr. 1896).

Italian composer. He entered the Milan Conservatory in 1842, remaining there until 1847. His first essay before the public was

'Don Bucefalo', given at the Teatro Re, Milan, in 1847. This *opera buffa*, although it long kept the stage in Italy, never attained success outside its own country; it was given at the Théâtre-Italien in Paris, but very coldly received.

Between 1856 and 1863 Cagnoni held the post of *maestro di cappella* at Vigevano, and while there devoted himself entirely to religious music. In that year he retired to Novara, where he became *maestro di cappella* in the cathedral and director of the Istituto Musicale. Subsequently he produced nothing but sacred music. Two motets, 'Inveni David' and 'Ave Maria', were published in 1886. In Feb. of that year Cagnoni was made a commander of the order of the Corona. He was from 1886 *maestro di cappella* at Santa Maria Maggiore, Bergamo. The following is a complete list of his operas:

'Rosalia di San Miniato' (1845).

'I due Savoia' (1846).

'Don Bucefalo' (1847).

'Il testamento di Figaro' (1848).

'Amor e trappole' (1850).

'Il Sindaco Babbeo' (with Ponchielli and others) (1850).

'La valle d' Andorra' (1851).

'Gralda' (1852).

'La fioraia' (1859).

'Le figlie di don Liborio' (1856).

'Il vecchio della montagna' (1860).

'Michele Perrin' (1864).

'Claudia' (1866).

'La tombola' (1868).

'Un capriccio di donna' (1870).

'Papa Martin' (1871), produced in London by Carl

Rosa at the Lyceum Theatre in 1875 as 'The

Porter of Havre

'Il duca di Tapigliano' (1874).

'Francesca da Rimini' (1878).

He left an opera on the subject of Shakespeare's 'King Lear'.

J. A. F.-M.

**CAHEN, Albert** (b. Paris, 8 Jan. 1846; d. Cap d'Ail, 23 Feb. 1903).

French composer. He was a pupil of Mme Szarvady for pianoforte and of César Franck. He wrote several works of some importance; his 'Jean le Précurseur', a biblical drama, was performed at the Concert National in Paris on 25 Jan. 1874 and 'Endymion', a *poème mythologique*, at the Concerts Danbé in Jan. 1875. His début on the stage was made with 'Le Bois', a one-act piece (Opéra-Comique, 1880); in 1886 'La Belle au bois dormant', a *féerie*, came out at the Geneva theatre; 'Le Vénitien', a 4-act opera, was given at Rouen in 1890; 'Fleur de neiges', a ballet, in Brussels in 1891; 'La Femme de Claude' at the Paris Opéra-Comique on 24 June 1896. Cahen also wrote a set of songs called 'Marines', etc.

G. F.

**CAHUSAC**. English firm of music publishers and instrument makers in London.

(1) **Thomas Cahusac, sen.** (b. ?; d. London, 18 May 1798). He was "at the sign of the Two Flutes and Violin opposite St. Clement's Church, afterwards 196 Strand",

as early as 1755, and from that date to 1798 he carried on an extensive business there, taking his two sons into partnership about 1794, when the firm became Cahusac & Sons. He published 'Twenty-four Country Dances for 1758', and there is evidence that there was an issue for 1757. An obituary notice in 'The Gentleman's Magazine' describes him as "the oldest musical instrument-maker in and near London".

(2) **Thomas Cahusac, jun.** (b. ?; d. ?), son of the preceding. He had been established at 4 Great Newport Street about 1781 and joined his father and brother at 196 Strand about 1794. After his father's death in 1798 the business was continued as T. & W. M. Cahusac until Aug. 1800, when the partnership was dissolved and Thomas, jun., carried on alone at 41 Haymarket to c. 1805, at 114 New Bond Street c. 1805-8 and at 42 Wigmore Street c. 1808-14.

(3) **William Maurice Cahusac** (b. ?; d. ?), brother of the preceding. He was, from c. 1794 to 1798, in partnership with his father and brother, and from c. 1798 to 1800 with the latter only. After separating from his brother he retained the premises at 196 Strand until about 1811, when he moved to 79 High Holborn. He retired about 1816, living in 1824 at Maida Hill and in 1829 at Bexley, Kent.

The Cahusac firm made flutes, violins and other of the smaller kind of musical instruments and issued numbers of interesting pocket volumes of airs and much sheet music.

F. K., rev. W. C. S.

**Cahusac, Louis de.** See Rameau (8 lbs)

**CAÏD** (Opera). See THOMAS (A.).

**CAIGNET, Denis** (b. ?; d. Paris, Nov. 1625).

French composer. He was in the service of the Duke of Villeroi and gained the prize of the silver lute with a chanson in the competition at Évreux in 1587. In 1624 he was musician-in-ordinary of the king's chamber. He composed 'Airs de court', in 4, 5, 6 and 8 parts (Paris, 1597), 50 Psalms for 3-8 voices (1607); 'Les CL Pseaumes de David' (1624, ed. 1626). Three chansons are in a collective volume of 1597.

E. v. d. s.

**Calihava.** See Boyer ('Étrennes de l'amour', airs).

**CAIMO, Giuseppe** (b. Milan, 1540; d. Milan, 1584).

Italian organist and composer. He was of noble birth and became organist at the church of Sant' Ambrogio at Milan in 1564 and at the Cathedral in 1580, remaining there till 1588. In 1582 he was in treaty with William V of Bavaria about an appointment which apparently he did not obtain. He composed 4 books of madrigals for 4-5 voices (1564-85), a book of madrigals for 5-8 voices and 2 books of 3-4-part canzonets; also some

canzonets, etc., in collective volumes. For an outstanding madrigal see Johannes Wolf, 'Sing- und Spielmusik', No. 38.

E. v. d. s., adds.

**Cain, Henri.** See Cendrillon (Massenet). Don Quichette (do). Dupont (G, 2 lbs). Godard ('Vivandière', opera). Massenet (5 lbs., 'Cigale', ballet). Till Eulenspiegel (Block, opera).

**Caine, Thomas Henry Hall.** See Mascagni ('Eternal City', incid. m.).

**CAIO FABRICIO** (Opera). See HASSE. ZENO.

**CAIO MARIO** (Opera). See JOMMELLI.

**CAIO MARZIO CORIOLANO** (Opera). See ARIOSTO.

**CAIRATI, Alfredo** (b. Milan, 18 Aug. 1875).

Swiss singing-master and pianist of Italian birth. Having studied singing and pianoforte at Milan, Munich (with Rheinberger) and Berlin (with d'Albert), he toured for some years as a pianist. In 1908 he was called to the Stern Conservatory in Berlin, where he remained until 1916, holding a master class for singing. He then settled in Switzerland, opening an Accademia di Canto at Zurich in 1916; but from 1922 until 1935 he also taught at the High School for Music at Stuttgart and from 1935 at the Music School of Winterthur.

Cairati has appeared as composer, his works including stage music, choral and solo vocal works, chamber music and pianoforte pieces. He also brought out several transcriptions and new editions of dramatic and symphonic works, such as Carissimi's 'Jephthé', Leoncavallo's 'Bohème', d'Albert's 'Tiefeland' and Sibelius's C major Symphony (No. 3). Moreover, he is the author of some pedagogic works on singing.

K. v. F.

**CAIRO.** See EGYPTIAN MUSIC (MODERN EGYPT).

**CAISSES** (Fr.). The generic French name for the whole class of drums of indefinite pitch (i.e. excepting the kettledrums [timbales]). The *grosse caisse* is the bass drum, the *caisse claire* the sidedrum and the *caisse roulante* or *caisse sourde* the tenor drum.

**CAIX D'HERVELOIS, Louis de** (b. Paris, c. 1670; d. Paris, c. 1760).<sup>1</sup>

French violist and composer. A pupil of Sainte-Colombe, he became one of the foremost French viola da gamba players and was in the service of the Duke of Orleans. He composed 5 books of pieces for viola da gamba, 1 book of duets for *pardessus de viole* and 3 books of flute sonatas. Many of his charming viola da gamba pieces have appeared in various arrangements in recent years. A son and three daughters of his are mentioned as performers on the viola da gamba in the French royal chamber in 1749.

E. v. d. s.

<sup>1</sup> G. Kinsky. W. Heyer, Cat II, 438.

**CAJETAN, Fabrice-Marin** (b. ? , d. ?).

French 16th-century composer. He was *maître de chapelle* to the Duc de Guise in 1576 and gained the 6th prize in the Puy competition at Évreux with a chanson, 'C'est mourir mille fois le jour'. Of his compositions are known 2 books of airs, chansons, etc., for 4 voices (Paris, 1578). E. v. d. s.

**CALAH, John** (b. ? , 1758; d. Peterborough, 5 Aug. 1798).

English organist and composer. He was organist of St Mary's Church and master of the Song School at Newark-on-Trent in 1782. In 1785 he was appointed organist of Peterborough Cathedral, a post he held till his death. He was buried in the New Building of the Cathedral. He composed some cathedral music, songs and a sonata for pianoforte with violin and cello. J. A. F.-M.

**CALAMITÀ DE' CUORI, LA** (Opera). See GOLDONI.

**CALANDO** (Ital. = diminishing, i.e. in tone). A direction equivalent to *diminuendo* or *decrecendo*, and often associated with *ritardando*. G.

**CALASCIONE (Colascione)** (Ital.; Fr. *colachon*). An instrument of the lute type, strung with two or three strings and played with a plectrum, belonging to southern Italy (PLATE 70, Vol. VIII, p. 146 (v), No. 4). H. G. C.

BIBL. — FRYKLUND, D., 'A Short Monograph on the Calascione' (Stockholm, 1937).

**CALATA** (Ital.). An Italian dance of the early 16th century similar to the French *basse danse*, usually played on the lute. It is in duple time but has a triple rhythm of groups of three bars, the effect being that of 3-2 time.

**CALDARA, Antonio** (b. Venice, 1670; d. Vienna, 28 Dec. 1736).

Italian composer. He received his musical instruction from Legrenzi at Venice. For a long time Caldara led a roaming life, visiting Rome, Vienna, Madrid, etc. But on 1 Jan. 1716 he was appointed vice-conductor at the imperial court in Vienna by the Emperor Charles VI. In this city, where Italian music was then in great favour, Caldara spent the most successful and fruitful years of his life, and he died there one of the most appreciated composers of his time.

Caldara was a particularly fertile artist. His oratorios and operas alone number more than one hundred. The Austrian Archduke Rudolph (Beethoven's pupil) was a great admirer of Caldara's work and owned a collection of his original manuscripts amounting to more than twenty thousand pages. It is treasured to-day by the Gesellschaft der Musikfreunde of Vienna.

Though Caldara composed valuable music for strings and thorough-bass (trio sonatas, quartets and a septet), his principal achieve-

ments lie in the domain of vocal music. In his ecclesiastical works (e.g. his exquisite 16-part 'Crucifixus') he combines the rich Venetian choral style with the harmonies and melodies of Naples. In this particular respect Caldara exercised an influence even on Joseph Haydn. His operas and oratorios too are more carefully elaborated than most other Italian works of his time. But the composer is perhaps at his best in his short lyrical compositions. His cantata 'Il giuoco del quadriglio', written to be performed by the Archduchess (later Empress) Maria Theresa and her sister, the Archduchess Maria Anna, still shows a somewhat operatic character. This original work describes a game of cards with all its incidents. In his madrigals and solo cantatas Caldara reveals himself as a graceful lyric composer. His canons must have acquired a great popularity considering the numerous copies that were made in the 18th century. Among these pieces we find plaintive love songs, solmization jokes which mock the singing methods of the time, a scene at the dentist's, gay drinking-songs and so on. Caldara was also fond of using the canon form for playing upon words, to which his own name lent itself easily (*caldara* being Italian for 'kettle'). In these small compositions written in rococo style a certain affinity to Mozart's canons is to be traced.

Only a few works by Caldara have been published in modern editions. The most extensive collection, comprising ecclesiastical works, cantatas, madrigals and canons, was published by the D.T.Ö (Vols XXVI and LXXV, edited by Eusebius Mandyczewski and Karl Geiringer). K. G.

Wolfurt (do.).

**CALEDONICA.** The name given by William Meikle of Strathaven, Lanarkshire, to a new wind instrument invented by him (c. 1830). An original specimen was discovered by Lyndesay G. Langwill in the Music Classroom of Edinburgh University and described by him, with illustrations, in 'The Musical Progress' (Apr. 1934). It was afterwards

known in a modified form as the Alto Fagotto.<sup>1</sup> Unfortunately crook and mouthpiece are missing; but as the Alto Fagotto, made by Wood of London and stated as "lately invented by William Meikle", was played with a small clarinet mouthpiece on the crook, it is most probable that the same method was adopted for the Caledonica. The instrument was made in various pitches, but the surviving example is an octave above the bassoon.

F. W. G.

See also *Bassoon* *Tenoroon*.

**CALEGARI, Antonio** (b. Padua, 17 Feb. 1757; d. Padua, 28 July 1828)

Italian composer. He was a pupil of Bertoni at Venice and made his début as a composer with a dramatic cantata, 'Ezzelino', which was performed in his native town in Apr. 1776, followed by an opera 'Antigono' in 1777, a *festa teatrale*, 'Deucalione e Pirra' in 1781, and a comic opera, 'Le due sorelle incognite', at Venice in 1783. From 1792 to 1796 he was musical director of the Teatro Nuovo at Padua, and about 1800 he was appointed organist and later (1814) chapel master at St. Anthony's church there. 'Telemaco in Sicilia' (1792), a cantata for the birth of Napoleon's son (1811) and 'Le feste euganee' (1815) complete the list of his dramatic compositions, while his sacred vocal works comprise a Latin oratorio, 'Coronato Salomonis' (1780), two Italian oratorios, a *Miserere* and other music for the church. He published a 'Gioco pitagorico musicale' at Venice in 1801 (of which a French translation appeared in 1802 as 'L'Art de composer de la musique sans en connaître les éléments'). His 'Trattato del sistema armonico' was published after his death by his pupil Melchiorre Balbi (1829; reprinted 1878) and 'Modi generali del canto', after the method of Pacchierotti, appeared in 1836.

Calegari's elder brother Giuseppe (c. 1750-?) was also an opera composer of some note. Among Giuseppe's four operas was one on the favourite subject of Don Juan, 'Il convitato di pietra', performed at Venice in 1777 (apparently lost).

A. L.

**CALEGARI, Francesco Antonio** (b. Venice, ?, d. ?).

Italian 17th-18th-century composer. He was educated at the Monastery of Palma, Friuli, and entered the Order of the Minorites. He was *maestro di cappella* at the Franciscan church of Santa Maria gloriosa de Frari, or Cà grande, at Venice in 1702. From 3 May 1703 to 10 May 1727 he held the same position at Sant' Antonio at Padua, returning to the Frari church at Venice, where he still was in 1740. His church music was much praised by the best composers of his time, but he burnt it all to compose henceforth in what he thought the

<sup>1</sup> See *BASSOON*.

enharmonic system of the ancient Greeks, and the music he then produced was little relished by his contemporaries. He wrote a theoretical treatise which was published by M. Balbi, Venice, 1829. Apart from church compositions he wrote harpsichord and organ pieces. A remarkably fine 'Pange lingua' is, according to Mendel, in the Vienna National Library.

E. v. d. s.

**CALEGARI, Giuseppe.** See *above*.

**CALEGARI, Luigi Antonio** (b. Padua, c. 1780; d. Venice, 1849).

Italian composer, nephew of Antonio Calegari. Eight operas of his were given between 1804 and 1811, chiefly at Padua and Venice, also a ballet and a cantata (1832).

E. v. d. s.

**CALEGARI, Maria Caterina** (b. Bergamo, 1644; d. Milan, ?).

Italian singer, organist and composer. Her first book of 'Motetti a voce sola' had already appeared at Bergamo in 1659. On 19 Apr. 1661 she joined the Order of St. Benedict at the convent of Santa Margherita, Milan, taking the name of Cornelia. Her beautiful singing and organ playing and her compositions drew crowds of musical amateurs from far and near to the church, and Donato Calvi speaks of her in 1664 as a famous singer and composer of whom masses, motets, madrigals, etc., have appeared in print.

E. v. d. s.

**CALENDA.** See *CALINDA*.

**CALENDAL** (Opera). See *BIZET*.

**CALESTANI, Vincenzio** (b. ?; d. ?).

Italian 16th-17th-century composer. All that is known of him is that he served at the grand-ducal court at Florence. In 1617 he published, at Venice, an extremely attractive collection of 'Madrigali ed arie', of which all but four songs (which are duets) are for solo voice and continuo. There are also contributions by Giovanni del Turco, Bettini and Bonnell. The madrigalian pieces, in which there are many examples of "affective" harmony and progressions, show an understanding of the monodic principle of polarity of vocal line and continuo line. Calestani's setting of verse used by other composers seems very often to be superior to theirs, even to Monteverdi in the setting of Chiabrera's 'Damiella'. There are many charming melodic lines in the 'Arie' and instrumental variations on the song-melodies, designated *ritornello* in each case. Calestani gives instructions in two methods of composing *ottave*, and Orlandi in his publication of 1616 shows yet another way of setting the second poem selected for illustration by Calestani.

N. F. (ii).

**CALIFE DE BAGDAD, LE.** Opera in 1 act by Boieldieu. Libretto by Claude Godard d'Aucour de Saint-Just. Produced Paris, Opéra-Comique, 16 Sept. 1800. 1st perf. abroad, Ghent, 1800. 1st in England, Lon-

don, Haymarket Theatre (adapted by T. J. Dibdin), 11 May 1809. 1st in U.S.A., New York (in French), 27 Aug. 1827.

**CALINDA.** An American Negro dance, primitive at first and sociable later on, spread through Spanish America and the southern states of the U.S.A. The earliest known description dates from 1698, when Père Lavat<sup>1</sup> who calls it *calenda*, records having seen it danced on Martinique, with a drum accompaniment. It was forbidden as indecent by the more religious-minded of the Christian communities, but not wholly suppressed among the Negro slaves. A century later Moreau de Saint-Méry<sup>2</sup> found it on San Domingo, where another name for it was *chica*. A modern artistic example of the dance appears in Delius's opera 'Koanga'.

See also footnotes.

**CALINO CASTURAME.** See FOLK MUSIC: IRISH.

**CALISTA (Colista), Lelio** (b. ?, d. ?).

Italian 17th-century composer. He wrote sonatas for 2 violins and bass whose manuscripts are preserved in English libraries, viz. Ch. Ch. (see Arkwright's Catalogue, Pt i, p. 20) and the Bodleian Library at Oxford, and the B.M. One of this name is mentioned in Kircher's 'Musurgia', but it is not known how Calista's works became famous in England. That they were no less rests on the direct statements of Henry Purcell, who quotes from "the famous Lelio Calista, an Italian" in his edition (the 12th) of Playford's 'Introduction to the Skill of Musick' (1694). The inference is that Calista was one of the "most fam'd Italian Masters" whom Purcell took as models for his own sonatas (1683). See Barclay Squire, S.I.M.G., 1904-5, p. 557; Mus. T., Apr. 1917, p. 157.

J. A. F.-M.

**CALKIN.** English family of musicians, mostly instrumentalists.

(x) **Joseph Calkin** (b. London, 1781; d. London, 30 Dec. 1846), violinist and violist. He was taught the violin by Thomas Lyon and Spagnoletti and became a member of the Drury Lane orchestra (1798-1808). Changing to the viola, he was engaged at the Opera, the Concerts of Ancient Music, the Vocal Concerts and the Philharmonic concerts, and he was still playing with the latter in 1827. In 1821 he became a member of the king's band.

(a) **James Calkin** (b. London, 19 Sept. 1784; d. London, 1862), pianist and composer, brother of the preceding. He was educated at Dr. Burrows's School, Soho Square, where Bishop was his desk companion, and he was taught the pianoforte, cello and thorough-

bass by Thomas Lyon and the violin by his brother. In 1823 he became an Associate of the Philharmonic Society and in that year his string Quartet, inscribed to and played by Mori, was performed at the British Concerts. A Symphony of his was rehearsed by the Philharmonic Society, but not performed. He also wrote chamber and pianoforte music.

(3) **William Calkin** (b. London, ?; d. ?), organist, brother of the preceding. Taught by his brother James, he became organist of the parish church at Arundel, Sussex, and was appointed organist for Sussex county by the Duke of Richmond.

(4) **James Joseph Calkin** (b. London, 1813; d. London, 1868), violinist, son of (1).

(5) **Joseph Calkin** (called *Tenniell*) (b. London, 1816; d. London, 6 June 1874), tenor singer, brother of the preceding. He studied at Milan under Lamperti and appeared at the Philharmonic and other concerts.

(6) **John Baptiste Calkin** (b. London, 13 Mar. 1827; d. ?), composer, organist and pianist, son of (2). Taught by his father, he became a well-known London organist, Woburn Chapel (1853-57), Camden Road Chapel (1863-68) and St. Thomas's, Camden Town (1870-84). He was a member of the council of the T.C.M. and a professor at the G.S.M. He was a prolific composer, his church services and anthems being widely accepted, while there was a demand for his glees and partsongs as well as his pianoforte music.

(7) **George Calkin** (b. London, 10 Aug. 1829, d. ?), violoncellist and teacher, brother of the preceding. For twenty-five years he was organist at St. Mark's, Regent's Park, and a professor at the London Academy of Music. As a cellist he played at the Philharmonic Society's concerts, the Royal Italian Opera and the leading provincial festivals. He composed 16 books of organ voluntaries, while his organ transcriptions from the works of Mendelssohn (Novello) were much in demand.

H. G. F.

**CALL, Leonhard von** (b. South Germany, 1768 or 1769; d. Vienna, 19 Feb. 1815).

German guitar player and composer. He wrote harmonious and pretty partsongs, which were greatly in fashion in Germany at the beginning of the 19th century, and contributed much to the formation of the *Manner-gesangvereine* in that country.<sup>3</sup> He is also known for his instruction book for the guitar. G.

**CALLAS, Maria Meneghini** (formerly *Kallas*) (b. New York, 3 Dec. 1923).

Greek-American soprano singer. She is Greek by parentage, American by birth and early upbringing, and Italian by career and by her marriage in 1947 to Signor Meneghini. On the return of her family to Greece, in 1936,

<sup>3</sup> Specimens will be found in 'Orpheus'.

<sup>1</sup> 'Nouveau Voyage aux isles de l'Amérique', II, 51.  
<sup>2</sup> 'Description . . . de la partie française de l'isle Saint-Dominique' (1797-98), I, 50.

she entered the Conservatory at Athens, where her teacher was the well-known coloratura soprano Elvira de Hidalgo. She was in Greece throughout the German occupation, when she made a few appearances at the Athens Opera (first as Martha in d'Albert's 'Tiefland'), returning to the U.S.A. after the war. Her true career may be said to have begun in 1947, when she sang in Ponchielli's 'Gioconda' in the open-air arena at Verona. Her quality was instantly recognized, and she soon became well known throughout Italy, especially as an exponent of the heaviest parts in the soprano repertory, such as Aida, Norma, Turandot, Isolde, Kundry and Brünnhilde. A versatility scarcely paralleled since the days of Lilli Lehmann was demonstrated when, within a week of singing Brünnhilde in 'Die Walküre', she deputized for another singer in the intricately florid music of Elvira in Bellini's 'Puritani'. Before long she began to relinquish the Wagnerian parts and Turandot in order to concentrate on the *bel canto* operas of Bellini, Rossini, Donizetti and Verdi. Besides adding Violetta, Gilda and Lucia to her repertory, she has been in constant demand whenever rare and vocally taxing operas of the older school are revived. Thus, she has sung in Rome as Fiorilla in Rossini's 'Turco in Italia', at Naples as Abigail in Verdi's 'Nabucco' and at the Florence Music Festivals of 1951-53 in the first stage performance of Haydn's 'Orfeo ed Euridice', in Verdi's 'Vespri siciliani', in Rossini's 'Armida' and in Cherubini's 'Medea'.

Maria Callas is alone among contemporary Italian sopranos in her command of the classical style. Her tone, if lacking in sensuous beauty and pathos, is robust, clear and penetrating. Her intervals are instrumentally distinct, her management of the vocal line shapely and musical, her florid singing (especially her downward chromatic scales) very brilliant. That her remarkable technique is not flawless is shown by the hardness and unsteadiness which develop in her highest register (which extends to *eb''''*). Perhaps the rarest and most prized of her qualities is the authority which she brings to all her parts. Her appearance generates excitement, and while she remains on the stage she rivets the attention of the audience. She scored a great success in London at her first Covent Garden appearance, in 1952, as Norma. When she repeated this part in the following year, opera-goers were surprised to hear her sing 'Casta diva' in the higher key of G which Bellini is said to have originally intended, instead of in that of F, as customarily printed and performed. Her other parts in the Covent Garden season of 1953 were Aida and Leonora in 'Il Trovatore'. D. S.-T.

**CALLCOTT, John (Wall)** (b. London [Kensington], 20 Nov. 1766; d. Bristol, 15 May 1821).

English organist and composer. His father was a bricklayer and builder. He obtained his first knowledge of music while a schoolboy from Henry Whitney, organist of Kensington Church. In 1780 he wrote music for a play performed at Mr. Young's school. He became acquainted, in 1782, with Arnold, Cooke and the elder Sale, from whom he derived much musical knowledge, although he did not receive any regular instruction. In 1783 he became deputy-organist, under Reinhold, of St. George the Martyr, Queen Square, Bloomsbury, which post he held until 1785. About 1782 Cooke introduced him to the orchestra of the Academy of Ancient Music, and the associations he there formed gave him his first bias towards glee-writing. He occasionally played the oboe in the orchestra of the Academy. In 1785 he carried off three of the four prize medals given by the Catch Club, by his catch 'O beauteous fair', his canon 'Blessed is he' and his glee 'Dull repining sons of care'. On 4 July in the same year he took the degree of Bachelor of Music at Oxford, setting as his exercise Joseph Warton's 'Ode to Fancy'. The autograph score of his two-act opera 'The Mistakes of a Day', dated 1785, is in the British Museum (Add MSS 27638). While there is no record of a production, it should be pointed out that a musical entertainment of the same title, also in two acts, was given at Norwich in 1787 (as appears from an anonymous manuscript libretto in the John Larpent Collection<sup>1</sup>, now in the Huntington Library at San Marino, California).

In 1787 Callcott took an active part with Arnold and others in the formation of the Glee Club. In 1788 he was elected a member of the Royal Society of Musicians and in 1789 chosen joint organist, with Charles S. Evans, of St Paul's, Covent Garden. Four years later he became organist to the Asylum for Female Orphans, a post he held till 1802.

Although he now ranked as one of the ablest and most popular composers of the day, Callcott had but little skill in orchestral writing. He therefore availed himself of the opportunity afforded by Haydn's visit to England in 1791 to take lessons in instrumental composition from that master. While studying under Haydn, Callcott composed his fine song 'These as they change' for Bartleman. From 1790 to 1793 he was awarded nine medals by the Catch Club for his compositions: two in 1790 for the canon 'Call to remembrance' and the glee 'O voi che sospirate', three in 1791 for the catch 'Tom Metaphysician', the canon

<sup>1</sup> Larpent was the Lord Chamberlain's official examiner of plays from 1778 to 1824, and the collection consists of about 2500 plays (including many operas) submitted to him for licence.

'I am well pleased' and the glee 'Triumphant Love', three in 1792 for the canon 'O Israel' and the glees 'See, with ivy chaplet bound' and 'Father of heroes', and one in 1793 for the canon 'Christ being raised'.

In 1797 he issued a prospectus for a musical dictionary he had planned, having acquired large collections of music for the purpose, including the manuscripts left by Boyce. On 18 June 1800 he proceeded Doctor of Music at Oxford. In 1795, upon the formation of a volunteer corps at Kensington, Callcott had accepted a commission in it. Aided by a subscription he formed a band for the corps in 1801, for which he not only purchased the instruments and composed and arranged the music, but also instructed the performers. In 1802 he wrote an anthem for Arnold's funeral. The compilation of his dictionary proceeding but slowly and, thinking the public had a right to expect some theoretical work from him, he employed himself in 1804 and 1805 in writing his 'Musical Grammar', which was published in 1806. In the latter year he wrote for Bartleman a scena upon the death of Nelson, and in 1807 he was appointed to lecture on German music at the Royal Institution. Further activity was suddenly interrupted by mental collapse, during which period (in 1809) his professional friends gave a concert on his behalf; and so strong was the desire to show sympathy for him that it was found that the opera-house in the Haymarket was the only building large enough to contain the numbers who thronged to be present.

Callcott's principal works were his very numerous glees and other pieces of vocal harmony, mostly published singly, but he left in manuscript many anthems, services, odes, etc. His fine scena 'Angel of life' was written for Bartleman. His son-in-law, William Horsley, edited in 1824 a collection of his best glees, catches and canons, in 2 folio volumes, with a memoir of the composer and an analysis of his compositions. The work also contains a portrait of Callcott from a painting by his brother Augustus, afterwards Sir Augustus Callcott, F.A. A volume of 12 of his glees, all dated and holograph, of the year 1785, are preserved in the Euing Collection, Glasgow University, where other compositions of his may be found in manuscript, autograph and otherwise. Besides the above-named works Callcott was associated with Arnold in the selection, adaptation and composition of the tunes for 'The Psalms of David for the use of Parish Churches' (1791).

Callcott left a numerous family. His daughter Sophia became eminent as a teacher of the pianoforte, and his younger son, William Hutchins Callcott (b. 28 Sept. 1807; d. 5 Aug. 1882), attained distinction as a composer and arranger. His elder son William Robert

Stuart Callcott (1852-86) was a skilful organist. W. H. H., adds.

**CALLS, MILITARY.** See MILITARY CALLS.

**CALORI, Angiola** (b. Milan, 1732; d. ? , c. 1790).

Italian soprano singer. Nothing is known of her career in Italy before she appeared in London on 10 Jan. 1758 in Cocchi's 'Zenobia'. After singing in the pasticcio of 'Solimano' on 31 Jan., she took part in three other works by Cocchi, 'Issipile' (14 Mar.), 'Attalo' (11 Nov.) and 'Ciro riconosciuto' (16 Jan. 1759). The later London productions in which she appeared (not counting pasticcios) were:

Perez, 'Farnace' (21 Apr. 1759).

Cocchi, 'Clemenza di Tito' (15 Jan. 1760).

Jommelli, 'L'isola disabitata' (13 Mar. 1760).

Cocchi, 'Erganda' (31 May 1760).

Galuppi, 'Il mondo alla luna' (22 Nov. 1760).

Galuppi, 'Il filosofo di campagna' (6 Jan. 1761).

Cocchi, 'Tito Manlio' (7 Feb. 1761).

Perez, 'Didone abbandonata' (14 Mar. 1761).

Berton, 'La pesca' (28 Apr. 1761).

Calori's name does not occur in London again after that. She had a soprano voice of great extent, a profound knowledge of music and extraordinary rapidity of execution. In 1770 she was singing at Dresden with great success. She returned to her native country in 1774 and continued to sing at the various opera-houses of Italy until 1783. J. M.

**CALUSIO, Ferruccio** (b. La Plata, 22 Dec. 1889).

Argentine conductor. He studied music first at La Plata and then in Buenos Aires. Having obtained a scholarship from the government of the Province of Buenos Aires, he left for Milan in 1909, where he studied with Frugatti and Mappelli. In 1912 he received the teacher's diploma and went to Memmingen to continue his studies with Max Reger. He started his conducting career in Italy in 1931 and came under the influence of Toscanini. After conducting at the Milan Scala and other theatres, he also conducted symphony concerts in Italy and France, taking over the Madrid Symphony Orchestra for a time on Arbós's death. Calusio had been *maestro substituto* at the Colón Theatre in Buenos Aires since 1923, and from 1927 onwards he has been a regular conductor there besides being director-general during several seasons, including 1948. N. F.

**CALVÉ, Emma** (Rosa Emma Calvet) (b. Décazeville, 15 Aug. 1858; d. Millau, Aveyron, 6 Jan. 1942).

French soprano singer. She was a pupil of Mathilde Marchesi and of Puget, and made

her début at Nice. Her first important appearance was at the Théâtre de la Monnaie, Brussels, as Marguerite in Gounod's 'Faust' on 23 Sept. 1882. Her first engagement in Paris was at the Théâtre-Italien, where she created the part of Bianca in Dubois's 'Aben Hamet' on 16 Dec. 1884. In the following Mar. she sang at the Opéra-Comique, and after some successful tours in Italy she reappeared at the Théâtre-Italien as Leila in Bizet's 'Pêcheurs de perles' in 1889. Returning to the Opéra-Comique, she sang the part of Santuzza in 'Cavalleria rusticana' for the first time in Paris on 19 Jan. 1892, and on 16 May of the same year made her first appearance in the same part in London, at Covent Garden. She was for many years an almost annual visitor to London and established herself among the first favourites of the operatic public. In Santuzza and Carmen her southern blood enabled her to give impersonations of the utmost vividness and dramatic force. She was considered to be the greatest Carmen of all who have appeared in the part.

Calvé created the part of Anita (written for her) in Massenet's 'Navarraise' in London on 20 June 1894 and sang in the same composer's 'Sapho' for the first time in Nov. 1897 at the Paris Opéra-Comique. She made some special appearances as Ophelia in Ambrose Thomas's 'Hamlet' at the Opéra in May 1899, but the part was not considered to suit her style when she sang it in London. She visited the U.S.A. in 1893, and made her first appearance there as Santuzza on 29 Nov. Her Carmen, first given there on 20 Dec., created "an indescribable sensation". Her stage success on both sides of the Atlantic continued till 1910, after which her appearances were confined to occasional concert performances. Her voice, a soprano of remarkably beautiful timbre, was very emotional, indeed almost luscious in quality, and exquisitely trained.

**CALVIN, Jean.** For description of psalters see BOURGEOIS.

**CALVISIUS, Seth** (b. Gorsleben, Thuringia, 21 Feb. 1556; d. Leipzig, 24 Nov. 1615).

German musician, astronomer and chronologer. His poverty interfered greatly with his education, but he contrived to attend the Magdeburg "Gymnasium" in 1572 and the Universities of Helmstedt (1579) and Leipzig (1580), and to avail himself of every opportunity of musical instruction. In 1581 he was made *Repetent* at St. Paul's Church, Leipzig, in 1582 cantor at Schulpforta and in 1594 cantor and *Schulcolleg* at St. Thomas's School

and musical director at St. Thomas's Church of Leipzig. For music he gave up much—for instance, the chair of mathematics at Wittenberg, offered him in 1611. His treatises are:

- 'Melopoeia . . .' (Erfurt, 1592, Magdeburg, 1630).
- 'Compendium musicae practicae . . .' (Leipzig, 1594, 2nd ed. 1602).
- 'Musicae artis praecepta . . .' (Leipzig, 1612; ed. 3 of the 'Compendium').
- 'Exercitationes musicae duae . . . (tertia)' (Leipzig, 1600 and 1611).

His music, original and edited, comprises:

- 'Hymni sacri latini et germanici' (1594).
- 'Harmonia cantionum, a M. Luthero . . . compositorum' (Leipzig, 1597).
- 'Bicinia 70' (1599).
- 'Bicimorum libri duo . . .' (Leipzig, 1590 and 1612).
- 'Tricina . . .' (Leipzig, 1603).
- 'Der 150. Psalm für 12 Stimmen . . .' (Leipzig, 1615).
- 'Schwanengesang' for 8 voices (1616).
- 'Der Psalter Davids . . .' (Leipzig, 1617).

Many motets and hymns are in manuscript in the Library of St. Thomas's School, and his pretty 'Joseph, lieber Joseph mein' is in Vol. III of 'Arion'. G.

**CALVOCORESSI, M. D. (Michel Dimitri)** (b. Marseilles, 2 Oct. 1877, d. London, 1 Feb. 1944).

Franco-English critic and writer on music, of Greek parentage. He was educated in Paris and made a considerable reputation as a writer on musical subjects, through numerous articles in French and English periodicals, translations and original books. He was particularly concerned with Russian music and modern musical developments, and his lectures (1905-14) in Paris (École des Hautes Études Sociales) brought to notice many new works and served to elucidate the aims of composers then considered obscure.

Calvocoressi was an exceptionally versatile linguist, capable of making translations from a great variety of European languages. Among several biographical books the most important was that on 'Mussorgsky' (1908) written in French and translated into English, Spanish and German. An English work on the same composer, written for the 'Master Musicians' series (1946) remained unfinished and was completed after his death by Gerald Abraham, who also collaborated with him in 'Masters of Russian Music' (1936). 'The Principles and Methods of Musical Criticism' (1923) attempted to lay out a ground-plan for consistent criticism, and 'Musical Taste and How to Form it' (1925) was a valuable contribution to aesthetics. Calvocoressi lived in London and was a regular correspondent on music to several continental papers.

**Calzabigi, Ranieri (da).** Italian literary man. He was born at Leghorn on 23 Dec. 1714 of humble parents and was probably never entitled to the prefix "da", but clearly had some sort of classical education. He was at Naples in his thirties, where he wrote his first libretto, the *festa teatrale* 'L'impero dell'universo', for the French dauphin's marriage with the Spanish infanta. The second, 'Il sogno d'Olimpia', he sent to Metastasio, who praised it, with whom he remained in touch and an edition of whose works he contrived to publish in Paris in 1755, during a stay there which seems to have lasted several years. He wrote a preface, 'Dissertazione su le poesie drammatiche del sig. Abate Pietro Metastasio'. Under the protection of Mme de Pompadour he started a lottery with his brother Antonio Maria in 1757, Casanova becoming a partner with a small share. The brothers seem to have been expelled from Paris, and they next went to Brussels. In 1761 Calzabigi went to Vienna, where he established personal contact with Metastasio and styled himself Chamber Councillor to the Counts of the Netherlands.

It is as the author of three librettos for operas by Gluck that Calzabigi remains known to fame, and to the musico-dramatic ideas they exhibit is due a good deal of the credit usually given to Gluck alone for such operatic "reforms" as his later works represent, reforms of which his work had shown scarcely a trace before he had met this collaborator.

Artega's attack on Calzabigi in his three-volume 'Rivoluzioni del teatro musicale italiano' (1783-88) drew from the latter a spirited reply in his 'Risposta' of 1790, a document of permanent importance to operatic history.

Calzabigi died at Naples in July 1795.

**CAMBERT, Robert** (b. Paris, c. 1628; d. London, c. Feb. 1677).

French composer. He was a pupil of Chambonnières and from about 1655 for some years organist of the church of Saint-Honoré in Paris. His first composition (not extant) was an *élégie à trois voix en espèce de dialogue*, 'La Muette ingrate', which was performed at his house. Through Cardinal Della Rovere, Archbishop of Turin, the pope's nuncio in Paris, Cambert was brought into contact with the Abbé Pierre Perrin (1625-75); from their common efforts rose the "première comédie

françoise en musique", the so-called 'Pastorale d'Issy', first performed in the country house of the king's goldsmith, M. de La Haye, at Issy near Paris, Apr. 1659. Received with great applause (8 or 10 performances), this so-called first French comedy in music<sup>1</sup> was produced at Vincennes before the court, on Cardinal Mazarin's prompting, again with great success. Cambert and Perrin then collaborated in a more ambitious work, a five-act opera on the subject of Ariadne and Bacchus. This, however, owing to the death of Mazarin (9 Mar. 1661) was not produced in Paris (but only many years later in London).

In 1666 Cambert was appointed superintendent of music to the dowager queen, Anne of Austria (the widow of Louis XIII), and it was probably through her influence that on 28 June 1669 he and Perrin obtained a royal privilege to perform "académies d'opéra ou représentations en musique et en langue françoise, sur le pied de celles d'Italie". They joined forces with the Marquis de Sourdeac as producer and with the ballet-master Beauchamps, recruited singers in the province of Languedoc and rented, on 8 Oct. 1670, the Salle du Jeu de Paume "de la Bouteille" for five years. Guichard, architect to the Duke of Orleans, converted the building into a theatre, and this first home of the Paris Opéra was inaugurated on 3 Mar. 1671, with 'Pomone', a five-act pastoral opera by Cambert (libretto by Perrin), of which the prologue and the first act have survived. So far as can be judged from the librettos, 'Pomone' did not differ much from the 'Pastorale d'Issy' of 1659 (the music of which is lost).

'Pomone' was followed in the beginning of 1672 by 'Les Peines et les plaisirs de l'amour', the music again by Cambert, the libretto by Gabriel Gilbert, Saint-Évremond calls this second opera "plus poli et plus galant, les voix et les instruments s'étoient déjà mieux formés pour l'exécution". Again, as in the case of 'Pomone', prologue and first act only are extant. A few weeks after the performance, probably on 13 Mar. 1672, the opera privilege passed into Lully's hands and Cambert's Paris career came to an abrupt end. He left France and followed his pupil Grétry to London, where he arrived in Sept. 1673. He founded, on the model of the French Académie, a short-lived "Royall Academy of Musick", situated in Bridges Street, Covent Garden, and it was here that 'Ariane, ou Le Mariage de Bacchus' (either with his original music of 1659, or in a new setting by Grétry) made a belated appearance in Mar. 1674.

<sup>1</sup> Since Pougny wrote 'Les Vrais Créateurs de l'opéra français' (1881) it was generally considered to be the first French opera until Henry Quittard, in 1908, pointed out the priority of 'Le Triomphe de l'amour sur des bergers et bergères' (1654-55), music by Michel de La Guerre.

His 'Pomone' was revived at the theatre in Whitehall in July 1674, and he was probably also the composer of a 'Ballet et musique pour le divertissement du Roy de la Grande-Bretagne' (libretto printed "Dans la Savoye par Thomas Nieucombe", 1674). Nothing more of Cambert's activities in London is known until his death, early in 1677. He is said to have been poisoned by a servant. The 'Mercure galant' published an *éloge funèbre* in Apr. 1677.

Apart from the fragments of 'Pomone' and 'Les Peines et les plaisirs de l'amour', the only music by Cambert extant is a collection of 'Airs à boire', for two and three voices (published 1665) and a 'Trio italien burlesque' the voice parts of which are printed in 'Le Jaloux invisible', a three-act comedy by Guillaume Marcoureaux de Brécourt, performed in Paris, at the Hôtel de Bourgogne, on 20 Aug. 1666 and published the same year. 'Le Tombeau de Clémène', sometimes mentioned as an independent work, is part of Act II of 'Les Peines et les plaisirs de l'amour', while 'La Mort d'Adonis', which also appears in some books of reference among Cambert's compositions, was by C. J. B. Boesset.

**CAMBIATA.** See ORNAMENTS, C (ii).

**CAMBINI, Giovanni Giuseppe** (b. Leghorn, 13 Feb. 1746; d. Bicêtre nr. Paris, 29 Dec. 1825).

Italian violinist and composer. He studied the violin with Pohl, also theory under Martini at Bologna, between 1763 and 1766. In the latter year he produced an opera at Naples without success. Having formed an attachment for a girl from his native city, he was returning thither with her to be married when their vessel was captured by corsairs and they were both sold as slaves in Barbary. There a rich Venetian merchant bought Cambini and gave him his liberty. In 1770 he went to Paris and was introduced to Gossec, who performed some of his symphonies at the Concert Spirituel. These works, though very slight,

were written with the flowing melody characteristic of Italian music and created a highly favourable impression.

During the ensuing twenty years Cambini, remaining in Paris, produced an enormous mass of music: 60 symphonies; 144 string quartets, 29 'Symphonies concertantes'; 7 concertos; about 400 pieces for different instruments, including duos, trios, quartets with oboes; organ pieces; solfeggi, methods; 15 patriotic hymns, an oratorio, 'Le Sacrifice d'Abraham' (Concert Spirituel, 1774) and another, 'Joad'; a 'Miserere' (Concert Spirituel, 1775); also more than 20 operas (1776-98) and ballets. He was conductor at the Théâtre des Beaujolais (1788-91) and at the Théâtre Louvois (1791-94). In 1804 he wrote some articles in the Leipzig A M Z, and in 1810 and 1811 was joint-editor of the 'Tablettes de Polymnie'.

Towards the end of his life Cambini maintained himself by arranging popular airs and other like drudgery, but even this resource failed him, and his last ten years were spent in the almshouses of the Bicêtre, where he died.

His best works were his quartets. He excelled so much in playing that style of music that Manfredi, Nardini and Boccherini, the three most eminent quartet players of that epoch, each chose him to play the viola with them. Cambini wasted in dissipation abilities which might have placed him in the foremost rank of musicians, and so little was he troubled with a conscience as to undertake to write some quartets and quintets in the style of Boccherini, which were published by Pleyel, indiscriminately with genuine compositions of that master.

M. C. C.

**CAMBIO, Perissone** (b ?; d. ?).

French (?) 16th-century singer and composer. In ancient collective volumes he is often referred to merely as Perisson, Pierreson, etc., and is probably identical with "Pyrison, a celebrated composer of Venice", as Duke Albert of Prussia's agent calls him when sending the duke a mass to Nuremberg (probably the Mass "super de beata Virgine" by "Piereson" in the Berlin Library). He is not to be confused with "Pierson", a name occasionally used at the beginning of the 16th century for Pierre de La Rue.

Cambio was a singer at St. Mark's, Venice, and Caffi says that he was of French birth and nationality. Burney (Hist., IV, 214), who reproduces a villota from his 'Canzone villanesche . . .', speaks of him as one of the greatest masters of his time. Of his compositions are known, apart from the above Mass, 3 books of madrigals and one of 4-part 'Canzone villanesche alla Napoletana' (2 eds.), published in 1545-51, besides a considerable number of songs in various collective volumes.

E. v. d. s.

**CAMBRIDGE.** The Cambridge University Musical Society (C.U.M.S.), the most important institution for the regular performance of music at Cambridge, apart from College choirs and societies, was founded as the Peterhouse Musical Society by a little body of amateurs in Michaelmas Term 1843. The earliest record which it possesses is the programme<sup>1</sup> of a concert given at the Red Lion in Petty Cury on Friday, 8 Dec.

In its early days the Society was mainly devoted to the practice of instrumental music. The Peterhouse Society had been in existence for about eighteen months, and had held eleven "Public Performance Meetings", when the name was changed to that of the Cambridge University Musical Society.

The first concert given by the newly named Society was held on 1 May 1844, it included Haydn's "Surprise" Symphony, and "Mr. Dykes of St Catharine's College" sang John Parry's 'Nice young man' and (for an encore) the same composer's 'Berlin Wool'. The "Mr Dykes" who thus distinguished himself was afterwards well known as the Rev. J. B. Dykes, the composer of hymn-tunes. There is not much variation in the programmes during the early years of the Society's existence. Two or three overtures, an occasional symphony or pianoforte trio, with songs and glees, formed the staple, but very little attention was given to choral works. The conductors were usually the presidents of the Society. In 1846 Walmisley's name frequently appears, as in his charming trio for three trebles, 'The Mermaids', and a duet concertante for oboe and pianoforte.

In Dec. 1852 professional conductors began to be engaged. One of the earliest of these (Amps) turned his attention to the practice of choral works. The result was shown in the performance of a short selection from Mendelssohn's 'Elijah' (15 Mar. 1853), 'Antigone' music (28 May 1855) and 'Oedipus' (26 May 1857), when Dr. Donaldson read his translation of the play. Sterndale Bennett, on his election to the professional chair of music, undertook, whenever time would allow, to conduct one concert a year. In fulfilment of this promise, on 17 Nov. 1856, he conducted a concert and played in his own Quintet for wind and pianoforte, the quartet being all professionals. In the next few years the Society made steady progress, the most notable performances being Mozart's Requiem, Bach's Concerto for three claviars, Beethoven's 'Ruins of Athens', the 'Antigone' again, a selection from Gluck's 'Iphigenia in Aulis', Beethoven's C major Mass and choral Fantasy, and a concert in memory of Spohr (7 Dec. 1859).

<sup>1</sup> This programme was printed in full in the first and second editions of this Dictionary.

In 1860 the Society gave its first chamber concert (21 Feb.). In the following year it gave a performance of the 'Oedipus' in the Hall of King's College, the dialogue being read by the Public Orator, the Rev. W. G. Clark. At a subsequent performance of the 'Antigone' in the Hall of Caius College (20 May 1861) the verses were read by the Rev. Charles Kingsley.

In 1870 Stanford (then an undergraduate at Queen's) made his first appearance at a concert on 30 Nov., when he played a 'Nachtstück' by Schumann and a waltz by Heller. In 1873 he succeeded Hopkins as conductor, and one of his first steps was to admit ladies to the choir as associates. This was effected by amalgamating the C.U.M.S. with the Fitzwilliam Musical Society, a body which had existed since 1858. The first concert in which the newly formed chorus took part was given on 27 May 1873, when Sterndale Bennett conducted his 'May Queen'. In the following year the Society performed Schumann's 'Paradise and the Peri' (3 June 1874), and on 2 May 1875 his 'Faust' music (part iii) for the first time in England. The custom of engaging an orchestra, consisting mainly of London professionals, now began and enabled the C.U.M.S. to perform larger works than before. The number of concerts had gradually been diminished, and the whole efforts of the choir were devoted to the practice of important compositions. By this means the Society acquired a reputation as a pioneer among English musical societies, and produced many new and important compositions besides reviving works which, like Handel's 'Semele' and 'Hercules', or Purcell's 'Yorkshire Feast Song', had fallen into undeserved oblivion. The first performance in England of Brahms's Symphony in C minor on 8 Mar. 1877 deserves special record.

In 1876 a series of Wednesday Popular Concerts was started, which continued for some years. These were given in the small room of the Guildhall and generally consisted of one or two instrumental quartets or trios, one instrumental solo and two or three songs. The performers consisted of both amateur and professional instrumentalists. More important chamber concerts were also given in the Lent and Easter terms; to these Joachim — an honorary member of the Society — often gave his services.

The Wednesday Popular Concerts were developed by Stanford in 1888 into a series of concerts partly orchestral, partly chamber, which came to an end in 1893, owing to want of financial support. A later series of similar kind, rather less ambitious, started by Alan Gray, came to an end in 1896. Others followed and the various schemes were modified from time to time, but the C.U.M.S., under

the conductorship of Cyril B. Rootham, who succeeded Gray in 1912, carried on the tradition established by Stanford of performing a wide range of the finest works both choral and orchestral.

A few events in the more recent history of music at Cambridge deserve record. In most of them the C.U.M.S., or at any rate its members, have taken an active part. On 14 Mar. 1923 the C.U.M.S. combined with the Oxford Bach Choir in giving a concert in London at the Albert Hall, when Beethoven's 'Missa Solemnis', Rootham's 'Brown Earth' and Vaughan Williams's 'Toward the Unknown Region' formed the programme. In the same year (2-8 June) a six-days' festival of British music was given at Cambridge, the programmes of which ranged from Elizabethan music to that of the present day with performances of old English operas, 'The Judgment of Paris' (Congreve and Eccles) and 'Midas' (burletta by O'Hara) in Neville's Court, Trinity College. Vaughan Williams's ballet 'Old King Cole' was then heard for the first time.

Dramatic music formerly cultivated in the universities chiefly as part of the academic performances of Greek plays has been furthered by certain operatic productions given by members of Cambridge University. These have included 'The Magic Flute', 1 and 2 Dec. 1911, 'The Fairy Queen' (Purcell), 10-14 Feb. 1920, the first production of Rootham's 'The Two Sisters', 14-18 Feb. 1922, and Handel's 'Semele', 10-14 Feb. 1925. All these were under Rootham's musical direction.

The Cambridge University Musical Club was founded in 1889 on the lines of the Oxford Musical Union and affiliated thereto. It holds weekly meetings for chamber music during term and provides a class in ensemble playing for its members (about 250) under professional direction.

Musical activities at Cambridge received a considerable stimulus by the appointment to the Professorship in 1926 of Edward J. Dent in succession to Charles Wood. Dent's interest in modern music and in musical research encouraged the periodic visits to Cambridge both of continental composers to hear or to conduct their own works and of musicologists. With Rootham as conductor of the C.U.M.S. a remarkable series of performances ranging from Purcell and dramatic presentations of Handel's oratorios to Vaughan Williams's comic opera were given as follows:

- 1927. Kodály's 'Psalmus Hungaricus' (first performance in England).
- 1928. Purcell's 'King Arthur' (Dramatic).
- 1929. Honegger's 'King David', dramatic version (first performance in England).
- 1930. Festival of English Music.
- 1931. Purcell's 'Fairy Queen' (Dramatic).
- 1932. Handel's 'Samson' (Dramatic).

- 1933. Festival of English Music (1200-1700) for the Society of Musicologists.
- 1934. Handel's 'Jephtha' (Dramatic).
- Pizzetti's Mass for unaccompanied voices.
- 1935. Handel Festival.
- 1936. Vaughan Williams's 'The Poisoned Kiss'.
- 1937. Handel's 'Saul' (Dramatic).
- 1938. Handel's 'Samson' (Dramatic).

When Rootham's failing health caused his retirement in 1937, he was succeeded as conductor of the C.U.M.S. by Boris Ord. In 1938 a Summer Festival was held in connection with a further Congress of Musicologists.

The death of Rootham in 1938 left vacant the posts of organist of St. John's College and University Lecturer in form and analysis; of these the former was filled by Robin Orr and the latter by Patrick Hadley, who both returned to Cambridge in the autumn of 1938. The war of 1939-1945 inevitably affected the musical life of the University in various ways. During the absence in the R.A.F. of Boris Ord and Robin Orr, the post of organist of King's College was held by Harold Darke and that of St. John's by Herbert Howells. The University Musical Society was conducted by Patrick Hadley during that period and the works performed under his direction included Delius's 'Appalachia' and 'The Song of the High Hills', and Rootham's 'City of the West'. Meanwhile, on the academic side, despite a greatly reduced number of students, the work of the musical faculty continued without interruption.

In 1941 Dent retired from the Professorship, which was left vacant until after the end of the war. Work of great value was done by H. S. Middleton, organist of Trinity College and secretary of the faculty, and it was largely due to his energy and drive that the musical tripos was established in 1945. This, coming at the end of the war, soon led to a great increase in the number of students and also to a widening of the range of the musical curriculum. In 1946 Patrick Hadley was elected Professor of Music, and the appointment of Thurston Dart as University Lecturer in 1947 provided a keen stimulus to musicological studies. Handel's 'Solomon' was given dramatically by the C.U.M.S. under Boris Ord in 1948, and in the same year a festival was held in conjunction with the B.B.C., which included a performance of Patrick Hadley's 'The Hills'. Purcell's 'Dioclesian' and 'King Arthur' were staged at the Arts Theatre in 1947 and 1949, and these productions, like that of 'Solomon', continued very successfully a tradition that had been well established at Cambridge before the war. Equally notable were the performances at Girton, in the open air, of Cavallieri's 'La rappresentazione di anima e di corpo' in 1949 and of Monteverdi's 'Orfeo' in 1950, produced by Mrs. A. P. Vlasto.

W. B. S., H. C. C. & P. F. R.

**CAMDEN, Archie** (b. Newark-on-Trent, 9 Mar 1888)

English bassoonist and conductor. He studied at the Royal Manchester College of Music from 1904 to 1908 and obtained his A.R.M.C.M. diploma with distinction. He is also an F.R.M.C.M. From 1914 to 1933 he was principal bassoonist of both the Hallé and the Liverpool Philharmonic Orchestras, and during the same period he was a professor at the Royal Manchester College. In 1933 he became principal bassoonist of the B.B.C. Symphony Orchestra in London for thirteen years and in 1946 he was appointed a professor of the R.C.M. there. In 1922-33 he conducted the Manchester Orchestral Society and from 1923 to 1927 the Bolton Orchestral Society. In the following years he became conductor of the Burnley Symphony Orchestra until 1933, and since 1937 he has conducted the Stock Exchange Symphony Orchestra in London.

As a soloist Camden has given many concert performances of the most important bassoon solos, the concertos of Mozart, Vivaldi and Weber, as well as those by Eric Fogg and Gordon Jacob, which are dedicated to him. His tone, though mainly light and rather dry, can acquire great warmth and range of tone, and he is master equally of elaborate staccato work in the concertos and sustained *cantabile* passages. M. K. W.

**CAMERA** (Ital. = chamber). A *sonata* or *concerto da camera* is a chamber-music work of secular character, chiefly Italian of the 17th and early 18th centuries, written "for a room" and so called to distinguish it from the *sonata* or *concerto da chiesa*, which was intended for performance in a church G., adds.

See also Chamber Music.

**CAMERACO, Jo. (? Johannes) de** (b. ?, d. ?).

French 15th-century composer. He is known to have been a member of the Papal Chapel in Rome in 1418. A setting of a piece from the 'Ordinarium Missae' is preserved at Bologna (Liceo Musicale 37) E. D. (ii).

BIBL.—DANNEMANN, E., 'Die spätgotische Musiktradition in Frankreich und Burgund vor dem Auftreten Dufays' (Strasbourg, 1936).

HASERL, FRANZ XAVER, 'Die römische Schola cantorum und die päpstlichen Kapellsänger bis zur Mitte des 16. Jahrhunderts' (V M W, III, Leipzig, 1887).

**CAMERATA** (Ital, fellowship, society). The collective name by which is known the group of musicians working together at Florence about 1600 under the patronage of Giovanni de' Bardi (Conte di Vernio) and Jacopo Corsi.

See also Caccini (G.). Cavalieri. Gagliano. Galileo. Peri.

**CAMERLOHER** (*Cammerlocher, Cammerlochner*), **Placidus von** (b. Murnau, 9 Aug. 1718; d. Freising, 21 July 1782).

German composer. He was educated at

the academy of the nobility at Ettal, after which he apparently belonged to the court chapel at Munich. In 1748 he took holy orders and became a canon at St. Veit and afterwards at St. Andreas, Freising, where he was simultaneously court *Kapellmeister* and councillor to the Prince-Bishop. He composed a Passion music, oratorios, an opera, 'Melissa' (1739), and a considerable amount of instrumental music, including quartets, trio and solo sonatas, and 4-part symphonies.

E. v. d. s., rev.

**CAMERON, Basil** (b. Reading, 18 Aug. 1884).

English conductor. He was educated at Tiverton Grammar School from 1890 to 1897 and studied music privately at York with Editha Knocker and Tertius Noble in 1900-1902, before going to the Berlin High School for Music in 1902. He remained there till 1906. In 1912 he became conductor of the Torquay Municipal Orchestra for four years, during which time he conducted a Wagner Centenary Festival in 1913 and arranged other notable events much beyond the ordinary scope of seaside resorts in those days. He was then known as Basil Hindenberg, and when on the outbreak of the first world war he reverted to his own name, he found that the ironical situation was that it was as difficult to convince some people that this was not merely a change for convenience as it had previously been to persuade the public that a musician named Cameron could conduct.

From 1923 to 1930 Cameron was conductor of the Hastings Municipal Orchestra. He also conducted annual Music Festivals for six years from 1924 at Harrogate, and for two years at Hastings. The next two years he spent with the San Francisco Symphony Orchestra, conducting jointly with Issay Dobrowen, and from 1932 to 1938 he conducted the Seattle Symphony Orchestra. On his return from the U.S.A. he became one of the principal conductors of the London Promenade Concerts, and he has frequently conducted the B.B.C. Symphony Orchestra, the L.P.O. and the L.S.O., besides a number of the Royal Philharmonic Society's concerts. He has also given concerts with the Amsterdam Concertgebouw Orchestra, the Berlin Philharmonic, the Czech Philharmonic and the Budapest Symphony Orchestras, among others. He is one of Britain's best-known conductors, with a catholic taste that includes the works of numerous composers, such as Elgar, Falla, Bax, Stravinsky and Sibelius, besides the standard classics. M. K. W.

**CAMIDGE**. English family of musicians.

(1) **John Camidge** (b. York, 1735; d. York, 25 Apr. 1803), organist. He went to London before his first appointment to Doncaster Parish Church, and studied under

Greene, taking some lessons from Handel. On the resignation of his master, James Nares, in 1756, he was appointed organist of York Minster, which post he held until 11 Nov. 1799. He published 'Six Easy Lessons for the Harpsichord'.

(2) **Matthew Camidge** (b. York, 1758; d. York, 23 Oct. 1844), organist and composer, son of the preceding. He received his early musical education in the Chapel Royal in London under Nares. He was at first assistant organist at York Minster, and on the resignation of his father in 1799 he was appointed his successor as organist. He published a number of sonatas, etc., a collection of tunes adapted to Sandys's version of the Psalms (York, 1789), and 'A Method of Instruction in Musick by Questions and Answers'. He resigned on 8 Oct. 1842.

(3) **John Camidge** (b. York, 1790; d. York, 21 Sept. 1859), organist and composer, son of the preceding. He graduated at Cambridge as Mus.B. in 1812 and as Mus.D. in 1819. About 1828 he published a volume of cathedral music of his composition. He received the appointment of organist of York Minster on the resignation of his father in 1842, having for many years previously discharged the duty. In 1848, when he was stricken with paralysis, his duties were undertaken until his resignation in 1858 by his son (4).

(4) **Thomas (Simpson) Camidge** (b. York, 2 Feb. 1828; d. York, 19 Dec. 1912), organist, son of the preceding. He studied at the Leipzig Conservatory and was appointed deputy organist of York Minster (1848-58), having been organist of Hexham Abbey.

(5) **John Camidge** (b. York, 8 Dec. 1853; d. Beverley, 22 Sept. 1939), organist, son of the preceding. He was educated as a chorister in Christ Church Cathedral, Oxford, 1862, and later was a pupil of E. G. Monk of York Minster. He was appointed organist of Beverley Minster in 1876.

W. H. H., adds.

**CAMP-MEETING SONGS, AMERICAN.** See SPIRITUALS.

**CAMPAGNOLI, Bartolomeo** (b. Cento nr Bologna, 10 Sept. 1751; d. Neustrelitz, 7 Nov. 1827).

Italian violinist and composer. He learned the violin from Dall'Ocha, a pupil of Lolli's from Guastarobba, of the school of Tartini, and afterwards from Nardini. While in the orchestra of the Teatro della Pergola at Florence he made friends with Cherubini. He led the opera orchestras at Florence and Rome alternately for some years, and in 1776 became *Konzertmeister* to the Bishop of Freising. In 1779 he entered the service of the Duke of Courland at Dresden. From 1783 to 1786 he was travelling in north Europe; in 1788 he revisited Italy. In 1797 he was leader at the Gewandhaus concerts at Leipzig. In 1801 he visited Paris, renewed his acquaintance with Cherubini and heard R. Kreutzer. He went in 1816 with his daughters, Albertina and Giannetta, two well-known singers, to Italy for a year, and in 1818 settled again at Leipzig. His works comprise concertos, sonatas, duets and smaller pieces for the violin and flute, and a violin-school. His greatest claim to fame lies in his fine 41 'Caprices pour l'alto viola', Op. 22. P. D., adds.

**CAMPANA, Fabio** (b. Leghorn, 14 Jan. 1819; d. London, 2 Feb. 1882).

Italian composer and singing-teacher. He received his musical education at the Liceo of Bologna. In early life he produced several operas with more or less ill-success, according to Fétis, viz. 'Caterina di Guise', Leghorn, 1838, another (name not given by Fétis) at Venice, 1841; 'Vannina d'Ornano', Florence, 1842; 'Luisa di Francia', Rome, 1844; 'Giulio d'Este', at Milan, in or about 1850. He then settled in London, where he was well known as a teacher of singing and a composer, principally of Italian songs, some of which were successful. He composed two other operas, 'Almina', produced at Her Majesty's Theatre, 26 Apr. 1860, with Piccolomini, and 'Esmeralda', produced at St. Petersburg, 20 Dec. 1869, and in London (Covent Garden), 14 June 1870, with Patti as heroine, afterwards produced through her instrumentality at Homburg in 1872. A. C.

**CAMPANE (Ital.).** See BELL (2), ORCHESTRAL.

**CAMPANELLO DI NOTTE, IL** (Opera). See DONIZETTI.

**CAMPANINI, Cleofonte** (b. Parma, 1 Sept. 1860; d. Chicago, 19 Dec. 1919).

Italian conductor. He was educated at Parma and Milan, first appeared as a conductor in 'Carmen' at Parma (1883) and in the same year was engaged as assistant conductor at the Metropolitan Opera House in New York. From 1900 to 1912 he visited London to direct Italian opera at Covent Garden. He also appeared at La Scala,

Milan (1903-6), and toured in Europe and South America. From 1906 to 1909 he was also conductor and artistic director at the Manhattan Opera House, New York. His association with the Chicago Opera House began in 1910 and was maintained till his death. He married Eva, the elder sister and teacher of Luisa Tetrazzini. H. C. C.

**CAMPANINI, Italo** (b. Parma, 30 June 1845; d. Corcagnano nr Parma, 13 Nov. 1896<sup>1</sup>).

Italian tenor singer. He received instruction in singing at the Parma Conservatory and later from Lamperti of Milan. He first attracted public attention in 1871, on the production in Italy of 'Lohengrin' at Bologna under Angelo Mariani. On 4 May 1872 he first appeared in London at Drury Lane as Gennaro in 'Lucrezia', with great success, and sang in England until 1876, notably in 1874 as Kenneth in Balfe's 'Talismano' and as Lohengrin, a part he was first to sing in New York. From 1878 to 1882 he was at Her Majesty's Theatre in London as Don José ('Carmen'), Rhadames ('Aida'), and, 6 July 1880, Faust. He had played the same part on 4 Oct. 1875, on the occasion of the successful performance of Gounod's opera at Bologna. He sang also at St. Petersburg, Moscow and for several seasons in America, where he resided some time and was very popular. On 13 Nov. 1894 he returned to England and appeared at the Albert Hall in Berlioz's 'Faust' with qualified success. A. C.

**CAMPANUS, Johannes** (b. Vodňany, Bohemia, 24 June prob. 1572; d. Prague, 13 Dec. 1622)

Czech humanist. His correct name was Jan Kumpan. From 1601 he was professor at Prague University and its rector in 1621, in the tragic year of the execution of twenty-seven leaders and participants of the Czech revolt against the Habsburgs. Besides many humanistic writings and plays he wrote versified Latin paraphrases of psalms ('*Psalmi poenitentiales*', 1604 *et seq.*) the texts of which (according to the 4th edition) he republished in 1618 under the title '*Sacrarum odarum libri duo*' with interesting polyphonic melodies. He composed 37 simple songs for four voices, which but for their lively tunes, would resemble the current manner of humanistic composition as exemplified by Tritonius. However, he composed music to a paraphrase of Psalm XXVIII, "Jehova fortis ars mea", an 8-part fugue for two choirs which clearly shows the high standard attained by Czech composers at that time. C. Č.

**CAMPBELL, Alexander** (b. Tombea, Loch Lubnaig, 22 Feb. 1764; d. Edinburgh, 15 May 1824).

Scottish organist. He and his brother John were pupils of Tenducci. He edited and pub-

lished, in 1792, a collection of 12 Scots songs, with an accompaniment for the violin, and later a similar collection with an accompaniment for the harp. Not long after the publication of his songs he abandoned music, including an organist's post at Edinburgh, and took to medicine, but subsequently fell into great poverty. W. H. H.

**CAMPBELL, Colin (Macleod)** (b. London, 12 Mar 1890, d. Farnham, Surrey, 24 June 1953)

British composer and conductor. He was educated at Dulwich College and started life in the office of an insurance broker at Lloyd's, transferring later to one of the large insurance companies. In 1912 he left his profession to study composition under Frederick Corder at the R.A.M., having been almost entirely self-taught until then and having contrived to have a few of his early orchestral works performed under Herbert Godfrey, at the Crystal Palace, etc. After a few terms at the R.A.M. he toured Canada in 1913-14 as conductor of a small company, and after this he spent a short time in New York gaining a different kind of experience in charge of the orchestra in a cabaret.

His first sizable work was a ballet for children, 'Princess Gioia', which was produced by a dancing-school at the Court Theatre, London, in 1918. This led to the commission of another children's ballet, 'A Christmas Fantasy', produced at the Rehearsal Theatre in Maiden Lane, London, the following year, when 'Princess Gioia' was performed at the R.A.M. Next came, apart from a few trifles, the one-act opera 'Thais and Talmae', which was produced by the Carl Rosa Opera Company at Manchester in 1921 and soon afterwards done by the same company in London (Covent Garden). It was repeated there in 1922-23 and revived at the King's Theatre, Hammersmith, in 1928.

Campbell was for several years on the teaching-staff of the London College of Music, after which he joined the editorial staff of Joseph Williams, Ltd., remaining there for about eight years. During that time he wrote many songs, orchestral pieces, a 3-act opera, 'Indomata', and an 'Anacreontic Ode' for mezzo-soprano, baritone, chorus and orchestra. In 1931 he took the B.Mus. degree at Oxford. In 1939 a concert performance of another 3-act opera, 'Maid Marian', was given at the Hyde Park Hotel with a full company and orchestra.

In addition to his activities as a composer Campbell was engaged in many branches of music, as accompanist, conductor, teacher, lecturer and journalist. In 1940 he founded the Highworth Choral Society and in 1948 he became conductor of the Pearl Assurance Orchestra. He was also appointed to the panel of Examiners of the T.C.M. E. B.

<sup>1</sup> 23 Nov. according to 'The Athenaeum'.

**Campbell, Joseph.** See Bax (songs) Hart (F, 14 songs) Quilter (3 songs).

**Campbell, Thomas.** See Stanford ('Battle of the Baltic', choral work).

**CAMPBELL, William** (b. ?; d. ?).

Scottish 18th-century collector of country dances and reels, for the violin, harp, harpsichord and German flute. R. Birchall published the seventh book in 1785, and in all there appeared at least 25 books, the titles of which were slightly different. E. v. d. s.

**Campe, Johann Heinrich.** See Mozart (song).

**Campeggi, Ridolfo (Count).** See Giacobbi ('Andromeda', lib, intermezzi for 'Filarmino', music for 'Reno sacrificante').

**CAMPENHOUT, François van** (b. Brussels, 5 Feb. 1779, d. Brussels, 24 Apr. 1848).

Belgian singer, violinist and composer. His fame rests chiefly on the composition of 'La Brabançonne', now the national air of Belgium, at the time of the revolution in 1830.

He began his career in the orchestra at the Théâtre de la Monnaie. Having developed a high tenor voice, he appeared on the stage, first in amateur performances, then professionally at Ghent and finally at the Monnaie. He made further singing-studies with Plantade, and during the ensuing 30 years he sang in the chief towns of Holland, Belgium and France, and made his farewell appearance at Ghent in 1827. He composed several operas, 'Gratius' (Amsterdam, 1808); 'Le Passe-partout' (Lyons, 1815); 'L'Heureux Men-songe', and others unpublished, besides a ballet 'Diane et Endymion', choruses, church music and songs. M. C. C., rev.

See also National Anthems (Belgium).

**CAMPI, Antonia** (born Miklaszewicz) (b. Lublin, 10 Dec. 1773; d. Munich, 30 Sept. 1822).

Polish soprano singer. Her beautiful voice attracted the attention of a courtier, and she was soon appointed court singer to King Stanislas Augustus in 1788. The next year she appeared in the Warsaw Opera, and her début was voted a great success. She was soon acclaimed the foremost Polish soprano. In 1790 she moved to Bohemia and began to sing at the Prague Opera.<sup>1</sup> It was there that she met a Bohemian bass singer, Campi, whom she married the following year. She then sang at Leipzig, Dresden, Frankfurt o/M., Stuttgart and Vienna. In the last-named town she was court singer for a certain time. She finally settled at Munich, where she died.

C. R. H.

**CAMPIAN (Campion), Thomas** (b. London, 12 Feb. 1567, d. London, 1 Mar. 1620).

English poet and composer. Both spellings of the name were used in his own time. On the title-pages of all his four books of *Airs* the name is spelt *Campion*, and, in its Latin form,

<sup>1</sup> One of the old Polish encyclopaedias (1875) says: "Mozart, struck by the unusual beauty of her voice, is said to have written the part of Donna Diana [sic] ('Don Giovanni') for her and not for Teresa Saporiti" (?).

the poet himself made it *Campianus*. That form is therefore adopted here, but Rosseter used the "o" in the dedication of the 1601 book.

Campion was a physician by profession, and his fame as a poet is universally recognized even though no complete edition of his works was published before that of A. H. Bullen in 1889. Percival Vivian's edition, which followed this later, has added much to our knowledge of his life; but it is as a musician rather than as a poet that we are chiefly concerned with him in the present notice.

Campion was baptized in the London church of St. Andrew, Holborn. His father, John Campian, was a member of the Middle Temple, and his mother, Lucy, was a daughter of Laurence Searle, a serjeant-at-arms to Queen Elizabeth. After John Campian's death in 1576 his widow married Augustine Steward. She died in 1580. Steward then married a widow named Sisley, whose son, Thomas Sisley, thus became the companion of Steward's other stepson Thomas Campian. In 1581 both the boys went up to Cambridge and resided at Peterhouse for four years, although neither of them seems to have graduated in any faculty. Vivian points out that the study of medicine and the love of travel were much encouraged at Peterhouse at this period, and Campian's career may have been influenced by his experiences at Cambridge.

In 1586 he was entered at Gray's Inn, and then a gap occurs in his history. Vivian quotes evidence to suggest that he took part in Lord Essex's expedition which landed at Dieppe in 1591 and laid siege to Rouen. About the year 1602 he first styled himself a "Doctor of Physic", though it is not known from what university he received such a degree. It is certain, however, that he had studied medicine meanwhile, and in 1601 Philip Rosseter refers to his music and poetry as being the "superfluous blossoms of his deeper studies", meaning medicine. It was Campian's medical qualifications that gained him admission to the Tower of London to visit his friend Sir Thomas Monson, accused of complicity in the murder of Sir Thomas Overbury.

Campion died in London and was buried at St. Dunstan's, Fleet Street. By his will<sup>2</sup> he bequeathed all his property, amounting to about £20, to his friend and fellow-lutenist Philip Rosseter, expressing a wish "that it had bin farr more".

The first of Campian's musical publications was 'A Booke of Ayres, Set forth to be song to the Lute Orpherian, and Base Violl'. This volume appeared in 1601 and differs from all the other books of *airs* by the English lutenists in that it really consists of two separate books, one by Campian and one by Rosseter, each of

<sup>2</sup> Commissary Court of London, 1619-20, fol. 358.

which is as large as those of the rest of the series. The words, as well as the music, of Campian's half of this book were undoubtedly written by him, but there is nothing whatever beyond internal evidence to prove that Campian wrote the words of Rosseter's songs, although it has been very generally assumed that he did so.

This book of airs was followed by four more, issued in pairs, but the dates of their publication are not known. The dates 1610 for the first and second books, and 1612 for the third and fourth, were given by Rimbault<sup>1</sup>; but the first and second books cannot have been published before 1612, seeing that the death of Prince Henry is alluded to in them. The third and fourth books contain a reference to the Overbury Plot, and they cannot therefore have been published before Sir Thomas Monson's innocence was established in 1617.

These five books contain altogether more than a hundred solo songs. The third and fourth as well as the Rosseter set were written exclusively as solo songs; the first and second books were "framed at first for one voyce" but later adapted for alternative performance by combined voices.<sup>2</sup> Campian takes very high rank in the remarkable school of English song writers which flourished at the beginning of the 17th century. Unlike Dowland he seldom attempted anything in the way of elaborate structure, but was content to work on a simple scheme, treating the verbal phrases of his lyrics line by line; again, his accompaniments have not the importance or independence which Dowland so often gave to his own; yet he exhibits first-rate genius in the freedom and beauty as well as in the aptness of his musical phrases. This statement will be made clear by reference to two phrases, one of five bars and another of seven, in 'Follow your saint'; and again to the phrasing of 'My sweetest Lesbia'. The setting of 'The cypress curtain of the night is spread' is marked by a very fine poetic imagination.

Campian also wrote several masques, both words and music, for special occasions; among these were a masque performed at Whitehall on Twelfth Night 1607, in honour of the marriage of Sir James Hay, for two of his songs in which he wrote the music: a masque performed in 1613 at the Banqueting House in Whitehall on the marriage of Frederick, the elector palatine, with the Princess Elizabeth, for one song of which he wrote the music. In the same year he wrote a masque for an entertainment in honour of Queen Anne (wife of James I) given at Caversham House by Lord Knollys; and another masque by him was

performed at Whitehall on St. Stephen's Night on the occasion of the marriage of the Earl of Somerset and Lady Frances Howard. The 'Mask of Flowers' presented in honour of this same marriage by the gentlemen of Gray's Inn has been wrongly attributed to Campian. But Vivian attributes to him the authorship of the words of 'The Ayres that were sung and played at Brougham Castle . . . in the King's Entertainment' in 1618, the music of which was composed by George Mason and John Earsden. Campian also wrote the words for a set of 'Songs of Mourning, Bewailing the untimely death of Prince Henry', in 1613; but the music for these was written by Coperario. Like Dowland, Campian wrote no madrigals, so far as is known, nor is any church music by him known to exist. He wrote a Latin epigram in praise of Dowland which was printed in Dowland's 'First Book of Airs', and he paid a similar compliment to Alphonso Ferrabosco the younger in 1609. Several of his lyrics were set to music by contemporary composers of madrigals and lute songs.

Campian was not only a composer, he also held individual views about the theory of music, just as he did about the theory of poetry. The same mind which had expressed itself in 'Observations on the Art of English Poesie' (1602), produced in 1613 a treatise entitled 'A New Way of making Fowre parts in Counterpoint, by a most familiar, and infallible Rule'. This treatise included discourses on the subject of keys, concords and closes. A second edition of this work, with annotations by Christopher Simpson, was published in 1655 under the title of 'The Art of Setting or Composing of Musick in Parts by a most familiar and easie Rule'; and another edition appeared in 1664 in which the word "Setting" in the title was replaced by "Descant". The later editions were appended to the first eight or nine editions of Playford's 'Introduction to the Skill of Musick'.

With Campian's exclusively poetical works we are not primarily concerned in this article, but it may be briefly stated that his first poems to appear in print were those included anonymously in the surreptitious edition of Sidney's 'Astrophel and Stella' in 1591. In 1595 he produced a volume of Latin epigrams and elegiacs under the title of 'Poemata', which was reprinted in 1619. His 'Observations on the Art of English Poesie' (1602) has already been mentioned, but it should be added that in this treatise he condemned "the vulgar and unartificial custom of riming". It was fortunate for English literature and music alike that he was forced from this position by the fact that lyric verse was so far better suited to the requirements of musical treatment than lines constructed upon the rules of classical prosody.

<sup>1</sup> 'Bibliotheca madrigaliana'; these dates were quoted in D.N.B. *sub* Campian.

<sup>2</sup> They are reprinted in 'English School of Lutenist Song-writers'.

## List of Campian's musical works :

1. A Book of Aurs to be sung to the lute (published in conjunction with Rosseter) (1601).
2. The First and Second Books of Aurs (? 1613).
3. The Third and Fourth Books of Aurs (? 1617).
4. Songs for a Mask at the marriage of Sir James Hay (1607).
5. Songs for a Mask at the marriage of Princess Elizabeth (1613).
6. Songs for a Mask at Caversham House (1613).
7. Songs for a Mask at the marriage of Robert, Earl of Somerset (1613).
8. Three songs, dated 1596 (B.M. Harl. MS 6910).
9. A new way of making four parts in Counterpoint (1613).

**CAMPIELLO, IL** (Opera). See WOLFF-FERRARI.

**CAMPIOLI** (actually Antonio Gualandini) (b. ?; d. ?).

Italian 17th-18th-century male contralto singer. He was born in Germany of Italian parents. Having learnt to sing in Italy, he returned to Germany, where his voice created a great sensation. He appeared first in Berlin in 1708. In 1720 he was engaged at Wolfenbüttel. Six years later he visited Hamburg; and, after travelling in Germany and Holland, he returned to Dresden, where he sang in Hasse's 'Cleofide' in 1731. On 7 Dec. of that year he appeared for the first time in London as Trasmede in Handel's 'Admeto' and then sang in the same master's 'Poro'. On 15 Feb. 1732 he sang in the new opera, 'Sosarme', and in revivals of 'Flavio' and 'Acis', all by Handel. He passed the remainder of his life in Italy. J. M., rev.

**CAMPION, Thomas.** See CAMPIAN.

**CAMPIONI, Carlo Antonio** (b. Leghorn, 1720; d. Florence, 1793).

Italian composer. It is not known whose pupil he was. He lived at his native town until c. 1765, held the title of chamber musician to the King of Sardinia and wrote a considerable amount of chamber music, which was for the greater part published in London, from about 1760 onwards, consisting of trio sonatas (Opp. 1-6), duets for two violins or for violin and cello (Opp. 7-8) and harpsichord sonatas. At Leghorn also his only work for the stage was produced, on 5 Oct. 1760, a short dramatic cantata, 'Venere placata' (libretto by Coltellini), for the wedding of the Archduke Joseph and Isabella of Bourbon. About 1765 Campioni moved to Florence and was appointed *maestro di cappella* of the cathedral there. Burney visited him in 1770, told him of the popularity his chamber music

enjoyed in England and was greatly impressed by Campioni's collection of 16th- and 17th-century madrigals. At Florence, he wrote mostly church music, a 'Te Deum' "full of curious canons and ingenious contrivances" (Burney) which was performed by a band of 200 voices and instruments; masses, responses, etc., some of which are preserved in Vienna and Florence; at the Florence Conservatory there is also the manuscript of his 'Trattato teorico e pratico dell' accompagn. del cimbalo'.

A. L.

**Campistron, Jean Galbert de.** See Colasse ('Achille et Polyxène', lib.), Lully (2 lib.). Marais ('Alcide', lib.).

**CAMPO, Conrado del** (b. Madrid, 28 Oct. 1876, d. Madrid, 16 Mar. 1953).

Spanish conductor and composer. At an early age he obtained the first prize for composition at the Madrid Conservatory, at which he later became professor of composition. He bore away from the Spanish tradition in these early days, and the influences moulding his mind were German, his critics accusing him of being a fanatical follower of the Teutonic school. Pedro Morales, the critic and poet, called him "the Spanish Strauss", owing to his complex orchestration and his romantic mentality; but his progressive and eminently practical mind led him to explore various fields of modern music. There is a distinct difference between his choral and dramatic works on the one hand and the symphonic and chamber music on the other. In the opera 'El final de Don Alvaro' (1910) the tuneful music stresses the romantic nature of the play by the Duke of Rivas which, when it had appeared on the Madrid stage in 1895, had marked the culminating point of Spanish romanticism no less than Hugo's 'Hernani' had marked the French movement in 1830. In lighter dramatic works, 'La tragedia del beso' and 'El Avapiés' (1919), the dominant note was more severely classical and reminiscent of the 18th century. Here and there in the last-named work the composer evoked the spirit of the ancient *tonadilla* and the picturesque Madrid immortalized by Ramón de la Cruz and Goya, with the *manolos* and *majas* in costume. In that work, as in 'Lola la Pierusca', Conrado del Campo with his light melodies and attractive orchestration suggests the characteristic style of the traditional *zarzuela*. It should be noted that 'El Avapiés', which was produced at the Teatro Real, Madrid, on 8 Mar. 1919, was written in collaboration with the Granadine guitarist and composer Ángel Barrios, which accounts for the decided folk character of the work.

In his symphonic works Conrado del Campo transforms his personality and becomes more universal in scope. In 'La

<sup>1</sup> The subject of Verdi's 'La forza del destino'.

dama del amboto' (1902) for chorus and orchestra the music, with its rugged harmonies and rhythmic variety, is Basque in spirit, though the instruments are marshalled in the Straussian manner. In 'La divina comedia (El infierno)', based on Dante, for orchestra, the sombre harmonies recall Strauss's 'Zarathustra'. More successful were the 'Suite madrileña' and the symphonic poems 'Las cantigas del Rey Sabio' and 'Opeuda a los cardos'. Very effective, too, were the five impressionistic sketches entitled 'Boceto castellano' and the suite in four movements called 'Una Kasida'—a title that evokes a traditional Moslem form of composition.

It would be difficult to exaggerate the importance of Conrado del Campo's influence on the Spanish musical life of the first half of the 20th century. His strong individuality as a composer, his immense experience in all schools of musical composition and his indefatigable industry have been of paramount importance in advancing musical art in Spain. His activities as professor of harmony at the Madrid Conservatory, as private teacher in composition, his outspoken articles on musical subjects, have been a strong element in the musical regeneration of Spain. Especially noteworthy have been his efforts to encourage concerted music in Madrid: it was he who in his early youth was the first to lead the Madrid amateurs and connoisseurs to study carefully Beethoven's last quartets, and he himself has written an immense amount of chamber music. In addition to concertos for pianoforte, violin, viola and cello, sonatas and trios, there are twelve string quartets, many of which have never been heard outside Madrid. Five of these were written in early life and are romantic, impetuous and full of vitality. The last quartets are works of his mature genius and constitute a rich treasure-house for enterprising players. One of the quartets is accompanied by recitation of José Zorrilla's poem 'Cristo de la vega'; others are entitled 'Asturiano', 'Caprichos románticos', 'Oriental' and 'Las horas de Nietzsche'. His experience as viola player and close collaborator of Arbós stood him in good stead in the composition of these works.

Apart from the works already mentioned the following may be enumerated:

- 'La dama desconocida', opera in 3 acts.
- 'Leonor Teller', opera.
- 'Los amantes de Verona', opera in 4 acts, after Shakespeare's 'Romeo and Juliet' (1909).
- 'Dies irae', opera in 4 acts (1908).
- 'La culpa', opera.
- 'La flor del agua', opera (1910).
- Incidental music for Martínez Sierra's 'Don Juan de España'.
- Mass for double chorus & orch.
- 'Aires, aires, aires' for solo voices, chorus & orch.

Campoamor, R. de. See Turina (6 songs).

**CAMPOLI, Alfredo** (b. Rome, 20 Oct. 1906).

Italian violinist. He received his musical education entirely from his father, who was a violin professor at the Accademia di Santa Cecilia in Rome. Campoli went to live in London in 1911 and started giving public recitals at the age of ten. Before he was thirteen years old he had won seven first prizes, two gold medals and a silver cup at music festivals; and in 1919 he won the gold medal of the London Music Festival for his performance of Mendelssohn's violin Concerto. When he was fifteen he toured the British Isles in a series of International Celebrity Subscription concerts, and he spent the next few years establishing his position as a soloist. When the general slump came Campoli formed a small orchestra of his own, while still broadcasting and doing solo work. In 1938 he played a Paganini Concerto at a Promenade Concert with Sir Henry Wood.

At the outbreak of war in 1939 Campoli disbanded his orchestra and again travelled all over the British Isles, giving concerts in military camps, factories and hospitals, and spending most of his spare time rebuilding his wide classical repertory. He has played with all the best-known orchestras in Britain and has frequently toured England and the Continent, giving recitals that show the range of his repertory and his versatility. He is a regular broadcaster with the B.B.C. and has made several gramophone recordings.

In 1950 Campoli went on an extensive tour of Australia and New Zealand. M. K. W.

**CAMPORESE, Violante** (b. Rome, 1785; d. Rome, 1839).

Italian soprano singer. She belonged to a good family, and it was not until after her marriage to Giustiniani, an Italian nobleman, that she took up singing professionally. During an engagement at Napoleon's private concerts in Paris she so profited by the lessons of Crescentini as to become an admirable artist. From Paris she went to Milan, where she sang at the Teatro alla Scala to crowded and enthusiastic houses. In 1817 she was engaged for the King's Theatre in London and made her début on 11 Jan. in Cimarosa's 'Penelope'. She was not accustomed to the stage, and was therefore at first nervous and embarrassed, making little effect. As Susanna in 'Le nozze di Figaro' she established her reputation, and this success was followed by another when she played Donna Anna in 'Don Giovanni'; she became, in fact, a particularly excellent singer of Mozart. In May she appeared as Agnese in Paer's opera of that name, in which she delighted the critics by her pure and tasteful singing. In July Mozart's 'Clemenza di Tito' was given,

Camporese sustaining the principal part of Sextus. Lord Mount-Edgcombe declares that she gave more effect to it than Braham or Tramezzani. She sang also at the Ancient Music and Philharmonic concerts.

After singing at Milan and at other places in Italy, Camporese returned in 1821 to London, with an engagement for the season at a salary of £1550, with extra allowance for costumes, permission to sing at concerts and her salary paid in advance. She sang on 10 Mar. in Rossini's 'Gazza ladra' with the greatest brilliance; but, thinking she could succeed in comic parts still more than in tragic, she attempted Zerlina, an experiment she had the good sense not to repeat. In 1822 she was again engaged and appeared in 'Le nozze di Figaro' and Rossini's 'Otello'; and she sang also at the concerts at the Argyll Rooms. She appeared again at the King's Theatre in 1823, bringing out at her benefit Rossini's 'Riccardo e Zoraide', in which opera she took her leave on 5 Aug. In 1824 she again returned; but her voice was worn, and she prudently retired to Rome, though we find her singing in Rossini's 'Aureliano' and other operas at Ancona in 1827. Two years later she went once more to London and sang at concerts; but her voice was gone and her performance was not successful.

Ebers, while in Paris in the autumn of 1816, was introduced to Camporese at Paer's house and gives a good account of her voice, style and appearance. She possessed a fine-toned voice of more than two octaves, from a to c'''; but her best notes were from c' to f''. She "cultivated a pure, chaste and expressive style, was a handsome and elegant woman . . . with dark hair, eyes and complexion, a tall, slender figure, a fine Roman countenance full of tragic dignity, and features rather strongly marked".

J. A. F.-M.

**CAMPRA, André** (b. Aix-en-Provence, 4 Dec. 1660<sup>1</sup>; d. Versailles, 29 June 1744).

French composer of Italian descent. He came of a Piedmontese family settled in Provence. He was educated in music through the precentorship of the church of Saint-Sauveur at Aix, under Guillaume Poitevin. He gave little promise of distinction until his sixteenth year<sup>2</sup>, when his talent made a sudden stride. A motet for 5 voices composed in his seventeenth year, 'Deus noster refugium et virtus'<sup>3</sup>, was much esteemed. As early as 1679 he is supposed to have filled the place of *maître de musique* in the cathedral of Toulon<sup>4</sup>, though no documentary evidence of this is found. He was in the same position at Arles in 1681, and in 1683 at Toulouse, where he remained until his removal to Paris in 1694. His

first post there was not the directorship of the music at the Maison professe des Jésuites, as has been said without proof. He was appointed to the directorship at Notre-Dame, replacing Jean Mignon, on 21 July 1694. His reputation as a composer would appear to have been already established, for we are told that crowds went to hear his motets there; but while thus employed, Campra was trying his hand at operatic writing, "divertissements" and other music for private festivities, and discovering where his own special talent lay.

On 24 Oct. 1697 he produced his first dramatic work, 'L'Europe galante' (opera-ballet), and this was followed on 20 Jan. 1699 by an opera-ballet, 'Le Carnaval de Venise'; but both these compositions appeared in his brother's name.<sup>5</sup> He was deterred from publishing them in his own name by fear of losing his valuable ecclesiastical appointment. On 13 Oct. 1700, however, he was released from his church duties.<sup>6</sup> 'Hésione', *tragédie*, the first dramatic production under his own name, appeared on 21 Dec. 1700; and thenceforth for forty years his works held the stage with ever-growing popularity. One of his last works, the divertissement 'Les Noces de Vénus', was published in 1740. Honours and emoluments were freely bestowed on him: in 1722 he was made teacher and director of the pages at the royal chapel, André Philidor being one of his pupils. This appointment he held until his death; by a patent dated 15 Dec. 1718 the king granted him a pension of 500 livres, "in recognition of his merits as a dramatic composer, and as an incentive to continued composition for the Académie Royale de Musique". In 1722 he was also given the title of composer and director of music to the Prince de Conti, and in the same year he was nominated *Maître de la Chapelle Royale*.

Campra's historic place in French opera was between two composers whose eminence transcended his own: following Lully and preceding Rameau<sup>7</sup>, he appears as one of the most remarkable dramatic composers of this period. His works enjoyed a long career. 'L'Europe galante', which brought him to the front, was performed until 1755, and parts of it even longer. He shows himself there as an innovator; though this type of stage piece was based on Colasse's 'Ballet des saisons' (1695), he brought it to such perfection that it became the model for all future opera-ballets. In

<sup>1</sup> Joseph Campra (baptized Aix, 10 Sept. 1662; d. 31 Mar. 1744), a double-bass player at the Opéra in 1699. He received a pension in 1727.—Féts

<sup>2</sup> A popular rhyme of the day:

Quand notre archevêque saura  
L'auteur du nouvel opéra  
M. Campra décampera.

Alleluia—

suggests that the true authorship of his operas had ceased to be a secret.

<sup>7</sup> For Campra's high appreciation of Rameau, see RAMEAU.

<sup>3</sup> He was baptized on the same day.  
<sup>4</sup> According to the Abbé de Fontenay ('Dictionnaire des artistes').

<sup>5</sup> Paris, Conservatoire Library. <sup>6</sup> La Borde, Féts.

'Tancredi', *tragédie lyrique*, given on 7 Nov. 1702, Campra rises to a very high level, it is a work full of warmth, life and genuine feeling, which was popular from its first appearance until its last performance in 1764.<sup>1</sup> He was, if anything, a too prolific composer, lacking the sobriety and reserve which is characteristic of the best French music, but he had the pastoral inspiration so much in favour among his contemporaries. His music is vigorous, lively, of flexible contours; it is clad in original orchestral colour, whenever he applies the orchestra to dramatic expression. Campra contributed considerably to the progressive development of dramatic music in France. In his time the so-called *spectacles coupés* — i.e. performances in one evening of favourite acts or scenes from different operas — were in special vogue. They attest the marked taste of the 18th-century public for variety, ingenuity and contrasted effects of the theatre. With Antoine Danchet, the librettist of many of his works, Campra adjusted airs taken from various ballets by Lully, a pasticcio which, under the title of 'Fragments de Lully', was very successful. In the same way he made, in 'Télémaque' (1704), use of fragments by Colasse, Desmarests, Charpentier, Marais and Rebel père.

Apart from his works for the stage (a list of which is given below) Campra wrote three books of 'Cantates françaises' (published 1708, 1714 and 1728), five books of motets (1695-1720), a Mass for 4 voices (1700) and two books of Psalms (1737-38), which were dedicated to Louis XIV and performed at the royal chapel and at the Concert Spirituel.

In the preface to the first book of the 'Cantates françaises' Campra states that he has attempted to combine the characteristics of the French and Italian schools, and the attention paid by him to the latter school is clearly indicated by the use of the orchestra and the more expressive treatment of the words, especially in the two later collections. Several editions of his motets were issued from 1695 (date of his first book) to 1734. The fourth book was published in 1706 and corrected 1734 with addition of instrumental accompaniment, and the fifth came out in 1720. In these compositions he paid special heed to the solo voice and emancipated it from the declamatory phrases so prevalent in Lully's time.

It is noteworthy that Campra was the first composer who introduced stringed instruments with the organ at Notre-Dame. Among the more beautiful of his motets is the last of the third book. Its brilliant and effective passages for the solo voice and expression marks, such as *affettuoso*, etc., are tokens of its Italian character. A more solid piece of work is a very fine 'In convertendo' in 6 parts with accompaniment for strings in 5 parts.

The following list of Campra's dramatic works gives (for the first time) particulars also of the numerous compositions he wrote for the Jesuit College Louis-le-Grand:

Title	Species	Author	Production	Remarks
'L'Europe galante.'	Opera-ballet, prologue & 4 entrées.	Antoine Houdar de La Motte	Paris, Opéra, 24 Oct. 1697.	
'Vénus'	Divertissement, prologue & 3 scenes (fête galante).	Antoine Danchet.	At the Duchesse de la Ferté's, 27 Jan. 1698.	
'Philochrysus.'	Latin tragedy, with French intermèdes.	Gabriel François Lejay.	Collège Louis-le-Grand, 15 Dec. 1698.	
'Le Carnaval de Venise.'	Opera - ballet, prologue & 3 acts.	Jean François Regnard.	Opéra, 20 Jan 1699.	Forms part of 'Le Carnaval de Venise'.
'Orfeo nell' inferno.'	Italian opera, 1 act.			
'Le Destin du nouveau siècle.'	Récits en musique.	Jean - Antoine Du Cerceaux.	Collège Louis - le - Grand, 12 May 1700	
'Hésione'	Tragédie lyrique, prologue & 5 acts.	Danchet.	Opéra, 21 Dec. 1700	New airs were added by Campra for the revival of 19 July 1709.
'Aréthuse.'	Opera - ballet, prologue & 3 acts.	Danchet.	Opéra, 23 Aug. 1701.	Alternative title in printed score is 'La Vengeance de l'amour'.
'Fragments de Mr. de Lully.'	Prologue & 4 entrées.	Various authors; arranged by Danchet.	Opéra, 10 Sept. 1702.	Music arranged by Campra.
'Tancredi.'	Tragédie lyrique, prologue & 5 acts.	Danchet (based on Tasso).	Opéra, 7 Nov. 1702.	

<sup>1</sup> This opera partly owed its great success to the circumstance that the heroine (Clorinde) was taken by a contralto (Mlle Maupin) for the first time since the foundation of the French opera. Vocal scores of 'L'Europe galante', 'Les Fêtes vénitienes' and 'Tancredi' have been reprinted in 'Les Œuvres de l'opéra français'.

<i>Titre</i>	<i>Species</i>	<i>Author</i>	<i>Production</i>	<i>Remarks</i>
'Le Triomphe de Vénus.'	One-act entrées.	Danchet	Opéra, 1703	Successively added to 'Fragments de Mr. de Lully', replacing some of the original entrées.
'La Sérénade vénitienne.'		Danchet	Opéra, 28 Oct. 1703.	
'Le Bal interrompu.'		Danchet	Collège Louis - le - Grand, 30 Jan. 1704.	
'Les Muses'		?	Collège Louis - le - Grand, 27 Feb. 1704.	
'Annibal jurans ad oras'	Latin tragedy, with French intermèdes.	Lejay.	Opéra, 6 May 1704	Music by Desmarests, completed by Campra. Replacing one of the original entrées in 'Les Muses'. Music from earlier operas of his own and by Colasse, Charpentier, Marais, Desmarests & J. F. Rébel, arranged by Campra
'Joseph vendu par ses frères.'	Tragedy with intermèdes.	Joseph François Duché de Vancy & Danchet.	Opéra, 10 Sept. 1704.	
'Iphigénie en Tauride'	Tragédie lyrique, prologue & 5 acts.	Danchet.	Opéra, 11 Nov. 1704.	
'Amarillus.'	Pastorale, 1 act.	Various authors, arranged by Danchet.	Opéra, 15 Jan. 1705.	
'Télémaque' ('Fragments des Modernes').	Tragédie lyrique, prologue & 5 acts.	Danchet.	Opéra, 11 Sept. 1705.	Music by Lully, arranged by Campra
'Alcine.'	Tragédie lyrique, prologue & 5 acts.	Philippe Quinault, reduced by Danchet.	Opéra, 6 Mar 1708.	
'Le Triomphe de l'amour.'	Opera - ballet, prologue & 4 entrées.	Pierre-Charles Roy.	Opéra, 16 Apr. 1708.	
'Hippodamie.'	Tragédie lyrique, prologue & 5 acts.	Bernard Le Bovier de Fontenelle.	Collège Louis - le - Grand, 12 Mar. 1710.	
'Thétis et Pélée'	Tragédie lyrique, prologue & 5 acts.	Charles Porée.	Opéra, 17 June 1710.	Music by Colasse, additional airs for this revival by Campra and Stuck.
'Agapitus Martyr.'	Latin tragedy, with French intermèdes.	Danchet.	Opéra, 12 Jan. 1712	
'Les Festes vénitienes.'	Opera - ballet, prologue & 3 entrées	Danchet.	Opéra, 6 Sept. 1712.	
'Idoménée.'	Tragédie lyrique, prologue & 5 acts.	Danchet.	Opéra, 23 Nov 1713.	
'Les Amours de Mars et Vénus.'	Opera - ballet, prologue & 3 entrées.	Danchet.	Opéra, 8 June 1717.	Added to a revival of 'Tancrède'.
'Téléphe.'	Tragédie lyrique, prologue & 5 acts.	Jacques Autreau.	Opéra, 9 Nov. 1717.	
'Les Fêtes corinthiennes.'	1 entrée.	Danchet.	Opéra, 17 May 1718.	
'Camille, reine des Volsques.'	Tragédie lyrique, prologue & 5 acts.	François Gacon.	Opéra, 9 Oct. 1718.	
'Ballet représenté à Lion devant M. le Marquis d'Haincourt.'	Opera-ballet.	Louis Fuzelier.	Collège Louis - le - Grand, 1 Mar. 1721.	Forming part of a mixed spectacle of "Fragments". Revived Paris, Concert Spirituel, 24 Jan. 1728.
'Les Ages.'	Opera - ballet, prologue & 3 entrées.	Gilles Anne Xavier de La Sante.	Collège Louis - le - Grand, 5 Aug. 1722	
'Le Fils indocile.'	Pièce comique, 4 acts.	Porée, choreography by Froment	Opéra, Oct 1722.	
'La Fête de l'Île Adam.'	Idylle.	?		
'Les Couronnes.'	Ballet.	?		Consisting of various earlier entrées in a new combination with some new music.
'Silène et Bacchus.'	Cantata.	Danchet.	Aix, Académie, Feb. 1724.	
'Les Muses rassemblées par l'amour.'	Divertissement.	Du Cerceau.	Collège Louis - le - Grand, 16 May 1725.	
'Euloge, ou Le Danger des richesses.'	Tragi-comédie, 3 acts with intermèdes.	Porée.	Collège Louis - le - Grand, 5 Mar. 1728.	
'Le Génie français exilé du théâtre latin.'	3 Intermèdes.	Danchet.	Opéra, 19 July 1729.	A new version of the 'Sérénade vénitienne' of 1702.
'Les Nouveaux Fragments.'	Prologue & 3 entrées.	?	Concert Spirituel, 14 Sept. 1729.	
'Les Sauvages.'	Divertissement, 1 act.	Danchet.	Opéra, 18 Jan. 1731.	
'Le Jaloux trompé.'	Intermède.			

Title	Species	Author	Production	Remarks
'Le Génie de la Bourgogne'	Pièce allégorique.	?	Dijon, Académie, 1734	
'Achille et Dédamie.'	Tragédie lyrique, prologue & 5 acts.	Danchet.	Opéra, 24 Feb 1735.	
'Les Noces de Vénus.'	Diversissement, pro- logue & 3 acts	?	1740, ? performed.	Score published 1740.

Of uncertain date are the printed 'Airs nouveaux ajoutés à l'Opéra de Phaëton', for a revival of Lully's opera of that title, probably the one of 5 Jan 1710.—The printed score called 'Le Triomphe de la folie, comédie mise en musique' of 1711 is an entrée of 'Les Fêtes vénitienes'. 'L'Apothéose d'Hercule', a diversissement sung at the Concert Spirituel on 27 Dec. 1732, is the prologue of 'Téléphée'.

### CANALI (Canale), Floriano (b. ?; d. ?).

Italian or Flemish 16th-17th-century organist and composer. From the title-pages of his works it appears that he was organist of the church of San Giovanni Evangelista at Brescia from 1581 to 1603. If he was the "Floriano Canale, Bresciano", who wrote the medical treatise entitled 'Dei secreti universali' (Venice, 1640, Bodl. Lib.), he was still alive in 1612, for the dedication is signed "Da Brescia, 12 Dicembre 1612, Floriano Canale". E. van der Straeten, who holds that Canale came from the Netherlands, says that the literal Flemish translation of the Latin name Canalis is Pijpe; many Flemish families have this name. He suggests that Buys (c. 1554) has a name that can be translated *Canalis*, although Buys's identity is more probably connected with that of Buus (c. 1541-51).

The following is a list of Canale's works:

1. 'Psalmodia, 5 et 4 voc.' (Venice, Scotto, 1575). In the State Lib., Berlin, 5 partbooks (Eitner).
2. 'Sacrae cantiones quae vulgo motecta dicuntur, quatuor vocibus decantandae: nec non quibuscumque Organorum sonis accommodatae, a Floriano Canali Brixiano organa modulante, nunc primum in lucem editae. Brixiae apud Vincentum Sabbium, 1581.' In the Bologna Liceo Musicale, 4 partbooks, 4to. In the Dedication, written from Bologna, Canale calls these compositions his "first-fruits" (Parisini).
3. 'Missae Introitus, ac motecta quatuor vocibus nec non quibuscumque organorum sonis accommodatae, a D. Floriano Canali Brix organa modulante, nunc primum in lucem editae. Brixiae, apud Thomam Bozzolam, 1588.' In B.M., 4 partbooks, 4to, pp. 30.
4. 'Canzoni da sonare a quattro et otto voci di D. Floriano Canale da Brescia organista. Libro primo. In Venetia appresso Giacomo Vincenti, 1600' In the Augsburg Lib., 4 partbooks, 4to; 17 canzoni a 4 voci, 2 a 8 voci (Schletterer).
5. 'Canzonette a tre voci di D. Floriano Canale da Bressa organista. Primo libro Venetia, Giacomo Vincenti, 1601.' In the Cassel Ständische Landesbibl. 3 partbooks, 8vo, pp. 29 (Israel).
6. 'Sacrae Cantiones—3 voc Venetia, Vincenti, 1602.' In the Episcopal Lib., Ratisbon, 22 compositions (Eitner).
7. 'Sacrae cantiones sex vocibus concinendae, tum viva voce, tum instrumentis cuiusvis generis cantatu accommodissimae, a D. Floriano Canali in ecclesia Divi Joannis Evangelistae de Brixia organista, noviter compositae. Liber primus. Venetiae apud Jacobum Vincentum, 1603.' In the Bologna Liceo Musicale, 6 partbooks, 4to (Parisini).

In the collection 'Promptuarii musici, sacras harmonias sive motetas v. vi. vii. et viii. vocum' (Abrahamus Schadaeus, 1611) are

two compositions, No 14 'Quem vidistis pastores' and part 'Dicite quidnam vidistis?' and No. 50 'Ego vos elegi de mundo', each headed "Floriano Canale a 6". A manuscript of the former in lute tablature is in the Bibl. Rudolfiniana der Königl. Ritteracademie at Liegnitz (Pfudel and Eitner). A manuscript score ('Cantiones sacrae diversorum auctorum') of 'La Balzana a 8 parti, una canzona da sonare', in two movements (see Torchi's 'Musica instrumentale' for music), is in the Bologna Liceo Musicale. Some of the music is given by Torchi in Riv. Mus. It. for 1897, p. 601, and in his 'Musica instrumentale in Italia', 1901, p. 22. C. S.

**CANARIE (Canaries).** A now antiquated dance, probably of Spanish origin. Thoinot Arbeau in his 'Orchésographie' gives the origin, and also the tablature of this dance, which was incorporated by Lully into some of his operas.

It is a species of gigue, usually in 3-8 or 6-8 time (sometimes 6-16 time according to J.-J. Rousseau, 'Dictionary of Music'), the distinctive peculiarity of which is that the first note of the bar is almost always dotted. In this respect it resembles the Loure, but it differs from that dance in its tempo, the Canarie being quick<sup>1</sup> and the Loure somewhat slow. It always begins on the first beat of the bar and consists of two short periods, each repeated. Specimens occur in a quartet by Arbeau (1589) and one by Negri (1604), and in Purcell's 'Dioclesian', from which we quote:

F. L. Schubert ('Die Tanzmusik') gives a specimen of the 17th century in 6-8 time. One in 3-4 time is found in the second *ordre* of the first book of Couperin's 'Pièces de clavecin'.

E. F., adds.

<sup>1</sup> G. Muffat, 'Florilegium primum' (1695).

**CANCAN** (Fr.). A dance which came into vogue in Paris about the middle of the 19th century, in the music-halls rather than the ballrooms, since it required a good deal of high kicking and other acrobatic displays, and was never considered reputable. The music is in very animated 2-4 time. E. B.

**CANCINEO**, Michel Angelo (b. ?; d. ?).

Italian 16th-17th-century composer. He was a Carmelite monk at Viterbo and *maestro di cappella* at the Cathedral there. He generally signed himself only with his Christian name. He composed 2 books of motets for 5 voices (only 2nd book, of 1608, still known), and a book of madrigals *a* 4, 5, 6 and 8 (Venice, 1590); also some songs in collective volumes.

E. v. d. s.

**CANCIONERO** (Spa., from *canción*, song).

A song-book or other collection of songs.

**CANCORIZANS** (Ger. *krebsweis*). This is a name given to canons by retrogression, on account of their crab-like motion — from the Latin word *cancer*, a crab. An example (from A. André's 'Lehrbuch der Tonsetzkunst') will best explain their construction:

Sometimes a canon is both cancrizers and by contrary motion — "retrograde-inverse", of which we give an example from Fétis's 'Traité du contrepoint et de la fugue'.

Renversez le livre

The book should be turned upside down to show the retrograde and inverse structure.

F. A. G. O.

See also Haydn, p. 155 (mus. ex.).

**CANDAEL**, Karel (b. Antwerp, 4 Sept. 1883; d. Rotterdam, 27 Mar. 1948).

Belgian composer. He studied at the Royal Flemish Conservatory of Antwerp, where his principal teachers were Jan Blockx, Emiel Wambach and Lodewijk Mortelmans. In 1907 he obtained a *mention honorable* for the Belgian Prix de Rome with a cantata, 'Genoveva van Brabant'. From 1911 to 1919 he conducted the orchestra of the Royal Dutch Theatre at Antwerp, in succession to Flor Alpaerts. In 1919 he was appointed professor at the Antwerp Conservatory, where he taught harmony, counterpoint and fugue. He retired in 1948. For a long time he was conductor of the Royal Flemish Opera and of the Casino at the seaside resort of Knocke. From 1936 to 1939 he was director of the Flemish music section of the Belgian Broadcasting Service. He was an enthusiastic supporter of the work of Peter Benoit, whose dramatic ideals strongly attracted him, and he conducted memorable performances of Benoit's best music-dramas, 'Charlotte Corday' and 'De Pacificatie van Ghent'. He died at Rotterdam during a rehearsal. Apart from the cantata named above, his principal works are the ballets 'De Zeven Hoofdzonden' ('The Seven Deadly Sins', 1925) and 'Het Hooglied' ('The Song of Songs', 1932); 'Rhapsodisch Gedicht', 'Meditatie' (1940) and 'Dans-symphonie' for orchestra (1941), 'Marialeven' ('The Life of Mary', 1943), 'Passacaglia and Bourrée' (1945), choral works, songs, etc.

A. L. C.

**CANDEILLE**, Amélie Julie (b. Paris, 31 July 1767; d. Paris, 4 Feb. 1834).

French actress, singer and composer. She was trained by her father, the composer Pierre Joseph Candelle. At the age of thirteen she appeared in public as singer, harpist, pianist and composer. In 1782 she made a very successful début at the Paris Opéra in Gluck's 'Iphigénie en Aulide' and the next year she sang there in Piccini's 'Atys'. She then retired, rather unaccountably, from the Opéra, but in 1785 returned to the Théâtre-Français, and in 1791 produced 'La Jeune Hôtesse' and in 1792 brought out, with much success, 'La Belle Fermière', in which she was responsible for both the words and the music and sang the principal part herself. The next year her comic opera 'Bathilde' was performed and 'Catherine' appeared about the same time. In 1796 she visited Holland and Belgium, where (1798) she married a carriage builder named Simons. In 1807 her comic opera 'Ida, ou L'Orpheline de Berlin' was produced at the Opéra-Comique. This was a

complete failure, but she met with some success as a composer of popular songs, romances and pianoforte pieces.

During the Hundred Days she went to London and gave some successful concerts under the direction of Viotti and Cramer. On her return to Paris she received a pension from Louis XVIII, and in 1821 she married a mediocre painter called Périé. Besides her songs and operas already mentioned, she published some instrumental chamber music.

J. M. (ii).

**CANDEILLE, Pierre Joseph** (b. Estaires, 8 Dec. 1744; d. Chantilly, 24 Apr. 1827).

French composer, father of the preceding. He went to Paris at an early age and became a singer at the Royal Academy of Music (Opéra) there. His first work for the theatre was 'Les Saturnales' in 1777, a divertissement produced at the Comédie-Française in 1778. But his most successful venture was his music for 'Castor et Pollux'. Two choruses and an air from Rameau's music to the same libretto by Bernard were retained, and the new version received about 50 performances between its production in 1791 and 1798, and was revived again in 1814.

Candeille was also employed writing ballet and pantomime music and incidental numbers for other works, but was very unfortunate with his later operas, for the majority of them were accepted for production at the Paris Opéra and elsewhere, but rejected at various stages in the negotiations.

J. M. (ii).

**CANDIDO, Serafino da Monte Reale** (b. ?; d. ?).

Italian 16th-century composer. Nothing is known of him but two publications: 'Delle mascherate musicali . . . parte I (c II) a 3, 4, e 5 voc.' (Venice, 1571) and 'Concenti nuovi' (Venice, 1572).

E. v. d. s.

**Candinus, Carl.** See Brahms (6 songs). Walker (E, song).

**CANGE, Sieur du (Charles Dufresne).** See DU CANGE.

**CANIGLIA, Maria** (b. Revisondoli, Abruzzo, 4 May 1906).

Italian soprano singer. She studied singing with Roche at Naples and made her first stage appearance at the Teatro Regio in Turin on 1 Jan. 1930, in Strauss's 'Elektra'. She has sung at all the chief Italian theatres and in many musical centres abroad. Her repertory includes the dramatic soprano parts in such works as 'Norma', 'Traviata', 'Trovatore', 'Aida', 'Otello' and 'Tosca'. She married in 1939 Piero Donati, then director of the Arena at Verona and now (1954) of the Teatro Comunale at Bologna. She has recorded in the complete H.M.V. disc performances of Verdi's 'Aida' and Requiem.

E. B.

**CANIS, Corneille (? Cornelis de Hond)** (b. ? Antwerp, ?; d. ? Ghent, ? 1556<sup>1</sup>).

Flemish composer. Nothing is known of his youth. He appears in 1542 with the title of master of the children in the Netherlands chapel of Charles V at Madrid, where he became chapel master in 1547 in succession to Gombert, when the latter accompanied the emperor on his expedition to Germany. Canis seems to have returned to the Netherlands (Brussels) and according to Kade was engaged for the electoral chapel at Dresden, which however appears to be merely a question of an invitation not accepted. Also in 1547 he accompanied Philip II on his entry into Ypres and on 28 July 1549 he is mentioned as *maître de chant* to the governess of the Netherlands. On 9 June 1551 he took up a third prebend at the church of Saint-Bavon at Ghent, which however was not residential. He retired from the service of Philip II in Apr. 1555 and may then have gone to live at Ghent. His successor in the Netherlands chapel was Nicolas Payen, who served in Madrid while holding various church benefices in Flanders. These non-residential ecclesiastical posts enormously complicate the biographies of old Netherlands and northern French musicians, for it can never be taken for granted without definite evidence that they lived at the places with whom their names are connected in manuscripts and publications. Thus Canis may or may not have resided at Ghent at the end of his life, and it is quite possible that he returned to Spain several times while he remained attached to the royal chapel.

Canis left masses and a large number of chansons. Burney<sup>2</sup> gives a masterly chanson in canon.

**CANNABICH.** German family of musicians.

(1) **Martin Friedrich Cannabich** (b. ?; d. Mannheim, after 1758), oboist, flautist and composer. He appears in the earliest extant list of the Mannheim court music (1723) among the oboe players and in later lists as flautist. He taught the flute to the Elector Charles Theodore and is probably the composer of the six flute Sonatas, Op. 1, published in Paris as being by "Sigr. Canaby"<sup>3</sup> and of the last three 'Solos for a German Flute . . .' published by J. Tyther, London, c. 1740 (the

<sup>1</sup> According to Hellin, 'Histoire chronologique de Saint-Bavon', I, 42, he died in Prague on 15 Feb. 1561 as chaplain to the Emperor Ferdinand, but in Guicciardini's 'Descrizione' of 1556 he is already mentioned as being dead.

<sup>2</sup> IV, 309; modern ed. II, 248.

<sup>3</sup> Copy formerly in the Wolfheim Collection.

first three being by the Irish composer Burk Thumoth.<sup>1</sup>

(2) (**Johann Innocent**) **Christian (Bona-ventura) Cannabich** (b. Mannheim, [bapt. 28 Dec.] 1731; d. Frankfurt o/M., 20 Jan. 1798), violinist, conductor and composer, son of the preceding. He was a pupil first of his father and afterwards of Stamitz. He joined the Mannheim orchestra as a *Scholar* in 1744 and was appointed ordinary violinist three years later. The elector then sent him to Italy, where he studied composition under Jommelli in Rome until 1753; after his return to Mannheim he succeeded Stamitz as leader of the orchestra after the latter's death in 1757, and in 1774 he was appointed director of the instrumental music, a post he retained after the transfer of the electoral court to Munich. He travelled to Paris at least three times, in 1764, 1766 and 1772 and died on a visit to his son Carl (who was then conductor at Frankfurt).

Cannabich composed music for a 3-act *Singspiel*, 'Azakia', produced at Mannheim in 1778, and a monodrama, 'Elektra', described as "a musical declamation" (Mannheim, 1781), but was specially renowned as a composer of ballets, of which he wrote about 40, mostly to scenarios by the choreographer Lauchery. They are not mentioned as extant by Eitner, but the music of a dozen or so has turned up since and has been made the subject of a special study by R. Klobner in 1928 (see Bibl.).<sup>2</sup> Burney gives a long description of Cannabich and Lauchery's 'La Foire de village hessoise', which he saw at Schwetzingen in July 1772.

Cannabich was also a very productive instrumental composer. Thematic catalogues of no less than 91 symphonies and 45 quintets, quartets, trios and sonatas are in D.T.B., III, 1, (1902) and XVI (1915), and the same collection contains reprints of a Symphony in B $\flat$  major and of an Overture in E major (Vol. VIII, Pt. 2, 1907) and of a string Quartet, Op. 5 No. 2, in E minor (Vol. XV, 1914).

Cannabich was a very good violinist, and all contemporary writers lay stress on his great skill as a leader and conductor. Mozart in many letters to his father, written during the visit to Mannheim in 1777-78, praises the perfect team-work in the orchestral performances there and speaks of Cannabich as the best conductor he had ever met. Burney is not less hearty in his praise, and Schubart, a writer of equal authority, reports as follows upon the Mannheim orchestra in the flowery style of the period:

<sup>1</sup> Copy in the B.M.

<sup>2</sup> To his list of libraries containing scenarios of Cannabich's ballets should be added the B.M., where there is a copy of the Cassel 'Recueil des ballets' of 1768 as well as one of 'Palmerin von Olive', 1777.

Here the *forte* is a thunder, the *crescendo* a cataract, the *diminuendo* a crystal streamlet babbling away into the far distance, the *piano* a breeze of spring.

P. D., adds. A. L.

BIBL.—HOFER, HEINRICH, 'Die Instrumentalwerke von Christian Cannabich' (Munich, 1921).

KLOBNER, RUDOLF, 'Die dramatischen Ballette von Chr. Cannabich' (Munich, 1928).

See also Mannheim School.

(3) **Rosine Therese Petronelle ("Rosa") Cannabich** (b. Mannheim, [bapt. 18 Aug.] 1764; d. ?), clavier player, daughter of the preceding. Mozart made friends with her during his visit to Mannheim in 1777 and admired her gifts as a performer, although she was only thirteen at the time. The slow movement of his pianoforte Sonata K. 309 is supposed to be a musical portrait of her.

(4) **Carl (August) Cannabich** (b. Mannheim, [bapt. 11 Oct.] 1771, d. Munich, 1 May, 1806), violinist and composer, brother of the preceding. He was a pupil of his father (2)<sup>3</sup> and entered the Munich orchestra as a violinist, but in 1796 was called to Frankfurt o/M. to become F. L. A. Kunzen's successor at the Opera there. He returned to Munich after his father's death and in 1800 took his place as court musical director. In 1797 he published a cantata in memory of Mozart — whom he had known from his earliest boyhood and greatly admired — 'Mozart Gedächtnis Feyer', in full score. For the Munich theatre he wrote two operas, 'Orpheus' (1802)<sup>4</sup> and 'Palmer und Amalie' (Aug. 1803)<sup>5</sup>, and ballet music for Salieri's 'Axur', also choruses for a play by Holbein, 'Die Wallfahrt nach der Königsgruft' (revived with his music in Vienna in 1817). Cannabich also published a Symphony, string quartets, trios, pf. variations, canzonettas and *Lieder*, and edited vocal scores of Winter's 'I fratelli rivali', Paer's 'Camilla' and other operas. His wife (born Josephine Woraleck) was a good soprano singer who took leading parts under her husband's direction at Frankfurt and Munich and later became an actress. Cannabich's obituary in A.M.Z. was written by Franz Danzi; he was succeeded by Ferdinand Fränzl.

'Palmer und Amalie' did not find favour. The A.M.Z. No. 49 of 1803 said that

the quintessence of Mozartian and Cherubimian melody is encountered to satiety. For the rare pleasure, however, of hearing about a dozen different operas at one and the same time the author of the work is here offered due thanks.

A. L.

**CANNICIARI, (Don) Pompeo** (b. Rome, 1670; d. Rome, 29 Dec. 1744).

Italian composer. He was appointed

<sup>3</sup> Not a son of Martin Friedrich Cannabich, as stated in Q.-L.; the melodrama 'Elektra' and the ballets ascribed there to Carl Cannabich are works by Christian Cannabich.

<sup>4</sup> The score is, or was, preserved at Darmstadt.

<sup>5</sup> The German libretto was taken by an unknown translator from C. A. G. Pigault-Lebrun's 'Le Major Palmer', set by Bruni in 1797.

*maestro* at Santa Maria Maggiore, Rome, in 1709 and retained that post until his death. He amassed a large musical library and bequeathed it to the basilica in the service of which his manhood had been passed. This collection, along with the other contents of Santa Maria, was dispersed and much of it probably lost. In the Santini library at Munster there were various pieces by Canniciari. He wrote music for 2 and for 4 choirs. An 'Ave Maria' for 4 voices is given by Proske, 'Musica divina', II, No. 10.

E. H. P.

**CANNING, Vera.** See MURRILL.

**CANNON, Beekman Cox** (b. Teaneck, New Jersey, 25 Dec. 1911).

American musicologist. He studied at Yale University, where he obtained the B.A. in 1934 and the Ph.D. five years later. Then for a year he became instructor in European history at Yale, and in 1940-41 he was an instructor in the history of music. During the second world war he served in the American Navy and was released in 1946 as a Commander of the U.S.N.R. From 1946 to 1950 he was assistant professor of the history of music at Yale and in 1950 was appointed Associate Professor. In that year also he was awarded the Guggenheim Fellowship for research in Europe in the history of music, as well as a Fulbright Fellowship for research in Italy. He was awarded a further grant by Yale University to continue his European research during the summer of 1951. His book 'Johann Mattheson, Spectator in Music' was published in 1947 and he is at work on a history of church music from 1600 to the present day.

M. K. W.

**CANNON, (Jack) Philip** (b. Paris, 21 Dec. 1929).

English composer. He studied with Imogen Holst in the Arts Department of Dartington Hall in Devonshire (1946-47) and at the R.C.M. in London with a composition scholarship (1948-51), where his masters were Gordon Jacob for composition and Pierre Tas for the violin. Later he became a visiting music teacher at Akeley Wood Preparatory School in Buckinghamshire and held a deputy professorship for composition at the R.C.M. In 1951 he gained a travel-long scholarship at that institution and the following year he obtained the Butterworth Trust Award. His works so far include 'Songs to Delight' for women's voices and strings, Op. 1; Concertino for pianoforte and strings, Op. 2; 'Cinq Chansons de femme' for soprano and harp, Op. 3; 'Galop parisien' for 2 pianofortes, Op. 4.

**CANNTAIREACHD.** See BAGPIPE (Music).

**CANON** (1) This is the strictest and most regular species of thematic imitation in com-

position. The word is derived from the Greek *κανών*, a rule or standard. A canon, therefore, is a composition written strictly according to rule. The principle of a canon is that one voice begins a melody, which melody is imitated precisely, note for note, and (generally) interval for interval, by some other voice, either at the same or a different pitch, beginning a few beats later and thus as it were running after the leader. For this reason the parts have been called "Dux" and "Comes", or "Antecedens" and "Consequens".

The following is a simple example of a canon "two in one at the octave", i.e. for two voices an octave apart, and both singing one and the same melody:

By means of a coda (or tail-piece) this canon is brought to a conclusion. But many canons lead back to the beginning, and thus become "circular" or "infinite". The following is a specimen of this kind, which is "two in one at the fifth below" or "canon ad hypodiapente":

Sometimes two or more canons are simultaneously woven into one composition. The following, for instance (from Travers's Service of 1740), would be called a canon "four in two":

Byrd's 'Diliges Dominum' for 8 voices consists of 4 canons all sung together, each voice singing the melody of its fellow reversed.

Often in a quarter there may be a canon between two of the voices, while the other two are free; or three voices may be in canon and the fourth part free, for example the "Gloria Patri" to Gibbons's 'Nunc dimittis' in F, in which the treble and alto are in canon while the tenor and bass are free. Again, there are canons of various other elaborate kinds demanding a high degree of technical skill, combined with a certain amount of luck<sup>1</sup>, for it may be said of all canons that, unlike fugues, they depend to a certain extent on coincidence — they either fit or they do not, and the subjects cannot be adjusted to do so.

The old writers often indicated canons by monograms, symbols or other devices, instead of writing them out in full, the process being called "Inscription". Indeed they went so far as to write their indications in the form of a cross, a hand or other shape, with enigmatical Latin inscriptions to indicate the solution. Such pieces were called "enigmatical canons" or "riddle canons". As compositions of this nature can only be regarded in the light of ingenious puzzles, bearing the same relation to music that a clever riddle does to poetry, it will be needless to give examples here; let it suffice to refer to those which are to be found in Fétis's admirable 'Traité du contrepoint et de la fugue' and in Marpurge's celebrated work on the same subjects.

The great masters were fond of the relaxation of these plays on notes. They occur often in Beethoven's letters, and the well-known *allegretto scherzando* of his eighth Symphony originated in a canon to be sung at Malzel's table. Kochel's Catalogue of Mozart's works contains 35 canons, that of Weber by Jahns 8 and an interesting collection will be found in the Appendix to Spohr's 'Autobiography'. The wonderfully expressive canons in Bach's "Goldberg" Variations are far more than examples of mere ingenuity. Every third variation is a canon, and each successive canon is at the distance of an interval by one degree larger than the one before it. Nearly all the canons are in two parts upon a free bass, a few in contrary motion, and they proceed from a canon at the unison (No. 3) to a canon at the ninth (No. 27).

Mozart's management of canon often produces a moment of astounding polyphonic craftsmanship by adding a kind of *stretto* effect to normal canonic treatment. The ominous descending figures appearing in close threefold entries in the 'Don Giovanni' overture are a well-known example; here is

another, less familiar, from the finale of the flute Concerto K. 314:

The first violins and violas (bars 1 & 3) have an ordinary canon between them, but the composer found that another entry would fit half-way between, and fit exactly without alteration of a note.

The word "canon" is also applied, somewhat incorrectly, to a species of vocal composition called a "Round".

**CANON (2).** An Oriental psalter adopted by Europe via the Arabian *qānūn*, the word itself but not necessarily the instrument being the Greek *kanōn*. It is to be seen on the sculptured portico (1184–88) of the Cathedral of Santiago in Spain, where it was known to Aegidius Zamorensis (c. 1270) as the *canon*, a smaller type being the *medius canon*<sup>2</sup>, which equate with the *caño entero* and *medio caño* of Juan Ruiz ('Libro de buen amor', c. 1343). Both of them are delineated in the 'Cantigas de Santa María' (13th cent.). They were the French canon mentioned by Brunetto Latini ('Trésor', c. 1266) and the *micanon* of Adenet ('Cleomedes', c. 1275). Italy knew of them as the *canone* and *mezzo canone* (Fr. da Barbarino, 'Reggimento e costumi di donne'), in which country its Oriental mien is so patent in the 'Trionfo della morte' of Orcagna (d. 1368). In Germany they spoke of the *kanon* and *metzkanon* (Sachs, S.I.M.G., XIV).

**CANTABILE** (Ital. = songful, singable, song-like). A direction placed against an instru-

<sup>1</sup> Gerbert, 'Scriptores', II, 388.

<sup>2</sup> See AUGMENTATION, CANCRIZANS, DIMINUTION, INVERSION, RECTE ET RETRO.

mental phrase when it is to sound as if sung. Hence it becomes equivalent to *legato*, as when J. S. Bach uses it on the title-page of his 'Three-Part Inventions', offering them to aid the student "eine cantabile Art im spielen zu bekommen". The word may also imply much the same as *espressivo*. G., adds.

**CANTARINA, LA** (Opera). See GOLDONI.

**CANTATA.** The Italian word means a piece of music sung, as opposed to *sonata*, one that is played instrumentally. As the name for a special form of vocal music it appears first in 1620 with the 'Cantade [sic] et arie a voce sola' of Alessandro Grandi, which are songs for a solo voice and thorough-bass consisting of several stanzas in which the bass is the same (or much the same) for each stanza, while the voice sings different melodies. This form is sometimes called strophic variation. The principle of the Italian solo cantata may, however, be traced much earlier; the strophic variation is a form employed only for a short period, and the cantata, which was popular into the time of Handel, exhibits various constructive methods, beginning with the quasi-dramatic monodies of Peri, Caccini, Saracini, Monteverdi and many others. Monteverdi's 'Lettera amorosa' and 'Partenza amorosa' have sometimes been regarded as its starting-point; it is in general principle a free personal monologue expressing a variety of emotions in recitative, *arioso* and aria. It is often introduced by a narrative recitative in which the poet presents the speaker of the monologue and the situation in which he gives vent to it; in the earlier cantatas (Luigi Rossi, Cesti, Stradella, etc.) the speaker is often an historical personage such as Nero or Seneca, in the later ones an imaginary nymph or shepherd. These early cantatas (c. 1640-60) are often extremely long, and their length is integral to their conception; it would be most unjust to the composer to perform them in extracts or abridged versions.

The cantatas naturally show a close resemblance to the operatic style of their period, and the same types of aria (as regards formal construction) appear in both; occasionally we find in Stradella's operas chains of arias and recitatives sung by one character exactly like a cantata; but these are rare, and it is not right to describe the cantata as a whole as resembling an extract from an opera. The cantata is always chamber music and should be regarded as the vocal parallel to the violin sonata, to which it is fully equal if not indeed superior in intellectual interest. The output of cantatas during the 17th century and the first quarter of the 18th is enormous; Alessandro Scarlatti alone composed over five hundred. In his hands the cantata soon settled down to a general standard form of two recitatives and two arias, parallel to the

standardization of aria form in opera, but Scarlatti's cantata arias are much more definitely "intellectual" in character than those of his operas, sometimes exhibiting ingenious problems of construction or modulation, while the recitatives are always far more expressive and contemplative than those of the operas. The cantatas are indeed much the most intimately personal of all Scarlatti's compositions.

Cantatas were often written with accompaniments for strings and wind instruments in various small combinations. The poems are mainly amorous, but some are dramatic, humorous or satirical; there is a fine example by Cesti, 'La corte di Roma', to vitriolic words by Salvator Rosa. Carissimi wrote sacred cantatas and also humorous ones both in Italian and in Latin. A very popular form was the cantata for two voices, generally soprano and contralto; in the earlier examples they are often called *madrigali* and are in fact descended from the "continuo madrigals" of Luzzaschi. The two voices are always treated contrapuntally in a more or less *fugato* style, but in binary form; Handel's chamber duets are good examples. Cantatas for three or four solo voices were sometimes written for ceremonial occasions. A chorus was very rarely employed; as in the operas the choral finale would be sung by the soloists. Many motets (often called *concerti sacri*) are practically cantatas.

In France the cantata was not taken up until early in the 18th century (Campra, Clérambault, Rameau, etc.), and although the poems were French, the style was obviously imitated from the Italian. In England the earlier Italian cantatas were certainly known, but the title "cantata" does not seem to have appeared before the time of Handel; the form and style, however, are very apparent in the long rhapsodical songs of Purcell and his contemporaries, often described by their poets as "Pindaric odes". In England, as in Italy, it was the theatre which adopted the cantata (e.g. Purcell's 'From rosy bowers' and 'Let the dreadful engines') rather than a borrowing from the theatre by the concert-room.

In Germany the secular cantata for a solo voice made its first appearance with the 'Arien und Kantaten' by Kaspar Kittel (1638); but apart from a few cantatas for ceremonial occasions there are few secular examples. The church cantata, however, became a form of the greatest importance in the Protestant states.

It is impossible to give an exact definition of the German church cantata, and some scholars have included among them the 'Symphoniae sacrae' of Heinrich Schütz to Latin words and other works of the same period, since they bear some resemblance in musical

form to the Italian cantatas both sacred and secular. Even as late as the time of J. S. Bach we find church cantatas entitled "concertos". But the really distinguishing mark of the German church cantata is the employment of a chorale as its main foundation, and the first composer of chorale cantatas was Franz Tunder (1614-67). The chorale was treated in various ways: sometimes its words appear in all the movements with its appropriate melody treated in different forms, sometimes it is used only here and there, though it is an almost invariable rule that the cantata should end with a plain statement of the chorale in full harmony which could be sung by the congregation. The majority of cantatas are accompanied by instruments and include choruses as well as arias and recitatives. The cantata tended gradually towards the use of free poetic texts, especially after 1700, when Erdmann Neumeister began writing innumerable cantata texts for all the church festivals.

These have sometimes been described as "operatic" because they were often exaggeratedly emotional in verbal expression and also because they made use of the *da capo* aria; but the *da capo* form was never anywhere peculiar to opera, and the cantata texts are never "dramatic" in the sense of being put into the mouths of individual characters or personifications as in many of the Italian oratorios. The most that can be said is that the singer represents the Christian soul, and therefore the whole congregation. J. S. Bach composed some three hundred church cantatas, of which about two hundred have survived. A few of these are for one solo voice only, but even in these cases there is always a four-part chorale at the end. Bach's contemporaries, especially Telemann, were equally prolific.

In the second half of the century the church cantata is hardly distinguishable from the oratorio, and the chorale was soon abandoned as a basis for it. Cantatas for ceremonial occasions were still composed, but they are not very numerous, and even when written by such masters as Haydn, Mozart and Beethoven they have not been reckoned among their greater works. The immense development of choral bodies in Germany and England during the 19th century led to a large output of works of the cantata type for general concert purposes rather than for single ceremonial occasions, and there was a considerable demand for choral concert works that would not occupy a whole evening like an oratorio, as well as for choral works of secular character. The sacred cantatas are as a rule nothing more than short oratorios, and the secular ones all too often based on commonplace librettos strung together merely

to give a choral society something agreeable to sing. Composers who set poems of real literary value generally preferred to avoid the title "cantata" altogether, and the musical value of such works has in most cases been more or less proportionate to that of the words.

**CANTE HONDO (jondo).** The name given to a form of song traditional in the provinces of Andalusia, in southern Spain. *Hondo* (or in its aspirated, provincial form, *jondo*) signifies deep or profound; it is the song of the tragic sense of life — tragic, because by the beginning of the 19th century it had come down to being the music made in prisons and *prostitutos*. Towards the end of the 19th century *cante hondo*, besides having come down in the world, began to undergo a musical change. It had always been a special favourite with gypsies; it was now taken up by those who affected gypsy manners, while about the time of the first production of 'Carmen' (1875) the conditions under which it was sung began to be studied and imitated. It was then called *flamenco* (lit. "flamingo" or "Flemish"), and was applied to the music made by those who affected gypsy manners or wore brightly coloured "flamingo" garments. *Cante flamenco* is the modernized, "gypsified" form of *cante hondo*, still composed and sung all over Andalusia. — Entertainments of the kind are common in descriptions of Spanish life in the 1830s, but the word *flamenco* seems not to have been applied to them until later. The earliest mention of *cante flamenco* in print is in 1871: the first published collection of *cantes flamencos* (words only) is dated 1881.

The characteristics of *cante hondo* are as follows: The song usually begins with a long vocalise on the syllables *Ay!* or *Llé!* There is a deliberate use of intervals unknown to modern western music, though their use depends on well-established principle or practice — the alteration by less than a semitone of certain notes of the scale, but never the tonic or dominant. The melody is generally restricted to the compass of a sixth; a note is apt to be repeated to the point of becoming an obsession; there are rich and complicated ornamental flourishes which, however, are

employed only at certain instants, to underline the emotion of the words; and there are the cries of *Olé, olé*, thrown in by the audience to express their approval and encourage the performers. To these might be added the prevalence of conjunct motion and the almost unvariable suggestion, both in the voice part and the guitar accompaniment, of the Phrygian cadence, A—G—F—E.

It is easy to dismiss these melodies as being "oriental", and it is true that modern Arab music has certain features in common with southern Spanish popular music as it is performed to-day. Yet the "orientalism" of *cante jondo* is mostly on the surface and connected with the words *Olé*, which is "Allah", and *Leli*, an Arabic word pointing to Moorish influence; it lies in the manner of performance rather than in the music itself. Moreover, the more modern forms (*flamenco*) sound more "oriental" than the older, traditional *cante hondo*, the oldest, the *siguiriya gitana*, less so than any.

Many forms of the songs have existed and are distinguished by the number of lines in the verse, by the run of the melody and by the rhythm and general shape of the introduction and accompaniment played on the guitar. (The singer very rarely accompanies himself or herself) *Cante hondo* includes *siguiriyas*, *polos* and other old forms; *soleares* are on the borderline between *hondo* and *flamenco*; while descendants of the *fandango* such as *granadinas*, *rondañas* and *malagueñas* are definitely *flamenco*. The *saetas* and *carceleras*, sung during the halts of a procession, are unaccompanied.

The festival of *Cante hondo* held at Granada in 1922 under the direction of Manuel de Falla proved that these songs, if properly performed, are not merely curious and interesting survivals, but living pieces of music, charged with all the emotion which tradition, memory, surroundings and pure musical beauty can give them.

J. B. T.

**CANTELLI, Guido** (b. Novara, 27 Apr. 1920).

Italian conductor. He showed musical gifts and began to be taught at an early age, so that, when he was fourteen, he was able to give his first pianoforte recital. He was then sent to the Milan Conservatory, where he made composition and conducting his principal studies. In 1943 he returned to Novara, where he became conductor and artistic director of the Teatro Coccia, a post held long before by Toscanini. But towards the end of the second world war he was obliged to join the Italian army, though he objected to fighting for principles which he regarded as having been imposed upon his country by the Nazi régime in Germany. He was therefore taken to Germany to be interned in a labour camp, and he remained in that of Stettin, where he suffered great privations,

until he became so ill as to be transferred to Bolzano as a hospital case. He eventually escaped from there, obtained a forged passport and contrived to make his way to Milan, where he lived under an assumed name. After the liberation of Italy he was set free, having been taken as hostage by the Fascist troops, and obtained engagements as an orchestral conductor, beginning with the orchestra of the Teatro alla Scala at Milan. He then made the round of Italy with growing success and before long appeared in many of the chief European musical centres, as well as in New York. He conducted at the Edinburgh Festival of 1950 and in 1951 appeared for the first time in London, conducting several concerts of the Philharmonia Orchestra at the Royal Festival Hall in Sept.

Cantelli conducts quietly, concentrating all his attention on the music and never giving a thought to the audience or trying to make an impression on it by any other means than that of his interpretations. At first sight his almost continually symmetrical use of both hands makes him appear less technically resourceful than his peers in the art of conducting, but on listening attentively to his performances one soon becomes aware that such careful preparation has gone towards their realization at rehearsal that no ostentatious gesturing is required to remind his players of what has been settled in matters of articulation, dynamic, phrasing and punctuation, all of which receive the most careful attention.

E. B.

**CANTELO, April.** See DAVIS, COLIN.  
**CANTELOUBE (DE MALARET),**  
(Marie) Joseph (b. Anonnay, Ardèche, 21 Oct. 1879).

French composer. He studied composition with d'Indy at the Schola Cantorum in Paris and expressed himself most fully in those of his works which were inspired by nature. Among his numerous compositions the following deserve mention: 'Le Mas' a lyric drama in three acts to his own libretto, which was awarded the Prix Heugel (100,000 francs) in 1926 and performed at the Opéra on 3 Apr. 1929; 'Vercingétorix', lyric drama in four acts, given at the Opéra on 26 June 1933; 'Vers la princesse lointaine', a symphonic poem first heard at the Colonne concerts in 1912; and 'Lauriers', a symphonic work for orchestra first heard there in 1931.

Canteloube also wrote a number of songs, including 'Colloque sentimental: Au printemps' (Colonne concerts, 1919); 'L'Arada' ('La Terre'); 'Tryptique' (Colonne concerts, 1923); 'Chants d'Auvergne' (Colonne concerts, 1924). His instrumental works include 'Dans la montagne' for violin and pianoforte, a 'Poème' for violin and orchestra (Colonne concerts, 1938) and 'Pièces fran-

caises', consisting of four pieces for pianoforte and orchestra (Colonne concerts, 1936).

After 1900 Canteloube devoted much time to the study of folksong in an effort to imbue modern music with some of its freshness and vigour, and with this end in view he published several collections of folksongs: 'Chants populaires de Haute-Auvergne et Haut-Quercy' (2 vols., 1907), 'Cinq Chants paysans', 'Nouveaux Chants paysans', 'Chants religieux de Haute-Auvergne', etc. From 1923 onwards he lectured extensively on French music and folksong, particularly on that of Auvergne; he also made numerous broadcasts from all the important French stations, and others during his travels in England and on the Continent. E. B. (ii).

**CANTERBURY PILGRIMS, THE** (Opera). See KOVEN. STANFORD.

**CANTERBURY TUNE.** See CHANT (Ex. 2).

**CANTICLE** (Lat. *canticum*). The name generally given to certain hymns taken from the Bible and sung in the services of the Anglican Church, such as the Benedictus, the Benedicite, the Magnificat and the Nunc Dimittis. In the Book of Common Prayer the word is used for the Benedicite only.

C. H. H. P.

See also Service.

**CANTIGAS.** See ALFONSO EL SABIO. SONG, p. 912.

**CANTILENA** (Ital., etymologically "a little song"). This term was formerly applied to the upper or solo part of a concerted song; also to a small cantata or any short piece for one voice. It is now employed in instrumental music to denote a flowing melodious phrase of a vocal character, or to indicate the smooth rendering of slow expressive passages. It is also sometimes used as a substitute for *cantabile*. A. H. W.

**CANTILLATION.** See JEWISH MUSIC.

**CANTIONES SACRAE.** The name given to numerous collections of Latin motets. Famous English examples are those of Tallis and Byrd.

See also Motet.

**CANTO** (Ital.; Lat. *cantus*; Fr *chant*). With the Italians this word has a great variety of acceptations, e.g. music, instrumental as well as vocal; the *motif*, subject or leading idea of a musical composition; the art and practice of singing; a section of a poem, etc., etc. Technically *canto* is more generally understood to represent that part of a concerted piece to which the melody is assigned. Thence *canto* (voice as well as part) has become rather too loosely synonymous with soprano. The *canto* clef is the C (soprano) clef on the bottom line of the stave. J. H.

**CANTO CARNASCIALESCO** (Ital., later *carnavalesco*). A carnivalesque song of the

15th-16th centuries, especially at Florence, with the tune in the tenor part. It was sung in carnival processions in the streets to secular words often of a ribald nature.

**CANTO FERMO.** See CANTUS FIRMUS.

**CANTOR** (Med. Lat. *primicerius*, *cantor*, etc.; Eng. *precentor*, *chanter*; Fr. *chantre*, *grand chantre*; Ger. *Canior*, mod. *Kantor*).

(1) A title given in cathedral, collegiate and monastic churches to the official in charge of the music. In the Norman constitution of the cathedrals, introduced at the end of the 11th century, the chanter was the second in rank of the four principal dignitaries of the church, and gradually the greater part of the secular cathedrals of the old foundation conformed themselves to this model; the most notable exception was the Church of St. David's, where there was no dean until the middle of the 18th century and the chanter was the chief dignitary. Normally as second only to the dean, in choir, he had the first return-stall, on the north side of the choir, facing the altar, for which reason the north side is called *Cantoris*, or the chanter's side, as contrasted with *Decani*, the dean's side. In monastic corporations the position was different, for the chanter there was merely one of the officers nominated by the abbot or prior, and had no particular precedence. Consequently in cathedrals that were formerly monastic, but are now governed by new statutes dating back only to the Reformation, the chanter or precentor is not a canon, but a minor canon.

In some few English cathedrals the familiar term chanter is still retained; and his deputy, the succentor, is called the subchanter. The Latinized form, *cantor* (now *Kantor*) is always used in Germany; but in France *chantre* is frequently exchanged for *maître de chapelle*.

The duty of the precentor is to direct the performance of the service in general and particularly to superintend the intoning of the psalms and canticles. It is from the second of these functions that he derived his title. In modern times his duty is to exercise a general supervision over the singing, to select the music and to take care that it is properly performed. In consequence of the high rank attached to the preferment in cathedrals of the old foundation, it is generally given to one whose qualifications for the position are other than musical, and the duties are entrusted to the succentor. Even where this is not the case, and in the new foundations where the precentor is usually chosen for his musical capacities, the importance of the office is increasingly modified by the growing importance of the organist—an official of more modern origin.

(2) A name given to the principal of a

college of church music. We hear of the foundation of such a college in Rome as early as the 4th century, but it was not until the pontificate of St. Gregory the Great (590-604) that the Roman Schola Cantorum began to exercise any very serious influence upon the development of church music. A sketch of its subsequent history will be found elsewhere.<sup>1</sup> Charlemagne founded singing-schools in many parts of his dominions and watched over them with paternal care. Every such school was governed by its own special *primicerius*, or cantor, and, as the curriculum was not confined to singing but comprised a complete course of instruction in music, the influence of a learned cantor was very great.

In Germany the musical head of an educational establishment, with a choir-school, attached to a church, was called the cantor; but he was subject to a rector, whose position was that of headmaster. It was in this sense that Bach was cantor of St. Thomas's School at Leipzig. W. S. R., rev. W. H. F., adds.

**CANTORIS.** See CANTOR. CATHEDRAL MUSIC.

**CANTUS FICTUS.** See MUSICA FICTA.

**CANTUS FIGURATUS** (Lat., figured song). Plainsong with more than one note to some of its syllables.

**CANTUS FIRMUS** (Ital. *canto fermo*). A "fixed" song or melody. The term is commonly used (in England the Italian form is most frequent) of a melody adopted by a composer for contrapuntal treatment. The style dates from the early polyphony of the 12th century<sup>2</sup>, when portions of Liturgical plainsong were thus adopted. The term seems to have been promulgated more by the writers of theoretic treatises than by composers, and thus it became specially associated with the academic exercise in counterpoint.

In motets from the 13th century onwards and in masses from about the 15th to the end of the polyphonic period a tune used as a *cantus firmus* remained unaltered in one voice (usually the tenor), while the other parts proceeded independently. It was as a rule sung in long notes against quicker motion in the counterpoint, with the result that it usually moved so slowly as to become unrecognizable in performance. H. C. C., adds.

**CANTUS MENSURABILIS.** See MUSICA MENSURATA.

*Canudo.* See Ravel ('Frontispiece', pf. duet).

**CANZONE** (Ital., plur. *canzoni*). The name of a particular variety of lyric poetry in the Italian style, and of Provençal origin

(*canzo*), closely resembling that of the madrigal. Musically the term is applied in various ways.

(1) The Provençal troubadour song designated by the Provençal word *canzo* or *canso*, equivalent to the French *chanson*.

(2) A definite musical form in 16th-century Italian secular music (*canzone alla villanesca*, *canzonetta*, etc.). Like the Italian poem from which it derives, it is strophic and usually takes the form of A (repeated), B, C (repeated). It is generally for 5 or 6 voices at that period and approximates to the light ballet or pastoral madrigal. Its most representative masters are Conversi, Ferretti and Orazio Vecchi.

(3) An instrumental form of the 16th and 17th centuries. It took its departure from the vocal *canzon francese*, as the polyphonic Flemish and French *chansons* were called in Italy, many specimens of which had been transcribed for lute, harpsichord or organ and thus led to independent instrumental composition of the kind, at first called *canzoni alla francese* or, to indicate their difference from vocal pieces, *canzoni da sonare*. The new species was usually designed for consorts of viols or — more often — for keyboard instruments. It was not unlike the *ricercare*, but lighter in character and less scholastic in texture. The polyphony was loose and, after a fugal opening, not strictly in the manner of a fugue. The fugal opening (in two parts only) persisted, however, into the early 18th century — e.g. in many of Domenico Scarlatti's *esercizi* for harpsichord. Representative composers of the *canzone* for several instruments are Banchieri, Giovanni Gabrieli, Purcell (in the 'Sonatas of 3 and 4 Parts'); of the keyboard *canzone* Andrea Gabrieli, Merulo, Frescobaldi, Froberger, Kerll, down to J. S. Bach (B.-G., Vol. XXXVIII, No. 20).

(4) In the 18th century and later the *canzone* became vocal again or, if instrumental, was in the character of a light song. In opera it was usually an actual song (e.g. Cherubino's "Voi che sapete" in Mozart's 'Figaro') as distinct from an aria expressing a character's mood or situation. E. P., adds.

See also Cavazzoni (G., instrumental *canzone*).

**CANZONET** (Ital. *canzonetta*). Originally a smaller form of *canzone*. Morley in 1597 published 'Canzonets or little short songs to four voices; selected out of the best and approved Italian authors'. Afterwards the word was used for vocal solos of some length in more than one movement. In 18th-century England canzonets were short songs, generally of a light character (e.g. Haydn's English canzonets of 1794). W. H. C., adds.

**CANZONETTA.** See CANZONE.

**CAOINE** (pronounced *Keen*). The death-song as practised in Ireland from prehistoric times till the close of the 19th century, though

<sup>1</sup> See SISTINE CHOIR.

<sup>2</sup> See DESCANT & MOTET.

in remote districts it may still be heard at wakes and funerals. The practice dates from the cradle of humanity when primitive man thought that he could influence an unseen spiritual world by means of a special *cantus*, a word which, in its pristine significance, meant "incantation". The *caoine* is identical with the *qinah* of the Old Testament, where it is a lamentation for the dead by professional wailing-women. Its expression ranged from a wail and dirge (Jeremiah ix, 17) to an elegiac form, as in David's sorrow over Saul and Jonathan (II Samuel i, 17). In the New Testament (Mark vi, 38) we see wailing-women at the house of Jairus, and in Talmudic times the *qinah* was chanted at burials by at least one wailing-woman and two pipe-players. Strangely enough, Arab female musicians were called *qandāt* in pre-Islamic and medieval times, and the word may be a survival of the ancient Assyrian *qanitu*. The Greeks had both the wail (*δολυγία*, Lat. *ululatus*) and the dirge (*ιδέμεος*, Lat. *naenia*), and both seem to have been constituent parts of the *θρήνος*, which Lucian describes in 'De luctu', while the *naenia* is well attested among the Romans.

These exist to-day in their primitive forms among Arabic and Celtic peoples. With the former, the *walwāl* or *walwāla*, which is the wail (cf. the Greek and Latin words), is performed by professional wailing-women (*nad-dābāt*) with such tributes to the dead as "O my glory", "O my lion", interspersed with cries of "Alas for him". The Irish *caoine* is little different, except that it is more musical and contains, like the Greek *θρήνος*, both the wail and dirge, the former displaying itself in the vowel "Ulla lulla", and the latter in its encomia of the deceased in such tributes as "Thou who wast noble, royal, valiant". The keeners surround the bed or bier and each group vary the melody according to their taste and musical knowledge, led by the chief keener. The cries are raised by the first and second semi-chorus at the conclusion of each verse of the *caoine*. These keeners were mostly professional mourning women, known as *mna caointe* (alluded to by Stanishurst ('De rebus Hibernicis', 1584, lib. i, p. 47)), and were generally four in number. It may be of interest to give a traditional *caoine*, known as 'The Wail of the Banshee':

Other examples may be found in the Irish authorities listed below. H. G. F.

**CAPDEVIELLE, Pierre** (b. Paris, 1 Feb. 1906).

French conductor and composer. He entered the Paris Conservatoire in 1924 and attended the classes of Gédalge for fugue, Vidal for composition and Philipp for the pianoforte; but, having submitted a cantata in which the administrative regulations of the institution were set to music, he was requested to leave in 1926. He then completed his studies privately under Vincent d'Indy and Maurice Emmanuel. In 1927 Rhené-Baton conducted one of his first orchestral works. During the 1930s he acted as music critic ('Monde musical', 'Revue musicale') and conducted operatic performances in provincial towns. In 1944 he was appointed director of chamber music and of musical studies by the Radiodiffusion Française. He is a member of the council for music of UNESCO, a vice-president of the I. S. C. M. and president of its French section. He appears frequently in Paris as conductor of his own music and on the wireless as conductor of old and new works for chamber orchestra.

As a composer Capdevielle defies classification. A consummate craftsman, he likes to vary his style from work to work, feels himself in sympathy with the "baroque" trends of the French tradition (Berlioz, Florent Schmitt) and is as little afraid of exotically luscious chromaticism and rhythmic asymmetry as of common chords or simple, square construction bordering on pastiche. A sense of humour mitigates his occasional pomposity. On the whole he is a romanticist who takes to classic subjects and treats them in a picturesque manner.

## CATALOGUE OF WORKS

## OPERA

- 'Les Amants captifs', *mythe lyrique* in 2 acts (libretto by P. Guth) (1948-50).

## INCIDENTAL MUSIC

- 'The Trachiniae', Sophocles (1943-48).

## CHORAL WORKS

- 'Pélagios', concert drama for speaking-voice, chorus & orch. (1941).

- 'Cantate de la France retrouvée' (J. Tardieu) for tenor men's chorus, wind, harp, pf. & perc. (1945).  
'L'Île rouge' for solo voices, chorus & orch. (1945-46).

## ORCHESTRAL WORKS

- Symph. poem 'Incantation pour la mort d'un jeune Spartiate' (1931).  
Overture for Cyrano de Bergerac's play 'Le Pédant joué' (1943).  
'The Trachiniae', 2 suites from the incidental music '1943-48'.  
'Moléra', suite (1946-47).  
1. Alceste.  
2. Agnès.  
3. Scapin.

## VOICE AND ORCHESTRA

- 'Deux Apologues d'Oscar Wilde' (1930-32)

## CHAMBER MUSIC

- 'Sonata da camera' for vn. & cello (1941).  
'Sonatine pastorale' for flute & viola (1942).

## VOCAL CHAMBER MUSIC

- 'Cinq Poèmes de J. Romann' for voice & stgs. (1934-1936).  
'De profundis' for voice & stgs. (1939).  
'Les Amours de Pierre Ronsard', 3 madrigals for voice, flute, harp & stg. trio (1943-45).

## VIOLIN AND PIANOFORTE

- 'Trous Pièces brèves' (1928-30).

## SAXOPHONE SOLO

- 'Exorcisme' (1936).

## PIANOFORTE MUSIC

- 'Lude' (1943).

## SONGS

- 'Cinq Poèmes de Guillaume Apollinaire' (1932-33).  
'Quatre Poèmes' (Baudelaire, P. Drouot, André Suarès & Rilke) (1932-38).

F. E. G.

**CAPE, Safford** (b. Denver, Colorado, 28 June 1906).

American conductor. He studied piano-forte and composition in his native town and went to Europe in order to complete his musical education, settling in Brussels, where he devoted himself to an elaborate study of musicology under the direction of his father-in-law, Charles van den Borren. Much impressed by the beauty of medieval and Renaissance music, Safford Cape became aware that almost entire periods in the history of music remained unknown, owing to the lack of proper performances of the works belonging to them. He then decided to bring to life the work achieved theoretically by musical historians. In 1933, giving up all his other activities, he founded the society "Pro Musica Antiqua" under the patronage of Professor van den Borren. Taking his stand on the original documents, he endeavoured to bring out the aesthetic principles which appeared to govern the performance of pre-classical music. His achievements are looked upon as true revelations by experts and greeted with enthusiasm everywhere by concert-hall audiences.

A. L. C.

See also Pro Musica Antiqua.

**CAPECE, Alessandro** (b. Teramo, Abruzzi, ?; d. ?).

Italian 16th-17th-century composer. He

was *maestro di cappella* at the cathedral of Ferrara and in 1613-17 at that of Rieti, where from 1614 he also filled the post of *organista supplente*. Where he lived between 1617 and 1624 is not known, but as he called himself "Romano", though not born in Rome, he may have been there during that time. From 1624 to Nov. 1627 he was *maestro di cappella* at Tivoli cathedral, where Carissimi was organist under him. He wrote three books of motets, three of madrigals, 'Sacri concerti', etc.

E. v. d. s., adds.

**Capece, Carlo Sigismondo.** See Gluck ('Tele-macco', lib.), Handel ('Resurrezione', oratorio). Scarlatti (1, 3 lib.). Scarlatti (5, 8 opera & 2 oratorio lib.).

**Capek, Brothers.** See Austin (F., 'Insect Play', incid. m.), Folprecht ('Fateful Game', lib.), Humak ('Insect Play', incid. m.).

**Capek, Josef.** See Křtčka ('Dobře do dopadlo', lib.).

**CAPEK, Josef Horymír** (b. Jestrčovice nr. Votice, Bohemia, 12 Mar. 1860; d. Chicago, 1 Aug. 1932).

Czech violinist and teacher. From 1877 he worked in the U.S.A. and in 1880-82 he studied violin at the Prague Conservatory. After his return to America he lived first at Milwaukee, then at Little Rock and from 1888 permanently in Chicago, where he played first violin in the Thomas Orchestra and in the Chicago Symphony Orchestra, taught the violin at the foremost musical institutions and organized the musical life of the Czech colony. It was under his leadership that Smetana's string Quartet, 'From my Life', was played for the first time in the U.S.A. (at Milwaukee in 1885), as well as the opera 'The Bartered Bride' in Czech, at Chicago on 20 Aug. 1893. His activity as a composer was less important.

G. Š.

**Čapek, Karel.** See Janáček ('Makropoulos Affair', opera).

**CAPELL, Richard** (b. Northampton, 23 Mar. 1885; d. London, 21 June 1954).

English music critic and author. He had a general musical education under C. J. King at Northampton and studied the cello with E. van der Straeten in London and G. Penaut at Lille. After some experience in journalism in his native town he went to London as music critic to 'The Daily Mail' and, except for an interval during and for a short time after the first world war (1914-19), when he was on active service abroad, he held that post until he was invited to transfer to 'The Daily Telegraph' in 1933. He occupied the post of chief music critic till his death. He received the Military medal for his war service. During the second world war he volunteered in 1939 to serve his paper as special correspondent, first in France, later in North Africa and lastly in Greece. The result of his Greek experiences was a book entitled 'Simiomata' (London, 1946). He received the O.B.E. in 1946.

A man of sound judgment and wide reading (particularly of French literature, which inculcates a sense of style), Capell was able to make the interests of music felt and the art respected by the wide circle of readers for whom 'The Daily Mail' caters. In later years his talents found fuller scope on a paper which by long tradition pays especial attention to the events of the concert-room and the affairs of the professional musician. A busy life left him little time for more permanent literary work, but his book on 'Schubert's Songs' (1928), containing detailed description, musical analysis and free English paraphrases of the poems of the most important songs, is a masterly contribution to the study of the subject. He made English translations for singing of songs by Schubert, Schumann, Wolf and Grieg, and in 1938 translated for the publishers Richard Strauss's opera 'Friedenstag'. In 1930 he published a small booklet on 'Opera', tightly packed with information and penetrating criticism; this was reissued in a revised and enlarged form in 1948.

When in 1937 'Music & Letters' was given up by its founder and first editor, A. H. Fox Strangways, Capell guaranteed its future by becoming its proprietor; and in 1950, when the second editor, Eric Blom, was compelled by pressure of work to resign the honorary editorship, Capell took it upon himself.

H. C. C., adds.

**CAPELLA (Martianus Minneus Felix)** (b. Madaura, N. Africa, ?; d. ?).

Latin 5th-century poet and grammarian. The 9th section of his 'Satyricon' is concerned with music, and Rémy of Auxerre's commentary on it is printed in Gerbert's 'Scriptores . . .', Vol. I.

D. H. B.

**CAPELLA RORANTISTARUM (Chapel of Rorantists).** A Polish religious and musical establishment founded by King Sigismund at Wawel, the royal castle of Cracow, in 1540. The king's edict established a vocal team consisting of nine chaplain-singers and a seminary, supervised and conducted by a *Præpositus*. Their principal task was to perform a *cappella* and in *cantus figuratus* the first daily Mass in the Sigismund Chapel. (The name "Rorantists" was derived from the initial phrase of the first Mass after dawn, 'Rorate coeli'.)

The funds for this establishment (by the king's edict) were collected from the salt-works at Wieliczka and Bochnia as well as from taxes due to the crown from the town of Słomniki and several neighbouring villages. The members of the chapel were provided with a separate house near the royal castle and with the latest musical publications of the time. They performed (not earlier than 1543) "prænobili arte italiana" the works of Palestrina, Lassus and Goudimel as well as music by the Polish masters of polyphonic art

such as Waclaw of Szamotuły, Marcin Leopolita, Mikołaj Gomółka and others.

The institution survived till near the end of the 19th century. The first *Præpositus* was Mikołaj of Poznań.

G. R. H.

**CAPET, Lucien** (b. Paris, 8 Jan 1873; d. Paris, 18 Dec. 1928).

French violinist, composer and teacher. He was a pupil at the Paris Conservatoire of J. P. Maurn (himself a disciple of Baillet and of Habeneck), and obtained in 1893 the first prize by unanimous decision. Appointed in 1896 as leader of the *Lamoureux* concerts, he left them soon to enter upon a brilliant career as a soloist and quartet player. He toured Europe with increasing success without giving up his teaching. After a short time at the Bordeaux Conservatory he was called to that of Paris in 1907 (chamber music and violin). His teaching brought him renown, especially in bowing, in which he brought the technique to as great a perfection as Ševčík did the technique of the left hand.

As a performer Capet was distinguished by faithfulness, by the purity of his tone and the fine style of his playing, though this at times interfered with the force of his expression.

He published a string Quartet, a Sonata for violin and pianoforte, studies for the violin and a poem for voice and orchestra, 'Devant la mer'. He left numerous compositions in manuscript, among them a second Quartet and a Psalm (solo, chorus and orchestra).

Capet formed his first string quartet team after leaving the Conservatoire with Giron, Henri Casadesus and Furet, the last-named soon replaced by Carcanade. This first party lasted from 1893 to 1899. In 1903 a new quartet was formed with Tourret, H. Casadesus (afterwards Bailly) and Louis Hasselmans. After studying for a year together this group appeared in public for the first time, giving a complete performance of Beethoven's 17 quartets. It repeated them frequently, together with the most beautiful works of the classical and modern repertory until 1910, when the players dispersed. In that year the third team was formed with Hewitt, Henri Casadesus and Marcel Casadesus (the latter killed in action in Oct. 1914). After the first world war the Capet Quartet consisted of Hewitt, Benoît and Delobelle. With these various partners Capet consistently gave performances which were models of technical ability and musical style and won praise in every capital of Europe. In 1911 Capet had the honour of representing the art of French quartet playing at the Beethoven Festival at Bonn.

**CAPILUPI, Geminiano** (b. Modena, ?; d. Modena, 13 Aug. 1616).

Italian composer. He was a pupil of Orazio Vecchi, who included 16 pieces by him in his 3-part canzonets of 1597 and whom he succeeded as *maestro di cappella* at Modena Cathedral on 7 Oct. 1604.

Capilupi's published works are 'Canzonette' for 3 voices (Venice, 1597. German ed. 1606), 2 books of madrigals (1599 and 1608), one book of motets (1603), 'Concerti ecclesiastici' for 8, 9, 12 and 13 voices (1621) and single songs in various collective volumes.

**CAPITAN, MAESTRO.** See ROMERO (MATEO).

**CAPLET, André** (b. Le Havre, 23 Nov. 1878; d. Paris, 22 Apr. 1925).

French conductor and composer. He began his musical studies at Le Havre under M. H. Woollett. In 1896 he went to the Paris Conservatoire, where he was the pupil successively of Leroux, Vidal and Lenepveu. Obtaining the Grand Prix de Rome in 1901 he was enabled to visit Italy and Germany, where he followed assiduously the performances at Berlin and Dresden of Mottl and of Nikisch. He early revealed his vocation as a conductor. At eighteen he was assistant to Édouard Colonne, at twenty-one director of music at the Théâtre de l'Odéon. But it was especially after he left Rome that Caplet developed his extraordinary gifts of orchestral comprehension and vitality. Debussy attracted him and they became intimate. The composer of 'Pelléas' considered Caplet a born conductor and chose him in 1911 to undertake the performances at the Châtelet of 'Le Martyre de Saint Sébastien'.

In 1910-14 Caplet was director of music and conductor at Boston, where he succeeded in introducing to the public a great number of notable works by modern French composers. In 1912 he conducted 'Pelléas et Mélisande' in London, at Covent Garden. In 1922, in Paris, Caplet conducted several times at the Padeloup concerts, and in 1925 he revived at the Opéra 'Le Triomphe de l'amour' by Lully, of which he had revised the orchestration.

Among his contemporaries Caplet ranked as a composer who employed modern harmony and instrumental colour with authority and taste. He was a sensitive poet before all else. He understood how to create a dreamlike or magic atmosphere in the most spontaneous way, from the first notes of any of his works. A refined artist, he always succeeded in expressing the most delicate fugitive shades of thought and feeling with an exquisite choice of expression.

Caplet's works comprise many songs:

'Prières', 'Le Vieux Coffret', 'La Croix douloureuse', 'Trois Fables de La Fontaine', 'Cinq Ballades françaises', 'Hymne à la naissance du matin', etc.; most of these are orchestrated. Chamber music is represented by a wind and pianoforte Quintet (1898), a 'Suite persane' for ten wind instruments (1900), a 'Conte fantastique' (after Edgar Allan Poe) for harp and string quartet. Later works were: 'Sonata da chiesa' for violin and organ (1924) and a 'Suite de pièces' for pianoforte duet, dedicated "aux enfants bien sages" (1925).

Orchestral music: 'Le Masque de la mort rouge' (symphonic study after Poe) (Colonne concerts, 1909); 'La Marche héroïque de la V<sup>e</sup> Division' (1917); 'Épiphanie', a musical "fresco" for cello and orchestra (1923). Transcriptions for orchestra of Debussy's 'Children's Corner', 'Pagodes' and pianoforte arrangements of his 'La Mer' and 'Martyre de Saint Sébastien' must also be mentioned.

Caplet's choral works and religious music, or with a religious tendency, hold a special place in the music of his time because of their mystical sentiment and dramatic force. 'Le Pie Jésus' (1919) is for solo voice with organ accompaniment; 'Les Inscriptions champêtres' (1914) and the Mass for three voices (1922) are written *a cappella*; 'Le Miroir de Jésus' (1923) consists of string quintet, harp and three voices, which alike accompany the solo voice. It is in these works that Caplet probably reached the summit of his art.

He died very suddenly of lung disease, the result of wounds and gas-poisoning during the first world war, at a time when he was nearing his zenith both as conductor and composer. He left various unfinished works.

**CAPO TASTO** (Ital. from *capo* = head and *tasto* = touch or tie; Fr. *barre*; Ger. *Capotaster*; sometimes *capo d'astro*). In Italian the nut of a lute or guitar, but also the general name of a contrivance for shortening the vibratory lengths of strings, thus forming a second nut to facilitate change of key. The construction of a *capoasto* varies according to the stringing and shape of the neck of the instrument it is to be applied to, but it may be described as a narrow rail of hard wood, metal or ivory, clothed with leather or cloth and often fastened by a screw upon the fret from which it is intended to mark off the new length of the strings. There are other but less simple ways of attaching it. The technical advantage of using a *capoasto* is that higher shifts can be more easily obtained; and the use of open strings, upon which the possibility of chords

often depends, is facilitated in another compass than that natural to the instrument. How much transposition may be facilitated will be gathered from the tuning of a guitar the strings of which give the following notes as the basis for sharp keys: E, A, d, g, b, e'. With a *capo tasto* on the first semitone fret we obtain the basis for flat keys, the fingering remaining the same, thus: F, Bb, eb, ab, c', f'.

With bowed instruments the *capo tasto* is no longer used, but it was formerly with those having frets, such as the viola da gamba. The use of the thumb as a bridge to the cello serves as a *capo tasto*, as also, in principle, the pedal action of the harp.

A. J. H.

**CAPOCCI, Filippo** (b. Rome, 11 May 1840; d. Rome, 25 July 1911).

Italian organist and composer. He began to study music at the age of nine, learning the organ and harmony from his father, Gaetano Capocci. In 1861 he obtained a diploma as a pianist in the Academy of St. Cecilia in Rome. He was appointed first organist at the church of St. John Lateran in 1873 and succeeded his father as *maestro direttore di cappella* in 1898. A visit of Alexandre Guilmant to Rome in 1880 inspired Capocci to devote himself to the highest branch of organ technique, and he shortly became famous for the excellent taste of his arrangement of stops, for the admirable clearness of his playing and for his musicianly phrasing. A great number of compositions for the organ have been published in London, Leipzig and Paris. They include 5 sonatas and 11 books of original pieces.

J. A. F.-M.

**CAPOCCI, Gaetano** (b. Rome, 16 Oct. 1811; d. Rome, 11 Jan. 1898).

Italian organist and composer, father of the preceding. He began his musical studies under Sante Pascoli, organist of St. Peter's in Rome, and was afterwards a pupil of Valentino Fioravanti and Francesco Cianciarelli for counterpoint and composition. In 1831 he received the diploma of organist and in 1833 that of composer from the Academy of St. Cecilia. His first post as organist was in the church of Santa Maria in Vallicella; in 1839 he was appointed to Santa Maria Maggiore; in 1855 he was made *maestro direttore* of the Cappella Pia of St. John Lateran, a post which he occupied till his death.

Capocci's sacred compositions were constantly in use at the Lateran, where his Responses for Holy Week were universally admired; seven published volumes, containing 42 compositions, such as masses, motets, psalms, etc., represent only a comparatively small proportion of his works, which are remarkable for their faithful adherence to the ecclesiastical style of the great Italian school, and for melodies of a flowing, facile type.

J. A. F.-M.

**CAPORALE, Andrea** (b. ?; d. London, c. 1756).

Italian violoncellist and composer. He arrived in London in 1734 and excited much attention. In 1740 he joined Handel's opera orchestra. He played in Dublin from Sept. 1754 to June 1755, and again in 1757, when his performance there on 3 Feb. is noted in Faulkner's Journal (No. 3107). He was more famous for tone and expression than for execution. Eighteen solos for his instrument were published in London.

E. v. d. s.

**CAPOUL, Joseph (Victor Amédée)** (b. Toulouse, 27 Feb. 1839; d. Pujaudran du Gers, 18 Feb. 1924).

French tenor singer. He entered the Paris Conservatoire in 1859, studied singing there under Révil and *opéra-comique* under Mockery, and in 1861 gained the first prize in the latter class. On 26 Aug. of the last-named year he made his début at the Opéra-Comique as Daniel in Adam's 'Le Chalet' and next played Tonio in Donizetti's 'La Fille du régiment'. He became a great favourite and remained at that theatre until 1870. In 1872 he sang in Italian at the Théâtre Ventadour, in 1876 in French at the Gaîté, as the hero in 'Paul et Virginie' (Massé) and in 1878 at the Ventadour as Romeo in 'Les Amants de Vérone' (Marquis d'Ivry), both new operas.

On 1 June 1871 Capoul first appeared in England at the Italian Opera, Drury Lane, as Faust, with success, and he sang there every season (except 1874) until 1875. From 1875 to 1879 he sang at Covent Garden as Paul, Romeo, etc. He sang several seasons in North America both in Italian and in French *opéra-bouffe*. His last new part in Paris (Château d'Eau) was on 13 Oct. 1888, as the hero in Godard's 'Jocelyn', the libretto by himself and Armand Silvestre. In 1892 he taught singing at the National Conservatory, New York. From 1897 to 1905 he was stage manager at the Paris Opéra.

A. C., adds. M. L. P.

**CAPPA, Goffredo** (b. ?, c. 1647; d. Saluzzo, 6 Aug. 1717).

Italian violin maker. He was a pupil of Nicola Amati and his instruments became famous.

G.

**CAPPERAN.** See CHABRAN.

**CAPRICCIETTO** (Ital.). Diminutive of the following:

**CAPRICCIO** (Ital. =whim, caprice; Fr. *caprice*).

(1) The name was originally given to pieces written for the harpsichord in a fugued style, though not strict fugues, in the late 16th and the 17th centuries, when they resembled the *ricercare*, the *canzona* and the *fantasia*. It was also sometimes applied to actual fugues, when written upon a lively subject; and the composition was consequently for the most part in

quick notes. Examples of this kind of capriccio can be found in Handel's 'Third Set of Lessons for the Harpsichord', and in the second of Bach's 'Six Partitas'. Bach also uses the word as synonymous with "fantasia", i.e. a piece in a free form, in his 'Capriccio on the departure of a beloved brother'.

(2) In the middle of the 18th century the term was applied to exercises for stringed instruments, such as would now be called *études*, in which one definite figure was carried through the composition (e.g. Paganini's violin 'Capricci').

(3) Later the name was applied to a piece of music constructed on original subjects, and frequently in a modified sonata or rondo form (as in Mendelssohn's 'Three Caprices', Op. 33, or Sterndale Bennett's *Caprice in E major*), or to a brilliant transcription of one or more subjects by other composers. As examples of the latter kind may be named Heller's 'Caprice brillant sur la Truite de Schubert' and Saint-Saëns's 'Caprice sur les airs de ballet d'Alceste de Gluck'. The title 'Capriccio' is applied to several of the short pianoforte pieces which form an important part of Brahms's later works. His Opp. 76 and 116 consist of 'Capricci' and 'Intermezzi', the former name being applied to the more rapid movements, the latter to the slower.

**CAPRICCIO.** Opera in one act by Richard Strauss. Libretto by Klemens Krauss and the composer. Produced Munich, State Opera, 28 Oct. 1942. First performed in England, London, Covent Garden Theatre, 22 Sept. 1953.

**CAPRICE AMOUREUX, LE** (Opera). See DUNI.

**CAPRICORNUS.** See BOCKSHORN.

**CAPROLI, Carlo** (called **Carlo del Violino**) (b. Rome, ?; d. ?).

Italian 17th-century composer. He was probably a pupil of Luigi Rossi. He entered the service of Prince Ludovico, the nephew of Pope Innocent X, but in 1653 the Abbé Francesco Buti, the literary agent of Cardinal Mazarin, called him to Paris, together with a company of singers, to perform an opera at the French court. This was 'Le nozze di Peleo e di Theti', to a libretto by Buti, and it was sung at the Petit Bourbon palace on 14 Apr. 1654, with great success, one of the earliest Italian operas ever heard in Paris. The composer's wife, Vittoria Caproli, sang the part of Theti. Unfortunately the score has disappeared, apart from the ballet airs (which were contributed by Lully).

Caproli returned to Rome in June 1654, with letters of recommendation from Mazarin to Cardinal Antonio Barberini; he joined the household of that prince and stayed until 1665.

Subsequently he was guardian of the section of instrumentalists of the Accademia di Santa Cecilia, and in 1667, jointly with G. E. Bernabei he was appointed chapel master of the French church in Rome, San Luigi dei Francesi. Nothing more is known about his life. He must have been still living in 1683, the date of the score of his oratorio 'Davide prevaricante, e poi pentito' (words by Lelio Orsini), which is preserved at the National Library in Vienna.

In Angelo Berardi's 'Ragionamenti musicali' (1681) Caproli is called one of the best composers of cantatas of his time. Some 70 cantatas and canzoni are extant in various libraries (Bologna, Brussels, Modena, Paris, Naples, Rome, London and Oxford), and a list of them was compiled by Prunières, who reprinted one of them, 'Chi può Nina mirare', in the appendix of his 'L'Opéra italien en France avant Lully' (1913). Two of Caproli's cantatas are included in Playford's 'Scelta di canzonette italiane di diversi autori' (1679).

Caproli's brother, Jacopo, was also a composer of cantatas; a collection of 'Villanelle spirituali' by him is preserved at Naples.

A. L.

**CAPRON, Nicolas** (b. ?, c. 1740; d. Paris, 14 Sept. 1784).

French violinist and composer. A pupil of Gaviniès, he made his début at about the age of sixteen in the orchestra of the Paris Opéra-Comique, and having appeared as soloist at the Concert Spirituel during 1761 he met with ever-increasing success. He married on 22 June 1769 Anne Soisson, a cousin of Piron the writer. He was a distinguished virtuoso, who was sometimes reproached with delighting in extreme difficulties.

Capron wrote a number of concertos, quartets, duos and sonatas. Only two works, out of all these productions, have been preserved, a 'Premier Livre de sonates à violon seul et basse', Op. 1 (1768) and 'Six Duos pour deux violons', Op. 3 (1777).

**CAPULETTI ED I MONTECCHI, I** (Opera). See BELLINI.

**CAPUT MASS.** Three masses with this name are at present known to exist, and all three are available in modern editions. The composers, together with approximate dates of composition, are as follows: Dufay (c. 1445), Okeghem (c. 1470), Obrecht (c. 1485). There is also an anonymous 'Agnus Dei', possibly by Obrecht, and a setting of 'Salve Regina' by the English composer Richard Hygons (who was organist of Wells Cathedral until 1507), both of which make use of the *Caput* theme. This, as a theme or *cantus firmus*, proved difficult to trace for many years. From 1912 onwards various guesses were

made by Fritz Schegar, Peter Wagner, Johannes Wolf and André Pirro, who were unable to throw light upon the connection between the word "caput" and the *cantus firmus* used by Dufay, Okeghem and Obrecht. The melody was recognized to be quite distinctive and unusual, though definitely a part of the vast corpus of Gregorian plainsong.

Its true identity was first revealed by Manfred Bukofzer at the Basel Congress of the International Musicological Society in 1949. He first came across the theme in a manuscript processional of the Nuns of Chester, and further research into graduals and processions of the English (Sarum) rite showed that the closest resemblance between the *cantus firmus* of the three masses and the original plainsong was to be found there. The actual source of the theme is a melisma on the final word ("caput") of the antiphon 'Venit ad Petrum' which formed part of a special service on Maundy Thursday. The fact that this antiphon is not found in Roman, Ambrosian or Mozarabic liturgy, whereas it is an integral part of the *mandatum* (Maundy) service in Anglo-French sources, suggests that Dufay used a French or even an English manuscript for his original transcription of the melody. Another theory is that Dufay based his *Caput* Mass on an earlier work by an English composer such as Dunstable or Power. This would explain the suspected absence of a Kyrie from Dufay's Mass, for English polyphonic masses of the 15th century began with the Gloria, the Kyrie being sung in plainchant. Obrecht must have known Dufay's Mass, for he copied (as if by way of acknowledgment) the opening of the Gloria. That he did not copy the Kyrie is taken as evidence of the omission of this section in the earliest version of Dufay's Mass. Documents at Cambrai, dated 1463, mention that the Kyrie of a *Caput* mass — presumably Dufay's — were copied into one of the choir-books there. It may therefore be true that the Kyrie was a later addition, made to conform with a change in liturgical custom.

Both Obrecht and Okeghem used not only the *Caput* theme, but the rhythmical organization of it as set down by Dufay, with very slight changes. Hygons, in his 'Salve Regina', did exactly the same, and since his version of the *cantus firmus* is at the same pitch as Dufay's, and in the same mode, it is possible that he too knew either Dufay's Mass or the hypothetical English work which was the prototype of them all. It has not so far been proved that Dufay did not visit England, and in view of the discovery of parts of his *Caput* Mass in a Coventry manuscript, and of a complete copy of his Mass 'L'homme armé' in the Scone choir-book<sup>2</sup>, it may not be beyond the bounds

<sup>2</sup> See SCONE ANTIPHONARY.

of possibility that Dufay, as well as his music, was well known in England and Scotland during the 15th century.

**CAPUZZI, Giuseppe Antonio** (b. Brescia, 1 Aug. 1755, d. Bergamo, 18 Mar. 1818).

Italian violinist. He was a pupil of Tartini and Berton and became leader at Santa Maria Maggiore, Bergamo. He was violinist at St. Mark's, Venice, and went to London in 1796, where he met with great success and produced his ballet, 'La Villageoise enlevée, ou Les Corsaires', and some operas. He composed operas, cantatas, a considerable amount of chamber music and a 'Sinfonia concertante'.

A. L.

**CARA, Marchetto (Marco)** (b. Verona, ?; d. Mantua, c. 1527).

Italian lutenist and composer. From 1495 to 1525 he was at the court of Mantua. He was a famous song composer (frottole and pieces in the frottola manner) and lutenist. Aaron mentions him in the latter capacity in 1545.

E. v. d. S., rev.

**CARACTACUS.** See ARNE (T. A.) (stage work). ELGAR (cantata).

**CARADORI-ALLAN, Maria (Caterina Rosalbina)** (born de Munck) (b. Casa Palatina, Milan, 1800; d. Surbiton, 15 Oct. 1865).

Alsatian soprano singer. Her father, Baron de Munck, was an Alsatian, and had been a colonel in the French army. Maria's musical education was completed entirely by her mother, without assistance. Her father's death obliged her to avail herself of her gifts in order to support herself. Having attempted the stage in the course of a tour through France and part of Germany, she took her mother's family name of Caradori and accepted an engagement in London in 1822. She made her début on 12 Jan. at the King's Theatre as Cherubino. "It may be observed", says Lord Mount Edgcumbe, "as an odd coincidence that Pasta, Vestris and Caradori all have acted the Page in 'Le nozze di Figaro', and none more successfully than the last, who by accident, not choice, made her début in that part; and it proved fortunate for her, as her charming manner of performing it laid the foundation of her subsequent favour." She continued engaged through 1823 and 1824, and in the latter year took her benefit in Mozart's 'Don Giovanni'. On 21 Mar. 1825 she sang in Beethoven's ninth Symphony on its production by the Philharmonic Society.

Pasta having returned to London in 1826 and chosen Mayr's 'Medea in Corinto' for her benefit, Caradori acted and sang most charmingly in the tender and gentle part of

Creusa. Her voice, though not very powerful, was exceedingly sweet and flexible, and her style almost faultless. She had much knowledge of music and sang with great delicacy and expression. In a room she was perfect. Her appearance was interesting, her countenance very agreeable and her manner modest and unassuming, she always pleased though she never astonished her audience. Her salary rose gradually from £300 in 1822 to £1200 in 1827.

In 1834, happening to be again in England, she carried on the operas with tolerable success until the arrival of the expected prima donna, Giulia Grisi. But it was in concerts that she now achieved her greatest success, and most prominently in the Festival in Westminster Abbey in this same year, in which she sang with her usual excellence and was well heard, though it had been feared that her voice was not powerful enough for so large a space.

During the Carnival of 1830 she sang with success at Venice, but after 1835 she remained in England, singing at festivals and concerts. She sang the soprano part in the first performance of 'Elijah' at Birmingham on 26 Aug. 1846, when Mendelssohn's judgment of her performance was not so favourable as Lord Mount Edgcumbe's (Letters, 31 Aug. 1846). There is a good portrait of Caradori in the character of Creusa in Mayr's 'Medea' by J. Hayter, lithographed by Hullmandel.

J. M., abr.

**CARAFA (di Colobrano), Michele Enrico** (b. Naples, 17 Nov. 1787; d. Paris, 26 July 1872).

Italian composer. He was a younger son of Giovanni, Prince of Colobrano and Duke of Alvitto, and destined for a military career. He entered the Neapolitan army, became aide to Joachim Murat and fought in Calabria, Apulia and in 1812 in Russia. After Napoleon's downfall he devoted himself wholly to music, which as a boy he had studied with Ruggi and Fenaroli at Naples and with Cherubini and Kalkbrenner in Paris. Carafa lived in Italy but often visited Paris and settled there permanently in 1827. He became Lesueur's successor as a member of the Académie des Beaux-Arts and in 1840 was appointed professor of composition at the Conservatoire, a post which he retained until his retirement in 1858.

Carafa was chiefly a composer for the stage and wrote no less than about 20 Italian and 17 French operas (some of them written in collaboration with other composers). Of the Italian works 'Gabiella di Vergy' (Naples, 1816) had some success, while most of the others, although performed on the first Italian stages, the Scala of Milan and the San Carlo of Naples, hardly ever lasted for more than one season; 'Abufar, ossia La famiglia araba',

which he wrote for Vienna in 1823, was also a failure. But some of his French operas, especially 'Le Solitaire' (1822), 'Masaniello' (1827) — which preceded Auber's 'Muette de Portici' by two months — and 'La Prison d'Edimbourg' (1833, from Scott's 'Heart of Midlothian') were fairly successful and kept the stage for many years. Carafa also wrote some ballets for the Paris Opéra ('L'Orgie', 1831, and 'Nathalie', with Gyrowetz, 1832), church music (a Mass, a Requiem, a 'Stabat Mater'), symphonies, romances, pianoforte pieces, etc.

See also Auber (collab.) Bellini, Hérold (collab.). Mercadante (resetting of 'Gabiella di Vergy', lib.). Paer (collab.).

**"CARAMBA, LA" (María Antonia Fernández)** (b. Motril, Granada, 1751; d. Madrid, 1787).

Spanish singer. She first appeared in Madrid in comic operas and *tonadillas* in 1776. Her extraordinary success was due mainly to her beauty and spirit, and to her interpretations of the wild Andalusian gypsy songs; she was especially notable for her manner of singing the prolonged *Ay!* with which most of them begin and end. A 'Tirana' and other songs sung by her are printed by Mitjana ('La Musique en Espagne').

In 1781 she retired from the stage and married a Frenchman. She soon left him, however. Her return to the theatre was made the subject of a *tonadilla*, 'El luto de Garrido por la muerte de la Caramba', in which, after her death had been bewailed by the tenor (Garrido) in an aria worthy of Gluck, she appears to him wrapped in her mantilla and convinces him that she is alive by her imitable singing of a florid Andalusian melody. The nickname of "La Caramba" was given to her from the enormous bow of brilliant colour which she began to wear in her hair about 1778. The word has been used ever since as a familiar euphemism to express considerable surprise. The best criticism on her art is perhaps that of the obituary sonnet: *Esa que muda fué más elocuente* (She was more eloquent in silence than in song). J. B. T.

**CARAPPELLA, Tommaso** (b. Cerreto, 1653; d. Naples, 20 Sept. 1736).

Italian composer. He was chapel-master at several Neapolitan churches and his services were much in demand with the nobility, as appears from the title-pages of his compositions. He retired to the monastery of Monte Oliveto, where he died. Padre Martini, in his 'Storia della musica', praises him as an excellent composer in the madrigal style. Of his compositions a collection of 'Canzoni a due voci' was published at Naples in 1728.<sup>1</sup> Other *canzoni* and chamber duets are preserved in manuscript, as are two oratorios, 'Il trionfo della castità' and 'Battaglia spiri-

<sup>1</sup> A copy is in the B.M.

tuale', a Miserere for 4 voices and a hymn to Santa Francesca Romana which was sung annually at Monte Oliveto.

Of dramatic music Carapella wrote the choruses for Duke Annibale Marchesi's tragedy 'Domiziano' (printed at the end of his 'Tragedie chrétienne', 1729) and two serenatas, 'Teti' (1714) and 'Il genio austriaco' (n.d.), librettos of which are in the London Library; the score of the latter has been preserved in the Conservatory of Milan.

**CARAVANE DU CAIRE, LA** (Opera). See GRÉTRY.

**CARBONEL, Joseph François Narcisse** (b. ? Vienna?, 10 May 1773; d. Nogent-sur-Seine, 9 Nov. 1855).

French composer. He was the son of Joseph Noël Carbonel (1751-1804), a performer on the *galoubet* (tabour-pipe), who returned to Paris a few years after the birth of his son. Carbonel entered the newly founded École Royale de Chant in 1783 and took lessons from Gossec, Rodolphe, Piccini and other notable musicians. He sang a boy's part, Élamir "jeune enfant des Augures, naïf & très-dévoué", in Beaumarchais's and Salieri's 'Tarare' at the Paris Opéra on 8 June 1787 and made — still only fourteen — his début as a composer on 1 Nov. of the same year, when with two other singers he performed his 'Ode sur la mort du Duc Léopold de Brunswick' at the Concert Spirituel. From 1798 onwards he published a number of pianoforte sonatas, collections of vocal romances, etc., but did not fulfil his early promises, for he passed the rest of his long life in comparative obscurity. The ballet 'La Dansomanie', which in Q.-L. (and incidentally also in the B.M. Catalogue and elsewhere) is recorded as his work, belongs to Méhul; Carbonel merely arranged the pianoforte score, as he did with numerous other contemporary compositions by Gaveaux, Dalayrac and others.

**Cardarelli, V.** See Petrassi (2 songs).

**CARDIFF MUSICAL FESTIVAL.** The first musical festival at Cardiff took place in 1892 and the second in 1895. Both were under the direction of Sir Joseph Barnby. An interval of seven years then elapsed, followed by the festivals of 1902, 1904, 1907 and 1910, all conducted by Sir Frederick Cowen. The one planned for 1913 and postponed till the following year could not be given on account of the outbreak of war. The programmes of these festivals followed the usual festival repertory, while as regards novelties special

<sup>1</sup> Fétis has "Vienne, Autriche", which is possible, but rather unlikely in the case of a *galoubet* player; this may have been a mistake for Vienne, Isère.

attention was given to works by Welsh composers. Salient features are as follows.

1892. 'Golden Legend' (Sullivan), 'Dream of Jubal' (Mackenzie), 'Faust' (Berlioz), 'Stabat Mater' (Dvořák), 'Blest Pair of Sirens' (Parry), 'Revenge' (Stanford), 'Saul of Tarsus' (Joseph Parry).

1895. Requiem (Verdi), Choral Symphony (Beethoven), 'St Francis' (Tinel), first time in Britain, 'The Bard' (Stanford), first performance, 'A Psalm of Life' (David Jenkins).

1902. 'Orpheus' (Gluck), 'Song of Destiny' (Brahms), 'Stabat Mater' (Rossini), 'Samson and Delilah' (Saint-Saëns), 'Ruth' (Cowen), 'Flying Dutchman', Acts I and II (Wagner), 'Les Beautés' (Franck), first time in Britain.

1904. 'Eve' (Massenet), 'Faust' (Schumann), Requiem (Verdi), 'Dream of Gerontius' (Elgar), 'The Desert' (David), 'Lohengrin', Act III (Wagner), 'John Gilpin' (Cowen), 'Victory of St. Garmon' (Harry Evans).

1907. 'Omar Khayyám', Part II (Bantock), 'Phoebus and Pan' (Bach), 'A Vision of Life' (Parry), 'He giveth His Beloved Sleep' (Cowen), Mass in E♭ (Schubert), 'Sir Patrick Spens' (Brewer), 'Romeo and Juliet' (Berlioz), 'Coming of Arthur' (David Evans), excerpt from 'Parsifal'.

1910. 'The Veil' (Cowen), 'The Sungods' Return' (Mackenzie), Requiem (Brahms), 'Pied Piper of Hamelin' (Parry), 'The Bard' (David Thomas), excerpts from 'Siegfried' and 'Götterdämmerung' (Wagner).

**CARDILLAC.** Opera in 3 acts by Hindemith. Libretto by Ferdinand Lion, based on E. T. A. Hoffmann's story 'Das Fräulein von Scudéri'. Produced Dresden, State Opera, 9 Nov. 1926. 1st perf. abroad, Vienna, State Opera, 3 Mar. 1927. Revised version produced Zurich, June 1952.

**CARDON, Louis** (b. Paris, 1747; d. Russia, 1805).

French harpist of Italian descent. He made a great reputation in Paris, but on the outbreak of the Revolution he migrated to Russia. His 'L'Art de jouer la harpe' (1805) was for long esteemed.

His brother, Pierre Cardon (b. Paris, 1751; d. ?), was a singer and violoncellist.

M. C. C.

**CARDONNE, Philibert** (b. Versailles, 1731; d. ? Paris, ?).

French composer. He was a pupil of Colin de Blamont. A motet of his was sung at the French court when he was only fourteen, and his first published composition, an *air tendre*, was printed in the 'Mercure de France', in Feb. 1746. Cardonne wrote three dramatic works, the pastoral 'Amaryllis', sung at a concert at Compiègne on 17 July 1752, the *tragédie lyrique* 'Omphale' (Opéra, 2 May 1769) and

the one-act opera-ballet 'Ovide et Julie' (Opéra, 16 July 1779). He held some official appointments at court, was the violin teacher of "Monsieur" (later Louis XVIII) and in 1775 succeeded the elder Berton as *Maître de la Musique du Roi*. Apart from the works already mentioned, he published some collections of airs and a book of sonatas for harpsichord with violin (Op. 3, 1765).

A. L.

**CARDOSO, Cyriaco de** (b. ?; 1846; d. ?, 1900).

Portuguese composer. He wrote comic operas, lively and graceful works which have continued to hold the stage.

J. B. T.

**CARDOSO, Manuel** (b. ?; d. ?).

Portuguese 16th-century church musician. He was *archipraeceptor* to John III and treasurer of the Cathedral of Leiria. He compiled a work containing the liturgical music sung in Holy Week, one of the earliest books of music printed in Portugal.

*Passonarium juxta Capellæ Regis Lusitanæ consuetudinem; accentos rationem integre observans. Per Emmanuelem Cardosum eiusdem Regis Capellæ Archipraeceptorem, & Leiriensis Ecclesiae Thesaurarium. Leirnae, Excudebat Antonino à Mariz... Anno 1575.*<sup>1</sup>

Cardoso died some time before 1595.

J. B. T.

**CARDOSO, Manuel** (b. Fronteira nr. Estremoz, ? Mar. 1571, d. Lisbon, 24 Nov. 1650).

Portuguese composer. He is one of the most able polyphonists of the later school. A son of Francisco Vaz and Isabel Cardoso, he adopted his mother's name according to the old Portuguese custom. He studied for the priesthood at the seminary of Evora. In this town, then undoubtedly the outstanding centre of Portuguese polyphony, he received a complete musical education, which enabled him, still very young, to be appointed choir-master of the cathedral there. Some years after he proceeded to Lisbon, where in 1588 he took the Carmelite habit, and in 1589 professed in the same order. From this time on until the end of his life he was musical director of the monastery of the Carmelites at Lisbon and for many years also sub-prior. In 1647 the provincial of the order appointed him his vicar.

Cardoso's wide musical knowledge, his vigorous style of composition with its powerful counterpoint, his art, throughout noble and never lacking a peculiar religious serenity, won him the high appreciation of the kings of both Spain and Portugal. To say, as certain scholars did, that Cardoso's music was rigid and little expressive is to misjudge him. John IV, after having become king of Portugal, frequently received Cardoso in his palace or visited him in his cell at the Carmelite monastery to converse about music and its theory. It was also Cardoso who in 1617

wrote the flattering introductory acknowledgement for P. Manoel Rodrigues Coelho's 'Flores de musica' (Lisbon, 1620), showing once again his reputation as an authority on music.

The contemporary Portuguese poet Manuel de Faria e Sousa mentions Cardoso side by side with Josquin des Prés, Cristóbal Morales, Philip Rogier and Francisco Guerrero. During his lifetime Cardoso's music became well known throughout the Peninsula, one of his most famous compositions being the 'Missa Philippina', written in honour of Philip IV of Spain.

Cardoso's printed works include:

Magnificats for 4 & 5 voices (Lisbon, Peter Craesbeck, 1613) (Coimbra, Bibl. Univ.).

'Missae 4, 5 et 6 v.' (Lisbon, Peter Craesbeck, 1625) (Coimbra, Bibl. Univ.; Evora, Cathedral).

'Missae 4 et 6 v. liber secundus' (Lisbon, Peter Craesbeck, 1636) (Coimbra, Bibl. Univ.).

'Missae de Beata Virgine Maria, 4, 5 et 6 v. . . . Liber Tertius, Ad S.C.R. Majestatem Philippi quarti Hispaniarum Regis, ac novi orbis Imperatoris . . .' (Lisbon, Laurens Craesbeck, 1636) (Evora, Bibl. Publ.).

'Livro de varios motetes, Officio da Semana Santa e outras cousas. Diringido a Real Magestade DEL rey Nosso Senhor Dom João IV. de Portugal . . .' (Lisbon, 'João Rodrigues Impressor Na officina de Lourenço de Anueres [i.e. Laurens Craesbeck]', 1648) (Lisbon, Cathedral; Evora, Cathedral; Vila Viçosa, Paço Ducal).

The manuscripts mentioned in the catalogue of the library of John IV were lost in the Lisbon earthquake of 1755. They consisted of two Christmas *villancicos* (with Spanish text), 5 masses, 5 Psalms, 1 Magnificat, 2 'Te Deum' and 'Salve Regina'. A Mass for 4 voices and an 'Agnus Dei' are said to exist in manuscript in the Biblioteca de Coro of Seville Cathedral. A manuscript belonging to the Paço Ducal at Vila Viçosa also contains a few of Cardoso's compositions. Two motets were printed by Proske in 'Musica Divina' and eight are mentioned in Q.-L. Transcriptions of a gradual, 'Angelis suis . . .', 'Tantum Ergo', 'Panis Angelicus' and the 'Missa Filipina' are to be found in J. E. dos Santos, 'A polifonia classica portuguesa' (Lisbon, 1937).

**CARDUS, Neville** (b. Manchester, 2 Apr. 1889).

English writer on cricket and music critic. After a difficult youth and an unconventional education, described with great frankness in his 'Autobiography', he began to write on music for the Manchester 'Daily Citizen' in 1913. In 1917 he joined the staff of 'The Manchester Guardian', assisting Samuel Langford on the musical side and taking up the reporting on cricket, on which he became the most brilliant and cultivated writer of his

<sup>1</sup> Copies in Lisbon, Bibl. Nac.; Evora, Bibl. Publ.

generation. On Langford's death in 1927 he became the paper's chief music critic and, at first imitating his predecessor somewhat closely, developed a sensitiveness and style of his own. He wrote with discernment and at considerable length on music in Manchester and elsewhere in England, but not in London and the southern area until 1931. He published several books on cricket, edited a selection of Langford's writings<sup>1</sup> and wrote 'Ten Composers' (London, 1945). By that time he had left for Australia, where he lived from 1939 to 1947, continuing his twofold activities there with much success, in spite of the opposition he aroused in those whose patriotism was wounded by his outspoken criticism. In 1948, having settled in London, he was engaged by 'The Sunday Times' to write on cricket. In 1951 he rejoined 'The Manchester Guardian' as London music critic, his former post as chief critic in Manchester going to Colin Mason.

Caresale, Angelo. *See* HASSE ('Sesostrate', lib.).

CARESANA, Cristoforo (*b.* Venice, c. 1640; *d.* Naples, 13 Sept. 1709).

Italian priest, singer, organist and composer. In 1658 he became a tenor singer in the royal chapel at Naples and in 1667 organist. In 1688–89 he held the post of *maestro di cappella* at the Conservatorio di Sant' Onofrio and from 1699 at the Tesoro di San Gennaro. In 1705 he was again temporarily in the royal chapel, taking the place of Domenico Scarlatti, who had obtained leave from his post there.

Caresana's most famous work is his 'Sol-feggi', published at Naples in 1681, of which Choron issued a new edition for use at the Paris Conservatoire. He also published motets, hymns and chamber duets, and in Oct. 1682 produced the dramatic cantata 'Il sospetto', one of several others. He left all his manuscripts to the Casa dei Padri dell' Oratorio di Napoli (Filippini), the archives of which possess more than 300 (Fétis said 41) manuscripts of his works, almost all of them autographs. They include a *dramma in musica* (? oratorio) 'Le avventure di una fede' (undated). M. C. C., adds.

CARESSA, Albert. *See* LUPOT (FAMILY).

CARESTINI, Giovanni (*b.* Filottrano, Ancona, c. 1705; *d.* ?, c. 1759).

Italian male contralto singer. At the age of twelve he went to Milan, where he gained the protection of the Cusani family, in gratitude to whom he assumed the name of Cusanino. His

voice, at first a powerful clear soprano, afterwards changed to the fullest, finest and deepest contralto ever, perhaps, heard. His first appearance was in Rome, 1721, in the female part of Costanza in Bononcini's 'Griselda'. In 1723 he sang in Prague, at the coronation of Charles VI as King of Bohemia. The following year he was at Mantua, and in 1725 sang for the first time at Venice in the 'Seleuco' of Zuccari, and in 1726 with Farinelli and Pasta. In 1728 and 1730 he visited Rome, singing in Vinci's 'Alessandro nell' Indie' and 'Artaserse'. Owen Mac-Swiney, happening to be in Italy with Lord Boyne and Walpole, wrote to Colman from Bologna, on 12 July 1730, mentioning letters which he had received from Handel, and goes on to say.

I find that Senesino or Carestini are desired at 1200 guineas each, if they are to be had. I am sure that Carestini is engaged at Milan, and has been so for many months past.

Carestini made his début in London on 30 Oct. 1733 in 'Semiramide', a pasticcio, under Handel's direction. He next sang the title-part in Handel's 'Ottone' (revived) on 13 Nov. and in the pasticcio 'Caio Fabbricio' on 4 Dec.<sup>2</sup> His magnificent voice and style enabled Handel to withstand the opposition, headed by Farinelli, at the other house. In the same season (1733–34) he sang in the operas 'Arianna in Creta', 'Parnasso in festa', 'Pastor fido' and the oratorios 'Deborah' and 'Athaliah'; and the next season in 'Ariodante' and 'Alcina' at Covent Garden. In 'Alcina' occurs the beautiful song "Verdi prati" which he sent back to the composer as not suited to him. Handel on this became furious, ran to the singer's house and addressed to him the following harangue:

You tog! don't I know petter as yourself vaat es peest for you to sing? If you vill not sing all de song vaat I give you, I vill not pay you ein stiver.<sup>3</sup>

In 1735 Carestini left England for Venice, and for twenty years after continued to enjoy the highest reputation on the continent, singing at Munich, Turin, Milan (where he created the chief parts in Gluck's 'Demofonte' and 'Sofonisba') and Berlin. About 1754 he was engaged for St. Petersburg, where he remained till 1756, when he quitted the stage, to retire to his native country. Quantz says: "He had one of the strongest and most beautiful contralto voices, which extended from d to g"<sup>4</sup>. He was also perfect in passages which he executed with the chest voice, according to the principles of the school of Bernacchi

<sup>1</sup> This was therefore not the work in which he first appeared, as is asserted by Burney, who may have been misled by the fact that the singer was called Carestino in Oct. and Caristino in Nov.

<sup>2</sup> According to Burney, but this is probably apocryphal. Handel knew Italian and it is highly improbable that Carestini knew English by that time, especially that sort of English.

<sup>3</sup> 'Samuel Langford: Musical Criticisms' (Oxford, 1929).

and after the manner of Farinelli; in his ornaments he was bold and felicitous. He was a very good actor, and his person was tall, handsome and commanding. There is a good mezzotint of him by J. Faber, engraved in 1735 from a picture by George Knapp, a fine impression of which is now rare.

J. M., adds. A. L.

**Carew, Thomas.** See Georges (3 songs) Lawes (2, 'Coelum Britannicum', masque).

**CAREY, Bruce Anderson** (b. Hamilton, Ontario, 16 Nov. 1877).

Canadian conductor. In his early years he was a baritone singer and choirmaster. In 1908 he went to Italy to study conducting under Visetti and others, and on his return founded the Elgar Choir of Hamilton, an organization of 99 voices which in a few years' time became famous in Canada and the U.S.A. for the expression and power of its *a cappella* singing. In 1925 Carey accepted the post of music director at Girard College, Philadelphia. His gifts as a choral conductor, particularly of the works of Bach, won widespread recognition and resulted in his appointment as director of the Bach Festival at Bethlehem, near Philadelphia, in 1933, on the death of its founder, J. Frederick Wolle. Since 1900 this Festival has been the most important event of its kind in North America, attended by musicians from many cities. The choral activities of this community (originally German) date back to 1797, and Carey, by his scholarship and enthusiasm as a conductor, has preserved its traditions. He is especially successful in securing a perfect balance of voices.

H. C. (ii).  
**CAREY, (Francis) Clive (Savill)** (b. Sible Hedingham, Essex, 30 May 1883).

English baritone singer, opera producer, teacher and composer. He was educated at Sherborne, Cambridge (Clare College) and at the R.C.M. in London, where his masters were Stanford for composition and James H. Ley for singing. Later he studied singing with Jean de Reszke at Nice during several intervals in his professional career. His first London appearance was a recital in 1907, at which he made an immediate mark both by his unusual choice of songs and his individual way of singing them. The same year (11 Dec.) he played Papageno in Mozart's 'Magic Flute' at Cambridge, the performance being produced by himself and sponsored by the future Professor of Music, Edward J. Dent, whose translation was then used for the first time. This was the beginning for Carey of a considerable amount of work in the special operatic performances which in England help to fill the blanks left by the few existing operatic companies of the fully professional kind.

The first world war caused a break in Carey's musical activities. After it he took

part in Rutland Boughton's performances at Glastonbury and then went to the Old Vic Theatre, producing and appearing in Mozart's 'Figaro', 'The Magic Flute' (1920) and 'Don Giovanni' (1921). At this time his incidental music for two plays, 'The Blue Lagoon' and 'The Wonderful Visit', was heard simultaneously in London theatres.

He taught singing at the R.C.M. and toured in Britain and on the continent with the English Singers, in the founding of which sextet he had taken a prominent share. In 1924 he went to Australia as director of the singing-school at the Conservatory of Adelaide and did some dramatic work with a repertory company. He remained there for three years, and on his way home in 1927 made a concert tour in India and other countries. The following year he sang Macheath in an American tour of 'The Beggar's Opera'. After this his public appearances became rare, though he sang occasionally at Sadler's Wells and played the Leader of the Chorus in Sir Martin Harvey's production of 'Oedipus Rex' at Covent Garden in 1936.

From 1932 onwards he devoted himself mainly to teaching and to operatic production. At Sadler's Wells he was one of the producers since the reopening of the theatre, and his experience as an actor on the "legitimate" stage, gained largely during his residence in Australia, combined with his knowledge as a musician and a singer, has served as an excellent equipment for his work there. He has concerned himself with the elimination of accumulated "traditions" in the performance of old operas, getting back to the original intentions of the composers, and has also applied himself to the improvement of the English translations where this was necessary. His productions have thereby gained in freshness and in reasonable conviction. After the death of Lilian Baylis he became a member of the committee of management at Sadler's Wells, and after a few years' retirement as a producer he again began to do brilliant work there in that capacity in 1947.

Carey has published a number of songs and folksong arrangements and composed incidental music for several plays.

See also Boughton. Dent. English Singers. Old Vic. Sadler's Wells.

**CAREY, Henry** (b. prob. Yorkshire, c. 1687; d. London, 4 Oct. 1743).

English composer and playwright. The recent researches of F. T. Wood (see Bibl.) have shed some light on the mystery which surrounded his origin and early years. According to Wood, Carey was the natural son of Henry Savile (Lord Eland) rather than of George Savile, Marquis of Halifax. He was married as Henry Savile at the Yorkshire

village of Rothwell near Rotherham on 4 Apr. 1708, and he seems to have adopted the name of Carey only at a later date, probably just before or after he settled in London, about 1710.

The names of Carey's teachers are known because he dedicated poems to each of them; they were "Olaus Westeinson Linnert, commonly called Westen<sup>1</sup>, who gave him his first notions of composition", Gemmani and Roseingrave.

During the first years of his career in London Carey won some reputation as a poet and playwright. His 'Poems on Several Occasions' came out in 1713 (enlarged editions 1720 and 1729) and his first dramatic works, two farces without music, 'The Contrivances' and 'Hanging and Marriage', were produced in 1715 and 1722 respectively. It was only in 1723 that he emerged as a composer, contributing songs to three Drury Lane pieces, 'Love in a Forest' (9 Jan.), 'Apollo and Daphne' (12 Aug.) and 'Harlequin Dr. Faustus' (26 Nov.). In 1724 a volume of cantatas and songs, words and music by Carey, was "printed for the author" on subscription, "to please my friends, to mortify my enemies, to get money and reputation", and an enlarged edition, now proudly called 'The Works of Mr. Henry Carey', came out in 1726. Among the additions appears the song which has kept its name alive, the famous 'Sally in our Alley' ("the words and tune by Mr. Carey"), at least as the author of the words; his melody, which was very popular for fifty years or so<sup>2</sup>, was then superseded by the one sung to-day (which, even though still often attributed to him, is of earlier origin).

The following years saw a steady rise in Carey's popularity as composer and as playwright. In 1728 he contributed two songs to Vanbrugh and Cibber's 'The Provoked Husband' and in 1729, after the success of 'The Beggar's Opera', he changed his farce of 1715 into a "ballad opera" by adding 13 songs; even in this new form 'The Contrivances' is not a ballad opera proper, since Carey wrote the music himself. It was first produced at Drury Lane on 5 Aug. 1729 and became one of the most popular musical pieces on the English 18th-century stage, reaching America in 1762 and Jamaica in 1777.

As a librettist Carey wrote for his friend Lampe 'Amelia' (1732), 'The Tragedy of Chrononhotonthologos' (1734), 'The Dragon of Wantley' (1737) and its sequel 'Margery' (1738), and for John Christopher Smith 'Teraminta' (1732). He himself wrote the

music or part of the music, as well as the words, of the "ballad opera" 'Betty, or The Country Bumpkins' (Drury Lane, 1 Dec. 1732), of 'The Happy Nuptials' and 'Britannia' (two entertainments sung at Goodman's Fields Theatre on 12 Nov. 1733 and 11 Feb. 1734, in celebration of the wedding of the Princess Royal, Anne, daughter of George II, and the Prince of Orange), of the very successful 'The Honest Yorkshire-Man' (Haymarket, July 1735) and finally of the equally popular interlude 'Nancy, or The Parting Lovers' (Drury Lane, 1739), which has been frequently revived, under various titles ('The Press Gang', 'True Blue', etc.) right up to the present.<sup>3</sup> Carey was probably also the author of the ballad opera 'The Disappointment', which appeared under the name of "John Randall" in 1732.<sup>4</sup> Furthermore, he wrote music for an anonymous masque, 'Cephalus and Procris' (with a pantomime interlude called 'Harlequin Volgi', Drury Lane, 1730), for a production of 'Hamlet' at Goodman's Fields, 9 Feb. 1736<sup>5</sup>, and finally, together with Henry Burgess, jun., for James Miller's 'The Coffee-House' (Drury Lane, 26 Jan. 1738).

Besides his works for the stage Carey continued to write songs and to publish them, in single sheets and in collected editions. After the 'Works' of 1726 there appeared 'Six Songs for Conversation . . . the tunes contrived to make agreeable little lessons for the harpsichord, viol, violin and hautboy' (1728), 'Six Cantatas' (1732), 'Three Burlesque Cantatas', by "Signor Carini" (1741), and 'A Choice Collection of Six Favourite Songs never before publish'd' (1742). The most comprehensive collection, made up of single-sheet songs, came out in two volumes (1737-1740), to the first of which his portrait is prefixed, under the title of

The Musical Century, in One hundred English Ballads on various subjects and occasions, adapted to several characters and incidents in Human Life, and calculated for innocent conversation, mirth and instruction.

A second edition followed in 1740 and a third, "very much improv'd and enlarg'd", in 1743, the year of his death; in the same year there also appeared a collected edition of his principal dramatic works (containing 'Amelia', 'Teraminta', 'The Dragon of Wantley' and its sequel, 'Chrononhotonthologos', 'The Contrivances', 'The Honest Yorkshire-Man' and 'Nancy'). His poems were collected in 1930.

There can be no doubt that Carey ended his

<sup>1</sup> "A well-known musician", according to F. T. Wood's explanatory note to the poem. As a matter of fact nothing whatever seems to be known of him beyond Carey's attempt to save his name from oblivion. He may have been the Westen Linnert who was a member of the Stockholm royal orchestra from 1706 until his death on 12 July 1745.

<sup>2</sup> It is this tune which appears in 'The Beggar's Opera'.

<sup>3</sup> Revived by the Little Opera Company at the Mercury Theatre, London, in 1938, 1940 and since 1948, when the music stood up well to Pergolesi's 'Serva padrona' in the same bill.

<sup>4</sup> See 'Review of English Studies', Vol. V, No. 17, Jan. 1929.

<sup>5</sup> "The ceremony of Hamlet's lying in state, after the manner of His Grace the late Duke of Buckingham, with new music proper to the occasion set by Mr. Carey." (Advertisement in 'London Daily Post'.)

life by suicide, at the height of his career. He hanged himself at his house in Dorrington Street, Coldbath Fields, on 5 Oct. 1743, as the entry in the church register of St. James's, Clerkenwell, expressly states (though the fact was not made known in the press). A benefit performance for his destitute widow and children was given at Covent Garden some days later.

Hawkins thus estimates Carey's abilities:

As a musician Carey seems to have been one of the first of the lowest rank, and as a poet the last of that class of which D'Urfey was the first, with this difference, that in all the songs and poems written by him on wine, love, and such kinds of subjects, he seems to have manifested an inviolable regard for decency and good manners.

The judgment of the composer Carey appears now rather too harsh, he was certainly not of the lowest rank and, besides 'Nancy', other of his dramatic works, especially 'The Honest Yorkshire-Man', could well bear reviving. Of his songs 'Flocks are sporting' has been reprinted in many modern editions. Carey's setting of 'Black-Ey'd Susan' did not achieve the popularity of Leveridge's tune. His claim to the authorship of 'God Save the King', put forward by his son George Savile Carey in 1795, is unfounded.

This son (1743-1807) inherited much of his father's talents. He was a poet, actor and dramatist, and possibly also a composer of some songs, and wrote some librettos, of which 'The Magic Girdle' and 'The Noble Pedlar' were set by Barthélemon. G. S. Carey's daughter, Anne, became the mother of Edmund Kean.

**CARICATURE.** Through the ages, from as early a time as we have any record of music-making at all, musicians have been subject to

documents by means of which early forms of music can now be reconstructed. We thus see musicians made fun of by means of carving or drawing so early that we can form no idea of what the music they played was like, though here and there the representation does something to help us in forming a vague notion, where actual musical records fail. A Greek

FIG. 2

intaglio (Fig. 1)<sup>1</sup>, for instance, showing a cricket with some unidentifiable instrument allows us to guess that this instrument may have produced a chirping kind of sound. A fox playing double pipes resembling the Greek aulos on an Egyptian papyrus (Fig. 2), on the

FIG. 3

other hand, is no more, in all probability, than a reflection on the character of musicians, or perhaps some particular musician. So it goes on into medieval times, e.g. the wild boar with a rebeck among the wood carvings in Winchester Cathedral (Fig. 3).

<sup>1</sup> Most of these illustrations are from Della Corte's 'Satire e grotteschi', reproduced by permission of the Unione Tipografico-Editrice Torinese.

FIG. 1

pictorial satire. Indeed caricatures—in stone, wood and other materials at first—date much farther back than any written

FIG. 4

The musicians in caricatures, even where they may be actual portraits, remain for long anonymous, in the nature of things. The fool in a woodcut illustrating Sebastian Brant's 'Narrenschiff' (1494), for example (Fig. 4), may have had a living model, but to us he is amusing only as an illustration of the folly of versatility. An Italian 16th-century drawing (Fig. 5) ridicules the performance (of we do not know what) by two singers and two players (we cannot tell who).

As we approach modern times, however, anonymity ceases. We are usually told who the artist was and in some cases at least his subjects are identified for us — witness for instance P. L. Ghezzi's unflattering drawing of Carlo Francesco Pollarolo (Fig. 6), which must belong to the early years of the 18th century, judging from the composer's dates (1653-1722) and his appearance in the picture. Hogarth's 'Enraged Musician' and the singer and flautist in the fourth picture of his 'Marriage à la Mode' have been identified.<sup>1</sup>

Sometimes, from that period on, a composer's work rather than his personality was ridiculed, as in Hogarth's engraving (1731) of

<sup>1</sup> The former is Prospero Castrucci and the latter are Caresini and Weideman

(in the Victoria and Albert Museum, London)

a very turbulent performance of William de Fesch's oratorio 'Judith' (Fig. 7). On the other hand the grotesque players in Gullray's plate of 1802, 'The Pic-Nic Orchestra' (PLATE 8) are depicted, not for what they play, but for their own absurd sakes.<sup>1</sup>

FIG. 6

FIG. 7

Again, some odd or striking feature in an individual musician's face might be shown in comic exaggeration, such as Pugnani's long nose.

In the 19th century an anecdotal element comes in. There is Nadar's illustration (1856)

<sup>1</sup> The Pic-Nics were a fashionable amateur society in London producing musical and dramatic entertainments. For another curious performance see the print of the Russian Horn Band (Vol. IV, p. 378, PLATE 28).

of the familiar story of the doctor who cured his deaf patient by taking him to a Berlioz concert, only to find that he had himself been deafened

FIG. 8

by the music (Fig. 8). Berlioz, of course, was the 19th-century caricaturist's chief victim, no doubt because his music was then thought as eccentric as his personal appearance actually was. Here he is as a man, by the same artist (Fig. 9), as a composer, by Carjat (Fig. 10) and as orchestral conductor, by "Cham" in 'Le Charivari' (Fig. 11). But Liszt and Wagner, for similar reasons, attracted almost as many draughtsmen's shafts to themselves, often prompted by more malicious intent. Nor, among portrait caricatures, must we overlook the many delightfully impertinent drawings of Verdi by Delfico (PLATE 8).

FIG. 9

Self-portraits are, of course, much rarer, since musicians are not often graphic artists, and those who were, like Mendelssohn, may have had no inclination to laugh at themselves. But there is an amusing sketch of Donizetti by Donizetti (Fig. 12) and a brilliant one of Caruso by Caruso. The great tenor was a rare instance of a highly gifted caricaturist among executive musicians, and he made many witty drawings of his colleagues, of conductors and of composers. Here is his

idea of Toscanini (Fig. 13). Another Italian singer, Fernando Autori, who appeared for several seasons in London in the 1920s, exhibited a number of excellent caricatures of

have yielded endless subjects for amusing and sometimes cruel ridicule. We have already

have also been pictorially castigated. One recalls Pont's "Tendency to Learn the Piano

<sup>1</sup> There is no room, for instance, for Wilhelm Busch's serial plate illustrating various phases of a pianist's performance, with Italian tempo directions for captions, or for Adolf Oberlander's plate "Wagner in the houses? Where?", which is an elaborate composition on the theme of a theatre full of "rubber-necks".

that of the supplier of the pianist's hair-oil. But this article could be continued indefinitely; it is intended to be no more than a brief abstract.

E. B.

BIBL. — DELLA CORTE, ANDREA, 'Satire e grotteschi di musiche e di musicisti d' ogni tempo, con 508 caricature antiche e moderni' (Turin, 1946).

**CARILLON (1).** A chromatic set of bells, hung "dead" or "fixed" in a tower, usually with a compass of from two to four octaves, and played by means of a clavier (console) arranged like the manuals and pedals of an organ, or automatically either by clock-work or by electrically controlled pneumatic mechanism (*see* CHIMES).

"Carillon" was used originally for the melody played. It is a French word derived from the medieval Latin *quadrilionem*, a quaternary, because carillons were at first sounded on four bells. It is connected with the French *clarine*, a little bell, as well as with the Italian *quadriglio* (quadrille), a popular dance in the 16th century, the music for which was probably played on bells.

Carillons are very ancient. It seems that the Chinese foresaw their possibilities thousands of years ago. Manuscripts of the 10th and 12th centuries give details of the disposition of nine notes to the octave. At first the bells were small, and they were played by a performer who tapped them with a hammer suited to the purpose. In Europe the perfecting of the art of bell-founding and the making of carillons took place during the 15th-18th centuries. The great bell-founders responsible for this were the brothers Hemony, the many members of the van den Gheyn family, and later Dumery. Dunkirk had a carillon in 1437, Alost 1487, Antwerp 1540 and Bruges 1675.

The people of the Netherlands probably know their folk music better than any others, and this is in a great measure due to the fact that the workman at his labour hears the melodies from the carillon almost every hour of the day.

**DISPOSITION OF THE BELLS.**—To ensure the proper effect of the instrument as a whole and to facilitate *direct* action between the clavier keys and the bell clappers so that the player has the greatest possible control over the amount of tone produced, it is of the utmost importance that due regard be paid to acoustics as well as to mechanics in arranging the bells in the tower.

The maximum volume of sound from a stationary bell travels downwards and outwards at an angle of about 45° from the edge of the lip. Hence the bells should be well above the bottom of the openings in the sides of the tower. They should not be overcrowded in the tower, as this causes interference—one bell sheltering another and deflecting or baffling its vibrations.

From the mechanical point of view it is desirable that the treble bells, upon which the most rapid and delicate passages are usually played, should be hung as near as possible to the clavier, so as to lighten the action by shortening the connecting wires.

The usual practice in the past has been to hang the bells in the frame in order of increasing weight from top to bottom; but in some recently erected carillons this arrangement has been reversed and the larger bells have been placed at the top. This departure from tradition, together with more delicate clavier mechanism, may well prove an advantage in suitable bell towers though, perhaps inevitably, it has encountered some conservative opposition.

In old Dutch practice the bells were sometimes hung in the openings in the towers, close to the outside. While architecturally attractive, this is to be avoided as far as possible, because the listener only hears satisfactorily the bells nearest to him, and the action work required does not give so much control in the manipulation of the clavier keys.

**ACTION WORK.**—The connections between the clavier keys and the bell clappers are somewhat similar in principle to the tracker action used in organ building. For each bell the wire from the clavier key and the wire to the clapper are attached to metal cranks fixed to a common roller which provides the horizontal connection.

In the past various devices have been used in attempts to lighten the action of the heavier clappers. One of these consisted of a balance weight which brought the clapper to within the proper striking distance, so that the player had only to upset this balance when using the pedals. The disadvantage of this scheme was the consequent slow return of the clapper after striking—which destroyed some of the resonance. Later attempts were made in England to do away with this somewhat clumsy and antiquated mechanism, by altering the suspension point of the clapper so that the inertia to be overcome was reduced to a minimum. This proved to be a disappointment, for while it lightened the touch, it caused the clapper to strike at a different angle, with noticeable deterioration of tone.

Properly graded springs are now found to give the most positive action and even touch. As was usual in the past, the smaller bells are provided with springs acting against the action to counterbalance its weight and to ensure the quick return of the clappers. The larger bells, on the other hand, have springs to assist the action and so lighten the touch by relieving the player of part of the weight of the larger clappers.

**THE CLAVIER.**—The keys are of oak and are round,  $\frac{3}{4}$  in. in diameter. The upper row, representing the black notes of the pianoforte keyboard, project  $3\frac{1}{2}$  in.; the lower, corresponding to the white notes, project  $6\frac{1}{2}$  in. The keys are far enough apart to allow the player to manipulate each key without fear of touching those next to it. The pedals, usually  $1\frac{1}{2}$

octaves in compass, or more in larger carillons, are connected with the clavier, so that the lower notes in many instances can be played by both manuals and pedals. The pedals add much to the resources of the instrument. The keys are struck with the closed hand (not fist, as so frequently stated), the little finger being protected with a leather covering to prevent injury when playing. Sometimes the whole hand or half of it is covered with a kind of glove of leather or other material, but whatever is used is to protect the fingers and hand.

In the past strength as well as celerity and skill was often a requirement of the carillonneur. Not only had the leverage of the key frequently to overcome faulty action, but also, owing to unsuitable arrangement of the bells, the player had to apply undue exertion to the keys or pedals of the lower ones to make them sound as loud as he wanted them to do.

The Dutch writer Fischer (1738) quaintly observes that for carillon playing "a musician requires nothing more than a thorough knowledge of music, good hands and feet, and no gout"!

The wires connecting the striking mechanism with each key are provided with turnbuckles by which their length can be altered and the touch adjusted with the greatest accuracy. Every good carillonneur exercises the utmost care in this adjustment, because the connecting wires can stretch or contract, due to variations in temperature, during a single recital. He adjusts till the clapper is, say,  $\frac{1}{8}$  in. clear of the bell when he holds the lever hard down. This then leaves the bell free to vibrate after striking, as a pianoforte string does.

The largest bell of the carillon is usually connected to the lowest C of the clavier, the keys of which are marked with their appropriate notes. Frequently the lowest two semitones of the carillon, C# and D#, are omitted for reasons of economy.

**METHOD OF PLAYING.**—On the larger bells the upper partial tones are relatively louder than on the smaller ones, so that when the larger bells are sounded together there is more interference between partial tones, *i.e.* more dissonance, than there is when smaller bells are so sounded. For this reason, and because the smaller bells are more easily manipulated, most of the notes played are assigned to them. Chords generally are most satisfactory when played *arpeggiando*. Chromatic and diatonic scale passages can be played at almost any speed and are most effective. The most intense *crescendo* and the most delicate *diminuendo* are possible. Sustained chords are produced by a kind of *tremolando*. The most beautiful effects of carillon music are possible only when the atmospheric conditions are

favourable as, for example, they are on a calm summer evening between the hours of 9 and 10, which was the usual time of the recitals given at Mechlin by the master player, Jef Denyn. The dim light, the absolute calm and the great height of the bells — these combine to produce indescribably ethereal music.

**CARILLON MUSIC.**—The carillon as an instrument has considerable versatility, and suitable music ranges from simple folk tunes and carols in single parts to arrangements of classical music in three or more parts; and it is obvious that when bells are used in combination each one must be absolutely in tune with itself and with the others.<sup>1</sup>

The scale to which the Hemony carillons were tuned was not tempered. Though beautiful for one key they are not adapted to music which contains modulations. Carillons of modern date are tuned in equal temperament.

As a rule, the fewer the parts the better the musical effect. A contrapuntal form is often ideal for bell music and the best effect is obtained by keeping the bass well separated from the part immediately above it. The playing of chords with several bells at once is to be avoided so far as possible since, owing to the complexity and number of bell tones, simultaneous striking is liable to produce very discordant effects.

Most of the music of carillons is played from manuscript. Every carillonneur of any note makes his own arrangements of the music he plays. These he considers his own special property, for he has to play on instruments of varying size — anything from 35 to 49 bells or more — a difference of compass which greatly affects the arrangement. His task is not unlike that of the organist who has to accompany a choral work from a pianoforte score, when he must make his own arrangement to suit the instrument on which he is playing. The most important published compositions are by van den Gheyn.

The carillonneur is usually a musician of standing who has taken up the instrument as his specialized life's work and has passed through the Carillon School at Mechlin founded by the late Jef Denyn, who was a celebrated exponent of carillon music. During this time the carillonneur increases his experience by playing on the many carillons in Belgium and Holland.

As change-ringing is practised in England to the virtual exclusion of playing on carillons, it is not surprising that the carillons built by two English firms for use in the British Isles, as set out in this table, should be only a small fraction of the total number of carillons they have built for the United States, the Dominions overseas, Holland and Belgium, as the figures

<sup>1</sup> For the tuning of bells see CHANGE-RINGING.

in the following paragraph indicate. Between them they had already built several more carillons before 1939 for Holland, the home of the Hemonys, alone, than for the British Isles. Moreover many of the carillons they built for these various countries contained more and heavier bells than those built for the British Isles, which include some small instruments.

In 'The Carillon' Percival Price gives a list of carillon bell-founders recorded as having built instruments with at least two chromatic octaves. The list contains 63 names of individual founders or firms, recorded as having built between them 335 such instruments between 1552 and 1932 inclusive, a period of nearly 400 years. In the particulars given below the numbers of carillons built by the two modern firms in the list, both English, are carried up to 1948 — raising the total to

357. It is significant that in this list only 5 names appear as the builders of 20 carillons or more of the compass specified: Francis and Pieter Hemony, of Zutphen and Amsterdam (1641-77), 50; the van den Gheyns, of Louvain and Saint-Trond (1717-91), 28; the van Aerschodts of Louvain (1830-1926), 23; John Taylor & Co., of Loughborough (1904-1948), 40; and Gillett & Johnston, of Croydon (1921-48), 49. The dates are those covered by the carillons built, and the total for these five firms is 190, more than half the entire list. These figures sufficiently indicate that the successful building of carillons is a highly specialized art.

W. W. S., rev. & adds. H. M. H.

<sup>1</sup> The carillon of 35 bells at Cattstock, by van Aerschodt (1882), recorded in previous editions of this Dictionary, was accidentally burnt down during the second world war.

<sup>2</sup> J. T. = John Taylor & Co. G. & J. = Gillett & Johnston.

<sup>3</sup> The pitch of the enlarged carillon was lowered from C to A♭ and four of the largest of the old bells were rehung.

<sup>4</sup> The existing bells were rehung in a new frame, and the automatic weight-driven tune-playing machine was replaced by electro-pneumatic action.

<sup>5</sup> This little carillon is behind louvers to the left of the stage, and is played from the organ console.

<sup>6</sup> The bourdon bell was cast in 1506 by Waghevens of Mechlin. In 1935 it was scientifically tuned, the other 34 bells being cast and tuned to blend with it.

**CARILLON** (2). The French term for the Chime-Bells or Glockenspiel.

**CARILLONS.** See ORGAN STOPS.

**CARIO, Johann Heinrich** (b. Eckernförde, Holstein, 1736; d. ?).

German trumpeter. He was instructed by C. P. E. Bach, Telemann and Schwenke, and became a great player. He is said to have invented a keyed trumpet which would play in every key and to have executed a prelude in B♭ minor. He was still alive in 1800.

G.

**CARISSIMI, Giacomo** (b. Marino nr. Rome, 1605?; d. Rome, 12 Jan. 1674).

Italian composer. From 1624 to late in 1627 he held professional appointments at Tivoli, first as singer and then as organist. For a short period he was *maestro di cappella* at Assisi until he obtained a similar post at the church of Sant' Apollinare in Rome, which was attached to the German College.

<sup>1</sup> He was baptized on 18 Apr. 1605. He may thus be assumed to have been born in the early spring of 1605, although Pitoni gave the birth-year as 1604. It is just possible that the baptism was so long delayed by some accident or other, but it was so unusual in the 17th century, particularly in Roman Catholic families, to leave infants so long unchristened that Pitoni's date may be ruled out with all but complete safety, failing corroborative evidence.

**BELL-TUNING MACHINE**

He remained there from the time of his arrival, between 1628 and 1630, until his death.

The works of Carissimi are outstanding in the development of musical declamation, particularly from the nature of their organization. The two main fields which were best suited to his style, and towards which his chief creative effort was directed, were chamber cantata and oratorio, together with their smaller supporting forms. The chamber cantata was at a very early stage in its evolution, and Carissimi and Luigi Rossi were largely responsible for creating its great popularity as an artistic medium for over a century. One strong recommendation of the chamber cantata to the contemporary Italian public was its close relationship to opera. The mood of the age was inclined to the dramatization of song, and the chamber cantata offered a convenient means of enjoying many of the elements of opera outside the theatre. Thus Carissimi's fine Lament of Mary Queen of Scots, 'Ferma; lascia ch'io parli', is virtually an extended operatic monologue, and most of the cantatas for two or more voices like 'Amor difeso' or 'Più non ti chieggió' contain a dramatic germ, however slight the characterization may be. It is significant that the one short opera that Carissimi wrote, 'L' amorose passioni di Fileno' (1647), of which the libretto only survives, was performed as an *accademia* at a private house at Bologna. The nature of this production seems to symbolize his function in the transfer of the dramatic style from the theatre to the home.

Carissimi's declamation derives from the tradition of Monteverdi, and he shows the same desire to employ the widest variety of methods. In the setting of words he uses every kind of treatment from the plainest type of *recitativo secco*, through innumerable gradations of *arioso*, to formal strains of lyrical melody. Especially remarkable is the ease and skill with which he passes from one style to another. Thus in the cantata 'Falsirena disperata' the final climax is approached by means of a systematic transition from recitative to measured *arioso*, which produces an impressive effect of steadily mounting tension. The power and impetus of Carissimi's declamation are well supported by a rich fund of harmonic resource which, if not always as vigorous and evocative as that of Monteverdi, shows in some respects more control. The cantatas 'Entro il mar' di miei tormenti' and 'In un mar' di pensieri' show his command of expressive harmony in conjunction with a strongly emotional melodic line. The chord of the Neapolitan sixth is a regular feature of his idiom and is handled with telling results. Although there is a certain amount of colouring of individual words, this is never allowed to reach the point where it threatens to dis-

integrate the line. Carissimi is more concerned to convey the general sense of each phrase of the text than to extract its emotional properties in detail. Recondite appoggiaturas and other more elaborate devices of melodic inflection are therefore introduced on a relatively restrained scale, and in consequence retain their force for moments of special emphasis. Even in the most dramatic passages there is always a lyrical element in Carissimi's writing for the solo voice. The line is kept throughout clearly within focus, and Carissimi is careful not to allow it to become distorted by exaggeration or violence of statement. His anxiety in this respect, and his desire for a degree of refinement and finish that seem more characteristic of a later epoch, sometimes lead him to accept the tame or commonplace where a more robust and imaginative response is needed. On the other hand his instinctive feeling for proportion enables him to avoid the extravagances that frequently mar the works of his contemporaries.

Nor is this sense of proportion merely a negative virtue in Carissimi. It forms part of a remarkable capacity for design on a broad scale that was one of his most valuable contributions to 17th-century music. Composers of this era were constantly exercised by the problem of organizing an extended and continuous musical work, now that the polyphonic system of overlapping sections, each based on a different motif, had ceased to be of general application, through changes in the texture of music. Carissimi demonstrated that it was possible to give shape and direction to a long composition for solo voice, without the assistance of stage action, by methods entirely in keeping with the character of the work. Since literary texts were involved, Carissimi had to be on his guard against appearing to impose a musical design at variance with the words. A great factor of his success in avoiding this was the wide range of components at his disposal. For his many shorter songs and airs reveal the variety of types on which he could draw. Frequently found is the air with refrain, such as 'E bello l'ardire' and 'Nò, nò, mio core', but it is by no means stereotyped since both its elements are continually changing in order and content; 'Io disse sempre che la mare' belongs to this category, but characteristically has a feature of its own in the expansion and development of the opening phrase when repeated at the end. In 'Bel tempo per me' and 'Sin che haurò' the formal *da capo* aria can be seen emerging, while in contrast 'Si dia bando alla speranza' is an unsophisticated popular tune that might be a folksong. Carissimi, therefore, did not lack materials with which to match the demands of a cantata

librettist, nor varieties of style to keep alive the interest of his audience. To fuse these materials together so that continuity as well as variety should be maintained, and an integrated design produced from a multiplicity of contrasting sections, was a difficult task that Carissimi never shirks and usually solves.

Within the unit of design bass patterns recurring similarly (rarely exactly) are used to preserve continuity while allowing considerable liberty to the upper line, and Carissimi's highly subtle control of the length, shape, rhythm and relative disposition of phrases enables him to repeat melodic and rhythmic figures in the vocal line and secure firmness of construction without becoming stiff or mechanical. Another powerfully cohesive force is the greatly developed feeling of tonality, Carissimi makes sure that his tonal centre is indisputably established, so that modulations can be seen in their correct perspective and key relationships be used as an additional support to the main structure. Carissimi's clear sense of harmonic direction, coupled with his instinct for a strong bass, enables him to produce long phrases that are neither faltering nor inconsequent. This is an important achievement in an age when the indefinite nature of certain types of transitional harmony was apt to be reflected in a weak and aimless melodic line.

In the form of the cantata as a whole balance is secured by means suited to each particular context. There is no standard design which is mechanically applied; the essence of Carissimi's structural technique is its flexibility. Recurring musical sections to the same or different words are a common feature, and often give a rondo-like impression. But the freedom with which the repeated units are disposed, and the many modifications, melodic and rhythmic, which they undergo implies a much more delicately adjusted type of organization. The cantata 'Sospiro che dice' owes its good proportions to the skilful use of such repetitions of phrase and section; 'Toghetemi la vita' employs the device of an instrumental ritornello for the same purpose, and in the cantata for two voices 'E pur vuole' each solo line is individually developed, but shares a common refrain. Tonality has a particularly important part in the beautifully constructed 'Sospiri ch' uscite dal tristo mio core', and thematic affinities are a constant source of consistency in exposition even where, as in 'Ferma; lascia ch' io parli', the style of declamation is fluctuating sharply. Guiding the music through the most radical changes of rhythm and measure is Carissimi's sure control of movement which ensures that the general rhetorical flow shall not be disrupted by transitory changes of mood.

In Carissimi's sacred music the same artistic

principles serve a religious purpose. Solo motets like 'Pastores dum custodistis' and 'Sicut stella' testify again to the unifying properties of the recurring section, the first by means of instrumental refrains, the second by linking different verbal phrases to the same music. 'Domine Deus meus' is welded together by a distinct feeling of thematic relationship between the principal movements, and there are a number of interesting motets in which accompanying strings have a structural function. In 'Eia plebs' and the alto setting of 'Beatus vir' there is a good deal of imitation between voice and instruments, and the overlapping of their respective phrases recalls polyphonic methods of construction. The soprano setting of the latter text shows also string refrains ingeniously varied over what appears to be but is not actually a ground bass. When further voices are added the possibilities of contrast in texture are increased, and Carissimi makes full use of this added scope. The sacred duets, like the secular examples, range freely over the imitative, antiphonal and homophonic styles, and the larger ensembles show a similar versatility. 'Veni sancte spiritus' has three-part concerted imitative writing over a semi-independent bass, in 'Pulchra et decora' two types of choral refrain, one homophonic and the other contrapuntal, are interspersed with passages of solo declamation, while in the choral sections of the five-part 'Annunciate gentes' the main technique is antiphonal — groups of two or three voices answering each other. Applying on a larger scale the many methods of treatment of solo voices and choral ensemble to be found in the motets, and infusing these elements with a vivid dramatic quality, Carissimi laid the basis of his most significant and influential contribution to sacred music — the oratorio.

Apart from Cavaleri, whose 'Anima e corpo' can only partly be classed as oratorio, Carissimi had few predecessors in this field. As in the cantata, he responded to the prevailing taste for dramatization, and demonstrated in very convincing manner its value in presenting a biblical episode clearly and impressively. Like Schutz he saw how music could help to delineate and reinforce characters and scenes from the Bible and make their impact stronger. His subjects, many of which are drawn from the Old Testament — Jonah, Belshazzar, Job, Hezekiah, the Judgment of Solomon, Jephthah and others — are selected skilfully and set out in a fashion well suited to his own idiom. Many of these oratorios are quite brief and consist only of a single dramatic scene. There is usually a narrator (*historicus*), even where there is only a single solo voice, as in 'Lucifer', and the action is carried forward by individual char-

acters in short self-contained passages of solo declamation. The medium most favoured is *arioso* with a moderate degree of expressive decoration, but the style is very flexible. The characterization is not laboured, though there are many arresting touches, such as the distinction drawn between the two quarrelling women in 'The Judgment of Solomon', and their lively musical argument. Carissimi is more concerned to express the emotional quality of what his characters say than to insist on their personalities. It is in his choruses that he makes his most direct dramatic appeal. Here the members of the *turba* — the victorious Israelites, the revellers at Belshazzar's feast, the sailors on Jonah's ship — may be either participants or commentators. At moments of excitement or tension they reiterate musical figures based on Latin metrical groups — "fugite", "plaudite", "tempestas magna", "perdat dies". Persistent rhythmic units of this kind, simple harmonic progressions and clear homophonic part-writing combine to secure brilliant and telling effects. By contrast the use of a more polyphonic technique stands out in greater relief for the reflective mood of the beautiful concluding choruses of 'Jonah' and 'Jephthah'. The voices are usually accompanied only by continuo; occasionally independent parts for strings are introduced, but these are not treated with much assurance and are given little of significance to add. Carissimi's natural expressive agent is the human voice, whose capacities he displays with complete mastery. It is on the voice that the task of communication rests in his music, and in the longer works, like the oratorios, his knowledge of the range of timbre and inflection possessed by voices alone and in combination is a sure guarantee against monotony of tone-colour. The titles of his oratorios, which include 'Diluvium universale', 'Felicitas beatorum', 'Judicium extremum', 'Historia Divitis', 'Lamentatio damnatorum' and some six others in addition to those mentioned above, bear testimony to the variety of subjects treated by Carissimi in an almost exclusively vocal medium. His masterpiece, 'Jephthah', is a fine example of his resourcefulness in this respect. Apart from the main (six-part) *turba* choruses, the sorrowful chant of the defeated Ammonites (three-part) and the succeeding psalm of the Israelites (two-part) are particularly effective elements in the tonal scheme, while a very moving feature of the touching lament of Jephthah's daughter is the manner in which the concluding phrase of each section of her solo is echoed by a two-part chorus of her attendants. But this diversity of scoring, applied to the sequence of short subdivisions (some only a few bars long) of which the oratorio consists, might produce a piece-

meal result if it were not for Carissimi's remarkable constructional power, which makes 'Jephthah' one of the most coherently satisfying works of its type in the 17th century. Notwithstanding Carissimi's fine vocal technique, the music of this epoch had more urgent need of his structural gifts, through which he exerted the most important and lasting influence on his contemporaries, and on which, in the final analysis, the fullest achievement of his art depends.

Carissimi also wrote a number of settings of the Mass, but these are not in general very characteristic and apt to be rather stolid and reactionary in style. By contrast an attractive and unexpected aspect of his musical personality was a delightful sense of humour, shown to advantage in cantatas like 'Il ciarlatano', 'I filosofi' (Democritus and Heraclitus), 'Testamentum asini' (a self-parody) and the 'Requiem jocosum' (in which a wife complains of her husband in a two-part canon over a plainsong intonation in the tenor).

There exists a German translation of a treatise by Carissimi entitled 'Ars cantandi'; with many other of his works, the original version of this appears to have been lost. He was a famous teacher, and an appreciable part of his widespread influence on the music of his time was transmitted through his pupils, among whom were numbered Alessandro Scarlatti, Johann Kaspar Kerll and Marc-Antoine Charpentier.

**CARL ROSA OPERA COMPANY, THE ROYAL.**<sup>1</sup> This company was founded in 1873 by Carl Rosa, for the production of opera in English, with the immediate intention of improving the standard of both repertory and performance. It began with a season at Manchester on 1 Sept. 1873. Rosa's previous experience of operatic management in America, in which he was associated with his first wife Euphrosyne Parepa-Rosa, had shown him the possibilities. Her death in 1874 necessitated the postponement of the company's London début at Drury Lane, as had been planned. The Princess's Theatre was taken in 1875, and the first season opened on 11 Sept. Various other theatres were taken in subse-

<sup>1</sup> Permission to prefix "Royal" to the name of the company was granted by Queen Victoria in 1897.

quent years, and the quick response of the public led to a great stimulus being given to the English operatic art, both of performance and of composition.

From 1883 to 1887 Rosa was associated with Augustus Harris, and the London seasons took place at Drury Lane Theatre. Rosa died in 1889, and Harris remained as managing director till the close of the following year. It was an unlucky thing for opera in English that Rosa's death should have synchronized with the re-establishment of foreign opera at Covent Garden under Harris's management, for the company had not really had time to make its position secure by the acquisition of a complete independence in the character of the performances. Comparison with the established traditions of foreign opera performance necessarily meant a loss of prestige. Also Harris, concerned with, to him, a more important thing, lost interest, and the direction of the company suffered in vigour by his retirement.

The London seasons became less regular, although the company's activities continued in the provinces, where indeed the main work has always been done. T. H. Friend and H. Bruce were the directors till 1898, when the company passed into other hands and was managed for a short time by Osmond Carr. From Aug. 1899 till May 1900 it was run as a commonwealth by some of the leading singers, with Arthur Winckworth as manager. A syndicate was then formed, with Messrs. Alfred and Walter van Noorden at the head; the latter was one of the company's conductors, and on his death Mrs. Rosa (*d.* 1927), Rosa's second wife, became co-director.

From 1923 the company was under the direction of H. B. Phillips, who died in 1950. Mrs. Phillips carried on the tradition for a short time, but was unable to continue without a public subsidy. Thus, however, was granted by the Arts Council of Great Britain in 1953, when a tour of fourteen weeks was arranged under the administration of the newly formed Carl Rosa Trust.

The company generally worked with a large repertory which included the popular operas of the day, but this gradually shrunk, from sheer box-office necessity, until little but a few of the most popular repertory works remained, excluding those demanding large casts or spectacular production. In earlier years, however, many works were produced which were either heard for the first time in English or were actual novelties. The following may be mentioned:

- 'Aida' (1880).
- 'André Chénier' (1903).
- 'Attaque du moulin' (1915).
- 'Bohème' (1897).
- 'Carmen' (1879).
- 'Cricket on the Hearth' (Goldmark) (1900).
- 'Faust' (Berlioz, stage version) (1893).

- 'Flying Dutchman' (1876).
- 'Forza del destino' (1910).
- 'Hansel and Gretel' (1894).
- 'Jewels of the Madonna' (1912).
- 'Lohengrin' (1880).
- 'Manon' (1885).
- 'Masteringers' (1896).
- 'Mefistofele' (Boito) (1912).
- 'Mignon' (1880).
- 'Otello' (1895).
- 'Queen of Sheba' (Goldmark) (1910).
- 'Rienzi' (1879).
- 'Siegfried' (1901).

A number of operas by British composers were produced for the first time by the company, including:

- 'Canterbury Pilgrims' (Stanford).
- 'Colomba' (Mackenzie).
- 'Dante and Beatrice' (Phillpott).
- 'David Garrick' (Somerville).
- 'Diarmid' (McCunn).
- 'Esmeralda' (Goring Thomas).
- 'Jeanie Deans' (McCunn).
- 'Nadeshda' (Goring Thomas).
- 'Nordisa' (Corder).
- 'Quentin Durward' (Maclean).
- 'Thorgim' (Cowen).
- 'Troubadour' (Mackenzie).

**CARLETON, Nicholas.** See CARLTON.

**CARLI, Girolamo** (*b.* Reggio, ?; *d.* ?).

Italian 16th-century composer. He published a collection of 5-part motets entitled 'Motetti del labirinto' (Venice, 1554).

M. C. C.

**Carlini** (painter) See Bach (J. C., 38, portrait of).

**CARLO DEL VIOLINO.** See CAPROLI

**CARLSON, Bengt (Ivar)** (*b.* Ekenas [Tammisaari], 26 Apr. 1890; *d.* Helsingfors, 21 Sept. 1953).

Finnish conductor and composer. Having studied at the Conservatory of Helsingfors in 1900-13, he became a pupil of d'Indy at the Schola Cantorum in Paris (1913-14). He was conductor of several well-known choirs in Helsingfors: Akademiska Sångforeningen (1920-46), Svenska Oratorieföreningen (from 1921), Sällskapet M. M. (1923-50) and Finlands Svenska Sång- och Musikförbund. In 1916 he became teacher of composition, theory and musical history at the Sibelius Academy of Helsingfors, and in 1948 he received the Professor's title. His compositions include cantatas, partsongs, chamber music, pieces for pianoforte and for violin, etc.

A. R.

**CARLTON (Carleton), Nicholas** (*b.* ?; *d.* ?).

English 16th-century composer. He is known by arrangements of some of his vocal compositions for organ or virginal and a duet for 4 hands for organ or virginal (B.M. MSS. Cat. for Instrumental Music). The latter is one of the earliest specimens of a duet for keyboard instruments.

E. v. d. S.

See also Duet (earliest keyboard duets).

**CARLTON, Richard** (*b.* ?; *c.* 1558; *d.* ?; *c.* 1638).

English composer. Nothing is known of his

parentage, and there is no evidence to support the conjecture that he was a son of Nicholas Carlton. He took his degree as B.A. at Clare College, Cambridge, in 1577. After his ordination he became vicar of St. Stephen's Church, Norwich, and was minor canon and master of the choristers at Norwich Cathedral. In Oct. 1612 he was presented by Thomas Thursby to the incumbency of Bawsey cum Glosthorp in Norfolk. It is stated that he died in 1638. Carlton was a contributor to 'The Triumphes of Oriana', and he published (1601) one set of madrigals, all of which were written for five voices. His madrigals<sup>1</sup> as a whole are characterized by a peculiar sense of tonality, and his use of certain chords, and his treatment of the major and minor thirds, in close juxtaposition and simultaneously, differentiates his work as regards style and manner from that of all the other English madrigalists. Similar clashes were introduced, as is well known, by Byrd and Kirbye among others, but their treatment of these "jars and dissonances", as Byrd designated them, was different in character from those of Carlton, who may either have been indulging in experiment or have come under some special influence in the course of his training in church music.

E. H. F.

The following are Carlton's madrigals<sup>2</sup>

#### MADRIGALS FOR FIVE VOICES (1601)

1. The love of change
2. Content thyself with thy estate.
3. The self-same things.
4. When Flora fair (Pt. i).
5. All creatures then (Pt. ii).
6. From stately tower (Pt. i).
7. With her sweet locks (Pt. ii).
8. Like as the gentle hart
9. Nought under heaven (Pt. i).
10. So whilom learned (Pt. ii).
11. Sound, saddest notes (Pt. i).
12. Let every sharp (Pt. ii).
13. If women can be courteous.
14. Nought is on earth
15. Ye gentle ladies.
16. The witless boy.
17. Who seeks to captivate.
18. Who vows devotion.
19. The heathen gods for love
20. O vain desire.
21. Even as the flowers do wither.

#### IN MORLEY'S 'THE TRIUMPHES OF ORIANA' (1601-3)

'Calm was the air', for 5 voices.

Carlyle, Thomas. See Coletti (ref. to).

**CARMEN.** Opera in 4 acts by Bizet. Libretto by Henri Meilhac and Ludovic Halévy, based on Prosper Mérimée's story. Produced Paris, Opéra-Comique, 3 Mar. 1875. 1st perf. abroad, Vienna, Court Opera (trans. by J. Hopp), 23 Oct. 1875. 1st in England, London, Her Majesty's Theatre (in Italian), 22 June 1878. 1st in U.S.A., New York (in Italian), 23 Oct. 1878. The original version, always used in Paris, has spoken

dialogue, that with recitatives, which are by Ernest Guiraud, was first used in Vienna.

**CARMEN, Johannes** (b. ?; d. ?).

French 14th-15th-century composer. He is named by Martin Lefranc in his poem 'Le Champion des dames', which was written about 1440, as one of the three musicians who were the delight of all Parisians before Binchois and Dufay were heard of.<sup>3</sup>

Three motets of his are preserved at Oxford, Bodl. Can. misc. 213, and Bologna, Liceo musicale 37. One of them, 'Pontifici', was published by Stainer, another, 'Venite adoremus — Salve Sancta' by van den Borren, parts of the third, 'Salve pater — Felix et beata' by Dannemann. The latter are isorhythmic double motets. In 'Pontifici', a motet in four parts in praise of St. Nicholas of Myra, Italian features have broken into the French tradition: although seemingly isorhythmic in structure, the motet is not based on a *tenor* of Gregorian origin. The upper parts are set as a canon.

**Carmina Burana** (13th-cent. anthology) See Liturgical Music-Drama, p. 329 Orff (scenic cantata). Passion Music Turchi ('Invettiva', chorus & pf.)

**CARNINIA.** See MADRIGAL (ITALY).

**CARNABY, William** (b. London, 1772; d. London, 13 Nov. 1839).

English organist and composer. He was a chorister of the Chapel Royal in London under Nares and Ayrton, became organist at Eye and subsequently at Huntingdon. In 1805 he graduated at Cambridge as Mus.B., and in 1808 proceeded to Mus.D. On the opening of Hanover Chapel, Regent Street, London, in 1823, he was appointed its organist. His compositions were numerous.

W. H. H.

**CARNEGIE UNITED KINGDOM TRUST.** Music has shared greatly in the activities of this Trust since its establishment at Dunfermline in 1913. The Trustees' first scheme was the completion of one begun by Andrew Carnegie for the gift of organs to more than 3,800 churches and chapels in the United Kingdom. Then, in 1916, they turned their attention to the production of hitherto unknown Tudor music, which resulted in the publication of the octavo edition of 50 separate pieces suitable for church performances and of the quarto edition of ten volumes of Tudor music for scholars and students. The former was completed in 1926, the latter in 1929. Another publication scheme, also announced

<sup>1</sup> Republished in 'The English Madrigal School', Vol. XXVII.

<sup>2</sup> *Ibid*

<sup>3</sup> Cf. TAFISIER.

in 1916, was concerned with works by contemporary British composers, and up to the time when the collection was closed in 1928, 56 new works had been published; they included Bantock's 'Hebridean Symphony', Boughton's opera 'The Immortal Hour', Vaughan Williams' 'London Symphony' and Holst's 'Hymn of Jesus'.

Among the existing national organizations which have at one time or another received assistance from the Trust are the British Federation of Music Festivals, the English Folk Dance and Song Society, the Rural Music Schools Council, the National Operatic and Dramatic Association and the National Federation of Music Societies; early beneficiaries were the Village and Country Town Concerts Fund and the Arts League of Service.

Since 1935 the Trustees have been concerned, broadly speaking, with the promotion of amateur choral and orchestral music; the outstanding exception was the emergency assistance which was given between the years 1941 and 1943 to the Sadler's Wells Foundation for its opera company and to the national orchestras, the Hallé, the Liverpool Philharmonic, the London Philharmonic, the London Symphony, the Northern Philharmonic, the Wessex Philharmonic and the Scottish Orchestra. The scheme of assistance for amateur choral and orchestral societies, which began in 1935, closed finally in 1951, as also did the Trustees' county music policy for the encouragement, chiefly by the provision of a county advisory service, of new amateur music groups, which should eventually either develop into established societies affiliated to the National Federation of Music Societies or become festivals within the British Federation of Music Festivals. Up to the end of 1950 the Trustees made grants in aid of the salaries of 36 county music organizers, but no further assistance was offered for new appointments made after 31 Dec. 1950.

N. G. G., rev.

**CARNER, Mosco** (b. Vienna, 15 Nov. 1904).

British conductor and musicologist of Austrian birth. He was educated at the Vienna Conservatory, where he studied the theory and composition of music, conducting, piano-forte and cello. He then studied musicology at Vienna University under Guido Adler and took his doctor's degree in 1928. From 1929 to 1930 he was opera conductor at Troppau and in 1930 he became conductor of the Danzig State Theatre for three years. He settled in London in 1933, where he was music correspondent of the 'Neue Freie Presse', Vienna, and the 'Prager Tagblatt' until 1938. He was music correspondent of the 'Schweizerische Musikzeitung' up to 1940. From 1944 to 1948 he was a member of the

B.B.C. Music Advisory Panel and he is on the Executive of the Committee for the Promotion of New Music. He is a member of the L.P.O. Score-Reading Panel and, since 1950, of the London Contemporary Music Centre. He has conducted the B.B.C., London Philharmonic, London Symphony and Philharmonia Orchestras both in London and the provinces, and he was guest conductor of Radio Eireann in 1948.

Carner has been music critic of 'Time and Tide' since 1949 and has written numerous articles for musical publications. His short biography of Dvořák appeared in 1940 and 'A Study of Twentieth-Century Harmony' in 1942. 'Of Men and Music', which was published in 1944, is a collection of essays originally written for various journals, chiefly on aspects of the work of Puccini, Bruckner and Mahler. He has also written 'The Waltz', published in 'The World of Music' series in 1948, and essays on Dvořák's church music and the orchestral music of Schubert and Schumann in the 'Music of the Masters' symposia.

Carner's wife, Helen Pyke (*d.* 13 July 1954), was a pianist who specialized in public and broadcast performances of pianoforte duets with Paul Hamburger. Malcolm Arnold's Concerto for pianoforte duet and orchestra was written for them. In 1954 Maurice Cole took Hamburger's place.

M. K. W.

**CARNEYRO, Claudio** (b. Oporto, 27 Jan. 1895).

Portuguese composer. He is a son of the well-known painter Antonio Carneyro. He began at first to learn the violin, but was soon attracted by musical composition. Lucien Lambert, who was then at the Oporto Conservatory, taught him the first rudiments of composition, and later in Paris he received his complementary lessons under Widor. He was well received by Pierné, who conducted his 'Preludio, coral e fuga' (1923 and 1925) at two concerts of the Orchestre Colonne. In 1922 he competed for a professorship at the Oporto Conservatory, a post he occupied again on his return from Paris in 1928, with another interruption by a tour in the U.S.A. In 1930, after Lambert's death, he took the vacant place at the Oporto Conservatory. In 1935 he again went to Paris, with a scholarship of the Instituto para a Alta Cultura, and there worked with Paul Dukas. His serious and rather 'grey' style shows classical tendencies, tempered at times by folklore elements. The best of his output is as follows:

#### BALLET

'Nau Catrineta.'

#### CHORAL WORKS

'Meu Deus' for chorus & orch.

3 Poems by Fernando Pessoa for unaccomp. chorus.

4 'Romances populares' for unaccomp. chorus

4 'Orações populares' for unaccomp. chorus.

## ORCHESTRAL WORKS

- 'Pregões, romarias e procissões'
- 'Cantarejo e dançará.'
- 'Palma a Chopin.'
- 'Portugalezas'
- 'Raiana.'

## WORKS FOR STRING AND CHAMBER ORCHESTRA

- 'Gradual.'
- 'Memento.'
- 'Barcos de Papel.'
- 'Pavana'
- 'Prelúdio, coral e fuga'

## PIANOFORTE AND ORCHESTRA

- 'Catavento.'

## VOICE AND ORCHESTRA

- 'Três poemas'

## CHAMBER MUSIC

- 2 String Quartets.
- Trio for vn., cello & pf
- Paruta for strg. trio.
- Quartet for vn., viola, cello & pf.

## VIOLIN AND PIANOFORTE

- Sonata
- 'Bruma.'
- 'A roda dos degredados.'
- 'Improviso'

## FLUTE AND PIANOFORTE

- 'Avena ruda.'

## PIANOFORTE MUSIC

- 'Fábulas.'
- 'Paciências de Ana Maria.'
- 'Pavana.'
- 'Bailadeiras.'
- 'Harpa-colea.'
- 'Raiana'
- Various small pieces.

## SONGS

- 'Velhos cantares.'
- 'Do meu quadrante.'
- 'Redondilhas'
- Numerous folksong arrangements

J. J. C.

**CARNICER, Ramón** (b. Tárrega nr. Lérida, 24 Oct. 1789; d. Madrid, 17 Mar. 1855).

Spanish composer. Having begun life as a treble in the cathedral choir at Urgel, followed by seven years' training in the traditions of ecclesiastical counterpoint, he found his first encounter with Italian opera at Barcelona in 1806 a disappointment. He is said to have learnt to appreciate opera, however, from the works of Mozart, although at that date the only one of Mozart's operas which had been performed at Barcelona was 'Così fan tutte' (1798). The French invasion of 1808 paralysed musical life in Spain. Carnicer fled to the Balearic Isles and worked as organist and teacher at Mahon in Minorca. There he made friends with a certain Dr. Charles Ernest Cook, described as a German engaged upon an exploration of the Pithyusae Islands. Cook was said to have had lessons from Mozart himself (he is not mentioned in Abert's edition of

Jahn, 1921); at any rate he made Carnicer acquainted with many of Mozart's works which were not to be found at Barcelona.

At the end of the war Carnicer returned to the mainland and was commissioned by the Duke of Bailén, a wealthy amateur, to engage Italian singers for the opera at Barcelona. His earliest dramatic compositions were additional arias and *sinfonias* for inclusion in the operas of other composers. His overture to Rossini's 'Barbiere' brought him into public notice.<sup>1</sup> His first two operas were 'Adele di Lusignano' (15 May 1819) and 'Elena e Costantino' (1821; Madrid, 1827). In 1820 he was appointed director of the opera at Barcelona. His 'Don Giovanni tenorio, ossia Il convitato di pietra', an *opera semi-seria* (20 June 1822) is interesting from the fact that Mozart's 'Don Giovanni' was at that time still unknown (or at least unsung) in Spain; in Madrid it was first performed in 1834 and at Barcelona not until 1849. The story, of course, was well known in Spain, having been given its earliest dramatic form by a Spanish dramatist of the 17th century. An anonymous 'Convitato di pietra' (? Trillo's or Fabrizi's) had been given at Barcelona on 4 Oct. 1787, less than four weeks before the first performance of Mozart's 'Don Giovanni' in Prague; while the same work had been produced in Madrid in 1796.

In 1827 Carnicer was brought to Madrid by the king's command to direct the Opera there, in spite of a four-years' engagement by which he was bound at Barcelona. He was faced with the prestige of the Italian school and the reputation of Mercadante, who had preceded him. His later operas include 'Elena e Malvina' (1829), 'Colombo' (12 Jan. 1831), considered to be his best work, 'Eufemia di Messina' (1832), 'Ismalia, ossia Morte ed amore' (12 Mar. 1838); he also composed a 'Missa solemnis' (4 voices and orchestra, 1828), 2 Requiems (4 v. and orch., 1829 and 1842), Vigilia (1833) and several symphonies. From 1830 to 1854 he taught harmony and composition at the Conservatory, and Barbieri was among his pupils.

The tragedy of Carnicer was that circumstances compelled him to set Italian words to music, instead of Spanish, or his real mother tongue, which was Catalan. Sometimes, however, he persuaded singers to introduce his own Spanish songs into the middle of Italian operas; they are described as being compositions in a vividly popular style, the last vestiges of the *tonadillas* of the 18th century. J. B. T.

See also National Anthems (Chile).

**CARNYX.** According to certain classical authorities Celtic peoples in ancient times called their long war trumpet by this name.

<sup>1</sup> It is quoted in part by Mitjana in the 'Dictionnaire du Conservatoire: Espagne', p. 2310.

Thus Eustathius, and also a Scholium<sup>1</sup>, in their commentaries on the 'Iliad' describe six kinds of salpinx of which "the third, the Galatic, is cast and not very big, with the bell shaped as an animal's head, and with a leaden mouthpiece into which the player blows; high in sound, and called by the Celts, carnyx" (*κάρνυξ*). Diodorus ascribes the description to Posidonius (c. 100 B.C.). The instrument is depicted on Trajan's Column (A.D. 113) and on many Gaulish and British coins. It resembles the lituus except in the open-jawed dolphin, horse or wolf design of the bell. The only actual specimen in anything approaching a complete state of preservation was found in Lincolnshire in 1768. It joined other antique objects in the collection of Sir Joseph Banks and was described by G. Pearson<sup>2</sup> as being of hammered bronze, about 30 ins. long. Since then it seems to have vanished.

The general design is much older; among the surviving bronze-age Irish instruments at Dublin are trumpets with cylindrical shaft (about an inch in bore) and upturned bell. The prototype was evidently a wooden or cane tube with an ox horn attached for a bell, but all that can be said of the connection, if any, between the bronze forms is that the pattern probably passed from the north to the south, with the carnyx parent to the Etruscan lituus.

**CAROL.** It is difficult to deal with the carol as a single subject for the simple reason that the word has been defined in a confusing number of different ways, corresponding to the changes undergone by this species of song in the course of centuries. The important fact to remember in the first place is that a carol is not necessarily a secular Yuletide or half-sacred Christmas song, and that the English carol does not correspond, except in the most limited sense, to the French *noël*. The use of the cry "Nowell" in English carols of various sorts is confusing, for although it must originally have been connected with the French word for Christmas, it became simply a general exclamation of joy not confined to that festivity. Professor R. L. Greene, in his fundamental treatise on the English 15th-century carol (*see* Bibl.), calls the carol words of that period "poems intended or at least suitable for singing, made up of uniform stanzas and provided with a burden which begins the piece and is to be repeated after each stanza". This definition was accepted and used at the end of the middle ages.

<sup>1</sup> 'Scholia Graeca in Homeri Iliadem' (Oxford, 1888), VI, 253.

<sup>2</sup> Roy. Soc., Philos. Trans. 86 (1796), xi, with a drawing of the carnyx.

The early carol is a fixed form, determined presumably by its musical function in processions; the *noël* had no fixed form (*i.e.* no recurrent burden or even, necessarily, any refrains). The heyday of the carol in this strict sense was the 15th century, whereas the *noël* did not begin to become popular until late in that century and had its prime in the 16th century, during the first half of which only a small number of carols of the earlier type were still produced, and these, only some twenty of which are preserved, are not as important in any respect as those of the 15th century. The earlier *noëls*, so called, *e.g.* of the 12th century, are always other types of song, such as *quêlle* songs, etc.

The refrain, or burden, which begins each carol and recurs between the stanzas, as well as the verse pattern A.A.A.B, show this song-form to be related to the medieval *carole* and similar round-dances. The French *virelai* and the Italian *ballata* closely resemble the carol in form, and the Italian *lauda* is similar to it not only in form but also in spirit. The carol is the English representative of this family.

THE 15TH-CENTURY ENGLISH CAROL.—That the carol was of importance in 15th-century England is attested by the fact that nearly 500 lyrics in this form survive and that the extant musical settings, found in about a dozen manuscripts<sup>3</sup>, number more than 130. In its polyphonic form in particular the carol was at that period an important vehicle of musical thought. The words are usually in the vernacular and sometimes macaronic, but the chief manuscripts include a fair number of purely Latin songs, often called *cantilenas*, which are, however, indistinguishable in form and character from the songs in English. All 15th-century carols, in fact, from the very simple early to the complex late ones, show the same process of musical thinking.

About the melodies of the carols the first question that may be asked is—where do they come from? The myth that the tenors of the polyphonic carols are folk tunes has recently been thoroughly demolished. It has been suggested that, on the contrary, the melodies had an independent existence only *after* their composition for the polyphonic carols with which they survive. There is perhaps a third alternative. The presence in the earliest carols of unison passages reminds us that in the

<sup>3</sup> Principal sources are Cambridge, Trinity Coll., 03.58 (unreliable edition by J. A. Fuller-Maitland, 'English Carols of the XVth Century' [1891]), Oxford, Bodleian Lib., Selden b. 26 (facsimiles and transcriptions in Stainer, 'Early Bodleian Music', Vols. I & II [1901]), B.M., Egerton MS 3307 (discussed in M.Q., XXXII, 1946, and by M. F. Bukofzer, 'Studies in Mediaeval and Renaissance Music' [1950]); B.M., Add. MSS 5663, 5465, 31922 (no modern editions). Modern edition of all carols in the above sources, except those in Add. MSS 5465 and 31922, by John Stevens, 'Medieval Carols' ('Musica Britannica', Vol. IV [1952]).

first decades of the century the carol tradition was still comparatively homogeneous; there was still a link between the polyphonic carol and the "popular" singing-tradition. It is possible that tunes were composed "according to the rules of art" for monophonic performance in far from "folky" circumstances and later used also for polyphonic settings. The tenors of 'Nowell: out of your sleep' or the refrain-song 'Omnes una gaudemus', or the upper part of the favourite, 'Ecce quod natura', to choose only a few obvious examples, could have come into being in this way. There is, unfortunately, no conclusive evidence.

Nothing could be more straightforward than the form of the earliest polyphonic carols, preserved in the Trinity collection. Their alternating burden and verse clearly reflect without change the division of the medieval *carole*, the dance-with-song, into chorus and leader. But the next stage of development is already apparent in the seventh carol of this collection, the well-known Agincourt Song, the earliest surviving carol to have two distinct burdens, one for soloists, one for the chorus. Eleven out of twenty-eight carols in the Selden Manuscript have double burdens including six out of the last nine — one of many hints, by the way, that the manuscript contains compositions written over a period of years. The Windsor Manuscript has a slightly higher proportion, half and half; the Ritson Manuscript consists entirely of carols with two burdens. In this last manuscript the dramatic possibilities of dividing a long burden into alternating phrases for chorus and soloists are clearly seized. The burden of No. 80, for instance, has four sections:

*Soloists:* Nowell, Nowell.

*Chorus:* Who is there that singeth so: Nowell?

*Soloists:* I am here, Sire Christemass.

*Chorus:* Welcome my Lord, Sire Christemass! Welcome to us all, both more and less! Come near, Nowell.

The traditional division of labour between leader and chorus was developed in the case of the verse also; a feature of the polyphonic carol is the interpolation by the chorus of short three-part phrases into the two-part solo writing. These phrases almost invariably repeat or slightly vary the words and music of the solo phrases immediately preceding. They do not occur, at least not in their written-out form, in the Trinity collection. The Selden Manuscript has five instances, of which No. 30<sup>1</sup> is the most complex: the verse is divided into four sections, the first three of which are repeated by the chorus: V.C.V.C.V.C.V. Examples do occur of the *last* phrase, the coda of the verse, being repeated by the chorus (e.g. No. 76), but more usually the last phrase but one or earlier phrases are repeated.

<sup>1</sup> These numbers refer to the 'Musica Britannica' reprints.

One of the more perplexing problems which faces the student and singer of the early carols is to decide in what order the sections should be sung in the case of carols with two burdens. A single and final answer to this question has never perhaps been possible. The assumption that complicated carols were always performed in the same way in all places and on every occasion will not hold, even on the most general grounds. We shall see that the manuscripts compel us to believe what we ought to expect — that there was more than one "right" way of performing the carols.

Two questions must be asked: (i) did the carol start with both or only one burden; (ii) were both burdens repeated between the verses? To take one example, 'David ex progenie', the Windsor Manuscript sets out the sections in the order B V BII V, while the Selden Manuscript gives the order B BII VCV. The necessity for putting the chorus section (C) into the verse is obvious. The question of what to do with burden II could be resolved by placing it after the burden as in the Selden Manuscript. It has in fact been suggested that the Selden Manuscript shows the "right" order for this carol, perverted in the Windsor Manuscript by the need for economizing space. But this solution cannot easily be accepted because in the Windsor Manuscript the scribe has placed note-guides after the burden leading to the verse, thereby confirming the order of the manuscript. Nor is this carol a unique example. Nos. 36, 49 and 67 are exactly comparable. (Our faith in the efficacy of the note-guides is increased, incidentally, by No. 106, where they are used to contradict the manuscript order). We are forced to the conclusion that B V BII was one of the accepted orders for the beginning of a polyphonic carol. A large number of carols are, on the other hand, arranged in the manuscript B BII V and have this order confirmed by note-guides. This is the order of the processional hymns ('Gloria, laus et honor', for instance), which so closely resemble the carol in form; and this, it must be admitted, seems the most natural way to start what is in essence responsorial music: burden (soloists), burden II (chorus), followed by verse (soloists with choral repeats).

The second question — were both burdens repeated between the verses? — is not easy to answer. It has been remarked that either or both would satisfy the demands of carol form. Nevertheless a careful analysis of the formal links between burdens and verse sheds some light on the matter. We must of course allow for the fact that what appears to us an excessive amount of repetition may have seemed to the 15th-century audience both normal and necessary. Nevertheless, it may be permissible to shorten those carols in which the same musical phrase will be repeated three times in

succession. This is what happens when, not uncommonly, burden and burden II are closely related, and when the coda of the verse also consists of a phrase taken from the burden. Formal analysis shows that burden and verse are frequently linked or rhymed in this way, and in not a few instances the whole of the burden becomes the coda of the verse. In such cases the scheme B BII V1 BII V2 BII may have been adopted.

If form distinguishes the carol in the late middle ages and provides a puzzling and fruitful subject for speculation, a certain style of rhythm and melody is what makes the 15th-century carol a natural whole, a unity, and distinguishes it from other music of the time. Dr. Manfred Bukofzer has well described the secret of carol style as the "interaction between angular design and rhythmic vigour". It is this that gives the carols their characteristic brisk gaiety, their freshness and their lilt.

The carols with few exceptions are written either in major prolation or in perfect time, transcribed 3-4. Major prolation is the rule in the Trinity collection; perfect time is increasingly represented in the Selden and Windsor Manuscripts and finally replaces the other altogether in the Ritson Manuscript. (This last manuscript contains, also, the only 15th-century carol to use duple time.) The significance of this important change, which also occurs in continental music of the same time, can be seen in a comparison of the terse and vigorous carols of the Trinity collection with the sedate and even turgid carols of the Ritson Manuscript. The solemnity of many later carols is in part due to the greater rhythmic complexities encouraged by perfect time. The choice of metre cannot, however, in the middle of the century have been thought a matter of decisive importance, because, for example, the Agincourt Carol is found in both. Furthermore, the characteristic cross-rhythms of carol music were as easily expressed in major prolation as they could be in perfect time. The cross-rhythms are of two kinds: the first usually, but not always, expressed by *coloration* and transcribed (in 3-4) as ; the second not requiring coloured notation and transcribed (3-4) as . These rhythmic shifts of emphasis are also found in monophonic carols. Contrasting  and  rhythms are another characteristic of carol music both early and late.

The harmonic basis of the 15th-century carol is the *gymel* or *cantus gemellus*. In this style, still common even in the Ritson Manuscript, the two equal voices move and cross to weave a texture of unisons, thirds, sixths and tenths. But many carols, particularly early ones, use parallel sixths, separating at cadences

to octave and unison, so consistently that it is only natural to assume that instructed musicians would sometimes have sung appropriate sections with an improvised middle part in "English descant" style. The alternating homophonic and "descant" sections of 'Alleluia: a newe work' suggest that the monophonic carol also may have been the subject to improvisation. The harmonic system of parallel thirds and sixths produced by the technique of "sight" was a familiar basis for three-part composition in the 15th century; and even in the Ritson Manuscript, where the harmonic and rhythmic freedom of the *medius* is most marked, passages of strict "descant" are not unknown. One is emboldened to suggest the occasional addition of a middle voice in the earlier two-part carols, even when the manuscripts give no indication of it, because one of the essentials of carol style in the middle and late century is the frequent contrast of two- and three-part writing, for soloists and chorus. Furthermore, No. 95 with its direction "Fa-burdon" gives a clear indication that parts were in fact improvised.

A proper examination into the modes used, the often subtle relationships between principal and intermediate cadences, the reason for the choice of a particular mode, the appropriate application of *musica ficta* to each, and so on, cannot be attempted here. The most striking single fact is the popularity of the G (Ionian) mode, *modus lascivus*. Over half the carols of the Selden and Ritson Manuscripts close on C or, transposed, on F. In Selden the untransposed form, in Ritson the transposed form is the most frequent. In the whole 'Musica Britannica' volume half the carols use one of these modes. The next most popular was the Dorian, but this was twice as much used in its untransposed form as in its transposed. The composers of the Trinity and Windsor Manuscripts had a particular liking for this mode and used it as much as the Ionian. The first carol of the Trinity collection is the only one to employ A as final. This mode is moderately popular in its transposed form only; one in every ten carols ends on D with a flat in the "key signature". The Phrygian occurs frequently, particularly transposed, as an intermediate cadence, but never as a final cadence. The remaining tenth unaccounted for are Mixolydian, equally divided into those ending on G (not easily distinguishable from Ionian) and those transposed to C.

The words of the carols raise two separate problems: first, the way the composers treated the text in their music; second, the way the scribes presented it in the manuscripts. The first problem is dependent upon the second, which fortunately is not insoluble. Carol scribes do not adopt the tantalizing practice, common in some manuscripts, of noting down

only the first words of each poem. On the contrary, with one exception, each piece of music is amply provided with text. This is normally underlaid only to the tenor, the lowest part in score.

The detail of fitting the words to the music was left to the singer, who was expected as part of his training to know how to do this. In the case of the Ritson Manuscript, for instance, he has a great deal to do; in the earlier manuscripts not so much. This is not because the Ritson Manuscript is less tidily written than the others, but because the style of the music is more complicated. On the whole a general agreement of phrase with phrase is all that the scribes attempted, and even this cannot be relied upon. When the manuscript seems to guide the singers most precisely and neatly in some point of detail, it is often fallacious. We may imagine that, provided the page looked neat, the scribe's duty was done. Closer examination or comparison with a similar passage exposes the sham; many carols with repeated sections are self-contradictory. If this were the whole picture, it would at least have the merit of consistency; but there are several places in the manuscripts where, from motives which seem quite inexplicable, the exact underlay is indicated by thin lines drawn from the words to the notes.

In the earlier and simpler carols the singer's task was quite straightforward: the words were set syllabically and forced, without much regard for natural stress into the metrical straitjacket of the music. Sometimes a short melisma is reserved for the end of a phrase or for a conventional word like "Good-day" or "Alleluia". Carols of the middle period, especially the sort that would be written in perfect time, show a slightly different treatment which may best be described as "metrical". The first five or six syllables are generally set to so many notes, but after that the syllables, again regardless of "just accent", are set each to a strong beat in the music; thus usually coincides with the beginning of a bar in the transcription. In a long phrase the later syllables may be spaced at intervals of two bars or more (e.g. 'Cum Virtus', No. 53). This use of words to underline the rhythmic vigour of the music is exactly what one would expect in the carol. Each syllable seems to administer, as it were, a little punch to the melodic line. Only in the later carols of the Ritson Manuscript is this principle departed from. There, after the syllabic beginning which remained characteristic, the increasingly florid melodies carry the syllables along with comparatively little regard for the rhythmic lift of the music, which is partly for this reason less emphatic. Change of syllable is introduced to mark a new phrase in the melody or a change in its direction. Late though these

carols are, there is little more attempt in them than in the earlier to draw out the inner meaning of the words. Only occasionally, as in the penitential carol 'To many a well', does the composer seem to be considering the text he is setting. Word-painting is virtually unknown in the 15th-century carol; "emotional commentary" was never even considered.

Greene (*op. cit.*) says that "the activity of some professional class, literate if not learned, is to be seen behind the English carol of the late middle ages"; this class, he suggests, should be identified with the mendicant friars who wrote and sang them in their "long struggle with the survivals of paganism". This important comment on the nature and purpose of the medieval carol has gone a long way to counter popular and sentimental notions. It may well be asked whether the music of the polyphonic carol has any bearing on the question. It must be emphasized (i) that the polyphonic carol is generally found in manuscripts which contain church music, and (ii) that it became increasingly isolated and cut off, if the manuscripts give a true picture, from the main stream of the carol tradition. This means that any conclusions that may be reached about the carols with music cannot legitimately be applied to the carols as a whole. Nevertheless the mere fact of this musical development may throw an interesting light on the nature of the carol in its earliest period.

What, then, can be said about the polyphonic carol? Who wrote it and who sang it? And on what occasions? It can be said at once that practically nothing is known about the composers of these carols; they are very rarely named, and when they are, the names convey nothing. With the exception of one doubtful attribution to John Dunstable, the important English composers of the century are not mentioned in the manuscripts. We should, however, be on our guard against supposing that the setting of carols was beneath the dignity of a fully fledged composer. There is little doubt what sort of singer the carols were written for — the professionals of important ecclesiastical establishments. The carols are emphatically not domestic music for amateurs. This does not mean that amateurs cannot now sing them with success, but merely that they were originally intended for the "gentlemen of the chapel" to perform on ceremonial occasions. The voices employed were nearly all baritones, tenors and countertenors. The last voice was in particular demand and will still be found most effective in performance. The verse in particular seems to be designed to enable countertenor and tenor to display their versatility. The possibility that the pieces were transposed must always be reckoned with, but the fact that experienced male altos

to-day find the upper parts within their compass suggests that our modern pitch may be used without danger of falsifying the original texture.

The provenance of the manuscripts is still to some extent an open question; nevertheless no good reason has yet been shown why the Selden and Windsor Manuscripts should not have belonged to St. George's Chapel at Windsor, a location hinted at in both cases by special hymns or stanzas of hymns honouring St. George. Failing the discovery of a larger manuscript from which it may have derived, the Trinity collection can never be assigned a definite home; it contains only the carols and, on the back, some offices in Latin. The Ritson Manuscript may be attributed fairly definitely to the west country, perhaps to the neighbourhood of Exeter. For present purposes it is enough to be able to say that nothing in the manuscripts themselves prevents their attribution to the largest royal, noble or ecclesiastical establishments in England. Each carol demands for its proper performance a choir of perhaps nine or ten adult male voices with especial strength in the middle register. Such a chapel as the fifth Earl of Northumberland had in Yorkshire would exactly meet this requirement: the establishment varied, but a typical entry in the Household Book refers to wages for 2 basses, 2 tenors and 6 counter-tenors. The other music in the Selden, Windsor and Ritson Manuscripts emphasizes the need for a large body of trained singers, though not all adult; the rubrics of the Sarum Processional, from which so many of the texts are taken, require that the pieces, even in their plainsong settings, shall be sung by such groups of singers as "tres clerici de superiori gradu" or "tres pueri" or "duo clerici de secunda forma".

These other compositions have a common character in the three principal manuscripts: they are largely processional music. It is this fact which provides the key to the third question — when and with what purpose were these polyphonic carols originally performed? Several factors combine to suggest that they too were written primarily for use in ecclesiastical procession. Mrs. C. K. Miller (*see* Bibl.) has neatly outlined them: (i) the presence in three manuscripts of other pieces from the processional repertory; (ii) the marking of certain carols with such headings as "in die nativitatis", "de sancto Thoma", "de innocentibus", (iii) the necessity of regarding the carol as a *conductus*, itself a processional form, in its general style, treatment of text, absence of *cantus firmus*, etc. We may add a fourth factor: the formal identity of the 15th-century carol and the processional hymn-with-repetenda.

The combination of these different observa-

tions lends great weight to a description of the polyphonic carols as "popular litanies for use in the ecclesiastical procession". The argument acquired its original impetus from recent literary research. It has been maintained, largely on etymological grounds, that the religious and didactic carol of the 14th and 15th centuries was adopted by the Church from popular usage as "an ornament of the processional rites of the Catholic Church".<sup>1</sup> If this is true, the original development of the polyphonic carol in the early 15th century as processional music is explained; it also means that the divergence previously noticed of the "musical" from the "literary" carol may be more apparent than real — may not now both forms be regarded as accurately reflecting "the aspirations of the congregation for whose benefit they were created"?

Here, however, an important distinction between the carols of the early and those of the late 15th century must be introduced. It is not difficult to regard the carols of the Trinity collection as reflecting "popular" aspiration; they speak a musical language which could be understood by everyone. But it is difficult to see the vastly more complicated carols in the Ritson Manuscript in this light. The natural conclusion is that a divergence did in fact take place; that the Trinity and to a much lesser extent the Selden and Windsor sources contain the only musical carols which can truly be described in Dr. Greene's useful phrase as "popular by destination". As the century wore on the music of the carol became more elaborate, more clerical — it became "musicians' music".

The time of year especially favoured by carol writers and composers was Christmas. Roughly three-quarters of the repertory honours the Virgin Mary or the festivals of Christmas week. The Ritson Manuscript is the only one to have actual rubrics and all those which are specific refer to feasts within the octave of Christmas. It is perhaps wrong to think of the headings as referring necessarily to different days in Christmas week; there may even be an intended distinction between *in die* and *de*, the latter meaning that the carol was intended for procession to a particular altar. We know, for instance, from the Sarum Customary that there were processions after evensong on Christmas Day and the three following days to the altars of St. Stephen, St. John, the Holy Innocents and St. Thomas; one direction reads:

When the first *Benedicamus* is finished, there shall be a procession to the altar of St. Stephen from the altar of St. Nicholas with all the deacons in silk copes, carrying lighted tapers and approaching through the middle of the choir. A responsory having been sung there and

<sup>1</sup> Margit Sahlin (*see* Bibl.) derives "carole", and therefore "carol", from *kyrie eleison*, through its corrupt forms of *kyriele*, *karielle*, *karole*, *karole*.

memorial made of St Stephen, they shall return into the choir singing another responsory (or antiphon) of Holy Mary, and there all the deacons shall wait until the prayer in her honour is finished. The *Benedicamus* shall be said by two deacons.

The conspicuous absence of 15th-century carols referring to other seasons of the church year, Holy Week for instance, suggests that the polyphonic carols were written especially for use in procession at Christmas time. But this does not at all mean, particularly in the late 15th century, that the carols were designed for a "plain man's worship".

In the Rutson Manuscript many carols are marked *ad plactum*. In the other manuscripts there are roughly the same proportion of moral, didactic, festive or political carols; they all might well be so marked. When were these carols performed? To begin with, there are still a few appropriate to ecclesiastical events. No. 118, for instance, with burden:

For all Christian souls pray we  
Requiem eternam dona eis, Domine,

may have been sung, not only as marked, *in fine nativitat*, but also when a procession went outside to escort a dead body to burial in the church.

But many carols are appropriate to secular ceremonies. This is not the place to attempt to show the dependence of late medieval music on ceremonies of all kinds. Let it only be said that the incredibly elaborate rituals and shows of aristocratic and municipal life were, outside the church, the chief stimulus to creative musicians, as they were to painters, architects and other craftsmen. The artist's purpose, and his reward, was to dignify or "worship" the highly formalized acts of courtesy in which the harsh realities of social life were obscured and its high aspirations expressed.

One particular occasion for an exchange of courtesies between a great man and his servants was New Year's Day. It was customary for the Chapel Royal, for instance, in early Tudor times to receive £13 : 6 : 8 on this day and for prominent members of it to give the king presents. A salutation from musicians at the chamber door was the rule in the Northumberland household: "to his Lordship vj Trompettes when they doo play at my Lords Chaumbre Dour the said Newe Yersday in the morninge XX.s". The household minstrels played not only at Northumberland's own door, but at the doors of other members of his family. The chapel may also have had this privilege in some households. The following Latin carol from the Windsor Manuscript is certainly the sort they might have sung:

Princeps serenissime  
Te laudamus carmine  
Anni donum, domine,  
Pro bono regimine  
Merens mirifice  
etc., etc.

Whether or not the ceremony mentioned was

an appropriate or the only appropriate one for this song can never be definitely established. But the aptness of the song to some sort of presentation to royalty cannot be doubted.

Medieval feasts were by no means the hearty convivial affairs of the popular imagination. The highest nobility, retainers on horseback, trumpeters, all took part in the "honourable service" which was the due of their royal or lordly host. It seems quite possible that the moralized Boar's Head carol, No. 79, may have been used on such a solemn occasion. The Windsor Manuscript contains, in the carol section, a highly sophisticated setting of the Goliardic song 'O potores exquisiti', it has passed so far unremarked that one of the carols is a companion piece to it, 'Comedentes convenite'. The text of this carol is obscure, but it seems to be an invocation to women-feasters to make themselves ready.

These are fairly obvious examples of banquet music. Other carols are appropriate to the entertainments or the "void" (a light refreshment of wine and spices) which habitually followed a formal banquet. Some regulations for the royal household in 1494 include the following:

As for the voide on 12th night and wassel. . . Item. the chapell to stand on one side of the hall, and when the steward cometh in at the hall door with the wassel, he must crye three tymes, *Wassel, wassel, wassel*; and then the chapell to answer with a good songe, and in like wise if it bee in the great chamber

There were doubtless "good songs" written especially for this ceremonial occasion. Other occasions of a similar kind may well have been served by such semi-dramatic carols as:

Nowell, nowell, nowell, nowell.  
Who is there that singeth so,  
Nowell, nowell, nowell?  
I am here Sire Christesmasse  
Wellcome, my Lord, Sire Christesmasse,  
Wellcome to us all, both more and less  
Com near, nowell

The third verse opens with the exhortation "Buvez bien par toute la compagnie". Earlier carols are susceptible of dramatic presentation, as for instance 'Goday, goday, my Lord, Sire Christesmasse, goday' and 'What tidings bringest thou messenger?'. Less easy to place in a precise social context is such a carol as 'Ivy is good and glad to see'; the poet praises ivy, and there is no mention of the traditional strife between ivy and holly, women and men. Although it is impossible to say for certain, it may be that this carol was part of the music for some courtly game bearing the same relationship to folk custom as, for instance, the elaborate May games of the early Tudor court.

There remain various carols of moral counsel — 'I pray you all with one thought' seems to have been especially popular — and a large group of "political" carols. The best-known of the latter is also the earliest, the Agincourt

carol. The popular idea that this song was sung by soldiers on the battlefield after the victory is hardly worth refuting. It is in all respects an elaborate and sophisticated example of responsorial music, rather more so than many other carols in the Trinity and Selden Manuscripts. If one ceremonial occasion rather than another would have provided an apt setting for the carol, it was the lavish civic reception given to Henry V on his return to London. This "royal entry" has often been described; it called forth all the glamorous and expensive "sights" the City could devise, including a chorus of beautiful virgins singing from a castle "Welcome Henry the Fyfte, Kyng of Englund and of Fraunce". It was common for the corporation to borrow skilled singers and players from the royal household or important churches in order to augment their "triumph", but this carol may well have been sung by the Chapel Royal in the king's procession. One hundred and thirty years later Edward VI was welcomed at the Little Conduit in Cheap with "Sing up Heart, sing up Heart, sing no more down". Other political carols for which similar settings may have been appropriate are, from the Windsor Manuscript, 'Anglia, tibi turbidas' and 'Enforce we us'; and from the Ritson Manuscript 'The Best Rede'.

It must, however, be strongly emphasized that any attempt at division of the polyphonic carols into sacred and secular, into those performed in church and those in the hall, is foredoomed to failure because based on the entirely false assumption that medieval people themselves felt this distinction. 'Enforce we us' could have been sung before the altar of St. George in a cathedral, and the carols of moral and political counsel would not be out of place in a solemn service; moreover, those "of his Lordships Chapel" who played "the Play of the Nativity uppon Cristynnes-Day in the mornings in my Lord's Chapel before his Lordship" could have used, say, 'What tidings bringest thou messenger?'.

The narrowest, but at the same time a highly significant way of describing the carol is as "processional music". In both its ecclesiastical and in its aristocratic milieu, in so far as they can be distinguished, the carol seems to have retained its association with bodily movement. To a much greater degree than is perhaps generally recognized, the procession is a key to medieval life. Recent studies have shown its importance as a motif for pictorial art and its importance in the development of the drama. It may not be too bold to say that when the carol ceased to be danced to it served for procession. On the many occasions when a procession was the nucleus of a civic, aristocratic or clerical ceremony, carols could have been sung. The substitution of a carol for a

"litany with faburden" is not a very far-reaching change.

The widest term that need be used is "ceremonial music"; the early carol, like so much other medieval music, is an agent in ceremony. Whatever its popular origins or the moral purpose of its adoption by the Church, the polyphonic carol, as it survives to-day, is a highly polished and sophisticated ornament of ceremonies ecclesiastical and aristocratic. One hesitates, in fact, to say that in its later stages it made more than a formal attempt to reflect or guide the aspirations of the common people. However that may be, the polyphonic carol, processional in character, ceremonial in purpose, was one of the most important musical "thoughts" of 15th-century England.

J. S. (II).

INTERNATIONAL FORMS. — After the middle ages the carol, in the later forms in which it is still familiar, came prominently to the fore at a time when Latin was ceasing to be a language universally understood. It thus overlapped in its early stages with the English carol discussed above. There was a perfectly natural development from the hymns and sequences, etc., of the church services. To St. Francis of Assisi is due the invention of the *praesepe* or cribs of Bethany to stimulate the humble Italian congregations to the acceptance of the doctrine of the Incarnation with more enthusiasm than was at that time being shown for the *Quicunque vult*. To him, too, in his 'Song of the Creatures', we owe the beginnings of the popular hymns and carols apart from church music, designed to appeal to the masses.

English carols have been classified by Rickert (*see* Bibl.) according to their subject-matter. The early ones are those of the Nativity and the Incarnation, together with a large group dealing with the Annunciation. Later we get the shepherd carols and the Epiphany group. Parallel with these there are the Christmastide festivity carols, the wassail and the boar's head group.

As to the music, it must be admitted that apart from one or two folksong carols there is not much to compare with the carols of the Continent, especially France, though some of it is very beautiful. There are some by William Byrd, Orlando Gibbons, Henry Lawes and other great musicians, but they are motets rather than carols. One of the most popular English carols, 'The First Nowell', is a portion only of a carol, and its frequent repetition is monotonous. Another, 'God rest you merry, gentlemen', existing in various forms, has a grand tune, which was used for political purposes in the 18th and 19th centuries, with different words. There is a West of England tune obviously based on the notes of a peal of bells.<sup>1</sup> Another fine air is that of 'Remember,

<sup>1</sup> See Chapell's 'Popular Music'.

O thou man' from Ravenscroft's 'Melismata' of 1611. The Coventry Carol of earlier date is an excerpt from a pageant of 1591 — printed with alterations to the rhythm in Bramley and Stainer. The very early carol, still sung on Christmas Day at Queen's College, Oxford, is that known as the Boar's Head Carol — 'The boar's head in hand bear I', 'Caput apri defero'. It was printed by Wynkyn de Worde in 1521. A later variant-tune given in Fyffe, 'The boar is dead', was sung before Prince Henry at St. John's College, Oxford, in 1607.

Of early English carols one of the most beautiful is a processional lullaby, 'Qui creavit coelum', sung by the nuns of St Mary's, Chester, with a varying lullaby refrain to each line. In the 14th and 15th centuries beautiful carols were being written, some of which are to be found in 'Early Bodleian Music' by Nicholson and Stainer. Of about the same date are some 'English Carols of the Fifteenth Century' from Trinity College, Cambridge, edited by J. A. Fuller-Maitland and W. S. Rockstro in 1891. There are many manuscripts in the B.M., easily accessible thanks to Hughes-Hughes's Catalogue, and some of these have in part been published. The Hill Manuscript in Balliol College Library, Oxford, contains a most interesting collection of carols probably entered from memory by Alderman Hill in his commonplace book in 1536. It throws much light on other manuscripts of the time containing carols. Some of the carols are of the early 15th century.

Of the Annunciation carols some are real gems, e.g. 'There is no rose of such virtue' and 'Tidings true then become new', with a 'Nowell' refrain.<sup>1</sup> There are many in the Hill Manuscript.

Epiphany carols too are often rather attractive, with the dramatic element of the visit of the Magi. The German 'Es fuhr drei Konige Gottes Hand' is a typical example. Lully set a Provençal carol on the subject to a spirited triumphal march air which is still sung in southern France.

It is easy to see how the "shepherd" motive inspired so many of the total number of extant carols in England and in other countries. One of the finest is 'Can I not sing but hoy', with the refrain beginning "Ut hoy", obviously based on the French "et hoye", or "et hye", of the time. It is given in full in Rickert and in Chambers and Sidgwick from the Hill Manuscript. In France 'Laissez paistre vos bestes pastoureaulx' was a favourite pastoral carol found as early as 1535 in 'La Fleur des noëls', more often sung in later times to the tune of 'Venez divin Messie'.

There is a large class of folksong carols based mainly on subjects drawn from mystery plays and pageants. Among these may be

mentioned the 'Cherry-Tree Carol', 'The Carnel and the Crane', 'Joseph was an old man', 'Dives and Lazarus', 'I saw three ships', 'The Holy Well', 'All under the leaves', 'To-morrow shall be my dancing day'. There are others in Cecil Sharp's collections, and much information is in the publications of the Folk Dance and Song Society.

Carols in England have suffered strange vicissitudes. They began as popular songs of great beauty, with a strong devotional flavour as a rule. The Reformation diverted the interest of the carol-singing public from the Virgin and Child motive, and the carol became rather a formal and sometimes dull hymn. The Puritans are blamed for discouraging carol singing, but their rule was too short to account for the decline, and the Restoration had no permanent effect on carols and carol singing, though carols in collections were reprinted.

From the time of the Restoration almost down to our own times carols were printed in collections issued as broadsides or sometimes as garlands. Hone in 1822 in 'Ancient Mysteries Described' gave a list of 89 which were then, if not in use, at any rate commonly known. From 1700 to 1850 the carol may be said to have been neglected as a rule, though Sandys stimulated the attention of a few. This attention had the effect of putting carols on the level of ordinary hymns, with performance in church as the crucial test. At the present time there are many so-called carols which are nothing more than uninspired hymns or second-rate partsongs or rhymed versions of Latin or German originals in which the sense has been sacrificed for the sake of the rhyme.

Perhaps the most beautiful of all carols are to be found in the "lullaby" or "cradle-song" group, and the palm must be given to those originally written in German, owing to the wealth of diminutives in that language. One of the most attractive is the 17th-century 'Schlaf, mein Kindelein', a translation of the early Latin 'Dormi fili', with its almost untranslatable refrain "Mille tibi laudes canimus, mille, mille millies". Many of these have been translated into English.

Some of the English ones which survive are excellent. One has its original tune set to rather hymn-like words by T. Pestel<sup>2</sup> (1584-1659). The words, which vary, are given in Rickert and also, in more modern form, in 'Carols' by W. J. Phillips. Another is that with the refrain "Lulla, la lulla, My sweet little baby, what meanest thou to cry?" from Byrd's 'Psalms, Sonnets and Songs' (1588).<sup>3</sup>

Probably the earliest Christmas carol is the Anglo-Norman 'Seignors, ore entendez a nus', translated by F. Douce<sup>4</sup>, of a festive nature.

<sup>1</sup> 'English Hymnal', No. 20.

<sup>2</sup> 'English Madrigal School', Vol. XIV, No. 32.

<sup>3</sup> Rickert, p. 132.

<sup>4</sup> See Fuller-Maitland & Rockstro.

Another early carol, 'Orientis partibus adventavit asinus', was sung in the 13th century at Sens and also at Beauvais. As in the case of so many early carols it is macaronic, *i.e.* in two languages. The tune is good and has been preserved in English hymnody<sup>1</sup> to the words 'Soldiers who are Christ's below', but the original rhythm has been destroyed. There are old though later carols in Norman French and in the Poitou dialect, as well as in the collection reprinted by Chardon, in which it is interesting to find religious carols ascribed to secular tunes. This in France, as elsewhere, was quite the rule.<sup>2</sup> In Belamy's 'Noels' the carols are directed to be sung to the latest gavotte or other stage music.

Many of the French *noels*<sup>3</sup> begin with the same words as those of the song to the tune of which they were sung, *e.g.* 'Pour bien chanter Noel' to the air 'Pour bien chanter d'amour' or 'N'aimeras-tu jamais mon âme' to the air 'N'aimerez-vous jamais, bergère', etc. Sometimes a secular tune after becoming a carol tune was again used for worldly purposes, *e.g.* the drinking-song in 'The Beggar's Opera', 'Fill ev'ry glass', was originally a French theatre tune turned into a carol. Sometimes, too, carols were diverted to other uses. A fine Christmas hymn by Andreas Hammerschmidt was sadly clipped and curtailed; what was 'Freueteuch ihr Christen alle' with its joyful refrain of hallelujahs is now found masquerading as 'Forty days and forty nights', a Lenten hymn.<sup>4</sup>

Of early carols in other countries there may be cited 'Resonet in laudibus', 'Singen wir mit Frohlichkeit', also found with the words 'Joseph, lieber Joseph mein' (1605).

Another almost universal carol in varying forms was 'Puer natus in Bethlechem', 'Ein Kind geboren zu Bethlechem'. There is also the early plainsong 'Dies est laetitiae' with its Dutch version 'Tis een dach van vrolichkeit' and German variants. Another fine plainsong is 'Ecce tandem sempiternus'.

One of the most popular was the macaronic carol 'In dulci jubilo', of early but not certain date, admirably translated by John Wedderburn in 1567.<sup>5</sup> The tune was murdered in Neale and Helmore to suit the jingle known as 'Good Christian men rejoice'.

A very early carol with late 13th-century words is 'Es kommt ein Schiff geladen', given by Woodward.<sup>6</sup> The tune is ascribed to 1608, but seems to be earlier.

One of the grandest of all carols is 'Quem pastores laudavere', of the early 15th century, intended to be sung line by line in church by four separate choirs of boys.

An interesting and unique volume, 'Piae cantiones', compiled by Theodoric Peter of Nijlandt and published in 1582, reprinted with notes and the original music by the Plainsong and Mediaeval Music Society (1910) under the editorship of the Rev. G. R. Woodward, contains over 70 hymns, of which over 20 are for Christmas. One of its tunes, perhaps the most beautiful in the set, a spring carol, 'Tempus adest floridum', was used by the Rev. J. M. Neale for the trivial 'Good King Wenceslas'.

In Germany the popular carol developed parallel with the Christmas chorale, of which 'Vom Himmel hoch' is a well-known example. In the 'Musae Sioniae' of Michael Praetorius (1611) there are many Christmas songs and motets, many of which have been anglicized and sung in Britain. There are in existence many collections of carols in German, in rather difficult dialects.

The early carols seem to have been for unison singing, but in the 16th and 17th centuries carols have a tendency to become motets. Mouton (*d.* 1522) wrote a motet 'Noe, noe psallite', on which a mass was written by Arcadelt. Du Caurroy, *maître de chapelle* to Charles IX, Henri III and Henri IV, left some famous *noels* in his 'Mélanges de la musique', published posthumously. After his time there is a dearth of composers whose works have come down to us, but there seems to have been no shortage in carol words. France is rich in the possession of many fine carols, several of which were written to be sung to the tune of 'O fili et filiae', but more of which were intended to be sung to secular airs. An almost universal favourite is the air (frequently used in England) to which 'Célébrons la Naissance' or the popular 'Chantons je vous en prie' is sung. There are many others, such as 'Guillot prends ton tambourin' and 'Faisons réjouissance', which were obviously dance tunes.

Burgundy was rich in the carols collected by Belamy and Fertiault, Provence in those of Saboly and Peyrol, while Auvergne was especially the home of the 17th-century carols of Natalis Cordat.

The airs of the French *noels* have formed the basis for a considerable amount of French organ music for use in the midnight mass at Christmas, and possibly for other seasons.

**CAROLAN, Turlough (or Terence)** (*b.* nr. Nobber, County Meath, 1670; *d.* nr. Kilronan, 25 Mar. 1738).

Irish harper and composer. He was one of the last of the harper-composers of Ireland and the only one whose compositions have survived in any number, as regards either the music or the appropriate verse. The "O'Carolan" form of his name is modern and lacks authority. He is often called "the last of the Irish bards" (a phrase derived from Goldsmith's essay on him), but this is erroneous. He was neither a bard nor the last of the class to which he belonged.<sup>1</sup>

Carolan was the son of John Carolan, who, according to local tradition, was a blacksmith. While he was still a child his parents migrated to the west of Ireland, where his father was employed at Ballyfarnon, County Roscommon, by MacDermott Roe, who conducted the business of an iron foundry. Mrs. MacDermott Roe took an interest in the boy and gave him a good education; but when he was about eighteen years old he caught smallpox, through which he became totally blind. His patroness accordingly took the course then usual in such cases. She placed him under a harper and maintained him for three years until he was a finished pupil. Thereupon she equipped him with a horse and provided him with a guide and with money, and at the age of twenty-one he set forth on his career as an itinerant harper.

His genius for making melody manifested itself early, and until his death nearly half a century later much of his time was spent in the various country houses throughout Ireland, where he stayed as an honoured guest, playing his own compositions and sometimes giving lessons on the harp. He was also a familiar

figure in Dublin, counting among his friends such celebrities as Dean Swift and Dr. Patrick Delany. When travelling to a particular mansion, he was accustomed to compose a melody in praise of the patron whom he was about to visit, after which he would devise verses to fit the tune. Arrived at his destination, he sang the finished song to his own harp accompaniment. His pieces are mostly of a lively, convivial character, and some of these are called "Planxties" — a term which seems to have been coined by himself; but he also composed the words and music of some moving laments. Many of his later tunes show the influence of the Italian composers whom he greatly admired — Corelli, Vivaldi and Geminiani.

Carolan married Mary Maguire, a Fermanagh lady of good family, with whom he settled down at Mohill, County Leitrim. She died in 1733 and there were seven children of the marriage — six daughters and one son. One of the daughters, Siobhán, married a British army officer named Captain Sudley, and her father composed a characteristic piece for the occasion, 'Planxty Sudley or Carolan's Dowry', later used by Moore for his song 'Oh! the sight entrancing'. The son, who was a ne'er-do-well, taught the harp in London and died in obscurity. Carolan survived his wife by five years, dying at the house of his patroness, Mrs. MacDermott Roe; and he is buried at Kilronan, close by.

Tunes by Carolan are found in many of the 18th-century collections of Irish music, in the volumes of Bunting and Petrie, and in extant Irish musical manuscripts. Three books were published consisting solely of his compositions. The first was issued c. 1721 (in Carolan's lifetime) by John and William Neale, of Christ Church Yard, Dublin; but the only known copy (in the National Library of Ireland) is defective. It consists of pp. 6-19 and contains 23 tunes. Thus pp. 1-5 (including the title-page) are missing, as well as an unascertained number of pages after p. 19. The second book was published by subscription in 1748 by Dennis O'Connor of Little Christ Church Yard. It contained 61 tunes, selected by Carolan's son, with a Preface probably written by Dr. Delany. Unfortunately not a single copy of this work is extant. The third, which is even now not scarce, is 'A Favourite Collection of the so much admired old Irish Tunes, the original and genuine compositions of Carolan, the celebrated Irish Bard', published c. 1780 by John Lee of Dame Street, Dublin. It contains 68 pieces, two of which are duplicated under different titles, giving a net total of 66 tunes.

Carolan's portrait was painted c. 1725-30 by a Dutch artist who, Petrie suggests, may have been Johan van der Hagen. It was purchased

<sup>1</sup> See *Folk Music: Irish*.

in 1828 by Myles John O'Reilly, who allowed two or three copies to be made of it, as well as an engraving which is now in the National Gallery of Ireland. The original portrait and one of the copies is at present (1950) owned by O'Reilly's great-grandson, Major Charles Leslie Munday, M.C.; and another copy is at Clonahis, the family seat of the O'Conor Don. In addition there is a bas-relief in St. Patrick's Cathedral, Dublin. A skull stated to be Carolan's (but probably not his) is in the National Museum, Dublin.

An edition of Carolan's poems by Dr. Tomás Ó Máille was published by the Irish Texts Society in 1916. His verse is that of a song-writer rather than of a poet and shows little of the genius of his melodies. A definitive edition of his music (220 tunes) has been prepared and awaits publication. D. O's.

**CAROLE.** See ESTAMPEE.

**CAROLI, Angelo Antonio** (b. Bologna, 13 June 1701; d. Bologna, 26 June 1778).

Italian organist and composer. He became a member of the Accademia Filarmonica, Bologna, on 15 Apr. 1728 and was six times *principe* of that Academy, in 1732, 1741, 1755, 1760, 1767 and 1776. After filling the post of *maestro di cappella* at several churches, he became G. A. Perti's successor at the Congregazione dell' Oratorio, 20 Apr. 1750. He had already acted as deputy for the aged Perti since 1741 and succeeded to his former post at San Petronio cathedral in 1767. At first he wrote operas and oratorios which apparently have all disappeared. Five masses *a 4* with orchestra, 2 cantatas and some secular songs are mentioned in Q.-L. as still in existence.

E. v. d. s., rev.

**CARON, Philippe** (or **Firmin**) (b. ?; d. ?).

Netherlands 15th-century composer. Joannes Tinctoris, who calls him Firmin, says he was a pupil of Binchois or Dufay. A chorister "P. Ph. Caron" is mentioned<sup>1</sup> as a member of the cathedral choir at Cambrai.<sup>2</sup> He may or may not have been the musician mentioned as "primus musicus" at the cathedral of Amiens in "1422" — a mistake for 1472. A 4-part Mass of his is in the Biblioteca Estense at Modena; another in the Sistine Chapel in Rome; those in Rome mentioned in Q.-L. are 'Acueille ma la belle', 'Jesus autem' and 'L'Homme armé'. 8 chansons are in the Bib. Nat. in Paris (MS 15, 123) and 2 for 3 voices at Dijon (517, formerly 295). Other MSS are at the Liceo Musicale, Bologna (cod. 109, 143, 148), Bib. Naz. Florence (XIX, 59 & 178), B.M., London (Roy. App. 57), Cappella Giulia, Rome (II, 27), Bib. Capit.,

Verona (cod. DCCLVII). Reprints of works by Caron, without Christian name, are to be found in D.T.Ö. ('Trionter Codices').

**CARON, Rose-Lucile** (born **Meuniez**) (b. Monerville, Seine-et-Oise, 17 Nov. 1857; d. Paris, 9 Apr. 1930).

French soprano singer. She was a pupil of the Paris Conservatoire from 1880, when she was already married, until 1884, when she obtained a second prize for singing and an *accessit* for opera. Her début took place in 1884 at the Théâtre de la Monnaie, Brussels, where she created the part of Bruneilde in Reyer's 'Sigurd'; she remained there till 1885, when (12 June) she appeared at the Paris Opéra, again in Reyer's work. She sang in Paris the principal parts in Halévy's 'La Juive', Weber's 'Freischütz', Saint-Saëns's 'Henry VIII' and Massenet's 'Cid', and created the soprano parts at Brussels in Godard's 'Jocelyn' (1888) and Reyer's 'Salammbô' (1890). In the latter year she went again to Paris, appearing in 'Sigurd', 'Lohengrin' (1891) and 'Salammbô' (1892). She sang the part of Sieglinde in the French performance of 'Die Walküre' (1893) and that of Desdemona in Verdi's 'Otello' (1894). Elisabeth in 'Tannhauser' and Donna Anna in 'Don Giovanni' were among her finest parts, and she was engaged in 1898 at the Opéra-Comique to appear in 'Fidelio', a part she had undertaken in Brussels. She also sang in Gluck's 'Iphigénie en Tauride' at the same theatre in 1900. In 1902 she became one of the professors of singing in the Paris Conservatoire, a post she resigned shortly before her death.

G. F.

**CAROSO, Fabrizio** (b. ? Sermoneta, ?; d. ?).

Italian 16th-17th-century dancing-master. He was the author of 'Il ballarino' (Venice, "appresso Francesco Ziletti", 1581), a valuable work upon dancing, dedicated to Bianca Cappello de' Medici, Grand Duchess of Tuscany. It gives instructions for performing the dances of the period, with music in lute tablature, and plates showing the attitudes of the dancers. It contains the author's portrait at the age of forty-six. Another publication, based upon the former, but so much revised and rewritten as to make it a new book, entitled 'Nobiltà di dame' (Venice, "presso il Muschio", 1600; reissued, 1605; modern edition by Chilesotti), has a dedication to the Duke and Duchess of Parma and Piacenza dated 1600. It contains the same portrait of the author altered so as to present him at the age of seventy-four. As late as 1630 a collection was published under the name of 'Raccolta di varij balli . . . nuouamente ritrouati

<sup>1</sup> According to Haberl, 'Vierteljahrsschrift', I, a Jean Caron is mentioned by Fétis and van der Straeten, I.

**Carpaccio.** See Gasco (vn Sonata on 'Vision of St. Ursula').

**CARPANI, Giuseppe (Antonio)** (b. Villabese, Como, 28 Jan. 1752; d. Vienna, 22 Jan. 1825).

Italian poet and writer on music. He studied law at Milan and Padua, and practised under the celebrated advocate Villata at Milan. While thus employed he wrote more than one comedy and translated several opera librettos for the Italian stage, among others 'Camilla', an Italian version of Marsollier's 'Camille' composed by Dalayrac (1791), and set anew by Paer (1799). In consequence of some violent articles against the French Revolution in the 'Gazzetta di Milano', of which he was editor from 1792 to 1796, he had to leave Milan when it was taken by the French. Until the peace of Campo Formio in 1797 he lived in Vienna; after that date he became censor and director of the stage at Venice, but a malady of the eyes drove him back to Vienna, where the emperor pensioned him till his death. He published a number of translations of French and German operas, and also wrote 'La passione di Gesù Cristo', which was set to music by Weigl and performed in 1804 in the palace of Prince Lobkowitz, and in 1821 by the Gesellschaft der Musikfreunde. He also translated 'The Creation' into Italian and wrote a sonnet on the celebrated performance of that work at which Haydn was present the year before his death. Carpani had the greatest esteem and affection for Haydn, which led to his publishing his well-known book on that master (Milan, 1812; second enlarged ed., Padua, 1823). 'Le Haydine' is a kind of aesthetical work and a eulogy of Haydn's compositions. It quickly found a French translator in Henri Beyle (Stendhal), who published it as his own, under the name of Bombet — 'Lettres écrites de Vienne', etc., by Louis Alexandre César Bombet (Paris, 1814). Carpani attacked this piracy in two spirited letters — 'Lettre due, dell' autore delle Haydine' (Vienna, 1815). Beyle was, nevertheless, audacious enough again to publish his work, this time under the alias of Stendhal, 'Vies de Haydn, Mozart, et Métastase', etc. (Paris, 1817). In spite of Carpani's protestations, the first of the two appeared in English as 'Lives of Haydn and Mozart' (Murray, 1817; Providence, 1820). Extracts of Carpani's original work, translated by D. Monde, appeared at Niort in 1836, and in a complete form in Paris, 1837, under the title 'Haydn, sa vie, ses ouvrages, et ses aventures', etc., par Joseph Carpani; traduction de Monde. Some clever but partial sketches of Rossini were published by Carpani in one volume as 'Le Rossiniane' (Padua, 1824). This also was pirated anony-

mously by Beyle (Paris), and published by Monde. Yet another book, 'Le Majeriane', is a reply to Andreas Majer's 'Della imitazione pittorica'. In 1809 Carpani accompanied the Archduke John on his expedition to Italy. After the return of peace he devoted himself to starting the 'Biblioteca Italiana'. He died at the smaller Liechtenstein Palace in Vienna.

**Carpenter, Edward.** See Boughton ('Midnight', chorus & orch. & 4 songs).

**CARPENTER, John Alden** (b. Park Ridge, Chicago, 28 Feb. 1876; d. Chicago, 26 Apr. 1951).

American composer. He began his musical studies under his mother's instruction and at the age of twelve took up more serious work under the supervision of Amy Fay, a pupil of Liszt and Tausig. He pursued his theoretical studies unaided until the age of sixteen, when he took some lessons with W. L. Seeboeck, and in 1893 he entered Harvard University, where for four years he took musical courses under John Knowles Paine.

In 1897 he graduated, and entered his father's business, with which he always maintained his connection. In 1895, while on a European visit, he studied for several months in Rome with Elgar, and on returning to America continued further theoretical work with Bernard Ziehn.

Carpenter took his M.A. at Harvard in 1922, and was made a Doctor of Music of Wisconsin University and also of Northwestern University; he was decorated by the French Legion of Honour in 1921 and was a member of the National Institute of Arts and Letters, receiving an award in 1947 for distinguished services to music.

Carpenter's first notable orchestral performance was in 1915 at Orchestra Hall in Chicago, when 'The Adventures in a Perambulator' met with huge success. This work together with a Concertino for pianoforte and orchestra and a concert version of his ballet 'Skyscrapers' had frequent performances throughout America and also in Paris.

Following the success of the ballet 'Krazy Kat' Diaghilev asked Carpenter to write a ballet expressing the bustle and racket of American life. 'Skyscrapers' was the result of this suggestion, and with Robert Edmond Jones that ballet was produced at the Metropolitan Opera House, New York, in 1926. There were many later performances of it in Germany.

Carpenter's pianoforte Quintet was commissioned for the Library of Congress Festival in 1935 by the Elizabeth Sprague Coolidge Foundation. The choral work 'Song of

Faith' was performed at the Washington Bicentennial in 1932. His last work was a symphonic suite, 'The Seven Ages', which was first performed by the New York Philharmonic Symphony in 1945.

P. G.-H

Carpenter's music, whether in large or small forms, orchestral, vocal or solo instrumental, is characterized by certain easily discernible traits, chief of which are a whimsical fancy, a delicate, even poetic humour and tender sentiment. His melodic invention is facile and his themes have fluency and grace. He wrote with an easymastery of form, and his orchestral works are filled with colour, but never garish. He was a composer who produced music with manifest enjoyment and whose quick impulses were governed by good taste.

## CATALOGUE OF WORKS

### BALLET

'Birthday of the Infanta' (after Oscar Wilde) (1919).  
'Krazy Kat' (1922).  
'Skyscrapers' (1926).

### CHORAL WORKS

'Song of Faith' for chorus & orch. (1931).  
'Song of Freedom', unison chorus & orch. or band (1941).

### ORCHESTRAL WORKS

'Adventures in a Perambulator', suite (1915).  
'Sea Drift' (1933).  
Symphony No. 1 (1940).  
Symphony No. 2 (1941).  
'Danse', suite (1942).  
'The Anxious Bugler' (1943).  
'The Seven Ages', symphonic suite (1945).

### SOLO AND ORCHESTRA

Concertino for pf. (1917).  
'Water Colours', Chinese song suite for mezzo-soprano & chamber orch. (1918).  
'Gitanjali' (Tagore), song suite for mezzo-soprano & chamber orch. (1932).  
Vn Concerto (1937).

### CHAMBER MUSIC

String Quartet (1928).  
Pf. Quintet (1934).

**CARPENTER, Nettie.** See STERN (L.).

**CARPENTRAS (II Carpentrasso).** See GENET.

**CARPI, Fiorenzo** (b. Milan, 19 Oct. 1918)

Italian conductor and composer. He studied at the Milan Conservatory under Pedrotti and Ghedini and became conductor at the Piccolo Teatro there. He has composed incidental music for many plays produced there, including works by Sophocles, Shakespeare, Calderón, Goldoni, Ibsen, Pirandello, A. Caro and others. His compositions further include an 'Inno' for orchestra, a 'Sonata notturna' for flute, violin and strings, a Sonata for flute and harp, a 'Concertino' for violin and pianoforte, etc. The Shakespeare productions for which he wrote music are

'Richard II' (Milan, 1948), 'The Tempest' (Florence, 1948), 'The Taming of the Shrew' (Milan, 1949), 'Julius Caesar' (Verona, 1949) and 'Richard III' (Milan, 1950).

G. M. G.

**CARPIO VALDÉS, Roberto** (b. Arequipa, 23 Feb. 1900).

Peruvian composer. He was educated at the Universidad de San Agustín. In 1935 he became a professor (pianoforte) at the Instituto de Música "Bach" in Lima, and since 1937 he has been a pianist at the Radio Nacional del Perú. In 1943 he was appointed secretary of the Lima National Conservatory, and in 1945 he resigned from the Instituto "Bach".

His compositions include the music for the film 'Petróleo del Perú' and many instrumental pieces and songs. His 'Trípico' for pianoforte won the Duncker Laval prize in 1945.

N. F.

**CARR, Benjamin** (b. London, 12 Sept. 1768; d. Philadelphia, 24 May 1831).

American (English-born) composer and music publisher. He was a pupil of Samuel Arnold and Charles Wesley, and made his début as a composer in London, at Sadler's Wells, on 16 Oct. 1792, with a pastoral piece called 'Philander and Silvia, or Love Crown'd at Last'.<sup>1</sup> The following year he emigrated to America, with his father Joseph (1772-1819) and his brother Thomas (1772-1849). They set up flourishing music shops at Baltimore, Philadelphia and New York, printing music popular in England as well as arrangements of pieces by Haydn, Mozart, Pleyel and other European composers, and of patriotic American airs. The Carr editions of 'The Star-Spangled Banner', 'Hail Columbia' and 'Yankee Doodle' were among the earliest, if not the very first ones. Benjamin Carr, besides, took an active and influential part in the musical life of the young republic, appearing at various times in the capacity of singer, actor, organist, pianist, arranger, concert manager and composer. He "composed" a 'Federal Overture' (1794), a medley which contained many popular tunes of the period, a great number of songs, a ballet, 'The Caledonian Frolic' (1794), arranged a number of successful English operas for the American stage ('The Spanish Barber', 'The Children in the Wood', 'The Deserter', etc.), wrote incidental music for 'Macbeth' (New York, 14 Jan. 1795) and other plays, and was the composer of one of the earliest original American operas, 'The Archers' (libretto by William Dunlap, on the William Tell story), first given in New York on 18 Apr. 1796. The

<sup>1</sup> This play is not mentioned in any of the dramatic and theatrical lists and catalogues, the fact and date of its production could however be established from the newspaper advertisement (which does not mention a composer), and Carr's claim to the music (in a MS list of his works) is thus substantiated.

score is lost, but three numbers have been discovered in various printed collections of the time.

In 1800 Benjamin Carr started to edit the 'Musical Journal for the Piano-forte in Two Sections, one of Vocal and one of Instrumental Music', which was published by his father at Baltimore, and in 1820 he founded the Musical Fund Society at Philadelphia.

**CARR, Howard** (b. Manchester, 26 Dec. 1880).

English conductor and composer. He was educated in London at St. Paul's School and the City and Guilds of London Technical College. At the age of nineteen he began his career as conductor of musical plays at various theatres in London and the provinces. In 1907 he started on a two years' tour, conducting light operas in Australia. In 1910 he became musical assistant at the Covent Garden Opera in London, where he increased his experience of the larger types of opera. This was followed by two tours with the Beecham Opéra-Comique Company and a series of light operas in London and provincial towns. He also conducted the Harrogate Municipal Orchestra for the seasons of 1922 and 1923, and founded the Orchestral Concerts for Children there as well as the Harrogate Choral Society.

In 1928 Carr paid a second visit to Australia, which proved more extensive than the first, for he settled there for a time on the staff of the Sydney Conservatory as professor of harmony and counterpoint, and also conducted the Philharmonic Society of Sydney. After ten years he returned to London and conducted 'An Elephant in Arcady' at the Kingsway Theatre in 1938. In 1939 he orchestrated and conducted 'Gregorian Springtime' at the Embassy Theatre. On the outbreak of the second world war that year he was entrusted with all the orchestrations and arrangements for the B.B.C. Theatre Orchestra, a kind of work for which his long experience of light orchestral music peculiarly fitted him and which continued for over ten years. An 'Ode to the Deity' (trans. from Gabriel Romanovich Derzhavin) for baritone, chorus and orchestra was performed in London on 13 Apr. 1950.

Howard Carr's numerous compositions, of the lighter kind, have met with wide success. A one-act operetta, 'Master Wayfarer', was frequently performed in London and his orchestral works, given at the Queen's Hall

Promenade Concerts, include 'The Jolly Roger', 'Three Heroes', 'The Jovial Huntsmen' and 'The Shrine in the Wood'. He was part-composer of 'The Lilac Domino' (Empire Theatre), 'Shanghai' (Drury Lane Theatre), 'The Girl for the Boy' (Duke of York's Theatre) and other productions. In 1948 he composed two light numbers for the film 'The Winslow Boy', based on Terence Rattigan's play.

H. G. C., adds,

**Carr, J. Comyns.** See O'Neill ('Lonely Queen', incid. m.). Sullivan ('Beauty Stone', lib.; 'King Arthur', incid. m.).

**CARR, John** (b. ?; d. London, ?).

English 17th-century music publisher. He was in business c. 1672–95 and issued many of the important musical treasures of his day. He was a friend, and in some degree a partner, of John Playford, his contemporary in music publishing, while his shop "near the Middle Temple Gate" must have been close to Playford's: this latter was "in the Inner Temple and near the Church door".

Among the works published or sold by Carr, either alone or in conjunction with Playford and others, are:

Matthew Locke's 'Melothesia or Certain General Rules

for Playing upon a Continued-Bass' (1673)

Francisco's 'Easie Lessons on the Guittar' (1677).

'Tripla Concordia' (1677)

Reggio's 'A Treatise to sing well any Song whatsoever'

(1677)

'Vinculum Societatis', 3 vols. (1687, 1688, 1691)

'Comes Amoris, or the Companion of Loves, Being a Choice Collection of the Newest Songs', 5 books

(1687–94)

'The Lawfulness and Expediency of Church Musick'

(a sermon preached at St. Bride's in 1693).

Thomas Salmon published through him his famous 'Essay to the Advancement of Musick by Casting away the Perplexity of Different Cliffs' (1672), a work which, attacked by Matthew Locke, John Playford and others, caused a small paper war. With Playford, Carr published Henry Purcell's 'Sonnata's of III. Parts' (1683).

F. K., rev. W. C. S.

**CARR, Richard** (b. London, ?; d. London, ?).

English 17th-century music publisher, son of the preceding. He was a musician in Charles II's royal band and, for a very short time, connected with Henry Playford as publisher—see imprint on 'Theater of Musick' (1685–86). John Playford the elder, in bidding farewell to the public in 'Choice Ayres', Book V (1684), says that he will now leave his labours to be taken up by two young men, "my own son and Mr. Carr's son who is one of His Majesty's Musick, and an ingenious person, whom you may rely upon".

F. K., rev. W. C. S.

**CARRA DE VAUX, Baron** (b. Bar-sur-Aube, Champagne, 3 Feb. 1867).

French orientalist and author. His grandfather was a cousin-german of Lamartine and his mother was closely related to Vincent

d'Indy. Educated at the École Polytechnique, Paris (promotion 1885-88), he began his literary career in 1891 and became professor of Arabic at the Institut Catholique de Paris. He is best known for his books on Islamic culture, notably 'Le Mahométisme: le génie sémitique et le génie aryen dans l'Islam' (Paris, 1897), 'Avicenne' (Paris, 1900) and 'Les Penseurs de l'Islam' (Paris, 1914-21), as well as his translations from the Arabic of the 'Kitāb al-tanbīh' by Al-Mas'ūdī as 'Le Livre de l'avertissement' (Paris, 1896) and the 'Mukhtasar al-ajā'ib' as 'L'Abrégé des merveilles' (Paris, 1898). In the realm of music we are indebted to him for his version of the 'Risālat al-Sharāfiya' by Saff al-Dīn 'Abd al-Mu'min as 'Le Traité des rapports musicaux' (Paris, 1891), one of the most important works of its kind, since it reveals the famous scale of the Arabic Systematist School of music theorists, which Sir Hubert Parry called "the most elaborate scale system in the world . . . the most perfect ever devised" ('The Evolution of the Art of Music', 1896, pp. 28-89). Carra de Vaux also devotes a chapter to music in his 'Penseurs de l'Islam' (Chap. iv). He was responsible for the final revision of Baron Rodolphe d'Erlanger's 'La Musique arabe' (Paris, 1930 *et seq.*). His contributions towards the early history of the hydraulis are of considerable moment, as is evident from his 'Notice sur deux manuscrits arabes' ('Journal Asiatique', Mar.-Apr. 1891), 'Les Mécaniques ou L'Élévateur de Héron d'Alexandrie' ('Journal Asiatique', 1894), 'Le Livre des appareils pneumatiques . . . par Philon de Byzance' ('Notices et Extraits des MSS. de la Bibl. Nat., Paris', XXXVIII, 1903), 'L'Invention de l'Hydraulis' ('Revue des Études Grecques', XXI, Paris, 1908). At the Congress of Arabian Music, Cairo, 1932, Baron Carra de Vaux was appointed President of the Commission of General Questions.

**CARREIRA, Antonio** (b. prob. Lisbon, c. 1525; d. ?).

Portuguese 16th-century organist and composer. He entered the royal chapel of John III as a choir-boy and there received his musical education. Thanks to his extraordinary gifts he advanced, becoming master of the chapel of King Sebastian and the Cardinal King Henry. Carreira probably met the Spanish

organists Francisco and Cipriano de Soto, who accompanied Princess Joan, the mother of King Sebastian, to the Portuguese capital. That Carreira was in touch with Spanish music is also proved by the fact that he wrote several variations on Spanish songs. He died some time between 15 July 1587 and 1597.

Music MS No. 242 belonging to the Coimbra University Library contains a considerable number of compositions for organ and other keyed instruments by Carreira, which show him to be a great master who stands comparison with Cabezón, Bermudo, Soto and other Spanish composers. His compositions show that he achieved the same high level of organ playing in Portugal as existed in Spain in his time. Three Fantasies for keyboard instruments have been edited by Santiago Kastner (Hilversum, 1951).

A son of Carreira, also christened Antonio, likewise became famous as musician. He died of the plague in 1599. A nephew, also called Antonio Carreira, became master of the chapel of the cathedral at Santiago de Compostela.

S. K.

**CARREÑO, (María) Teresa** (b. Caracas, 22 Dec. 1853; d. New York, 12 June 1917).

Venezuelan pianist, composer, conductor and singer. She was the granddaughter of the Venezuelan composer José Cayetano Carreño. Her father, Manuel Antonio Carreño, a politician and at one time Venezuelan Minister of Finance, was also a well-known musician, and she affirmed in later life that she was still teaching the essentials of piano-forte technique taught to her by her father when she was a small girl. He also awakened in his daughter a strong sense of self-criticism, to which she attributed much of her later success. When eight years old she was taken to New York, where she studied with Gottschalk. Four years later, having also studied in Paris with Mathias, and later with Anton Rubinstein, she launched out on the career that was to take her all over the world. She had particular success in Germany, where she lived and taught for over thirty years. In 1872 she married the violinist Émile Sauret, with whom she played sonatas. Her interest in string music prompted her to write a string Quartet in B minor, among other compositions. The marriage was dissolved, and in 1875 she married the baritone Giovanni Taglia-petra, and later spent two years in Venezuela with him, organizing and conducting an opera company in which she also appeared as a singer. However this marriage, too, came to grief, and she reappeared as a pianist in 1889, making a triumphant tour of Europe. In 1892 she married Eugen d'Albert, under whose influence her style changed completely. From

having been an impetuous, almost tempestuous player, she became a thoughtful and profound interpreter and one of the most sought-after professors in Berlin. In 1895 the d'Albert marriage came to an end, and in 1902 she married her second husband's brother, Arturo Tagliapietra. In 1938 her ashes were ceremoniously laid to rest in her native country.

PLAZA, JUAN B., 'Teresa Carreño' (Caracas, 1938)

**CARRILLO, Julián** (b. San Luis Potosí, 28 Jan. 1875).

Mexican composer of Indian parentage. He studied theory with Melesio Morales and the violin with Pedro Manzano. In 1899 he received a stipend from the government for study in Europe. He entered the Leipzig Conservatory, where he studied with Jadasohn. He appeared as a violinist at Leipzig at a concert conducted by Nikisch. In Germany he wrote two symphonies, two masses, four violin sonatas and other chamber music, as well as two operas, all in an academic style. At the same time he experimented with atonal writing; in this manner he composed a string Quartet in two versions, the second of which was the exact "crab" reversion of the original. As early as 1895 he wrote music in quarter-tones and formulated a theory which he named "Sonido 13", a designation symbolizing his exploration of sound beyond the twelve chromatic notes. He designed a special number notation, subdividing the octave into 96 intervals, which permitted him to notate not only quarter-tones, but eighth-tones and sixteenth-tones. Later he constructed instruments to reproduce these small divisions, although the accuracy of intonation perforce remained in doubt. He undertook to transcribe Bach's fugues and Beethoven's symphonies into quarter-tones by halving the octave, thus reducing it to the augmented fourth. His early experiments with fractional tones should establish Carrillo as a pioneer in this field. He wrote numerous works in this infra-chromatic technique, among them a 'Preludio a Cristóbal Colón' for soprano, violin, flute and guitar in quarter-tones, piccolo in eighth-tones and harp in sixteenth-tones; 'Ave Maria' for mixed voices in quarter-tones with instrumental accompaniment, and many other works. Carrillo's music was championed in the U.S.A. by Leopold Stokowski, who conducted his 'Concertino' at Philadelphia on 4 May 1927 and his 'Horizontes' at Pittsburgh on 30 Nov. 1951. Both works are written for solo instruments in fractional tones, with the orchestra in normal tuning.

Despite his unconventional theories, Carrillo's solid academic training enabled him to

occupy important teaching-posts in Mexico. In 1905-14 he was director of the National Conservatory in Mexico City; he also conducted concerts of the Conservatory orchestra. He published several manuals in the traditional system. In 1924-25 he published a monthly magazine, 'El Sonido 13', which appeared on the 13th of each month.

- 'Zulitl', 3 acts (1922).

### CHORAL WORKS

- \* 'Ave Maria' for mixed chorus in quarter-tones & mts (1922)
- \* 'Tepepán' for soprano & chorus in quarter-tones & harp in 16th-tones (1923).

### ORCHESTRAL WORKS

- Symphony No. 1 (1901).
- Symphony No. 2 (1905).
- Symphony No. 3 (1948).
- 'Impresiones de la Habana' (1938)
- 'Nocturnos' (1940)
- \* 3 Symphonies entitled 'Colombia' for full orch in quarter-, eighth- & sixteenth-tones (1925-26).
- \* 'Misterioso Hudson' (1927).

### SOLO INSTRUMENTS AND ORCHESTRA

- Triple Concerto for vn, flute, cello and orch (1918)
- \* 'Concertino' for vn, guitar, cello, piccolo & harp (orch. in normal tuning) (1926)
- \* 'Horizontes' for vn., cello & harp (1947)
- 'Concertino' for cello (1952)

### CHAMBER MUSIC

- String Sextet (1902)
- String Quartet in E♭ ma (1903)
- Quintet for 2 vns, viola, cello & pf. (1918).
- \* 'Hoja de album' for 6 mts. (1923)
- \* 'Fantasia Sonido 13' for vn., horn, guitar, piccolo, cello & harp (1925)
- 'Cuarteto atonal' No. 1 (1928).
- \* 3 String Quartets in quarter-tones (1928-30).
- String Quartet on a scale of 6 notes (1938).
- \* 'Preludio a Cristóbal Colón' for soprano & 5 mts. (1940).
- 'Cuarteto atonal' No. 2 (1946).
- 'Cuarteto atonal' No. 3 (1947).
- 'Cuarteto atonal' No. 4 (1948).

### ONE INSTRUMENT AND PIANOFORTE

- \* Sonata for cello (1930).
- \* Sonata for viola (1931)
- \* Sonata for vn. (1932).

### GUITAR MUSIC

- \* Sonata in quarter-tones (1925).

<sup>1</sup> Works marked \* are in the "Sonido 13" system of fractional tones.

**CARRODUS** (originally **Carruthers**), **John (Tiplady)** (b. Keighley, Yorks, 20 Jan. 1836; d. London, 13 July 1895).

English violinist of Scottish extraction. His father, a zealous amateur, violinist and leader of the local choral society, was his first teacher, and he made his initial public appearance in his 9th year (5 Feb. 1845) at a concert at the Mechanics Institute, Keighley, playing Bériot's '6th Air and Variations'.<sup>1</sup> At the age of twelve he was placed under the tuition of Molique, who had just arrived in London, and on 1 June 1849 young Carrodus made his first metropolitan appearance at a C. K. Salaman concert at Hanover Square Rooms. The following year he played second to Molique at the latter's chamber music concerts. He then accompanied his teacher to Stuttgart, where he became a member of the Duke of Württemberg's orchestra, of which Molique had been leader for nearly a quarter of a century. Under the care of this great violinist he remained until he was nearly eighteen, when he returned to London, and at the recommendation of Spohr was engaged for the first Bradford Musical Festival, at the opening of St. George's Hall, 31 Aug. 1865, where he was a soloist. There he came under the notice of Costa, who immediately engaged him for the Royal Italian Opera orchestra at Covent Garden, where he eventually became the leader. Meanwhile his fine performance as a soloist at the London Musical Society's concert on 23 Apr. 1863 assured his future. He took the post as leader in Ardit's orchestra at Her Majesty's Theatre, but when this was destroyed by fire in 1867 he went back to Costa. Under him and others he was engaged at almost all the great concerts and festivals — Philharmonic, Crystal Palace, Three Choirs, Handel, Worcester, Gloucester, Hereford and Leeds, the latter 1880–92 — and he was leader and soloist at the concerts of the Choral Union at Glasgow and that of Edinburgh from 1873. When the National Training School for Music, now the R.C.M., was opened in 1876 he became the first professor of the violin, a post which he held later at the T.C.M. After 1881 he undertook wider recital activities, and in 1890–1 he toured South Africa. He was warden of the College of Violinists and president of the London Orchestral Association and the provincial Amalgamated Musicians' Union. On 5 Feb. 1895 Carrodus celebrated the jubilee of his first public professional appearance by giving a concert at the Mechanics Hall, Keighley, in which four of his sons and his sister also took part. On this occasion he was presented with the freedom of the borough. He was at his desk at

Covent Garden the night before his death.

**CARROIS, Seigneur de.** See **RIPA**.

**Carroll, Lewis** (Charles Lutwidge Dodgson) See Addinsell ('Alice', incid. m. for 2 adapts.). Davies (H. W., 'Humpty Dumpty', chamber cantata) Fine (chorus from 'Alice in Wonderland') Gardiner (J., 'Through the Looking-Glass', operetta) Kelly ('Alice in Wonderland', orch. suite) Mackenzie ('Jabberwocky', recitation with pf.) O'Neill ('Alice in Lumberland', revue parody) Taylor (J. D., 'Through the Looking-Glass', orch. suite).

**CARROLL, Walter** (b. Manchester, 4 July 1869).

English musical educationist and composer. He studied pianoforte and composition with Dr. Henry Hiles (1889–93) and then entered the University of Manchester, where he graduated Mus.B. (1896) and Mus.D. (1900), having previously taken the Mus.B. degree at Durham. He was a professor of harmony and composition at the Royal (Manchester) College of Music (1893–1920) and lecturer and examiner in music to the University (1904–1920).

Carroll has specially concentrated on the musical education of young children, for whom he has written a very large number of elementary pianoforte pieces. His object in this has been to stimulate imagination by suggestions of natural scenery, using quotations from poetry and also pictures to carry further the implications of the music. In 1918 he was appointed Musical Adviser to the City of Manchester Education Committee, which appointment he held until 1934. During this period he did pioneer work in organizing the music in schools, lecturing on every aspect of elementary musical education and establishing municipal concerts for school children. A pamphlet, 'Music in Manchester Schools, 1918–1930', describes his achievement in detail.

H. G. C.

**CARRON, Arthur** (real name **Cox**) (b. Swindon, 12 Dec. 1900).

English tenor singer. He was educated at Swindon College and started his operatic career at the Old Vic. Theatre in London in 1929. He first became known under his original name of Arthur Cox, and his first principal part was that of Tannhauser. He sang at Sadler's Wells from the opening night until 1935 and during these years he also sang at several provincial festivals in England. He went to the U.S.A. in 1935 to do some operatic coaching with Florence Easton and after an audition at the Metropolitan Opera House he was engaged there for ten years from 1936. He sang under his new stage name in a large number of operas, including 'Otello', 'Tannhauser', 'Aida', 'Tosca', 'Pagliacci', 'Carmen', 'Lohengrin' and 'Die Walküre'. During this time he also made guest appear-

<sup>1</sup> Dr. Herbert Thompson claimed another début for him with the Bradford Old Choral Society in 1846, see **BRADFORD**.

ances with the Cincinnati, Chicago, Detroit and Philadelphia Opera Companies, and he made his début at Covent Garden in London in 'Il Trovatore' in 1899.

He sang at Porto Rico in 1940, at the Municipal Theatre of Rio de Janeiro in 1941 and at Cuba in 1942. From 1941 to 1943 he was engaged at the Colón Theatre in Buenos Aires, where he sang Bacchus in the first performance given in the western hemisphere of Strauss's 'Ariadne auf Naxos'.

Carron was engaged by the Municipal Theatre of Santiago in 1944 and sang in Mexico from 1945 to 1946 before returning to England in 1947 for another appearance at Covent Garden. His voice is capable of great power and intensity and is particularly suited to exacting dramatic parts.

M. K. W.

**CARROSSE DU SAINT-SACRAMENT, LE** (Opera). See BERNERS. BUSSER.

**CARSE, Adam** (b. Newcastle-on-Tyne, 19 May 1878).

English composer, teacher, collector and writer on musical instruments. He received his musical education chiefly at the R.A.M. in London, where he studied composition under Corder and held the Macfarren scholarship. He was made an associate in 1902. He was engaged chiefly in teaching, but in spite of this the list of his compositions is considerable. It includes a cantata, 'The Lay of the Brown Rosary', which was first performed at Queen's Hall, in Mar. 1902. But the greater part of his important work is orchestral. The following have received public performance: 'The Death of Tintagiles', after Maeterlinck, July 1902; Prelude to Byron's 'Manfred' (Philharmonic Society, Mar. 1904); Concert Overture in D major (London Symphony Orchestra, Dec. 1904); symphonic poem, 'In a Balcony' (Promenade Concert, 26 Aug. 1905); Symphony in C minor (Patrons' Fund Concert, 3 July 1906). A second Symphony, in G minor, played at the R.C.M. students' concert, 19 Nov. 1908, was revised and produced at the Newcastle Festival of 1909. Later works for orchestra include a set of variations produced at a concert of the R.C.M. Patrons' Fund (July 1913) and 'Two Sketches' for strings founded on a Northumbrian song and dance played at the Promenade Concerts (1924). Carse has also written songs and chamber music, and has made a speciality of easy pieces suitable for teaching purposes. Of more lasting importance than his compositions is Carse's research work in the history of musical instruments and the collection of old instruments made by him over a long period, now housed in London, in the Horniman Museum at Forest Hill. In connection with these studies he published the invaluable books, 'The Orchestra in the XVIIIth Century'

(Cambridge, 1940) and the large and very important 'The Orchestra from Beethoven to Berlioz' (Cambridge, 1948). A smaller, lavishly illustrated book, 'The Orchestra', was contributed by him to the 'World of Music' series (London, 1949). Carse has also done valuable historical work by editing a number of early symphonies

G. S. K. B., adds.

**CARSON, Nellie.** See ENGLISH SINGERS.

**CARTAN, Jean (Louis)** (b. Nancy, 1 Dec. 1906; d. Bligny, 26 Mar. 1932).

French composer. He studied harmony with Marcel Samuel Rousseau while still at school. At the age of eighteen he entered the Paris Conservatoire and studied composition with Paul Dukas, who conceived a high idea of his capabilities. His first compositions — a Sonatina for pianoforte and a setting of Psalm XXII for voice and pianoforte — date from 1925. They were followed in 1926 by settings of six poems by Tristan Klingsor and an Introduction and Allegro for wind instruments with pianoforte accompaniment, in 1927 by 'Trois Chants d'été', a first string Quartet, finely written in a classical form, and a first version of 'Hommage à Dante', a hymn between two chorales, nobly conceived and executed.

In 1928–29 Cartan published his settings of three poems by Villon, and then devoted his time and energy to his most important work, 'Pater', a cantata for solo voices, chorus and orchestra, in three parts. In 1930 came settings of two of Mallarmé's sonnets, a lively Sonatina for flute and clarinet (played at the I.S.C.M. festival at Oxford, 1931) and a second string Quartet, a work which shows a more mature and personal style. Unfortunately the illness which had threatened Cartan for so long left him no time to finish his last compositions, which included an overture to Claudel's 'L'Ours et la lune' and 'Hymne à la terre' for chorus and orchestra. But in his short life he wrote enough to show himself an exceptionally gifted artist, endowed with great qualities of mind and rare musical ability.

**CARTELLA.** See ADDENDA, Vol. IX, article SCORE.

**CARTER, Charles Thomas** (b. Dublin, ? c. 1735; d. London, 12 Oct. 1804).

Irish composer. He was, according to John O'Keefe's 'Recollections' (II, 37–38),

brought up in the choir of Christ Church Cathedral, Dublin, and was organist to Werburgh Church. Any music he had never seen before, placed before him, upside down, he played it off on the harpsichord.

Carter remained at St. Werburgh's Church from Dec. 1751 (?) to Sept. 1769; subsequently he travelled for some time in Italy, and he is stated to have gone to India, where

he was musical director of the theatre at Calcutta.<sup>1</sup> About 1772 he settled in London, made a name as a composer of songs for the public gardens and soon began to write for the stage also. The Rev. Henry Bate wrote for him "from no motive of literary variety, but in order to introduce to the world a young<sup>2</sup> musical composer, whose taste he conceived might do honour to his profession", the libretto of a comic opera, 'The Rival Candidates', which was successfully produced at Drury Lane Theatre on 1 Feb. 1775, kept the stage for ten years and also reached the U.S.A. This was followed by 'The Milesian' (1777) and 'The Fair American' (1782), at the same theatre. In 1783 Carter composed the epilogue song for Mrs. Cowley's comedy 'A Bold Stroke for a Husband', and in 1787 he was appointed musical director of the newly founded Royalty Theatre in Well-Glose Square (on the site of the old Goodman's Fields theatre), where he produced four musical pieces, 'The Birthday, or Arcadian Contest', 'True-Blue' (a new setting of Carey's 'Nancy'), 'The Constant Couple' and 'The Constant Maid, or Poll of Plympton' in 1787 and 1788. Subsequently Carter was for a time director of music at the Earl of Barrymore's private theatre at Wargrave; a pantomime, 'Blue Beard', and some songs introduced into Colman and Arnold's 'The Surrender of Calais' date from that period (1791). Carter's last work for the stage, the comic opera 'Just in Time', was produced at Covent Garden on 10 May 1792.

Carter also wrote some harpsichord music (12 'Familiar Sonatinas', Op. 6, and others) of which the variations on 'Carillons de Dunquerque' (c. 1785) appeared in a modern pianoforte edition in 1938. The first collection of his Vauxhall songs came out in 1773; it contains the well-known 'O Nanny wilt thou fly from me' (words from Percy's 'Reliques', 1765) which was very popular for many years, as were his "sea-fight and hunting" songs (such as 'Tally ho', 'Stand by your guns', 'Ye sportsmen give ear', etc.), which were singled out by his contemporaries for special praise. A final collection of 'Songs, Duos, Trios, Catches, Glee and Canons', Op. 27, was published in 1801.

The Thomas Carter who, according to the 'Gentleman's Magazine' (1800, p. 1117) died in London on 8 Nov. 1800 at the age of thirty-two, "a victim in early life to the fatal ravages of the liver complaint", was a singer and member of various musical societies, but not a composer so far as is known. Samson Carter,

an elder brother of Charles Thomas Carter, graduated Mus.D. at Dublin University in 1771; as a composer he is known by a single song, 'The Rhapsody' which appeared as a musical supplement to 'The Gentleman's and London Magazine' (Dublin), June 1772.

A. L.  
**CARTER, Elliott (Cook), jun.** (b. New York, 11 Dec. 1908).

American critic and composer. He studied music under Walter Piston, Holst at Harvard and with E. Burlingame Hill and A. T. Davison, also in the U.S.A. He received his M.A. degree from Harvard University in 1932. From 1932 to 1935 he studied with Nadia Boulanger in Paris. In 1936 he became musical director of the American Ballet Caravan. He was active about the same time as music critic, contributing articles to 'The Saturday Review of Literature', 'The New York Herald Tribune' and 'Modern Music'.

In 1940 he was appointed Director of the Music Department of St. John's College, Annapolis, where in addition to teaching music he directed the Glee Club, taught mathematics, Greek, physics and philosophy. In 1942 he obtained leave of absence to join the Office of War Information as music consultant.

His ballet 'Pocahontas' was first performed by the Ballet Caravan in New York. His Symphony No. 1 was played by the Rochester Symphony Orchestra at the Festival of American Music. The Harvard Glee Club presented 'The Defence of Corinth' and 'Tarantella' in New York and on tour. The Ballet Society staged 'The Minotaur', and 'Holiday Overture' was given at the Columbia University Festival. There have been frequent broadcasts of various chamber works over stations N.B.C., W.A.B.C. and W.N.Y.C. in New York. The incidental music for 'The Merchant of Venice' was written for the Mercury Theatre production. He has won several awards and prizes, including the Guggenheim Fellowship, the grant of the Society of Arts and Letters, the Juilliard Award and the American Composers Alliance and B.M.I. prizes.

Elliott Carter's work is essentially neo-classic in style and is a good example of how the American idiom can evolve within this structural type. The music is economical, linear, rhythmically intricate and syncopated, and he has a notable gift for achieving dramatic effects by unusual and yet simple technical devices. This is apparent both in his orchestral and in his choral scores. His music is remarkably free of mannerisms, either idiomatic or technical, but it has a distinct individuality in spite of its abstract nature.

## CATALOGUE OF WORKS

### BALLETS

- 'Pocahontas' (1939).
- 'The Minotaur' (1946).

<sup>1</sup> D.N.B., which however seems to confuse him with Thomas Carter (see p. 98).

<sup>2</sup> This can hardly apply to a man of forty, and makes one wonder whether the dates usually given for his birth and his entry into the service of St. Werburgh's are not perhaps rather too early.

## INCIDENTAL MUSIC

- \* *Philoctetes* ' by Sophocles (1933).
- \* *Mostellaria* ' by Plautus (1936).
- \* *The Merchant of Venice* ' by Shakespeare (1939).

## CHORAL WORKS

- \* *Tarantella* ' (Ovid) for men's voices & orch. (1936).
- \* *To Music* ' (Herrick) for unaccomp. chorus (1938).
- \* *Heart not so heavy as mine* ' (Emily Dickinson) for unaccomp. chorus (1939).
- \* *The Defence of Corinth* ' (Rabelais) for men's voices & pf. duet (1941).
- \* *The Harmony of Morning* ' (Mark van Doren) for women's voices & small orch. (1945).
- \* *Musicians wrestle everywhere* ' (Dickinson) for unaccomp. chorus (1945).
- \* *Let's be gay* ' (from 'The Beggar's Opera') for women's voices & 2 pls. (1938).
- \* *Emblems* ' (Allen Tate) for men's voices & pf. (1947).

## ORCHESTRAL WORKS

- Symphony No. 1* (1942).
- \* *Holiday Overture* ' (1944)
- \* *Prelude Fanfare and Polka* ' for chamber orch (1944).

## VOICE AND ORCHESTRA

- \* *Warble for Lilac Time* ' (Walt Whitman) for soprano & small orch. (1943).

## CHAMBER MUSIC

- Suite for 4 saxophones* (1942).
- Quintet for woodwind* (1948).
- 8 Etudes and a Fantasy for woodwind 4tet* (1950).
- 6 Pieces for kettledrums* (1950).
- String Quartet* (1951).

## ONE INSTRUMENT AND PIANOFORTE

- \* *Pastoral* ' for English horn (or viola or clar.) (1940).
- Cello Sonata* (1948).

## PIANOFORTE MUSIC

- Sonata* (1946).

## SONGS

- \* *Tell me where is fancy bred* ' (Shakespeare) with guitar (1939).
- 3 Songs (Robert Frost) (1943)
  1. *The Line Gang*
  2. *The Rose Family*
  3. *Dust of Snow*
- \* *The Voyage* ' (Hart Crane) (1943).

## VOCAL DUET

- \* *The Difference* ' (Mark van Doren) for soprano & bar (1944).

P. G.-H.

**CARTER, Henry.** See BUGLE.

**CARTER STRING TRIO:** *Mary Carter* (b. Redhill, 30 Apr. 1914), *Anatole Mines* (b. Cambridge, 21 July 1915), *Antonia Butler* (b. London, 1 June 1909).

British team of string players: violin, viola and violoncello. The three artists formed the trio in 1940 and have played all over Great Britain and on the Continent. They appeared twenty times at the National Gallery Concerts in London during the second world war and gave many other recitals for C.E.M.A. (now Arts Council) in the provinces. In 1946 they toured Czechoslovakia for the British Council and played in Prague, Brno, Bratislava and Plzeň, where they were enthusiastically received. They were engaged for the Edinburgh Festival both in 1947 and in 1948, and in 1949 they toured Germany for the Foreign Office, visiting Hamburg, Oldenburg, Dusseldorf and Berlin. Peggie Sampson (b. Edinburgh, 16

Feb. 1912), was the cellist until her departure for Canada in 1951.

Their repertory is extremely wide and includes works by composers such as Purcell, Matthew Locke and William Shield as well as Reger, Dohnányi, Gordon Jacob and the trios of Mozart and Beethoven. They are particularly admired for the delicacy of their chamber-music playing and the excellence of their team-work

M. K. W.

**CARTER, Thomas** (b. Dublin, May 1769; d. London, 8 Nov. 1800).

Irish composer. He was a chorister at Cloyne Cathedral. So great was his musical precocity that he was taken up by the Earl of Inchiquin, who sent him to Italy. Having finished his studies at Naples in 1788 he went to India, where he was musical director of the theatre at Calcutta. His health broke down and he went to London, where in 1793 he married a Miss Wells of Cookham, Berkshire. He composed many theatrical interludes and some trivial songs.

W. H. G. F.

**CARTHUSENSIS, Johannes.** See JEAN DE NAMUR.

**CARTIER, Jean Baptiste** (b. Avignon, 28 May 1765; d. Paris, 1841).

French violinist and composer. He was the son of a dancing-master, and his first teacher on the violin was an Abbé Walrauf. In 1783 he went to Paris and continued his studies under Viotti. His progress must have been rapid, for he very soon, on Viotti's recommendation, obtained the post of accompanist to Marie Antoinette, which he held up to the outbreak of the Revolution. From 1791 to 1821 he was in the orchestra of the Opéra as assistant leader and solo player. From 1804 he was a member of Napoleon's private band under Paisiello and he belonged to the royal band from 1815 till 1830.

Cartier was a good violinist, and it was his great merit to have revived the noble traditions of the old Italian school of violin playing by publishing new editions of works by Corelli, Tartini, Nardini and other great masters, which at that time were all but unknown in France. He thereby caused not only his own numerous pupils but all the young French violinists of his time to take up the study of these classical works for the violin. In his work 'L'Art du violon' (Paris, 1798 and 1801) he gives a comprehensive selection from the violin music of the best Italian, French and German masters, which is rightly regarded as a practical history of violin literature in the 17th and 18th centuries.

It is much to be regretted that a history of violin playing which Cartier wrote has never been made public. His compositions are of no importance. He published sonatas in the style of Lolli, studies, and duos for violins. Fétis also mentions 2 operas, 2 symphonies and

violin concertos, which have remained in manuscript. P. D.

BISL.—PINCHERLE, MARC, 'Les Violonistes, compositeurs et virtuoses' (Paris, 1922).

**Cartwright, William.** See Lawes (2, songs in plays & poems).

**CARULLI, Ferdinando** (b. Naples, 10 Feb. 1770; d. Paris, Feb. 1841).

Italian guitarist and composer. Though self-taught he attained a perfection of execution before unknown on the guitar, and on his arrival in Paris in 1808 created a furore. In the space of twelve years he published 300 compositions, including a 'Method' which passed through four editions. He was also the author of 'L'Harmone appliquée à la guitare' (Paris, 1825), a treatise on the art of accompanying, which was the first work of its kind. A selection of his guitar compositions (with biography, etc.) forms Vol. I of the 'Alte Meister der Gitarre', a series edited by E. Schwarz-Reiflingen.<sup>1</sup> M. C. C.

**CARULLI, Gustavo** (b. Leghorn, 20 June 1801; d. Boulogne-sur-mer, Oct. or Nov. 1876).

Italian singing-master and composer, son of the preceding. He is known for his didactic works, such as 'Solfèges' for one and two voices, singing methods and exercises, vocal quartets, etc. M. L. P.

**CARUSO, Enrico** (b. Naples, 25 Feb. 1873; d. Naples, 2 Aug. 1921).

Italian tenor singer. After studying singing from 1891 under Guglielmo Vergine, he made a modest début at the Teatro Bellini at Naples in 'Faust' in 1894. He gradually gained favour and established his position in Italy, when in 1899 he created at Milan the part of Loris in Giordano's 'Fedora'. He also created the tenor parts in Cilea's 'Adriana Lecouvreur', Franchetti's 'Germania' and other operas. Little was heard of him in London till 1902, when he sang with brilliant success at Monte Carlo with Melba in Puccini's 'Bohème'. He visited Covent Garden in the same year, appearing first (14 May) as the Duke in 'Rigoletto'. His success with the audience was unmistakable, but not every one in the theatre realized his possibilities. During the season Caruso earned more and more applause every time he was heard, but he did not at once cause a rush to the box office. An engagement in America kept him away from London in 1903, but he was back at Covent Garden the following year, and from that time dated his immense popularity. His Rodolfo in 'La Bohème' did more, perhaps, than any other part to establish his fame in London.

Caruso sang regularly at Covent Garden down to 1907. In 1908, however, he did not appear. As the result of his triumphs at the Metropolitan Opera-House, New York, he

had bound himself by an inclusive contract to Conried, and the Covent Garden Syndicate would not pay the terms demanded for his services.

In its combination of power and sweetness Caruso's voice has not been approached in our time. Moreover, the singer made the most of nature's abundant gifts. His breath control was so complete that he could deliver the longest phrase without any suggestion of being at the end of his resources. He was equally at home in the passion of Canio's lament in 'Pagliacci' and in the tranquil beauty of the duet in the dungeon at the end of 'Aida'.

Towards the end of the American season of 1908-9 Caruso suffered a temporary failure of voice and could not finish his engagement. On his return to Europe he had to undergo a throat operation, but after a period of rest his voice returned with undiminished powers. When in 1913, terms having been arranged, Caruso returned to Covent Garden, he had an enthusiastic welcome; but some at least of his listeners felt that his voice, though still splendid, was not quite what it had been. It was noticeable, too, what in his later seasons in New York the critics often pointed out, that he was in better voice on one night than another. There had been no such vocal inequalities in his early London seasons. However, he remained, till the night of his last appearance on the stage, the chief attraction at the Metropolitan. He died of pleurisy. S. H. P.

**CARUSO, Luigi** (b. Naples, 25 Sept. 1754; d. Perugia, 1822).

Italian composer. He studied with Nicola Sala at Naples and wrote his first opera, 'La lavandaia astuta', for Leghorn in 1775. This was followed by more than 50 others, many of which were fairly successful. According to the custom of the time he travelled from town to town, supervising and conducting the performances, and apparently never left Italy. In 1790 he settled at Perugia and was *maestro di cappella* at the cathedral there until the end of his life; but he continued to write operas, chiefly for Rome, until 1810 (e.g. 'Così si fa alle donne', at the Teatro Apollo). 'L'albergatrice vivace' (Venice, 1780) was the most successful of all his operas and was also heard in London on 16 Dec. 1783. He wrote an 'Amleto' for Florence in 1789 and a 'Lodoiska' for Rome in 1798; also several oratorios,

<sup>1</sup> See review in Z.M.W., June 1919, pp. 552-56.

and during the latter part of his life much music for the church. None of his works appears to have been published but many scores and single airs are extant in manuscript.

A. L.

**CARVAJAL, Armando** (*b.* Santiago de Chile, 7 June 1893).

Chilean violinist, conductor and composer. He studied at the Conservatorio Nacional de Música at Santiago. In 1912 he qualified as professor of the violin and in 1914 founded the Trio Penha and toured Chile extensively with it. From 1919 to 1927 he was professor of violin at the Conservatorio Nacional and from 1928 to 1943 director of the same institution, at the same time taking the chamber-music, opera and choral classes. From 1931 to 1938 he was the Dean of the Faculty of Fine Arts in the University of Chile.

Carvajal started conducting in 1921, and from 1924 he conducted the concerts of the Sociedad Bach, at the same time leading its chamber-music groups. During that time he made all the major oratorios and choral works from Bach to Mendelssohn known to the Chilean public. In 1925 he was appointed conductor of the Municipal Orchestra of Santiago, and in 1931 he conducted the symphony concerts given by the Universidad de Chile. From 1932 until the establishment of the Orquesta Sinfónica de Chile, of which he is the artistic director, he conducted the orchestra of the Asociación Nacional de Concierptos Sinfónicos.

In the realm of opera, besides the yearly round of the opera season, Carvajal produced, at the Conservatorio Nacional de Música, Mozart's 'Figaro', Debussy's 'L'Enfant prodigue', Humperdinck's 'Hänsel and Gretel', Pergolesi's 'La serva padrona' and other unusual or interesting works.

In 1930 the Chilean government sent him on an extensive tour to observe conditions in all parts of Europe, and in 1942 he toured South America, conducting most of the major symphony orchestras then in existence.

Carvajal has also composed choral and orchestral music and some pianoforte pieces.

N. F.

**CARVALHO, Eleazar de** (*b.* Iguatu, Ceara, Brazil, 28 June 1915).

Brazilian conductor and composer. After two years at marine schools he began eight years' service in the Brazilian National Naval Corps at the age of thirteen and played in its band. Meanwhile he studied at the National School of Music of the University of Brazil, graduating in 1934 and receiving a diploma as conductor and composer in 1940 after further study with Paulo Silva. On leaving the Navy he first played tuba and double bass for cabarets, casinos and circuses, and then won a competition for a post in the orchestra of the

Teatro Municipal in Rio de Janeiro. He also became a member of the Brazilian Symphony Orchestra, with which he made a successful début as conductor when the regular conductor fell ill. As a result he became its permanent associate conductor. He also conducted opera at the Teatro Municipal and directed Brazil's first Beethoven cycle at São Paulo in 1945.

Impressed by Carvalho's talent at the Berkshire Music Center of Lenox, Mass., in 1946, Kussevitky engaged him as his assistant for the Center of 1947 and as guest conductor of the Boston Symphony Orchestra, with which he made his North American début in 1947. During the next few years he became well known in the U.S.A., conducting several of the major orchestras. He continued his activities in Brazil and appeared in England in 1953. His conducting gives an impression of notable vitality and also of careful study of the scores. Among his compositions are two operas, 'The Discovery of Brazil' (1939) and 'Tiradentes', which won a \$4000 award in 1941, and 'The White Symphony'. He was elected to a permanent chair in the Brazilian National Academy of Music.

F. D. P.

**CARVALHO, João de Sousa** (*b.* Estremoz, 22 Feb. 1745; *d.* prob Borba, 1798).

Portuguese composer. Together with Camillo Cabral and the brothers Jeronymo Francisco and Braz Francisco de Lima he was sent to Naples by the Seminario Patriarcal. He left Lisbon on 2 June 1760 and entered the Naples Conservatorio di Sant' Onofrio on 15 Jan. 1761. Upon his return to Portugal he became teacher of counterpoint and the first master of the chapel of the Patriarchate of Lisbon. He joined the Brotherhood of Santa Cecilia at Lisbon on 22 Nov. 1767. In 1778 he succeeded Perez as music teacher to the royal family. About 1790 he retired to a country seat in his native province. Among his pupils were Leal Moreira (who succeeded him at the Seminario), Marcos Portugal, João José Baldi, Domingos Bomtempo and many others.

Carvalho composed a considerable number of Italian operas, the manuscripts of which are to be found at the Lisbon Ajuda Library. He was one of the few important composers of opera who emerged from Portugal in the 18th century. His works consist of some church music (a Benedictus, two masses, responsories, psalms with orchestra, several harpsichord sonatas, etc., dated 1770-83) and the following operas (all written to Italian words):

'L' amore industrioso' (1769); 'Eumene' (1773); 'Angelica' (1778); 'Perseo' (1779); 'Testotide Argonauta' (1780); 'Seleuco, re di Siria' (1781); 'Evarado III, re di Lituania' (1782); 'Penelope nella partenza da Sparta' (1782); 'Endimione' (1783); 'Tomim' (1783); 'Adraeto, re degli Argivi' (1784); 'Nettuno ed Egli' (1785); 'Alcione' (1787); 'Numa Pompilio II re de' Romani' (1789).

Two further works in the library, an opera 'Nitteti' and an oratorio 'Isacco', are catalogued under his name, but are, according to Ernesto Vieira, who examined the scores, by a different composer, one João de Sousa (c. 1740-1802) who also wrote the music for an allegorical piece called 'O monumento immortal' which was sung at Lisbon palace on 8 June 1775, on the occasion of the unveiling of a statue of King Joseph.

The score of a cantata 'Imeneo trionfante' (anonymous, but probably by him) passed from the Vasconcellos into the Wolffheim collection. One of his sonatas is included in 'Cravistas Portugueses', Vol. I.

S. K. & A. L.

**CARVALHO, Marie.** See MIOLAN.

**CARVER, Robert** (b. ? 1487; d. ?).

Scottish composer. He appears to have spent at least thirty-six years as a member of the community of Scone Abbey, in Perthshire, where no doubt his seven extant compositions were first sung. He died some time after 1546. Twice in the same source<sup>1</sup> it is implied that Carver entered the service of the church at the age of sixteen, but a discrepancy in the dates has previously given rise to confusion regarding the year of his birth. The first statement is found at the end of an imperfect 4-part Mass:

Missa domini Roberti Carbor facta anno domini 1546 anno actatus suae 59 necnon ingressus suae religionis anno 43.

The second statement, a mixture of liturgical and biographical information, occurs at the beginning of the 10-part Mass (dedication of the Church of St. Michael, Archangel):

Tenor dum sacrum de istius missae quam composuit Dominus Robertus Carbor Canonicus de Scona anno domini 1513 et actatus suae anno 22 necnon ingressus suae religionis anno 6 ad honorem Dei et Sancti Michaelis.

The date 1513, which the scribe has tried to alter, is clearly an error for 1509, which is in agreement with the other set of figures in placing the birth-date at 1487. One other reference to the composer deserves mention: it is a signature "Robertus Carwor" on a Preceptum of Seisin dated 4 Nov. 1544. This document was printed in the 'Liber Ecclesie de Scon' published by the Bannatyne Club in 1843. Although the name Carver is not particularly associated with Scotland, the name Arnat (for he is frequently called "Carbor alias Arnat") may be seen from time to time in the Register of the Great Seal of Scotland and in the Exchequer Rolls of Scotland. It is not, therefore, unlikely that the composer was connected with one branch or another of this family.

The Scone Manuscript is the only known source of Carver's music, and although his name is the only one which occurs (apart

from "duffa" = Dufay), the manuscript is by no means entirely made up of his own compositions. There are two motets by Fayrfax and a Mass by Dufay, all three works being unascrived. Carver's work consists of five masses and two motets, copied in the following order:

Mass for 4 voices (1546).

'O bone Jesu', for 19 voices

Mass ('L'homme armé') for 4 voices.

'Gaude flore virginali', for 5 voices.

Mass ('Dum sacrum mysterium') for 10 voices (1513,

sc. 1509).

Mass for 6 voices.

Mass for 5 voices.

The seven works are scattered throughout the manuscript, which is unfortunately not foliated, thus rendering impossible an accurate location for each item.

The Mass for 4 voices betrays, by its very form, something of the uneasiness which Catholics must have felt in the year 1546, which saw the slaying of "the carnal Cardinal" Beaton by the Reformers. Only the very beginning and ending of the Gloria and Credo are composed in polyphony, the omissions being far and away larger and more significant than those current in England at the same time. The Kyrie, which is imperfect owing to a missing folio, is troped, as is the Benedictus. The other shorter sections, Sanctus and Agnus Dei, are also complete.

The motet 'O bone Jesu'<sup>2</sup> deserves to be set by the side of Tallis's 40-part motet as an example of highly resourceful handling of a vast and rich texture. The impressive sonority of the nineteen voices is reserved not so much for effects of climax as for emphasizing certain parts of the text, notably the word "Jesu". Contrasting sections for eight, nine and ten voices alternate with sections involving the full choir, which consists of four trebles, two altos, ten tenors and three basses.

Carver's Mass on 'L'homme armé' is separated by only one work from an anonymous Mass on the same *cantus firmus*. This is actually by Dufay and may well have been copied into the volume by Carver himself in order to serve as a model for his own Mass, which exhibits fine and tasteful workmanship together with a distinctive feeling for strong melodic lines. The Kyrie is omitted here and in the other four Masses, according to the custom in Britain at that time.

In the motet for 5 voices, 'Gaude flore virginali', Carver produced as fine a work as those on the same text by Kellyk, Turges and Horwud, which are found in the Eton Manuscript. The Mass for 10 voices, based on the antiphon 'Dum sacrum mysterium', has been described as "solid rather than brilliant", a judgment which may also be reserved for the composition immediately fol-

<sup>2</sup> Edited by J. A. Fuller-Maitland and published in modern score by the Year Book Press (London, 1926).

<sup>1</sup> See SCONE MANUSCRIPT.

lowing, which is a 6-part Mass. Two folios containing part of the Gloria are unfortunately imperfect, the margins having been cut, resulting in the loss of some music. The last of Carver's masses, which is for 5 voices, is quite complete, though the opening of the Gloria has been misplaced by the binder and is found a few folios in advance of its correct position. A liturgical tenor by no means prevents the composer from giving free rein to a decorative and at times complex manner of writing.

These seven works to which the name of Robert Carver is appended give more than adequate proof of his powers as a contrapuntist and as one to whom the intricacies of mensural notation were as second nature. He was without doubt the greatest Scottish composer of the 16th century. D. W. S.

**CARY, Annie Louise** (b. Wayne, Maine, 22 Oct. 1842; d. Norwalk, Conn., 3 Apr. 1921).

American mezzo-contralto singer. From 1864 to 1866 she studied at Boston with J. Q. Wetherbee and Lyman Wheeler. In Aug. of the latter year she went to Milan and prepared for an operatic career with Giovanni Corsi. She made her operatic début in Copenhagen. For two seasons she sang in Scandinavian theatres, devoting her vacations to study with Pauline Viardot-Garcia at Baden-Baden. In the autumn of 1869 she sang in Brussels, then spent the winter in Paris studying with Maurice Strakosch and Bottesini. She now signed a contract with the brothers Maurice and Max Strakosch for three years, and in Aug. 1870 returned to the U.S.A. From that time till her retirement at the height of her popularity in 1882, she was one of the most admired of opera and concert contraltos, her services being always in demand at the opera houses of London, St. Petersburg and New York. The seasons of 1875-77 were spent in Russia. She married Charles Monson Raymond in the spring of 1882 and subsequently lived in retirement in New York. Her voice was a mezzo-contralto of wide range and great beauty. H. E. K.

**CARYLL, Ivan** (actually **Félix Tylén**) (b. Liège, 1861; d. New York, 28 Nov. 1921).

Belgian-American composer. He studied at the Conservatory of his native town, but later made his career in England and the U.S.A. as a composer of operettas and musical comedies. He first made his name with adaptations of two French works: Chabrier's 'L'Étoile', given as 'The Merry Monarch' in New York and Boston in 1890, and as 'The Lucky Star' in London, at the Savoy Theatre, on 7 Jan. 1899; and Audran's 'La Cigale' (translated by J. C. Burnand) at the Lyric Theatre, London, on 9 Oct. 1890 and in New York on 26 Oct. 1891. Both pieces contained music of Caryll's

own, and in fact little was left of Chabrier's in the former.

Of the operettas which were entirely Caryll's 'The Duchess of Dantzic', based on Sardou's 'Madame Sans-Gêne', was the most successful. It was produced at the Lyric Theatre in London on 17 Oct. 1903 and ran consecutively for 236 nights. Others received with much favour were 'The Earl and the Girl' (libretto by Seymour Hicks, Adelphi Theatre, 1903) and 'Our Miss Gibbs' (with Lionel Monckton, Gaiety Theatre, 1909). E. B.

**CASA, Girolamo and Nicolo dalla.** See DALLA CASA.

**CASADESUS.** French family of musicians.

(1) **Francis (François Louis) Casadesus** (b. Paris, 2 Dec. 1870; d. Paris, June 1954), conductor and composer. He gained a second prize in harmony (1895) at the Paris Conservatoire, was conductor of the Orchestre de Paris and founded and directed the American Conservatory at Fontainebleau (1918-22). In his compositions he strove to realize the union of popular tendencies with the conception of modern dramatic production in music. He composed operas, 'Cachapès' (3 acts, 1914), 'Le Moissonneur' (5 acts), 'Au beau jardin de France' (1 act), both 1918; an operetta, 'La Chanson de Paris', performed in Paris, Nov. 1924; and a Symphony.

(2) **Henri Gustave Casadesus** (b. Paris, 30 Sept. 1879; d. Paris, 31 May 1947), violist, brother of the preceding. He gained a first prize for viola (Conservatoire, 1899), and was the founder (1901) and director of the Société des Instruments anciens (Paris).

(3) **Marcel Louis Lucien Casadesus** (b. Paris, 30 Oct. 1882; d. ? , Oct. 1914), cellist, brother of the preceding. He gained a first prize for cello (Conservatoire, 1903), but was killed in the first world war.

(4) **Marius Robert Max Casadesus** (b. Paris, 24 Oct. 1892), violinist and composer, nephew of the preceding, son of (1). He gained a first prize for violin (Conservatoire, 1914). His works include quartets, etc.

(5) **Robert Marcel Casadesus** (b. Paris, 7 Apr. 1899), pianist, brother of the preceding. He gained first pianoforte prize (Conservatoire, 1913). An excellent performer, he became one of the most gifted of the younger generation of French pianists. He also made a great success as a teacher and is now head of the piano department at the American Conservatory, Fontainebleau. He has composed chamber music, twenty-four preludes and three 'Berceuses' for pianoforte, cadenzas for three concertos (Beethoven, Mozart) and has edited Cimarosa's sonatas, etc. M. L. P.

**CASAL CHAPÍ, Enrique** (b. Madrid, 15 Jan. 1909).

<sup>1</sup> Originally Casal y Chapí.

Spanish composer. He is a grandson of the well-known Spanish composer Ruperto Chapí. He began his musical education in 1921, and from that year until 1928 he studied more or less alone. In 1928 he became a pupil of Emilia Quintero, and he also entered the Madrid Conservatory to join the composition class led by Conrado del Campo. In 1936 he won the first prize for composition at that institution.

Casal Chapí taught pianoforte and harmony, and also conducted a quartet of male voices, which chiefly cultivated Castilian folk-song. In 1933 he was appointed musical director of the Teatro Escuela de Arte of Madrid, founded by Cipriano de Rivas Cherif. He kept this post until 1937 and during those years wrote much music for the stage. Not long after he went to live in France. Later he went to the Republic of San Domingo, where he conducted concerts, and he eventually settled in Uruguay. He lives at Montevideo, where he has a group of young composition pupils and conducts the choral society. He visits Buenos Aires once a fortnight to hold a private harmony class and is also artistic adviser to SODRE.

Casal Chapí's style of composition is based on Spanish tradition and is very strongly influenced by such ancient masters of counterpoint and polyphony as Morales and Victoria, but chiefly by Cabezón and Spanish instrumental music of the 16th to the 18th centuries, before the invasion of Italian music. He is one of the very few modern Spanish composers whose musical idiom is derived from Castile and the real ancient tradition, in contrast to many other modern Spanish composers, who underwent the influence of the Andalusian folk music and French impressionism, mixed with some kind of neo-classicism. He tries to establish links between the classical Spanish music of bygone days and that of the 20th century; in many respects he has succeeded, and the result is an output of some very fine and personal music.

His principal works are:

#### INCIDENTAL MUSIC

Music for Lope de Vega's 'La dama boba', 'El villano en su rincón', 'El caballero de Olmedo'.  
Music for Georg Kaiser's 'Gas'.

Also music for several plays by Calderón, Lorca, Casona and others.

#### ORCHESTRAL WORKS

'Fantasía sinfónica'  
Overture to 'Cuento de abril'.  
'La decantada vida y muerte del General Malbrú.'  
'Final para una sinfonía imaginaria' (Prelude).

#### VOICE AND ORCHESTRA

'Romance del mozo y de la calavera.'  
'Zamorana.'  
'Las aguas del Manzanares.'  
'Las mujeres pendencieras'.

#### PIANOFORTE MUSIC

Sonatina.  
'Capriccio quasi sonata.'  
'Preludio.'

S. K.

**CASALI, Giovanni Battista** (b. Rome, c. 1715; d. Rome, 6 July 1792).

Italian composer. He was *maestro di cappella* of St John Lateran, Rome, from 1759 till his death. An opera of his, 'Candaspe', was produced at Venice in 1740 and another, 'Antigona', at Turin in 1752. Seven others were produced between 1738 and 1755. Grétry was his pupil for two years in Rome, but Casali did not detect his talent and sent him back with a letter of introduction in which he described the great opera writer as "a nice fellow, but a thorough ass and ignoramus in music". Casali's works comprise 4 Masses, motets, Magnificats and many other pieces for the church as well as an oratorio, 'La benedizione di Giacobbe'. He wrote in a very pure style, though without much invention. A Mass and four other pieces are given by Luck (Sammlung, 1859), two motets in Schott's Répertoire, and an 'O quam suavis', a pretty melodious movement, by Novello, from Choron.

**CASALI, Lodovico** (b. Modena, ?; d. ?).

Italian 16th-17th-century organist and composer. He was organist at Scandiano, Modena, in 1618. He wrote masses, motets, etc., also 'Ampiotheatro degli honori, e maravigliosa grandezza della musica', manuscript codex, Ferrara, ? 16th century.

E. v. d. s.

**CASALS, Pau (Pablo)** (b. Vendrell, Tarragona, 29 Dec. 1876).

Spanish violoncellist, conductor, pianist and composer. His father was an organist and gave him some musical teaching at an early age. By the time he was twelve he had played nearly every orchestral instrument in some fashion. He next took up the cello seriously and had lessons from José García in Madrid, where he entered the Royal Conservatory and studied chamber music, playing under Monasterio. His own principles of cello playing he developed in the time following this when he was a professor of his instrument at the Conservatory of Barcelona and formed a quartet with Crickboom as first violin. He accepted an engagement as solo cellist at the Paris Opéra (1895) and in 1898 made his début as a virtuoso in Paris at the Lamoureux concerts and in London at the Crystal Palace. In 1901 he first visited America and thenceforward toured on both sides of the Atlantic, but the recognition of his unique powers came comparatively slowly, no doubt because his supreme instrumental command was always controlled by and directed towards musical interpretation. It was not until 1909, when he

<sup>1</sup> Pau is the Catalan form of Paul, Castilian Pablo.

played Bach's Suite in C for cello alone and took part in concerted works at a concert of the Classical Concert Society that Londoners recognized Casals as representative of a new era in the art. He made Bach's unaccompanied suites (formerly regarded as works of academic interest) take their true place in the repertory of living music, and in the sonatas of Beethoven and Brahms, the concertos of Haydn, Schumann, Dvořák, Lalo, Elgar and others, he has given to his hearers all over the world a new conception of the music, by the faithfulness with which he follows his ideal of perfection.

H. C. G.

In 1906 Casals married the Portuguese cellist Guilhermina Suggia and in 1914 the American singer Susan Metcalfe, whom he would often accompany on the pianoforte, thus revealing his versatility. More important, however, have been his activities as conductor; though lacking in this realm the supreme ease which is his as a cellist, he nevertheless displays many of those qualities which seem to be his as an "absolute" musician. Above all, from the Spanish standpoint, his foundation in 1919 and subsequent tireless direction of the Barcelona Orchestra was of the first significance. Perhaps for the first time the Catalan masses heard great classical music in any regular fullness; many of his players, moreover, were working-men of Barcelona. Casals was inspiring at once as an orchestral director and as a rehearsaler whom no detail of the hidden design of a score could escape. He has conducted this orchestra in Paris; in London, however, he made his conducting début in 1925 with the London Symphony Orchestra, while in 1927 he conducted in Vienna part of the Beethoven centenary festival. Another aspect of his musicianship has been his collaboration with Cortot and Thibaud in the great classical trios, while he and Thibaud have also recorded the Brahms double Concerto, with Cortot — a musician of kindred versatility — in charge of Casals's own orchestra.

Casals, however, conducted his orchestra for the last time in 1936, when the Spanish civil war interrupted the carefully built-up work that had been his pride, joy and expense for so many years. Since that time Casals has never returned to his native soil. Instead, he has given his energies to succouring the victims of that war, for instance in London, at a probably unique concert, where he played three concertos, those by Haydn, Dvořák and Elgar. About the same time he recorded the Dvořák Concerto in Prague: a rendering which seems destined to mark a standard for generations. He settled in the south of France, where he curtailed his musical career and devoted his fortune and powers to the assistance of refugees. Since the second world war he has reappeared in various countries, but has lately

refused, for political reasons, to play in Britain or America. At present (1954) he resides at Prades, just across the Spanish frontier in France, where he composes and teaches, and where he instituted a festival of classical chamber music in 1950.

The greatness of Casals is uncontested: he is perhaps the only string-player admired by all musicians without reservation. His aristocratic art, at once generously natural and richly subtle, has called to its aid a technique not only unusual in itself but remarkable for methodical innovations, many of which have become embodied in the general style of modern cello playing. He is a master of pure line, perfect phrasing and an immense variety of tones, moods and nuances.

Among Casals's compositions are a 'Miserere', a choral work, 'La visión de Fray Martín', and music for cello solo, cello and pianoforte, and violin and pianoforte.

**CASANOVA** (Opera). See LORTZING RÓZYCKI.

**CASANOVA, André** (b. Paris, 12 Oct. 1919).

French composer. In 1942 he gave up his studies for a doctorate in law in order to devote himself to learning composition under René Leibowitz. He has since written some works in the twelve-note technique which show an effective handling of the medium. His output is as yet not great, but his music is refined and carefully written. It includes a Symphony, Op. 4; a Trio for flute, horn and viola, Op. 3 (1946); 3 pianoforte pieces, Op. 1 (1944) and 3 songs to poems by Tristan Tzara, Op. 2 (1945).

**CASANOVA, Juan** (b. Santiago de Chile, 27 Dec. 1893).

Chilean conductor and composer. He studied in Chile at first, with Humberto Allende, and then in Paris with d'Indy. On his return to Chile he studied various orchestral instruments at the Santiago Conservatory. At the age of twenty he gave his first orchestral concert in the Teatro Municipal of Santiago and in 1920 he was appointed general director

of the Chilean regimental bands, a post which he still occupies (1954). In 1923 he toured Europe conducting the Berlin Philharmonic, the Carlsbad Symphony Orchestra and the Orchestre Lamoureux in Paris. In 1936, 1937 and 1940, and subsequently, he was a guest conductor at the Colón theatre in Buenos Aires and he has frequently conducted the Chilean Symphony Orchestra. In 1947 he conducted his opera 'Erase un rey . . .' at the Colón theatre. Besides producing a treatise on orchestral and band instrumentation, Casanova has composed many large-scale orchestral works

N. F.

**Casari, F.** See Mercadante ('Elisa e Claudio', opera).

**CASATI, Gasparo** (b. ? Venice, ?; d. Novara, 1643).

Italian composer. He was a Franciscan monk, *maestro di cappella* at Novara Cathedral from 1641. He was a prolific composer of masses, motets, 'Sacri concerti' (several reprints) and other church music, published between 1641 and 1644. He died in early youth.

E. v. d. s.

**CASATI, Girolamo** ("detto Filago") (b. ?, d. ?).

Italian 16th-17th-century composer. He was a Carmelite monk of Novara and organist at the Cathedral there in 1609. In 1625 he was organist at Romanengo near Cremona, about 1635 *maestro di cappella* at Como and in 1654 of the Carmelite church (del Carmine) at Pavia. He wrote several books of sacred songs for 2-5 voices and instrumental pieces for stringed instruments.

E. v. d. s.

**CASAUX, Juan Antonio Ruiz** (b. San Fernando, Cadiz, 23 Dec. 1889).

Spanish violoncellist. He was first trained for the Navy according to the traditions of his family. In 1904, owing to his success in a music competition at Cadiz in which Falla was a judge, he decided to devote himself to music. He entered the Royal Conservatory, Madrid, and became pupil of Mireski. In 1908, after winning the principal prizes, he gave concerts in Madrid and in 1909 he won a government scholarship with which he continued his studies in Paris under Hekking. Until 1914 he remained in France and undertook frequent tours throughout the country. On the declaration of war he settled down in Lisbon and gave many concerts with the Lisbon Symphony Orchestra under Pedro Blanch. As a result of his stay there he gave great impetus to cello playing in Portugal. In 1920 Casaux became senior professor at the Madrid Conservatory. For years previously he had struggled to expand the scope of classical music by his chamber-music recitals, in which he was associated with the most

prominent exponents, such as Fernández Arbós, Viana da Mota, Ricardo Viñes and Cubiles. It was he who played the solo part in the first performance in Spain of Richard Strauss's 'Don Quixote' under the direction of Arbós. Ten years later, in 1925, that composer himself conducted the work for Casaux in Madrid.

Ever since 1920 Casaux has devoted his great energies towards creating a school of cello playing, and his influence as a teacher extends all over Spain. He has been particularly prominent in extending the scope of chamber music. He founded the Hispano-Hungaro Trio with Iniesta and Ember as well as the Hispano Trio with Iniesta and Aroca. After the Spanish Civil War he joined the National Chamber Music Organization (Agrupación Nacional de Música de Cámara), which has played a very important part in making modern as well as classical chamber works known to a wide public in Spain. This team (Luis Antón, 1st violin; Enrique García, 2nd violin, Pedro Meroño, viola; Juan Casaux, cello; Aroca, pianoforte) has played complete cycles of Haydn, Mozart and Beethoven quartets not only in public recitals, but also in universities and schools throughout Spain, in addition to tours in foreign countries.

Casaux has also played an important part as curator of the instruments belonging to the Royal Collection. Ever since early youth he had interested himself in the "luther's" craft and devoted special study to the collection of Stradivari instruments in the royal palace. In 1923 he visited London at the behest of the royal family in order to have the two Stradivari cellos repaired by W. E. Hill & Sons. It was then that he became acquainted with the Stradivari viola which had originally belonged to the set of five instruments Stradivari had made in 1696. This set of instruments, all of them ornamented, were sold by Paolo Stradivari to Charles IV of Spain through the intermediary of Padre Brambilla in 1775. The viola and the tenor were among the booty carried off by the French from the royal palace in Madrid at the end of the Peninsular War. The tenor disappeared, but the viola was bought in 1819 in Paris and taken to England, where eventually it came into the possession of the firm of Hill. Since 1923 Casaux has been indefatigable in his efforts to secure the return of the instrument to Spain; it was his constant dream, and he persuaded Mr. W. E. Hill to give Spain the first offer of purchase. At last, in 1950, the Spanish government authorized the purchase of the viola, which Casaux was thus able to restore to Madrid. Now that the Stradivarius quartet of instruments is complete he and his colleagues of

the Agrupación, playing upon these priceless instruments, give regular chamber-music recitals from the royal palace, which are broadcast to the public.

W. S.

**CASAVOLA, Franco** (b. Modugno, Bari, 13 July 1892).

Italian composer. He studied at the Liceo Musicale of Bari under P. La Rotella and later in Rome with Respighi at the Conservatorio di Santa Cecilia. He became an adherent to futurism, on which he wrote a number of manifestoes, and composed several settings of futurist poetry and other works tending in that direction, such as 'La danza dell' elica' for flute, clarinet, violin, kettledrums, blasting-machine and wind machine, a ballet, 'Fantasia meccanica', etc. Later on, however, he changed his outlook and conformed to the more widespread taste of post-verist opera, in which he scored some notable successes. Among them may be mentioned 'Il gobbo del califfo', a one-act comic opera to a libretto by A. Rossato, produced at the Opera in Rome in 1929 and given in other Italian theatres as well as in Germany, 'Astuzie d' amore', one act (Bari, 1936), the pantomime 'L' alba di Don Giovanni' (Venice, 1932) and the ballet 'Il castello nel bosco' (Rome, 1931). A more recent opera based on Flaubert's 'Salammbô' had a less favourable reception at its production in Rome in 1948.

G. M. G.

**CASCATA.** See ORNAMENTS, D (b).

**CASCIOLINI, Claudio** (b. ?; d. Rome, ?).

Italian 17th-18th-century composer. He was choirmaster of the church San Lorenzo in Damaso, Rome, early in the 18th century and upheld the traditions of the *a cappella* Palestrina style. Of his numerous compositions left in manuscript a few have been published in modern times, some motets in Proske's 'Musica divina' and elsewhere, a Mass for 4 voices edited by Jansen, and 2 Requiems for 3 and 4 voices edited by Haberl.

J. R. M.

**CASE, John** (b. ?; d. ? 23 Jan. 1600).

English physician and musical theorist. He took the M.D. degree at Oxford, where he was sometime a Fellow of St. John's College, and published in 1586 'The Praise of Musicke' and in 1588 'Apologia musice tam vocalis tam instrumentalis et mixtae'. There is in the Cambridge University Library a broadside of 'A gratification unto Master John Case, for his learned booke, lately made in the praise of Musicke. VI voc.' "Cantus secundus" begins, "Let others prayse what seemes them best". The broadside is a printed voice-part of a poem by Thomas Watson bearing the words "set to music by William Byrd".

J. A. F.-M.

**CASEDA, Diego** (or **José**) (b. ?; d. Seville, 1723).

Spanish composer. He was for many years *maestro de capilla* at the cathedral of El Pilar at Saragossa, and subsequently at Seville. Eslava gives a specimen of his work.

J. B. T

**CASELLA, Alfredo** (b. Turin, 25 July 1883; d. Rome, 5 Mar 1947).

Italian pianist, conductor, teacher and composer. At the age of five he began to learn the pianoforte under his mother's guidance — his father, Carlo Casella, taught the cello at the Liceo Musicale of Turin — and when he was eleven he gave his first public concert before the Circolo degli Artisti of his native town. In 1896, on Martucci's advice, he went to Paris, where he entered the Conservatoire, joining the pianoforte class of Diémer and the harmony class of Leroux. Three years later he obtained the first pianoforte prize and in 1900 he came under Fauré's tuition as an *auditeur*. From 1906 to 1909 he took part as harpsichord player in the Casadesus family's Société des Instruments Anciens, and in 1908 his name appeared for the first time as that of both a composer and a conductor on the occasion of the performance of the first Symphony at Monte Carlo under his own direction. Between 1909 and 1914 his activities in Paris grew more and more assiduous: at the Salle Gaveau he conducted his second Symphony, his Suite in C major and his rhapsody 'Italia'; at the Trocadéro he gave a series of popular orchestral concerts; he assisted Cortot as pianoforte professor at the Conservatoire; and he acted as music critic to the daily 'L'Homme libre' founded by Clemenceau.

All Casella's compositions up to that time reveal an exceptional power of writing, together with a gift of assimilation that led him to a great variety of influences ranging as far as from Mahler to Debussy. Not until he had set a poem by Carducci, 'Notte di maggio', for voice and orchestra, which was performed at the Colonne concert of 29 Mar. 1914, did he settle down to a personal style and thus begin to produce work of outstanding interest.

Back in Italy at last, after nearly twenty years in Paris, Casella conducted at the Augusteo in Rome for the first time in Feb. 1915, and in the autumn of the same year he was appointed professor of the pianoforte at the Conservatorio di Santa Cecilia there (a post which was later converted into the leadership in a course of perfecting pianoforte studies). From that period to the time of his death, that is to say during more than thirty years, his activity never ceased, and it manifested itself in a great variety of ways. He founded the Società Nazionale di Musica (which became the Società Italiana di Musica

Moderna and was later converted into the *Corporazione delle Nuove Musiche* in collaboration with Gabriele d'Annunzio and Malipiero). He also originated the review 'Ars Nova', conducted symphony concerts in Italy and abroad, lectured all over the world and formed the *Trio Italiano* with Arturo Bonucci and Alberto Poltronieri. All this was mainly directed towards the spread of knowledge of the music of the vanguard, particularly that by young composers, and it is from this point of view that the work done by Casella in Italy must be evaluated. Its importance to Italian musical production during the last thirty years is beyond dispute.

As regards Casella's own creative work, although it showed a certain fundamental consistency from about 1914 onwards, there is evidence of strong influences to be found in it. The neo-classicism which flourished after 1920 in particular found favourable soil in Casella's somewhat frigid and speculative nature, so that he became one of its most conspicuous exponents. At the same time it is undeniable that his knowledge and his studies of the great Italian masters of the past released a cross-current against all these influences which gradually became more and more powerful; and he remained aloof from the Schoenbergian twelve-note system and, in general, from Central European expressionism, so much so that if he ever came under Schoenberg's spell at all, it was of the briefest duration and of the very slightest importance. In the last five years of his life his output, further influenced by a reawakening of religious sentiment, showed him more strongly linked to Italy's musical past than ever and inclined to exalt the expressive values of the human voice, both monodically (as in the 'Canti sacri') and polyphonically (as in the 'Missa solennis').

To complete the picture of Casella as a man his work and influence as a teacher must be mentioned. It exerted itself not only in the music schools, but also in his close and cordial relations with the young pianists and composers. To the study of the pianoforte he made noteworthy contributions by his editions of the classics of the instrument, to which he applied himself particularly during the long and painful illness from which he died. It was in fact during this last period that he added to that of Beethoven's sonatas, brought out between 1915 and 1919, most praiseworthy editions of Bach's 'Well-tempered Clavier', of the most important works of Chopin, of Mozart's sonatas and fantasies, as well as works by other great masters.

## CATALOGUE OF WORKS

### OPERAS

- Op.  
50. 'La donna serpente', *opera fiaba*, prologue & 3 acts (libretto by Cesare Lodovici, based on Gozzi's play) (1928-31), prod. Rome, Teatro Reale, 17 Mar. 1932.  
51. 'La favola d'Orfeo', chamber opera, 1 act (lib by Corrado Pavolini, after Poliziano) (1932), prod. Venice, Teatro Goldoni, 6 Nov. 1932.  
60. 'Il deserto tentato', mystery, 1 act (lib by Pavolini) (1936-37), prod. Florence, Teatro Comunale, 6 May 1937.

### BALLET

18. 'Le Couvent sur l'eau' (scen. by J. L. Vaudoyer) (1912-13).  
41. 'La gara' (scen. by Composer, based on a novel by Luigi Pirandello) (1924).  
64. 'La camera dei disegni', children's ballet with chamber orch. (scen. by A. A. Millos) (music from Op. 24 & 35 for pf. and some new pieces).  
66. 'La rosa del sogno' (scen. by Millos) (music by Paganini, from Op. 65 for orch. and some new pieces).

### CHORAL WORKS

- 'Canto e ballo sardo' for chorus & orch (1937).  
71. 'Missa solennis, "Pro pace"' for soprano, baritone, chorus, orch. & organ (1944).

### ORCHESTRAL WORKS

5. Symphony No. 1 (1905-6).  
12. Symphony No. 2 (1908-9).  
13. Suite, G ma. (1909-10).  
25 bis. 'Pagine di guerra' (arr. from Op. 25, see Pianoforte Duet) (1918).  
29. 'Elegia eroica alla memoria di un soldato morto in guerra' (1916).  
40 bis. Concerto for stgs. (arr. from Op. 40, see Chamber Music) (1927).  
— 'Marcia rustica' (1929).  
46 bis. Serenade for small orch. (arr. from Op. 40, see Chamber Music) (1930).  
55. 'Introduzione, aria e toccata' (1926).  
57. 'Introduzione, corale e marcia' for woodwind (1931-35).  
61. Concerto (1937).  
63. 'Sinfonia' (1939-40).  
65. 'Paganiniana', divertimento on music by Paganini (1942).  
69. Concerto for stgs., pf. & perc. (1943).

### SOLO INSTRUMENTS AND ORCHESTRA

- 30 bis. 'A notte alta' for pf. (arr. from Op. 30, see Pianoforte Solo) (1921).  
42. Partita for pf. (1924-25).  
43. 'Concerto romano' for organ (1926).  
44. 'Scarlattiana', divertimento on music by Scarlatti for pf. & 32 insts. (1926).  
48. Vn. Concerto, A mi. (1928).  
54. 'Notturmo e tarantella' for cello (arr. from 'Vocalizzi', see Songs) (1934).  
56. Concerto for vn., cello & pf. (1933).  
58. Cello Concerto (1934-35).

### VOICE AND ORCHESTRA

20. 'Notte di maggio' (Giosuè Carducci) (1919).  
26 bis. 'L'Adieu à la vie', 4 songs (Rabindranath Tagore, trans. André Gide) with 16 insts. (arr. from Op. 26, see Songs) (1926).

### CHAMBER MUSIC

27. 'Pupazzetti' for 9 insts. (1916) (see also Pianoforte Duet).  
40. Concerto for stg. quartet (1923-24).  
43. 'Sinfonia' for clar., trumpet & pf. (1932).  
— 'Siciliana e buresca' for vn., cello & pf. (1937).  
— 'Sonata a tre' for vn., cello & pf. (1938).

## PIANOFORTE SOLO

- Op.*  
 1. 'Pavana' (1901).  
 3. 'Variations sur une chaconne' (1903).  
 6. Toccata (1904).  
 9. Notturmo (1909).  
 10. 'Sarabande' (1908) (or for harp).  
 14. 'Berceuse triste' (1909).  
 15. 'Barcarola' (1910).  
 17. 'A la manière de . . .', Set I (1911)  
 17 bis. 'A la manière de . . .', Set II (with Ravel) (1913).  
 24. 'Nove pezzi' (1919)  
 1. In modo funebre.  
 2. In modo barbaro.  
 3. In modo elegiaco.  
 4. In modo burlesco.  
 5. In modo esotico.  
 6. In modo di nenia.  
 7. In modo di minuetto.  
 8. In modo di tango.  
 9. In modo rustico.  
 28. Sonatina (1916).  
 30. 'A notte alta' (1917) (see also Solo Instruments and Orchestra).  
 31. 'Deux Contrastes' (1916-18)  
 1. Grazioso. Hommage a Chopin.  
 2. Antigrazioso.  
 32. 'Inezie' (1918).  
 35. 'Undici pezzi infantili' (1920)  
 1. Preludio.  
 2. Valse diatonique.  
 3. Canone.  
 4. Bolero.  
 5. Omaggio a Clementi  
 6. Siciliana.  
 7. Giga.  
 8. Minuetto  
 9. Carillon.  
 10. Berceuse.  
 11. Galop finale  
 47. 'Due canzoni italiane' (1928)  
 52. 'Due ricerche sul nome di B. A. C. H.' (1932).  
 59. 'Sinfonia, arioso e toccata' (1936).  
 — 'Studio delle terze maggiori' (1942).  
 — 'Ricerche sul nome di G. M. Gatti' (1942).  
 70. 'Sei studi' (1944).

## PIANOFORTE DUET

25. 'Pagine di guerra' (1915) (see also *Orchestral Works*)  
 1. Nel Belgio: sfilata di artiglieria pesante tedesca.  
 2. In Francia: davanti alle rovine della cattedrale di Reims.  
 3. In Russia: carica di cavalleria cosacca.  
 4. In Alsazia: croci di legno.  
 27. 'Pupazzetti' (1916) (see also *Chamber Music*).

## HARP MUSIC

10. 'Sarabande' (1908) (or for pf.).  
 68. Sonata (1943).

## SONGS

2. 'Cinq Lyriques' (1902-3)  
 1. Larmes (Jean Richepin).  
 2. C'était un songe (J. Lorrain).  
 3. Temps de neige (A. L. Hettich).  
 4. Réverie (F. de Croisset).  
 5. Nuageries (Richepin).  
 7. 'La Cloche fêlée' (Charles Baudelaire) (1903).  
 9. 'Trois Lyriques' (1903)  
 1. Soleils couchants (Paul Verlaine).  
 2. Soir païen (Albert Samain).  
 3. En ramant (Richepin).  
 16. Sonnet (Pierre de Ronsard) (1910).  
 21. 'Due canti' (Giosuè Carducci) (1913)  
 1. Pianto antico.  
 2. Il bove.  
 22. 'Deux Chansons anciennes' (anon.) (1913)  
 1. Rêves d'or pour ton sommeil (17th cent.).  
 2. Flautolet (13th cent.).  
 26. 'L'Adieu à la vie', 4 songs (Rabindranath Tagore, trans. André Gide) (1915) (see also *Voice and Orchestra*).  
 36. 'Tre canzoni trecentesche' (1923)  
 1. Giovane bella luce del mio core (Cino da Pistoia).

*Op.*

2. Fuor della bella gaiba (anon.).  
 3. Amante sono, vaghuccia, di voi (anon.).  
 37. 'La sera fiesolana' (Gabriele d'Annunzio) (1923)  
 38. 'Quattro favole romanesche' (Trilussa) (1923)  
 1. Er coccodrillo.  
 2. La carità.  
 3. Er gatto e er cane.  
 4. L'elezione del presidente  
 39. 'Due liriche' (R. O. Naldi) (1923)  
 1. Voluttà.  
 2. La danza.  
 — 'Tre vocalizzi' (wordless) (1929)  
 — 'Ninna nanna corbellina', Genoese folksong (1934)  
 67. 'Tre canti sacri' for baritone & organ (1943)  
 1. Ecce odor filii mei.  
 2. Respite, Romine, famliam tuam  
 3. Ecce Deus Salvator meus.

## TRANSCRIPTIONS

- Albéniz, 'Rapsodia spagnola', *Op.* 70, for pf. & orch. (1922)  
 Bach, 'Chaconne' for orch. (1933).  
 Trio Sonata from 'Das musikalische Opfer' for vn, cello & pf. (1934).  
 Balakirev, 'Islamey' for orch. (1907).  
 Bassani, 'Sonata a tre' in A m, for 2 vns, cello & continuo (1941)  
 Beethoven, Symphonies for pf. duet (1924).  
 Bruneau, Preludes and Interludes from various operas for pf. (1897-1905).  
 Clementi, Symphonies in D m and C m, revised and reconstructed (1935).  
 Trio, *Op.* 28 No. 2, revised and elaborated (1936).  
 Mahler, Symphony No. 7 for pf. duet (1910).  
 Monteverdi, Psalm 'Laudatus sum' for solo voices, chorus & orch. (1941).  
 Rossini, Sonata for 2 vns, viola & bass (1943).  
 Sammartini (G. B.), Concerto for stg, G m, revised (1936).  
 Sonata in A m (1934)  
 Scarlatti (A.), Sonata No. 4, A m, for flute, stgs. & continuo (1940)  
 Scarlatti (D.), Sonata (Toccata, bourrée e giga) for small orch. (1933).  
 Two Sonatas for vn & harpsichord (1940).  
 Schubert, Two Marches for orch. (1912).  
 Torelli, Concerto grosso in G m. (1941).  
 Vivaldi, 8 Concertos, a Sonata, 3 Sacred Pieces and 2 Arias from 'Ercole sul Termodonte' revised and elaborated (1936-43).

## EDITIONS

Works by Bach, Beethoven, Chopin, Frescobaldi, Mozart and Mussorgsky.

## LITERARY WORKS

- 'L'evoluzione della musica attraverso la storia della cadenza perfetta' (1923, English trans. by Eric Blom).  
 'Igor Stravinsky', (1928, rev. & augmented, 1945).  
 '21+26' (1930).  
 'Il pianoforte' (1937).  
 'I segreti della giara. autobiografia' (1941).  
 'G. Seb. Bach' (1942).  
 'Beethoven intimo' (1944; publ. 1949).

G. M. G.

See also Clementi (eds. of).

**CASELLA, Pietro** (b. ?; d. ?).

Italian 13th-century composer. Nothing is known of his life except that he was a friend of Dante's, as appears from his mention in that poet's 'Divina commedia', that he wrote some madrigals, and that he must have died some time before 1300, since the poem deals with events antedating the spring of that year.

E. B.

**CASENTINI, Anna** (b. ?; d. ?).

Italian 18th-century soprano singer. She made her first appearance as a singer in the comic style at the Pantheon in London on 22

Mar 1791, as Dorinda in Guglielmi's 'La bella pescatrice', and sang there during that season and the next in comic operas by Paisiello and Cimarosa. In 1793 she married Borghi, a second violin at the Opera, and sang at the King's Theatre as "Signora Casentini Borghi" on 11 Jan. 1794 in Cimarosa's 'Matrimonio segreto'. Having added some other parts to this, she left that season, for although Lord Mount-Edgcombe describes her as "a pretty woman and genteel actress", her voice was too weak for that house. In 1797 she sang in Vienna in Borghi's (not her husband's) 'Semiramide', according to Pohl.

J. M., adds. A. L.

**CASIMIR.** See BAECKER. He published works for one and two harps under his Christian name of Casimir.

**CASIMIRI, Raffaele** (b. Gualdo Tadino, Umbria, 3 Nov. 1880; d. Rome, 15 Apr. 1943).

Italian musical scholar, choirmaster and composer. He studied under Bottazzo at Padua, where, in 1899, he was appointed master of the Schola Cantorum. In 1901 he became editor of the 'Rassegna Gregoriana', a quarterly magazine for the propagation of Solesmes chant. Between the years 1903 and 1908 he was choirmaster at Calvi, Teano, Capua and Perugia, and in 1909 he was invited by Pope Pius X to found the Schola Cantorum at Vercelli. At length, in Dec. 1911, he was promoted *maestro* of the Lateran Basilica in Rome.

Casimiri composed numerous masses and motets, organ voluntaries, sacred songs, etc., but from 1915 he devoted himself mainly to choir training and musical research. He was conductor of the Roman choirs that visited London in 1922. He discovered the date of appointment of Palestrina as chorister in the Roman church of Santa Maria Maggiore and identified that composer's masters as Rubino and Firmin Le Bel of Noyau, thus destroying the legend of Goudimel. His discovery of Palestrina's annotated scores proved a corrective for Haber's edition; he inaugurated (1924) 'Note d'archivio', a quarterly magazine for the publication of ancient scores, documents and historical jottings.

W. H. G. F.

**CASINI, Giovanni Maria** (b. Florence, c. 1670; d. Florence, c. 1715).

Italian organist and composer. He went to Rome early, but not before he had learnt the elements of counterpoint at Florence. In Rome he was successively the pupil of Matteo Simonelli and Bernardo Pasquini, under the last-named of whom he perfected himself as an organ player. He was ordained priest and the only post which he is known to have held was that of organist in the cathedral of Florence, from 1703 until 1714 or later.

Casini followed in the wake of Vicentino, Doni and Colonna in endeavouring to revive the three old Greek "genera" of progression: the diatonic, the chromatic and the enharmonic. Fétis, indeed, says that, as several enthusiastic pedants of his class had done before him, he constructed a harpsichord in which the notes represented by the black keys were subdivided, so as to obtain "just intonation". Baini<sup>1</sup> does not go so far as this, but only states him to have adopted the views of those who have wasted their labour and ingenuity. He describes a harpsichord which Casini had constructed in 1706 at the expense of Camillo Gonzaga, Count of Novellara. It had 4 octaves, each divided into 31 notes, and as the highest of the treble was in octaves to the lowest of the bass, it had 125 keys in all, black and white.

Casini's extant works consist of:

Oratorio 'Il viaggio di Tobia' (MS) and another dealing with the flight into Egypt (at Modena).

'Canzonette spirituali' (Florence, 1703).

'Johannis Mariae Casini, Majoris Ecclesiae Florentinae modulatoris, et sacerdotio praediti, modulorum quatuor vocibus: opus primum. Romae, apud Mascardum, 1706', motets for 4 voices in the *stile osservato*.

'Responsori per la Settimana Santa' for 4 voices, Op. 2 (Florence, C. Bindi, 1706).

'Pensieri' for organ, Op. 3 (Florence, 1714).

A motet of his is given by Proske in his 'Musica divina', II, No. 58, and two of the 'Pensieri' are in Vol. III of Torchi's 'L'arte musicale in Italia'.

E. H. P.

**CASPARINI, Adam Horacy** (b. Wrocław, 1676; d. Wrocław, 1745).

Polish organ builder. He was a member of a family of organ builders in Polish Silesia, resident at Wrocław. He built the famous organ at the celebrated Church of Jasna Góra (Częstochowa) in 1725. (The name of the family was known also as Caspari or Kasper.)

C. R. H.

**CASSA** (Ital.). Drum.

**CASSADÓ, Gaspar** (b. Barcelona, 30 Sept. 1897).

Spanish violoncellist and composer. His father was a well-known organist and composer at Barcelona and director of the municipal school, Las Mercedes. At the age of five he began his musical education and was so precocious that he was chosen as one of the members of a children's vocal ensemble. At seven years he began to learn the cello, and so rapid was his progress that after two years' study he gave his first public concert and aroused such enthusiasm that the municipality of Barcelona awarded him a scholarship to enable him to study abroad. In 1910 he became a pupil of Pau Casals in Paris and in addition began under the influence of Falla and Ravel to devote himself to composition. In 1914 at the outbreak of the war he returned

<sup>1</sup> 'Memorie storico-critiche . . . da Palestrina.'

to Barcelona, where he studied harmony and counterpoint with his father.

After the armistice in 1918 Cassadó embarked upon a series of European and South American tours, which rapidly established him as one of the foremost soloists on his instrument. Many of the conductors, such as Weingartner in Vienna, Pierné and Gaubert in Paris, Wood and Beecham in London and Furtwangler in Berlin, engaged him for concertos. His performances of the Brahms double Concerto with Huberman, Szigeti or Jelly d'Aranyi were remarkable. His tone is of mellow quality and his technique neat and sparkling, but what impresses his audience most are his qualities of subtle phrasing and classical balance of interpretation. This appeared most of all in his sonata recitals with masters of ensemble such as Harold Bauer, Arthur Rubinstein and Iturbi.

Some of Cassadó's most effective compositions are written for strings and pianoforte, such as his 'Sonata in Spanish Style', of which he gave the first performance with Giulietta von Mendelssohn for the first time at the Venice International Music Festival of 1925. Another effective work is his Sonata for violin and pianoforte.

Cassadó is now (1954) professor at the Accademia Musicale Chigiana at Siena and lives at Florence. w. s

**CASSADÓ, Joaquín** (b. Mataró nr. Barcelona, 30 Sept. 1867; d. Barcelona, 25 Mar. 1926).

Spanish composer, father of the preceding. He began his career as choirmaster at the church of Nuestra Señora de la Merced at Barcelona. He was afterwards organist of San José and conductor of a choral society, the Capilla Catalana, which he founded in 1890. Later he lived much in Paris. His compositions, besides a quantity of church music, include a 'Sinfonía dramática' (Nuremberg, 1903), symphonic poems, a comic opera, 'Lo monjo negro' and 'Hispania' a fantasy for pianoforte and orchestra (Paris, 1911). J. B. T.

**CASSANDRA** (Opera). See GNECCHI.

**CASSATION.** An 18th-century type of orchestral or chamber-music work in several movements similar to a divertimento or serenade, but normally (e.g. in Mozart's case) opening with a march instead of a sonata-form movement. The cassation is thus less highly organized, and the movements tend to be on a smaller scale. On the other hand they are apt to be numerous. The exact application of the term "cassation" to this kind of work is uncertain. In law the late-Latin term *cassationem* means the making null and void of a decision, and a Court of Cassation in France is the highest court of appeal which has the power to quash (*casser*, Lat. *quassare*) the decisions of other

courts. There is thus some connection with "cessation", and it has been thought that in music a cassation was a final piece played just before some function or other at which music was played came to an end. This does not, however, account for the opening march, which rather suggests the beginning of a ceremony.

Another derivation has been claimed from the German *Gasse*, a street or alley, cassations being originally open-air music, and from the Austrian (dog-Latin) dialect term *gassatim gehen*, to go courting girls in front of their houses at night, which would account for the serenade character of these suite-like compositions.

These rather far-fetched interpretations are unlikely to make convincing explanations; a better one, perhaps, is that the word implies simply a "broken" piece — i.e. broken into a number of movements. Mozart's two finished Cassations (not three, as is often stated), K. 63 and 99, have seven movements each. K. 62, in D major, is nothing more than a March, known only from a catalogue entry. Einstein thinks that it may have been intended as an opening and closing piece for the Serenade K. 100 in the same key. E. B.

**CASSEL, Guillaume** (b. Lyons, 1794; d. Brussels, 1836).

French singer. He studied first under Georges Jadin, and then at the Paris Conservatoire under Garat and Talma. He made his début at Amiens and sang at various places before he appeared at the Opéra-Comique in Paris, where he remained for three years. At the end of that time he quarrelled with Pixérécourt, the director, and withdrew to Belgium, where he settled for life. After a five years' engagement in Brussels he retired from the stage in 1832 and became a teacher. He trained many eminent pupils, including Julie Dorus-Gras. In 1833 he was appointed professor of singing at the Brussels Conservatoire.

M. C. C.

**CASSIODORUS, Magnus Aurelianus** (b. Schillazzo, Lucania, c. 485; d. Vivarese, Calabria, c. 580).

Roman writer and statesman. More fortunate than Boethius, he survived the reign of his master Theodoric and, after a life of public service, retired to a monastery which he had founded. There he devoted himself to study and added theological and encyclopaedic works to the historical writings of his earlier career. He and Boethius are in general the most important writers of the 6th century and in particular were responsible for transmitting knowledge of ancient musical theory to the middle ages. The musical portion of his 'Institutiones divinarum et humanarum litterarum' is included in M. Gerbert's 'Scriptores ecclesiastici de musica' (1784),

Vol. I. See also H. Abert, 'Zu Cassiodor' (S.I.M.G., 1902). R. P. W.-I.

See also Boethius.

**CASSIRER, Fritz** (b. Breslau, 29 Mar. 1871, d. Berlin, 26 Nov. 1926).

German conductor. He was twenty-three years of age when he turned to music. He studied first at Munich, then at the Stern Conservatory in Berlin. At the latter he studied composition with Pfitzner and orchestral conducting with Gustav Hollaender. He held posts as opera conductor successively at Lubeck, Posen, Saarbrücken and Elberfeld (1903-5). It was at this last place that he became particularly interested in the music of Delius, whose work had already been introduced there by his predecessor, Haym. He did much to introduce Delius's earlier works to German audiences.

Cassirer visited London and conducted the first performance there of 'Appalachia'. Subsequently he lived at Munich, where he occupied himself primarily with philosophical studies and literary work. H. C. C.

**CASSON, Thomas** (b. Liverpool, 19 Oct. 1842; d. London, Sept. 1910).

English organ builder. He was a banker by profession, but retired early to devote himself to organ building and to the development of his ideas on organ construction, about which he published a number of pamphlets. He advocated more adequate pedal organs, better stop control and a greater use of enclosed stops. Most organ builders were inclined to ignore his work as that of an amateur. The largest organ constructed on his system was that for the church of the Sacred Heart, Omagh, County Tyrone, Ireland. With J. Mewburn Leven he founded the Positive Organ Company in London, which built some hundreds of small pipe-organs from which, on a single manual, special melody-and-bass effects could be obtained. Sir Lewis Casson, the distinguished actor, is a son of Thomas Casson. E. B.

**CASTALDI, Bellerofonte** (b. Modena, 1581; d. ?).

Italian theorbo player, guitarist, poet and composer. He was also an adventurer, traveller, humorist and dilettante, living mainly at Modena and Venice. He died, probably at Modena, some time after 1649. His music includes 'Capricci a due stromenti, cioè tiorba e tiorbino' (Venice, 1621) and the notable collection of songs for 1-3 voices and continuo entitled 'Primo mazzetto de fiori . . .' (Venice, 1623), many of them set to his own words. The book contains a portrait of Castaldi, a long poem praising him by no less a poet than Fulvio Testi and an amusing address to the reader, in which, *inter alia*, he ridicules the "pedantry" of guitar alphabets (tablatures). In his own day he was better known as a wit and poet,

and other composers set his poems to music. A 170-page autobiography in manuscript at the Biblioteca Estense at Modena is full of anecdotes and adventures. N. F. (u).

Bibl.—VALDRIGHI, L. F., 'Annotazioni bibliografiche intorno Bellerofonte Castaldi' in 'Atti e memorie delle R. R. Deputazioni di Storia Patria per le Provincie dell' Emilia', V, 1 (Modena, 1880), pp. 89-115. Also printed separately as 'Musurgiana', No. 3 (Modena, 1880).

**CASTANETS** (Fr. *castagnettes*; Ger. *Kastagnetten*; Ital. *castagnette*, Spa. *castanetas*). A pair of percussion instruments of indefinite pitch. They are the small wooden "clappers" originating from Spain. In their national form, and whenever they are used for their original purpose of accompanying the dance, they consist of a pair of small shallow cup-shaped pieces of special wood<sup>1</sup> drilled with holes through which passes an ornamental cord, by which the dancer holds them in the fingers, one pair to each hand. In the orchestra they are similar so far as the two loose "cups" are concerned, but they are corded onto a central piece of wood elongated into a handle, by which the player holds them. Only one pair is used in the orchestra by one player. They are usually held and shaken by the right hand, and are struck against the palm of the left hand to accentuate a given rhythm.

Castanets are usually employed in music of a Spanish flavour, such as Glinka's 'Jota aragonesa', Chabrier's 'España' rhapsody or Massenet's 'Le Cid' ballet music. Wagner gives them a part in the Venusberg music in 'Tannhäuser', where they give a kind of "lead-in" to the climax of the abandoned excitement depicted. Their effect in the 'Dance of the Seven Veils' in Richard Strauss's 'Salome' is also one which helps to establish the atmosphere of the scene. They are by no means the easiest percussion instrument to control, for unless care is taken a player may get a rebound sound accidentally.

K. S. R.

**CASTEL, Louis Bertrand** (b. Montpellier, 11 Nov. 1688; d. Paris, 11 Jan. 1757).

French theorist and writer on musical subjects. He studied mathematics at Toulouse and later (1720) in Paris. He became a Jesuit, but was greatly interested in scientific research and was struck by some passages in Newton's 'Optics', remarking on the ratio similarities between the breadth of the seven colour-bands in the spectrum and the seven string-lengths, which, when in vibration, produce the individual notes of the major scale. He thereupon busied himself, first in theory but later in practice, with the construction of a "Clavecin oculaire", the colour scale of which corresponded with that of the diatonic scale and was calculated to appeal to the eye as the other does to the ear. He spent much

<sup>1</sup> Usually chestnut—hence the name.

time and money on this project and was one of the earliest to investigate the scientific relationship between colour and sound. Most subsequent attempts to construct "colour organs" have been based on a different principle (the simple ratio equivalencies between the vibration frequencies of the notes of the musical scale on the one hand and those of the component colours in the colour-octave on the other). Below is a list of Castel's writings: 'Nouvelles Expériences d'optique et d'acoustique' ('Mémoires de Trévoux', 1735); a description of the "clavecin oculaire" which was translated into German (Hamburg, 1739). An English derivative also appeared under the title 'Explanation of the Ocular Harpsichord' (London, 1757).

'Lettres d'un académicien de Bordeaux sur le fond de la musique' (Paris, 1734).

'Remarques sur la lettre de M. Rameau' ('Mémoires de Trévoux', 1736).

Castel was acquainted with Rameau and is supposed to have assisted him with his writings on musical theory. J. M. (11).

**CASTELLAIN, Charles.** See CHASTELLAIN.

**CASTELLAN, Jeanne (Anais)** (b. Beaujeu, Rhône, 26 Oct. 1819; d. ?).

French soprano singer. She received instruction in singing from Bordogni and Nourrit at the Paris Conservatoire and gained first prizes in singing and *opéra-comique* in 1836. She went on the operatic stage in Italy and sang with success at Turin, Milan and Florence (where in 1840 she married Enrico Giampetro, a singer), also in Vienna, etc. She first appeared in England on 13 May 1844, at a Philharmonic concert in London, with such success that she was re-engaged at a subsequent concert on 10 June and at other concerts. On 1 Apr. 1845 she first appeared at Her Majesty's Theatre as Lucia, with fair success, and remained there during that and the two next seasons, and was Isabella in 'Robert le Diable' (4 May 1847) with Jenny Lind. From 1848 to 1852, except 1849, when she was at the Paris Opéra, where she was the original Bertha in 'Le Prophète', she sang each season at Covent Garden, where she proved herself a pre-eminently useful singer in many parts of different character. Her last new parts were Glicera in 'Sappho' (Gounod), Cunegunda in 'Faust' and Amazili in 'Jessonda' (both Spohr). She last appeared at the Birmingham Festival of 1858. A. G.

**Castelli, Ignaz Franz.** See Hiles (H., 'War in the Household', lib.). Huguenots (Meyerbeer, trans.). Schubert ('Verschworenen', lib.; 1 part song, 1 song). Weber (12, romance for 'Diana von Poitiers', 2 songs). Weigl (2, 2 lib.).

**Castelli, Ottaviano.** See Colonna (P., 'Proserpina rapita', lib.).

**CASTELLO, Dario** (b. ?; d. ?).

Italian 16th-17th-century composer. He was *maestro* of instrumental music at St. Mark's,

Venice, in 1629 and wrote two books of sonatas "in the modern style" for organ or spinet (harpsichord) with violin, violetta, trombone, bassoon and trumpets; also for voices and instruments. They were published at Venice in 1621-44, both in score and parts. He also published 'Sonate concertate a 4, due parti' in 1626-27. E. v. d. s.

**CASTELNUOVO-TEDESCO, Mario** (b. Florence, 3 Apr. 1895).

Italian composer. He came of a Jewish family and studied with Pizzetti, who, although anxious to let his pupil's own individuality develop itself freely, influenced him in a slight degree. At the age of fifteen the student composed a piece for pianoforte, 'Cielo di settembre', which revealed considerable originality and promise, and in 1913 a more mature work for the same instrument appeared under the title of 'Questo fu il carro della morte'. A year later followed a song, 'Ninna-nanna', two French songs and two madrigals that showed not only great skill in choral writing, but the gift of interpreting the spirit of old poetry by modern means. Still more interesting in this respect are the two song-cycles written in 1915, 'Stelle cadenti' and 'Coplas', on old folk poetry, Italian and Spanish respectively. In 1916 Castelnuevo-Tedesco issued another choral work, the 'Two Greek Songs' for male voices, and to the same year belong the two songs from Tagore and a pianoforte piece, 'Il raggio verde', which now forms part of a cycle of sea pieces with two other works dating from 1919, 'Alge' and 'I naviganti'. The year 1917 saw the production of the songs, 'Il libro di Dolcina', and in 1919 the three 'Canti all' aria aperta' for violin and pianoforte were written.

A work of considerable importance was finished in 1920: the setting for voice and orchestra of three of the 'Fioretti' by St. Francis of Assisi. In the course of the same year Castelnuevo began his operatic setting of Machiavelli's comedy, 'La mandragola'.

During the years 1921-24 no work of large dimensions appeared; the fact is doubtless attributable to the composer's continued occupation with his opera, which was produced at Venice, at the Teatro La Fenice, on 4 May 1926. Among the smaller works of that period, however, may be mentioned 'Cipressi' (1921), 'Vitalba e biancospino' (1922), 'Alt-Wien', a Viennese Rhapsody (1923) and 'Epigrafe' (1923) for pianoforte; 'Capitan Fracassa' and 'Ritmi' (1921) for violin and pianoforte; and an important series of all the songs from Shakespeare's dramatic works, set to the original English words, which appeared between 1922 and 1924.

In his instrumental pieces Castelnuevo-Tedesco combines a strongly personal and

highly refined manner of handling his means of expression with a poetry of feeling that shrinks from superficial realism. In his vocal music he refrains from merely throwing into relief the imagery of the poetry he chooses and endeavours instead to express its essence by a definite atmosphere and a continuous musical movement. In the important song-cycles, 'Stelle cadenti' and 'Coplas', for instance, where the temptation to interpret the popular feeling of the verses by means of real or imitated old Italian and Spanish folk idioms must have been strong, Castelnuovo-Tedesco chose the more difficult and more subtle way of creating equivalent impressions by modern and entirely personal means. Instead of merely illustrating the words, the music comments on them, either lyrically, philosophically or with gentle irony. The Shakespeare songs are models of purely musical and yet singularly apt settings, and the Italian composer's treatment of English prosody is irreproachable, both here and in the 'Three Sonnets from the Portuguese' (Elizabeth Barrett Browning) published in 1928.

In 1931 Castelnuovo-Tedesco had his second opera, 'Bacco in Toscana', produced at Milan, and in the same year he began a second series of Shakespearean music, consisting this time of overtures to the plays and beginning with a fully scored prelude to 'The Taming of the Shrew'. This was produced by Vittorio Gui at Florence in 1931. The overture to 'Twelfth Night' followed in 1935, played under the same conductor, and in the same year Massimo Freccia conducted that to 'The Merchant of Venice' at Turin, while Bernardino Molinari produced the 'Julius Caesar' overture at the Augusteo in Rome about the same time. Toscanini, to whom 'The Merchant of Venice' overture is dedicated, conducted the first performance of the fifth work of the series, that on 'The Winter's Tale' in Vienna in Feb. 1938. The cycle was destined to be further continued by the composer. Other works of importance are the Hebrew Rhapsody, 'The Dances of King David', produced at the I.S.C.M. Festival at Frankfurt o/M. in 1927, and the second violin Concerto, entitled 'The Prophets', in three movements characterizing Isaiah, Jeremiah and Elijah, first performed by Jascha Heifetz at a New York Philharmonic Concert on 23 Apr. 1933, under Toscanini.

In 1939 Castelnuovo-Tedesco was forced to leave Italy by the racial laws promulgated by Mussolini. He emigrated to the U.S.A., settling at first at Larchmont, N.Y., and later at Beverly Hills, California, where he still lives. He became an American citizen and, among other things, took up the composition of music for films, including 'And Then There Were None', directed by René Clair. He

also took part, with other composers, in the collective work 'Genesis' dating from 1947

## CATALOGUE OF WORKS

### OPERAS

- 'La mandragola' (lib. by the Composer, based on Machiavelli's comedy), prod. Venice, Teatro La Fenice, 4 May 1926
- 'Bacco in Toscana', scenic cantata (lib. by the Composer, based on a poem by Francesco Redi), prod. Milan, Teatro alla Scala, 8 May 1931.
- 'Aucassin et Nicolette' (1938).

### FILM MUSIC

- 'And Then There Were None' (René Clair).

### BALLETS

- 'The Octoroon Ball' (1947).
- 'Naomi and Ruth' (1947).

### CHORAL WORKS

- 2 Madrigals for unaccomp. mixed chorus (1915).
- 2 Greek Songs for unaccomp. male chorus (1916).
- 'Lecho Dodi' for unaccomp. chorus (1939).
- Sacred Synagogue Service (1943).
- 'Genesis' for orch., voices & narrator (1947, with other composers).

### ORCHESTRAL WORKS

- Hebrew Rhapsody 'Le danze del re David' (1925).
- Overtures to Shakespeare's plays:
  - 'The Taming of the Shrew' (1931).
  - 'Twelfth Night' (1935).
  - 'The Merchant of Venice' (1935).
  - 'Julius Caesar' (1935).
  - 'The Winter's Tale' (1938).
  - 'A Midsummer Night's Dream' (1940).
  - 'King John' (1942).
- 'A Rhapsody of the South Seas' (1942)
- 5 Humoresques on Foster's 'Themes' (1943).
- Overture to a Fairy Tale' (1943).
- Suite, 'The Birthday of the Infanta' (after Oscar Wilde) (1944).
- 'Noah's Ark' (1944).

### SOLO INSTRUMENTS AND ORCHESTRA

- 'Concerto italiano' for vn. (1924).
- Pf. Concerto No. 1 (1928)
- Vn. Concerto No. 2, 'The Prophets' (1939).
- Pf. Concerto No. 2.
- Cello Concerto
- Symphonic Variations for vn. (1930).
- Guitar Concerto (1939).
- Vn. Concerto No. 3.
- Poem for vn. (1942).

### VOICE AND ORCHESTRA

- 3 Fioretti by St. Francis of Assisi (1920).

### CHAMBER MUSIC

- String Quartet.
- Pf. Trio (1928).
- Concertino for harp & 7 insts. (1937).
- Sonata for vn. & viola (1945).
- Divertimento for 2 flutes (1943).

### VIOLIN AND PIANOFORTE

- 'Tre canti all' aria aperta' (1919).
- 'Capitan Fracassa' (1921).
- 'Ritmi' (1921).
- 'Sonata quasi una fantasia' (1929).
- Suite on themes by Donizetti.

### VIOLONCELLO AND PIANOFORTE

- Sonata (1928).

### CLARINET AND PIANOFORTE

- Sonata (1945).

### BASSOON AND PIANOFORTE

- Sonata (1946).

## PIANOFORTE MUSIC

- 'Cielo di settembre' (1910)
- 'Questo fu il carro della morte' (1913)
- 3 Sea Pieces
  - 1 Il raggio verde (1916)
  - 2. Alge (1919).
  - 3. I naviganti (1919)
- 'Capressi' (1921).
- 'Vitalba e biancospino' (1922)
- 'Alt-Wien' (1923).
- 'Epigrafe' (1923).
- 6 Illustrations for Voltaire's 'Candide' (1944).
- 'Stars.'
- 'Nocturne in Hollywood.'

## SONGS

- 'Fuori i barbari' (1915).
- 'Ninna-Nanna' (1915).
- 2 French Songs (1915).
- Cycle, 'Stelle cadenti' (1915)
- Cycle, 'Coplas', in Spanish (1915).
- 2 Tagore Songs (1916).
- 'Il libro di Dolcina' (1917).
- Songs from Shakespeare's plays (1921-26)

## Book I

- 1. 'Old Song', "Come away, death" ('Twelfth Night').
- 2. 'Fancy', "Tell me where is fancy bred" ('Merchant of Venice').
- 3. 'Fairies', "Ye spotted snakes" ('Midsummer Night's Dream').

## Book II ('As You Like It')

- 1. 'Under the greenwood tree.'
- 2. 'Winter Wind', "Blow, blow".
- 3. 'Springtime', "It was a lover and his lass".

## Book III

- 1. 'Orpheus' ('Henry VIII').
- 2. 'Sylvia', "Who is Sylvia?" ('Two Gentlemen of Verona').
- 3. 'For the rain it raineth' ('Twelfth Night').

## Book IV

- 1. 'Sigh no more, ladies' ('Much Ado about Nothing').
- 2. 'Seals of Love', "Take, O take those lips away" ('Measure for Measure').
- 3. 'O mistress mine' ('Twelfth Night').

## Book V

- 1. 'Autolycus', "When daffodils begin to peer" ('Winter's Tale').
- 2. 'The Willow', "The poor soul sat sighing" ('Othello').
- 3. 'Roundel', "Fie on sinful fantasy!" ('Merry Wives of Windsor').

## Book VI

- 1. 'Apemantus's Grace', "Immortal gods" ('Timon of Athens').
- 2. 'Arise!', "Hark! hark! the lark" ('Cymbeline').
- 3. 'The Soldier Drinks', "And let me the canakin clink" ('Othello').

## Book VII

- 1. 'The Clown in the Churchyard', "In youth when I did love" ('Hamlet').
- 2. 'Ophelia', "How should I your true love know" ('Hamlet').
- 3. 'The Cuckoo and the Owl', "When daisies pied" ('Love's Labour's Lost').

## Book VIII

- 1. 'The Pedlar', "Lawn as white as driven snow" ('Winter's Tale').
- 2. 'Come to Dust', "Fear no more the heat o' the sun" ('Cymbeline').
- 3. 'Two Maids Wooing a Man', "Get you hence, for I must go" ('Winter's Tale').

## Book IX

- 1. 'Merry Heart', "But shall I go mourn for that" ('Winter's Tale').
- 2. 'Hecate', "Pardon, goddess of the night" ('Much Ado About Nothing').
- 3. 'The Witch', "What shall we have that kill'd the King" ('As You Like It').

## Book X ('King Lear')

- 1. 'The Fool', 8 short songs (linked together).

## Book XI ('The Tempest')

- 1. 'Merrily', "Where the bee sucks".
- 2. 'The Sailor Drinks', "I shall no more to sea".
- 3. 'Ariel', "Come unto these yellow sands".
- 4. 'Caliban', "No more dams I'll make for fish".

## Book XII ('The Tempest')

- 'Epithalamium', "Honour, riches, marriage-blessing" (with Nuptial March for pf solo)
- 'Three Sonnets from the Portuguese' (Elizabeth Barrett Browning) (1926)
  - 1. The sweet, sad years
  - 2. Letters.
  - 3. Poems and Flowers.
- 'Fragments de Marcel Proust' (1936).
- 'Leaves of Grass' (Walt Whitman) (1936).
- 27 Shakespeare Sonnets (1945).

**CASTÈRA, René de** (b. Dax, Landes, 3 Apr. 1873).

French composer. He studied at the Paris Schola Cantorum in 1897-1902, d'Indy being among his masters. As a composer he remained entirely loyal to the tendencies of that school and he founded the publishing concern Édition Mutuelle for the purpose of issuing works by its disciples.

Castéra's compositions include the opera 'Berteretche', the ballet-pantomime 'Nausicaa', 'Jour de fête au pays basque' for orchestra, a Concerto for flute, clarinet, cello and piano-forte, a Trio for violin, cello and piano-forte, a Sonata for violin and piano-forte, and a number of piano-forte pieces and songs.

E. B.

**Casti, Giovanni Battista.** See Libretto Salieri (4 lib.).

**CASTIL-BLAZE, François Henri Joseph** (actually **Blaze**) (b. Cavaillon, 1 Dec. 1784, d. Paris, 11 Dec. 1857).

French writer on music and drama, and composer. His father (1763-1833), a lawyer by profession, was a good musician, friend of Grétry and Méhul, and composer of masses, operas and chamber music. The younger Blaze was sent to Paris in 1799 to study the law, but became a pupil at the Conservatoire and took private lessons in harmony. He obtained the post of *sous-préfet* in the Department of Vaucluse and other appointments. In 1820 he threw up his post and set out with his family for the metropolis, chiefly with a view to publishing a book compiled during his leisure hours. It appeared in 1820, in two volumes, with the title 'De l'opéra en France', and is the work on which his claims to remembrance are chiefly founded. The first volume contains an elaborate though popular treatment of the various elements of music, including hints as to the choice of librettos, and the peculiarities of verse and diction best adapted for musical treatment. The second volume is devoted to opera proper, describing at considerable length its various component parts, the overture, recitative, aria, ensemble, etc.

He attacks the various uses and abuses of theatrical managers, the arrogance of ignorant critics and the miserable translations supplied

by literary hacks for the masterpieces of foreign composers. On the latter point he was entitled to speak, having himself reproduced more or less felicitously the librettos of numerous Italian and German operas.

Unfortunately Castil-Blaze frequently made bold to meddle with the scores, and even to introduce surreptitiously pieces of his own composition into the works of great masters. Among his romances 'King René' was deservedly popular. He wrote several pieces of sacred and chamber music, one serious and two comic operas, none of which was successful to any considerable extent. More valuable is a collection of songs of southern France called 'Chants de Provence'.

Other literary works by Castil-Blaze are :

- 'Dictionnaire de musique moderne' (1821).
- 'Biographie de musiciens flamands' (1828).
- 'La Chapelle de musique des rois de France' (1832).
- 'La Danse et les ballets depuis Bacchus jusqu'à Mademoiselle Taglioni' (1832).
- 'Molière musicien' (1852).
- 'Théâtres lyriques de Paris', 3 vols (1847-56).

For ten years before 1832 Castil-Blaze was music critic of the 'Journal des Débats'. He also wrote numerous articles for the 'Constitutionnel', the 'Revue et Gazette musicale', 'Le Ménestrel', etc., partly republished in book form. F. H.

See also Aumon (lib.). Auber ('Marquise de Brinvilliers', lib.). Boieldieu (do.). Hérold (do.). Robin des Bois (Fr. trans. of Weber's 'Freschütz').

**CASTILETI, Johannes.** See GUYOT, JEAN.

**CASTILLO, Diego del** (b. ?; d. Madrid, after 1600).

Spanish organist and composer. He was organist at Seville in 1560 and succeeded Berardo Clavijo as choirmaster at the royal chapel in Madrid. Esclava prints two motets by Castillo, for 5 voices. J. B. T.

**CASTILLON (de Saint-Victor), Alexis** (Vicomte) de (b. Chartres, 13 Dec. 1838; d. Paris, 5 Mar. 1873).

French composer. His father, the Marquis de Castillon, was a good amateur singer. As a boy Castillon gained access to the organ of Chartres Cathedral, and he soon revealed an exceptional talent for music. He was sent to the military academy of Saint-Cyr in 1856; but he abandoned an army career for music. He first studied under Victor Massé, but although he liked him personally and dedicated his Symphony to him in 1865, he found his teaching uncongenial. He was on the point of giving up his studies when in 1868 his friend, the composer Henri Duparc, introduced him to Franck, under whom he worked until his studies were interrupted by the Franco-Prussian war in 1870. He rejoined the army and suffered such hardships and privations during the war as to impair his health seriously and before long to cause his early death.

On the foundation of the Société Nationale de Musique in 1871 Castillon became its first secretary. But his music was not understood, and the first performance of his pianoforte Concerto on 10 Mar. 1872 at one of Pasdeloup's Concerts Populaires, with Saint-Saëns as soloist, was outrageously hissed. During the winter of 1872-73 he was obliged to go to Pau for his health, but on his return to Paris he caught pneumonia, which in his enfeebled condition he was unable to withstand.

Castillon was exceptionally gifted; his serious and refined talent and the nobility of his inspiration mark him as one of the most original of Franck's pupils. His songs opened the way to Duparc, Chausson and the more modern French school, and he was one of the champions of the revival of chamber music in France. Although misunderstood in his time as an incomprehensible modernist, the influences that formed him, apart from Franck's, were the classical ones of Bach and Beethoven and the romantic ones of Berlioz and Schumann. G. F., adds.

## CATALOGUE OF WORKS

### Op. CHORAL WORKS

- 17 'Paraphrase du Psaume LXXXIV' for solo voices, chorus & orch. (1872)  
— Mass (unfinished).

### ORCHESTRAL WORKS

1. Symphony No. 1 (1865).  
— 'Cinq Airs de danse'.  
— Symphony-Overture 'Torquato Tasso' (1871).  
— 'Marche scandinave' (1872).  
15. 'Esquisses symphoniques' (1872).  
— Symphony No. 2 (unfinished).

### CHAMBER MUSIC

1. Quintet for 2 vns., viola, cello & pf.  
3. String Quartet No. 1.  
4. Trio No. 1, for vn., cello & pf.  
7. Quartet for vn., viola, cello & pf.  
17 bis. Trio No. 2, for vn., cello & pf.  
— String Quartet No. 2 (unpubl., except 'Cavatina')

### VIOLIN AND PIANOFORTE

6. Sonata. PIANOFORTE MUSIC  
2. 'Fugues dans le style ancien.'  
5. Suite No. 1.  
9. 'Cinq Pièces dans le style ancien.'  
10. Suite No. 2.  
11. 'Six Valses humoristiques.'  
— 'Pensées fugitives', 24 pieces.

### SONGS

8. 'Six Poésies' (Armand Silvestre)  
1. Le Bûcher.  
2. Le Semeur.  
3. Sonnet mélancolique.  
4. La Mer.  
5. Renouveau.  
6. Vendange.

**CASTLE SOCIETY CONCERTS.** These had their origin in London in the early 1720s in musical evenings held at the house of John Young, music seller and instrument maker, at the Dolphin and Crown at the west corner of London House Yard in St. Paul's Churchyard.

His son Talbot had been educated musically in St. Paul's choir under Maurice Greene and later gained some reputation as a violinist, so much so that the 'Second Book of the Pleasant Musical Companion' (London, 1701) says:

There's old Young and young Young, both men of renown.  
Old sells, and young plays, the best fiddle in town.

Greene took a prominent part in these auditions, and before 1724, the house of John Young being too small to accommodate the growing audiences, a society was founded, under a subscription, to continue these musical evenings at the Queen's Tavern, Paternoster Row. Here the promoters were joined by Woolaston the artist and violinist, the friend and supporter of Thomas Britton and his concerts, whose portrait he painted. After a few winters the concerts were so successful that they removed them in the year 1724 to the Castle in Paternoster Row (hence the name), where the concert-room was adorned by Woolaston's portrait of Talbot Young, the leader of the band. The latter continued to direct these concerts for many years until compelled by ill-health to retire, when he was succeeded by Prospero Castrucci, who died in 1760. After 1744 the concerts were held for about fourteen years at the Haberdashers' Hall, when they were removed to the King's Arms, Cornhill, where they were still flourishing in 1783.

**CASTRATI.** Eunuchs were in vogue as singers in the 17th and 18th centuries, and decreasingly in the early 19th, mainly in Italy at first, and they always remained an almost exclusively Italian product. The last male soprano of this artificial kind was probably Giovanni Battista Velluti, who died in 1861.

*Castrati* were employed in the church choirs of Rome and elsewhere in Italy, but became fashionable on the stage and exerted their greatest influence in the Italian opera of the 18th century.

The high-pitched voices of the *castrati*, who were sometimes contraltos, but far more often sopranos, resembled those of women in range, but not in quality. The reason for their type of voice is to be found in the absence of growth

changes which take place in the male at the time of puberty, as the result of circulation of certain internal secretions in the blood. The growth changes, as they affect the larynx, cause the wings of the thyroid cartilage to meet at a sharper angle than before, with the result that the Adam's apple becomes more prominent. The vocal cords increase in length and bulk, and their margins become thicker and more rounded; the various muscles and other parts of the larynx show a certain increase in size.

Because of these changes the vocal cords of an adult man can vibrate more slowly than those of a boy, chiefly because of their increased mass, and the voice is lower in pitch. The quality of sound is also changed in the mature man, because a greater surface of the vocal cords comes into contact during phonation.

The larynxes of eunuchs do not undergo these changes; some growth takes place, but it is the result of a very gradual process, and does not cause any interruption in the singer's career. Furthermore, the voice remains of a high pitch, and the mechanism of singing is the same as in boyhood; therefore the training of professional *castrati* could begin at an early age and proceed uninterruptedly. It is probable that boys were chosen for the beauty of their voices and were then prepared for the calling of adult chorists; castration after puberty has no effect on the larynx.

Although the voice of the *castrato* had a high pitch, yet the quality was of a characteristic type and did not necessarily conform closely to that of a boy. The rest of the body, apart from the larynx, shows a greater development in eunuchs than in normal men. The capacity of the lungs and the force of expiration are equal to, if not greater than that of a mature man, so that the power of the voice of the *castrato* was very great. This characteristic, in conjunction with the distinctive quality, gave to singers of this type their extraordinary popularity. This meant that with Italian opera itself their fame spread over Europe and found little acceptance in France only because a different indigenous type of opera developed there while they were at the height of their fame. In England they came in for a good deal of critical abuse for their vanity and arrogance, but were nevertheless accepted as an artistic necessity so long as composers of Italian opera, including Handel, wrote for them. Their final abolition was due to humanitarian, not to aesthetic considerations.

V. E. N., adds.

It is to be noticed that a type of *castrato* part continued to be written for operatic singers long after male vocalists had ceased to be available for the purpose. Such figures as Cherubino in 'Figaro', the pages of Meyer-

beer and Verdi, Prince Orlovsky in 'Die Fledermaus', Octavian in 'Der Rosenkavalier' and many others, sung by women but representing young men, are accepted by operatic audiences only thanks to a persistent continuance of the *castrato* tradition, and the English pantomime boy, always played by a woman, belongs to the same convention. There is an amusing instance of a celebrated male soprano, Farinelli (whose part is sung by the prima donna) appearing as one of the characters in a mid-19th-century opera — Auber's 'La Part du diable'. Celebrated *castrato* parts of the past now sung by women are rare in the modern repertoire. Among them are Gluck's Orpheus (first version) and Mozart's Idomeneo (in 'Idomeneo').

**CASTRO.** Argentine family of musicians.

(1) **José María Castro** (b. Avellaneda, Prov. of Buenos Aires, 17 Nov. 1892), cellist, conductor and composer, eldest son of a well-known musician of Galician descent. J. M. Castro studied cello and composition in Buenos Aires and played in several chamber-music groups besides becoming first cello of the Orquesta Filarmónica de la Asociación del Profesorado. He also became a professor of the Conservatorio Municipal of Buenos Aires.

Castro has also on frequent occasions conducted the philharmonic and chamber orchestras of the A.P.O. as well as symphony concerts at the Teatro Colón. Since 1933 he has been the director of the Banda Municipal of Buenos Aires.

J. M. Castro's compositions include the ballet 'Georgia', played at the Teatro Colón, a 'Concerto grosso', an Overture for a comic opera, a string Quartet, sonatas for piano-forte, cello and piano-forte, and for two cellos, and a number of songs and instrumental pieces.

(2) **Juan José Castro** (b. Avellaneda, Prov. of Buenos Aires, 7 Mar. 1895), violinist, pianist, conductor and composer, brother of the preceding. He studied in Buenos Aires at first and later in Paris, with d'Indy (composition) and Risler (piano-forte).

On his return to Argentina Castro played in several chamber-music groups, but soon dedicated himself exclusively to composition and conducting. During many years he conducted ballet and symphony concerts at the Teatro Colón, the Orquesta de Cámara "Renacimiento", the Filarmónica de la Asociación del Profesorado Orquestal and lately the annual series of concerts given by the Asociación Filarmónica de Buenos Aires. He has also conducted the Philharmonic of

New York and all the South American orchestras, following Kleiber as conductor of the Cuban Philharmonic. In 1948 he was appointed conductor of the Sodre Orchestra at Montevideo. In 1951 he obtained the Verdi Prize offered by the Teatro alla Scala, Milan, from among 138 competitors, for his opera 'Proserpina y el extranjero', which was produced there in Mar. 1952.

Castro's compositions include the 'Sinfonia bíblica' for chorus and orchestra, various symphonic poems, the ballet 'Mekhano', given at the Teatro Colón, the opera 'La zapatera prodigiosa', a piano-forte Concerto, string Quartet, and many chamber-music, instrumental and vocal pieces.

(3) **Luis Arnaldo Castro** (b. Buenos Aires, 1 Mar. 1902), violinist and musicologist, brother of the preceding. He was trained chiefly as a violinist and played in chamber-music groups and the Philharmonic orchestra of the A.P.O. Later he was president of this organization and secretary of the Colón theatre. He is a keen musicologist and an expert on British music, on which he lectured extensively throughout Argentina for the British Council until 1950. L. A. Castro is also Buenos Aires municipal inspector of concerts.

(4) **Washington Castro** (b. Buenos Aires, 13 July 1909), cellist and composer, brother of the preceding. He studied cello and composition in Buenos Aires and later in Paris, where he specialized in cello under Maurice Maréchal.

Back in Argentina he soon became first cellist of the Philharmonic orchestra and one of the conductors of the chamber orchestra of the A.P.O. He also played in several chamber-music groups and has recently founded the Cuarteto Haydn.

As a composer Castro has produced a number of symphonic and chamber-music works as well as songs and instrumental pieces. A string Quartet won him the Buenos Aires municipal prize in 1946.

Castro, Guilhem de. See Bizet ('Don Rodrigue'), list.

**CASTRO, Jean de** (b. Liège, ?; d. ? Cologne, ?).

(?) Walloon 16th-century lutenist and composer.<sup>1</sup> He seems to have been at Antwerp in 1569, where the first book of his madrigals was

<sup>1</sup> His history is very obscure, and even his nationality is still in doubt, though in spite of his southern name it is now regarded as unlikely that he was a Spaniard or Portuguese, at any rate by birth, and Estner's assertion that he was a native of Evreux in Normandy, on the strength of his describing himself as "Eburone", is disputed, since Foppens, in his 'Bibliotheca belgica' (1739) uses that Latin term for "from Liège" or "from the Liège country". (See René Vannes, 'Dictionnaire des musiciens', Brussels, 1947, according to which there was a Jean de Castro at Liège both in the 14th and in the 15th centuries, though both were canons and thus not direct ancestors of the subject of this article.)

published. Later works were printed there and at Louvain, but others appearing at Lyons about 1570 describe a Jean de Castro as being *maître de chapelle* there. A manuscript of chansons in the Bibliothèque Nationale in Paris (Français 25, 536) says they were "composées et mises en musique par Jean de Castro", but "escrites [*i.e.* copied] à Anvers par Jean Pollet, lillois, demourant audict Anvers, anno 1571". According to Riemann Castro may have been at Lyons from about 1570 to 1585. Further complications are that in 1586 he describes himself as chapel master at Cologne and in 1591 as being in the service of Prince William of Julich, Cleves and Berg at Dusseldorf. Yet he seems to have been settled at Cologne from that year to his death.

Castro wrote masses, motets, sacred songs, madrigals and chansons. A 3-part Mass was published at Cologne in 1599, books of motets at Louvain (1571, 1574), Douai (1588), Antwerp (1592) and Cologne (1593, 1596); books of madrigals and chansons at Louvain (1570, 1575, 1576), Paris (1575, 1580), Antwerp (1569, 1582, 1586, 1591, 1592, 1595), etc.

E. v. d. s., rev.

**CASTRO, Ricardo** (b. Durango, 7 Feb. 1864; d. Mexico City, 28 Nov. 1907).

Mexican composer. He came of well-to-do parentage. When he was thirteen his father was elected to the Mexican Congress, and the family then moved to the capital, where he studied composition with the paladin of Mexican composers, Melesio Morales, and the pianoforte with Julio Iruarte. In 1882 he won a pianoforte competition at the Querétaro Exhibition and in 1885 represented Mexico at the New Orleans Cotton Exhibition. While in the U.S.A. he played also at Chicago, Philadelphia and New York. Upon returning to Mexico he joined Gustavo E. Campa and Felipe Villanueva in founding a rival conservatory to the Conservatorio Nacional.

At twenty-five Castro was well enough known in Spain to win favourable mention in Felipe Pedrell's 'Ilustración musical hispano mexicana'. During the late 1890s he was active in the affairs of a chamber-music society and played the pianoforte parts in Mexican premières of several now standard chamber works. His opera, 'Atzimba', dealing with the conquest of Michoacán, was produced on 9 Nov. 1900. The Díaz government in 1902 awarded him a liberal grant for European study and travel. In Jan. 1903 his cello Concerto was first performed in Paris; his pianoforte Concerto (Op. 22) was first heard in Dec. of the following year in Brussels. He returned to Mexico in Sept. 1906 and saw his three-episode music drama 'La leyenda de Rudel' produced shortly after reaching the capital. He was appointed director of the Conservatorio Nacional in Jan. 1907, but died

the following Nov. A three-day period of national mourning was proclaimed.

Castro was the first Mexican composer to write symphonies (1883, 1887). His pianoforte Concerto, the vocal score of 'La leyenda de Rudel' and other smaller works were published in Germany by Hofmeister. A large number of his unpublished scores may be consulted at the Free Public Library of Philadelphia. His Tarascan opera 'Atzimba' was successfully revived at Mexico City in the summer of 1952, and a national prize to be known as the Castro Prize for operatic composition was instituted in his memory.

R. S.

**CASTRUCCI, Pietro** (b. Rome, 1679; d. Dublin, 29 Feb. 1752).

Italian violinist, conductor and composer. He was a pupil of Corelli in Rome and went to England in 1715 with Lord Burlington. He had a benefit concert in London on 23 July of that year. He became leader of Handel's opera orchestra and had a special reputation as performer on the *violetta marina*, an instrument of his own invention. In Handel's 'Orlando' (1733) is an air accompanied by two *violetta marine* with plucked cellos, "per gli Signori Castrucci", according to the manuscript — meaning Pietro and his brother Prospero. The same master had already written an air with *violetta marina obbligata* in 'Sosarme' (1732).

In 1737 Castrucci was superseded at the opera by Michael Festing. To his undoubted talent Castrucci added an amount of charlatanism surprising in a pupil of Corelli's. An instance is given by Burney.<sup>1</sup> He went to Dublin in 1750 and had a benefit concert at Fishamble Street on 21 Feb. 1751. J. C. Walker<sup>2</sup> states that he was invited to Dublin to conduct the Rotunda Concerts, that he died there in great poverty, but was honoured by a splendid funeral. He published 12 'Concerti grossi' and 3 books of violin sonatas.

P. D., adds. W. H. G. F.

**CASTRUCCI, Prospero** (b. Rome, ?; d. ? London, 1760).

Italian violinist, brother of the preceding. He probably also studied with Corelli in Rome, but whether he went to London with his brother or later is not known. He was director of the Castle Society of Music there and is famed as the original of Hogarth's 'The Enraged Musician'. He published 6 violin sonatas in 1739.

P. D.

**CASULANA, LA.** *See* MEZARI, MADDALENA.

**CATALANI, Alfredo** (b. Lucca, 19 June 1854; d. Milan, 7 Aug. 1893).

Italian composer. He studied at first with

<sup>1</sup> History, IV, 353, note; modern ed., II, 770.

<sup>2</sup> Irish Bards' (1786).

his father, the organist at the church of San Frediano at Lucca. At the age of fourteen he wrote a Mass which was sung in the cathedral. At seventeen he went to the Paris Conservatoire, where he studied in Bazin's class. Returning to Italy, he continued his studies for two years at the Milan Conservatory, in the theatre of which his first essay in dramatic composition, an *egloga* in one act, 'La falce' (text by Boito), was performed in the summer of 1876. His first public appearance was with a four-act grand opera, 'Elda' (libretto by Carlo d'Ormeville), produced at the Teatro Regio at Turin on 31 Jan. 1880. His later operas were the following:

'Dejanire' (Angelo Zanardini), Milan, Teatro alla Scala, 17 Mar 1883

'Edmea' (Antonio Ghislanzoni), Milan, Teatro alla Scala, 27 Feb. 1886

'Loreley' (new version of 'Elda', lib. by Zanardini), Turin, Teatro Regio, 16 Feb. 1890, London, Covent Garden Theatre, 12 July 1907.

'La Wally' (Luigi Illica, based on Wilhelm von Hillern's novel 'Die Geyer-Wally'), Milan, Teatro alla Scala, 20 Jan 1892

'Loreley' was much more successful than the original 'Elda', and 'La Wally' proved a lasting success in Italy, where it has not yet dropped entirely out of the repertory. Catalani was essentially a composer for the stage, but he also had a considerable success with a symphonic poem, 'Ero e Leandro', in 1885.

**CATALANI, Angelica** (b. Sinigaglia, 10 May 1780; d. Paris, 12 June 1849).

Italian soprano singer. Her father was a tradesman, and at about the age of twelve she was sent to the convent of Santa Lucia at Gubbio, where her beautiful voice soon became a great attraction. On leaving the convent she found herself compelled to perform in public, owing to the sudden impoverishment of her parents. Her musical education had been but ill cared for, but her voice was so full, powerful and clear, her intonation so true and her instinctive execution of difficult and brilliant music so easy that her very first steps in a stage career were at once marked with the most extraordinary success. In 1797 she obtained her first engagement, at the Teatro La Fenice at Venice. Her success, due to her uncommon beauty as well as to her art, grew year by year and lasted nearly a quarter of a century. In the season of 1798 she sang at Leghorn, the following year at the Teatro della Pergola at Florence and in 1801 at Milan, whence she went to Florence, Trieste, Rome and Naples, exciting everywhere the same astonishment and admiration.

Her reputation now reached the ears of the

Prince Regent of Portugal, who engaged her to sing at the Italian Opera there, and she arrived about the end of 1804. Her salary was 24,000 cruzados (£3,000). It was there that she married Valabrègue, of the French embassy; but she always kept her name of Catalani before the public. Her husband, a stupid, ignorant soldier, appears to have had no ideas beyond helping his talented wife to gain the utmost possible amount of money on every occasion, and spending it for her afterwards. They went first to Madrid and then to Paris, where she sang only at concerts.

In Dec. 1806 Catalani appeared at the King's Theatre in London. She had been engaged at a large salary, and her engagements entailed on the theatre an expense surpassing anything before experienced; moreover, her disposition would not endure the possibility of rivalry, nor would the extravagance of her increasing demands allow any manager to engage other singers. It appears that the total amount received by her from the theatre in 1807, including benefits, was £5,000, and her total profits that year, with concerts, provincial tour, etc., £16,700. She received as much as 200 guineas for singing 'God save the King' and 'Rule, Britannia', and at a single festival £2,000. Had she practised the least economy she must have amassed a very great fortune; but this she did not do. Her husband, too, was passionately addicted to gambling and lost vast sums at play. She remained seven years in England, where she finally succeeded in becoming the only singer of eminence and led in both lines; but one singer does not constitute an opera, though Valabrègue used to say, "Ma femme et quatre ou cinq poupées — voilà tout ce qu'il faut". She sang at the Birmingham Festival of 1811. She left the King's Theatre at the end of the season of 1813, having first endeavoured (unsuccessfully) to purchase it. After leaving this stage, she for many years never trod any other, except in Paris, where she obtained the management of the Italian Opera, with a subsidy of 16,000 francs; but the undertaking was not fortunate. On the return of Napoleon, in 1815, she left Paris, going first to Hamburg and afterwards to Denmark and Sweden, exciting everywhere the wildest admiration and enthusiasm. She returned to France, after the Restoration, by way of Holland and Belgium. On her arrival in Paris she resumed the direction of the Théâtre-Italien and established the same ruinous system which had, for a time, destroyed opera in London. Every expense of scenery, orchestra and chorus was curtailed and every singer of worth excluded. This was not all: to suit this state of things the operas were arranged in such a manner that little of the original but the name remained.

In May 1816 Catalani left her opera in the

hands of managers and went to Munich to give concerts and stage performances. In 1818 she left her opera entirely and resumed her wanderings, which lasted nearly ten years. In 1824 she returned to London, performing a certain number of nights with no regular engagement. "Her powers were undiminished, her taste unimproved." She next visited in turn Germany, Italy and Paris once more, then Poland, Russia and the north of Germany again in 1827. About this time she sang for the last time in Berlin and resolved to cease singing in public; but she revisited England once more in 1828. Lord Mount-Edgumbe heard her at Plymouth and describes her as having lost, perhaps, a little in voice, but gained more in expression; as electrifying an audience with her 'Rule Britannia'; as still handsome, though somewhat stout. After a time, she retired to a villa which she had bought in the neighbourhood of Florence. Her charitable deeds were innumerable, and the amount of money earned by her concerts given for such purposes alone has been estimated at 2,000,000 francs. At her residence she founded a school of singing for young girls.

According to Fétis and all other authorities, her voice must have been one of extraordinary purity, force and compass, going as far as *g'''*, with a sweet clear tone. This exquisite quality was allied to a marvellous truth and rapidity of execution.

Lord Mount-Edgumbe says:

Her voice is of a most uncommon quality, and capable of exertions almost supernatural . . . while its agility in divisions, running up and down the scale in semi-tones, and its compass in jumping over two octaves at once, are equally astonishing. It were to be wished that she was less lavish in the display of these wonderful powers, and sought to please more than to surprise; but her taste is vicious, her excessive love of ornament spoiling every simple air, and her greatest delight (indeed her chief merit) being in songs of a bold and spirited character, where much is left to her discretion (or indiscretion), without being confined by the accompaniment, but in which she can indulge in *ad libitum* passages with a luxuriance and redundancy no other singer ever possessed, or if possessing ever practised, and which she carries to a fantastical excess.

**CATALONIA, MUSIC OF.** See PUBLICATIONS CATALUNYA.

**CATCH.** Originally simply a round for three or more voices (unaccompanied). The word is obviously derived from the Italian *caccia*, with which it shares the feature of canonic writing.

Catches were devised for each succeeding singer to take up or "catch" his part in time; this is evident not only from the manner in which they were printed, but also from the simple and innocent character of the words of the oldest catches, from which it would be impossible to elicit any ingenious cross-reading. But in course of time a new element was

introduced into catches. words were selected so constructed that it was possible, either by mispronunciation or by the interweaving of the words and phrases given to the different voices, to produce the most ludicrous and comical effects. The singing of catches became an art and was accompanied by gesture; the skill with which they were sung became a tradition, and certainly many old specimens are so difficult that they must have required considerable labour and practice to sing them perfectly.

Catches were most in vogue in the reign of Charles II, and since much of the popular literature of that period was sullied by indecency and licentiousness it is not surprising that catches were contaminated with the prevailing and fashionable vice<sup>1</sup>; the more than questionable character of the words to which many of the catches of that age were allied has sufficed to ensure the banishment of a large amount of clever and learned musical contrivance. In later times Hayes, Webbe and Callcott excelled in the composition of catches: 'Would you know my Celia's charms' by Webbe is a well-known example; 'Ah, how, Sophia', and 'Alas, cry'd Damon' by Callcott are also tolerably well known and still occasionally performed.

Hayes published several collections of catches, some with words by Swift, and in his preface to the first set (1763) he says: "The Catch in Music answers to the Epigram in poetry, where much is to be expressed within a very small compass, and unless the Turn is neat and well pointed, it is of little value".

W. H. C.

The following are the principal collections of catches and glees published in England.

Glees, rounds, catches and canons are so inextricably mixed in publication that it would be an extremely difficult task to indicate the particular character of each collection.

After the publication of 'Pammelia', 'Deuteromelia' and 'Melismata' John Playford and his son were responsible for catch books. John Walsh and John Johnson followed, but their issues were mainly reprints from the earlier books. The institution of the different catch and glee clubs throughout the country gave great impetus to the composition and publication of this class of music. The list does not pretend to anything like completeness, but it may be of use to the student of the subject.

1609. 'Pammelia: Musick's Miscellanie, or mixed variety of Pleasant Roundelays and delightful Catches of 3, 4, 5, 6, 7, 8, 9, 10 parts in one. None so ordinarie as musically, none so musically as not to all very pleasing and acceptable.'

1609. 'Deuteromelia: or second part of Musick's Melodie, or Melodious Musick of Pleasant Roundelays. K. H. Mirth, or Freeman's songs, and such delightful catches.'

<sup>1</sup> See preface to Purcell Society's edition, Vol. XXIII, 'Two- and three-part Songs'.

1611. 'Melismata: Muscally Phanases fitting the court, cite, and country Humours.'

The first two were edited and collected by Thomas Ravenscroft; the last bears in addition the name William Ravenscroft.

1651. 'Musical Banquet' J. Playford.  
1652. 'Catch that Catch can, or a choice collection of Catches, Rounds, and Canons for 3 and 4 voices Collected and published by John Hilton' Sm oblong John Playford.

The punning title and much of the contents are taken from Ravenscroft's publications

1667. 'Catch that Catch can, or The Musical Companion' (a second edition of the above, with additions) Oblong 4to. J. Playford.

- 1672-73. 'The Musical Companion in two books' (a third edition with additions) Oblong 4to J. Playford.

1685. 'Catch that Catch can, or the second part of the Musical Companion.' Oblong 4to. John Playford.

- 'The Pleasant Musical Companion: Being a choice collection of Catches for three and four voices' Oblong 4to. John Playford.

The date of first edition not ascertained.

The sixth dated 1720; eighth 1724; ninth 1726; tenth 1730.

1686. 'The Second Book of the Pleasant Musical Companion.' Oblong 4to. J. Playford.

- 1687-1726 'The Second Book of the Pleasant Musical Companion.' Second edition dated 1687; a fourth dated 1701 (with a Supplement, 1702), a fifth 1707; a ninth 1726

Another book, with the title 'The Pleasant Musical Companion', was published by John Johnson of Cheapside about 1740. It is from engraved plates, and appears to be a reprint from the Playford predecessors.

- c. 1730. 'The Catch Club, or Merry Companions: Being a choice collection of the most diverting catches for three or four voices (with a second part).' Oblong 4to. Published by John Walsh, senior. A later one bearing the same title, but selected by C. J. F. Lampe, was published about 1762 by Walsh, junior, in oblong folio

1763. 'A Collection of Catches, Canons, and Glee, for three, four, five, six, and nine voices, never before published. Selected by Thomas Warren, London, for the editor.' Oblong folio.

This most valuable collection extended from the above first volume, dated 1763, to the thirty-second. It contained 652 pieces. Warren was secretary to the Noblemen and Gentlemen's Catch Club.

- 'A Collection of Vocal Harmony, consisting of Catches, Canons, and Glee. Selected by Thomas Warren.' Oblong folio.

1763. 'Social Harmony, consisting of a collection of songs and catches. By Thomas Hale, of Darnhall, Cheshire' 8vo.

Another work with this title was published in octavo volume by Jones & Co. about 1830.

1764. 'Catches, Canons, and Glee. Composed by Samuel Webbe.' Nine volumes. Oblong folio.

This was issued at intervals by Webbe from 1764 onwards to about 1798. A selection from the work was made and published in three volumes.

1769. 'The Essex Harmony: Being an entire new collection of the most celebrated Songs and Catches, Canzonets, Canons, and Glee. By John Arnold.' 2 vols. 8vo, 1769, second edition, 1777; third edition, 1786.

A much later work under this title was published by Bland & Weller in two vols 4to, c. 1795.

- c. 1776. 'A Collection of Catches and Glee. Composed by L. Atterbury.' Oblong folio.

1780. 'A Collection of Catches, Canons, Glee, Duets . . . Four vols Edinburgh, J. Sibbald.

This was reprinted by Longman & Broderip, and again by Muzio Clementi.

- c. 1780-90. 'The Gentleman's Collection of Catches, Glee, Canons, . . . Selected by J. Bland.' Folio.

- 'The Ladies' Collection of Catches, Glee, Canons, . . . Selected by J Bland' Folio.

Two collections of selected glee, etc., which extended to twenty or more numbers. John Bland published other collections, besides quantities in sheet form.

- c. 1790. 'Apollonian Harmony A collection of scarce and celebrated Glee, Catches, Madrigals, Canzonets, Rounds, and Canons' Six vols. 8vo. Thompson.

A later issue from the same plates was issued by Button & Whitaker.

- 'Vocal Harmony: A collection of Glee, Madrigals, . . . including the prize glee from 1763 to 1794.' Edited by Wm. Horsley. Nine vols Folio

- 'The Flowers of Harmony.' Four vols. 8vo.

- c. 1800. 'British Vocal Harmony: A select collection of ancient and modern Duets, Glee, and Catches.' H. Gray Oblong 8vo.

- c. 1810-15. 'A Collection of Catches and Glee.' By William Cranmer, Edinburgh. 4to.

- 1821, etc. 'Kentish Harmony' (a series of small square volumes published by W. Blackman)

- 'The Apollo.' A similar series, but embellished with portraits.

- 'Convito armonico: A collection of Madrigals, Elegies, Glee, Canons, Catches, and Duets. Selected by S. Webbe, junior.' Four vols. Folio.

1824. 'A Collection of Glee, Canons, and Catches. Composed by the late John Wall Callcott.' Edited by Wm. Horsley. Two vols., with fine portrait.

1864. 'The Rounds, Catches, and Canons of England.' Edited by E. F. Rimbault. Large 4to.

To the above might be added many collections of glee and catches by different writers, such as those of Benjamin Cooke, Maurice Greene, J. Stafford Smith, J. Danby, Wm. Horsley and others. In addition is the great mass of minor publications and single sheets from Purcell's time onwards. F. K.

**CATCH CLUB.** This London society, the full title of which is The Noblemen and Gentlemen's Catch Club, was formed in 1761 for the encouragement of the composition and performance of canons, catches and glee, and the first meeting took place in Nov. of that year, when there were present the Earls of Eglinton, Sandwich and March, Generals Rich and Barrington, the Hon. J. Ward and H. Meynell and R. Phelps. These gentlemen, with the Duke of Kingston, the Marquesses of Lorne and Granby, the Earls of Rochford, Orford and Ashburnham, Viscounts Bolingbroke and Weymouth, Lord George Sutton, Colonels Parker, Windus and Montgomery, Sir George Armytage and H. Penton, W. Gordon and J. Harris, who joined in 1762, were the original members, and all subsequently enrolled were balloted for. Among distinguished persons afterwards admitted to the Club were George IV (elected when Prince of Wales in 1786), William IV (elected when Duke of Clarence in 1789), the Dukes of Cumberland (1786), York (1787), Cambridge (1807) and Sussex (1813). The professional members elected into the Society of the Catch Club included Beard, Battishill, Arne, Hayes, Atterbury, Paxton, S. Webbe, Piozzi, Knvyett, Stevens, Callcott, Danby, Greatorex,

Bartleman, R. Cooke, Horsley, Goss, Walmsley and Turle.

In 1763 the Club offered its first prizes, one for two catches, a second for two canons and a third for two glees, and they were awarded to Baildon, Marella, Hayes and G. Berg. From its foundation to 1794 the prizes were competed for annually, and among the winners were Arne, Hayes, J. S. Smith, Danby, S. Webbe, Lord Mornington, Paxton, Atterbury, Dr. Cooke, R. Cooke, Alcock, Stevens, Spofforth and Callcott. In 1787, in consequence of Callcott's having submitted nearly 100 compositions in competition for the prizes, a resolution was passed that "in future no composer should send in more than three compositions for one prize". From 1794 to 1811 no prizes were offered, and after being awarded for two years they were again discontinued, until in 1821 they were once more revived, a gold cup taking the place of the medals.

The rules of the Club required the members to take the chair in turns at the dinners which were held at the Thatched House Tavern every Tuesday from Feb. to June, except in Passion and Easter weeks. The successive secretaries of the Club to the end of the 19th century were Warren (1761-94), S. Webbe (1794-1812), Sale (1812-28), R. Leete (1828-36), Jas. Elliott (1836-52), O. Bradbury (1852-73), E. Land (1859-76), W. H. Cummings (1876-97) and James A. Brown (1897-1909). Webbe's glees 'Hail! Star of Brunswick' and 'The Mighty Conqueror' were composed specially for George IV, who invariably took his call and sang in his glee; and the Duke of Cambridge attended to the last year of his life and rarely omitted his call, one of his favourite glees being Webbe's 'Glorious Apollo'.

In 1861 the Club celebrated its centenary with much vigour, and to commemorate the event offered a silver goblet for the best 4-part glee, which was awarded to W. H. Cummings for 'Song should breathe'. The Club's meetings were held at the Criterion restaurant till 1915, then discontinued, but resumed in Jan. 1919 at Simpson's in the Strand until 1925. A Ladies' Night was held at the Criterion in May of that year, and it was decided to return to that restaurant for the future. One of the Club's moving spirits to-day (1954) is Lord Saltoun.

C. M., adds.

BIBL.—GLADSTONE, VISCOUNT, 'The Story of the Noblemen and Gentlemen's Catch Club' (privately printed, 1931).

**CATEL, Charles-Simon** (b. L'Aigle, Orne, 10 June 1773; d. Paris, 29 Nov. 1830).

French composer. He studied at the École Royale de Chant (later Conservatoire) in Paris with Gossec and Gobert. In 1787 he was appointed accompanist and *professeur-adjoint* of

the school, and from 1790 to 1802 he was accompanist at the Opéra. In 1790 he also became chief, conjointly with Gossec, of the band of the Garde Nationale, for which he wrote a vast quantity of military music, which was adopted throughout the revolutionary army. His first work of public note was a 'De profundis' for the funeral of Gouvion in 1792. Another was a Hymn of Victory on the battle of Fleurus (26 June 1794), performed 29 June, written for chorus with wind accompaniment only. On the formation of the Conservatoire in 1795 Catel was made professor of harmony. He immediately began the compilation of his 'Traité d'harmonie', which was published in 1802, French and German in parallel columns, and later translated into Italian and English. Founded on the theories of Kirnberger and Turk it remained for many years the standard French text-book of harmony.

In 1810 Catel became one of the inspectors of the Conservatoire, a post which he retained till 1814. In 1815 he was elected member of the Institut, in the place of Monsigny, and in 1824 he was made a Chevalier of the Legion of Honour.

Catel wrote ten operas (*see list below*) of which 'Les Bayadères' (1810) was the most successful; it was given 140 times at the Paris Opéra, parodied twice and translated into German and Russian. His only ballet, 'Alexandre chez Apelle' (20 Dec. 1808), is notable for the fact of the first introduction of the English horn into the orchestra of the Opéra. Besides his theatrical and military music Catel wrote symphonies for wind only, hymns and choral pieces, quintets and quartets for strings and wind, songs, etc. He contributed to the 'Solfèges du Conservatoire'.

G. C., rev. A. L.

The following is a list of Catel's operas, all produced in Paris:

- 'Sémiramis' (lib. by Desriau after Voltaire), Opéra, 3 May 1802.
- 'L'Auberge de Bagnères' (Jalabert), Opéra-Comique, 16 Apr. 1807.
- 'Les Artistes par occasion' (Duval), Opéra-Comique, 24 Feb. 1807.
- 'Les Bayadères' (Étienne de Jouy), Opéra, 8 Aug. 1810.
- 'Les Aubergistes de qualité' (Jouy), Opéra-Comique, 17 June 1812.
- 'Le Premier en date' (Desaugiers and Pessey), Opéra-Comique, 1814.
- 'Bayard à Mézières' (Dupaty and Chazet), Opéra-Comique, 12 Feb. 1814 (with Boieldieu, Isouard and Cherubini).
- 'Wallace, ou Le Ménéstrel écossais' (Fontanes de Saint-Marcellin), Opéra-Comique, 24 Mar. 1817.
- 'Zirphile et Fleur-de-Myrte, ou Cent Ans en un jour' (Jouy and Lefebvre), Opéra, 29 June 1818.
- 'L'Officier enlevé' (Duval), Opéra-Comique, 4 May 1819.

**CATELANI, Angelo** (b. Guastalla, 30 Mar. 1811; d. San Martino di Mugnano, 15 Sept. 1868).

Italian musician and writer on music. He received his first instruction from the organist of his birthplace and afterwards at Modena from Giuseppe Ascoli and M. Fusco. In 1831 he entered the Conservatory of Naples, then under Zingarelli, and became the special pupil of Donizetti and Crescentini. In 1834-37 he was director of the theatre of Messina, in 1837 at Correggio, and he finally settled at Modena in 1838, where he was successively *maestro di cappella* and (from 1859) keeper of the Este Library. Catelani was the composer of an opera, 'Carattacco' (Modena, 1841), as well as of a Requiem and other pieces of church music; but his claim to mention rests on his archaeological works:

Notices of P. Aron, N. Vicentino ('Gazzetta musicale', 1851), 'Epistolario di autori celebri in musica' (1852-54); 'Bibliografia di due stampe ignote di O. Petrucci da Fossombrone' (1856) — a treatise on the two first pieces of music printed from type, 'Della vita e delle opere di Orazio Vecchi' (1856), 'Della vita e delle opere di Claudio Merulo da Correggio' (1860); 'Della vita e delle opere di Alessandro Stradella' (1866).

**CATHEDRAL MUSIC (Anglican)**. The term used to connote music written for the choirs of the English cathedrals, and thus for all Anglican churches so far as they are able to use it, more particularly the harmonized settings of the canticles of morning and evening prayer, commonly known as the Service and Anthem.

Important collections of Cathedral Music were made in the 17th century by Barnard and in the 18th century by Samuel Arnold, Boyce and Tudway. The contents of these collections are catalogued in this Dictionary under the names of their editors.

The ancient statutes of the English cathedrals made provision for an adequate staff of musicians to carry out efficiently the performance of the daily services. In pre-Reformation times the chief of this staff was one of the Prebendaries, or Canons, and was styled Precentor. He held rank next after the Dean and occupied the stall corresponding with that of the Dean on the opposite side of the choir. This is the origin of the terms *Decani* and *Cantoris*, denoting the sides of the choir-stalls, that "of the Dean" (south) and that "of the Cantor" (north), in relation to antiphonal choir-music. The Precentor held supreme authority in all matters concerning the music. Under him was a deputy, called Succentor, or sub-cantor. He was nominated by the

Precentor to act with authority as his deputy in the same department. The Succentor was chosen from among the Priest-Vicars.

The Priest-Vicars, as the term implies, needed to be in priest's orders and acted as deputies of the Prebendaries. In some establishments there were as many as twelve Prebendaries and the same number of Priest-Vicars. Their principal duty was to perform all those parts of the mass and the daily offices and prayers that required musical intonation. It was also customary for them to take part in singing the choir music. The main responsibility for this latter duty rested upon the Vicars Choral. In this capacity they too were acting as vicars of Prebendaries. In some establishments, but not all, the Vicars Choral were in minor orders. The musical staff was completed by the Choristers, boys with unbroken voices.

At the time of the dissolution of the monasteries the cathedrals came to be divided into two classes. The "secular" establishments retained their position with their statutes unmolested. Consequently they were known, and are still known, as "the Cathedrals of the Old Foundation". Among examples of these are York, Lincoln, Exeter and Hereford. The "monastic" establishments suffered dissolution; but a certain number of them were reconstituted as diocesan cathedrals, with new statutes issued under the authority of Henry VIII. These are known as the "New Foundation Cathedrals", a title that now sounds a little strange, seeing that it applies to Canterbury and Winchester. St. Paul's Cathedral occupies a different position from all these, for it was reconstituted as recently as the 19th century.

The statutes of the New Foundation cathedrals were drafted, in a general way as far as the musical staff was concerned, on much the same lines as those of the old. The term Canon was substituted for that of Prebendary. But in process of time it had become unusual to find a Canon with sufficient musical qualification to perform the highly specialized duties of a Precentor. The Henry VIII statutes provided that this office should be held by a Minor Canon somewhat on the same footing as that of the Succentor in the Old Foundations, but endowed with independent authority as regards all musical matters, such as the choice of music to be sung at the services. In a parallel position the style of Minor Canon was adopted in the place of Priest-Vicar and the duties were exactly similar. The Minor Canons were in no vicarious position like the Old Foundation priests, but in no instance except at St. Paul's Cathedral did the Minor Canons form a separate corporation like the Priest-Vicars of Exeter and Hereford. In the New Foundations the choir-men rank as Lay

Clerks instead of Vicars Choral in the Old. In the Old Foundations the position of the Organist was unduly modest, although before the 16th century there was little need of a highly skilled player in cathedral usage. He ranked as one of the Vicars Choral, and like them was usually in minor orders. Under the Henry VIII statutes his status was properly established, and he held a freehold position like other members of the establishment. Some of the ancient freehold rights attached to certain offices in the cathedrals have recently been modified under new statutes, issued under the authority of Parliament.

**CATLEY, Ann** (b. London, 1745; d. nr. Brentford, 14 Oct 1789).

English soprano singer. She was born of very humble parents, her father being a hackney coachman and her mother a washer-woman. Endowed with great personal beauty, a charming voice and a natural talent for singing, she gained her living at the early age of ten by singing in the public houses in the neighbourhood of Tower Hill, where she was born, and also for the diversion of the officers quartered in the Tower. When about fifteen years of age she was apprenticed by her father to William Bates for the purpose of receiving regular instruction in the art of singing, Catley binding himself in the penalty of £200 for her due fulfilment of the covenants in the indenture. She made rapid progress, and in the summer of 1762 made her first appearance in public at Vauxhall Gardens. On 8 Oct. in the same year she appeared at Covent Garden Theatre as the Pastoral Nymph in Dalton's alteration of Milton's 'Comus', and in 1763 at Marylebone Gardens after some litigation occasioned by the attempts of Sir Francis Blake Delaval (a young baronet who had taken her to live with him) to put an end to her apprenticeship to Bates. Shortly afterwards she became a pupil of Macklin, the actor, who procured her an engagement at Dublin, where she became a great favourite.

In 1770 she returned to England and reappeared at Covent Garden on 1 Oct. as Rosetta in 'Love in a Village'. After the season she was again engaged at Marylebone Gardens, where she appeared on 30 July 1771 and sang until the close of the season. She sang in O'Hara's burletta 'The Golden Pippin', on its production at Covent Garden

in 1773. In this occurred the song "Where's the mortal can resist me", which, slightly varied, is now known as the hymn-tune "Helmsley".<sup>1</sup> Having amassed an independence Ann Catley retired from public life in 1784. She died at the house of General Lascelles, her husband.

W. H. H., rev.

**CATLEY, Gwen** (*Gwendoline Florence*) (b. London, 9 Feb. 1910).

English soprano singer. She was educated privately and studied singing at the G.S.M. in London under Bantock, Pierpoint, Walter Hyde and Jenny Hyman. She also had lessons privately from Julian Kimbell. She won the Gold Medal at the G.S.M., and Sir Landon Ronald, who was then Principal, sponsored her début at the Wigmore Hall in 1938. She joined the B.B.C. chorus, and Joseph Lewis gave her her first engagement with the B.B.C. Symphony Orchestra.

In 1941 she sang Gilda in 'Rigoletto' with the Carl Rosa Opera Company, with whom she has since sung frequently. She was in the revue 'Hi-De-Hi', which ran at the Stoll Theatre in London for over a year from 1942, and she has sung with all the leading orchestras in Britain. Besides appearing in concert and opera she has sung "coloratura" parts in two films and has made numerous recordings. She appears frequently in television and broadcasts regularly. She is a versatile artist and does not specialize in any particular type of song, but the even clarity of her voice is well suited to works requiring delicate singing and her agility in florid parts is exceptional. These qualities were especially evident in some programmes of little-known vocal trios by Mozart, in which she broadcast.

**CATO, Diomedes**. See DIOMEDES CATO.

**CATTOIRE (Katuar), Georges Lvovich** (b. Moscow, 27 Apr. 1861; d. Moscow, 21 May 1926).

Russian composer of French descent. He studied with Klindworth and others in Berlin, with Liadov in St. Petersburg. His early work attracted the favourable attention of Tchaikovsky. A Symphony in C minor, Op. 7, and the symphonic poem 'Mzyri' (after Lermontov), Op. 13, were among the works with which he first made his mark. His piano-forte Concerto in A♭ major, Op. 21, was introduced to England at the Promenade Concerts of Queen's Hall in Aug. 1920 by Sir Henry Wood and Isabel Gray. His pianoforte sonatas and chamber works further served to carry his name outside his own country. He was professor of composition at the Moscow Conservatory and issued a Manual of Harmony.

<sup>1</sup> See CARTER, CHARLES THOMAS.

**CATRUFO, Giuseppe** (b. Naples, 19 Apr 1771; d. London, 19 Aug. 1851).

Italian composer. He studied music at Naples and produced two comic operas, 'Il corriere' and 'Caiaciello desertore', at Malta in 1792 and 1793 and two more at Arezzo and Florence in 1799. Subsequently he lived for some years at Geneva<sup>1</sup>, and from about 1810 to 1835 in Paris, before he settled in London as a singing-teacher. Of his French *opéras-comiques* 'Félicie, ou La Jeune Fille romanesque' (1815) was by far the most successful. Catrufo also wrote some church music, pianoforte pieces and romances, a 'Méthode de vocalisation' (1830) and other theoretical works. His *solfèges progressifs* and *vocalises* were widely used for teaching purposes for a long time after his death.

See also Lemièrre de Corvey (collab. in 'Rencontres').  
**"CAT'S FUGUE, THE."** The familiar nickname of a harpsichord exercise (sonata) by Domenico Scarlatti (G minor, No. 499, Vol. X, in Longo's edition). Its subject, at its entry, rises in curious intervals (g, b $\flat$ , c $\sharp$ , f $\sharp$ , b $\flat$ , c $\sharp$ , d $\flat$ ), suggesting the haphazard succession of notes produced by a cat walking up the keyboard. But whether such an incident ever occurred is not known.

E. B.

**CATTERALL, Arthur** (b. Preston, Lancashire, 1883; d. London, 28 Nov. 1943).

English violinist. He was a pupil of Willy Hess in 1894 and of Adolph Brodsky (at the Royal Manchester College of Music) in 1895. He played at all Cosima Wagner's soirées at Bayreuth in 1902, and the following year at a Hallé concert in Manchester in Tchaikovsky's Concerto. In 1909 he led the orchestra of the Queen's Hall Promenade Concerts in London and in 1912-25 the Hallé orchestra. He was professor at the Royal Manchester College of Music.

Catterall was heard at his best in chamber music; he had a strong lead, but was without temperamental eccentricities, being a self-contained classical player who let the music of the great masters speak for itself.

In the season of 1910-11 he established the Catterall Quartet, which originally consisted of himself as leader, O'Malley, second violin, David Reggel, viola, and Johan C. Hock, cello. In the season 1914-15 an alteration was made in the personnel of the quartet, O'Malley resigning through ill-health and Reggel securing an appointment in the U.S.A. In their places were appointed John S. Bridge, second violin and Frank S. Park, viola, and the quartet remained so for ten years (to 1925). Later further changes took place in the middle instruments, the final team including Audrey Catterall, the leader's daughter, as second violin and Lena Wood as viola, but Catterall and Hock remained to the last.

<sup>1</sup> Not Genoa as usually stated.

It may be recorded that the first performance of Elgar's Quartet in the provinces was given by the Catterall Quartet, and also the first performance in England of Pizzetti's Quartet. But the repertory consisted mainly of the old masters, and in no case was a work undertaken which was not entirely approved by all the four players. W. W. C., adds.

**Catullus, Gaius Valerius.** See MILHAUD (4 songs). Orff (scenic cantata). Pizzetti ('Epithalamium', choral work).

**CATURLA, Alejandro García** (b. Remedios, 7 Mar. 1906; d. Remedios, 12 Nov. 1940).

Cuban composer. He studied law and became a judge in his native town of Remedios, where he was assassinated by a criminal. He took lessons in composition first in Havana, with Pedro Sanjuán, then in Paris with Nadia Boulanger. Having acquired a considerable technique in the modern style, he applied it to his music, rooted entirely in Afro-Cuban rhythms and melodic inflections. His orchestral suite '3 danzas cubanas' (1928) still retains a traditional form; in his "Afro-Cuban movement" 'Bembé' (1929), scored for pianoforte, wind instruments and percussion, he abandoned formal design for realistic representation of a ritual dance. Still farther along the road to modernistic primitivism is his Negro liturgy 'Yamba-O' for full orchestra with voices. Despite his free use of dissonant harmonies, the sense of tonality is maintained through a frequent recourse to pedal-points. Caturla's other works are 'Primera suite cubana' (1930) for pianoforte and 8 wind instruments, 'La rumba' for orchestra (1931), 'Obertura cubana' (1938) and several pianoforte pieces and songs.

**CAURROY, François du.** See DU CAURROY.

**CAUSINUS, Arnoldus.** See CAUSSIN, ERNOLD.

**CAUSSIN, Ernold** (Arnoldus Causinus) (b. Ath, ?; d. ? Parma, ?).

Netherlands 16th-century composer. He

learned music from Josquin des Prés at the cathedral of Cambrai about 1520, and in 1526 he matriculated at the University of Cracow. In Oct. 1529 he is found in the service of the Cappella Steccata at Parma, the direction of which was entrusted to him from 1534 to 1539. Between Apr. 1547 and Feb. 1548 he was still — or again — there, and after that all traces of him disappear. On the title-page of the first book of his 5-part motets (1548) he is spoken of as "musicus celeberrimus". Other motets of his appeared in the 'Motetti del fiore' (1539-42) and in collections of 1542, 1555 and 1556. E. v. d. s., rev.

**CAUSTUN (Causton)** <sup>1</sup>, **Thomas** (b. ?; d. London, 28 Oct. 1569).

English composer. He appears as one of the 40 Gentlemen of the Chapel Royal among a list of musicians, with their fees, contained in the Establishment Book for 1552<sup>2</sup>, and continued as such until his death, as is testified by the following extract from the Chapel Royal Cheque Book:

1569. Mr Causton died the 28 of October, and Richard Farrant was sworn in his place the 5 of November.

He contributed largely to the 'Certaine Notes' (1560) of John Day. His name, or initials, only occur occasionally in the first edition, but in a reprint, that of 1565, he is credited with a good deal. From a collation of these two editions he appears as the composer of two complete services (each including a Morning, Communion and Evening Service), an alternative Evening Service (M and ND) belonging to the first whole service, and 5 anthems. The 1565 edition also contains another anthem (or "prayer", as it is styled in Day), 'Most Blessed Lord Jesu', by Causton. Day's 'Whole psalmes in foure partes' (1563) contains 141 settings, and of these 27 are by Causton. His work here is rather different from that of the rest. The majority are simple settings, often in plain counterpoint, but Causton's part-writing is much more elaborate, with small points of imitation, usually at small intervals, very closely wrought into the texture.<sup>3</sup> A Morning Service by Causton is in B.M., Add. MSS 31,226, and another (from 'Certaine Notes') in B.M., Add. MSS 30,480-3. A Venite and Communion Service by him were printed in Jebb's 'Responses' (1847), and a Communion and Evening Service by Novello (ed. Royle Shore).

J. M. (ii), rev.

**CAVACCIO, Giovanni** (b. Bergamo, c. 1556; d. Bergamo, 11 Aug. 1626).

Italian composer. In 1581 he was *maestro di cappella* at the Cathedral of Bergamo. Thence after twenty-three years' service he was called

to be *maestro* at Santa Maria Maggiore there, where he remained till his death.

Cavaccio contributed to a collection of Psalms, dedicated in 1592 to Palestrina. His works include a Requiem published at Milan (1611); Magnificats (1581 and 1582); Psalms (1585); Madrigals (1585, 1597, etc.). Some of his pieces are in the 'Parnassus musicus' of G. B. Bonometti of Bergamo, and 3 organ pieces are given in Vol. III of Torchi's 'L'arte musicale in Italia'. G., adds.

**CAVAILLÉ-COLL, Aristide** (b. Montpellier, 4 Feb. 1811; d. Paris, 13 Oct. 1899).

French organ builder. He descended from several generations of distinguished organ craftsmen in the south of France, named Cavaillé. The name of Coll was that of his grandmother. In 1833 he went to Paris to see what progress was being made in his art, but without the intention of establishing himself there. Hearing that there was to be a competition for the construction of a large organ for the basilica of Saint-Denis, he determined to send in a tender, although only two days remained for preparing it. When called up before the committee he gave them such interesting explanations of his plans that they decided to accept his tender. Barker's pneumatic lever was first used in this organ. He thus became established in Paris, built the fine organ of the Madeleine, and many others in the capital and in the provinces. Among his greater works are the organs in the Paris churches of Notre-Dame, Saint-Sulpice and Sainte-Clotilde. His instruments were responsible for the "symphonic style" of organ playing in France in the latter half of the 19th century. He wrote:

'Études expérimentales sur les tuyaux d'orgue' (1849).

'De l'orgue et de son architecture' (1856).

'Projet d'orgue monumental pour la basilique de Saint-Pierre de Rome' (1875).

Charles Mutin, a pupil, succeeded as head of the firm, Gabriel, son of Aristide, having founded a firm of his own in 1892.

<sup>2</sup> B.M. Stowe 571/366. <sup>3</sup> See M. & L., Apr. 1924.

Oratorio del Santissimo Crocifisso in Rome, from 1578 to 1584, when he went to Florence, where he was Inspector-General of Arts and Artists in 1588-96. A member of the Bardi circle at Florence, he helped to further the new style of composition together with such men as Caccini, Peri and Marco da Gagliano, and, with them, can be considered as one of the early composers of opera. His portrait is to be found in Hawkins's 'General History of Music'.

Although he wrote *intermedii* in the old style for celebrations in honour of the wedding of Ferdinand I, Grand Duke of Tuscany, with Christine of Lorraine in 1589, his importance derives from his contribution to monodic music for the stage. In 1590 he set to music 'Il saturo' and 'La disperazione di Fileno', words by Laura Guidiccioni, both of which have been classed by Solerti as *favole pastorali*.<sup>1</sup> From the notice to the reader in a later work, 'La rappresentazione di Anima, e di Corpo', we know that appropriate gestures and movements were expected from the singers. In the same year he set to music extracts from Tasso's 'Aminta' and, in 1595, 'Il giuoco della cieca', adapted by Guidiccioni from Guarini's 'Pastor fido'. The same notice to the reader tells us that it was a "pastorella tutta in musica". These works are akin to the *rappresentazioni musicali* given annually at Venice from 1578, and are links between opera and the *intermedii* which had been acted with music and scenery almost throughout the century at court.

Cavalieri's best-known work, 'La rappresentazione di Anima, e di Corpo', words by Agostino Manni, was first performed in Feb. 1600 at the Oratorio della Vallicella, St. Philip Neri's church in Rome, a coincidence from which it has been wrongly described as the first oratorio. It is in fact a sacred drama, intended to please all tastes "perchè di questa ho fatto elezzione che sia la prima di tutte in istampa, accio il secolare, ed il Religioso ne possano godere". Cavalieri gives clear indications for the method of performance. It could be given in a theatre or a hall to not more than a thousand spectators, and the actors had to be dressed beautifully and with variety; the orchestra, situated behind the scenes, should be adapted to the needs of each performance. He suggests "una lira doppia, un clavicembalo, un Chitarrone, o Teorba" or "un Organo soave con Chitarrone" and, for the finale, two flutes and "Tibie all' antica", a significant acknowledgment to the antiquarian interests of the Florentine *camerata*. In the preface he explains the shorthand method for indicating the necessary harmonies from which evolved the figured bass. He also explains the vocal ornamentation to be used.

<sup>1</sup> *Sq. Riv. Mus. It.*, X, 468.

Here the *trillo*, unlike the same ornament in Caccini's 'Nuove musiche', is the equivalent of the modern trill.

The principal characters in the work are allegorical personifications of Time, Life, the World, Pleasure, the Intellect, the Soul and the Body, and its purpose is didactic, conforming to the methods of the Counter-Reformation by which the senses are utilized for moral and ethical purposes. The characters speak in short recitatives which, owing to the numerous cadences, give the music a certain monotony. The choruses of Blessed and Damned Spirits are well contrasted, and the favourite device of the echo is used to good effect. The whole is divided into three acts, and Cavalieri suggests four *intermedii* to intersperse them. This in itself is significant, since opera in three acts was unusual until the public performances at Venice starting in 1637. Equally, the instructions for performance class the work more as a sacred stage drama, the first of a number connected later with the fortunes of the Barberini family in Rome, rather than as the forerunner of oratorio.

'La rappresentazione di Anima, e di Corpo' was edited originally by Guidotti of Bologna.<sup>2</sup> A facsimile score, edited by Mantica, also the libretto, edited by Alaleona, appeared in Rome, both in 1912. There is a manuscript in the B.M., copied from a transcription in Brussels for Hughes Hughes in 1886. A stage performance, probably the first in modern times and indeed, as far as can be ascertained, the only one since 1600, was given, in a translation by Edward J. Dent, by the Girton College Musical Society, Cambridge, on 9 June 1949. s. T. W. (ii).

CAVALIERI, Katharina (b. Währing nr. Vienna, 19 Feb. 1760; d. Vienna, 30 June 1801).

Austrian soprano singer. At a very early age she was placed under Salerni by some wealthy connoisseurs who had heard her sing in church, and in 1775, when barely fifteen, was engaged to sing in Italian opera in Vienna. A year later the Emperor Joseph founded a German Opera, to which she was transferred. As Cavalieri never sang out of Vienna, her name was almost unknown elsewhere, but Mozart's approval stamped her as an artist of the first rank. In one of his letters (1785) he says: "She was a singer of whom Germany might well be proud"; and it was for her that he composed the part of Constanze in the 'Entführung', the soprano part in 'Davide penitente', that of Mme Silberklang in the 'Schauspieldirektor' and the aria "Mi tradi" in 'Don Giovanni', on its first Vienna per-

<sup>2</sup> *Ibid.*, IX, 797.

formance on 7 May 1788. Salieri called her his favourite pupil and wrote the principal parts of several operas for her. She sang in nearly all the oratorios produced by the Tonkünstler-Societät and maintained her popularity to the last against many eminent singers. Her voice was of considerable compass, she was a cultivated musician, and she made up for her want of personal attractions by her fascinating manners. She was compelled, from over-exertion, to retire when in the prime of life (1793). C. F. P.

**CAVALIERI, Lina** (b. Viterbo, 25 Dec. 1874; d. Florence, 8 Feb. 1944).

Italian soprano singer. Endowed by nature with a good voice and unusual beauty, she began her public career at the age of fourteen as a singer at café-concerts. A growing reputation led, after five or six years, to the ambition for better things, and she took up serious study in Italy with Signora Mariani-Masi. In 1901 she made her début on the operatic stage at the Royal Theatre, Lisbon, as Nedda in 'Pagliacci', the music of which suited her rather light voice admirably. Her subsequent successes in Italy, France, England and America were chiefly gained in parts of this calibre, such as Thais, Manon, Mimi and Gilda, rather than in the slightly heavier modern repertory which she also attempted. During her first London season at Covent Garden (1908) she appeared in Puccini's 'Manon Lescaut' and 'Tosca' and Giordano's 'Fedora'. After 1906, however, her career was principally confined to the U.S.A., where she sang in New York and Chicago. She married the tenor Lucien Muratore, with whom she took part in several concert tours, but from whom she was divorced in 1927. Later she married Giuseppe Campari. She was killed in an air-raid on Florence.

H. K., adds.

**CAVALLERIA RUSTICANA** ('Rustic Chivalry'). Opera in 1 act by Mascagni. Libretto by Guido Menasci and Giovanni Targioni-Tozzetti, based on Giovanni Verga's play. Produced Rome, Teatro Costanzi, 17 May 1890. 1st perf. abroad, Stockholm (trans. by H. Key), 11 Dec. 1890. 1st in U.S.A., Philadelphia (in Italian), 9 Sept. 1891. 1st in England, London, Shaftesbury Theatre (in Italian), 19 Oct. 1891.

For a sequel see Borch ('Silvio').

**CAVALLI, (Pietro) Francesco** (b. Crema, 14 Feb. 1602; d. Venice, 14 Jan. 1676).

Italian composer. He was the son of Gian Battista Caletti-Bruni, for forty years director of the cathedral choir at Crema, and he took the name of Cavalli from his patron, a Venetian nobleman. In 1617 he became singer in the choir of St. Mark's under Monteverdi, in 1640 organist at the second organ, in 1665 organist at the first organ in that church and in 1668 *maestro di cappella*. Of his church music no-

thing has been published beyond 'Musiche sacre', containing a Mass, psalms and antiphons for 2 to 12 voices (Venice, 1656), and vespers for 8 voices (*ibid.* 1675). Santini possessed a Requiem (sung at the composer's funeral) for 8 voices in manuscript.

Cavalli's operas were very numerous, as the appended list will show. He began to write for the theatre in 1639 ('Le nozze di Teti e di Peleo'), and continued to do so for thirty years. There were then six theatres at Venice capable of producing opera, and Cavalli was fully employed. Bonlini, the author of 'Le glorie della poesia e della musica' (Venice, 1730) gives the names of 34 operas which he produced for Venice alone between the years 1637 and 1665. Altogether 42 operas are accounted for, 26 of which are in the Marciana Library, Venice, and two more elsewhere. In 1660 he was called to Paris for the marriage of Louis XIV and produced his opera of 'Xerse' (originally written for Venice, 1654) in the Grand Gallery of the Louvre; to Paris again in 1662 for the Peace of the Pyrenees, when he brought out 'Ercolo amante'; and to Innsbruck for the festivities held at the reception of Queen Christina. His wife belonged to the Sozomeni family; he grew rich and enjoyed the esteem and affection of his fellow-citizens. He took the opera from the hands of Monteverdi and maintained it with much dramatic power and with a force of rhythm before unknown. G., adds.

Until Monteverdi's operas, more particularly the late works 'Il ritorno d'Ulisse' and 'L'incoronazione di Poppea', were published in complete editions, and until the history of the Roman opera became known, a true understanding of Cavalli's operas and their place in the history of opera was impossible. To draw a modern analogy, one might say that Monteverdi and Cavalli stand in the same relation to each other as Richard Wagner and Richard Strauss. Monteverdi is unquestionably the greater genius, but Cavalli is the more brilliant of the two. Monteverdi prepared the way for Cavalli, who in his turn enriched the Venetian stage with such a wealth of outstanding works that he may be regarded as the most significant figure in the field of opera in Venice.

To the Venetian works must be added a few others, including 'Ercolo amante', composed apparently in 1660 for the Paris celebrations of Louis XIV's marriage, but not given there until 1662, during Cavalli's visit. This work is remarkable as showing characteristics of the French style at a date before the French influence can be said to have made itself generally felt among the Venetians. The librettists whose works Cavalli most frequently set were Giovanni Faustini and Nicolò Minato. A few librettos are by Francesco Busenello, one

of the greatest dramatists of the period, who also wrote the libretto of Monteverdi's 'L' incoronazione di Poppea'.

Regarded in their chronological order, the titles of the librettos show that Cavalli at first drew his materials from the realm of gods and heroes, but that later he turned his choice to episodes in the history of Greece and Rome. This is not a matter of Cavalli's personal tastes, but reflects a change in the general preference for certain types of story.

In his 'Orfeo' Monteverdi incorporated instrumental and vocal pieces of a kind that had existed before the rise of the *dramma per musica* — to use the most exact designation of the form which we briefly term opera — and had linked them by dialogue written in the style of the *nuove musiche*. In his later operas he eliminated, as far as possible, the self-contained forms and wrote the whole work in a unified dramatic style. Cavalli uses this style from the first. There are hardly any choruses in his earliest operas, the recitative has taken on an *arioso*-like character, thus avoiding too strong a contrast between the treatment of the ordinary dialogue on the one hand and the dramatic or lyrical points on the other. The *arioso* may be described as short phrases frankly melodic in character, developed organically but less conclusively than in the later Venetian operas. Self-contained songs, which are described as arias, appear only in isolated cases; they are mostly in binary and ternary forms, with variations of the several strophes. Instrumental pieces are confined to the most important points — the beginning of the acts, changes of scene, processions and a few crucial points in the action. In Cavalli's operas, as in Monteverdi's later works, the musical climax coincides with that of the drama, and it is this which gives to his operas their strength of dramatic expression.

Like his predecessors, Cavalli is fond of giving force to his melodic line by the use of motives based on the triad and allowing the bass to provide an imitative accompaniment to the voice. The opening of Iride's arietta from the prologue of 'Didone' may serve as an example:

The most famous instance comes from Medea's aria in 'Giasone':

Here the inexorable character of Medea, as she invokes the powers of the underworld, is marvellously suggested by a series of E minor chords. The subsequent alteration of these minor chords to C major produces an extraordinarily powerful dramatic effect. Cavalli's operas, however, are lacking in those remarkably bold harmonic progressions found in Monteverdi. On the other hand he uses chromatic inflection effectively as a means of pathetic expression, for example the wailing cry of Isifile in the second act of 'Giasone':

In his first period Cavalli rarely writes duets, and those he does write are not particularly good. The great age of the duet did not begin until after the Monteverdi-Cavalli epoch. On the other hand he treats with great skill a form of song which, in the operas of the Venetian school, stands just before the *dénouement* and is usually called *lamento*. The melody of the *lamento* is as a rule built up over a short recurrent bass motif, a *basso ostinato*, and is thus in the form of a *passacaglia*. It is singular that all these ground-basses bear a certain resemblance to each other. Frequently they are built upon a descending fourth, diatonic or chromatic:

ELIOGABOLO  
Aria of Hasdrubal

EGISTO  
Aria of Climens

or upon an inversion or variation of the fourth:

CIBO  
Aria of Manda...

In a few cases the descending scale-passage is more freely handled and the motif is spread out over a whole octave, as in the song of Amor in 'La virtù de' strali d' Amore' (1642).

The simple melody over the ground-bass is replaced, in the middle section, by a more elaborately ornamented vocal line:

In the Roman opera, which reached its peak between Monteverdi's early works and Cavalli's, the chorus plays an important part. In Cavalli's works, on the contrary, it is cut down to a minimum and after 'Egisto' (1643) excluded from his operas for over ten years. 'Ercole amante', written for the French court, is the first work to be once more richly interspersed with choruses. In most of his operas the choruses are very simple, adapted to the weakness of Venetian stage choirs. But Cavalli was perfectly capable of writing a good choral movement, as is shown by the ensembles in the prologue of 'Ciro' (1654), in which the vocal parts are skilfully handled, with an abundance of imitative entries. In his instrumental movements Cavalli begins by following Monteverdi, but later gives them a richer development. Even his first opera, 'Le nozze di Teti e di Peleo' (1639), contains a *sinfonia*, entitled 'Concilio Infernale'. This piece (to which H. Kretzschmar first drew attention and which is printed in full in the O.H.M., III, 131) opens with a broken chord of E minor, taken up by one part after another, which is meant to suggest the powers of darkness. A somewhat quicker section follows, after which the E minor chord returns, again followed by the second section in a shortened

form. The whole piece takes no more than thirteen bars. At first Cavalli frequently uses the technical device of a ground-bass repeated on the different degrees of the triad, upon which he constructs a short three- or four-part movement. Gradually he widens the scope of the *sinfonia* and the *ritornello* by means of sequences or fugal entries of the parts. But these instrumental pieces are generally the weakest features of his operas.

Cavalli's instrumentation is much less rich in orchestral colouring than that employed by Monteverdi in 'Orfeo'; it is the same as that of Monteverdi's 'L'incoronazione di Poppea'. It must be remembered that the rich colours used by Monteverdi in 'Orfeo' were the expression of an earlier age. The Venetian theatre employed mainly strings, while wind instruments were used but rarely and at few points. The 'Codici Contarminiani' in the Biblioteca di San Marco at Venice, which are the source for Cavalli's operas, can in no way be regarded as scores in the present sense of the word. They are outlines, nearly all amazingly sketchy, generally consisting merely of the vocal line and the figured bass. Often in the choruses the canonic entries alone are written out and the rest left incomplete. Again, an aria may be laid out on five staves, the first bar is clearly written out for the voice and the instrumental parts, after which there is a sign to show that the parts are to continue more or less in the manner indicated. A modern editor, therefore, cannot merely content himself with filling in the keyboard part, but in all such places, and in others, must complete the score. This means that his work is much more than an "edition"; it inevitably becomes a free revision, the scope of which must depend entirely on the editor's personality.

Of all Cavalli's operas the most famous, and, since its publication by Eitner<sup>1</sup>, the best-known and most quoted is 'Giasone'. But no less worthy of note is 'Ciro' (1654), the prologue of which is extraordinarily gripping, both poetically and musically. (It is given in full by Wellesz, *see* Bibl.). In this prologue the poet anticipated Goethe's 'Faust' in his idea of a symbolical discussion of the ensuing drama. Poetry, Painting, Architecture and Music are discovered in the act of completing a new musical drama. They are joined by Curiosity, full of inquiries as to what may be expected of the new drama, and whether it answers all expectations. Then follows a conversation in which all the arts relate what they have done for the work, and they finish setting the stage in full view of the audience.

It is difficult to decide whether it would be at all possible to restore to the modern

<sup>1</sup> 'Die Oper', Part II.

operatic stage any one of Cavalli's operas in a revised form, as Monteverdi's 'Orfeo' and 'L' incoronazione di Poppea' have been restored. Generally speaking, it is sufficient for the modern stage to have one representative of any epoch — as here for the Venetian

opera — and Monteverdi is better suited to act as such. It would, however, assuredly be well worth while to perform selected scenes from Cavalli, one of the most significant figures in the field of opera.

E. J. W.

The following is a list of Cavalli's operas:

<i>Title</i>	<i>Libretto</i>	<i>Production</i>
*' Le nozze di Teti e di Peleo.'	Orazio Persiani	Venice, Teatro San Cassiano, 24 Jan. 1639.
*' Gli amori d' Apollo e di Dafne.'	Giovanni Francesco Busenello.	Venice, Teatro San Cassiano, Carnival 1640.
*' Didone.'	Busenello.	Venice, Teatro San Cassiano, Carnival 1641.
' Narciso ed Ecco immortalati '	Persiani.	Venice, Teatro SS. Giovanni e Paolo, 30 Jan. 1642.
' Amore innamorato.'	Giovanni Battista Fusconi.	Venice, Teatro San Moisè, 1 Jan. 1642.
*' La virtù de strali d' amore '	Giovanni Faustini.	Venice, Teatro San Cassiano, Carnival 1642.
*' Egisto.'	Faustini.	Venice, Teatro San Cassiano, autumn 1643.
' Deidamia.'	Scipione Herrico.	Venice, Teatro Novissimo, 5 Jan. 1644.
*' Ormindo.'	Faustini.	Venice, Teatro San Cassiano, Carnival 1644.
' Il Romolo e 'l Remo.'	Giulio Strozzi	Venice, Teatro SS. Giovanni e Paolo, 5 Feb. 1645.
*' Doriale.'	Faustini.	Venice, Teatro San Cassiano, Carnival 1645.
' Titone.'	Faustini.	Venice, Teatro San Cassiano, Carnival 1645.
' La prosperità infelice di Giulio Cesare dittatore.'	Busenello.	Venice, Teatro Novissimo, 1646.
' Torilda.'	Pietro Paolo Bissari.	Venice, Teatro San Cassiano, Carnival 1648.
*' Giasone.'	Giacinto Andrea Cicognini	Venice, Teatro San Cassiano, 5 Jan. 1649.
' Euripo.'	Faustini.	Venice, Teatro San Moisè, Carnival 1649.
' Bradamante.'	Bissari.	Venice, Teatro SS. Giovanni e Paolo, Carnival 1650.
*' Orimonte '	Niccolò Minato.	Venice, Teatro San Cassiano, 20 Feb. 1650.
*' Alessandro vincitore di se stesso.'	Francesco Sbarra.	Venice, Teatro SS. Giovanni e Paolo, 20 Jan. 1651.
*' Oristeo '	Faustini.	Venice, Teatro Sant' Apollinare, Carnival 1651.
*' Rosinda '	Faustini.	Venice, Teatro Sant' Apollinare, 1651.
' Armidoro.'	Bartolommeo Castoreo.	Venice, Teatro San Cassiano, 1651.
*' Calisto.'	Faustini.	Venice, Teatro Sant' Apollinare, autumn 1651.
*' Veremonda, l' amazzone di Aragona.'	Maiolino Bisaccioni, arranged by Luigi Zorzisto.	Venice, Teatro SS. Giovanni e Paolo, 28 Jan. 1652.
*' Eritrea '	Faustini.	Venice, Teatro Sant' Apollinare, 1652.
' Helena rapita da Teseo '	Giacomo Badoaro	Venice, Teatro SS. Giovanni e Paolo, 1653.
*' Orione.'	Francesco Melosio.	Milan, Teatro Regio, June 1653.
*' Serse' (' Xerse').	Minato	Venice, Teatro SS. Giovanni e Paolo, 12 Jan. 1654.
*' Ciro.'	Giulio Cesare Sorrentino.	Venice, Teatro SS. Giovanni e Paolo, 30 Jan. 1654.
*' Statira, principessa di Persia.'	Busenello.	Venice, Teatro SS. Giovanni e Paolo, 18 Jan. 1655.
*' Erismena.'	Aurelio Aureli.	Venice, Teatro Sant' Apollinare, Jan. 1655.
*' Artemisia.'	Minato.	Venice, Teatro SS. Giovanni e Paolo, 10 Jan. 1656.
' Antioco '	Minato.	Venice, Teatro San Cassiano, 21 Jan. 1658.
*' Hipermestra.'	Giovanni Moniglia.	Florence, Teatro della Pergola, 18 June 1658.
*' Elena.'	Minato (after a scenario by Faustini).	Venice, Teatro San Cassiano, 26 Dec. 1659.
' La pazzia in trono, ovvero Caligola dellirante.'	Domenico Gisberti.	Venice, Teatro Sant' Apollinare, 1660.
*' Ercole amante.'	Francesco Buti.	Paris, Tuileries, 7 Feb. 1662.
*' Scipione Africano.'	Minato.	Venice, Teatro SS. Giovanni e Paolo, 9 Feb. 1664.
*' Mutio Scevola.'	Minato.	Venice, Teatro San Salvatore, 26 Jan. 1665.

Title	Libretto	Production
* 'Pompeo Magno' 'Coriolano.' * 'Eliogabalo'	Minato Cristoforo Ivanovich. Aureli.	Venice, Teatro San Salvatore, 20 Feb. 1666. Piacenza, Teatro Ducale, 1669 Score extant, performance not recorded.

Of these 42 operas 28, marked \*, are preserved in score; the others are known only by the librettos

VIVIANI ('Scipione Africano' altered).  
 CAVALLINI, Ernesto (b. Milan, 30 Aug. 1807; d. Milan, 7 Jan. 1874).

Italian clarinetist. He was taught at the Milan Conservatory and after an engagement at Venice and considerable travelling he returned to his native city, first as player in the orchestra of the Teatro alla Scala and then as professor in the Conservatory. In 1852 he accepted a post in St. Petersburg, which he filled for fifteen years, after which he returned to Milan in 1870. In 1842 he was elected a member of the Paris Académie des Beaux-Arts.

Cavallini travelled much and was well known in Paris, London and Brussels. He played a Concerto of his own at a Philharmonic concert in London on 23 June 1845. Fétis describes his volubility and technique as prodigious and his breath as inexhaustible, his intonation was also very good, though his instrument was only the old six-keyed clarinet.

G.

CAVAN, Marie. *See* MAŘÁK (O.).

CAVATA (Ital., an epitaph, lit. a thing carved or dug). In music the term has been used for a short *arioso* following a recitative, particularly in the early 18th century, and it suggests something brief and epigrammatic. It occurs rarely, however, unlike its diminutive, which is *cavatina*.

E. B.

CAVATINA (Ital., dim. of *cavata* = a "digging out", i.e. in music the act of producing tone from an instrument). The term originally signified a short song, without a second part or *da capo*, but it is frequently applied to a smooth air forming part of a grand scena; also to an instrumental movement (e.g. in Beethoven's Quartet, Op. 130) or piece (e.g. Raff's Op. 85 No. 3) of that type.

W. H. C., adds.

<sup>1</sup> B.M. Add. MSS 14,221 (f. 86) contains a 'Recitativo con cavata' by Cafaro.

CAVAZZONI, Girolamo (b. ? Urbino, c. 1500; d. ? Venice, 1560).

Italian organist and composer. He became famous as an organist at Venice and his 'Intavolatura' (1542) initiated the type of organ *canzona*. Examples of his work are printed by Torchi.

J. A. F.-M.

CAVAZZONI, Marco Antonio (b. ? Urbino, c. 1480; d. ?).

Italian organist, composer and singer, also known as Marc' Antonio da Bologna, *detto* d'Urbino, father of the preceding. He was the first important organ composer in Italy. He was first in the service of the patrician Francesco Cornaro at Venice and in 1515 in Rome at the court of Pope Leo X. After Leo's death (1521) he returned to Cornaro at Venice, but by about 1527 he was in the service of Cardinal Pietro Bembo at Padua. In 1536-37 he was organist at the cathedral of Chioggia and in 1545-59 a singer at St. Mark's, Venice. He was a friend of Willaert's. His will is dated 3 Apr. 1569.

Cavazzoni's only known work is 'Recercari / Motetti / Canzoni . . . Libro Primo . . . (Venice, 1523); only extant copy in Brit. Mus., modern edition by Knud Jeppesen ('Die italienische Orgelmusik am Anfang des Cinquecento', Copenhagen, 1943). (Cf. also Claudio Sartori in *Riv. Mus. It.*, XLIV, 1940.) The book contains 8 numbers: 2 ricercari, 2 motets and 4 canzoni francesi. The ricercare form is here quite different from that first established by the composer's son, Girolamo Cavazzoni, in his 'Ricercari' of 1543, being more toccata-like and making a feature of contrasting effects.

E. B.

CAVENDISH, Michael (b. ?, c. 1565; d. London, 5 July 1628).

English composer. He was the youngest of three sons of William Cavendish of Cavendish Overhall by Ann, his wife, daughter of John Cocks of Beamonds. The pedigree of this elder branch of the Cavendish family, which became extinct in the 17th century, is fully recorded in Davy's 'Suffolk Collections'.<sup>3</sup> The younger branch is now represented by the Duke of Devonshire. The exact date of Michael Cavendish's birth is not known. He died unmarried, in the parish of St. Mary.

<sup>3</sup> 13 numbers from this work, whose full title is 'Intavolatura cioè Recercari Canzoni Hinni Magificat' (2 parts) are in Torchi's 'L'arte musicale in Italia', Vol. III.

<sup>2</sup> B.M., Add. MSS 19,122

Aldermanbury, London, and his will was proved on 11 July of that year.<sup>1</sup> He dedicated his volume of compositions published in 1598 to Lady Arabella Stuart, who was his second cousin. Sir Charles Cavendish, one of Wilbye's patrons, was his father's first cousin; and so was Lady Pierpoint, the wife of Thomas Greaves's patron.

Cavendish was a contributor to East's 'Whole Booke of Psalmes' in 1592, and he produced one volume of his own compositions in 1598. The title-page of the only known copy of this book, now in the B.M., is mutilated; the book contains twenty airs with lute accompaniment with an alternative version for four voices, and these are followed by eight madrigals for five voices. His madrigal 'Come, gentle swains' (No. 24 of the set) was largely rewritten before it appeared three years later as one of 'The Triumphes of Oriana'. It is the only example among the "Triumphs" that had been previously printed, and it is not impossible that the idea was put into Morley's mind by Cavendish. In estimating the artistic value of his work it must be remembered that his 'Ayres' were the first to appear after Dowland's first book, and he was also comparatively early in the field as a madrigal composer.

E. H. F.

The following are the titles of the 8 madrigals in the book of 1598<sup>2</sup>:

1. In flower of April springing
2. Zephyrus brings the time
3. Much it delighted
4. Come, gentle swains.
5. To former joy
6. Faustina hath the fairer face.
7. Every bush new springing.
8. Wandering in this place.

**CAVERNE, LA** (Opera). See LESUEUR.

**CAVOS, Catterino** (b. Venice, 1775; d. St. Petersburg, 10 May 1840).

Italian composer. He was a pupil of Francesco Bianchi and made his début as a composer at the Teatro Fenice, Venice (of which his father was manager), on 13 Sept. 1797 with an *unno patriottico* in honour of the republican civil guard. This was followed in 1798 by a cantata, 'L'eroe', celebrating the victorious entry of the imperial (Austrian) army into Venice, and he was still in his native town on 16 Nov. 1799 when his 4-act ballet 'Il sotterraneo' was produced (together with Nasolini's opera 'Le feste d'Iside').

In or shortly after 1800 (not in 1797 or 1798 as usually stated) Cavo went to Russia. In 1803 he wrote additional music for a Russian version of Kauer's 'Donauweibchen', and his first independent work for the Russian stage seems to have been 'Kniaz nevidimka' ('The

Invisible Prince'), which was performed in St. Petersburg in May 1805. About this time he took charge of the musical direction of the Russian Opera, in 1821 he became inspector and in 1832 managing director of all the imperial theatres.

Among his Russian operas and plays with music—more than 25 altogether—'Ilya Bogatyr' (1807)<sup>3</sup> and 'Ivan Sussanin' (1815)<sup>4</sup> must be mentioned as early attempts at national opera; the latter anticipates the subject treated by Glinka in his 'Life for the Tsar' twenty years later. The Russian element is very slight in the music of Cavo; nevertheless he must be reckoned one of the first to start that movement towards nationality in music which Verstovsky strove to develop and which eventually culminated in the genius of Glinka.

Cavo's last work for the stage was an opera, 'Miroslava', written in collaboration with Antonolini in 1827. The statement that French and Italian operas of his were also performed in Russia cannot be verified; but an Italian intermezzo by him, 'Il calzolaio deriso, ossia Il convito degli spiriti', was heard in Berlin, Dresden and Munich in 1814-15. He also wrote several ballets and a few songs.

His son Albert (1800-63) was a well-known architect who built several theatres in St. Petersburg and Moscow.

**Cayrol, Jean.** See Langlais ('Diable qui n'est à personne', incid. m.; 4 songs).

**Cassali, Henri.** See Saint-Saëns ('Danse macabre', symph. poem & song).

**CAZDEN, Norman** (b. New York, 23 Sept. 1914).

American composer. He studied at the Institute of Musical Art and later at the Juilliard Graduate School, where he was a pupil of Hutcheson and Wagenaar. He received his B.Sc. degree in social science from New York City College and his M.A. degree in music from Harvard University. At Harvard he worked with Piston and Copland.

He has won a number of fellowships and awards: at the Juilliard School, 1927 and 1939, at Harvard University, 1943-45, the Westminster Choir Award in 1936, the George Arthur Knight Prize in 1945 and the John Knowles Paine Travelling Scholarship in 1945-46.

Cazden was for a time on the musical staff of The New Dance Group and has been active in connection with musical programmes for workers' clubs in New York. He teaches pianoforte and theory at the Juilliard School.

The following are his principal works:

'Five American Dances', Op. 14, modern dance with pf. (1938).

'Etcetera', Op. 35, dance with recitation & pf. (1941).

<sup>3</sup> Vocal score published.

<sup>4</sup> Vocal score edited by A. Evgeniev c. 1870.

<sup>1</sup> P.C.G.; 72, Barrington.

<sup>2</sup> Republished in 'The English Madrigal School', Vol. XXXVI.

- 'The Lonely Ones', Op. 44, dance with cartoons & pf. (1944).  
 'Preamble', Op. 18, for orch. (1938).  
 'On the Death of a Spanish Child', Op. 20, for orch. (1939).  
 'Six Definitions', Op. 25, for chamber orch. (1939).  
 Three Dances, Op. 28, for orch. (1940).  
 Concerto for ten insts., Op. 10 (1937).  
 String Quartet, Op. 9 (1936).  
 3 Chamber Sonatas, Op. 17 (1938).  
 Quartet, Op. 23, for vn, clar, viola & cello (1939).  
 Quintet, Op. 32, for 2 vns, viola & 2 cellos (1941).  
 'American Suite', Op. 31, for cello & pf. (1940).  
 Sonata, Op. 33, for horn & pf. (1941).  
 Sonata, Op. 36, for flute & pf. (1941).  
 Suite, Op. 43, for vn & pf. (1943).  
 Sonata, Op. 7, for pf. (1935).  
 Sonata, Op. 12, for pf. (1938).

P. G. H.

**Gazotte, Jacques.** See Louné ('Diable boiteux', ballet).

**CAZZATI, Maurizio** (b. Guastalla, c. 1620, d. Mantua, 1677).

Italian composer. He was *maestro di cappella* successively at Sant' Andrea, Mantua (c. 1641), at the private chapel of the Duke of Sabionata at Bozolo (1647), the Accademia della Morte, Ferrara (1650), Santa Maria Maggiore, Bergamo (1653), San Petronio, Bologna (1657-71), and finally, from 1673 until his death, he was in the service of the Duchess Anna Isabella di Gonzaga at Mantua. He was a member of the Academies at Mantua and Bergamo, and a very prolific composer, especially of church and instrumental music. His published compositions, starting with Op. 1 ('Salmi e messa a 5 voci') in 1641, reached Op. 66 in the year of his death. They comprise masses, psalms, litanies, antiphons, hymns, motets and other sacred works (Opp. 1, 3, 5-7, 9, 10, 12-14, 16, 17, 19-21, 23-25, 28, 29, 31-34, 36, 37, 39, 40, 42, 44, 45, 47, 49, 51-54, 56-59, 63, 65), the cantata 'Lamento di S. Francesco Saverio per la perdita del suo crocifisso in mare' (Op. 48), secular vocal music (solo airs and canzonets, madrigals, chamber duets, Opp. 11, 26, 27, 41, 43, 46, 66) and instrumental music, 'Canzoni da sonare', for 2 violins and violone (Op. 2), sonatas in 1-5 parts (Opp. 8, 18, 35, 55), 'Trattenimenti per camera d' arie, correnti e balletti' (Op. 22), 'Correnti e balletti per sonare nella spinetta, leuto o teorba' (Op. 35), 'Vari e diversi capricci per camera e per chiesa' (Op. 50).<sup>1</sup>

Besides, Cazzati wrote a number of oratorios which were all sung at Bologna: 'Il Caino condannato', 'Celeste aiuto a chi ben fa, non manca', 'Il diluvio' and 'Il zelante difeso' (all 4 in 1664), 'Il transito di S. Giuseppe' (1665), 'Sisara' (1667), 'Giuditta' and 'Psiche deificata' (1668) and 'La vittoria di San Filippo Neri' (1669). From his early days date two works for the stage, 'I gridi di Cerere' and 'Il carnevale esiliato', which were both produced at the Teatro Obizzi, Padua, in 1652.

One of Cazzati's secular cantatas was

<sup>1</sup> Of his Opp. 4, 15, 38, 60-62 and 64 no copies appear to be known.

reprinted in H. Riemann's 'Kantaten-Fruhlings' (1912) and his Sonata Op. 18 No. 9 reappeared in 1934 (ed. by W. Danckert). In 1659, Cazzati's pupil, G. C. Arresti, attacked his teacher, on a theoretical question, in his 'Dialogo tra un maestro e un discepolo desideroso d' approfittare nel contrapunto'; in his defence Cazzati published another pamphlet, 'Risposta alle opposizioni . . .' in 1663; the dispute was carried on for several years and eventually resulted in Cazzati's resigning from his post as *maestro di cappella* of San Petronio.

**Cebà, Ansaldo.** See Monteverdi (2 madrigals).

**CEBALLOS, Francisco & Rodrigo.** See CEVALLOS.

**CEBELL.** A form of gavotte used only by English composers of the late 17th and early 18th centuries. Its characteristic feature is the use of comparatively frequent episodes, four bars or so in length, in which the bass has unaccompanied running figures or passages. This feature persists even in orchestral cebells. One or two became specially popular and were used as ballad tunes. The origin of the name is unknown.

R. T. D.

**CEBOTARI, Maria** (b. Kishinev, Bessarabia, 10 Feb. 1910; d. Vienna, 9 June 1949).

Russian soprano singer. She sang in a school choir at the age of six and in church at eight, receiving meanwhile a general musical education. When she was fourteen she first appeared in public as a singer and dancer with a travelling company and then developed her gifts as an actress. In 1929 she visited Paris with the Moscow Arts Theatre and a little later became a pupil of Oskar Daniel in Berlin, a course to which she owes her success in opera. In 1930 Fritz Busch engaged her for the Dresden State Opera, where she made her début as Mimi in 'Bohème' and scored another success as Butterfly. The following year she first appeared at the Salzburg Festival. Among the productions of new operas in which she appeared are d'Albert's 'Mr. Wu', finished by Leo Blech (Dresden, 1932), Sutermeister's 'Romeo und Julia' (Dresden, 1942) and Einem's 'Dantons Tod' (Salzburg, 1947). As a concert singer she appeared more than once with Richard Strauss and Hans Pfitzner in song recitals. She travelled widely, as far as North and South America in 1948-49. London she first visited with the Dresden State Opera in 1936 and she appeared again at Covent Garden with the Vienna State Opera in Sept. 1947, singing Mozart's Countess Almaviva and Donna Anna as well as Strauss's Salome. Her name became widely known as a singer in German and Italian films.

**CECCHINA, LA, OSSIA LA BUONA FIGLIUOLA** (Opera). See PIOCINI.

**CECCHINO, Tomaso** (b. Verona, c. 1580; d. Lesina, 1644).

Italian composer. For some years from c. 1603 he was *maestro di cappella* at Spalato (Split) in Dalmatia, than a Venetian possession. At the end of 1614 he moved to a similar post at Lesina, an island in the Gulf of Venice, where he remained until his death.<sup>1</sup> He seems to have been a prolific composer, for he claims to have reached Op. 27. His sacred works include six known books of masses, motets, psalms, etc., for at least 2 voices, and mostly for 5 and 8 voices, between 1613 and 1628. He also wrote a number of sacred songs. His secular output is limited to a set of 5-part madrigals, 'Madrigali e canzonette a 3 v. et basso continuo' (1617) and two books mainly devoted to monody, the 'Amorosi concetti' of 1612 and 1616, which show that he was one of the earliest followers of Caccini. The book of masses of 1628 also includes a set of eight sonatas for various instruments. Some of this music is to be found in the Catalogue of the King of Portugal at Lisbon. N. F. (ii).

**Cech, Svatopluk.** See Dvořák ('Smith of Lešetín', song). Janáček (2 operas; 'Fiddler's Child', orch. ballad) Novák ('Storm', cantata). Suda ('Blacksmith of Lešetín', opera). Weis (do). Zich (O., 'Painter's Whim', opera).

**CECIL SHARP HOUSE.** See ENGLISH FOLK DANCE AND SONG SOCIETY.

**CECILIA, Saint** (b. ? Rome or Sicily, ?; d. ? Sicily, c. 178).

Patron saint of music and of the blind. According to tradition she was of noble birth and, being educated in the Christian faith, vowed to lead a celibate life and to devote herself to the service of religion. She was, however, compelled by her parents to marry Valerianus, a young Roman noble and a pagan, with whom she prevailed so much as not only to induce him to respect her vow but, with his brother, to embrace the Christian faith. Seized and brought before the pagan authorities, and refusing to abjure their faith, they were condemned to death, the brothers being decapitated and the virgin-wife placed in a dry bath with fire beneath, which failed to terminate her existence as rapidly as her persecutors desired, whereupon they sent an executioner to despatch her by severing her head from her body. These events occurred in Rome about A.D. 229, under Alexander Severus, according to most writers, but some state with more plausibility that they happened in Sicily under Marcus Aurelius between 176 and 180. Her house in Rome, where, according to one account, she was put to death, was converted into a church, or a church was built over it, to which in 821 her remains, with those of her husband, his brother and other martyrs, were

translated. This church was repaired and sumptuously embellished in 1599, and a monument of the saint was erected.

St. Cecilia has long been regarded as the tutelary saint of music and musicians, but the period at which she was first so looked upon is involved in obscurity. There is a tradition that an angel by whom she was visited was attracted to earth by the charms of her singing, but when it originated is equally unknown. Early writers make no mention of her skill in music; even as late as 1594 a long Italian poem by Castelletti, entitled 'La trionfatrice Cecilia, vergine e martire romana', was published at Florence, which does not allude to it. It is certain, however, that nearly a century before she had been considered as music's patroness, for in 1502 a musical society was established at Louvain, the statutes of which were submitted to the magistrate for his sanction. The founders desired to place the new association under the patronage of St. Job, but the magistrate decided that it should be put under the auspices of St. Cecilia.

W. H. H., rev.

**CECILIAN FESTIVALS.** For a very long time the custom of celebrating upon St. Cecilia's festival (22 Nov.) the praise of music by musical performances existed in various countries, and many associations were formed for the purpose. The earliest of such associations of which any notice has been found was established on 12 Oct. 1570, at Évreux in Normandy, under the title of "Le Puy de Musique". A solemn celebration of Vespers and Compline took place in the cathedral on the vigil; high Mass, Vespers and Compline were performed on the feast day and a Requiem Mass for the souls of departed founders on the morrow. A banquet was given after Mass on the feast day and prizes were awarded for the best motets, partsongs, airs and sonnets. The best composers of the day were competitors for these prizes; among those who obtained them are found the names of Lassus, Eustache Du Caurroy and Jacques Salmon.

It was a century later before any similar association was regularly established in England. In 1683 a body of persons known as The Musical Society held the first of a series of annual celebrations in London. Their practice was to attend divine worship (usually at St. Bride's Church), when a choral service and anthem with orchestral accompaniments (often composed expressly for the festival) were performed by an exceptionally large number of musicians, and a sermon, usually in defence of cathedral music, was preached. They then repaired to another place (commonly Stationers' Hall), where an ode in praise of music, written and composed expressly for the occasion, was performed, after which they sat down to an entertainment.

<sup>1</sup> Praetorius mentions him in 'Syntagma musicum' Vol. III.

These odes were written by Dryden (1687 and 1697), Shadwell, Congreve, Dufrey, Hughes and less-known writers, and composed by Henry Purcell (1683 and 1692), Blow (1684, 1691, 1695 and 1700), Draghi, Eccles, Jeremiah Clarke and others of lesser note. Purcell produced for 1694 his 'Te Deum and Jubilate' in D major and Blow his for 1695. These celebrations were kept uninterruptedly (with the exception of the years 1686, 1688 and 1689) until 1703, after which they were held only occasionally. The Musicians' Company in London revived the celebration of the festival in 1905.

Pope wrote his fine ode in 1708, but it was not set to music until 1730, and then in an altered and abbreviated form by Greene, as the exercise for his doctor's degree. It was first set in its original form about 1757 by William Walond, organist of Chichester Cathedral, and at a much later period by Thomas Busby. In 1736 Handel reset Dryden's 'Alexander's Feast', originally composed in 1697 by Jeremiah Clarke, and in 1740 Dryden's first ode, originally set in 1687 by Draghi. Odes were composed at various periods by Pepusch, Boyce, Festing, Samuel Wesley, Parry and others.

About the same time that the London celebrations were established similar meetings were held at Oxford, for which odes were written by Addison, Yalden and others, and set by Blow, Daniel Purcell, etc. These meetings were continued until 1708, perhaps later. Other places followed the example, such as Winchester, Gloucester, Devizes and Salisbury. At this last place, in 1748 (the time of holding it having previously been changed), the meeting was extended to two days, and it gradually developed into the modern musical festival, oratorios being performed at the Cathedral in the morning and secular concerts at the Assembly Rooms in the evening.

Edinburgh gave a St. Cecilia's concert in 1696, and the Musical Society there carried on a recognition of the day of celebration (22 Nov.) and called its concert-hall by the Saint's name. In the early part of the 18th century several festivals took place in St. Patrick's Cathedral, Dublin.

In Paris in the 19th and early 20th centuries it was the custom to have a solemn Mass performed in the church of Saint-Eustache on St. Cecilia's Day, for the benefit of the Society of Artist Musicians. The orchestra of the Société des Concerts du Conservatoire took part. On these occasions a new Mass, composed expressly by some eminent musician, was usually produced. Among those who wrote such masses were Adolphe Adam, Niedermeyer (1849), Dietsch, Gounod (1855) and Ambroise Thomas (1857). Later masses by Saint-Saëns, Franck, Dubois and Samuel

Rousseau, etc., were utilized. After the appointment of Félix Raugel as *maître de chapelle* at Saint-Eustache (1910) the Mass of St. Cecilia was replaced by a sacred concert and a solemn benediction. From 1911 to 1913 works by Liszt, Bach and Handel were given, in 1922 and 1923 works by Franck and Widor.

Musical celebrations on St. Cecilia's Day are recorded as having taken place at various periods in Italy, Germany and elsewhere. Spohr composed a 'Hymn to St. Cecilia' for the Cecilian Society at Cassel in 1823 and Moritz Hauptmann another for the same society in the following year.

Mus. Ant., II, 234 (July 1911), article on the feasts, odes, &c.

**CÉDEZ** (Fr., imper., cede, yield). A direction used by Debussy and some other French composers as an equivalent of the Italian *ritenuto* or *rallentando*.

**CÉILIDH.** The social gathering of Gaelic-speaking peoples at which vocal and instrumental music, story and fable, proverb and riddle are the chief entertainment. The meeting-place is usually the home of one who not only has the room to accommodate those attracted from near and far, but who himself can entertain and offer hospitality. The *céilidh* is an integral part of the social and cultural life of the Highlands of Scotland, and whether the audience are contributors to the entertainment or not, it was customary in the past for the homely arts and crafts to be carried on during the entertainment. In the islands there would be the fisher-folk mending their nets; in agricultural and pastoral communities the saddler would be repairing his harness and the shepherd carving some handsome crook. Everywhere the women-folk would be knitting or darning, carding or spinning. In this way the young not only learned by heart the songs, stories and ancient folklore of the old *seanachaidh* or *file*, but they were afforded instruction in the homely arts and crafts.

Nor was the *céilidh* exclusively for the community. In 1875 we read: "Bards, itinerants, tinkers, pipers, fiddlers and mendicants, who loved to hear or tell a good story, or recite an old poem—all come and are well received among the regular visitors". To-day we see much the same thing at the *céilidhs* during the National Mod. Highland societies and associations in the cities and towns still hold their *céilidhs*, but here they are but entertainments and a mere shadow of the past. Even in the islands and Highlands the old-time *céilidh* has lost its communal character, in spite of the Ossianic cry: "Leansa gur dlùth vi clùid do shinnisr" ("Follow faithfully the traditions of your ancestors")

Čelakovský, F. L. See Novák ('Toman and the Wood-Nymph', symph. poem).

Celano, Thomas de'. See Dies irae (authorship of).  
ČELANSKÝ, Ludvík Vítězslav (b. Vienna, 17 July 1870; d. Prague, 27 Oct. 1931).

Czech conductor. He became a school-teacher, then studied at the Prague Conservatory in 1892-94 and during the next few years held several posts as a theatre conductor at Píseň (Bohemia), Zagreb (Yugoslavia) and at the National Theatre in Prague. In 1901 he enriched Czech musical life by founding the Czech Philharmonic Orchestra and by organizing the opera in the Prague quarter of Královské Vinohrady in 1907 and again in 1913. In each case his activity was short-lived, and before the first world war he worked mostly abroad. When the Czechoslovak Republic was formed he was again put at the head of the Czech Philharmonic Orchestra, but had soon to give way to Václav Talich and later was entirely set aside. As a composer he was a follower of Smetana, Dvořák and Fibich, and during his stay in Paris he inclined to French impressionism.

His works include: 'Kamilla', an opera-melodrama (1897), several symphonic poems, especially the trilogy 'Adam, Noe, Mojžíš' ('Adam, Noah, Moses') (1915-18), 'Hymnus slunci' ('Hymn to Sun') (1919), a few melodramas and songs. G. Č.

CELESTA. A keyboard instrument in which plates of steel suspended over resonating boxes of wood are struck by hammers after the manner of the pianoforte action. It was the invention of Auguste Mustel of Paris, who subsequently combined its characteristic effects with those of the Mustel Organ, producing some distinctly new qualities of tone. The tone of the celesta itself is of exquisite purity, and as an orchestral instrument it has been used by a large number of modern composers in operas, ballets and mystic pieces, where a special quality of tone is required. Its compass is four octaves upwards from *c*', and the part is written an octave below the actual pitch. The tone improves as the pitch rises.

J. A. F.-M., adds.

CELESTINA. A keyboard instrument in which the sound is produced by the friction of a continuous band of rosined silk upon catgut or wire strings. F. W. G.

See also Sostinente Pianoforte.

CELESTINO, Eligio (b. Rome, c. 1739; d. Rome, 14 Jan. 1812).

Italian violinist and composer. Burney heard him in Rome in 1770 and considered him the best Roman violinist of the period. In 1772 he began to travel; he appeared in London in that year. He was appointed violinist of the court orchestra at Stuttgart in 1776. He gave a concert with his wife at

Frankfurt o/M. in 1780 and already had the title of *Konzertmeister* to the Duke of Mecklenburg-Ludwigslust, a post which he retained till his death.

In Preston's Catalogue (London, 1797) we find of Celestino's composition 'Six Sonatas for a Violin and Bass' (Op. 9), and three 'Duos a Violino e Violoncello' (London, Clementi, 1798). Some other works, such as a vocal solo or trio with orchestral accompaniment, are mentioned in Q.-L. P. D.

Celiano, Ludovico. See Monteverdi (madrigal).

CELIBIDACHE, Sergiu (b. Roman, 26 June 1912).

German conductor of Rumanian birth. He began earning money for his musical studies by playing at night clubs and at a Paris dancing-school. From 1939 to 1945 he studied at the Berlin Conservatory under Thomas, Gmeindl, Thiessen and Stein, and at the same time he read musicology under Schering and Schunemann at the University. In 1945 he suddenly rose to fame when, as yet inexperienced, he was appointed resident conductor of the Berlin Philharmonic Orchestra. In 1948 he shared the concerts of that orchestra's first post-war visit to the U.S.A. with Furtwangler. He has since paid several highly successful visits to Mexico and South America. As a composer he has produced 4 Symphonies, an orchestral Suite and a pianoforte Concerto. K. W. B.

CELLI (actually Standing), Frank H. (b. London, 1842; d. London, 27 Dec. 1904).

English bass singer. He was a brother of William T. Carleton, singer, and Herbert Standing, actor, both well known. His voice, which might also be termed a heavy baritone, was of an unusually sweet, sympathetic quality, yet sufficiently powerful and extremely flexible. He had received little instruction when he made his London debut at the age of twenty at the old Marylebone Theatre as Mat-o'-the-Mint in a revival of 'The Beggar's Opera'. Other stage and concert work followed, including one engagement as Lorenzo (with songs) in a revival of 'The Merchant of Venice' at the Princess's Theatre. He then studied and sang in oratorio with Hermine Rudersdorff, and in the late 1860s went on a concert tour with Carlotta Patti.

Celli's true bent was towards opera, for which his fine voice and striking physique eminently suited him. Accordingly in 1871 he joined Mapleson's provincial company, which then included Tietjens, Trebelli, Sinico, Ilma di Murska, Bettini and Foli, with Bevilacqua as conductor, and made his first appearance at Birmingham as Valentine in 'Faust', then given for the first time in that city. His chief successes, later on, were gained in English opera, especially under Carl Rosa, with whose company he sang regularly for

several years. Towards the latter part of his career he drifted into light opera, visiting the U.S.A. and various colonies, where he quickly won popularity. At home he was always a great favourite, and his voice retained much of its freshness and charm to the end. He was the father of the actress Faith Celli. H. K.

**CELLIER, Alfred** (b. London, 1 Dec. 1844; d. London, 28 Dec. 1891).

English organist, conductor and composer. He was the son of a teacher of French and was educated at the Hackney Grammar School. From 1855 to 1860 he was a chorister at the Chapel Royal, St. James's, under the Rev. Thomas Helmore. In 1862 he was appointed organist to the church of All Saints, Blackheath. At the age of twenty-one he became director of the Ulster Hall Concerts, Belfast, succeeding Dr. Chipp, and conductor of the Belfast Philharmonic Society. Back in London he was appointed organist at St. Alban's Church, Holborn, in 1868.

Cellier was conductor at the Prince's Theatre, Manchester (1871-75), Opera Comique, London (1877-79), and joint conductor, with Sullivan, of the Promenade Concerts, Covent Garden (1878 and 1879), besides holding numerous smaller appointments, at the Court, St. James's and Criterion Theatres.

His compositions include a setting of Gray's 'Elegy', written for the Leeds Festival (10 Oct. 1883), a 'Suite symphonique' for orchestra, various songs and pianoforte pieces, among which latter must be mentioned a charming 'Danse-pompeuse' (1880), dedicated to and frequently played by Fanny Montigny-Rémaury. But Cellier was best known as a composer of light opera or *opéra-bouffe*. Besides much incidental music to plays, etc., he produced the following:

- 'Charity begins at Home', London, Gallery of Illustration, 1870.
- 'The Foster Brothers', 1 act, London, St. George's Hall, 17 June 1873.
- 'The Sultan of Mocha', Manchester, Prince's Theatre, 16 Nov. 1874; London, St. James's Theatre, 17 Apr. 1876.
- 'The Tower of London', Manchester, 4 Oct. 1875.
- 'Nell Gwynne', Manchester, 16 Oct. 1876.
- 'Dora's Dream', 1 act, London, Opera Comique, 17 Nov. 1877.
- 'The Spectre Knight', 1 act, London, Opera Comique, 9 Feb. 1878.
- 'Bella Donna, or 'The Little Beauty and the Great Beast'', Manchester, 27 Apr. 1878.
- 'After All', 1 act, London, Opera Comique, 16 Dec. 1878.
- 'In the Sulk', 1 act, London, Opera Comique, 21 Feb. 1880.
- 'The Masque of Pandora', grand opera in 3 acts (lib. by Longfellow), Boston, Mass., 10 Jan. 1881.
- 'The Carp', 1 act, London, Savoy Theatre, 11 Feb. 1886.
- 'Dorothy', operetta, 3 acts (lib. by Benjamin Charles Stephenson), London, Gaiety Theatre, 25 Sept. 1886.
- 'Mrs. Jarramie's Gue', 1 act, London, Savoy Theatre, 14 Feb. 1888.
- 'Doris', London, Lyric Theatre, 20 Apr. 1889.
- 'The Mountebanks', London, Lyric Theatre, 4 Jan. 1892.

The one-act pieces were merely curtain-raisers. Few of the larger works obtained more than a provincial popularity, in spite of the pleasing and elegant music they contained, probably owing to weak librettos, but 'Dorothy', a fresh setting of his 'Nell Gwynne' to a new book, had an enormous success, thanks to its considerable musical merits. It ran for 931 nights successively at the Gaiety, Prince of Wales and New Lyric Theatres, was given all over the British Isles and brought out in New York (1887), Sydney (1889), Capetown (1890) and Montreal (1891); also in Budapest in Hungarian (c. 1890).

'Doris' was less successful, but 'The Mountebanks', thanks to an admirable libretto by W. S. Gilbert, was outclassed in popularity only by 'Dorothy'. It was technically a posthumous work, the composer having died before he could complete it by the composition of an overture: a movement from his 'Suite symphonique' was adapted for the purpose. On 21 Sept. 1887 'The Sultan of Mocha' was revived in London at the Strand Theatre with a new libretto by Lestocq.

During his later years Cellier lived in the U.S.A. and in Australia, but he returned to England in 1887.

**Cellini, Benvenuto.** *See* Benvenuto Cellini (Beniz, opera on & overture 'Carnaval roman'). Lachner (3, opera on). Purfling (vn. carved for Gasparo da Salò). Rossi (Lauro, 'Cellini a Parigi', opera).

**CELLO** (x). The familiar contraction of *violoncello*, used in English and some other languages. It may be considered as having become an English word by adoption, and there is thus no necessity to spell it with an apostrophe ('cello), as is still frequently done, nor is the Italian plural (*celli*) desirable in English parlance. At the same time it is true that the abbreviation, like that of "piano", is nonsensical, since the Italian word is formed from *violone* (a big violin) with a diminutive suffix (a little big violin) — in itself quite absurd enough. Literally translated, the suffix *cello* would be "-kin" in English, so that the violoncello might have become a "bass-kin", if English usage had tended that way, or, if the old spelling "base" for "bass" had been retained, "basekin", a pretty word, but unlikely now to displace the firmly entrenched "cello".

E. B.

**CELLO** (z). *See* ORGAN STOPS.

**CELLONE** (Ital. [but not used in Italy], augment of cello, a big violoncello). A large-sized modern string instrument of the cello type, larger than that instrument but smaller than the double bass, made by Stelzner of Dresden. It was intended to be used for double-bass parts in chamber music (e.g. Schubert's "Trout" Quintet and Octet) and could be played seated. The four strings were tuned G, D, A, e.

E. B.

*See also* Violin Family (Obsolete Members, 10).

**CEMAL REŞİD.** See REY, CEMAL REŞİD.

**CEMBAL D' AMORE** (Ital., lit. "harp-sichord of love"). According to Adlung ('Musica mechanica') this instrument did not belong to the *clavicembalo* or harpsichord genus, but to that of the clavichord. The instrument should be regarded as a double clavichord, the two instruments being separated by the tangents. The strings, Adlung states, were as long again as in the ordinary clavichord, and the tangents which produced the tone from the strings, instead of touching them near to their left-hand terminations, made the impact exactly in the middle of their whole length between the bridges, of which there were two instead of one as in the clavichord; also two soundboards of unequal forms and dimensions. Both halves of the strings were thus set in vibration simultaneously, which necessitated the use of a damping contrivance different from the simple one of the clavichord. In the *cembal d' amore* the strings lay upon the damping-cloth instead of its being woven between them, and small wooden uprights supported it. The strings were therefore damped when at rest, when raised upwards by the tangents they were free to vibrate and remained so as long as the keys were pressed down.

The shape of a *cembal d' amore* was that of an English spinet with the keyboard to the right hand of the player instead of the left, thus reversing the extension of the instrument laterally. Adlung attributed to it more tone than the ordinary clavichord had and more capability of the *behead* effect by the gently rotating movement of the key. But too much pressure on the key would affect the intonation as in a clavichord. In estimating its dynamic power he places the *cembal d' amore* far behind the pianoforte, though beyond the clavichord. Mattheson<sup>1</sup> ('Critica musica') refers to it and to a parallel between the Florentine (pianoforte) and Freiberg (*cembal d' amore*) in a bantering tone. Gottfried Silbermann of Freiberg (1683-1753) invented it and Hahnel of Meissen attempted to improve it by adding a "Celestine" register. Others, like Oppermann and Masse of Hamburg, made the instrument. A drawing of this rare instrument is preserved in the State and University library of Hamburg.

The even series of partial tones being virtually banished by the contact with the second or node at the half length of the string, the quality of tone must have tended towards that of the clarinet. The Rev. J. R. Cotter, of Donoughmore Rectory, Cork, between the years 1840 and 1865 endeavoured to obtain this effect from a pianoforte he had constructed

<sup>1</sup> The only known illustration was found by E. van der Straeten in Mattheson's papers at Hamburg, and reproduced, with particulars, in Mus. T., Jan. 1924. A detailed description is given in J. Adlung's 'Musica mechanica', III, 123.

in Broadwood's workshops, by making a "striking-place" at the middle of the vibrating length of string. In this, the Lyrachord, as he named it, the clarinet quality was a prominent characteristic.

A. J. H.

**CEMBALO** (or **Cimbalo**) (Ital.). A dulcimer, an old European name of which, with unimportant phonetic variations, was Cymbal. The derivation of *cemballo* is from the Greek κύμβα (Latin *cymba*), a hollow vessel; and with the Greeks κύμβαλα were small cymbals, a larger form of this ringing instrument being well known in modern military bands and orchestras. These cymbals and bells in the middle ages were regarded as closely allied, and rows of bells of different sizes, *tintinnabula* or *glockenspiel*, were also called *cymbala*. Virdung (1511) names *Zymbeln* and *Glocken* (cymbals and bells) together. It was most likely the bell-like tone of the wire strings struck by the hammers of the dulcimer that attracted to it the name of cymbal or *cemballo*. It is explained here, however, not only for the meaning dulcimer, but for the frequent use of the word *cemballo* by composers who wrote figured basses, and its employment by them as an abbreviation of *clavicembalo*. The dulcimer, or *cemballo*, with keys added, became the *clavicembalo*. In course of time the first two syllables being, for convenience or from idleness in speaking or writing, dropped, *cemballo* also was used to designate the keyed instrument, that is, the *clavicembalo* or harpsichord—just as "cello" in the present day frequently stands for violoncello. In the famous organ Passacaglia of J. S. Bach "cemballo" occurs where we should now write "manual", there being a separate pedal part. But we know from Forkel that Bach used a double *Flügel* or *clavicembalo* with two keyboards and *obbligato* pedals, as well as the organ with pedals.

Anticipating a note in singing before it is due; scooping.

**CERESINI, Giovanni** (b. Cesena, ?; d. ?).

Italian 16th-17th-century composer. He was Accademico Etereo in 1607 and *maestro di cappella* 'della morte in Ferrara' in 1627. He wrote 'Messa et salmi' for 5 voices, Op. 3 (2 eds. 1618 and 1623); 2 books of madrigals (1607 and Op. 4 (1627); 2 books of motets (1617 and 1638). E. v. d. s.

**CERMISY.** See SERMISY.

**CERNÍK, Josef** (b. Staříč nr. Přibor, Moravia, 24 Jan. 1880).

Czech folklorist, composer and teacher. He studied composition under Janáček and Novák. He is one of the most important Czech folksong experts and has collected, adapted and edited Moravian-Slovak, Slovak and gypsy folksongs. The most characteristic of his compositions are choruses and songs (e.g. song cycles written to words by Petr Bezruč and J. Wolkner). In his numerous treatises and articles about musical ethnography and education he shows himself to be a true follower of Janáček. G. č.

**ČERNOHORSKÝ (Czernohorsky), Bohuslav Matěj** (b. Nymburk, Bohemia, 16 Feb. 1884; d. Graz, 1 July 1942).

Bohemian composer. Born into a musical family, the son of a teacher, he was from 1903

a friar of the Minorite order in Prague and from 1739 conductor of the church choir at St. James's church. Many facts about his life are not clear; in particular we cannot say how long and in what way he worked at Padua and Assisi, where he was nicknamed *Il Padre boemo*. We know that he was four times in Italy and died on his return from his last visit. His compositions are among the outstanding works of the polyphonic baroque style, but unfortunately only very few of them have been preserved; most of them were probably destroyed in a fire at his monastery in 1754.

Of Černohorský's works for the church the following have been re-published: vocal fugue 'Laudetur Jesus Christus', in 'Česká hudba', Vol. XXXVI; a selection of his compositions for organ in O. Schmid's 'Ausgewählte Orgelwerke althöhmischer Meister'; in A. Guilman's 'École classique de l'orgue' and in the collection 'Musica antiqua bohémica' (1936), revised by F. Michálek. A large group of Czech composers were his followers: the best-known of them are J. F. Seger, J. A. Sebling, Jan Zach and F. Tůma; it is, however, impossible to say how many of them were really his pupils. It is also said, but on unreliable evidence, that Černohorský was the teacher of Tartini and Gluck. G. č.

**ČERNUŠÁK, Gracian** (b. Ptení nr. Prostějov, Moravia, 19 Dec. 1882).

Czechoslovak musicologist. After attending school at Olomouc and Kroměříž, he studied history at the Universities of Prague and Cracow in 1901-5, but also attended the university lectures on music in the Czech capital. Largely self-taught in music, he became a teacher at Hradec Králové (1915-18) and Brno (1918-38), and in the latter place he also lectured on musical history at the Conservatory in 1919-39. In 1945 he became professor there and in 1946-48 he was also professor at the Janáček Academy of Musical Arts of Brno. From 1926 onward, except during the war years, he worked in constant collaboration with the Czechoslovak broadcasting service.

At Hradec Králové Černušač acted as choral and orchestral conductor, and as music critic; at Brno he devoted himself more exclusively to writing. He was appointed editor, and later co-editor with Vladimír Helfert, of Pazdírek's Musical Dictionary, and later still musical editor of Otto's 'Encyclopedia of Modern Times'; but both publications were interrupted, the former by Helfert's imprisonment and the German censorship, the latter by the official restrictions imposed after Feb. 1948. The following two books appeared, but are at present out of print: 'Všeobecný dějepis hudby' ('A Universal History of Music'), 2 vols. (2nd ed. Brno,

<sup>1</sup> Adapted by Isouard and by Steibelt, both produced in 1810.

1930-31) and 'Průhledný dějepis hudby' ('A Survey of the History of Music'), 2 vols. (Brno, 1946-47). E. B.

**ČERNÝ, Ladislav** (b. Plzeň, 13 Apr. 1891).

Czech violist. Having finished his studies at the Prague Conservatory in 1912, he became a member of the Czech Philharmonic Orchestra when still in military service. In 1919-21 he worked at Ljubljana (Yugoslavia) as solo violist of the Royal Opera and as professor at the school of Glasbena Matica Society. Since 1921 he has lived permanently in Prague and since 1940 he has been professor of the viola and of chamber music at the Conservatory. In Czechoslovakia it is almost impossible to discuss the viola without recalling his name. He gives his qualities as a virtuoso and a musician principally to the performance of modern Czech and foreign music, and his playing in the Prague String Quartet shows his extreme sensitivity to chamber music. G. Č.

See also Prague String Quartet.

**CERONE, (Dom) Pietro** (b. Bergamo, c. 1560; d. Naples, 1625).

Italian priest, singer and musical theorist. He was cantor at Oristano, Sardinia, until 1592, when he left for Spain to become court chaplain to Philip II, on whose death in 1598 he remained in the service of Philip III. He returned to Italy in 1603<sup>1</sup> and in Jan. 1609 became a priest and tenor singer at the church of the Annunciation at Naples. The *deliberazioni* of that church, dated 25 Jan. 1609, declare that:

Il Reverendo Don Pietro Cerone [sic] si assenta da noi per maestro d' insegnare a cantare il canto fermo alli Jaconi [diaconi] della Chiesa di questa Santa Casa in luogo del quondam reverendo don Martino Garofano, venedoci fatta fede della sua habilità a tale carico.

Hence doubtless Cerone's publication of a treatise, 'Le regole più necessarie per l' introduzione del canto fermo' (Naples, 1609). In 1610 he became tenor in the Neapolitan royal chapel, a post he retained until his death.

In 1613 Cerone published another theoretical work at Naples, in Spanish: 'El melopeo', a folio volume of 22 books and 1,160 pages of small print; a work, according to Fétis's account, valuable in some respects but tedious, confused and unequal to an astonishing degree. It is founded on Zarlino's system; indeed, there is some reason to believe that it is a mere redaction of a work with the same title Zarlino speaks of as having completed in manuscript, but which has totally disappeared. The whole edition of Cerone's work is said to have been lost at sea except 13 copies, but 10 copies are mentioned in Q.-L. as being still

<sup>1</sup> Or possibly in 1608: 1603 may be a misprint for that date. Prota-Giurleo gives Jan. 1609 as the date of his taking on "new duties" at Naples, which may suggest that he filled some other post there before.

extant. A third work is there referred to as being by Cerone, 'Curiosidades del cantollano' (Madrid, 1709 [sic, perhaps for 1609])

BIBL.—Proc. Mus. Ass., 1878-79, p. 87

G., rev.

**CERRETO, Scipione** (b. Naples, 1551; d. Naples, after 1631).

Italian theorist and composer. Of his four known works, 'Della pratica musica' (1601), 'Dell' arbore musicale' (1608), 'Due ragionamenti in forma di dialogo' (MS, 1626) and 'Dialogo harmonico' (MS, 1631), the first is the most important. It is a comprehensive account of the musical practice of his time and includes valuable and detailed information on contemporary instruments. The last two works deal with counterpoint, canon, etc. Of his madrigals only one book, 'L' Amarillide' (1621), a 3, and three a 4 in one of the many re-editions of Arcadelt's madrigals (1608) have survived.

R. T. D.

**Cerrito, Fanny (Francesca)**. See Gabrielli (N., 'Gemma', Balle); SAINT-LÉON (husband).

**CERRUTTI, Giovanni Battista** (b. Cremona, c. 1750; d. Cremona, 1817).

Italian violin maker. He is generally considered the last of the famous Italian makers. He learnt his craft in the workshop of Lorenzo Storione at his birthplace. The varnish of Cerrutti's violins varies considerably in colour. The highest price recorded so far to have been paid for a cello of his make is 4000 marks. F. B.

**CERTON, Pierre** (b. ? Melun, ?; d. Paris, 22 Feb. 1572).

French composer. He was master of the choir of the Sainte-Chapelle in Paris and is first mentioned there as "Clerc sous la prébende de M. de Colligny" on 8 May 1532. In 1542, in his second book of motets, he is called "master of the boys" there. He is mentioned by Rabelais in the 'Nouveau Prologue' to the 2nd book of 'Pantagruel'. Having become permanent chaplain in 1548, he retained both titles until his death. Before 1560 he was in possession of a canon's prebend at the church of Notre-Dame, Melun, from which district he probably originally came. An annual service was founded by him at this church for Lady Day, and the inscription of it was engraved on a stone now preserved at the Museum of Melun. Other pious foundations of his were given to the Sainte-Chapelle and the Hôtel-Dieu in Paris.

Certon was a prolific composer. The number of his masses appears to be eight: 'Missae tres Petro Certon', 'Sus le pont d'Avignon', 'Adjuva me', 'Regnum mundi' (1558), 'Missa pro defunctis', 'Missa ad imitationem moduli' (1558) (Le Roy; Ballard). His motets, 'Recens modularum', etc., amounting probably to fifty, are included in the publications of Phalèse (Louvain, 1558), Gardano

(Venice, 1544) and Attaignant (1533-49). His chansons amount to about 200, including the collections which are not mentioned in Q.-L. They are contained in the following collections: Attaignant (1533-49), Moderne (1538), Le Roy and Ballard (1552), Tylman Susato (Antwerp, 1543-50), etc. He also composed French psalms and canticles. A Magnificat is found in 'Canticum B. M. Virginis . . . 1559'.

Modern reprints include:

HENRY EXPERT. 'Répertoire populaire de la musique de la Renaissance', Chanson: 'Si par fortune avez mon cœur acquis', 'Monuments de la musique au temps de la Renaissance' (1925), 3 Masses: 'Sus le pont d'Avignon', 'Regnum mundi', 'Adjuva me'.

CHARLES BORDES: 'Chansonnier du XVI<sup>e</sup> siècle', Chanson: 'J'espère et crains, je me tais et supplie . . .', 'Ancient Church Music', printed by the Motet Society (1843), 1 piece (2 trebles and tenor to English words).

**CERVANTES, Ignacio** (b. Havana, 31 July 1847; d. Havana, 29 Apr. 1905).

Cuban pianist and composer. He studied the pianoforte with Louis Gottschalk and in 1865 went to France, where he entered the Paris Conservatoire, attending the classes of Marmontel and Alkan. Upon graduation he returned to Havana, where he was active as a concert pianist and a teacher. He also gave recitals in the U.S.A. and Mexico. He wrote an opera, 'Maledetto' (1895), a Symphony (1879), an orchestral 'Scherzo capriccioso' (1886) and numerous drawing-room pieces in a popular French manner. His pianoforte suite 'Danzas cubanas' is the first work by a Cuban composer to incorporate native rhythms in a concert form.

## CERVELAS.

CERVELAT. } (Fr. properly *cervelas* = saus-

age). The French name for the Racket or Sausage Bassoon.

**ČERVENÝ, Václav František** (b. Dubeč, 27 Sept. 1819; d. Hradec Králové, Bohemia, 19 Jan. 1896).

Czech maker of musical instruments. He gained experience in Prague, Vienna, Budapest and Brno, and in 1842 founded his own establishment at Hradec Králové, which he made famous by his numerous inventions and improvements of musical instruments. From 1853 he achieved international recognition at European and American exhibitions. He gave most of his attention to the brass valve instruments of the bugle type. He constructed several models for the use of military bands. His instruments were most popular in Russia, and the factory had a branch at Kiev until the Bolshevik Revolution. His inventions are in many ways an independent analogy of the constructions of his French contemporary Adolphe Sax. In 1856 he invented a kind of contra-bassoon called Tritonikon in Eb, of which he also made a Bb model, and he exhibited it in Paris in 1867 and 1889. In 1873 he also constructed a subcontra-bassoon in Bb which goes down to the 64-ft. octave. However, no specimen of this monstrous instrument appears to have survived.

**CERVETTO** (Giacomo Basevi or Bas-sevi, called *Cervetto the Elder*) (b. ?; 1682; d. London, 14 Jan. 1783).

Italian violoncellist and composer (?) of German origin.<sup>1</sup> Born in Italy, he went to London in 1728 as a dealer in Italian instruments and a cellist. In the latter capacity he took part in the performance of Arne's 'Comus' in 1737, and Burney tells us in 1739 that Cervetto, together with Abaco, Lanzetti, Pasqualini and Caporale, "brought the violoncello into favour", although it was already in use in England during the 17th century. In 1744 Cervetto, Pasqualini and Caporale were playing at the concerts at Hickford's Room, and Burney says that while the two former possessed a greater technique and musical knowledge, their tone was raw and crude and their style of delivery uninteresting, and Caporale surpassed them with respect to the latter qualities.

For many years Cervetto was solo cellist at Drury Lane Theatre, where he afterwards succeeded Garrick as manager, with great financial success. He was "of an amiable disposition but of odd appearance and manners, his large proboscis causing him to be hailed from the gallery with 'Play up, Nosey'". There are several amusing anecdotes told regarding his habits. At the time of his death he had amassed a fortune of £20,000, which he left to his son James, who was the most gifted of his many pupils.

His compositions consist of 6 trio sonatas for 3 cellos or 2 violins and a bass; 6 trios for 2 violins, cello or harpsichord; 12 solos and 6 solos for cello and thorough-bass, 6 solos and 8 solos for German flute and continuo; 6 lessons or *divertimenti* for 2 cellos, Op. 4. Several of his sonatas and solos have appeared in modern editions. E. v. d. s.

**CERVETTO, James** (called *Cervetto the Younger*) (b. London, 1747; d. London, 5 Feb. 1837).

English violoncellist and composer, son of the preceding. He was a pupil of his father and C. F. Abel in London, and appeared on 23 Apr. 1760 at a concert given at the Little Theatre in the Haymarket in conjunction with Gertrud Schmeling (afterwards Mara), aged ten, "Master Barron", a pupil of Giardini, aged thirteen, and Fanny Burney, then an eight-year-old pianist. In 1765 he played with his father at a concert given by Parry the harpist and soon became one of the leading cellists of his time. From 1780 he played at the professional concerts at the Hanover Square Rooms, where in 1783 he was joined by Dupont and Baumgarten, and in 1784 he played a cello Concerto by Haydn there, being joined about that time by Chabran (Gaetano

Chiabrano). From 1763 to 1770 he toured as a soloist on the Continent, and after his return became (1771) a member of the queen's band.

Although not possessing the fiery temperament and virtuosity of Crossdill, Cervetto surpassed both him and his own father in beauty of tone and delicacy of phrasing. He composed 3 books of duets for 2 cellos, 2 books of solos and 1 book of sonatinas for cello and bass, Op. 4. A fine portrait of him in oils is in the possession of W. E. Hill & Sons.<sup>2</sup>

A Jasper Cervetto, probably a son of James, is known as the 19th-century author of a *Divertimento* for 2 cellos and 2 books of duets for violin and cello, Opp. 5 and 6. E. v. d. s.

**Červinka, Vincenc.** See Janáček ('Kát'a Kabanová', lib.).

**Červinková-Riegrová, Marie.** See Dvořák (2 libs.). Šebor ('Zmařená svatba', lib.).

**CES** (Ger.). The German name of the note C<sub>b</sub>, C<sub>#</sub> being Cis.

**CESANA, Bartolomeo** (Count) (b. ?; d. ?).

Italian 16th-17th-century composer. His life is almost entirely shrouded in obscurity. However, in 1613 he published a volume of songs for one, two and three voices that is among the most pleasant of the time. In the solo songs he shows great understanding of the new melodic recitative with continuo; the other items are less "advanced" and look back, for example, to the collections of dance-songs, etc., without instruments. This book is dedicated to the Archduke of Austria, who, says Cesana in his dedication, has ordered the music from him. From his rank we must presume Cesana to have been of independent means, perhaps travelling round from one court to another, performing or composing.

N. F. (ii).

**CESARI, Gaetano** (b. Cremona, 24 June 1870; d. Sale Marasino, 21 Oct. 1934).

Italian double-bass player, music critic and historian. He entered the Milan Conservatory as a student of the double bass and was for some years a performer on this instrument in various Italian orchestras. In 1900 he resumed his studies, going to Hamburg, where he sought the advice of Arnold Krug. From Hamburg he went on to Munich to study under Felix Mottl, graduating at the same time in philosophy at the University. On his return to Italy Cesari for a time taught history, and later he was appointed librarian to the Milan Conservatory. He was music critic to the 'Corriere della Sera' and member of the Permanent Commission for Music of the Italian Ministry of Education. A critical edition of Monteverdi was projected by him. His most important work was the collection of Verdi's letters, 'Il copialettere di Giuseppe Verdi'.

F. B.

<sup>1</sup> His sobriquet "Cervetto" (a little stag) points to a translation of the German-Jewish name of Hirschel.

<sup>2</sup> Reproduced in E. van der Straeten's 'History of the Violoncello'.

**CESARIS, Johannes** (b. ?; d. ?).

French 15th-century composer. He is one of the three musicians named by Martin Le Franc as predecessors of Dufay, Binchois and J. Carmen. In 1417 an organist by the name of Cesaris received a small organ from Yolande of Aragon, Queen of Sicily, for the cathedral at Angers.

Cesaris's music is preserved at Oxford (Bodl. Can. misc. 213) — one motet and five chansons — and Florence (Bibl. Naz. Panciat. 26) — one chanson.

The motet, published by van den Borren (*see* Bibl.) is isorhythmic. Some of the chansons have a surprising number of accidentals. Two of them are published by Dannemann (*see* Bibl.) and one each by Stainer and Wolf (*see* Bibl.). E. D. (ii).

**CESI, Napoleone** (b. Naples, 6 Aug. 1867).

Italian pianist and composer. A son of the Neapolitan pianist Beniamino Cesi, he studied with his father, then with Martucci, Lauro Rossi and Serrao. He was classed second in the Rubinstein competition won by Busoni. He composed operas and various pianoforte pieces, among them a 'Concert-stuck' for piano and orchestra and a Concerto dedicated to his daughter Cecilia, also a pianist of ability. F. B.

**CESI, Sigismondo** (b. Naples, 24 May 1869; d. Naples, 1 Sept. 1936).

Italian pianist, brother of the preceding. He was taught by his father, Beniamino Cesi, and by Alessandro Longo for pianoforte, and by N. D' Arienzo for theory. In 1898 he founded at Naples a Liceo Musicale, together with E. Marciano, of which he became the director. He published editions of the works of Schumann and Clementi, and is the author of a study of the history and literature of the pianoforte. F. B.

**CESTI, Pietro Antonio**<sup>1</sup> (b. Arezzo, 5 Aug. 1623; d. Florence, 14 Oct. 1669).

Italian composer. He sang as a boy at the cathedral of Arezzo under Bartolomeo Ruscelli and later at Santa Maria della Pieve under

Cristoforo Santini. In 1637 he joined the Minorite friars with the name of Frate Antonio. He seems to have lived in Rome from 1640 to 1645 and to have studied there under A. M. Abbatini and Carissimi. From 1645 to 1648 he lived at Volterra, where he was *maestro* at the seminary and *direttore della cappella* at the cathedral. His first opera, 'Orontea', was produced at Venice in 1649 and was followed in 1651 by 'Cesare amante'. These works established his fame. Salvator Rosa, whose letters are a valuable source of information about Cesti, in 1650, after 'Orontea', calls him "glory and splendour of the secular scene" and in 1652 writes: "I have news of our Padre Cesti, who in Venice has become immortal and is regarded as the leading composer of the day". Passages in Rosa's letters refer to Cesti's misadventures and love affairs, according ill with his religious calling, and it seems that, not without difficulties and delays, he eventually secured release from his vows. In 1650 he was at the court of the Medici at Florence, but he was later dismissed for "reprehensible conduct". In the autumn of 1650 he was singing at Lucca, and his own next opera, 'Alessandro vincitore de se stesso', was produced there in 1654.

Baini and others record that Cesti was a member of the papal choir in Rome from 21 Dec. 1659 to Feb. 1662; but this has been thought to conflict with the evidence of a document in the State Archives for the Tyrol at Innsbruck, according to which by 1663 he had been in service as *maestro di cappella* to the Archduke Ferdinand of Austria for about twelve years. The Innsbruck appointment actually dated from 1652, although the earliest work known to have been composed for performance there is the opera 'Argia' of 1655. The problem of the apparently conflicting documents at Rome and Innsbruck is solved by reference to the letters of the Salvator Rosa, which show Cesti endeavouring not unsuccessfully to serve two masters. He was in Rome in Jan. 1658, later in the same year in Tuscany, and in Jan. 1659 again in Rome. Already at this time he was in the pope's service, but obtained leave to rejoin the archduke at Florence at Easter. In Aug. he obtained leave of absence from his other employer to go back to Rome, where he accepted an appointment to the papal choir, with emoluments amounting to 50 scudi a month, on the death of another singer in Dec. Letters of 1661 show Cesti desirous of returning to Innsbruck and trying to persuade Rosa to accompany him. In this year, too, he returned to the theatre, one of his most famous works, 'Dori', being produced at Florence during the Carnival season. The ecclesiastical authorities, who had obtained his release from his religious vows as friar of the Minori Conventuali, thought him

<sup>1</sup> He was baptized Pietro, but took the name of Frate Antonio when he entered the order of the Minori Conventuali. The form "Marcantonio" or "Marc' Antonio" in general use to-day, seems to be a corruption of "Frat' Antonio" and not to have been used by Cesti himself or by his contemporaries. The libretto of 'Cesare amante' refers to the composer as "Signor Padre Antonio Cesti" and the later librettos in which he is named at all call him "Sig. Antonio Cesti", "Sig. Cavalier Cesti" or "Sig. Cav. Antonio Cesti".

ungrateful when he wished to give up his Roman appointment. His release in Feb. 1662 followed on the intervention of the Emperor Leopold I. He returned to Innsbruck and there produced, in May, his 'Magnamutà d' Alessandro'.

On 22 Aug. 1665 Rosa told his friend Ricciardi he had heard that Cesti was to transfer himself and the whole troop of his singers to the imperial court in Vienna, on very favourable terms. Cesti was actually appointed vice-Kapellmeister there in 1666 and held this position until 1669. New operas, 'Tito' and 'Nettuno e Flora festeggianti', were produced respectively at Venice and Vienna in 1666, and in the next year no less than four new works were seen in Vienna, including the sumptuously produced 'Pomo d' oro' for the wedding of Leopold I with the Infanta Margherita of Spain.

In Sept. 1668 Rosa heard that Cesti intended settling at Venice again and remarked that he would be ill-advised to do so, owing to some scandal connected with his previous stay in the city. In Nov. Apollonio Apolloni, author of the librettos of 'Argia' and 'Dori', visited Rosa in Rome and brought good news of Cesti, their common friend, who was then in Tuscany. He would seem to have taken Rosa's advice and not settled in Venice, although his last opera, 'Genserico', completed by D. Partenio, was produced there at the end of Jan. 1669. He died eight and a half months later at Florence. F. W. (ii).

Of all Venetian composers Cesti may be regarded as the most widely known to his contemporaries. He combined the writing of operas with cantatas set both to religious and secular texts. There is little difference in content between his secular and religious music. Both appear to have had a wide circulation in Europe and both are based on the contrast between recitative and arioso. Ch. Ch. Library, Oxford, possesses manuscript music books containing cantatas ascribed to him with inscriptions by their owners dated Rome 1672 and Uppsala 1653, this latter the property of a musician in the chapel of the Queen of Sweden. His operas were constantly repeated and he himself was hailed as "miracolo della musica".

Cesti lived at a time when taste required few distinctions beyond the text to mark as suitable music for a religious ceremony or a secular festivity. In his cantatas and *sacre rappresentazioni* he was influenced by the Roman school of Carissimi and in his operas by the Venetian school of such composers as Cavalli, which may help to explain the universal popularity of his music.

The examples of his work are too rare to form a thorough appreciation of the progress of his style; nevertheless we can judge him a

master of the "affective" from his treatment of dissonance, which makes his music passionate and expressive.

The important collection in Ch. Ch.<sup>1</sup> of 18 secular and 3 religious cantatas includes works for solo soprano, duets for soprano and contralto, and an impressive religious piece, 'Filiac Jerusalem', for 3 sopranos and bass. They are all written out for the voices and a continuo, spasmodically figured. They are written on the lines of the French *rondeau*, but often repeat only a part of the original figure until the final *da capo* section. The sections retain their interest by the contrast between recitative and arioso. The arioso is never sufficiently formal to be labelled as aria. The aria with its essential contrast between voice and instruments, as we know it from A. Scarlatti and the Neapolitan school later in the century, was then, even in operas, to be found only in its embryonic state, developing from the strophic song and *recitativo stromentato*.

The religious cantatas show a more developed style and a thorough knowledge of the power of diminished and augmented intervals to express the sense of the text. In particular 'Filiac Jerusalem', set to words inspired by the Song of Songs, shows his mastery of the expressive style in a conversation between the bridegroom (bass) and the three daughters of Jerusalem (sopranos). He employs all the symbolical devices of the *cappella* style of the previous century, together with chromatic alteration of the melody, the use of the diminished fifth and, in connection with it, the minor third, a sound which struck terror into contemporary audiences by its novelty. The quartet finale in this cantata is a prelude to his operatic writing for the magnificent Habsburg court.

The operas again testify, from the varied cities for which they were written, to Cesti's widespread fame. His librettists were popular poets of the day, Cicognini, Apolloni, Monigla and, in particular, the imperial court poet Sbarra, who wrote the 'Pomo d' oro' among other of Cesti's operas. The plots deal with romanticized classical subjects or complicated love stories set in the fashionable eastern courts. Two of his Viennese operas of 1667 and the *Serenata* of 1662 show a different taste; the last belongs to the field of *favole rusticali*, whereas the mythological 'Pomo d' oro' is described as a *fiesta teatrale* and the 'Disgrazie d' amore' as a *dramma giocoso-morale*. The Viennese productions were written on a far larger scale than the earlier operas. The prologue of 'Pomo d' oro', apart from the soloists, includes a double four-part

<sup>1</sup> List in G. E. P. Arkwright, 'Catalogue of Music', Part 1 (Oxford, 1915). In the light of the recent research into his names the additional three cantatas by "Sig. Marco" or "Marc" Antonio can no longer be attributed to P. A. Cesti.

chorus, 2 *trombe*, violins, 2 *viola* and *violone*, while Act I opens with *cornetti*, *trombone*, *fagotto*, *regale*. The instruments in the *Serenata*, doubled "all' uso de' concerti di Francia", were 6 violins, 4 alto viols, 4 tenor viols, 4 bass viols, double bass, a *spinettina*, a *spinettone*, a lute and an archlute. Certain orchestral pieces are marked *corrento*, *alemannna* and *sarabanda*. Cesti was attentive to the quality of tone of each instrument and its effect. His position in Vienna enabled him to write for larger forces than were at the disposal of Cavalli in Venice. His voice-parts are occasionally given violin-like figurations or imitate, as for example Momo's part in 'Pomo d' oro', the running bass associated as a rule with later baroque composers. In his other operas Cesti follows the normal Venetian technique of Cavalli, building his themes from the triad. The ghost scene in 'Tito' resembles the similar occasion in Cavalli's 'Giasone' given in Eitner, in which block chords are used, likewise, in the fight between Titus and a tiger, the music gains intensity by the reiteration of the tonic-dominant triad in quavers increasing to semiquavers reminiscent of Monteverdi's 'Combattimento di Tancredi e di Clorinda'.

The musical stimulus gained by Cesti in Vienna is best judged from his concerted pieces. The duets from his earlier operas are, from length alone, hardly worthy of the name, and the chorus is scarcely used at all. His Viennese works combine the French and Italian fashions which, with certain novel tricks, the jump downwards of a fifth, augmented or diminished, to open an air, or a particularly violent blurring of the melodic line by the use of accidentals, mark him as an important figure in the history of mid-17th-

century music. Dr. Wellesz's article in S.I.M.G. gives interesting tables of the stylistic tricks used by Cesti which stamp his compositions with an originality uncommon, to modern ears, in that epoch. They enabled him to see that 'Il principe generoso', at one time attributed to P. A. Cesti, is by Remigio Cesti. It is possible too that the 'Serenata' (Florence, 1662), although marked A Cesti in the Vienna score, is by this Remigio, since there are passages which show consecutive fifths and clumsy and ugly arrangement of parts. If this work is by P. A. Cesti, it may be regarded, as Dr. Wellesz says, as a symptom of the extent to which, in Italy, the art of contrapuntal writing had suffered from the dramatic style of composition.

#### CATALOGUE OF STAGE WORKS

Title	Libretto	Production	Remarks
'Orontea.'	Giacinto Andrea Cicognini.	Venice, Teatro dei SS. Apostoli, 20 Jan 1649.	
'Cesare amante.'	Dario Varotari	Venice, Teatro dei SS. Giovanni e Paolo, autumn 1651.	
'Alessandro il vincitor di se stesso.'	Francesco Sbarra	Lucca, 3 Feb. 1654.	Part of the music by Marco Bigongiari.
'L' Argia.'	Apollonio Apolloni.	Innsbruck, 4 Nov. 1655.	
'Venere cacciatrice.'	Sbarra.	Innsbruck, 1659.	Music probably by Cesti.
'Dori, ovvero La schiava fedele.'	Apolloni.	Florence, Teatro dei Sorgenti, Carnival 1661.	
'La magnanimità d' Alessandro.'	Sbarra.	Innsbruck, May 1662.	
'Serenata.'	?	Florence, 14 Aug. 1662.	
'Tito.'	Niccolò Beregani.	Venice, Teatro dei SS. Giovanni e Paolo, 13 Feb. 1666.	
'Nettuno e Flora festeggianti.'	Sbarra.	Vienna, 12 July 1666.	
'Il pomo d' oro.'	Sbarra.	Vienna, Carnival 1667.	

Title	Libretto	Production	Remarks
'Le disgrazie d' amore.'	Sbarra.	Vienna, Carnival 1667	<i>Lucenza</i> by the Emperor Leopold I.
'Semiramide.'	Giovanni Andrea Moniglia	Vienna, 9 June 1667	Revived, after Cesti's death, at Venice, 1674, as 'La schiava fortunata', with additional music by Marc' Antonio Ziani.
'La Germania esultante.'	Sbarra.	Vienna, Favorita, 12 July 1667	'Festa a cavalli', trumpet music by Johann Heinrich Schmeltzer.
'Genserico.'	Beregani.	Venice, Teatro dei SS Giovanni e Paolo, 31 Jan. 1669.	According to Allacci score finished by Giovanni Domenico Partenio.

Two more operas were intended to be composed by Cesti, 'Ermengarda, regina de' Longobardi', libretto by Pietro Dolfino, performed at Venice in 1670 with music by Antonio Sartorio, and 'Giocasta', libretto by Moniglia.

A. L.

See also Bernabei (G. A., prologue for 'Dori'). Bigonari (collab.). Lorenzani (French setting of 'Orontes' lib.).

### CESTI, Remigio (b. ?; d. ?).

Italian 17th-century composer, perhaps a nephew or other relative of the preceding. He was organist of Santo Stefano at Pisa. The only printed work of his appears to be a motet, 'Beatus vir', contained in a collection published at Venice in 1663. The opera 'Il principe generoso', produced at the imperial court in Vienna in 1665, the score of which is preserved in the Austrian National Library, is a work by Remigio Cesti, not by Pietro Antonio as was formerly supposed. According to E. Wellesz<sup>1</sup> the 'Serenata' which was performed at Florence on 14 Aug. 1662<sup>2</sup> was possibly also by Remigio, an assumption which rests on a comparison with the style of 'Il principe generoso' and is not supported by external evidence. A. L.

### CETTERA. See CITTERN.

CETNER, Józef (b. Tarnopol, 17 Feb. 1887).

Polish violinist and teacher. He studied at the Lwów Conservatory under Wolfstahl (violin) and Sotys and Niewiadomski (theory) between the years 1908 and 1912. For the next two years he continued his studies under Ševčík at the Master School in Vienna. After several concert tours in Poland, Germany, Austria, Czechoslovakia and Italy he began his pedagogic career, being appointed teacher of the violin at the Conservatory of Lwów on 1 Sept. 1919. After ten years he moved to Katowice, where he became a violin teacher at the State Conservatory. Soon afterwards he became vice director of this school. But he continued his appearances on the concert platform and in the studios of the Polskie Radio, both as recitalist and as soloist with nearly all the Polish symphony orchestras. After the outbreak of the second world war he went to Great Britain and gave many recitals first in Scotland (Edinburgh, Dundee, Glas-

gow, etc.) and later, after three violin recitals at the London Wigmore Hall, in many English towns. For his musical activities he was awarded the Gold Medal of Merit before the second world war. He is now domiciled in London. C. R. H.

### CEVALLOS (Ceballos, Zeballos), Francisco (b. ?; d. Burgos, 1571).

Spanish composer. He held the post of *maestro de capilla* at Burgos from 1535 until his death. Works attributed to him rather than to his brother Rodrigo are found in manuscript at the Escorial, Seville and Toledo Cathedral (MS, 7 motets and 3 masses), and the Cathedral of El Pilar at Saragossa; the last possesses a Mass by him (3rd tone). Eslava printed three motets and Mitjana ('Encyclopédie de la musique: Espagne', p. 1975) quotes a faburden. J. B. T.

### CEVALLOS (Ceballos, Zeballos), Rodrigo (b. ?; d. ?).

Spanish 16th-century composer, brother of the preceding. On 10 June 1556 he was appointed *maestro de capilla* at Cordova. He is known as a composer of secular music. J. B. T.

CHABRAN (actually *Chiabrano*). Italian musical family, apparently relatives, who all came from Piedmont. Musicians of this name have been inextricably confused, but careful investigation of all available sources has yielded the following results:

(1) Charles Chabran (Carlo Chiabrano)<sup>3</sup> (b. ?, c. 1723; d. ?), violinist and composer. He was a nephew and pupil of Somis at Turin and became a member of the royal chapel there in 1747. He went to Paris in 1751 and there met with great success, publishing 6 sonatas for violin and continuo, Op. 1, which were also published by Welcker of London, where he appeared in 1752. His importance lies in the fact that, together with other pupils of Somis, he handed the latter's art down to posterity. Some of his sonatas were republished by Cartier, Alard, Moffat and others.

<sup>3</sup> Fétis confused him with Francesco Chabran (3).

<sup>1</sup> 'Zwei Studien zur Geschichte der Oper im XVII. Jahrhundert', S.I.M.G., XV, 1, Oct.-Dec. 1913.

<sup>2</sup> See list of works by A. Cesti, above.

(2) **Gaetano Chiabrano (Chabran)** (b. ?; d. ?), violoncellist and composer. He is probably identical with "Capperan", who appears as cellist in the orchestras of the Paris Opéra and Concert Spirituel in 1755, the royal chapel at Turin in 1752-55 and again in 1771, and at the Concerts of Antient Musick in London in 1784 (as "Chabran"). He wrote solos for cello and continuo, published by Bremner in London as "six solos by Chiabrano and Piantanida" about 1780 and two sonatas for the same (manuscript in the Berlin State Library). Five manuscript sonatas for cello and continuo by Gaetano Ciabrano in the Milan Conservatory are apparently by the same.

(3) **Francesco Chabran (Ciabrano)** (b. ?; d. ?), guitar player and composer. He published a Tutor for the guitar in 1790 and a book of opera dances for violin or flute and pianoforte about 1795. A cello Sonata attributed to him in the B.M. catalogue is evidently by Gaetano Chiabrano. E. v. d. s.

**CHABRIER, (Alexis) Emmanuel** (b. Ambert, Puy-de-Dôme, 18 Jan. 1841; d. Paris, 13 Sept. 1894).

French composer. He began to play the pianoforte at the age of six, taught by a Spanish refugee named Saporta. At the age of ten he was sent to the Lycée Impérial at Clermont-Ferrand, where he studied accompanying with the violinist Tarnowski and began to try his hand at composition. His father, however, though proud of his gifts, would allow him to exercise them only as an amateur — which in a sense he was in fact to do all his life — and when the family moved to Paris in 1856 he was sent either to the Lycée Louis-le-Grand or to the Lycée Saint-Louis (his biographers disagree on that point). In 1858 he began the study of law, but he worked at the pianoforte with Édouard Wolf and later at counterpoint and fugue with Semet and Aristide Hignard. In 1862, having taken his degree in law, he entered the Ministry of the Interior. He worked there for eighteen years without satisfaction or interest, taking pleasure only in composition and in his artistic friends, who included the painter Manet<sup>1</sup> and the poet Verlaine as well as fellow-musicians like Duparc, d'Indy, Fauré and Messager. On 27 Dec. 1873 he married Marie Alice Dejean.

Chabrier's first works of any importance were two operettas, more worthy of notice than most compositions of their kind,

'L'Étoile'<sup>2</sup> (1877) and 'Une Éducation manquée' (1879). In the latter year he visited Germany for the first time in the company of Duparc, and it was the enthusiasm aroused in him by a performance of Wagner's 'Tristan und Isolde' at Munich which decided him to devote his life entirely to music. He resigned from the Ministry and left it on 12 Nov. 1880. In 1881 he published the 'Dix Pièces pittoresques' for piano, followed later on by 'Habanera' (1885), 'Bourrée fantasque' (1891), etc., and in Dec. 1883 a rhapsody on original Spanish airs heard during a holiday in Spain. This was 'España', performed by Lamoureux at his concerts at the Château d'Eau, with extraordinary success. Thus his reputation was made. As chorus master (1884-85) he helped Lamoureux to produce the first two acts of 'Tristan', thus developing his talent for orchestration, but also confirming that Wagnerian taste which, so much at variance with his own artistic disposition, was later to unsettle his work and, in all probability, to contribute to the tragic mental breakdown from which he suffered for some time before his death. He then produced a scena for mezzo-soprano and women's chorus, 'La Sulamite' (15 Mar. 1885), also selections from his opera 'Gwendoline', first given in its entirety (2 acts) at the Théâtre de la Monnaie, Brussels in 1886 (later performances: Carlsruhe, 30 May 1889; Leipzig, 1890, and other German towns; Lyons, Apr. 1893; Paris, Opéra, 27 Dec. 1893).

Finally, his remarkable comic opera 'Le Roi malgré lui', was given at the Opéra-Comique on 18 May 1887. Though conceived in what the Wagnerians regarded as an antiquated form — in numbers interspersed with dialogue — it represented his special gifts most brilliantly and was full of spirited, delightful or original music. But after three performances it was stopped by the fire of 25 May and not heard again until 16 Nov. at the temporary establishment. His unfinished opera<sup>3</sup>, 'Briséis', consisting of one act only, was produced at the Opéra on 8 May 1899.<sup>4</sup>

Chabrier's musical language is marked by great brilliancy, an exuberant verve and wit, an inexhaustible spontaneity, a vivid harmonic, rhythmical and orchestral colouring. His works show a rare power of combining all the musical materials at his disposal, and his 'España' is a model in that respect. Although he left serious works for the stage, his nature was not that of a dramatist, and the lyric side of his temperament prevailed in all his pro-

<sup>1</sup> He possessed several pictures by Manet, as well as others of the "impressionist" school, by Renouir, Sisley, Forain and Monet. Among his Manets was the celebrated 'Bar aux Folies-Bergère', which later went to London as part of the Samuel Courtauld collection and is now in the National Gallery. An English ballet based on this picture was thus most appropriately accompanied by music selected from Chabrier's 'Pièces pittoresques'.

<sup>2</sup> The libretto of this work, with one number from the original music, was used as the basis of 'The Lucky Star' (Savoy Theatre, London, 7 Jan. 1899) by a number of adapters and Ivan Caryll.

<sup>3</sup> Planned in three acts.

<sup>4</sup> First performances (concert form), Lamoureux Concerts, 31 Jan. 1897; Berlin, 14 Jan. 1899.

ductions, excelled only by his comic vein where it could properly find scope. He possessed a special gift for expressing drollery in music, as for instance in his songs ('Ballade des gros dindons', etc.), the more so since it was the natural reflection of his own turn of mind.

In this respect Chabrier anticipated Erik Satie to some extent; and indeed Satie, like some other French composers of his time, and particularly his disciples, including the group of "Les Six", greatly admired Chabrier and largely took him for a model, drawing the line, however, at his Wagnerian leanings as displayed in the unrepresentative and unsuccessful 'Gwendoline' and in 'Briséis'. Ravel always frankly acknowledged that he owed much to Chabrier's influence, which is quite clearly evident in some of his work, particularly of the early period. Such a piece as Chabrier's 'Idylle' in the 'Pièces pittoresques' could very easily be taken for early Ravel, and on the other hand the latter's 'Pavane pour une Infante défunte', for instance, might be mistaken for Chabrier.

#### CATALOGUE OF WORKS

##### OPERAS

- 'L'Étoile', 3 acts (libretto by Eugène Leterrier & Albert Vanloo), prod. Paris, Bouffes-Parisiens, 28 Nov. 1877.  
 'Une Éducation manquée', 1 act (lib. by Leterrier & Vanloo), Paris, Cercle de la Presse (with pt.), 1 May 1879; 1st perf. with orch. Paris, Théâtre des Arts, 9 Jan. 1913.  
 'Gwendoline', 2 acts (lib. by Catulle Mendès), prod. Brussels, Théâtre de la Monnaie, 10 Apr. 1886.  
 'Le Roi malgré lui', 3 acts (lib. by Émile de Najac & Paul Burani, based on a comedy by François Ancelet), prod. Paris, Opéra-Comique, 18 May 1887.  
 'Briséis, ou Les Amants de Corinthe', fragment, 1 act (lib. by Ephraïm Mikhaël & Mendès, based on Goethe's ballad 'Die Braut von Corinth'), prod. (in German) Berlin, Royal Opera, 14 Jan. 1899.

##### CHORAL WORKS

- 'La Sulamite', *scène lyrique* (Jean Richepin) for soprano, chorus & orch. (1884).  
 'Ode à la musique' (Edmond Rostand) for solo voice, women's chorus & orch. (1890).

#### ORCHESTRAL WORKS

- Rhapsody 'España' (1883).  
 'Suite pastorale' (orchn. of Nos. 6, 7, 4 & 10 of 'Pièces pittoresques', see Pianoforte Solo).  
 'Joyeuse Marche' (orig. 'Marche française') (1888).

#### PIANOFORTE SOLO

- 'Marche des Cipayes' (1860).  
 'Impromptu', G ma. (1860).  
 'Dix Pièces pittoresques' (1880):  
 1. Paysage.  
 2. Mélancolie.  
 3. Tourbillon.  
 4. Sous bois.  
 5. Mauresque.  
 6. Idylle.  
 7. Danse villageoise.  
 8. Improvisation.  
 9. Menuet pompeux.  
 10. Scherzo Valse.  
 'Capriccio' (1883).  
 'Habanera' (1885).  
 'Air de ballet' (c. 1888).  
 'Bourrée fantasque' (1891).  
 'Cinq Pièces posthumes' (1891):  
 1. Aubade.  
 2. Ballabile.  
 3. Caprice.  
 4. Feuille d'album.  
 5. Ronde champêtre.

#### PIANOFORTE DUET

- 'Cortège burlesque'.  
 'Quadrille sur les principaux motifs de Tristan et Yseult de Wagner' (c. 1887).

#### TWO PIANOFORTES

- 'Trois Valses romantiques' (1883).

#### SONGS

- 'Credo d'amour' (Armand Silvestre) (1883).  
 'Tes yeux bleus' (Maurice Rollinat) (1885).  
 'Chanson pour Jeanne' (Catulle Mendès) (1886).  
 'Villanelle des petits canards' (Rosemonde Gérard) (1889).  
 'Ballade des gros dindons' (Edmond Rostand) (1889).  
 'L'Île heureuse' (Ephraïm Mikhaël) (1889).  
 'Les Cigales' (Gérard) (1889).  
 'Pastorale des cochons roses' (Rostand) (1889).  
 'Toutes les fleurs' (Rostand) (1889).  
 'Lied' (Mendès) (? publ. 1897).

#### UNFINISHED AND UNPUBLISHED WORKS

- 'Vaucochard et Fils 1<sup>er</sup>', operetta (Paul Verlaine), fragments (1863).  
 'Fish-ton-kan', operetta (Verlaine), fragments (c. 1865).  
 'Jean Hunyadi', opera (Henry Fouquier), fragments (c. 1865).  
 'Larghetto' for horn & orch. (c. 1875).  
 'Lamento' for orch. (c. 1876).  
 'Le Sabbat', comic opera (Armand Silvestre), fragments (c. 1877).  
 'Deux Duos bouffes' for 2 voices & orch. (1878)  
 1. Cocodette et Cocorico.  
 2. Monsieur et Madame Orchestre  
 'Duo bouffe de l'ouvreuse de l'Opéra-Comique et de l'employé du Bon Marché' (1888).  
 See also Caryll (adapt. of 'L'Étoile') Mottl (orch. of 'Bourée fantasque'). Ravel (orch. of 'Menuet pompeux'). Waldteufel (waltz based on 'España').

**CHACONNE** (Ital. *ciaccona*; Old Eng. Chacony; Span. *chacóna*). An obsolete dance, probably of Spanish origin. At any rate the name is Spanish, and is said to be derived from the Basque *chocuna*, "pretty" (Littré).<sup>2</sup> It is

<sup>1</sup> Published in 1897; the date 1891 is that of composition.

<sup>2</sup> Adolfo Salazar, in 'La música en la sociedad europea' (I, 346), suggests that it came from *chanson* through a faulty reading of French manuscripts. In an article, 'Sobre los orígenes de la chacóna' ('Nuestra Música', Mexico, Mar. 1946), he lends additional support to this conjecture by citing documents in which the form *chacon* is used for *chanson*.

first mentioned in Spain in 1591, and Cervantes has an admirable description of the dance in one of his 'Exemplary Novels' ('La ilustre Fregona'), published in 1610. The chaconne was a dance usually in 3-4 time (with the accent on the 2nd beat of the bar), of a moderately slow movement, which belonged to the class of variations, being, in fact, in the large majority of cases, actually a series of variations on a "ground bass", mostly eight bars in length. It closely resembles the Passacaglia.<sup>1</sup> Among the most celebrated examples are that in Bach's fourth Sonata for violin solo, and the two (one with 21, the other with 62 variations) in Handel's 'Suites de pièces'. (In Bach's case, where a bass was not to be maintained throughout by an unaccompanied violin, it is implied rather than audibly stated, but none the less clearly present.) Lully made the chaconne the customary ending to his operas, and its use in such a place was a convention of the later 17th- and early 18th-century opera. Gluck conformed to it in the finale of his 'Orfeo' and with some modifications in the final ballet of his 'Iphigénie en Aulide'. In Couperin's 'Pièces de clavecin' (1713) is a chaconne in 2-4 time, 'La Favorite: Chaconne à deux tems'.

E. P., adds. J. B. T. & E. B.

See also Passacaglia Variations (B iv).

**CHADWICK, George W. (Whitefield)**  
(b. Lowell, Mass., 13 Nov. 1854; d. Boston, 4 Apr. 1931).

American composer and teacher. He began to learn the pianoforte under his elder brother and later went to Boston, where he studied organ under Eugene Thayer. For a short time he was director of music at Olivet College, Michigan, but resigned to go to Leipzig, where he studied in 1877 and 1878 under Reinecke and Jadassohn in the class with Helen Hopekirk and Carl Muck. In 1879 he studied at Munich under Rheinberger. While at Leipzig he composed an overture, 'Rip van Winkle', which he conducted at a festival concert of the Handel and Haydn Society of Boston after his return to America in 1880. He made Boston his home and became organist of the South Congregational Church. He was appointed professor of harmony, composition and orchestration in the New England Conservatory of Music (Boston), and became its director in 1897. He exerted a potent educational influence. Yale University conferred upon him in 1897 the honorary degree of Master of Arts. He conducted for several seasons the music festivals at Worcester, Mass., but confined himself chiefly to his duties at the Conservatory and to composition.

Chadwick's works include operas, choral compositions, orchestral pieces (symphonies and other forms), chamber music, piano pieces

and songs. His productivity was not only large but varied. His writings for the stage range from serious musical dramas like 'Judith' to a burlesque operetta, 'Tabasco' (Boston, 29 Jan. 1894), which had much popularity. His creations in the choral field, however, are more important. His Ode for the opening of the Columbian Exposition (Chicago, 1892), 'The Viking's Last Voyage' and 'Phoenix Expirans' are works of imagination, virility and melodic inventiveness. His symphonic compositions disclose a sympathy with classic ideals. In some later works, such as 'Tam o' Shanter', Chadwick showed his readiness to assimilate modern methods and orchestral devices, which he handled with skill. His chamber music is characterized by clarity and dignity. Above all he drew clear and engaging melodic outlines in all his music. He made use of representative themes in some works and in others he introduced the idioms of Negro songs. But his music was for the most part conservative in style.

The following is a list of Chadwick's larger works:

#### OPERAS

- 'The Quiet Lodging' (1894).
- 'Tabasco', burlesque opera (1894).
- 'Judith', lyric drama (1901).
- 'The Padrone' (1915).
- 'Love's Sacrifice', pastoral opera (1917).

#### CHORAL WORKS WITH ORCHESTRA

- 'The Viking's Last Voyage' (1881).
- 'The Song of the Viking', for male voices (1882).
- Dedication Ode for the new Hollis Street Church, Boston (1886).
- 'Noël', for solo voices & mixed chorus (1888).
- 'Lovely Rosabel', choral ballad (1889).
- 'The Lily Nymph', cantata (1895).
- 'Ecce jam noctis', hymn for male voices, for Yale University (1897).
- 'Phoenix expirans' for solo voices & mixed chorus (1892).
- Ode for the Opening of the Columbian Exhibition Chicago (1892).
- 'Land of our Hearts' (1918).

#### ORCHESTRAL WORKS

- Overture 'Rip van Winkle', after Washington Irving (1879).
- Symphony No. 1, C ma. (1882).
- Overture 'Thalia' (1883).
- Symphony No. 2, B♭ ma. (1888).
- Serenade for strs. (1890).
- 'A Pastoral Prelude' (1891).
- Overture 'Melpomene' (1891).
- Symphonic poem 'Cleopatra' (1891).
- Symphony No. 3, F ma. (1896).
- 'Symphonic Sketches', suite in A ma. (1896).
- Overture 'Adonais', after Shelley (1898).
- Sinfonietta, D ma. (1906).
- Overture 'Euterpe' (1906).
- 'Suite symphonique', E♭ ma. (1911).
- Symphonic poem 'Aphrodite' (1912).
- Symphonic ballad 'Tam o' Shanter', after Burns (1917).
- Symphonic poem 'Angel of Death' (1917).
- Elegy, 'in memoriam Horatio W. Parker' (1919).
- Anniversary Overture (1922).
- 'A Pastoral Prelude'.
- 'Tre pezzi' ('Ouvverture, mignonne', 'Canzone vecchia', 'Fuga giocosa').

#### ORGAN AND ORCHESTRA

Theme, Variations and Fugue (1923).

<sup>1</sup> For a comparison of the two see PASSACAGLIA.

## VOICE AND ORCHESTRA

- 'Lochinvar' (1896).  
 'A Ballad of Trees and the Master' (1899)  
 'Joshua' (1909).  
 'Afar on the Plains of Tigris' (1911)  
 'Aghadoe' (1911).  
 'Four Christmas Songs' (1912).  
 'The Curfew' (1914).  
 'The Voice of Philomel' (1914)  
 'The Fighting Men' (1918)  
 'Drake's Drum' (1920).

## CHAMBER MUSIC

- 5 String Quartets, G m., C m., D m., E m., D m.  
 Quintet, E♭ m., for 2 vns, viola, cello & pf.  
 Also church music, part songs, numerous pieces for pf.  
 and for organ, songs with pf. or with organ, &c.

W. J. H.

**CHAGRIN, Francis** (b. Bucharest, 15 Nov. 1905).

Anglo-Rumanian composer. He studied engineering at Zurich and the pianoforte at the Conservatory there in 1924-28. In 1930-1932 he was at the Bucharest Conservatory, where Mihail Jora was his master for composition, and in 1933-35 he was a pupil of Dukas and Nadia Boulanger at the École Normale de Musique in Paris. He settled in London and in 1944-46 made further studies with Mátyás Seiber. But by that time he had already been (1941-44) musical director, composer and arranger in the B.B.C. Overseas Service (French section). He was the founder of the Committee for the Promotion of New Music (London, 1943).

His compositions include incidental music for Bernard Shaw's 'Heartbreak House' and Gozzi's 'King Stag'; music for numerous films and broadcast feature programmes; 'Prelude and Fugue' and several suites for orch.; pf. Concerto; chamber music; pf. pieces; over 100 songs, etc.

E. B.

**CHAILLEY, Jacques** (b. Paris, 24 Mar. 1910).

French conductor, musicologist and composer. Between 1925 and 1936 he studied harmony and counterpoint with Nadia Boulanger, composition with Delvincourt and Busser, conducting with Willem Mengelberg and musicology with André Pirro, Yvonne Rokseth and Albert Smijers. In 1933 he became Gustave Cohen's musical adviser for the Théophilien company in its task of reviving the ancient Greek theatre and medieval French plays at the Sorbonne, and he wrote incidental music for 'Le Jeu d'Adam et Ève', based on anonymous 12th-century texts (1933), 'The Persians' (1936) and 'Agamemnon' (1947) by Aeschylus and 'Antigone' by Sophocles (1939). He was attaché at the Maison Descartes in Amsterdam (1935-36) and general secretary and assistant director at the Paris Conservatoire from 1937 to 1948. In the latter year he was appointed professor of the vocal ensemble class there. He is conductor of the *a cappella* choir L'Alauda and editor of the 'Revue musicale internationale'.

Chailley's literary publications include 'Histoire musicale du moyen-âge' (1950) and 'Traité historique d'analyse musicale' (1951), and his compositions a one-act comic opera, 'Pan et la Syrinx' (libretto by Jules Laforgue, 1946), a Symphony and a string Quartet.

F. E. G.

**CHAIR (or Choir) ORGAN.** The name given to the small organ which, in cathedrals and other churches, used to hang suspended in front of, and below, the larger or great organ. Its name was said to be derived from its employment to accompany the vocal choir in the chief portions of the choral service except the parts marked "full" and the Gloria, which were usually supported by the "loud organ" as it was sometimes called. But there is no evidence to show that the name is connected with "choir", which in any case would have been spelt "quire" at the time. The derivation may be from "char" or "chore" = a helper. The chair organ is the equivalent of the German *Ruckpositiv*, i.e. an organ at the back (of the organist's seat).

The chair organ was generally of very sprightly tone, however small it might be; one of three stops only, not infrequently consisting of the following combination — Stopped Diapason, Principal, Fifteenth. As a rule a good chair organ should have a sufficient proportion of flue and reed-toned stops to give variety, colour and contrast in accompanying voices; and for use in solo playing as opposed to the reedy tone of the swell organ and the powerful tone of the great.

Father Smith's chair organ at St. Paul's Cathedral in London (1694-97, the most complete he ever made, had eight stops: Stopped Diapason (Wood), Principal, Flute (Metal), Gemshorn Twelfth, Fifteenth, Mixture III ranks, Cremona (through), Vox humana (through).

The chair organ should not only be regarded as a quiet accompanimental section, but it should also function as a softer contrast to the great organ and be equipped with a proper quiet chorus, containing a selection of mutation stops (nazard, tierce, etc.) and a small chorus reed (trompette). Only then can Bach's music be properly played on the instrument.

E. J. H., rev. W. L. S. (ii).

**CHALABALA, Zdeněk** (b. Uherské Hradiště, Moravia, 18 Apr. 1899).

Czech conductor. He studied conducting under František Neumann at the Brno Conservatory, where, later, he held a post as a teacher in 1925-36, being conductor of the National Theatre at Brno at the same time. In 1936-45 he was conductor and producer of the National Theatre at Prague; later he became director of the Opera at Ostrava and in 1949 director of the Opera of the State Theatre at

Brno. In 1952 he left Brno for Bratislava, where he became chief opera conductor of the Slovak National Theatre. He is a conductor of strong temperament and refined taste; he has done a great deal of work in systematically publicizing Yugoslav and Russian dramatic works.

**CHALET, LE** (Opera). See ADAM.

**CHALIAPINE, Feodor**. See SHALIAPIN.

**CHALLIS, John** (b. South Lyon, Michigan, 9 Jan. 1907).

American harpsichord maker. He was educated at the Michigan State Normal College and the University of Michigan. While at college he studied the organ with Frederick Alexander, having already had pianoforte lessons from the age of seven. He also learnt clock and watch repairing under his father, a jeweller at Ypsilanti, Michigan. Alexander, who taught him to love and understand Bach, owned a Dolmetsch-Chickering clavichord, and Challis tried to build such an instrument for himself. This led to his going to England in 1926, where he learnt harpsichord and clavichord making and playing under Arnold Dolmetsch at Haslemere and held the Dolmetsch Foundation Scholarship in 1928-30. In the latter year he returned home and established his own harpsichord-building studio at Ypsilanti. In 1946 he removed to Detroit, where he opened a larger establishment.

Not being an antiquarian and, always bearing in mind that the keyboard instruments of the old type have a future as well as a past, he continually made experiments and improvements. He was the first in 1936 to use an aluminium casting not dependent on the wooden substructure for the framing of harpsichords and clavichords. His instruments are made of American walnut with a dull oiled finish and mouldings in gold leaf. The keyboards have ebony naturals and white boxwood sharps. His largest (concert) harpsichord has two manuals, a range of five octaves, four sets of strings and seven pedals working different stops; and he makes a smaller two-manual type as well as five single-manual types of various sizes. He also makes a clavichord reproducing the effect of the old instruments, but with added resonance and volume. Moreover, there is a Challis "Mozart Pianoforte" reproducing the qualities of the early instruments written for towards the end of the 18th century.

E. B.

**CHALUMEAU** (Fr., from *calamus*, a "reed"). An obsolete instrument of the beating single-reed type. In its rudest form it was made from a cylindrical reed in which the speaking-tongue was cut. An interesting example lent by Césaire Snoeck to the Royal Military Exhibition, London, in 1890, was  $8\frac{1}{2}$  ins. long and about  $\frac{3}{16}$  in. internal diameter,

and was pierced with six fingerholes on the upper side and one thumbhole beneath. The tongue or reed was cut on the upper side. By the 17th century the instrument, from its rude original form, had developed into a family, of soprano, alto, tenor and bass, with a slightly increased compass due to the introduction of two keys. In this state it was ready by means of a slight modification to become the modern clarinet.

The name *Chalumeau*, especially in its German form *Schalmei* or *Schalmei*, is also given to a totally different instrument from the foregoing: an instrument with conical tube and double reed, the antetype of the oboe.<sup>1</sup> There may be room for doubt as to which of the two instruments is intended where the name occurs in the scores of Gluck's operas.

The word is also used for the lowest register of the clarinet.

D. J. B.

The foregoing is reprinted from the third edition, of this Dictionary, since the first paragraph represents a view widely if not generally accepted by musicologists. It should be observed, however, that there is no evidence of any sort for the existence of a family of single-reed instruments until the 17th century was nearly if not quite at an end. No instruments of this type were known to Mersenne (1636) and no specimens of such a family definitely assignable to the 17th century exist in any collection. The rude instrument formerly owned by C. Snoek and now in the Berlin collection is dated by Curt Sachs as c. 1700. In the first decades of the 18th century parts for the chalumeau are found in the scores of many German composers — Keiser, Telemann, Graupner, Hasse and Molter among others. Since J. C. Denner's 2-key clarinet also made its appearance about 1700, it is not unreasonable to suppose that these parts were intended for the newly invented instrument and that the first name given to it in Germany was not "Clarinet" but "Chalumeau". In fact the name "Clarinet" does not appear to have come into use in Germany before 1730, when it is found, seemingly for the first time, in J. G. Doppelmayr's 'Historische Nachricht den Nürnbergischen Mathematicis und Künstlern'.

**CHAMADE**. See ORGAN STOPS.

**CHAMAULT**. See COLIN, PIERRE GILBERT.

**CHAMBER MUSIC** (Fr. *musique de chambre*; Ger. *Kammermusik*; Ital. *musica da camera*). The term properly applied to all music intended for domestic use. Before the

<sup>1</sup> See SHAWM.

public concert became a recognized institution it was used principally to distinguish that kind from music written either for the church or the theatre. Consequently early in the 17th century we find the title of *musico da camera* (musician of the chamber) mentioned as a post held by a musician in a noble household, and composers of that time producing *cantate da camera* and *madrigali da camera* for their patrons. With the rise of the violin during the century the distinction between the *sonata da camera* and *sonata da chiesa* came into vogue in Italy<sup>1</sup>, and from that time began the special association of the term with the idea of concerted music for strings, though the consort of viols, as exemplified in the "fancies" or fantasies of the old English school, was one species of chamber music among many which flourished in England at an early date.<sup>2</sup>

So general a term cannot receive any precise classification; it is important to observe, however, that the development of chamber music in its various branches was always specially dependent on the patronage in one form or another of an aristocracy, until the concert-room converted chamber music into a species of public performance.

We find the Italian Renaissance, the English Elizabethan period, the French court of Louis XIV (who established the office of *Maitre de la Musique de la Chambre du Roy*) and, in the 18th century, the small German courts modelled on that of "Le Grand Monarque", each in turn producing chamber music of distinguished types, concerted and solo, vocal and instrumental.

Wherever patronage was uncertain the cultivation of chamber music was sporadic. That is the essential difference between the cases of Corelli in Italy and Purcell in England. The former, living and working under the protection of Cardinal Ottoboni, headed a great school of chamber music; his English contemporary, despite his superior personal genius, remained an isolated phenomenon. Purcell's 'Sonatas of Three Parts' (published 1683), offered to those "who carry musical souls about them", were merely seed thrown by the wayside: they established no type and proclaimed no era.

The models of the sonata for stringed instruments with thorough-bass accompaniment for harpsichord and of the concerto for a larger group of instruments, established by the great Italians, Corelli, Vivaldi and others, at the end of the 17th century, remained the dominant types of concerted chamber music throughout the first half of the 18th century. Handel and J. S. Bach were alike indebted to them for the forms of their instrumental works, and again, in comparing these two the influence of patronage in determining the course of events is

apparent. Handel, fighting his own way through the world, produced a comparatively small amount of chamber music — the violin sonatas are the most important part of it — and he turned the concerto from a chamber-music form into an orchestral one for public performance. Bach, on the other hand, produced the bulk of his sonatas, suites and concertos during his Cothen period, and the scrupulous attention he paid to detail as opposed to massed effects proclaims him pre-eminently a chamber-music composer.

Haydn, who developed the string quartet and kindred combinations of concerted chamber music in the seclusion of Prince Esterházy's country house, may be regarded as the last outstanding representative of the era of patronage, although the form which his work took indicated new artistic directions which subsequent composers were to follow.

The first essential difference between Haydn's quartets and the chamber music of the preceding generation is one of texture. His quartet represents the equal conversation of the four instruments, and the complete emancipation of all chamber music from the control of a thorough-bass followed as its consequence. The second is that of form. By a series of modifications and developments from existing shapes he arrived empirically at the classical sonata form<sup>3</sup>, and established it as the framework of all concerted chamber music for instruments. Mozart followed in his steps, and for nearly a hundred years after Haydn's death that framework was considered to be an essential condition of such music. The only important departure from it was made by Beethoven in the last series of his quartets (published posthumously), works which can scarcely be said to belong either to the chamber or the concert-room, but were written rather as an intimate personal diary of the soul.

A less definable characteristic than either form or texture, but one common to all classical examples of chamber music, is the intimacy of feeling expressible through the subtleties of a team of combined solo players. On this characteristic all the great masters have relied. The opening of Mozart's string Quartet in C major (K. 465), considered in its day one of the enigmas of music, is a typical instance of such reliance, and all the masters of the classical era from Bach to Brahms afford countless others.

The concert-room of the 19th century did not essentially alter the structure of chamber music. History records no counterpart in it to the symphonic poem which in the middle of the century threatened to supersede the classical symphony of the orchestra. The development of programme music left the

<sup>1</sup> See CORELLI.

<sup>2</sup> See CHEST OF VIOLS.

<sup>3</sup> See SONATA.

string quartet and its companion combinations virtually untouched. The concert-room, however, had its effect in sophisticating the ideas of chamber music, coarsening its texture and often increasing the technical demands made on the performers. Among 19th-century composers it often seems rather a matter of chance whether a work is scored for a chamber-music combination or for an orchestra. Even Brahms, whose understanding of chamber-music style was more complete than that of any other composer of his generation, could begin his first string Quartet (Op. 51 No. 1, C minor) with a passage which has all the appearance and sound of being an orchestral idea reduced for four strings, and the chamber music of such composers as Dvořák, Grieg and Tchaikovsky teems with passages illustrating the same point.

Moreover, the enlargement of the pianoforte from a chamber instrument, as it was in the days of Mozart, to the concert-room instrument for which Schumann wrote his Quintet for strings and pianoforte created a new standard of technique for those species of chamber music which combine the keyboard instrument with strings. Schumann, indeed, may be said to have begun a new epoch in this type of chamber music which was carried farther by Brahms, Dvořák and César Franck. In their piano quintets, etc., these composers are felt to be writing primarily for the public concert-hall, even though it be a small hall, rather than for purely domestic performance. With the 19th century, too, performers organized themselves into permanent parties for the performance of chamber music, and necessarily studied their team-work increasingly from the standpoint of the concert platform.

Towards the end of the 19th century this chamber music of the concert-room entered on a new phase. All those influences of romanticism which converged to produce what is known as programme music, though kept at bay for a time, began to affect first the spirit, then the actual form of chamber music. During the 19th century these influences began to operate most clearly in the work of Slavonic composers. Smetana's string Quartet 'From my Life' and Tchaikovsky's Trio for strings and pianoforte, 'In Memory of a Great Artist', show the influences at work. At the end of the century Debussy used the string quartet as a medium for that kind of impressionism which he had evolved at the keyboard of the pianoforte. Ravel, following a few years later with the string Quartet and the Septet (harp, flute, clarinet and string quartet), carried farther what Debussy had begun. The characteristic of this early 20th-century French school of chamber music is the concentration of the interest on successive impressions of harmony and timbre rather than on design.

This is true even where the traditional sonata form is followed with exactitude, as it is in Ravel's Quartet.

In England in the first decade of the 20th century there came an impulse among the younger composers to write short single-movement works for various combinations of instruments. This impulse was fostered from without by the competitions instituted by W. W. Cobbett; but it would be untrue to suggest that his prizes were the cause of so general a departure from the sonata tradition. The 'Fantasies' by Hurlstone, Frank Bridge, Vaughan Williams and others, which won prizes, were in some instances no doubt influenced by practical considerations, not only of the conditions laid down for the competitions, but also of what would be serviceable in the concert-room. They were also the result of the desire for a more direct and less pretentious form of musical expression. Thus, while German chamber music was becoming increasingly elaborate, with the involved counterpoint of Max Reger and the systematized artifice of Arnold Schoenberg, both French and English composers in their different ways were throwing over accepted traditions, and from them it largely comes that at the end of the first quarter of the century the chamber-music repertory again included works of innumerable sizes and shapes having little or no connection with that three- or four-movement sonata form based on the classical view of tonality which modern harmony had challenged. Chamber-music combinations, and particularly the string quartet, have been found to be a peculiarly convenient medium for all those experiments with atonality, polytonality, quarter-tones and other divisions of the scale which are characteristic of the restless technical enterprise of to-day.

Throughout the 19th century chamber music lay in a quiet backwater of the stream, more or less immune from the controversies which urged on the progress of orchestral music. To-day it has been drawn into the vortex, as the festivals held annually by the I.S.C.M. show. It is unnecessary to pass any judgment on the desirability or otherwise of this state of things. The course of history is here outlined merely to establish the fact that chamber music, though still called by the name which indicates its domestic origin, has become merely a species of public concert music differing from orchestral music only in the fact that it is performed by groups of solo players sufficiently small to produce perfected team-work without the aid of a conductor. H. C. C.

**CHAMBER ORGAN.** The little portable organs, carried by a strap over one shoulder, pumped with one hand and played on a diminutive keyboard with the other, which were so prominent in the musical life of the middle ages, declined in popularity during the late Renaissance; but the rather larger positive organ continued throughout the baroque period as a domestic or chamber instrument of considerable importance. There was one organ scarcely larger than the medieval and early Renaissance portable: namely the regal, a diminutive reed organ with pipes too short to influence the pitch, though contributing to tone-quality by selectively reinforcing certain of the upper harmonics. The reed is not a free reed as in the modern harmonium and American organ, but a beating reed comparable to that of the clarinet; the tone is incisive, pungent and unexpectedly powerful. The chamber organ proper is about the size of a writing-desk or a little larger, equipped with one or two sets of wooden flue pipes of soft, sweet and unassertive tone. Larger organs were also built with a greater variety of stops, seldom, however, exceeding six, a typical Father Smith specification being: Stopped Diapason 8'; Principal (wood) 4'; Fifteenth 2'; Mixture, 2 ranks. In such instruments (especially Smith's) the upper-work is often quite bold and ringing. About the middle of the 18th century it became customary to divide some or all of the stops, so that they draw on separate halves, above and below c', for differentiating the melody. A number of 17th- and 18th-century chamber organs remain in private hands and, when properly restored — *i.e.* efficiently but without modernization — they afford rare opportunities for authentic performances of Baroque

music. Much Tudor keyboard music is also suited to the organ and mainly though not exclusively intended for it: perhaps one-third of the contents of the 'Fitzwilliam Virginal Book', for example, is of this character.

In addition to its solo possibilities the chamber organ is a continuo instrument of considerable significance, joining or replacing the harpsichord in suitable cases. Its use and status during the 17th century may be learned from Mace's 'Musick's Monument' (1676, p. 234), where a distinction is drawn between the profoundly serious chamber music in which the chamber organ can most properly take part and the lighter but more brilliant works for which the harpsichord is suited:

We had for our Grave Musick, Fancies of 3, 4, 5, and 6 Parts to the Organ, Interpos'd (now and then) with some Pavins, Allmaines, Solemn, and Sweet Delightful Ayres . . . upon so many Equal, and Truly-Sciz'd Viols . . . The Organ Evenly, Softly, and Sweetly According to All . . . But when we would be most Ayrey, Jocond, Lively, and Spruce; Then we had Choice, and Singular Consorts, [*i.e.* with viols, etc. — "broken" consorts, as the context shows] either for 2, 3, or 4 Parts, but not to the Organ (as many (now a days) Improperly, and Unadvisedly perform such like Consorts with) but to the Harpsicon.

Organ parts survive in contemporary manuscripts for many but very far from all the Stuart "whole" consorts for viols described at the beginning of this passage. They normally consist of a skeleton reduction of the viol parts. Such doubling by the organ was evidently a frequent practice, as it also was in vocal music; but it must certainly be regarded as optional. Chamber organs were by no means such common possessions as chests of viols; hence the absence of an organ is never incorrect, even when a contemporary organ part survives. Conversely, the addition of a chamber organ is not incorrect even when no part survives. When present, the little chamber organ, with its unobtrusive diapason tone, is scarcely audible in itself, but lends a softness and bloom to the viols which has peculiar charm, though some of their edginess disappears at the same time. Thus in complex polyphonic fantasies the loss may outweigh the gain, while in quiet pavans and the simpler fantasies there is only gain; and similarly in vocal music.

The organ is not infrequently specified as the continuo instrument on the title-pages of 17th-century Italian violin music; but probably only in the case of sonatas *da chiesa*, not *da camera*, where the harpsichord is indicated. Nevertheless, the "church" sonatas were obviously performed frequently enough in the "chamber" as well. Within the limits set by musical sensibility some interchange of chamber organ and harpsichord was considered permissible. In modern times we are confronted with the rarity of surviving chamber organs and of suitable stops on larger

organs, the English church organs in particular being almost totally devoid of baroque colourings.

R. D.

**CHAMBERLAIN, Houston Stewart** (b. Portsmouth, 9 Sept. 1855; d. Bayreuth, 9 Jan. 1927).

English writer on music. He was educated at Cheltenham and later in France, but settled in Germany and became one of Wagner's most enthusiastic followers, one of his most ardent champions in the 'Bayreuther Blätter' and a defender of Teutonic culture in general. He married Wagner's daughter Eva and became a naturalized German. Apart from many articles on the Wagnerian conception of art, in the nature of propaganda rather than of discerning criticism, he published two books: 'Richard Wagner' (Munich, 1896) and 'Richard Wagner der Deutsche als Künstler, Denker und Politiker' (Leipzig, n.d.). During the Nazi rule between 1933 and the second world war, when it was decreed that Wagner was to be regarded as the supreme German artist, Hitler declared Chamberlain to be "the ideal Englishman".

**CHAMBONNIÈRES, Jacques** Cham-pion de (b. ? , 1602; d. Paris, c. 1672).

French composer and harpsichordist. He was the grandson of Thomas Champion, son of Jacques Champion, "sieur de La Chapelle" and of Anne Chartriot (married 31 Jan. 1601), daughter of Robert Chartriot, "sieur de Chambonnières". He added to his name that of his maternal grandfather's estate, in Brie (now department of Seine-et-Marne), which was also the home of the Couperin family. It was he who introduced the Couperins to Paris in the early 1650s. Chambonnières succeeded his father as *clavecin* player to Louis XIII and held the same post under Louis XIV. He also served as court harpsichordist in Sweden and Brandenburg, and was perhaps the most celebrated performer of his day, renowned not so much for virtuosity as for the "roundness and softness of his touch" (Constantin Huyghens). His music, like his playing, cultivated an extreme refinement and subtlety, rather than brilliance and grandeur. He may be regarded as the founder of the French school of *clavecin* composers and as a leading representative of the *précieux* society. His work is an extension of the work of the lutenists of the *salons*; they were emulated for social as well as musical reasons, since the lute was the traditional instrument of nobility.

Many of Chambonnières's pieces derive from the polyphonic elements of lute style. The three big G minor 'Pavanes', for instance, use contrapuntal entries, false relation

and rhythmic flexibility in a manner that almost suggests an affinity with the polyphonic organ school. More "modern" features are the luxuriant ornamentation and the richness of the harmony, encouraged by the spacing of the lute parts. The warm sound of the tenth and the dominant seventh is especially attractive to Chambonnières.

In his sarabands Chambonnières sometimes writes symmetrically lyrical tunes which have something of the flavour of French folksong. This is a very conscious naivety, however, the suave progression of the harmonies and the fragile ornamentation are still the product of a courtly society. The model for these simple lyrical pieces is to be found in the lute suites of Gaultier.

Of the quick dance movements the most successful are those which are contrapuntally treated, such as the delightful 'Gigue Bruscambille'. In general, however, his best movements are those which are in direct contact with the polyphonists or the lutenists, or both. They tend, like Gaultier's work, to the elegiac and contemplative, without perhaps reaching the sombre refinement of Gaultier's best music. When Chambonnières attempts to build his pieces not on latently polyphonic principles, nor on a simple dominant-tonic dance basis, but on a more developed scheme of tonal relations, the effect is less convincing. The larger allemandes, though interesting for their flexible part-writing, have not the balance between polyphonic vitality and harmonic architecture which marks the mature allemandes of Couperin and Bach. From this point of view this normally impeccable artist suggests a development which he did not live to fulfil. On the whole his most moving and most powerful music is his most old-fashioned.

All Chambonnières's music is in the form of the dance suite borrowed from the lutenists; both the number and the order of the dances were still unstable. His first volume of pieces contains a table of ornaments the purpose of which was to introduce something of the lute's subtlety of nuance into harpsichord technique. Like Couperin after him, he wished to make the *clavecin*, which he regarded as a kind of mechanized lute, as expressive as was the lute itself, in which the strings were directly under the control of the player's hands.

Chambonnières taught most of the later generation of harpsichord player-composers including G. Nivers, the three earlier Couperins, Cambert, Le Bègue and d'Anglebert.

**CHAMINADE, Cécile** (b. Paris, 8 Aug. 1857; d. Monte Carlo, 18 Apr. 1944).

French pianist and composer. She studied

various branches of music with Le Couppey, Savart, Marsick and Godard. At the age of eight she wrote some pieces of church music, and she gave her first concert when she was eighteen. Her numerous works of all kinds attracted the attention of the public, and she brought them forward during many concert tours, in France and elsewhere, particularly in England, where she became a regular visitor after her first appearance in June 1892.

A great number of songs, pianoforte pieces, a 'Concertstuck' with orchestra, etc., are among her most successful works. She attempted the larger forms of music, writing several orchestral suites, a *symphonie lyrique* with chorus and orchestra called 'Les Amazones'; two Trios for strings and pianoforte; a ballet, 'Callirhoe', produced at Marseilles in 1888; and an *opéra-comique*, 'La Sévillane' (unpublished). Notwithstanding the real charm and clever writing of many of Chamnade's productions, they do not rise above the level of agreeable drawing-room music.

**Chamisso, Adalbert von.** See Brahms (partsong). Cornelius (duet). Franz (5 songs). Grieg (4 songs). Jensen (3, 'Dolorosa', song cycle). Loewe (song). Medtner (2 songs). Pfitzner (song). Reznicek ('Schlemihl', symphony). Schumann (1 part-song, 13 songs). Wolf (H, 2 songs).

**CHAMPEIN, Stanislas** (b. Marseilles, 19 Nov 1753, d. Paris, 19 Sept. 1830).

French composer. According to Laborde he was of Greek origin. He started on his professional career at a very early age as organist at the small town of Pignon in Provence and went to Paris about 1775. Together with Albanèse he wrote the music for a lyric scene called 'Le Soldat français', which was sung by the "petits comédiens du Bois de Boulogne" on 1 June 1779. Champein's first independent work for the stage was an unsuccessful 3-act opera, 'Mina' (Comédie-Italienne, 26 Jan 1780), followed by c. 25 others until 1796. The most successful were 'La Mélomanie' (1781), 'Les Dettes' (1787) and 'Le Nouveau Don Quichotte' (1789); all three were published in full score and given on many stages. Choron and Fétis between them enumerate the titles of another 20 operas, which were never performed and of which hardly a trace remains.<sup>1</sup> His last works were 'Les Trois Hussards' (Opéra-Comique, 26 July 1804), of which a manuscript score is extant<sup>2</sup>, and after another long interval yet another hussar opera (different at any rate as far as the libretto is concerned), 'Les Hussards en cantonnement' (Opéra-Comique, 28 June 1817).

<sup>1</sup> One of them was, according to Choron, an opera in prose, for which he chose a literal translation of Sophocles's 'Electra'. The work was rehearsed at the Opéra and received with great applause, but the authorities refused, without giving a reason, to permit its performance.

<sup>2</sup> At least it was extant in 1914 (Liepmannssohn Catalogue 185, No. 232).

Champein had been receiving a pension of 6000 francs from Napoleon which he lost at the Bourbon Restoration. After many vicissitudes and hardships a committee of authors, including Boieldieu and Scribe, assured him another pension, which he enjoyed for only about eighteen months before he died.

See also Rouget de Lisle ('Bayard dans Bresse', lib.).

**CHAMPION.** French 16th-17th-century family of musicians.

(1) **Jacques Champion** (b. ?; d. ?), singer. He was in the chapel of Charles V in 1521 and the following years.

(2) **Nicholas Champion** (b. ?; d. ?), singer and composer, ? brother of the preceding. He was also in the royal chapel at the same time. A Psalm of his is known, 'Beati omnes qui timent', for 6 voices, found in two collections printed in 1542 and 1569 at Nuremberg.

(3) **Thomas Champion** (called *Mithou*) (b. ?; d. ?), keyboard player and composer, ? brother of the preceding. He was court organist and spinet player in the reigns of Charles IX and Henri III, and published a 'Premier Livre contenant 60 psaumes de David' in 1561. In 1570 he married Margaret, daughter of the Scottish lutenist Charles Edmuthon.

(4) **Jacques Champion** (b. ?; d. ?), singer, son of the preceding. He had the title of "Sieur de la Chapelle" (equivalent to the English "Gentleman of the Chapel Royal").

(5) **Nicolas Champion** (b. ?; d. ?), singer, brother of the preceding. He followed his brother under succeeding kings.

(6) **Jacques Champion de Chambonnieres** (b. ?; 1602; d. Paris, c. 1672), harpsichordist and composer, nephew of the preceding, son of (4). See CHAMBONNIÈRES.

(7) **Antoine Champion** (b. ?; d. ?), organist and (?) composer, ? relation of (1-6). He was court organist in the reign of Henri IV. A 5-part Mass in the Munich Library (attributed to him by Fétis) is the work of one Nicholas Champion, a 16th-century composer of psalms and motets, probably (2). Fétis declared himself the possessor of a book of organ pieces by Antoine Champion, but it is not now to be found in the Fétis library.

**Champmeslé, Jean François.** See Pierné ('Coupe enchantée', opera).

**CHANDOS ANTHEMS.** See HANDEL (Catalogue, Church Music).

**CHANG.** This term is best known as the name of the Persian harp, although the instrument itself has its roots in antiquity, where we see it on a bronze of about 2000 B.C. from Nihawand.<sup>3</sup> Special characteristics of this harp were that it had no supporting frontal pillar and that its soundchest was above the strings, not below them, as in the earlier

<sup>3</sup> E. Herzfeld, 'Archaeological History of Iran', 1935, p. 7.

harps and kitharas During the 18th Egyptian dynasty (c. 1570 B.C. and on) this land adopted the upper-chested harp, probably from Syria, where we see the soundchest at an angle from the vertical. We do not know its Egyptian name, unless it was the *da'da't* or *da'da'newt*; nor do we know its Semitic name, although there is an alluring possibility. In Akkadian *shabikū* equates with the Arabic *shabaka* ("network") and the Hebrew *šabaka* ("to entwine"), hence, perhaps, the *šabekd* or *sabekd* of Daniel iii, 10, 15, which may have been the parent of the Greek *sambyke*, as Gesenius suggested. In any case, the latter instrument was Oriental, as Strabo assures us.

In the next millennium, however, the instrument in Iran<sup>1</sup> and in Assyria<sup>2</sup> reveals that the back of the soundchest had developed a gradual curve, a configuration which may have given rise to its name in Pahlavi — *chang* — by which it has since been known through Sasanian days (A.D. 224–642) to about two centuries ago, when the instrument fell into disuse. It soon influenced both the East and West. We observe it in China on a stele of A.D. 551 at Philadelphia and in the paintings of 'The Thousand Buddhas', a little later, as shown by Sir Aurel Stein (pl. 30).

At the dawn of Islam (7th cent.) the Arabs took a liking to the *jank fārist* ("Persian harp"), the vocable *jank* being the nearest sound in Arabic to the Persian word *chang*, although in many instances the terms *šanj* and *sanj* were used, which led to some confusion, since the first name stood for cymbal (pl. *sumij*). Al-Fārābī (d. c. 950) describes its stringing and scales under the name *šanj*, and it has 15 strings, tuned diatonically, giving two octaves. Avicenna also mentions this harp (*šanj*), as well as another, the *salbāq*. This latter would appear to be the Byzantine *sambyke*, an instrument which, probably, possessed a frontal pillar.<sup>3</sup> In Egypt there was a *jank miṣrī* ("Egyptian harp"), an indigenous production. It was furnished with a double row of strings, placed side by side, with a thin piece of wood separating each row which acted as a soundboard.

In Persia many types and sizes existed, as their paintings reveal. In the *Kanz al-tuhaf* (14th cent.) the soundchest was 109 cm. long, while the lower bar (*dasta*) was 81 cm. long. Ibn Ghaibī (d. 1435) describes the normal diatonic harp as having 24 strings, although those who used the scale of the Systemists<sup>4</sup> had 35 strings. By the time of Evliyā Çelebī (17th cent.), Turkey had but ten players on the instrument, and it soon disappeared en-

tirely, as it did in Persia, where in the time of Kaempfer (Amoen. Exot., 1717) the name *chang* was given to a psaltery or dulcimer

**CHANGE-RINGING.** An art of bell-ringing peculiarly English and producing a music of its own. It was developed in England during the 17th century, while on the Continent there was a parallel development in the carillon.

Any given number of bells sounded singly, one after another, is capable of a fixed number of permutations, each one different from all the others. Every such rearrangement, in actual ringing, of the order in which the bells strike is called a "change". Change-ringing is the art of so ringing bells that a different change is produced at each pull of the bell ropes. No greater shift in the order of striking of any bell is allowed than an exchange of place with the bell next to it, and no change may be repeated: each one must be different. Sets of bells of various numbers, 5, 6, 8, 10 or 12, are used in change-ringing; they are usually tuned to the notes of the major scale, but some few rings of 5 are to be found in the minor. The largest bell, the tenor, is always the tonic or keynote. The smallest bell, sounding the highest note, is called the treble bell. All the bells are indicated by numbers which run consecutively from the treble bell as 1. When the bells are rung in sequence by numbers 1, 2, 3, . . . to the tenor the sequence is called "rounds". A set of changes begins with rounds and is not completed until the sequence of rounds is again reached.

The underlying principles of all change-ringing will best be explained by an example. A bell working its way from the leading or first place (front) to the last place (behind) is said to be "hunting up". The reverse of this is called "hunting down". Thus in the following example of ten changes on five bells No. 1 "hunts up" first and then "hunts down", while No. 5 is doing the exact opposite:

1 2 3 4 5	5 4 3 2 1
5 3 4 1 2

This is a "plain hunt" on five bells. It will be observed that each bell in turn works from being first bell to being last, striking two blows as first and two as last.

Arising from a plain hunt such as this, and conforming to the rules already indicated, many methods, more or less intricate, of producing changes have been evolved. The four standard methods are called Plain Bob, Grand-sire, Treble Bob and Stedman.

Change-ringing proper is not possible on less than 5 bells or on a greater number than 12. Changes are rung on 7, 9 and 11 bells, but in each case 8, 10 and 12 bells respectively are used, the tenor bell then remaining the last note of the sequence throughout.

The following technical terms should be defined :

"Doubles." The changes produced on five bells in which two pairs of bells interchange at each permutation.

"Triples." The changes produced on seven bells in which three pairs of bells interchange at each permutation.

"Caters." The changes produced on nine bells in which four pairs of bells interchange at each permutation. The name is derived from the French *quatre* or the Latin *quatuor*.

The following table shows the number of changes arithmetically possible on a given number of bells, the change-ringers' technical term for each group, and the approximate time which would be taken in ringing them :

No. of Bells	Name	No. of Changes	Years	Days	Hours	Minutes
4	Singles.	24	..	..	..	1
5	Doubles.	120	..	..	..	5
6	Minor.	720	..	..	..	30
7	Triples.	5,040	..	..	3	30
8	Major.	40,320	..	1	4	..
9	Caters (quarters).	362,880	..	10	12	..
10	Royal.	3,628,800	..	105	..	..
11	Cinques.	39,916,800	3	60	..	..
12	Maximus	479,001,600	37	355	..	..

It will be observed that the plain hunt on five bells, in which two pairs of bells interchange at each permutation, comes back into rounds after 10 changes. This is only one-twelfth of the total number of changes that is arithmetically possible for doubles. It illustrates the opportunities that are open to the composer of a "method" of change-ringing. For example a plain course of Stedman Doubles will run into rounds at the end of 60 changes.

So in contrast with the plain hunt on five bells shown above let us consider Stedman's principle. This is a "method" of change-ringing invented by Fabian Stedman, a printer of Cambridge, who published his great work, 'Tintinnalogia', in 1668. It is probable that his "method" was composed about 1675. He

based it upon the six changes of which three bells are capable, for these six changes are being rung continuously by a group of three bells "in front" while the other bells "behind" are "dodging". "Dodge" is defined as an evolution in change-ringing performed (when required by the rule of the "method") by two bells which meet when hunting in opposite directions, one "up" and the other "down", and proceed to change "places" three times in successive strokes before resuming their respective paths. That is, each bell after crossing the other's path, strikes a blow in the contrary direction to that in which it was previously hunting, and then resumes its former path, crossing the other again. The backward blow is called the "dodge".

Here is part of a plain course of Stedman Doubles, showing two successive sequences of six changes, the first a "slow" six, the second a "quick" six :

Bells No. 3, 2, 4	3 2 4 1 5 6	The treble bell &
"in front" for	2 3 4 5 1 6	No. 5 "dodge".
six changes.	2 4 3 1 5 6	The Tenor bell
	4 2 3 5 1 6	"covers" or
	4 3 2 1 5 6	strikes "behind"
	3 4 2 5 1 6	throughout.

Bell No 5 having finished	4 3 5 2 1 6	Bell No. 2 having finished its
"dodging" now	4 5 3 1 2 6	ing finished its
comes to the	5 4 3 2 1 6	"front work"
three-bell work	5 3 4 1 2 6	now "dodges"
"in front" for	3 5 4 2 1 6	with the treble.
six changes.	3 4 5 1 2 6	etc.

The 46th change from this point will be rounds. The "dodging" bells make a "double dodge".

The Grandsire method of change-ringing is supposed to be the original one. Taking the rule given above for a plain hunt, which produces only ten changes on five bells, in this method it is altered thus: The bell that leads next before the treble only goes up in 3rd's place (*i.e.* her place in rounds) and then goes back to lead again; by this the bells in 4th's and 5th's places are thrown out of their work as will be seen at \* in the following diagram, and they proceed to dodge:

1 2 3 4 5	5 1 4 2 3
	1 5 2 4 3
2 1 3 5 4	* 1 2 5 3 4
2 3 1 4 5	2 1 5 4 3
3 2 4 1 5	2 5 1 3 4
3 4 2 5 1	5 2 3 1 4
4 3 5 2 1	5 3 2 4 1
4 5 3 1 2	3 5 4 2 1
5 4 1 3 2	etc.

This diagram shows the first fifteen changes in a plain course of Grandsire Doubles. At \* the treble is leading and is about to hunt up to 5th's place. The bell which led next before

the treble is No. 5, and so, by the rule, she does not go up beyond 3rd's place. Consequently No. 4 bell has to dodge with No. 3 and so she cannot lay her two blows behind<sup>1</sup> for another two changes. If the fifteen changes next following those written out above are themselves written out now, it will be found that at the nineteenth and twentieth change the treble leads again. This time No. 4 is next before the treble in the lead and so she cannot now go up beyond 3rd's place. Consequently the twenty-first change is identical with the first change (*i.e.* after rounds) in the plain hunt given above, and the bells continue as there shown, and run into rounds again at the thirtieth change. This produces only a quarter of the 120 changes possible with five bells. Now examine the last three changes in the plain hunt. The bell in the lead next before the treble is No. 3, and this explains why for consistency the No. 3 bell cannot go above 3rd's place in the first change of Grand-sire Doubles shown above.

To produce more than 30 changes by this method the services of the conductor are needed. He uses the terms "Bob" or "Single" to call the changes in work shown in the following diagrams. These changes always take place when the treble is leading, and for convenience we will take up the work from the last change in the left-hand column above, which we will repeat before adding the new changes:

"Bob" 5 4 1 3 2	"Single" 5 4 1 3 2
5 1 4 2 3	5 1 4 2 3
1 5 4 3 2	1 5 4 3 2
1 4 5 2 3	1 5 4 2 3
4 1 5 3 2	5 1 4 3 2
4 5 1 2 3	5 4 1 2 3

It will be seen that by these calls all the bells, except the treble, are thrown out of their plain hunting work, bells No. 4 and No. 5 do not go up beyond 3rd's place, while No. 2 and No. 3 keep changing places; in change-ringing terms No. 4 and No. 5 are said to "make places", while No. 2 and No. 3 make a "double dodge" (like the corresponding bells in Stedman Doubles). The effect of these calls is most easily observed by comparing the courses of bells No. 4 and No. 5 in these two columns and in the right-hand column of the earlier diagram of the first fifteen changes. In particular it is evident that when a "Single" is called only two bells change places (*cf.* the definitions of Doubles and Triples), whereas normally, at a change, as many pairs of bells as possible change places.

This method is much practised on all numbers of bells from 5 to 12; the working is the same on all numbers, but with more bells there are more of them to dodge, and the

arrangement of bobs and singles becomes more complicated. This method is, however, considered to be better suited to an uneven number of changing bells with the tenor covering.

In Stedman Doubles, for some reason best known to himself — possibly to make the first two rows, after rounds, identical with those of Grandsire Doubles — Fabian Stedman caused the final rounds to occupy the position of the fourth row of a "quick" six, and this custom is continued. It is never varied in the case of Doubles and Triples, and it is generally followed in Caters and Cinques. Thus in Stedman Doubles the work begins with the first two rows of Grandsire Doubles, not counting rounds, followed by the two "sixes" written out above. This explanation will now make it easy to write out the whole 60 changes of a plain course of Stedman Doubles, when it will become evident that by two calls, namely "Singles", in the right places, the full 120 changes can be produced in this method. The first call reverses two of the bells so that they are "out of course", the second puts them back in their original order, *i.e.* "in course" again.

Writing out changes in this way is very informative for those who wish to understand the principles of change-ringing. In his classic treatise, 'Change Ringing', Troyte wrote:

I will again urge on the young conductor the great advantage that it will be to him to write out touches or even whole peals — whereby he will gain a great insight into the working of the bells<sup>2</sup>

Treble Bob, in particular Treble Bob Major (*i.e.* on eight bells), is a familiar method of change-ringing. There are many variations of this method which is usually performed on an even number of bells. It derives its name from the fact that, instead of the plain hunting course, the bells, and more especially the treble, have a dodging course; as will be seen from the following diagram for six bells (Minor):

1 2 3 4 5 6	5 2 6 3 4 1
2 1 3 4 6 5	2 5 3 6 1 4
1 2 4 3 5 6	2 3 5 1 6 4
2 1 4 3 6 5	3 2 1 5 4 6
2 4 1 6 3 5	3 2 5 1 6 4
4 2 6 1 5 3	2 3 1 5 4 6
4 2 1 6 3 5	2 1 3 4 5 6
2 4 6 1 5 3	1 2 3 4 6 5
2 6 4 5 1 3	2 1 4 3 5 6
6 2 5 4 3 1	1 2 4 3 6 5
6 2 4 5 1 3	1 4 2 6 3 5
2 6 5 4 3 1	4 1 2 6 5 3
2 5 6 3 4 1	1 4 6 2 3 5
5 2 3 6 1 4	4 1 6 2 5 3
	4 6 1 5 2 3
	<i>etc.</i>

<sup>1</sup> *Cf.* Dorothy L. Sayers, 'The Nine Tailors', p. 39.

<sup>2</sup> Quoted in 'The Nine Tailors', p. 216.

The following diagrams show the way in which a modern bell is hung for the purpose of change-ringing. The crown of the bell is

firmly bolted to the headstock, which revolves on "gudgeons" working in ball-bearings. To the headstock is fixed a large wooden wheel, grooved to hold the rope which passes down, by means of rollers and guides, into an approximate circle with its neighbours in the ringing-room. Here the ringer pulling on the familiar

coloured woollen sally sets the bell in motion, causing it to swing alternately in opposite directions, making one swing for each pull.

As the bell swings through a right angle the garter hole passes the roller and the direction in which the rope leaves it is reversed. The bell describes an ever-increasing arc until it is mouth upwards, its clapper striking the bell at each swing at the time when the bell is reaching the end of its movement. The process of getting the bell into this position is called "raising", and the bell when raised is said to be "up" or "set". The bell may, if desired, be allowed to go a little way over the "balance" point until the stay pawl rests against the slider stop. It can there remain, and the ringer may remove his hands from the rope. This is what happens with a bell fitted as shown in the diagram. An alternative plan is to fit an ash-wood slider bar to cross the bell pit parallel to the stretcher, and the end of the stay rests against this bar when the bell is "set". The ash bar is pivoted on the wheel side of the frame and moves in a slot on the stay side. Should the bell be overpulled the bar may act as a safety device, giving way before damage is done to other parts of the mechanism. It is easily replaced. The entire ring of bells must always be "raised" to this balance position, or be "set", before change-ringing can begin.

"Falling" a bell is bringing it from the "set" to the "at rest" position shown in the diagrams. In doing this the ringer progressively lessens the arc described by the bell by checking the movement on the rope. In many parts of the country, and especially in Devon, bells are rung up or lowered in this way, in peal; and the consequent slowing down or quickening of the rate of striking, in "raising" or lowering ("falling") the bells, respectively, is very effective.

Change-ringing is practicable only when the bells are describing their complete circle and are being rung up to the "balance" each time. In the change-ringer's terminology, when the rope then goes straight from the garter hole to the roller (see the first diagram and assume the bell to be rotated counter-clockwise to a vertical—mouth uppermost—position) so that the sally is at a convenient hand level, the bell is at "hand stroke". When the bell has swung full circle, so that the rope goes from the garter hole round the wheel to the roller, and the sally is in consequence high, the bell is at "back stroke".

In change-ringing, bringing the bell from one "balance" position to the other demands skill and judgment so that the successive "striking" shall be regular and even. An expert band of ringers secures perfect precision in the "striking". This, together with the full tone of the bell, in "full swing", the ever-changing notes, the continuity and the mingling of sounds, constitutes the indescribable

charm of good change-ringing. In many ways the succession of sounds has little real musical significance, but the indefinite rhythmic tonal progression is fascinating.

The quality of tone produced by a bell is governed by its proportions and by the purity of the alloy of copper and tin used for bell-metal. The design of a good bell is the result of the accumulated knowledge of many generations of bell-founders. The accepted form cannot be departed from without injury to tone and tune. The details are intricate and the bell-founder keeps their secrets to himself, because the allowances which must be made for tuning while yet maintaining the best proportions are known only after long experience.

Long before change-ringing was practised care was taken to make bells "tuncable and agreeable to each other", showing that they were tuned in musical sequence. On the Continent the tuning of bells received much attention. As early as the 13th century it was considered necessary that every good bell should produce three prominent notes. In the latter half of the 17th century Hemony maintained that a good bell must be so proportioned that its partial tones contain three octaves, two fifths, a minor third and a major third. This was undoubtedly the aim of the greatest continental founders, and it is largely due to the method of tuning that so many of their bells have become famous for both tone and tune. The following analysis of the tones of the splendid Great Bell at Erfurt shows that Hemony's principles were carried into effect nearly two centuries before his time:

Date 1497. Diameter 8 ft. 5½ ins.  
Estimated weight 11½ tons.

When a bell is properly struck, the first note which prominently attracts the attention of the ear is what is known as the strike-note or tap-note — this is *the* note of the bell. The strike-note of the Erfurt bell is E in the middle of the bass stave.

Change-ringing is held directly responsible for an alteration in the shape of English bells from that of the best bells of earlier date and from the shape aimed at on the Continent in Hemony's day and for a couple of centuries before then. This alteration would have improved the balance of the bell for change-ringing when hung in the old style; but it did so at the cost of completely upsetting the series of partial tones in each bell.

The first thorough scientific investigation into the vibrations of bells was made by

Lord Rayleigh about 1890.<sup>1</sup> Below, set out *approximately* in musical notation, are the first five partial tones he found in each of two bells in the ring of five in the church at Terling, the treble and the No. 2 bell, with their dates:

The strike-notes of these two bells were C# and Bb in the treble stave, and neither of these notes is to be found in the tones which Rayleigh identified as corresponding to an element of the vibration in the air. But each is an octave below the fifth partial tone. In all bells the strike-note is an octave below the 5th partial tone, and that is why the 5th partial tone comes to be called the nominal, for its pitch names the note of the bell. The strike-note is the creation of our hearing faculty.

At about the date of this work of Rayleigh's, Canon Simpson, Rector of Fittleworth, in Sussex, began his crusade for the better tuning of church bells. He concentrated his attention on the first, second and fifth partial tones which he contended, in the face of considerable opposition, should be an octave apart. The strike-note is the most important tone in change-ringing; and from the examination of a large number of bells Simpson found that, by focusing attention on the strike-note of each bell in order to ensure that it was in tune with a diatonic scale, English bell-founders had come to neglect all the partial tones, other than the nominal, which Hemony had tuned 200 years earlier. The most usual result was this: ignoring octave differences, the second partial tone, called the fundamental, was flatter than either the first partial tone or the nominal; the first partial tone, the hum-tone (the persistent tone heard when a bell is tolled), was the sharpest; so that the nominal was generally between the two. The Terling bells illustrate this observation.

The results of Canon Simpson's investigations were applied and extended in the closing years of the nineteenth century by a leading firm of English bell-founders, John Taylor & Co. of Loughborough. A famous example of their work of that date is the ring of ten bells at Beverley Minster dated 1901. In all these bells the first five partial tones were tuned in the harmonious relationship found in the bourdon bell, Great John:

<sup>1</sup> 'On Bells', *Phil. Mag.*, S.5, Vol. XXIX, No. 176, Jan. 1890.

The names given to the five tones they tuned are set out on the right-hand side of this figure

The secret of Hemony's work was lost on the continent, but through this work of Taylor's and the subsequent work of Gillett & Johnston, of Croydon, stimulated by Canon Simpson's initiative, it was completely recovered in England, with the result that the leading English bell-founders are to-day regarded as second to none in the world. The tuning machine is a vertical lathe, capable of turning out the finest shaving of metal from any part of the inside of the bell, and the art of tuning consists in knowing where to remove these shavings.

Not only has this work corrected a defect in bell-founding for which, in England, change-ringing must hold a fair share of blame, not only has it shown that proper design of the ringing mechanism will permit of change-ringing with properly tuned bells and made it possible to produce peals which are far truer and sweeter than those of the 19th century; but it has won for the two English firms named a pre-eminent position in the manufacture of carillons, for use in countries overseas as well as in Great Britain.

In the revision of the articles on CARILLON, CHANGE-RINGING and CHIMES full use has been made of up-to-date information generously supplied by Messrs. John Taylor & Co., of Loughborough, and Messrs. Gillett & Johnston, Ltd., of Croydon.

**CHANLER, Theodore Ward** (b. Newport, Rhode Island, 29 Apr. 1902).

American critic and composer. He began to study the pianoforte at six years of age and at sixteen was already composing. He worked at composition and pianoforte with Ebell and harmony with Arthur Shepherd. In 1919 he went to the Institute of Musical Art in New York, where he studied pianoforte with Buhlig and counterpoint with Goetschius.

Later he worked with Bloch and in 1923 went abroad and attended Oxford University. He then went to France, where he spent three years working at composition with Nadia Boulanger.

In 1934 Chanler became for a short time the music critic of 'The Boston Herald'. In 1940 he won the League of Composers Town Hall Award, for which he composed 'Four Rhymes from Peacock Pie', and in 1944 he was awarded a Guggenheim Fellowship. From 1945 to 1947 he taught at the Peabody Conservatory at Baltimore, and he is at present on the faculty of the Longy School at Cambridge, Mass.

Chanler is well known as one of the most brilliant of the composer-writers on modern musical subjects, and was a regular contributor to 'Modern Music' until it went out of publication. He has had many notable performances of his small but exquisite works — mostly in chamber form — and their quality, vivacity, rhythmic subtlety and technical and aesthetic excellence have won for them a distinguished place in America. He is regarded as one of the outstanding, if not the foremost, of American song writers of the present time.

Chanler's principal works are the following:

#### BALLET

'Pas de trois' with pf. (1942).

#### CHORAL WORKS

Mass for 2-part women's chorus with organ (1930).  
'Four Chorals for Summer' (Feeney) for unaccomp. chorus (1947).

#### VIOLIN AND PIANOFORTE

Sonata (1927).

#### PIANOFORTE MUSIC

'Calm' (1934).  
3 Short Pieces (1935).  
5 Five Short Colloquies, suite (1936).  
Toccata (1939).  
'Aftermath' (1941).  
'The Second Joyful Mystery' for 2 pfs. (1942).  
'A Child in the House', 11 pieces (1949).

#### SONGS

'These, my Ophelia' (McLeish) (1925).  
'Agnus Dei' (Ordinary of the Mass) (1930).  
'The Doves' (Feeney) (1931).  
'Memory' (Blake) (1934).  
'Eight Epitaphs' (De la Mare) (1937).  
'Three Epitaphs' (De la Mare) (1940).  
'Four Rhymes from Peacock Pie' (De la Mare) (1940).  
'The Lamb' (Blake) (1940).  
'I rise when you enter' (Feeney) (1942).  
'The Flight' (Feeney) (1944).  
'The Children', cycle of 9 songs (Feeney) (1945).  
'The Policeman in the Park' (Feeney) (1946).  
'The Patient Sleeps' (Henley) (1946).

P. G.-H.

**CHANOT.** French family of musical-instrument makers.

(1) François Chanot (b. Mirecourt, 1787; d. Brest or Rochefort, 1823). He entered the Navy as an engineer under the Empire, but

<sup>1</sup> According to Constant Pierre (see Bibl.).

quitted it after the Restoration. Returning to Mirecourt, he made special studies in the construction of the violin and ultimately built one which deviated considerably in form from the accepted pattern. Believing that, in order to make every part of the instrument partake equally of the vibrations of the sound, the fibres of the wood should be preserved in their entire length, he considered the corners and curves of the outline as so many obstacles to the propagation of the waves of sound, and accordingly gave his violin a pear-shaped form, resembling that of the guitar. The table (belly) he made quite flat and he left out the sound-post altogether, on the ground that it merely served to break the waves of sound, while in reality it transmits them from table to back.

This violin (if one may still call it so) he submitted to the authorities of the Institut de France. After having been examined by a committee of eminent men, both scientific and musical, and tried against instruments of Guarneri and Stradivari, it was pronounced not inferior in quality to the violins of these great makers ('Rapport de l'Institut', in the 'Moniteur Universel', 22 Aug. 1817). It is difficult to account for this decision, which experience quickly proved to be a complete delusion, as all instruments made after the new pattern turned out of indifferent quality. One of his violins, made for Viotti in 1818, and a cello, are kept at the Instrumental Museum of the Paris Conservatoire. P. D.

(2) **Georges Chanot** (b. Mirecourt, 25 Mar. 1801, d. Courcelles, Seine-et-Oise, 10 Jan. 1883), brother of the preceding. He went to Paris in 1819 and made violins of the "Chanot" model, but was soon obliged to give this up. He worked for the instrument maker Clément for a year and in 1821 for Gand, whom he left in 1823 to set up for himself. After several changes of address he settled in 1848 on the Quai Malaquais, where he remained until his retirement from business in 1872, when he left his business to his son-in-law, Marie-Joseph Chardon. Georges Chanot was an admirable maker of violins and a skilful repairer.

(3) **Florentine Chanot** (born **Demoliens**) (b. ?; d. ?), wife of the preceding. She was also a violin maker, probably the only female one known to fame. She made several violins with her own hands, working assiduously with her husband at his trade. E. J. P.

(4) **Georges Chanot** (b. Paris, 1830; d. London, 3 Mar. 1893), son of the preceding. He learnt the trade from his father and in 1851 left Paris for London, where he worked for several years with Maucotel, the brother of the Parisian instrument maker. In 1858 he set up for himself, and he was known for many years as one of the best workmen in London,

gaining gold medals at various exhibitions, including the London Inventions Exhibition of 1885.

(5) **G. A. Chanot** (b. London, 28 Oct. 1855; d. ?), son of the preceding. He is known as an excellent violin maker.

(6) **F. W. Chanot** (b. London, c. 1860; d. London, 1911), brother of the preceding, also a violin maker, is better known as a publisher of violin music.

(7) **Joseph Chanot** (b. London, 1 Oct. 1865; d. ?), brother of the preceding. He was an artist-craftsman who fully sustained the reputation of the family.

**CHANSON.** French polyphonic chansons may be said to start with the works of Machaut. But they have their origins in the motet of the 13th century as well as the monodies of the Trouvères. In fact the forms used by the poet-musician, which in the chansons determined the style of the complete piece, form the *tenor* of numerous motets of the preceding generation. The two large collections of 13th-century motets which form the MSS Montpelier H. 196<sup>1</sup> and Codex Bamberg Ed IV. 6<sup>2</sup> contain numerous examples showing the widespread popularity of certain songs throughout Europe, for some of the *tenors* appear many times<sup>3</sup>; the most usual forms are the *rondeau* and *virelai*, but the *chanson avec des refrains* and *ballade* also appear. The Italian *ballata*, it is worth noting, is similar in structure to the *virelai*, not the *ballade*.

Both the *rondeau* and *virelai*, which Machaut calls *chanson balladée*, retain the traditional form of the 13th century, which is then found for the first time in polyphonic settings. Most of these pieces are anonymous, but there are extant four *rondeaux* and two *virelais* by Adam de La Halle<sup>4</sup> which in syllabic style imitate the *conductus*. The melody can be in either the lowest or middle voice; but if all voices are sung, the text is not necessarily the same in each part. Gennrich has transcribed a number, and his book, which studies both the text and the music, is the standard work on the subject for the 12th and 13th centuries.<sup>5</sup> A lucid explanation of the growth and variants to be found in the literary and musical forms up to the 16th century is contained in the Hewitt edition of 'Harmonice

<sup>1</sup> Yvonne Roketh, 'Polyphonies du XIII<sup>e</sup> siècle', 4 vols. (1935-39).

Musices Odhecaton<sup>1</sup>; the Apel edition of 'French Secular Music of the late Fourteenth Century'<sup>2</sup> is also helpful. The method of analysis which follows the examples in this article uses Greek letters to represent the musical phrases, Roman capitals to represent the refrain and small letters to represent the solo lines. This method will be used throughout the article. The *rondeau* is from 'Li Rondel Adam', MS Paris, Bibl Nat. fr. 25566.<sup>3</sup> It will be seen that so long as the full text is preserved any *rondeau* can be constructed from the music of the refrain. It is possible that the refrain only was sung polyphonically, or that a group of three soloists took the *additamenta*, leaving the refrain to be sung monodically by a chorus, or that the whole *rondeau* was sung in parts. The analysis of a *rondeau* is

aß aa aß aß  
AB aA ab AB

Rondeau Hé, Dieux! quant verrai

The *virelai* is also set by Adam de La Halle in the traditional form, the earliest description of which is to be found in 'L'Art de dictier' by Eustache Deschamps. The distinctive feature of this type is the  $\gamma$  section of the music: although it may be a setting of several lines in the text, it must be balanced by a further number of similar lines. In later examples the endings of the otherwise identical musical phrases could differ and were distinguished by the terms *ouvert* and *clos*, and repeat marks could be used analogous to the modern first- and second-time bars. The presence of these repeat marks at the end of the music indicates that the song is a *virelai*. Following this verse is the so-called *tierce*, set to the music of the refrain which succeeds it. Each stanza follows an identical plan; therefore in the following example by Adam de La Halle<sup>4</sup> one only is given. The analysis is:

Virelai. Fines amouretes ai, Dieu!

The third of the *formes fixes*, the *ballade*, is rather less rigid in structure. Reese gives

possible variants<sup>1</sup>, all of which are distinct from both *rondeau* and *virelai*, by the inclusion of an extra musical phrase. The most elaborate form drops the music of the refrain in the *terce* of the *virelai* and substitutes new music and words. The form was very popular in the 14th century, particularly in Machaut's works, from which later it will have its illustration. However, it must be noted that this *ballade* in canon is unusual. But owing to the number of possible differences within the *forme fixe* any example can differ in detail, though not in general plan from any other.

The transition from Adam de La Halle to Machaut can be traced in the two *rondeaux* from MS Paris, Bibl. Nat., coll. de Picardie 67<sup>2</sup>, which show a slight loosening of modal rhythms. The experiments in notation associated with Pierre de La Croix, and more particularly Philippe de Vitry, whose treatise 'Ars nova' (between c. 1316 and 1325) gives the distinction between the new style and that of the late 13th-century writers, making it possible to distinguish more clearly the character of the parts by dividing the perfect breve into four and more semibreves; however, at first the *triplum* benefited more than the other two parts, which remained in slower-moving modes. The MS Paris, Bibl. Nat. f. fr. 146 gives among the thirty-one chansons of Jehannot de L'Escurel one polyphonic piece in *conductus* style, the *rondeau* 'A vous, douce debonnaire'.<sup>3</sup> The rhythmic innovations can be seen in the monodic chansons from the 'Roman de Fauvel', interpolated into the poem in 1316.<sup>4</sup> Here the older more or less syllabic settings give way to short melismatic flourishes. Coloured notation is used to indicate changes of time, an account of which is given in the 'Ars nova'. An important work explaining the new system is 'Ars novae musicae' by the theorist Jean de Muris.<sup>5</sup>

The foremost composer in the new style who may be said to be the first composer of polyphonic chansons in numbers is the poet-musician Guillaume de Machaut. Although he died a canon of Rheims, he led an adventurous and much-travelled life, being for many years in the service of John II, King of Bohemia and Duke of Luxembourg, who was killed at Crécy. Later Machaut was attached to the French court, where he was considered the compeer of Petrarch. His biographer considers that "au plus, il accommode facilement ses devoirs, ses fonctions religieuses avec la chasse, la vie

mondaine et l'amour lui-même".<sup>6</sup> A manuscript Bibl. Nat. MS fr. 1584, richly illuminated by Maître aux Boqueteaux and once in the possession of the Duke John of Berry, contains portraits of the composer.<sup>7</sup> The Ludwig edition<sup>8</sup>, of which the volumes so far published contain all the polyphonic secular music apart from the *lais*, gives a list of manuscript sources, and Hoepfner published all the poetry.<sup>9</sup>

He develops the old *formes fixes*, especially the *ballades*, of which he wrote over two hundred. Of the 42 set by him to music, 1 is monodic, 15 are in two parts, 18 in three parts and 8 in four parts. Although it remained a popular literary form after Machaut's death, according to Miss Hewitt<sup>10</sup>, it did not receive so much musical treatment; but late 14th-century composers made constant use of it.<sup>11</sup> The *ballade* differs from the *rondeau* and *virelai* in the position and importance of the refrain; in this form the refrain does not open the piece. The normal poem had a four-line section with alternate rhyme schemes set to the same music, with perhaps *ouvert* and *clos* endings. A certain method for recognizing it at a glance is to see whether such endings occur about the middle of the song. If that is the case, the piece is a *ballade*. Any number of lines may follow, the music being composed for each one. The final line is the refrain which occurs at the end of each verse. The usual number of verses was three. But, although not invariably the case, an *envoi* might be added to sum up the ideas in the poem. However, this coda did not appear until the time of Eustache Deschamps and was never essential. The analysis of the form gives us

aβ aβ γ β  
ab ab ccd D

A *ballade* by Machaut clearly shows a more advanced style than the earlier settings of La Halle. In the majority of cases a single vocal line was accompanied by instruments in the other parts. However, different texts could be set to more than one part, making double and triple *ballades*. The four-part double *ballade* 'Quant Theseus, Hercules et Jazon/ Nequier veoir la biaute d'Absalon' has an instrumental *tenor* and *contratenor* supporting the upper voices, which both move independently. The well-known lamentation on

the death of Machaut set by Andrieu, a late 14th-century composer, to words by Deschamps, is in a similar style, and the final verse gives us a rare indication of contemporary methods of performance<sup>1</sup>:

Rubeles, leuths, vielles, syphome,  
psalterions, tres tous instrumens coys,  
rothes, guiterne, flaustes, chalemie,  
traversaynes, et vous, nymphes de bois,  
timpane aussy, metes en euvre doys,  
et le choro n'y ait nul qui repliche,  
fautes devour, ploures, gentils Galoys,  
la mort MACHAUT, le noble rethorique.

In order to emphasize the name in the refrain the cadence on Machaut is isolated by rests.

The piece from which the following is quoted is an example of the *ballade*<sup>2</sup> form giving all three parts to the voices in canon. It has the usual three verses; part of one only can be given here. The canon seems to have been a French innovation, for four pieces are to be found in a French manuscript at the Chapter Library, Ivrea, and are thus antecedents of the Italian *caccia*:

<sup>1</sup> Ludwig, *op. cit.*, I, 40-51. Incorrectly transcribed by Droz and Thibault, 'Poètes et musiciens du XVe siècle', (1) 1944, pp. 19-20. There are four illustrations from a Machaut MS, Paris, Bibl. nat., fonds franç. 9221, showing methods of performance facing p. 13.

<sup>2</sup> *Ibid.*, I, No. 17.

Three characteristics of Machaut's style may be noted. First his preference for alternating specifically rhythmic motives with sustained notes, as for example in the five-part *ballade* 'De fortune ne doy pleindre et loer' and the famous *rondeau* 'Ma fin est mon commencement'<sup>3</sup>, in which the music of the second part is the exact reverse of the first, taking the form of a musical palindrome; the only difference being that in the second part the original music for the *duplum* is transferred to the *tenor* voice part and the old *tenor* becomes the instrumental *duplum*. Such complications make it extremely unlikely that these forms were danced to any longer during the 14th century. Although many of his motives run in imitative patterns throughout the web of a composition, they occasionally lose effect by a failure to make clear the entries. There are, in all, 21 *rondeaux* set to music, 7 of which are in two parts, 11 in three parts, and 3 in four parts. The variation in the number of parts is a second characteristic of this style: later composers almost invariably wrote chansons in three. It is worth while noticing the fluidity of his harmonies. That he had no desire for any rigidity may be deduced from the alterations in the different manuscripts noted in Ludwig and by Machabey, in which entirely new music for a part may be substituted. This vagueness applies to all types, but an example may be seen in the *rondeau* 'Puis qu'en oubli sui de vous, dous amis', in which a new *tenor* and *contratenor* are substituted in the Paris MS Bibl. Nat. fr. 9221. A third characteristic of his style is the fairly constant use of binary instead of the conventional triple rhythms.

Of the 33 *virelais*, or *chansons ballades*, as Machaut prefers to call them, which he set to music, 25 are monodic, 7 in two parts, and one is in three parts. All the polyphonic settings are three-verse poems in the old style.

A striking fact in the history of French polyphonic chansons is a comparison between the solitary composer of the first half of the century and the numerous followers writing in the form up to the time of Dufay. Until Apel's study of late 14th-century secular music was published, little was known of the chanson of the period. The music reaches a high complexity of rhythm and subtlety of construction equal to the elaborate domestic architecture so characteristic of the reigns of Charles V and Charles VI in France. It was an age, too, in which the miniature and the illuminated book achieved a delicacy and finesse unknown until then in the West. Brilliant courts were held not only in Paris, where Machaut had worked, but at Avignon, Dijon and in northern Spain. The great Maecenas and brother of both Charles V and Philip the Bold, Duke

<sup>3</sup> Ludwig, *op. cit.*, I, 25-26, 63-64, also Reese, 'Music in the Middle Ages', pp. 351-52.

John of Berry, who commissioned two of the most exquisite books of Hours, 'Les Grandes Heures du Duc de Berry' and the 'Très Riches Heures du Duc de Berry', was patron equally of poets and musicians. His praises were sung "quar c'est celi qui est la flour du monde", a tribute which formed the refrain to a *ballade* by Solage<sup>1</sup>, Machaut's pupil, an elaborate piece, as befits a court ode. In general Solage follows his master in style, but makes greater use of dissonance to illustrate the text, as in the following passage from his *rondeau*, 'Fumeux fume', a song written perhaps for a club of smokers known to have existed about that time. The three bass registers and the raucous character of the music with its chromaticism unique for the date lend authority to the suggestion<sup>2</sup>:

From a *Rondeau* by Solage.

The musical score is for a *Rondeau* by Solage. It consists of three staves of music. The first staff has the lyrics "fu fum me met" and "mer molt". The second staff has the lyrics "par sa pen-a" and "me-se gre-e". The third staff has the lyrics "par sa pen-a" and "me-se gre-e". The score includes bar numbers 15 and 20.

Although the form of the *rondeau* altered little, the isorhythmic features common in the motets are occasionally introduced. Two examples by the late 14th-century composer Garinus, of which the second, 'Loyauté me tient', has the complete text, are given in Apel's study. The second section of this *rondeau* is rhythmically identical with the first in every part except for bar 31 in the bass.

The *virelai* after Machaut undergoes little fundamental change in form. The musical structure is often on a more extended scale, which may account for the dropping of the second and third verses always found in the older masters' works. This shorter form came to be known as *bergerette*. However, the complex musical structure that is characteristic of the period 1370-90, during which time such poet-composers as Anthonello da Caserta, Trebor, Jacob de Senleches and Philipoctus da Caserta wrote many of their *chansons*, makes Apel distinguish between the Machaut style, which "although flexible, nevertheless is wholly integrated" and the "manneristic style" which aims at "deliberate diversification, extravagance and utmost complexity". Some of the most delightful of these *bergerettes* have passages in imitation of bird-calls, and Apel suggests that "there is perhaps still an echo of 13th-century village poetry in these lyrics whose carefree prattling reveals such a strong contrast to the formal rhetoric of the courtly ballades". They were the work of trouvères of northern France and Flemish territories, bearing Walloon and Picard traits of dialect.<sup>3</sup> The piece by Vaillant, 'Par maintes foyes', in which the nightingale, skylark and cuckoo compete, is known also from the German *contrafactum*, 'Der Mai mit lieverzal', by Oswald von Wolkenstein.<sup>4</sup> A *virelai* by Ciconia, 'Or sus vous dormez trop', performed with a bagpipe for the *contratenor* and trombone for *tenor* has, in Apel's opinion, "all the qualities to become one of the top attractions in concerts of early music". But however fresh it may seem, it is remarkable for the notational and stylistic complexities typical of the period, and indeed the attention to details from nature is an indication of a *fin-de-siècle* attitude. The harmonic idiom of the "manneristic" period is startling, but the explanation lies in the principles of 13th-century *discantus* modified by the admission of the third and, to some extent, the sixth as consonances. As an example of the increasing importance of these intervals the *contratenor* part in the *ballade* 'Dame d'onour en qui' by Anthonello da Caserta, transcribed by Apel as No. 24, is an interesting example both for its harmonies and for the arpeggio-like figures on the  $\frac{5}{4}$  and  $\frac{3}{2}$  chords. As distinct from the four-part ecclesiastical polyphony in motets, these secular works depended on a two-part *discantus* texture in which the *superius-tenor* combination was paralleled by the *contratenor-tenor* combination. Considered in this light, the most startling dissonances can be explained, since they appear where the *tenor* is in the

<sup>1</sup> They are transcribed in section vii of Apel's study.

<sup>2</sup> *Apel, op. cit.*, No. 34, 'S'aincy estoit'. Fac. as *ibid.*, No. 40. Fac. as pl. V.

<sup>3</sup> Transcriptions in D.T.O., IX, the 'Historical Anthology of Music' and Wolf, 'Geschichte der Mensuralnotation'. Both pieces are compared by Gennrich in the 'Zeitschrift für deutsche Bildung', II.

middle of a combination and thus, through two almost independently written *descantus* combinations, composers arrived at a musical style of greater daring and deliberate dissonance than had been used before, or, indeed, was used thereafter until the advent of the 20th century.

The very complicated rhythmic and harmonic style of the late 14th century becomes simpler in the works of Matheus de Perusio. Several points in his style connect him with the period of Dufay and Dunstable, the most noticeable of which is the simplification of the *contratenor* line, giving it a harmonic instead of melodic function, and dispensing with its rhythmic peculiarities. The reaction to the *fin-de-siècle* atmosphere in which the arts mirrored a highly sophisticated society, isolated within exotic mansions of its own creation, followed naturally. The Burgundian court, "improvisation monstrueuse d'une aggrégation de provinces, qui n'eurent ni l'unité de races ni l'unité d'idées", was able from its international character to collect artists from all Europe. Allied to the English court of Henry V, himself one of the group of composers whose works are to be found in the Old Hall Manuscript, Burgundy was able to prosper, while the France of the *trouvères* was struggling in the final phase of the Hundred Years' War. Gilles de Binchois, a soldier who from about 1430 to his death remained in the service of Philip the Good as a musician, is the most representative composer. But the international character of Dijon must be remembered when dealing with the Burgundian school. Actually it attracted both English and Flemish composers and, by drawing back to itself such men as Dufay and the Liégeois Hugo and Arnold de Lantins, all at some time of their lives members of the papal chapel in Rome, the school may be said to have fused even the Italian element. For the return of the papacy to Rome and the training which the papal chapel gave to its cosmopolitan choir was to have an effect on music in Europe as profound as the edicts of Gregory the Great. It is, of course, true to say that the French chanson played an infinitely more important part in 15th-century life than the Italian *canzona*. The MS Panciatichi 26 at Florence, a purely Italian work but containing numerous French texts set by Frenchmen and Italians, is an indication of the northern hegemony. As Chailley puts it, "La Bourgogne . . . se borne à drainer les artistes de toutes provenances vers la Cour de Dijon et à leur suggérer, par le faste de ses réjouissances, une certaine unité de style, qui permet malgré tout d'évoquer une véritable école bourguignonne". Charles van den Borren has an informative discussion on the distinctive elements which made up the Bur-

gundian school in his book on the music of the 15th century.<sup>1</sup>

The chansons of the immediate predecessors of Dufay and Binchois are not easily accessible, although the names of the three most distinguished composers, Tapissier, Carmen and Cesaris, figure in the poem by Martin le Franc, 'Le Champion de Dames' (c. 1440), the relevant verses of which, including the reference to the pre-eminence of English composers, are printed in Stainer's 'Dufay'. The only chanson of the three published by Stainer is 'Mon seul vouloir' by Cesaris. It is again in striking contrast with the transitional mannerist style. The *tenor* is in the fifth mode throughout, reminiscent of the motet style, while the *contratenor* and *superius*, set to different texts, have none of the long melismata found in the earlier composers. A *rondeau* and double *rondeau* may be seen in Dannemann's book on the immediate predecessors of Dufay.<sup>2</sup> This type of slow-moving *tenor* leads van den Borren to conclude that chansons were beginning to be composed as a unit rather than as three separate strands of music: the use of *faburden* particularly in the cadences is perhaps an indication of this. But it has been suggested that such *tenors* as that in 'Mon seul vouloir' were taken from popular songs. This certainly became the case later on, although even during the 13th and 14th centuries the *tenors* of secular motets had been borrowed from chansons in the *formes fixes*. It is not clear whether in the 15th century the *tenors* were borrowed from popular songs or whether composers used their own melodies. Certainly the *tenor* of the *ballade équivoque* 'Se la fase ay pale' provides Dufay equally with the basis for his Mass of that name; and there are a few examples in which French and Latin texts are mixed.<sup>3</sup>

A further innovation made much use of at this time is the instrumental interlude. Such an interlude provides an explanation for the popularity of the *rondeau* form over the *ballade* and, to a lesser extent, the one-verse *virelai* or *bergerette*; the constant repetition inherent in the form was made interesting both by interludes and by an increase in the number of lines with a consequent lengthening of the melody in each of the two musical sections. It is probable that wind instruments accompanied

<sup>1</sup> 'Études sur le XV<sup>e</sup> siècle musical' (1941). Most of the published work comprising the period 1420-80 can be seen in Stainer's 'Dufay'; the D.T.O. Vols. VII and XI, 2, of the Trent Codices; van den Borren's collection of pieces 'Le Manuscrit musical 222 C22 de la Bibliothèque de Strasbourg' (1924), Droz and Thibault's 'Poètes et musiciens du XV<sup>e</sup> siècle' (1924), Marix's 'Les Musiciens de la cour de Bourgogne au XV<sup>e</sup> siècle (1420-1467)' (1937), and Blume's 'Das Chorwerk', Vols. XIX, XXII.

<sup>2</sup> Erna Dannemann, 'Die spätgotische Musiktradition in Frankreich und Burgund' (1936).

<sup>3</sup> Vol. XI of the D.T.O. gives three pieces of this nature.

the voices. There is evidence for this supposition in the description by Olivier de La Marche of a contemporary feast arranged for the wedding of Margaret of York and the Duke of Burgundy in 1468, where "prestement s'ouvrirent les fenestres, et là se comparurent quatre loups ayans flustes en leur pattes: et commencèrent les dictz loups à jouer une chanson"<sup>1</sup>, with the implication here that at times voices could be done away with altogether. One rare indication of a specific instrument is to be found in a chanson by Pierre Fontaine, 'J'ayme bien celui qui s'en va', which has a marking *contratenor trompette*.<sup>2</sup>

Dufay's works point the way for the more elaborate imitation of the latter part of the century. This technique was by no means modern, as we have seen, but it is employed more effectively by him than by Machaut. An example of imitative writing is to be found in the *rondeau* 'Ce jour de l'an', transcribed by Stainer, of which van den Borren quotes the opening in his study of 15th-century music. As a rule the imitative passages are found in the voice parts, the instrumental parts preserving their independence by the use of a different modal rhythm, and it is significant of the increasing taste for imitation that this is a piece for three voices. His setting of the words is far more simple and syllabic than that of his predecessors. An interesting piece which illustrates this point is the dialogue 'La belle se siet au pié de la tour', the *tenor* of which is an extremely old popular melody, 'La Pernette', still to be heard in the south of France. It was constantly used later and settings are to be found by Josquin des Prés and Okeghem, among others:

Declamation of this nature is not very common. But in the works of Binchois, especially in the love laments, it seems to have been introduced to bring out a sense of desolation. Droz and Thibault transcribe two *ballades* by Binchois: the first, 'Deul angoisseaux, rage desmesurée', a poem by Christine de Pisan, the second, 'Triste plaisir et douloureuse yoie', by Alain Chartier, which illustrate the point. The following extract is from the Christine de Pisan poem:

<sup>1</sup> Stainer, *op. cit.*, quotes Petitot's Collection of Mémoires, X, 344.

<sup>2</sup> Transcribed by Aubry in S.I.M.G., 1907.

An anonymous example in D.T.Ö., XI, 'Terriblement suis fortunée', is a further instance notable for declamation and for the angular *contratenor* part:

These examples show a further difference between the period of Dufay and Binchois, to take the two outstanding masters, and earlier composers: the new distinction between poet and musician. For the two are no longer synonymous. And among the poets are to be found such names as Charles d'Orléans and François Villon. But the favourite subject is still the *amour courtois*.

The imitation which can be found in Dufay and his contemporaries gains in complication in the works of Busnois and Okeghem. In the opinion of both van den Borren and Jeppesen<sup>3</sup> this may be accounted for by the tendency to sing all parts which, while relatively rare in Dufay, becomes more frequent as the century continues.

<sup>3</sup> Knud Jeppesen, 'Der Kopenhagener Chanson-nier' (1927).

The *ballade* form, which still had a certain vogue in the earlier part of the century gave way entirely to the *rondeau*, which underwent considerable change, the two-line refrain giving way to four and even five lines which, still preserving the basic structure of a two-phrase melody, increased its length greatly. The five-line structure was made possible by giving three lines to the first musical phrase and two to the second. Actually no *rondeaux* of the period are given a complete text under each line of the score. The words generally follow the *superius*. But it is unlikely that the 13th-century rules were not still obeyed, for the musical and literary sources were entirely derived from a past heritage. The *bergerette* form was almost as popular as the *ballade*. The two sections often differ in rhythm, changing from ternary in the first to binary in the second. Otherwise the *bergerette* conforms to the *virelai*. Binary rhythm increased in popularity throughout the century; in fact, of the 33 pieces in the Copenhagen Manuscript 21 are in binary rhythm, 10 in ternary and the remaining two, *bergerettes*, have the refrain in ternary and the rest in binary as a contrast.

In the works of late 15th-century composers the dissonant qualities still found in Dufay gradually disappear and, without deference to the strict rules of 16th-century counterpoint, the harshness noticeable in earlier periods tends to be softened by a more circumspect treatment.

Jepesson gives a list of the sources for the period in the edition of the Copenhagen Manuscript; and an interesting article on Busnois is printed in 'The Music Review' by George Perle<sup>1</sup>, which includes a short bibliography of modern reprints. But it is not intended to be a full list. The first printed collection of chansons, 'Harmonice Musices Odhecaton', was published by Petrucci at Venice in 1501. It contains many works by contemporary composers.<sup>2</sup> In this collection it is possible to detect the change that comes over music in the 16th century. The chanson develops on entirely new lines. Josquin des Prés, for example, is among the first composers to write complicated polyphonic chansons in four parts; and from now on the three-part form is rare. Three of Josquin's six pieces in the 'Odhecaton' are in three parts, but the three remaining examples by him written in a more modern style are given to four voices. The four-part piece 'De tous bien' illustrates the complicated contrapuntal writing favoured by the late Burgundian school. Josquin actually borrows the *tenor* and *superius* from Hayne's setting of the same piece, included also in the collection, and adds a third part in an entirely

<sup>1</sup> 'The Chansons of Antoine Busnois' (M. Rev., May 1950).

<sup>2</sup> The Hewitt edition gives a comprehensive list of MSS, early and modern printed works.

different style with a puzzle superscription, "Petrus e Joannes current in puncto". The solution produces a canon at the unison with the fourth and lowest voice a minim behind. The octave leaps and hocket-like passages for the parts in canon leave no doubt that they were intended for instruments. This borrowing and the use of popular songs within the chansons becomes as common feature of the times.

Apart from these musical complexities, however, the texts themselves show a difference from the older poems both by their freedom from the old *formes fixes* and by the change of subject-matter away from the lovers' complaints. The new songs can be distinguished only by the presence or absence of a refrain, and the refrain itself is treated with a new freedom so that the music now governs the form of the song and, to illustrate the text, a more expressive style is introduced. The poems have a freshness enlivened with constant references to nature which, illustrated in the music, remind us of some late 14th-century *virelais*. In the four-part *chanson à refrain* of Josquin's pupil Jean Mouton, 'James James James', included in the 'Odhecaton', the details of the new style can be seen. The free poetic form allows the music to determine the lay-out of the text; thus the refrain recurs constantly in short settings throughout the piece, since the lines themselves are concise. The imitative entries, the comparatively restricted compass of the voices and the syllabic setting are all characteristic of the period. Rhythmic alterations of a few bars' length show an increase in flexibility already noticeable in the two sections of the *formes fixes*. This development leads Einstein to the conclusion that the first quarter of the 16th century marked a phase in the history of music as important as the change to monody about 1600 or the break from the *opera seria* at the time of Gluck. "The transformation", he writes in 'The Italian Madrigal', "about 1520, of the song style of the preceding centuries into the poetic motet style of the 16th century was just such a far-reaching and quiet revolution."

In fact the developments in France at this time were to be of vital importance to the history of monody and hence of opera. For, through the flowering of the new type of chanson intimately connected with the rhythms of the poetry, we reach the *chansonnets mesurées* of Baif and the inauguration of the Académie de Poésie et Musique in 1570. The interest in the relationship between speech-rhythms and music may be said to date from the publication of 'L'Art de métrifier françois' by Michel de Bouteville in 1497; and it is possible to detect its antecedents in the declamatory settings of Dufay, such as we have

illustrated in 'La belle se siet'. The rhythmic pulse tends to have a more regular significance and the music to fit into definable bars, although of course the bar-line as we know it is useless in the real measured music. The music of the whole period can be found in the volumes edited by Expert.<sup>1</sup> The descriptive chansons of Jannequin are particularly delightful. They are remarkable for brilliant imitative passages in which the hunt, 'Gentilz veneurs', battle, 'Escoutez, escoutez', and bird-songs, 'Réveillez vous',<sup>2</sup> are all presented in the most vivid manner, using pairs of voices echoing each other as well as full four-part homophonic sections. Other examples of these free chansons are written in five and even more parts. The Jannequin pieces are on a large scale divided into two sections and show the wonders of the late flowering French renaissance. However, in spite of the elaborate treatment, the words are set syllabically almost throughout. With the followers of Jannequin, Costeley and Regnart in particular, who set Ronsard's poems in a manner they believed to imitate classical Greek, that is to say in the *vers mesurés à l'antique*, the study of French chansons ends. For in the interest of the new speech-rhythms can be seen the antecedents of modern music, the *nuove musiche*, the *camerata* of Bardi and the opera. The circle is indeed complete, for we find the ancient belief that poet and musician should be one expressed in the dedication to Baif in 1570 of Costeley's 'Musique':

Iadis Musiciens et Poëtes et sages  
Furent mesmes auteurs : mais la suite des ages,  
Par le tems qui tout change, a séparé les troys.  
Puissons-nous, d'entreprise heureusement hardie,  
Du bon siècle amener la coustume abolie,  
Et les troys réunir sous la faveur des Roys.

Although it cannot be said that this synthesis was achieved in one man after the fashion of Machaut, the union of music and poetry was to be wrought into a new amalgam: 'Le Printemps', a collection of measured chansons by Claude Le Jeune which Ballard published in 1603 is among its finest products.

**CHANSON BALLADÉE.** See MACHAUT.

**CHANSON DE FORTUNIO LA** (Opera). See OFFENBACH.

**CHANSON DE GESTE.** See SONG, p. 909.

**CHANSON DE TOILE** (Fr., cloth song).

A French medieval type of song similar to the *chanson de geste*, but referring to a female instead of a male character in the story it tells or the action it accompanies. The name

doubtless refers to such an exclusively feminine occupation as spinning or embroidering.

**CHANT.** To chant is, generally, to sing, and, in a more limited sense, to sing certain words according to the style required by musical laws or ecclesiastical rule and custom; and what is thus performed is styled a Chant and Chanting, *cantus firmus* or *canto fermo*. The method of chanting that belongs to the Latin service-books is described elsewhere.<sup>3</sup> The word is now used for the short melodies sung to the psalms and canticles in the English Church. These are either "single", i.e. adapted to each single verse after the tradition of sixteen centuries, or "double", i.e. adapted to a couple of verses, or even "triple" or "quadruple", ranging over three and four verses respectively.

The qualifying terms "Gregorian", "Anglican", "Gallican", "Parisian", "Cologne", etc., as applied to tone or chant, simply express the sources from which any particular chant has been derived.

It is historically incorrect to regard the structure of ancient tones and of modern chants as being antagonistic to each other. The famous 'Book of Common Prayer' noted, by John Marbeck (1550), includes music of the Latin ritual, adapted, *mutatis mutandis*, to the new English translations of the Missal and Breviary. The ancient Gregorian chants for the psalms and canticles were in use not only immediately after the Reformation, but far on into the 17th century; and although the Great Rebellion silenced the ancient liturgical service, with its traditional chant, yet in the fifth year after the Restoration (1664) the well-known work by the Rev. James Clifford, Minor Canon of St. Paul's, gives as the "Common Tunes" for chanting the English Psalter, etc., correct versions of each of the eight Gregorian tones for the Psalms, with one ending to each of the first seven, and both the usual endings to the eighth, together with a form of the Peregrine tone similar to that given by Marbeck.<sup>4</sup> Clifford gives also three tones set to well-known harmonies, which have kept their footing as chants to the present day. The first two are arrangements of the 1st Gregorian tone, 4th ending—the chant in Tallis's 'Cathedral Service' for the Venite—with the melody, however, not in the treble, but (according to ancient custom) in the tenor. It is called by Clifford "Mr. Adrian Batten's Tune"; the harmony is essentially the same as that of Tallis, but the treble takes his alto part, and the alto his tenor. The second, called 'Christ Church Tune' and set for first and second altos, tenor and bass, is also the same; except the third chord from the end:

<sup>3</sup> See GREGORIAN TONES.

<sup>1</sup> H. Expert, 'Les Maîtres Musiciens de la Renaissance française'. A representative collection is given in Vol. V of 'Trente et une Chansons musicales', published by Attaignant in 1529, including pieces by Jannequin, Claudin de Sermisy and Gascogne.

## Christ Church Tune

Clifford's third specimen is quoted as 'Canterbury Tune' and is that set to the "Quicumque vult" (Athanasian Creed) in Tallis's 'Cathedral Service'; but, as before, with harmonies differently arranged:

Canterbury Tune  
1 Counter Tenor

It has all the characteristics of the 8th Gregorian tone, with just such variations as might be expected to occur from the lapse of time and decay of the study of the ancient forms and rules of church music.

The fourth of Clifford's examples is also a very good instance of the identity, in all essential characteristics, of the modern Anglican chant and the ancient Gregorian psalm tones. It is an adaptation of the 8th tone, 1st ending — the tone being in the tenor:

## The Imperial Tune

The work published in 1661 by Edward Lowe, entitled 'Short Directions for the Performance of Cathedral Service' (2nd ed., 1664), also gives the whole of the tones, and nearly all their endings, according to the Roman Antiphonarium, as Lowe had sung them before the Rebellion when a chorister at Salisbury. He also gives the harmonies quoted above as the 'Imperial' and 'Canterbury' tunes, and another harmony of the 8th Tone, short ending (Marbeck's 'Venite') with the plainsong in the bass.

The 'Introduction to the Skill of Music', by John Playford (1679 ed.), in its directions for the 'Order of Performing the Divine Service in Cathedrals and Collegiate Chapels' confirms the above statements. Playford gives seven specimens of psalm tones, one for each day of the week, with 'Canterbury' and the 'Imperial' tunes in "four parts, proper for

Choirs to sing the Psalms, Te Deum, Benedictus, or Jubilate, to the organ".

The Rev. Canon Jebb, in the second volume of his 'Choral Responses and Litanies of the United Church of England and Ireland', gives from the three writers quoted and from Morley's 'Introduction' (1597) a table of such old English chants as are evidently based upon or identical with the Gregorian psalm tones. He also gives some interesting specimens of the experiments made by English composers shortly after the Reformation, preliminary to the settling down of the new four-part chant into the rhythm which it permanently adopted, based upon the rhythm of some of the old tones.

It is interesting to note also that in the earliest days of the Reformation on the Continent books of music for the service of the reformed church were published, containing much that was founded directly upon the Gregorian plainsong, and it was chiefly through the rage for turning everything into metre that the chant proper fell into disuse among Protestant communities on the Continent. See the 'Neu Leipziger Gesangbuch' of Vopelius (Leipzig, 1682).

The special work for the guidance of the clergy of the Roman church, and all members of canonical choirs, in the plainsong which they have specially to chant, is called the 'Directorium Chori'. The present 'Directorium' corresponds with the famous work prepared by Guidetti (1582), with the aid of his master Palestrina. But as is the case in most matters of widespread traditional usage, differences are found between the books of present and past liturgical music, not simply in different countries and centuries, but in different dioceses of the same country and the same century. The York, Hereford, Bangor and Lincoln "uses" are named in our Prayer Book as is also that of Salisbury ("Sarum use") which obtained a foremost place of honour for the excellence of its church chant. The chants for the responses after the Creed in the Matins and Vespers of English cathedrals are almost the same to the present day as those found in the most ancient Sarum Antiphonary and differ but slightly from the Roman.

The psalm tone, or chant, in its original and complete form, consists of (1) an Intonation at the beginning, followed by a Recitation on the dominant of its particular mode; (2) a Mediation, *a tempo*, closing with the middle of each verse; (3) another Recitation upon the dominant with a Termination completing the verse, as in the following — the 3rd tone sixth ending:

In the modern Anglican chants the Intonation has been discarded, and the chant consists of the Mediation and Termination only.

When the tune or phrase coincides with a single verse of the psalm or canticle it is styled a "single chant", as are all those hitherto cited. At the time of the Restoration, as already stated, the Gregorian chants were still commonly used, till lighter tastes in music and the lessened numbers of men in cathedral choirs led to the composition of new treble chants and a rage for variety. Some of these, especially the earlier ones by Restoration composers, are fine and appropriate compositions. But a different feeling gradually arose about the essential character of church music; double chants and pretty melodies with modern major or minor harmonies came to be substituted for the single strains, the solemn and manly recitation tones and the grand harmonies of the 16th century. These indulged in a partsong prettiness and showed a weak harmonic sense and little evidence of self-criticism on the part of the composers. This tendency persisted till the latter part of the 19th century, for the Anglican chant was no more immune from disease than was the whole corpus of church music.

The 20th century has seen a return to a more diatonic harmony, and the modern chant tends to be frugal in the use of crotchet movement and passing-notes, which is a welcome sign that the purpose of the chant is more fully recognized.

The following, by Crotch, is remarkable for its grace and elegance, as well as for the severity of the contrapuntal rule to which the quondam Oxford professor subjected himself in its construction (*per recte et retro*). Each of the four parts in the former half of the chant has its notes repeated backwards in the corresponding sections of the second half:

For the method of using such chants see CHANTING. T. H., rev.

See also Gregorian Tones. Morley (W., ? oldest ex. of double chant). Psalmody

**CHANT DU DÉPART.** According to some authorities (Castil-Blaze, Chouquet, Pougin) this national air was composed by Méhul to some fine lines by Marie Joseph

Chénier, for the concert celebrating the fourth anniversary of the taking of the Bastille (14 July 1794). There are different versions of the circumstances in which the words were written. One of these is that Chénier was in hiding at the house of B. Sarrette, and that the first edition, by order of the National Convention, states merely "Paroles de . . . ; musique de Méhul". It must be remembered also that the sub-heading of the air is 'Hymne de guerre', and there is no allusion to the taking of the Bastille in the text itself. In reality it was played for the first time on 4 July 1794, at a concert in the Tuileries, conducted by Sarrette, to commemorate military victories; then on 14 July and 10 Aug. It was in fact performed at nearly all official ceremonies from 1794 to 1800, and its theme was adapted to some thirty songs. The first verse is as follows:

*Tempo di marcia*

La vic-tou-re en chant-ant nous ou-vre la bar-  
-rière, La li-ber-té gui-de nos pas; Et du  
Nord au Mi-di la trom-pet-te guer-  
-rière a son-né l'heu-re des com-bats. Trem-  
-blez, en-ne-mis de la Fran-ce, Rois  
i-vres de sang et d'orgueil! Le peu-ple sou-ve-rai-  
-van-oe; Ty-rans, des-cen-dez au cer-cueil! La ré-pu-  
-bli-que nous ap-pe-le, Sa-çons vaincre ou sa-çons pé-  
-rir; Un Fran-çais doit vi-vre pour el-le, Pour  
elle un Français doit mou-ri-r! Un Français doit vi-vre pour  
el-le, Pour elle un Français doit mou-ri-r!

Braham used the opening phrase, perhaps unintentionally, in 'The Death of Nelson'.

**CHANT-FABLE** (Fr.). A 13th-century French *trouvère* song the words of which relate a fable.

**CHANTAVOINE, Jean (François Henri)** (b. Paris, 17 May 1877; d. Mussy-sur-Seine, Aube, 16 July 1952).

French musicologist. He studied musicology and philosophy at the Universities of Paris and Berlin (under Max Friedländer) and was music critic of the *Revue Hebdomadaire* in 1903-1920, of *Excelsior* in 1911-20 and of several musical journals, notably of *Le Ménestrel*. From 1921 to 1923 he was a member of the Commission Interalliée pour la Rhénanie at Wiesbaden, and from 1924 to 1937 Secretary-General of the Paris Conservatoire. He edited for the firm of Alcan a series of monographs, *Les Maîtres de la musique*, himself writing on Beethoven (1906) and Liszt (1910, 3rd ed. 1913). He also published a collection of seven essays entitled *Musiciens et poètes* (1912) which includes a study of Liszt's early operetta *Don Sanche*, which Chantavoine himself discovered, and *De Couperin à Debussy* (1921). He translated and edited a selection of Beethoven's letters, *Correspondance de Beethoven* (1904), and published an analysis of Beethoven's symphonies, also a book on Munich in the collection *Les Villes d'art célèbres* and another on *Vermeer de Delft*.

Chantavoine was the author of excellent French translations of the texts of Mozart, Brahms, Wagner, Richard Strauss, Respighi, etc., and of an adaptation of Beethoven's ballet *Die Geschöpfe des Prometheus*. He was also responsible for the publishing, both in score and for pianoforte solo, of the twelve Minuets by Beethoven written in 1799 and rediscovered in 1872 by Richard von Perger.

A. H. (ii).

**CHANTER.**<sup>1</sup> The highest pipe of the bagpipe, from which the "chant" or melody is produced, as opposed to the drones, each of which speaks only a single note.

W. H. S.

See also Bagpipe.

**CHANTERELLE** (Fr., lit. "the singing one"). The French name for the E string of the violin; also by analogy, but less currently, the top string of any stringed instrument.

E. B.

**CHANTING.** This term is, by modern usage, generally confined to that species of Anglican ecclesiastical singing in which prose verses of varying length are sung to a repeated melody. Chanting belongs especially to the Psalms and Canticles of the daily offices of the Church.

<sup>1</sup> Often spelt "Chaunter" in would-be imitation of Scottish pronunciation; but there is no authority for this.

It has been shown above (see CHANT) that the form of the chants now in common use in the English Church was evolved first by the application of harmony to the Gregorian tones, and later by new compositions of a more or less similar pattern. This evolution in the composition produced a difficulty in practice which has made good chanting a rare accomplishment, for it turned the chant from a formula of melody, in which only pitch relationships were defined, into a composition in which the melody was reinforced by harmony, and the whole was written in notes of definite time-values: to this bar-lines were added, thereby making the chant into a rhythmic pattern, thus:

The following is a typical product of this line of thought:

Even in this "partsong" type of composition there is a certain, if weak grace; but this is destroyed if the chant rhythm is broken. Yet there must be elasticity in performance, so that the varying lengths of the prose verses can be accommodated. Nevertheless, the elasticity was mismanaged, for the actual result in practice caused certain points in the chant to be stressed, and this method earned for itself the name of the "Anglican thump". In other words, the music was pressed into the most rigid accentuation, while the words provided the supposed elasticity, since some verses are shorter than others. In the 18th century chanting was practically confined to cathedrals and collegiate churches. It was then no concern of congregations, and it is possible that the slower tempos of that day lessened the more obvious evils of this custom; but the revival of church life in the 19th century, and the introduction of surpliced choirs, provided a stimulus for the "fully choral service", as it came to be known, and also created a demand for Psalters which contained the most explicit directions for the singers. Consequently the prefaces to these books abound in warnings about accents, asterisks, syllables printed in heavy type, and sometimes (even in the words edition) bar-lines. All these increased the rigidity and made worse nonsense of the words. Among the earlier of these books may be mentioned Robert Jones's (1837), Hullah's *Psalms with Chants* (1844), the Psalter of the S.P.C.K., edited by Turle (1865), the

'English Psalter' (1865) and the 'Psalter Accented' (1872). But by far the most important publication, because of its wide acceptance, was the 'Cathedral Psalter', in which the Rev. S. Flood-Jones, the Rev. Dr. Troutbeck, James Turler, Sir John Stainer and Sir Joseph Barnby collaborated (1875). Its notes and explanations directly recommended the method described above. Other Psalters, such as the 'Barless Psalter', the 'Free Rhythm Psalter', the 'St. Mary Abbott's Psalter', in which the editor used miniature notes placed over the syllables to indicate time-values, were designed partly to improve the disposition of the syllables, partly to remedy the defects supposed to be inherent in the Cathedral Psalter. Later, the 'New Cathedral Psalter' was published, with syllables in yet heavier type, and a return to the older method. None of these books succeeded, because the true function of the chant had not yet been realized. Composers were viewing the chant as a composition to which the words had to be fitted, instead of a musical arrangement which must be the servant of the words sung to it.

Concurrently with this general extension of psalm-singing in English churches came a movement in favour of the restoration of the Gregorian tones in their unharmonized form. This was an ecclesiastical rather than an artistic movement, but it served to draw people's attention to the evils inherent in the structure of the Anglican chant. About the year 1840 some attempt to study plainsong was made. Marbeck was re-edited by both Pickering and Rimbault; Dyce and Burns published an adaptation of the plainsong to the Prayer Book; Oakley and Redhead brought out the 'Laudes diurnae' at the Chapel in Margaret Street, London; and the 'Oxford Psalter' was published in 1843. Helmore's 'Psalter Noted' (1850) was an attempt to take up Marbeck's work at the direction after the *Venite*—"and so with the psalms as they are appointed"—and to furnish an exact guide for "pointing". But the movement had to wait for fuller scholarship to accomplish any result, and even now there is no convincingly complete answer to those authorities who maintain that the tones devised for the Latin language are ill-adapted to the genius of the English one.

The arguments against the use of the Gregorian tones for chanting the Psalms in English were developed at some length by the late Poet Laureate, Robert Bridges, in his article on chanting in 'The Prayer-Book Dictionary' (1912). It was Bridges who really roused musicians to see that the chant must be fitted to the words, not the words to the chant. In his writings he analysed in detail the verbal rhythms of the English Psalms and examined

closely the structure of the Anglican chant. He went so far as to suggest the exclusion of passing-notes from existing chants.

Bridges was given practical support by the late Sir Hugh Allen (then Dr. Allen) at New College, Oxford. In the chapel at New College Bridges' suggestions were proved not only possible and reasonably simple, but also inspiringly imaginative and practical. Progress was slow, but the torch lit by Bridges and Allen has become a flame, for although there is still opposition and lethargy, there is evidence that some church musicians are tackling the problem. The 'Psalter Newly Pointed' (S.P.C.K., 1925) was a direct outcome of this pioneering, and it has made a good deal of headway. The 'Southwark Psalter', edited by Madeley Richardson, was an attempt to illustrate the varying moods of the Psalms not only by means of frequent changes of chant, but also by the insertion of interludes on the organ when the mood changed in the course of a Psalm. This was successful at Southwark, but could hardly find general acceptance, for by its very nature it precluded the congregation from taking any part.

Other Psalters which have been adopted in a number of places are the 'Oxford Psalter' (1929) and the 'English Psalter'. In these the aim has been to suggest the nearest approach to speech rhythm, but neither can be called simple, if viewed from the standpoint of the village choir; and the book which provides the minimum of directions, while having regard to the problems of each and every verse on its merits, still remains to be compiled.

There are encouraging signs that church musicians have at long last begun to recognize the need for overhauling their methods. Where progress has been made there is a livelier interest taken in chanting, and a further result is that choirs (and occasionally congregations) are beginning to enjoy and to understand the superb English of the Psalms. Previously the process of trying to fit words to music had been no more than a jig-saw puzzle of which the complete picture was never seen. In that unequal struggle the understanding of the words had no chance. Now the seeds have been sown, and they are germinating.

**CHANTY.** See SHANTY.

**CHAPEAU CHINOIS.** See CHINESE PAVILION.

**CHAPEL ROYAL.** The term chapel is derived from the *cappella*, or cloak, of St. Martin, which was treasured as a relic by the Frankish kings and carried before them into battle. It was also used to give sanctity to oaths. The keepers of the cloak were termed *cappellani* (hence chaplains), and in course of

time the sanctuary in which it was kept was called the *cappella*. Subsequently the use of the term was extended to any private sanctuary or holy place.

But apart from its more ordinary use as referring to a building, the word chapel was used to denote the entire apparatus, including the *personnel*, the vestments, the plate and the service-books (musical and otherwise), which constituted the religious establishment attached to the household of a sovereign or of any great nobleman or bishop.

Such establishments were maintained with considerable dignity and elaboration at the courts of the kings of France and of England. Wherever the king travelled in state he took his chapel with him, together with the other officers and members of his household, and it was the duty of the chapel to perform the daily services wherever the king was in residence, whether he attended in person or not. When the English sovereign was in residence at one of his own palaces the services were performed in the private chapel attached to the palace, whether in Tudor times at Greenwich or Whitehall, or later at St. James's Palace, or in early days at Eltham or elsewhere; and the chapels in those palaces came to be styled Chapels Royal, this term being applicable to any chapel belonging personally to the sovereign and used for his own purposes in worship. Mention must here be made of St. George's Chapel in Windsor Castle. In one sense it is a Chapel Royal, and was indeed sometimes styled "*Libera Capella Regia* [not Regis] *infra castellum de Wyndesore*"; but in the days of Edward VI and Elizabeth, as well as more recently, it is technically described as "*The King's Free Chapel of St. George in Windsor Castle*". It is a "*Royal Peculiar*", as also is Westminster Abbey; in other words, it is exempt from all episcopal or archiepiscopal jurisdiction.

Of the buildings that have been known as Chapels Royal little need be said here. That in St. James's Palace is, practically speaking, the only actual Chapel Royal now served by the establishment. In that building, which dates from the reign of Henry VIII, a full choral service is still performed twice on Sundays by the Gentlemen and Children of the Chapel. The school for the "children" has recently ceased to exist, but the boy choristers still retain their brilliant uniform, dating from Tudor times and somewhat similar in style to that worn by the Yeomen of the Guard. The Chapel Royal in Whitehall ceased to be maintained as a chapel towards the close of the 19th century. The Whitehall Chapel of Tudor days was the old chapel of the palace and perished when the palace was destroyed. In later times Inigo Jones's Banqueting Hall was for a long period used as the

Chapel Royal. The Savoy Chapel was constituted a Chapel Royal in 1773 by a special patent issued by George III, but the musical services at the Savoy were never of much importance.

E. H. F., *abr.*

It would be very surprising indeed if the Chapel Royal of England, with its roots in the early part of the 12th century, had failed to create an important if only occasional repertory of choral music during the many centuries of its existence. An establishment of this kind would be expected to produce liturgical music for its own services, and such non-liturgical motets and anthems as were from time to time demanded by a special occasion, either a royal birth or a state funeral, a royal marriage or a coronation, and many similar events of equal importance. Thus it is that the finest flower of English church music throughout the ages has sprung up from the Chapel Royal and its composers, who have given, by their music alone, an artistic commentary on historical deeds and events which as far as Europe is concerned is almost without parallel.

Only the records of the very earliest times tend to show that England relied on continental composers for music in the Chapel Royal. A manuscript which belonged in the year 1299 to Edward I, or more possibly to his private chapel, mentions by name two organa beginning respectively '*Viderunt*' and '*Alleluia*'. If these correspond to the quadruple and triple organa which Anonymous IV attributes to Pérotin, it is highly likely that they were brought back from France when Edward I (a keen music-lover) returned from a long crusade. A century later, the state of musical composition in England was very different, for a group of composers was active in the chapel of St. George, Windsor. Among the clerks the name of William Excestre is found as early as 1393, while records of Cooke, Burell, Aleyn and Chirbury are found in Wardrobe Books dating from 1413. The mass sections composed by this group were eventually united with similar settings by other colleagues, including the two canons Damett and Sturgeon, who undoubtedly supervised the final and beautifully illuminated transcription known to-day as the Old Hall Manuscript. Among the motets contained in this highly important source are several whose text refers to a political or historical event connected with royalty. It is now assumed that "*En Kathetrinae solennia*" (Byttering) refers to the marriage of Henry V with Catherine of Valois, and that the mention of "*Henrici nostri regis*" in Damett's motet '*Salvatoris mater pia*' is intended for Henry V, not Henry VI.

A later product of the Chapel Royal may well have been the Bodleian Manuscript Selden B 26, which (like the Old Hall Manuscript) contains a song in honour of St. George,

the patron saint of England and of the Windsor community. A copy of the Agincourt song is also found here, while echoes of the battle itself reappear in a carol (once again in honour of St. George) which is included in the extensive and almost unique repertory of Egerton Manuscript 3307. This manuscript was certainly written at Windsor, where it was used by singers of the chapel for both sacred and secular occasions. Among the former was the funeral of Edward IV, during which members of the Chapel Royal are reported to have sung the psalter in its entirety. Less solemn gatherings, such as the Twelfth Night feast at the court of Henry VII in 1487, would prompt the performance of carols and secular songs. We are told by an eye-witness of these festivities that

... at the Table in the Medell of the Hall sat the Deane and thos of the Kings Chapell, whiche incontinently after the Kings first Course sange a Carall.

At that time the establishment consisted of 26 chaplains and clerks, 13 minstrels, 10 choirboys with their master and one wait, whose duty it was to sound the hour thrice nightly. During the previous year, which had seen the festivities held in honour of the marriage of Henry VII with Elizabeth of York, Gilbert Banaster, Master of the Children of the Chapel Royal, composed a five-part motet, 'O Maria et Elizabeth', which is preserved in the Eton Manuscript. Another member of the Chapel, Thomas Ashwell, wrote an English anthem in honour of the same event:

God save King Harry wheresoe'er he be,  
And for Queen Elizabeth now pray we,  
And for all her noble progeny.

Henry VIII, in spite of a predilection for Brescian lute players and Venetian organists, must clearly have retained throughout his life a strong enthusiasm for English singers and composers, for he augmented the establishment of the Chapel Royal to no less than 79, drawing upon such famous musicians as Fayrfax, Newark, Cornish, Burton and Farthing. Fayrfax was at the head of the singing-men when the Chapel was called upon to attend the king at the Field of the Cloth of Gold, in 1520. Doubtless the excellence of the performances on that noteworthy occasion was due not only to the care with which the music had been prepared, but also to the spirit of friendly rivalry between the Chapel Royal and the private band of singers who served Cardinal Wolsey. A discerning ecclesiastic, writing to Wolsey in 1518, had said:

The King hath plainly shewn unto Cornish that your Grace's Chapel is better than his, and proved the same by this reason that if any manner of new song should be brought into both the said Chapels to be sung ex improviso then the said song should be better and more surely handled by your Chapel than by his Grace's.

The Eltham ordinances of 1526 led to further increases in the number of singers, which in Edward VI's reign had risen to 114.

A musical relic of his Chapel may be seen in the anthem 'O Lord Christ Jezu, that art King', which is described as "a prayer for King Edward". Thomas Tallis was among the many eminent musicians whose services were retained when Edward came to the throne, and it is worthy of note that both Tallis and his pupil Byrd were allowed to continue to hold office under Elizabeth, in spite of their lightly veiled adherence to the old faith. Shepherd had been appointed during the reign of Mary, and he is reported in 1557 to have delivered a roll of songs into the Chapel as a New Year's gift to the queen and her consort.

During Elizabeth's reign the Chapel Royal reached unprecedented heights in its musical accomplishments, the names of Tallis, Byrd, Morley, Bull, Robert Parsons, Tye and Munday being in themselves a strong guarantee of a noble and original musical style. In James I's time Orlando Gibbons and Thomas Tomkins added their own peculiar lustre to the skilled company of composers, and although Gibbons died in 1625, Tomkins continued in service until the execution of Charles I in 1649. Tomkins was then residing at Worcester as organist of the cathedral there, his membership of the Chapel Royal being in no wise affected by the distance which separated him from the unlucky monarch, whose demise prompted him to write a 'Sad Paven for these distracted Tymes'. During Charles's lifetime Thomas Weelkes had written the anthem 'O Lord God Almighty' in his honour, and on the restoration of the monarchy further anthems were composed by way of commemoration, one of the most significant being Smith's 'How is the gold become dim'.

In celebration of the return of the monarchy in 1660 William Child wrote a five-part full anthem, 'O praise ye the Lord', while the coronation ceremonies in the following year saw the first performance of 'Zadok the priest' by Henry Lawes, whose brother William (also a Gentleman of the Chapel Royal) had been killed while fighting for the Royalists in 1645. Captain Cooke also contributed music for the coronation and built up a fine choir at Windsor in less than four years. That the early period of training was beset with difficulties is shown by Ashmole's description of the processional hymn sung at the Installation of the Knights of the Garter in 1661:

This hymn is composed and set with verse and chorus by Captain Cook, Master of the Children of the Sovereign's Chapel, by whose direction some instrumental loud music was at that time introduced, namely, two double sackbuts and two double courtales, and placed at convenient distance among the classes of the Gentlemen of both Choirs [Whitehall and Windsor] to the end that all might distinctly hear, and consequently keep together in both time and tune.

Two of Cooke's choirboys, Blow and

Tudway, provided verse anthems "on ye Thanksgiving for ye discovery of ye Rye House Conspiracy" in 1683. Purcell, who was a pupil of both Cooke and Blow, wrote 'My heart is inditing' for the coronation of James II, 'Blessed are they that fear' for the thanksgivings in 1688 "for the Queen's being with child" and 'Thou knowest, O Lord, the secrets of our hearts' sung at the funeral of Queen Mary in 1695, and at Purcell's own funeral a few months later. Blow, whose anthem 'The Lord God is a Sun' had been performed in 1689 at the Coronation of William and Mary, offered a verse anthem, 'We will rejoice', on the occasion of the Thanksgiving Day for the discovery of the plot against the king's life, in Apr. 1696.

Thanksgiving Days were very much to the fore during the reign of Queen Anne, for the victory at Blenheim in 1704 and the success of the Navy in 1708 were both commemorated by Croft, who was then joint organist with Jeremiah Clarke at the Chapel Royal. Tudway, who was still active as a composer, wrote a verse anthem, 'Behold how good and joyful', to celebrate the Union with Scotland, in 1707. Seven years later Croft was called upon once more, this time to compose a funeral anthem, 'The souls of the righteous', for Queen Anne's burial service. He continued to serve the Chapel Royal even after his appointment to Westminster Abbey and composed a coronation anthem for George I and another, in 1715, "for the Thanksgiving upon suppressing of the Rebellion at Preston".

The Chapel Royal composers were as prolific as ever until the reign of George IV, and there is no doubt that Greene, Nares and Boyce contributed a wealth of music for all kinds of ceremonial occasions. Handel, who was never actually a member of the Chapel Royal, was called upon frequently to provide occasional anthems and music for the court of George II, for it was the custom of this monarch to look beyond the boundaries of his Chapel when music was needed for an important function. Thus it was Handel who provided the music for Queen Caroline's funeral in 1737 and for the victory at Dettingen in 1743. Organists of the Chapel since the middle of the 18th century have continued to supervise the Sunday choral services held at St. James's Palace, and among their number have been such well-known choirmasters and composers as T. S. Dupuis, Samuel Arnold, John Stafford Smith, Sir George Smart, Thomas Attwood and C. H. Lloyd.

Apart from the ceremonial music dutifully performed throughout the centuries by the Gentlemen and Children of the Chapel, there is another important aspect of their practical contributions towards royal entertainment: the dramatic productions which started,

apparently, in the 15th century and continued for a very considerable time. These productions were usually entrusted to the Master of the Children. The earliest Master on record is John Pyamour, who served in this capacity from 1420 until 1427, when he left England as a follower of the Duke of Bedford. Half a century later the Master of the Children was assisted at the Christmas and Twelfth Night entertainments by an Abbot (or Lord) of Misrule, whose office later became absorbed into that of the Master of Revels.

Gilbert Banaster was among the first of the Masters to act as a producer of plays, and his literary ability is amply demonstrated by the 'Miracle of St. Thomas', a manuscript preserved in the library of Corpus Christi College, Cambridge. William Cornish was also a fluent writer, but unguarded enough in his allusions to contemporary worthies to cause trouble which eventually brought about his imprisonment. He was in all probability a participant in the play given to celebrate the marriage of Prince Arthur and Katherine of Aragon, in Nov. 1501. The Gentlemen of the Chapel took part, and the Children, disguised as mermaids, "sang most sweetly and harmoniously".

Often the Children of the Chapel were joined by those of St. Paul's, when Redford, Heywood or Westcott would take command of the proceedings, judiciously mixing dramatic and musical elements into a simple yet effective entertainment. Richard Edwards, of Christ Church, Oxford, followed with enthusiasm the line which earlier writers had pointed out and received high commendation from Queen Elizabeth for his play 'Palamon and Arcite', first produced at Oxford in 1566, during the queen's visit. Richard Farrant, who was organist and choirmaster at St. George's Chapel Windsor from 1564, produced a number of plays at Christmas, Shrovetide and Twelfth Night. 'Quintus Fabius' was first performed at Whitehall, while 'Mutius Scevola', involving both Windsor and London resources, met with considerable success at Hampton Court.

The regular licensing of these tender youths as touring companies of actors led in due course to a certain amount of discontent among parents. A warrant of 1626 expressly states that the Children are not to be employed as comedians and stage players,

for that it is not fit or descent that such as should sing the praises of God Almighty should be trained or employed in such lascivious and prophane exercises.

Warrants of this kind, giving power to the Master to impress children from provincial establishments, date back to the 15th century. Two are preserved in the B.M., the first (Harl. 433) dating from 1484 and the second (Sloane 2035 B) from 1585.

Other relevant documents relating to the Chapel Royal are the Cheque Book (now in the Public Record Office) which records appointments, resignations and deaths of a great many Masters, Gentlemen and Children of the Chapel, the Anthem Book of 1635 (Bodleian MS Rawl. Poet. 23) and the enlarged version of this, used in the reign of Charles II (Harl. 6346). Drawings, made in or about the year 1603, of members of the Chapel Royal forming part of the funeral procession of Queen Elizabeth, may be seen in the B.M. (Add. MSS 35324).

ROPER, E. STANLEY, 'The Chapels Royal and their Music' (Proc. Mus. Ass., Vol. LIV, 1927).

**CHAPEL ROYAL OF SCOTLAND.** As in England, the term "Chapel Royal" in Scotland meant not only a building set apart for divine worship by the king and court, but also a movable institution of ecclesiastics, canons, choristers, musicians and others who officiated therein. The former dates from the year 1120, when Alexander I founded a chapel in Stirling Castle dedicated to his mother, Queen Margaret ('Reg. Dunfermelyn', 4, 8). We read of it many times during this century and the next (*ibid.*, 3, 9, 38, 39, 57, 63, 66, 81, 154, 157, 418), and in a bull of Pope Alexander IV (1154-1261) it is called the King's Chapel ('Acta Parl. Scot.', I, 107-8). In the year 1359 it was known as St Michael's Chapel ('Excheq. Rolls', I, 577). During the early 15th century the Chapel Royal is frequently mentioned in the 'Exchequer Rolls' (IV, 164, 379, 565, 592, 605), but during the preceding three centuries there is no special reference to music or musicians on the establishment of this chapel, although we have complete details of the choirs and the music of the cathedrals and abbeys of Scotland from the 13th century. It was not until James III (1460-88) came to the throne that the musicians are mentioned. This king favoured an Englishman, Sir William Rogers, at his court. He is described by Ferrerius as *varissimus musicus ex Anglia* ('Continuation of Boece', 391-92) and possibly it was this fine musician who gave this king the notion of founding a new Chapel Royal as a college of music. Pittscottie avers that there was to have been a precentor and sub-precentor, as well as a large staff, of which "one half should ever be ready to sing and play with him [the king], and hold him merry; the other half to remain at home to sing and pray for him and his succession." How far the king proceeded with this scheme there is little record, since Rogers was seized and hanged by the dissident nobility in 1482, although Ferrerius speaks of people who, in 1529, claimed to have studied at Rogers's *schola*. Yet there are no documents

extant concerning this Chapel Royal as a college of music at this time, although we know that the Chapel Royal followed the king during his "flitting" from one place to another ('Treasurer's Accounts', 1484-9).

It was James IV (1488-1513) who carried out his father's plans and made (1503) the Chapel Royal a collegiate church, to which he appointed a dean, sub-dean, sacristan, precentor (the next year), 16 canons, 16 singing canons and six trained choirboys ('Reg. Cap. Reg.'). During this time there were some interesting personalities at the Chapel Royal. James Beaton, who had previously (1497) been precentor at Caithness ('Bannatyne Club Misc.', II, 162) and eventually became Archbishop of St. Andrews, was the Dean of the Chapel Royal (1503). John Maior or Major (d. 1550) the historian was canon (1518) and treasurer (1522) at the Chapel ('Ann. Univ. Glasg.', Records, I). Alexander Paterson, the sacristan of the Chapel, was celebrated as the joint author of a work entitled 'For Singing the Mass' (R. A. Hay, 'Ane Account of the Most Renowned Churches', I, 234). In 1505 an inventory of the property of the Chapel Royal tells us of "Three pairs of organs, one of wooden, and two of tin or lead [pipes]". Among the items in the music library were

Four large music books written on parchment having divers capital letters gilt. . . . Two volumes on parchment, with notes in counterpoint. . . . Three gradualls written on parchment, and the large gradual, written on parchment, given to the King by the deceased Abbot of St. Columba.

At the Reformation (1559-60) the reforming mobs wrecked most of the choirs, organs and music books in the Scottish cathedrals, abbeys and other religious edifices but, says Rogers, those of the Chapel Royal were spared (p. lxxv). However, an inventory of 1561 reveals that there were only "one Mass book of parchment, with one noted Antiphonale of parchment" left out of a fairly substantial music library. Queen Mary, still faithful to her religion, moved her residence to Holyroodhouse, Edinburgh, but the Chapel Royal did not follow, although the latter took part in the elaborate ceremony when her son, afterwards James VI, was baptized at Stirling in 1561, on which occasion "the choristers sang appropriate airs, accompanied by the organs" (Rogers, p. lxxix). In 1571 Parliament decided "that the said Chapel should be purged of all monuments of idolatory or other things whatsoever dedicated to superstition", and the Earl of Mar was commissioned to see it done ('Acta Parl. Scot.', III, 62). Whatever had been spared hitherto — organs, music books, service books — was now suppressed or destroyed, although something of the old régime may have lingered, since in 1586, when Thomas Hudson was appointed Master of his Majesty's Chapel Royal, it was ordered

that he should make sure that the service there conformed with "the religion presently professed within the realm". Three acts of Parliament (1592, 1594, 1606) guaranteed the status of the Chapel Royal as a musical institution ('Acta Parl. Scot.', III, 563-64: IV, 75, 298). In the latter year the old building of the Chapel Royal at Stirling was razed to the ground and a new chapel erected in its stead. It was here, in 1594, that a little of the former grandeur of the choir was revived for the ceremony of the baptism of James's first-born, Prince Henry. There was part-singing in plenty, which was something more than was tolerated elsewhere, since a plain homophonic psalmody was the rule of the presbyteries. In spite of all the show made by the king in his new chapel and its music, it soon fell into disuse until the endowment was transferred to Holyroodhouse, Edinburgh, which now housed the Chapel Royal.

After the union of the crowns (1603), James's interest in his distant chapel was at low ebb, and a mere skeleton staff was maintained. In 1612, however, he displayed quite a fresh outlook. A new Dean and Master was appointed in William Birnie (1563-1619) and he was directed to choose prebendaries who were "skillful in music" ('Register of Presentations', IV, fol. 80), and by 1617 it was apparent that the king, having so long enjoyed the music of his English Chapel Royal, was anxious to have something similar in Scotland, as Secretary Lake's letter to Sir Dudley Carleton tells us. This meant the Anglican service, and to this was added an organ constructed by Thomas Dallam under the eye of Inigo Jones. Both Calderwood and John Row, two Presbyterian stalwarts, had given their view on the unwelcome novelties, and the people of Scotland as a whole did not approve the innovations. After this initial effort the king's zeal cooled somewhat after his return to London, and the institution once more fell into decay. About the year 1623 it was admitted that out of 16 canons, 9 prebends and 6 choirboys only seven ever attended, and they only sang "the Common Tune of a psalm".

The accession of Charles I to the throne (1625) brought about another revival of interest in the Chapel Royal in his attempt to foist the Anglican service on Scotland in 1627. A certain Edward Kellie, apparently quite a skilled man at his post, was appointed Director of Music to the chapel in 1629, and he worked hard to rekindle the smouldering embers of the old institution. English documents would lead one to believe that he was not appointed until 1633 (see Lafontaine, 'The King's Musick', p. 86), which is not so. Kellie had been responsible for the music at the king's coronation and seems to have been frequently in London. While there he had secured the

services of an organist, players on the cornett and sackbut, and choirboys, whom he took with him to Scotland for the Chapel Royal there, at which establishment he had 16 men and 6 boys, as well as an organist. Kellie also had charge of the music at the Scottish coronation ceremonies in 1633, which were quite creditable to him, but he seems to have been unjustly blamed for the theft of some wages, and he was succeeded in 1635 by Edward Millar, the editor of the classic 'Psalmes of David . . . in Four or More parts, and some Psalmes in Reports' (Edinburgh, 1635). Two years later the king tried to introduce Laud's liturgy into Scotland, which the Scots repudiated, and once more the music of the Chapel Royal fell into desuetude for, as we read in the Spalding 'Memorials', all the chaplains, choristers and musicians were discharged and the organs broken. Notwithstanding this repulse, his son, Charles II, also tried his hand at restoring the Chapel Royal to its ancient musical glories, and in 1671 he expressed his opinion that the chapel within the palace at Holyroodhouse did not please him; and the following year the Privy Council declared that the Abbey Church should be "the Chapel Royal in all times coming". Yet nothing materialized.

The last attempt to revive the Chapel Royal as a musical institution was made by James II (=James VII of Scotland) as one of his plans in romanizing Scotland. First he gave orders (1686) for the large chamber in Holyroodhouse to be converted into a Chapel Royal, and the Privy Council voted funds for "persons appointed for the service of music employed for . . . our Chapel . . . in Holyroodhouse". By 1687 he had changed his mind as to the *locus* of his Chapel Royal, and now had determined to annex the abbey church for this purpose. It was the beginning of the end, the significance of which may be seen in Lord Fountainhall's remark: "So this is the first Protestant church taken away from us" ('Lord Fountainhall's Decisions', I, 466). A large and magnificent organ had been installed (Maitland, 'History of Edinburgh', p. 153) and by February 1688 the Roman service was established in the Chapel Royal, now in the abbey church ('Lord Fountainhall's Historical Notes', p. 852). In Dec. "a rabble of all sorts" entered the abbey church in riotous fury and destroyed every vestige of the Roman Catholic faith on which they could lay hands. Thus came to an end the Chapel Royal of Scotland, which had lasted, with varied fortunes, for 568 years. After the failure of Episcopacy in Scotland the tiends of the estates, which constituted the revenues of the deanery of the Chapel Royal, fell to the Crown, which dispensed them as it thought fit to reward crown favourites. In

1863, however, the Universities Commissioners distributed the funds among the Divinity, Biblical Criticism and Church History chairs of the four Scottish Universities, a proceeding which, in view of the origin of the Chapel Royal proper, was quite unjust. At its foundation in 1503 the Chapel Royal was a collegiate church and a music institution, and one would have thought that the University Commissioners could have used some of the funds for the establishment of a chair of music at St. Andrews, Glasgow or Aberdeen, which would have been more in keeping with the ideals of James IV, the founder of the Chapel Royal, of the Scottish Parliament of 1594 and 1606, and of its great benefactor, James VI, who revived the Sang Schools and the Cantorie Colleges.

ROGERS, C., 'History of the Chapel Royal of Scotland' (Edinburgh, 1882)

**CHAPELLE** (Fr.). Originally the musicians of a chapel, now extended to mean the choir or the orchestra, or both, of a church or chapel or other musical establishment, sacred or secular. The *maître de chapelle* is the director of the music. In German the word *Kapelle* or *Capelle* was formerly used specially of the private orchestra of a prince or other great personage; the *Kapellmeister* is the conductor or director. *Maestro di cappella* and *maestro de capilla* are the corresponding terms in Italian and Spanish respectively, though in the Latin countries the ecclesiastical significance has been more generally preserved. Chapel-master is not customary as an English equivalent.<sup>1</sup> *Cappella pontificale* is the term for the whole body of singers in the pope's service, the *cantatori cappellani*, the *cantatori apostolici* and the *cantatori pontificali*. The derivation of the term "chapel" is explained above (see CHAPEL ROYAL).

**CHAPERONS BLANCS, LES** (Opera). See AUBER.

**CHAPÍ Y LORENTE, Ruperto** (b. Villena nr. Alicante, 27 Mar. 1851; d. Madrid, 25 Mar. 1909).

Spanish composer. He was the son of the village barber who was also a musician, and he had composed a *xarxuela* before he was seventeen. He studied for a time at the Madrid Conservatory and in 1872 received the appointment of *Músico mayor* to the Spanish Artillery. In 1873 the Academy of St. Ferdinand sent him to Rome, from which he industriously sent home a number of operas and a symphonic poem. Poverty afterwards drove him to comic opera, in which his singular

aptitude for musical caricature was of great service. He managed, however, to undertake more serious works, among which his last opera, 'Margarita la Tormera', and the earlier 'Curros Vargas' are the most valuable. He also composed 4 string quartets. His best pupil is D. Manuel Manrique de Lara. The following productions, all in Madrid, may be listed:<sup>2</sup>

'La hija de Jefe', 1 May 1876.

'La tempestad' (on Erckmann-Chatrian's 'Le Juit polonais'), 11 Mar. 1882.

'La bruja', 11 Dec. 1887.

'La revoltosa', 25 Nov. 1897.

'Curro Vargas', 10 Dec. 1898.

'Circe', 7 May 1902.

'Margarita la Tormera', 24 Feb. 1909.

**Chaplin, Charles** (Charlie). See POOT (3 symph sketches)

**CHAPPELL & CO.** English firm of music publishers, concert agents and later piano-forte manufacturers. It started business in London in 1811, at 124 New Bond Street, previously tenanted by Goulding, D'Almaine, Potter & Co.

(1) **Samuel Chappell** (b. ?; d. London, Dec. 1834). He was associated with John Baptist Cramer and Francis Tatton Latour. At the expiration of seven years Cramer retired, Chappell & Co. having previously (c. 1819) removed to a house nearly opposite, 50 New Bond Street. The first partnership is noticeable for the establishment of the Philharmonic Society, all the business arrangements for which were made at No. 124. At the end of the second term of partnership (1826) Latour withdrew and carried on a separate business at 50 New Bond Street until 1830, when he sold it to his former partner, Samuel Chappell, who was at 135 New Bond Street from about 1826 to 1830. In 1829-33 Chappell was also in partnership with G. Longman and T. C. Bates, who had been musical-instrument makers at 6 Ludgate Hill in 1824-33. After Samuel Chappell's death the business was carried on for the widow by her sons.

(2) **William Chappell** (b. London, 20 Nov. 1809; d. London, 20 Aug. 1888), eldest son of the preceding. Desiring to propagate a knowledge of the music of the English madrigalian era, William (in 1840) projected the Musical Antiquarian Society, which held its meetings and rehearsals at No. 50. He edited Dowland's songs for the Society, and also edited and published (1838-40) a 'Collection of National English Airs', giving their pedigrees and the anecdotes connected with them, with an essay on minstrelsy in England. This was afterwards expanded into his 'Popular Music of the Olden Time' (2 vols., 1855-59).

<sup>1</sup> See PRECENSOR.

<sup>2</sup> From Alfred Loewenherz's 'Annals of Opera'.

This standard book was later recast and published in 2 volumes under the editorship of H. E. Wooldridge in 1893. W. Chappell projected a general history of music, and the first volume was published in 1874.

(3) **Thomas Patey Chappell** (b. London, ?; d. London, 1 June 1902), brother of the preceding. He greatly extended the business under a family arrangement by which his elder brother left in 1844 and bought a share in the business formerly known as Cramer, Addison & Beale, which was continued as Cramer, Beale & Chappell until 1861. It was under Thomas Chappell's management that the great extension of the buildings took place, and he was the projector of the Monday Popular Concerts, and the Saturday Popular Concerts which sprang out of them, both of which have owed their success in great measure to the management of the following younger brother. From 1856 the firm was known as Chappell & Co.

(4) **S. Arthur Chappell** (b. London, ?; d. London, 21 Dec. 1904), brother of the preceding. St James's Hall was projected and carried out mainly by the Chappells.

The pianoforte factory of Chappell & Co. was in Chalk Farm Road, but is now, under the name of The Chappell Piano Co., Ltd., at 19 Ferdinand Street. Under the guidance of E. Glandt, who was their pianoforte constructor, their instruments gained largely in favour and commensurate sale. The firm successfully entered the lists of concert-grand manufacturers. Chappell & Co. became a limited company in Dec. 1896.

(5) **T. Stanley Chappell** (b. London, ?; d. London, 26 Apr. 1933), nephew of the preceding, son of (3). He was chairman of the company of which William Boosey was managing director. The firm was the lessee of Queen's Hall, destroyed during the second world war. The present addresses of Chappell & Co. are 50 New Bond Street and 14 George Street, Hanover Square.

W. C., adds. F. K., A. J. H. & W. C. S.

See also Queen's Hall St James's Hall.

**CHAPPINGTON, John** (b. South Molton, Devon, ?; d. Winchester, c. 1 July 1606).

English organ builder. He built an organ in 1597 for Magdalen College, Oxford. He also did work at Salisbury, Westminster Abbey and St. Margaret's, Westminster. He was buried at Wells Cathedral.

Other members of the Chappington family, Richard, Hugh and Ralph, also built organs.

W. H. H.

**CHAPPLE, Samuel** (b. Crediton, 20 July 1775; d. Ashburton, 3 Oct. 1833).

English organist and composer. He was blind and was taught the pianoforte by a master named Eames, who had been a pupil of Thomas, a scholar of John Stanley — all blind

men. In 1795 he was appointed organist of Ashburton, where he continued for nearly forty years. He composed and published many anthems, songs, glees and pianoforte sonatas.

W. H. H.

**CHAPPLE, Stanley** (b. London, 29 Oct. 1900).

English pianist, conductor and educationist. A scholar of the London Academy of Music, which he entered in 1909, he became a successful exponent of the Yorke Trotter method of teaching and followed Dr. Yorke Trotter as principal of that institution in 1930, remaining until 1935, when he left it and joined the staff of the G.S.M. He has published two books on teaching, 'Yorke Trotter Principles of Musicianship' and 'The Class Way to the Keyboard' (1935), and during annual visits to the U.S.A. in 1923-28 he directed a summer school in the educational methods in which he has specialized.

As a pianist and conductor Chapple has done work marked by the soundness of his musicianship. In conjunction with his brother Norman (violinist) he has given recitals of chamber music, and as a conductor has had some experience abroad as well as in London and English provincial cities, where he has conducted concerts with the L.S.O., the L.P.O. and for Sir Robert Mayer's Children's Concerts. He began conducting in 1922, when he founded the Modern Chamber Orchestra, with which he presented a number of new works. In 1924 he was appointed director of music to the Vocalion Gramophone Company and worked in their studios for six years. He has conducted the Berlin Philharmonic Orchestra in Berlin, where he had studied in the years following the war 1914-18, and he has appeared also in Vienna and The Hague.

On his return to the U.S.A. Chapple became assistant to Kussevitky at the Berkshire Music Centre (1940-47) and in 1940 resumed conducting the St. Louis Summer Symphony Orchestra. From 1945 to 1948 he was conductor of the St. Louis Philharmonic Orchestra, and he has conducted nearly all the major orchestras in the U.S.A. He was made a D.Mus. (*hon. causa*) at Colby College, Maine, in 1947, and has been Director of the Music School of the University of Washington since 1948. His later publications include 'Language of Harmony' (1942).

F. S. H. & M. K. W.

**CHAPUIS, Auguste (Paul Jean-Baptiste)** (b. Dampierre sur Salon, Haute-Saône, 20 Apr. 1858; d. Paris, 6 Dec. 1933).

French organist, educationist and composer. He studied at the Paris Conservatoire under Dubois, Massenet and Franck, and excelled in harmony (1877) and organ playing (1881). From 1882 to 1887 he was organist at the Paris church of Notre-Dame-des-Champs and

from 1888 to 1906 at that of Saint-Roch. He was professor of harmony at the Conservatoire from 1894 to 1929, and wrote many musical textbooks designed principally for the school children of Paris, where he was for many years inspector of music in schools and at the same time president of the Examining Board for military music. He also greatly furthered the cultivation of choral singing by reviving in Paris in 1899 the Orphéon Municipal, whose annual contests bring together more than 1500 competitors.

Chapuis collaborated in the editing of the complete works of Rameau ('Castor et Pollux'). Among his own works are the operas 'Enguerrande', in 5 acts (Opéra-Comique, 1882); 'Les Demoiselles de Saint-Cyr', in 4 acts (Monte Carlo, 1921); 'Iamed', in 3 acts; several collections of songs; Sonata for violin and pianoforte and Sonata for cello and pianoforte; 'Tableaux flamands' for orchestra (Lamoureux concerts, 1918). E. B. (ii).

Char, René. See Boulez (2 works). Martinet (3 songs).

**CHARACTER NOTATION.** The name given in the U.S.A. to one of the many devices contrived during the past 200 years in Europe and America to facilitate the reading of music by singers. The device here discussed was invented in America about the year 1800. Its difference from traditional notation lies merely in the shapes of the diatonic noteheads. To each of these is given a shape which reveals to the singer its melodic character or function.

When the manner was new its graphic objective was not fully attained. Only four differently shaped noteheads were provided, because the innovation was linked with the old English manner of sol-fa'ing, then in general use also in America, with its only four notes: *fa*, *sol*, *la* and *mi*. The tonic in all major keys was *fa* with a triangular notehead; then followed, upward and diatonically, *sol* oblong and *la* rectangular. These three notes and shapes were then repeated for the next three steps, to be followed by the seventh step, *mi* diamond-shaped. Thus the E $\flat$  major scale, for example, appeared as:

In minor scales exactly the same note and shape sequence served, though the tonic was on *la* below the relative major tonic, as in the following staff:

The repetition of three of the shapes within

the same octave seems to have caused the singer no more concern than had the similar repetition of note-names in the earlier singing-tradition. But this duplication was destined to be eliminated. In the early 1800s the continental European *do-re-mi* practice (the movable *do*) reached America, took root in the cities and replaced there the old English solmization. By the 1840s the influence of the practice was felt in the singing-schools of remote parts where the four-shape character notation was popular; and a demand was stirred up for a different name and shape for each of the seven scale-notes. Jesse B. Aikin, a Pennsylvania singing-school master, was the first to respond to the demand in his book of song, 'The Christian Minstrel' (1846), where he used the *do-re-mi* system and added three shapes to the older four. The Aikin major scale thus appeared as:

The relative minor scale was constructed as with the four shapes, by starting the same series on *la* below.

After Aikin a number of his competitors followed his example and introduced their own threesome of new shapes (since Aikin had patented his), using them along with the older four which had reverted to public domain. Six of these imitative attempts are given in the following table (with Aikin's at the top), together with the names of those who made and used them:

do	re	mi	fa	sol	la	si
△	▽	◇	▷	▭	▭	◁
▷	◁	◇	▷	▭	▭	◁
⊗	⊙	◇	▷	▭	▭	△
▷	◁	◇	▷	▭	▭	◁
△	◻	◇	▷	▭	▭	◇
▷	◻	◇	▷	▭	▭	◁
△	◻	◇	▷	▭	▭	◁

The rows represent: 1. Aikin (1846), 2. Auld (1847), 3. Swan (1848), 4. Funk (1851), 5. Gillham (1854), 6. Johnson (1853), 7. Walker (1866)

These new series of shapes failed, however,

to gain the public's favour, and Aikin's seven became standardized.

Character notation — also called patent-note music and, by those who would ridicule it, "buckwheat notes" and "square-toed music" — emerged in upstate New York; but it became popular chiefly in rural parts of Pennsylvania and regions to the west and south. From its beginnings it was called "God's music" because its use was confined to the songs and "fuguing" pieces, exclusively religious, in singing-school usage. Eventually and naturally it went over to the spirituals. The four-shape variety persists in but two very old song-books, 'The Southern Harmony' (1835) and 'The Sacred Harp' (1844), both still in use. The seven shapes are used in countless books of the popular-religious sort.<sup>1</sup> The publishing-house of the (American) Methodist Church, for example, producing millions of song-books each year, prints more in the seven-shape character notation than in the usual round-note style. These facts would seem to indicate that the public found something definitely helpful in the note-shapes.

CHARAMELINHA. See ESCOBAR, ANDRÉ

DE

CHARD, George William (b. Winchester, 1765; d. Winchester, 23 May 1849).

English organist and composer. He became lay-clerk and assistant organist of Winchester Cathedral (1787) and organist in 1802. At the same time he was appointed organist of Winchester College, as a brass to his memory records. He was also organist of St. Maurice with St. Mary Kalender Church, Winchester. He was famous as a trainer of boys' voices. He took the D.Mus. degree and published some church music and 'Twelve Gleees, for three, four and five voices'. He was buried in the cloisters of Winchester College Chapel.

W. H. H.

CHARDE (Chard), John (b. ?; d. ?).

English 15th-16th-century composer. After sixteen years of study at Oxford University, and having written a Mass and Antiphon in 5 parts, he applied in 1518 for the degree of B.Mus. This was granted on condition that he should give his Mass and Antiphon into the hands of the proctors, and write another 5-part Mass on the 'Kyrie rex splendens'. Anthony à Wood, in his 'Fasti', adds the information that, although compositions in 4, 5 and 6 parts had become frequent since Henry VIII's accession, Charde was the first on the University registers who composed in so many parts.

W. H. H.

<sup>1</sup> See Gospel Songs under SPIRITUALS.

CHARDINY, Louis-Armand (b. Fécamp, Normandy, 1758<sup>2</sup>; d. Paris, 1 Oct. 1793).

French baritone singer and composer. He made his début at the Paris Opera in 1786 and continued to sing there until the end of his short life. He fought in the Revolution as a captain of the National Guard; shortly before his death he was appointed musical director of the newly founded Théâtre du Vaudeville and in that capacity wrote numerous airs for many plays performed there; his name continues to be mentioned in the printed editions of those plays (some of which contain the music of his airs) until several years after his death. Before his appointment, however, he had already made his name as a composer of an oratorio, 'Le Retour de Tobie', sung at the Concert Spirituel on 26 Mar. 1785, and of several comic operas performed at the smaller Paris theatres, such as 'Annette et Basile' (1785), 'La Ruse d'amour' (1786), 'Le Pouvoir de la nature' (1786; score preserved), 'L'Anneau perdu et retrouvé' (1788) and others. Chardiny wrote the recitatives for the French version of Paisiello's 'Il re Teodoro in Venezia' when produced at the Paris Opéra in 1787.

A. L.

CHARITY CHILDREN, Meeting at St. Paul's. A festival service, attended by the children of the old charity schools of London, was held annually in June under the dome of St. Paul's Cathedral, the children taking a prominent part in the singing. The first of these festivals was held in 1704, on the Thursday in Whitsun week, at St. Andrew's Church, Holborn; the second in 1705 at St. Sepulchre's, where the service took place until 1738, when it was held at Christ Church, Newgate Street. It was continued there until 1801. In that year the children met at the cathedral, where the services were subsequently held, except in 1860 when the cathedral was under repair and the schools assembled on the Handel orchestra at the Crystal Palace.

On 23 Apr. 1789 the children met at St. Paul's, when George III went in state to return thanks for his restoration to health; and, earlier still, on 7 July 1713, at the thanksgiving for the Peace of Utrecht, they were assembled in the streets. The effect of the music has been recorded by many eminent musicians, including Haydn, in whose memorandum book in the Vienna Conservatory there is a note on the service, quoting Jones's double chant<sup>3</sup>, and Berlioz, who was present in 1851.<sup>4</sup> The number of the children varied, but was generally between 5000 and 6000; they were arranged in an amphitheatre constructed for the occasion under the dome. Among the conductors have

<sup>3</sup> According to the obituary in the 'Journal des Spectacles', which gives his age as 35; according to Fétis he was born at Rouen in 1735 or 1736.

<sup>4</sup> See JONES, JOHN, and FOHL, 'Haydn in London' p. 212. <sup>5</sup> 'Soirées de l'orchestre', No. 21.

been Bates, H. Buckland and Shoubridge. The last festival service was held in June 1877.

C. M.

**CHARIVARI** (Fr., onomat.). A confusion of sounds, as for instance the tuning of an orchestra; a playing in haphazard disharmony, often with extraneous noises on all sorts of non-musical implements thrown in and with musical instruments playing out of tune and time. In various European countries, especially Germanic, where the *charivari* is called *Katzenmusik* (cats' music), such performances were sometimes given as mock-serenades to persons who had made themselves unpopular.

E. B.

**CHARKE, Richard** (b. ?; d. Jamaica, ?).

English 18th-century violinist and composer. He succeeded Richard Jones as first violin at Drury Lane Theatre in London before or about 1740. He married Charlotte, the youngest daughter of Colley Cibber, whom he ill-treated, the full account of which treatment is set forth in a book published by her in 1755. He emigrated to Jamaica, where he died in the prime of life. Hawkins credits him with being the first to compose medley overtures, i.e. compiled from passages taken from other works, principally popular airs. 'Charke's Hornpipe' is one of the few compositions which survived him. Burney mentioned that Charke was a dancing-master, an actor, a man of humour and an excellent violinist. Songs by him were used in Chetwood's ballad operas 'The Lovers' Opera' (1729) and 'The Generous Free-Mason' (1730), and he also set the two songs contained in James Miller's comedy 'The Humours of Oxford' (1730), which were published separately.

F. K., adds. A. L.

**CHARLES, ? ("Mr. Charles")** (b. ?; d. ?).

Prob. Hungarian 18th-century horn player and clarinetist. He is a shadowy but important figure, since he was the first named performer on the clarinet in the British Isles. He arrived at Dublin in Mar. 1742 from London, heralded in Faulkner's Dublin Journal as "the Hungarian and famous French-Horn Master", and in May he played concertos on the horn and clarinet and "select pieces" on the hautbois d'amour and "Shalamo". He later took over "Mr. Geminiani's concerns and Great Musick-Room" and gave lessons on the horn, playing at the same time in the orchestra of the Theatre Royal in Aungier Street. Later in 1743 he was back in England, since he was advertised in Nov. to perform at Salisbury on the horn, clarinet, hautbois d'amour and "shalamo, being instruments never heard here before". There he was joined in a trio for three horns by his wife and son. In 1755 he appeared as a clarinetist in Edinburgh. No doubt he is to be identified with the composer

of 'Twelve Duettos for two French Horns or two German Flutes' appended to 'Apollo's Cabinet', published by John Sadler, Liverpool, 1756. In addition King's College, Cambridge, possesses manuscript copies (RW 6.23) of a 'Solo' for the French horn and two 'Solos for Spinnet' by "Mr. Charles".

**CHARLESTON**. See FOXTROT.

**CHARLIER DE GERSON, Jean**. See GERSON.

**CHARLOTTE CORDAY** (Opera). See BENOTT (P).

**CHARPENTIER, Gustave** (b. Dieuze, Meurthe, 25 June 1860).

French composer. He went to school at Tourcoing, where his parents went to live after the Franco-Prussian war of 1870-71. At the age of fifteen he was put into business for two years, but was then admitted to the Lille Conservatory. Having carried off many prizes he entered the Paris Conservatoire in 1881. A pupil of Massart for violin, he was afterwards in Pessard's class for harmony, competing twice for prizes without success. In 1885 he entered Massenet's composition class and in 1887 won the Prix de Rome with his *scène lyrique* 'Didon', first performed at one of the sessions of the Institut and afterwards at a Colonne concert and in Brussels. In 1888 his brother Victor (b. Dieuze, 23 July 1867), who was also at the Conservatoire, obtained a second prize for cello playing. He later became a conductor.

Among the works composed in Rome by Gustave Charpentier were the orchestral suite 'Impressions d'Italie', which rapidly became famous and was heard at the leading centres of symphonic music; and 'La Vie du poète', a *symphonie-drame* in four movements for solo voices, chorus and orchestra, set to words of his own. Other works of his include two sets of 'Poèmes chantés', one for voice and piano-forte, the other for voice and orchestra; settings for voice and piano-forte of five of Baudelaire's 'Fleurs du mal' and for voice and orchestra of three 'Impressions fausses' by Verlaine, given at a Colonne concert in Paris (1895); a 'Sérénade à Watteau' for voice and orchestra, performed in the Luxembourg gardens on 9 Nov. 1896; a 'Fête du couronnement de la Muse', performed at Lille and in Paris (1898) and eventually incorporated in 'Louise'; a second orchestral suite (1894) of which the manuscript was burnt in a fire; and the two operas 'Louise' and 'Julien'.

Charpentier's most important work is the *roman musical* of 'Louise', in 4 acts, produced at the Opéra-Comique in Paris on 2 Feb. 1900,

and since then on all the most important operatic stages. The independence and novelty of this work seemed at the time to make it one of the most noteworthy of modern French operas; but it must be admitted that its lasting popularity with the least discerning sections of operatic audiences is due to its sensational realism and its sentimental tributes to a holiday-makers' Paris, and that those who admire these things are attracted rather than repelled by a certain musical crudity which, one must recognize, suits the subject. The work was first given in London, at Covent Garden, on 18 June 1909.

According to Virgil Thomson<sup>1</sup>, Max Jacob said that

the plot was conceived and much of the detail written down in one evening at a dinner of Charpentier and some literary friends in a Paris restaurant, Jacob himself being present and participating in the communal creation. Also that the poet Saint-Pol-Roux was the one writer there who remembered he put his name to the work. He may also have done more to it at a later time, because Jacob assured me that Saint-Pol-Roux received performing-right fees regularly for 'Louise' from the Society of Dramatic Authors and Composers.

In 'Julien', its successor, which was produced at the Opéra-Comique on 3 June 1913, the composer used up the larger portion of his early work 'La Vie du poète', enlarging it into an opera in 4 acts and a prologue. This proved as great a failure, in spite of its short-lived *succès d'estime*, as 'Louise' had been a success. The libretto, like the earlier one the composer's own, was vaguely symbolic of a romantic type of socialism and lacked the humanity that gave life to 'Louise', the orchestration was often even more crude and monotonous than that of the first work, and much of the thematic material was merely repeated from 'Louise' as well as 'La Vie du poète', though, since the second opera was a kind of sequel to the first, there was a good deal of justification for this. Indeed, by far the most interesting sections of the opera were those in which these two works were drawn upon; and this dependence for inspiration on previous compositions, combined with the lapse of thirteen years between the two operas, led critics to draw an obvious inference which later received confirmation in the fact that, with the exception of the recasting in ballet form of the early suite 'Impressions d'Italie' in 1913 (the year after he was elected to be Massenet's successor in the Académie des Beaux Arts), no music of any importance came from his pen, though an operatic *triptych* ('L'Amour au faubourg', 'Comédiantes', 'Tragédiantes') and other works were for long announced as "in preparation".

It remains to mention that Charpentier published critical articles on Bizet and Bruneau, and that he founded in 1902 the

Conservatoire populaire de Mimi Pinson, which started in an attempt to provide Parisian workgirls with a popular theatre in which they should act as well as be the audience, and ended by becoming an institution where they could obtain free lessons in music and classical dancing.

Charpentier was one of the last of the Parisian artists who felt it incumbent on them to cultivate a picturesque appearance to set them visibly apart from the rest of mankind. He wore hats and ties that made him look like one of Murger's — or Puccini's — bohemians. This is now a dead fashion, even in Paris, and 'Louise', though still showing signs of life, has the same superficial and spurious picturesqueness depending for its appreciation on a mere passing curiosity.

**CHARPENTIER, Jacques Marie (Beauvarlet)** (b. Lyons, 3 July 1766; d. Paris, 7 Sept. 1834).

French organist and composer. He was a pupil of his father, Jean Jacques Charpentier, and was taken to Paris at the age of six. He became organist of the Paris churches of Saint-Germain des Prés (1815–33) and Saint-Eustache (1831–34). His compositions include masses, hymns and a Magnificat with organ, a 'Journal d'orgue' for his own instrument and pieces and arrangements for piano-forte.

M. L. P.

**CHARPENTIER, Jean Jacques (Beauvarlet)** (b. Abbeville, 28 June 1734; d. Paris, 6 May 1794).

French organist and composer, father of the preceding. He was organist of St. Paul's Church at Lyons. In 1772 he removed to Paris, where he was appointed organist of the abbey of Saint-Victor and the church of Saint-Paul, where he succeeded Daquin. One of the four organists at Notre-Dame later on (1783), he was considered with his colleague of Saint-Sulpice, Nicolas Séjan, one of the cleverest virtuosi on the organ. He composed 'Douze Noels variés pour l'orgue', 2 concertos, music for the harpsichord, collections of sonatas with violin accompaniment, etc.

M. L. P.

**CHARPENTIER, Marc-Antoine** (b. Paris, 1634; d. Paris, 24 Feb. 1704).

French composer. He went to Italy while still young and studied music under Carissimi in Rome for some years. On his return to France he was invited by Molière, who had broken off his partnership with Lully, to co-operate with him in the performances of the Théâtre-Français, the result of this collaboration being 'Le Mariage forcé' (1672) and 'Le Malade imaginaire' (1673). Charpentier's connection with the Théâtre-Français

<sup>1</sup> 'The Musical Scene' (New York, 1945).

continued after Molière's death (1673) until 1685, the year of 'Vénus et Adonis'.

It was only after 1679 that Charpentier was charged (officially or otherwise) with the composition of the music performed at the dauphin's private mass. In 1683 he competed for one of the four posts of *sous-maître de chapelle*, Lalande obtaining one of them; but illness forced him to withdraw his candidature. From 1680 to 1688 he acted as composer and musical director to the Princesse de Guise. About 1684 he was appointed *maître de musique* to the Jesuits of the Maison-professe in Paris, composing spiritual *tragédies* which were given at the Collège de Clermont. Engaged by the Duke of Orleans, the future regent of France, as his master of composition, Charpentier wrote for him a little treatise, 'Règles de composition et abrégé des règles pour l'accompagnement'. He entered the Sainte-Chapelle, Paris, on 28 June 1698, as *maître de musique*, replacing François Chaperon.

Charpentier's 'Médée', *tragédie lyrique* in 5 acts with a prologue, the words by Thomas Corneille, was performed in Paris on 4 Dec. 1693 by the members of the Académie Royale de Musique (Opéra). The principal parts were taken by Mlle Le Rochois (Medea), Mlle Moreau (Creusa), Dun (Creon) and Du Mesny (Jason). Although it had a great success, it was never repeated. According to Brossard it was considered as the most learned and choice dramatic music printed since Lully's death. Its failure to hold the stage is attributed to the poverty of the poem. A folio edition was published: 'Médée, tragédie mise en musique par Monsieur Charpentier. À Paris, par Christophe Ballard, 1694' (in the B.M., Bibl. Nat. and Conservatoire Lib., Paris); and there was another edition in 1704 (in the Berlin State Lib.).

Although working in Paris at a time when all operatic composers were more or less overshadowed by Lully's influence and capacity, Charpentier was generally recognized for his musical ability and considered a more learned and cultivated musician than Lully. 'Médée' has genuine touches of dramatic feeling and makes an effort to break new ground. He obviously found it difficult to follow a definite dramatic development; irrelevant matter is frequently introduced into 'Médée', the opening prologue, quite unconnected with the Greek tragedy following, consists of dances, songs in praise of Louis XIV, etc., while later on an Italian love-song is suddenly dropped into the middle of the dramatic action. The structure is much the same as in Lully's operas, but the music, on the whole, of finer quality, the declamatory passages being better modelled and more forceful without losing their oratorio character. That he was a great admirer of Italian composers, especially of Carissimi, ex-

plains the good style and melodiousness of his vocal writing. In the treatment of the instruments there is a great deal more careful work, both in accompaniments and independent movements, than in Lully's operas.<sup>1</sup>

Charpentier is said to have composed 17 operas. Of 'Circé' (1675), for which he composed the *intermèdes*, more than 30 performances were given. A large number of his manuscript compositions are in the Conservatoire, National and Sainte-Geneviève Libraries of Paris, and at Versailles and Avignon. The only printed works of his were: 'Airs de la comédie de Circé' (Christophe Ballard, 1676), 'Médée' (1694), 'Motets mêlés de symphonie [*sic*]' (Paris, Jacques Édouard, 1709). At different dates appeared 'Airs sérieux et à boire', for voice or voices, with or without continuo in the volumes of the 'Mercure galant', 'Nouveau Mercure galant', and in the collections of airs printed by Ballard.

As composer of sacred music Charpentier holds, together with Lalande, a prominent position in France at the end of the 17th century. His numerous compositions in that style are 12 masses, more than 30 psalms, motets for most of the feasts in the year, several settings of Te Deum, Magnificat, etc. He wrote also three-part pieces to be sung in women's convents and elaborate Psalms with solos, chorus and instrumental parts for the dauphin's chapel. His oratorios, religious dialogues and church cantatas are the most original and striking categories of his output. In this field he can be recognized clearly as the disciple of Carissimi and as representing the contemporary French equivalent of the dramatic style practised by Schutz and Purcell. The 'Histoires sacrées', based on episodes from the Bible, give full scope to his talent for characterization and show the range and depth of his emotional power.

#### CATALOGUE OF WORKS<sup>2</sup>

##### DRAMATIC WORKS

1. Molière's 'La Mariage forcé, comédie-ballet en 3 actes', set to music by Lully, was revived (with

<sup>1</sup> Parry, O.H.M., III.

<sup>2</sup> See Brenet in 'Tribune de Saint-Gervais' and Crussard (Bibl. above) and J. Écorcheville, 'Catalogue du fonds de musique ancienne de la Bibliothèque Nationale' (Paris, 1910). The works are contained in 28 vols. of MS 'Mélanges' and a few additional portfolios in the Bibl. Nat.

- 'La Comtesse d'Escarbagnas') at the Palais-Royal, Paris, 8 July 1672, with music by Charpentier.
- 2 'Le Malade imaginaire, comédie-ballet en 3 actes' by Molière, produced at the Palais-Royal, Paris, 10 Feb. 1673.
  - 3 'Circé, tragédie, précédée d'un prologue, par M. Corneille de l'Isle', the music of the intermèdes by Charpentier, produced at the Théâtre de Guénégaud, Paris, 17 Mar. 1675.
  - 4 'L'Inconnu, comédie en 5 actes de M. Corneille de l'Isle et de M. Vise, mêlées d'ornemens de musique de Charpentier' Produced at the Théâtre de Guénégaud, Paris, 17 Nov. 1675.
  - 5 'Les Amours d'Acis et de Galatée', opera, 'représentée chez M. de Rians, procureur du roi, au Châtelet', Paris, Jan. 1678.
  - 6 'Les Fous divertissans, comédie en 3 actes, avec trois divertissements, par M. Raymond Poisson' Produced, Paris, Théâtre de Guénégaud, 14 Nov. 1680.
  - 7 'La Pierre philosophale', comedy in 3 acts by Corneille and Visé; airs de danse and divertissements by Charpentier. Performed Paris, Théâtre de Guénégaud, 23 and 25 Feb. 1681.
  - 8 'Endimion, tragédie' Produced Paris, 22 July 1681.
  - 9 'Psyché', set to music by Lully, revived with music by Charpentier, 1684.
  - 10 'Les Amours de Vénus et d'Adonis', tragedy by Vise, revived Paris, 3 Sept. 1685, with the addition of divertissements and dances by Charpentier.
  - 11 'Médée, tragédie lyrique', prologue and 5 acts, by Thomas Corneille, produced Paris, 4 Dec. 1693.
  - 12 'La Sérénade', comedy in 1 act by Regnard, performed Paris, 8 July 1694.
  - 13 'Philomèle, un opéra', performed three times at the Palais-Royal, Paris.
  - 14 Pastorales
    - 'Le Sort d'Andromède' (c. 1670).
    - 'Les Arts florissans' (c. 1673).
    - 'Le Retour du printemps, idylle sur la convalescence du roi' (c. 1680).
    - 'La Noce de village' (1692).
    - 'Le Jugement de Pan' (c. 1690).
    - 'La Fête de Ruel' (c. 1690).
    - 'Actéon' (c. 1690).
    - 'Les Plaisirs de Versailles' (c. 1693).
    - 'La Couronne de fleurs'.
    - 'Flore'.
    - 'Dialogue de Vénus et Médor'.
  - 15 Prologues for Pierre Corneille's 'Polyeucte' and 'Andromède'.

## SACRED WORKS

1. Masses for voices & insts including Requiem for 4 voices, a Mass for 4 choirs, a Midnight Mass (for Christmas) for 4 voices, flutes & vns, &c.
2. Psalms (more than 30) for 3-6 voices, Canticles, Lamentations of Jeremiah for 1, 2 & 4 voices, &c.
3. Motets, Hymns, Proses, Anthems. Elevations for voices & orch. or voices & cont.\*
4. Leçons de Ténébres' and 'Litanies de la Vierge'.
5. Histoires sacrées
  - 'Caecilia virgo et martyr'
  - 'Caedes sanctorum Innocentium.'
  - 'Historia Esther.'
  - 'Judicium Salomonis.'
  - 'Filius prodigius'
  - 'Dialogus inter Christum et peccatoris'
  - 'Sacrificium Abram.'
  - 'Mort Saulis et Jonathae.'
  - 'Le Reniement de Saint-Pierre', &c.

\* In 'Nouvelles Parodies bachiques', Vol. III (Paris, 1702) are the following pieces from 'Circé': Prologue, Minuet I, air 'Tout rit dans ce bocage', airs 'Les plaisirs suivent les peines', air 'Je me suis félicité', Loure I, Loure II, 'Prélude des vents', 'Menuet des Néréides'.

\* In 'La Clef des chansonniers', II, 226 (1717) is 'L'Air de la sarabande de l'Inconnu'.

\* Six performances were given.

\* It was said that the Duke of Orleans, who had some share in the composition of this opera, would not allow it to be published.

\* An 'Air de Flore' is in 'La Clef des chansonniers', I, 188 (1717).

\* Some motets printed in 'Motets mêlés de symphonie' (1709). \* French title but Latin words.

6. Plainsong.
7. Tragédies spirituelles
  - 'Clissonus' (1685).
  - 'Celse martyr' (1687).
  - 'David et Jonathas'.
  - 'Saul' (1688).

## SECULAR VOCAL WORKS

8. 'Airs sérieux et à boire', published at different dates in the collections of the 'Mercure galant' (1699) and 'Nouveau Mercure galant' (1678); also in 'Airs à boire sur des sujets plaisants à 2, 3 et 4 parties' and 'Recueil d'airs sérieux et à boire de différents auteurs pour l'année 1695' (both printed by Ballard).

## INSTRUMENTAL WORKS

- 7 (cont'd.). 'Ballets des saisons', 'Orphée', &c.\*
9. 'Caprice' for 3 vns, March, Minuets, Preludes, 'Concert' for 4 viols, Overtures, 'Noëls', &c.

## MODERN REPRINTS

- 'Le Malade imaginaire', ed. by Saint-Saëns (Durand, Paris).
- 'La Couronne de fleurs', ed. by H. Busser (Durand, Paris).
- 'Concert spirituel', Nos. 3 & 5 ed. by Charles Bordes. Biographical notice by Michel Brenet to Vol. III ('Histoires sacrées').
- 'Musique d'église des XVII<sup>e</sup> et XVIII<sup>e</sup> siècles' (Nos. 1 & 11), ed. by H. Expert (Senart, Paris).
- Motets 'Dilecto mi' and 'O amor, O bonitas', ed. by Charles Bordes (Schola Cantorum, Paris).
- Midnight Mass, ed. by H. Latocart (Lemoine, Paris).
- See also Assoucy (nvalry). Philip, Duke of Orleans (collab. in 'Philomèle').

## CHARŚNICKI, Philip (or Philemon)

(b. ?; d. ?).

Polish 17th-18th-century composer. He was a monk in the Monastery of the Premonstratensians at Krzyzowice about 1700. Two of his works remain: 'Aeterna Christi munera' for 2 S.A.T.B. and 2 violins, viols and continuo, and 'Rex gloriose martyrum' for 2 S.A.T.B. and 2 violins, 2 trombones, viols and continuo. C. R. H.

## CHARTON-DEMEUR, Anne (Arsène)

(b. Saujon, Charente Inf., 5 Mar. 1824<sup>9</sup>; d. Paris, 30 Nov. 1892).

French soprano singer. She was taught music by Bizot at Bordeaux, and in 1842 made her début there as Lucia in Donizetti's opera as Mlle Charton. She sang next at Toulouse, and in 1846 in Brussels. On 18 July in the same year she made a successful début in London, at Drury Lane Theatre, as Madeleine in Adam's 'Postillon de Longjumeau', and later she sang with great success as Angèle in Auber's 'Domino noir' with Couderc, the original Horace. On 4 Sept. 1847 she married the flautist Demeur.<sup>10</sup> In 1849-50 she was first female singer of Mitchell's French Company at St. James's Theatre in London, and became highly popular in various light parts, many of which were then new to England. She sang at the

\* Performed at the Jesuit College (Collège de Clermont).

<sup>9</sup> Pougin. Fétis gives 27 Feb. 1824.

<sup>10</sup> Demeur, Jules Antoine (b. Hodumont-lez-Verriers, 23 Sept. 1814), studied the flute at the Brussels Conservatoire from Lahore, subsequently learnt the Boehm flute from Dorus in Paris; in 1842-47 was first flautist at the Brussels Opera, and as such played at Drury Lane Theatre in London in 1846; he relinquished that post to accompany his wife on all her engagements.

Philharmonic concert of 18 Mar. 1850; in 1852 she appeared in Italian at Her Majesty's Theatre on 27 July as Amina in Bellini's 'Sonnambula', and on 5 Aug. in the Duke of Saxe-Coburg-Gotha's 'Casilda'.

Charton-Demeur, having sung with little success in 1849 and 1853 at the Paris Opéra-Comique, adopted the Italian stage and won both fame and fortune in St. Petersburg, Vienna, North and South America, and in Paris at the Théâtre-Italien as Desdemona in Rossini's 'Otello' in 1862. On 9 Aug. of that year she played the heroine on the production of Berlioz's 'Béatrice et Bénédicte' so much to the composer's satisfaction that he requested her to play Dido in 'Les Troyens à Carthage', produced at the Théâtre-Lyrique on 4 Nov. 1863. Berlioz has commemorated in his Memoirs her great beauty, her passionate acting and singing as Dido, although she had not sufficient voice wholly to realize his ideal heroine. On the conclusion of the run of the opera she sang in Madrid, but afterwards returned to the Lyrique.

For many years Charton-Demeur lived in retirement, but she occasionally appeared at concerts, such as the Berlioz Festival at the Paris Opéra, with Nilsson in the *duo-nocturne* from 'Béatrice et Bénédicte', 22 Mar. 1870. Finally she sang at the Padeloup concerts in 1879 on the production of 'La Prise de Troie' by the same composer.

A. G.

**CHARTREUSE DE PARME, LA** (Opera). See SAUGUET.

**CHASE, Gilbert (Culmell)** (b. Havana, 4 Sept. 1906).

American writer and lecturer on music. He studied at Columbia University and at the University of North Carolina, obtaining the B.A. degree. He also studied during travels in Spain, France and Denmark. From 1929 to 1935 he was music critic for the continental 'Daily Mail' in Paris and in 1936-39 was associate editor of the 'International Cyclopaedia of Music and Musicians'. Then for a year he acted as an editor for Schirmer's in New York and from 1940 to 1943 was the Latin-American specialist at the Library of Congress. For the next four years he worked on the staff of N.B.C. University of the Air before joining the R.C.A. Victor Division of the Radio Corporation of America, first as supervisor and later as educational director. He was a specialist consultant for Music Loan Libraries in Latin America for the Library of Congress from 1944 to 1946 and in 1945 toured Latin America to inspect the American Music Loan Libraries. He is now a member of the Foreign Service of the U.S.A. and Cultural Attaché at the American Embassy in Lima.

Chase has lectured in many universities,

including those of Delaware, California-Northern and Southern California, Tennessee, Harvard, Stanford and Boston. In 1946-48 he was a lecturer on American music at Columbia University. He has also given lectures in South America and Cuba, in Lima, Santiago de Chile, Buenos Aires, Rio de Janeiro and other towns. He was a member of the Advisory Committee for Music, Department of State, from 1943 to 1946 and in 1943-45 acted as Music Consultant to the Pan-American Union. He is a member of various musical organizations, including the American Musicological Association, the Music Library Association and the Instituto Español de Musicología. As a writer he has contributed to a great number of journals on music and other periodicals, both in the Americas and other countries, besides writing articles for dictionaries and encyclopaedias. His books include 'The Music of Spain', published in 1941, 'Bibliography of Latin-American Folk Music' (1942), 'Music of the New World', 5 vols. (1942-44), 'Guide to Latin-American Music' (1945), 'The Story of Music', 2 vols. (1945-46), 'Music in Radio Broadcasting' (1946) and 'America's Music' (1951).

M. K. W.

**CHASINS, Abram** (b. New York, 17 Aug. 1903).

American pianist and composer. He is perhaps most widely known for his work in connection with radio, although he has toured both Europe and the U.S.A. as pianist, appearing with various orchestras as soloist both in his own and other works. From 1926 to 1935 he was member of the pianoforte faculty of the Curtis Institute of Philadelphia, and in 1940 he was a member of the Berkshire Music Centre at Tanglewood.

In connection with his radio work, he was the initiator of the series Master Class of the Air, a weekly network series of talking and playing broadcasts over C.B.S. and N.B.C. During the second world war he received four Government citations for voluntary work in music and radio.

His Concerto in F minor has been played in Philadelphia, New York, Vienna, Munich and Havana. 'The Parade' has been heard in New York, Boston, Philadelphia, Los Angeles, Oslo, etc. The second Concerto was produced by the Philadelphia Orchestra, with the composer as soloist.

Chasins has written much for one and two pianofortes, and his works are popular and widely known. Those on a larger scale include:

Three Chinese Pieces for orch. (1929)

1. A Shanghai Tragedy.
2. Flirtation in a Chinese Garden
3. Rush Hour in Hong Kong.

Parade for orch. (1930).

Pf. Concerto No. 1 (1929).

Pl. Concerto No 2 (1932)

P. G. H.

**CHASTELLAIN<sup>1</sup>, Charles** (b. ? , c. 1490; d. Soignies, 1578).

Netherlands composer. He is first heard of as canon and chapel master at Soignies in 1551 and in 1564 received, through the intermediary of Margherita of Parma, a proposal to undertake the direction of Philip II's chapel in Madrid; but he declined the offer on account of his great age and ill-health. He was succeeded in his post of chapel master by Jean Bonmarché.

Motets by Chastellain appeared in Phalèse's collections in 1553, 1554, 1556, Susato's in 1555 and Waelrant's in 1556 and 1558. Nine motets and chansons are cited by Eitner as being in Proske's MSS 814 and 888.

E. B.

**Chateaubriand, François René, Vicomte.** See Franck (C, song). Indy ('Abencérages', opera project). Leneveu ('Velléda', opera). Luszt (No. 18, chorus). Malbrook (theory of provenance). Pedrell ('Ultimo Abencerraje', opera). Roussel ('Bardit des Francs', choral work). Setaccioli ('Ultimo degli Abencerragi', opera).

**CHATTERTON (Opera).** See LEONCAVALLO.

**CHATTERTON, John (Balsir)** (b. Portsmouth, 1805; d. London, 9 Apr. 1871).

English harpist. He studied in London under Bochsa and Labarre, and first appeared at a concert at Aspull's in 1824. He succeeded Bochsa as professor of the harp at the R.A.M. in 1827 and in 1842 was appointed harpist to Queen Victoria. He wrote much for his instrument, chiefly operatic selections.

M. C. C.

**Chatterton, Thomas.** See Cooke (B., ode to).

**Chaucer, Geoffrey.** See Accompaniment, p. 26. Anthem (mention of) Apivor (songs). Bax ('Roundel', song). De Koven ('Canterbury Pilgrims', opera). Duni ('Fée Urgèle', opera). **CHAUSSON, Ernest (Amédée)** (b. Paris, 21 Jan. 1855; d. Limay nr. Mantes-la-Jolie, Seine-et-Oise, 10 June 1899).

French composer. He studied law at first and did not begin to occupy himself seriously with music until he had come of age. He entered the Paris Conservatoire in 1880 and even then had only a brief course in Massenet's composition class. He left the same year and became a private pupil of César Franck, with whom he remained until 1883. Although devoted exclusively to composition after that,

being possessed of ample means, he worked slowly and with extreme care, producing comparatively little during the sixteen years that remained of his life, which was cut short by a bicycle accident. He acted for ten years as secretary to the Société Nationale de Musique, which began to make his name known, as did to a smaller extent the Lamoureux and Colonne concerts. But his opera, 'Le Roi Arthus', for which he wrote his own libretto, was not produced until 1903, more than four years after his death, and even then not in France, but in Belgium; and it was that calamity, perhaps, which prevented Felix Mottl from realizing his plan of bringing the work out at Karlsruhe in 1900.<sup>2</sup> Chausson was engaged on the scherzo of a string Quartet on the day his fatal accident took place.

Of his major instrumental works the 'Poème' for violin and orchestra was heard for the first time on 4 Apr. 1897 and the Symphony on 18 Apr. 1898, both in Paris. But Chausson lacked self-confidence and was never anxious to urge the performance of his works, another reason being a fear of an unfair advantage his fortune might give him over his less affluent colleagues. He always remained, in fact, both unworldly and unprofessional to some extent.

Chausson's music is a typical product of the Franck school, though here and there the influence of Wagner may be found in it, as in the Symphony, for instance. Musical construction on a large scale was not his strong point, and the qualities he inherited from Franck were of a different order. They were, however, modified by characteristics of his own, due to his delicate and sensitive nature, which was prone to melancholy. That, as it were, envelops his music with a veil of sadness and does much to justify a certain formal vagueness and fluidity. It was especially in instrumental works and in songs that his talent was most congenially employed, though everything he wrote reveals an individuality becoming ever stronger as his art matured. The songs contain exquisite things; though not so amply constructed as Duparc's, to which they bear a certain family likeness, they follow that master's tradition.

## CATALOGUE OF WORKS

### OPERAS

Op.

4. 'Les Caprices de Marianne' (setting of Alfred de Musset's play), c. 1880 (unpublished).

<sup>2</sup> Riemann, Séré and others wrongly state that this production actually took place.

<sup>1</sup> Also Castellain, Châtelain or Chasteleyn.

## Op.

7. 'Hélène', lyric drama in 2 acts (libretto by Charles Leconte de Lisle), 1884-85 (unpublished, except a women's chorus).  
 23. 'Le Roi Arthus', lyric drama in 3 acts (lib. by composer), prod. Brussels, Théâtre de la Monnaie, 30 Nov. 1903.

## INCIDENTAL MUSIC

18. Shakespeare's 'The Tempest', trans. by Maurice Bouchor, prod. Paris, Petit Théâtre des Marionnettes, Dec. 1888.  
 22. 'La Légende de Sainte Cécile', verse-drama in 3 acts by Bouchor, prod. Paris, Petit Théâtre des Marionnettes, 25 Jan. 1892.

## CHURCH MUSIC

6. 2 Motets (1883)  
 1. Deus Abraham.  
 2. Ave, verum corpus  
 12. 3 Motets (1886)  
 1. Ave Maria.  
 2. Tota pulchra es.  
 3. Ave maris stella.  
 16. 3 Motets  
 1. Lauda Sion (1888).  
 2. Benedictus (1890).  
 3. Pater noster (1891).  
 31. 'Vêpres du Commun des Vierges' (1897).

## CHORAL WORKS

- 'Jeanne d'Arc', lyric scene for solo voices and women's chorus (anon.) (c. 1880).<sup>1</sup>  
 9. 'Hymne védique' (Leconte de Lisle) for chorus & orch (1886).  
 15. 'Chant nuptial' (Leconte de Lisle) for women's voices & pf. (1887).  
 28. 'Chant funéraire' (Shakespeare) for women's voices & pf. (1897).<sup>2</sup>  
 29. 'Ballata' (Dante) for unaccomp chorus (1897).

## ORCHESTRAL WORKS

3. 'Viviane', symphonic poem on an Arthurian legend (1882).  
 10. 'Solitude dans les bois' (1886)  
 20. Symphony, B♭ ma. (c. 1890).  
 32. 'Soir de fête' (1898).

## VIOLIN AND ORCHESTRA

25. 'Poème' (1896).

## VOICE AND ORCHESTRA

19. 'Poème de l'amour et de la mer' (Maurice Bouchor) (1882-92).  
 17. 'Chanson perpétuelle' (Jean Cros) (1898).

## CHAMBER MUSIC

3. Trio for vn., cello & pf. (c. 1882)  
 21. 'Concert' for vn., pf. & strg. 4tet (1890-91).  
 30. Quartet for vn., viola, cello & pf. (posth., publ. 1917).  
 35. String Quartet (unfinished, 1899).

## PIANOFORTE MUSIC

1. 'Cinq Fantaisies' (c. 1880).  
 26. 'Quelques Danses' (1896)  
 1. Dédicace.  
 2. Sarabande.  
 3. Pavane.  
 4. Forlane.  
 38. 'Paysage' (1895).

## SONGS

2. 7 Songs (1882)  
 1. Nanny (Leconte de Lisle).  
 2. Le Charme (Armand Silvestre).  
 3. Les Papillons (Théophile Gautier).  
 4. La Dernière Feuille (Gautier).  
 5. Sérénade italienne (Paul Bourget).  
 6. Hébé (Ackermann).  
 7. Le Colibri (Leconte de Lisle).  
 8. 2 Songs (Maurice Bouchor)  
 1. Nocturne (1886).

<sup>1</sup> Probably a scene from an unfinished opera.  
<sup>2</sup> 'Chansons de Shakespeare' (see Songs).

## Op.

2. Amour d'antan (1882)  
 3. Printemps triste (1883)  
 4. Nos Souvenirs (1888).  
 13. 4 Songs  
 1. Apaisement (Paul Verlaine) (1885).  
 2. Sérénade (Jean Lahor) (1887).  
 3. L'Aveu (Villiers de l'Isle Adam) (1887).  
 4. La Cigale (Leconte de Lisle) (1887).  
 17. 'Chansons de Miarka' (Jean Richepin) (1888)  
 1. Les Morts.  
 2. La Pluie.  
 24. 'Serres chaudes' (Maurice Maeterlinck)  
 1. Serre chaude (1896).  
 2. Serre d'ennui (1893).  
 3. Lassitude (1893).  
 4. Fauves las (1896).  
 5. Oraison (1896).  
 27. 'Trois Lieder' (Camille Maclair) (1896)  
 1. Les Heures.  
 2. Ballade.  
 3. Les Couronnes.  
 28. 'Chansons de Shakespeare' (trans. by Bouchor) \*  
 1. Chanson de clown (1890).  
 2. Chanson d'amour (1891).  
 33. 'Pour un arbre de Noël' (?) (c. 1898, unpublished)  
 34. 'Deux Poèmes' (Verlaine) (1898)  
 1. La Chanson bien douce.  
 2. Le Chevalier Malheur.  
 36. 2 Songs (1898)  
 1. Cantique à l'épouse (Albert Jhouney).  
 2. Dans la forêt du charme et de l'enchantement (Jean Moréas).

## VOCAL DUET

11. 2 Duets (1883)  
 1. La Nuit (Théodore de Banville).  
 2. Le Réveil (Honoré de Balzac).

**CHAUVET, Charles Alexis** (b. Marines, Seine-et-Oise, 7 June 1837; d. Argentan, Orne, 28 Jan. 1871).

French organist. A pupil of the Paris Conservatoire from 1850, in Benoist's organ class and that of Ambroise Thomas for composition, he won the first organ prize in 1860. In 1869, having filled various posts as organist, he was appointed to the new organ of the Trinité in Paris. He left many works for organ and for pianoforte, which show much refinement of style and elegiac charm. G. F.

**CHÁVEZ, Carlos** (b. Mexico City, 13 June 1899).

Mexican composer. He was the seventh child of a Mexican father and Indian mother, he studied with his brother and later with Manuel Ponce. His progress as a composer was rapid, and at the age of fifteen he made arrangements of Mexican songs and composed pianoforte pieces. He wrote a Symphony at the age of twenty, academic in form and content, but showing considerable technique. Having passed through the initial period of romantic and impressionistic writing, he turned his attention to native music. The first important work in the Mexican style was 'El fuego nuevo', written in 1921 and scored for an orchestra that included indigenous percussion instruments. Another work of the same character was the ballet 'Los cuatro soles', symbolic of the four elements, earth, air, fire and water.

In 1922 Chávez went to Europe, and later

\* For No. 3 see Choral Works.

he spent some time in New York. He became deeply interested in the problems of constructivist music reflecting the machine age. To this period belongs his ballet 'HP' (Horsepower). In this work Chávez introduced Mexican elements to symbolize the economic relationship between the industrial U.S.A. and the productive tropical lands. The last scene, a dance of men and machines, pictures the rebellion of the workers and their capture of industry and the machines. The ballet was first produced by Stokowski at Philadelphia on 31 Mar. 1932. At approximately the same time he composed several works in an abstract style: 'Polígonos' for pianoforte, 'Exágonos' ('Hexagons') for voice and pianoforte, 'Energía' for nine instruments and a piece for violin and pianoforte, 'Espiral' ('Spiral'). In these compositions he pursued the ideal of terse musical statement in a linear counterpoint of considerable stridency.

On his return to Mexico in 1928 Chávez was appointed director of the National Conservatory and conductor of the Orquesta Sinfónica de México, a post which he continued to hold, with some interruptions, until 1952. He also founded a series of concerts for workers, for which he composed a 'Sinfonía proletaria'; he conducted it in Mexico City on 29 Sept. 1934. Another work of social consciousness belonging to this period was his 'Republican Overture', which he performed in Mexico on 18 Oct. 1935.

In his subsequent works Chávez pursued the lines of austere neo-classicism and an equally austere native style. In 1932 he wrote incidental music for a production of 'Antigone', the score of which is marked by an extreme economy of musical materials. As with all of his stage works, he extracted a symphonic suite from this score, 'Sinfonía de Antígona', which he conducted in Mexico City on 15 Dec. 1933. He then turned to the composition of a purely native work of primitivistic colour, 'Sinfonía India', making use of Mexican instruments. An even more emphatic expression of the Mexican spirit is represented by his score 'Xochipili-Macuilxochitl' (the Aztec name of the god of music), written for native instruments. He conducted this work at a special concert of Mexican music in New York on 16 May 1940. His later work for instruments of percussion, a 'Toccata' (1942), represents an experiment in complex rhythms and sonorities.

Between 1938 and 1940 Chávez wrote a pianoforte Concerto in three movements, in which the instrument is treated in a percussive manner, which, however, does not exclude lyrical expressive power. Two separate sets of thematic materials are given to the pianoforte and the orchestra; they are combined in free counterpoint in the concluding movement.

The same percussive style marks his ten Preludes for pianoforte, written in 1937. In his desire to achieve technical economy he employs in most of these Preludes only the white keys of the keyboard.

Chávez has written three string Quartets, a Sonatina for violin and pianoforte and a piece characteristically entitled 'Soli' for oboe, clarinet, trumpet and bassoon. In his chamber music he treats every instrument as a soloist, combining the individual parts contrapuntally, without striving for sonorous luxuriance. The spirit of musical austerity is maintained in his ballet 'Hija de Cólquide' (1944) conceived as a series of accompanied solos and reflecting the simplicity of primitive music. This ballet was produced by Martha Graham in New York on 23 Jan. 1946, under the title 'Dark Meadow'.

In 1950 Chávez completed his violin Concerto in eight linked movements. He conducted its first performance in Mexico City on 29 Feb. 1952. On 11 Feb. 1953 he conducted the first performance of his fourth Symphony with the Louisville Orchestra, which had commissioned it. Here he returns to a classical style, definitely tonal and with the formal elements clearly delineated.

Chávez exercises a great influence on the development of modern music in Mexico. His principle of tonal economy and his enlightened primitivism are in keeping with the modern trend of musical composition in other parts of the world as well. Although the titles of his works are often programmatic, he maintains that the essence of his music does not depend on extraneous considerations. In his scores of Mexican inspiration he rarely, if ever, uses authentic folk tunes, but rather interprets the native elements in a manner suitable to the artistic expression of his time. Chávez has written a book, 'Toward a New Music' (New York, 1937), and has contributed numerous articles to Mexican magazines. A catalogue of his works was published by the Pan-American Union in Washington (1944).

## CATALOGUE OF WORKS

### BALLETS

'El fuego nuevo' (1921).

'Los cuatro soles' (1926).

'HP' (1927).

'Hija de Cólquide' ('Daughter of Colchis') (1944).

### INCIDENTAL MUSIC

'Antigone', Sophocles (1932).

### CHORAL WORKS

'Tierra mojada' for chorus, oboe & English horn (1932).

'El sol' for chorus & orch. (1934).

- 'Llamadas', proletarian symphony for chorus & orch. (1934).  
 'La paloma azul' for chorus & orch. (1940).  
 'Árbol que te sequeste' for unaccomp chorus (1942).  
 'Canto a la tierra' for chorus & pf. (1946).

## ORCHESTRAL WORKS

- Symphony (1920).  
 'Sinfonia de Antígona' (1933) (see also Incidental Music).  
 'Cantos de México' for Mexican orch. (1933).  
 'Obertura republicana' (1935).  
 'Sinfonia India' (1936).  
 'Xochipili-Macuilxochitl' for Mexican orch. (1940).  
 'Toccata' for percussion insts. (1942).  
 Symphony No. 3 (1951).  
 Symphony No. 4 (1952).

## SOLO INSTRUMENTS AND ORCHESTRA

- Concerto for 4 horns (1938).  
 Pf. Concerto (1940).  
 Vn. Concerto (1950).

## VOICE AND ORCHESTRA

- 4 Nocturnes (1939).

## CHAMBER MUSIC

- String Quartet No. 1 (1921).  
 'Energía' for 9 insts. (1923).  
 Sonata for horns (1930).  
 String Quartet No. 2 (1932).  
 'Sol' for oboe, clar., trumpet & bassoon (1933).  
 String Quartet No. 3 (1944).

## VIOLIN AND PIANOFORTE

- Sonatina (1924).  
 'Espiral' (1934).

## VIOLONCELLO AND PIANOFORTE

- Sonatina (1924).

## PIANOFORTE MUSIC

- Sonata No. 1 (1920).  
 'Páginas sencillas' (1921).  
 '4 Estudios' (1921).  
 '4 Valses' (1921).  
 'Cantos mexicanos' (1921).  
 Sonata No. 2 (1923).  
 'Polígonos' (1923).  
 Sonatina (1924).  
 '36' (1925).  
 'Solo, Blues and Fox' (1928).  
 '10 Preludios' (1937).  
 'Fuga' (1948).  
 '3 Etudes' (1950).

## SONGS

- '4 Poemas' (1921).  
 '3 Exágonos' (1923).  
 'Otros 3 exágonos' (1924).  
 'Todo' (1932).  
 '3 Poemas' (1937).  
 'La casada infiel' (1941).

**CHECK** (Fr. *attrape* or *chasse*; Ger. *Fanger*, Ital. *ribatto* or *paramartello*). An important member in the action of a grand pianoforte, consisting of an upright of thick wire, bearing an almost spade-shaped head of leather or some light wood covered with leather. It is fixed in the back part of the key behind the hammer, and its function is to catch the hammer when it falls a certain distance away from the string, and hold it until it is released by the finger of the player allowing the key to rise. In upright pianofortes, which now are always made with check actions, the check is placed before the hammer, and a stud project-

ing from the butt of the hammer comes in contact with the check. A. J. H.

**CHÉDEVILLE**. French *musette* (bagpipe) players and composers, two brothers.

(1) **Esprit Philippe Chédeville (l'aîné)** (b. ?; d. Paris, 1782).

(2) **Nicolas Chédeville (le jeune, le cadet)** (b. ?; d. ?).

They were the greatest players of their instrument at the time. Esprit was also oboist in the royal chamber music. They wrote a large number of compositions for *musette*. Nicolas also wrote 6 sonatas for flute, oboe or violin and continuo, Op. 7. A Tutor for the *galoubet* published by Decombe (Paris) bears the name of Chédeville. H. Expert edited a selection from their works

BIBL.—THOINAN, E. DE, 'Les Hotteterre et les Chédeville' (Paris, 1894)

**CHEF** (Fr.=chief, head). In music the word is used in such connections as

**Chef d'orchestre**=conductor, and

**Chef de la maîtrise**=chapel-master or choirmaster, the musician taking charge of the music in a church—the exact equivalent of the Italian *maestro di cappella*. E. B.

**CHEF D'ATTAQUE** (Fr.). See ATTACK. LEADER.

**CHEKKER**. This name, assuming various forms (*eschaquier, eschequier, eschquier, exaquier, exaquir, escaque*, etc.), stands in the 14th–16th centuries for a keyboard instrument popular in England, France, Burgundy and Spain. The form *eschaqueuil*, given by Kastner as from Machaut's 'Prise d'Alexandrie' (1377), is a mistake, the reading of the manuscripts being *eschaquier* or *eschquier*. Purro in 'Les Clavecinistes' (1924) supplies a useful list of references to this instrument. One of the earliest relates to the gift of an *eschequier* from King Edward III in 1360 to his prisoner, King John of France, made by a certain Jehan Perrot; and in 1390 Bishop Braybroke of London gave ius. iud. to one who played "super le chekker" at Stepney. In fact the evident popularity and, perhaps, the invention of this instrument in England seem to be emphasized by the allusions of the French poet-musician Machaut, who in his 'Prise d'Alexandrie' speaks of it as "l'eschaquier d'Engleterre", a title also given in the chanson 'Le Chevalier au cygne'. It appears to have come into use about the middle of the 14th century, unless the *shaqra*, mentioned by a 17th-century Spanish writer, Maguari, and attributed by him to the 13th century, is identical with it (Farmer). Machaut, however, in his 'Li Temps pascour' (1340) does not include it in a very full list of musical instruments, and in 1385 its name seems to have remained novel in Burgundy. It continues to be mentioned by writers of the first half of the 16th century,

sometimes as the *archiquer* or the *exacherium*, and its final disappearance may be attributed to the fuller development of the spinet, virginal and harpsichord type of instrument.

The nature of the chekker has been open to much discussion and attempts have been made to explain its name in connection with the word *échiquier*, a chess-board, either from its black-and-white keys (an anachronism for so early a date) or from the similarity and decoration of its case. That it was a stringed instrument is certain; also that it was very like the manicordion or clavichord, though not identical with it, as they are mentioned together. Moreover it was not of the spinet type, for in 1511 the Duke of Lorraine bought an instrument "faisant eschicquier, orgues, espinettes et flutes" — a combination of distinct wind and string tones produced by reeds, flue-pipes, plucked strings and the *eschicquier*, on which the strings, if not bowed (and its comparison to the clavichord forbids that) must have been hammered. Fortunately the publication in annotated facsimile of a work by the scientist and musician Henri Arnaut of Zwolle in the Netherlands, and now preserved in the Louvre (Le Cerf and Labande, Paris, 1933), explains its true character and, we believe, the origin of its name. This Latin manuscript was noticed by Bottée de Toulmin in his 'Dissertation sur les instruments de musique', p. 123 (1840), and by Fétis ('Histoire de la musique', V, 201), but their assertion that it revealed an early pianoforte action was ridiculed. The Arnaut manuscript treats of the keyboard instruments of the day (early 15th century), figuring and describing the clavicymbalum, clavicordium, dulce melos and organ, with notes on the harp and lute. The dulce melos or dulcimer, the author says, took three forms, the simplest being struck "vulgariter et ruraliter cum baculo"; the two others were constructed, after the manner of a clavichord, with keys, and differed from one another only in the arrangement of the bridges for the strings. The key action is described in connection with the clavicymbalum; for after he has explained three ways of plucking the strings, as usual on the harpsichord, he adds that

there is yet a fourth way of producing the sound—each key has at its upper [or farther] end a piece [of wood] applied to it, weighted with lead, so that, when the key is struck and it hits an obstacle above it near the strings, this piece jumps [salta] in the direction of the strings and, having touched them, falls away [cadit], the key being still held in *suspensio*. And this piece has a metal cramp [crampum], as in the clavicordium. On this system one can make a clavisimbalum, a clavicordium or a dulce melos and all will sound as a dulce melos;

that is, as a percussion instrument struck with a free hammer. He adds moreover that, when used in the clavisimbalum, the metal cramp would be placed horizontally and not on the top, as in the clavichord. This, of which he

gives an illustration, would enable the existing jackrack (*penu*) to be employed for holding in position the new form of action, the slots being used for the free passage of the hammers. Here, then, we have an early instance of the "check" necessary for jerking the little tangent or hammer upon the string and its action gives its name to the chekker, which naturally appears in French as *eschequer*, from *eschec* (*échec*), a check, stop or repulse, while in Cerne's 'Rules for Minnesingers' (1404) it is mentioned, together with the clavicordium and the clavicymbalum, under the title *Schachtbret* or *Schachbret*, with which we may compare the word *Hackbrett* for the hand-hammer action of the ordinary dulcimer.

We find "bons eschequiers et les doucelles" frequently alluded to together; this implies a difference, and Arnaut explains it. It did not lie in the action but in difference of stringing. Only 12 strings were required for the nearly three-octave compass of the dulce melos (B $\sharp$ -a $\flat$ ), for each string was divided by transverse bridges into the proportional lengths required for the unison, octave and super-octave pitches as on the ordinary dulcimer. The chekker in clavichord shape, on the other hand, had a string for each note in chromatic order, 35 strings in all for the same compass. No dampers are mentioned for either instrument. The writer of this article constructed a full-sized specimen (36 ins.  $\times$  12 ins.  $\times$  6 ins.) of this early pianoforte type according to Arnaut's description. The tone is pleasing and, owing to the metal-tipped tangents, bell-like, in volume equal to that of the spinet; for such simple mechanism the repetition is remarkable; as on the clavichord, expression and accentuation can be effected by the player's touch, but with greater resonance.

The principle of the chekker anticipated by more than four centuries the "invention" of the pianoforte in the early years of the 18th century. In fact, Cuisinié's *clavecin à maillets* (1708) was inferior to it, as the striking hammer did not leave the string unless the key was released, a similar fault in Marus's *clavecin* (1716). In the same century other "tangent pianos" were produced with more elaborate mechanism; excellent diagrams of them will be found in Rosamund Harding's 'The Pianoforte' (1933).

BIBL.—FLOOD, W. H. GRATTAN, 'The Eschequier Virginal' (M. & L., VI, 1925, p. 151).

CHELARD, Hippolyte (André Jean Baptiste) (b. Paris, 1 Feb. 1789; d. Weimar, 12 Feb. 1861).

French composer. He was the son of a clarinet player at the Paris Opéra and a pupil of Fétis, Dourlen and Gossec. Having won the Grand Prix de Rome in 1811, he went to Italy and studied church music under Bainsi and

Zingarelli in Rome, and dramatic music under Paisiello and Fioravanti at Naples. He produced his first work, a comic opera, 'La casa da vendere', at Naples in 1815.

After his return to Paris Chelard became a violinist at the Opéra in 1816 and gave lessons, composing diligently at the same time. After much trouble his tragic opera of 'Macbeth' (libretto by Rouget de Lisle) was produced at the Opéra (29 June 1827), but it was soon removed from the boards, and Chelard left Paris for Munich, where the success of 'Macbeth' was so decided that the King of Bavaria made him his *Kapellmeister*. He returned to Paris in 1829, produced an unsuccessful opera, 'La Table et le logement', established a music business, and remained there till the Revolution of 1830 drove him back to Munich. There he produced a new opera, 'Mitternacht' (19 June 1831) and a German version of 'La Table et le logement' under the title of 'Der Student' (19 Feb. 1832).<sup>1</sup>

In 1831 Chelard led the Thuringian Festival at Erfurt. In 1832 and 1833 he was in London conducting the German opera company of which Schröder-Devrient and Haitzinger were members.<sup>2</sup> In 1835 his best work, 'Die Hermannschlacht', a solid and carefully written opera, based on Kleist, was given at Munich; in 1836 he was employed as theatre and concert director at Augsburg, and became court *Kapellmeister* at Weimar. There he wrote music for 'Scheibentoni', a play by Charlotte Birch-Pfeiffer (1842) and a comic opera 'Die Seekadetten' (1844). There, too, he met Berlioz in 1843.<sup>3</sup> He was succeeded by Liszt in 1848, and for two years went to live in Paris, returning to Weimar in 1854. A posthumous opera, 'Le aigle romane', was given at Milan in 1864.

A. M., adds. A. L.

**CHELIUS, Oskar von** (b. Mannheim, 28 July 1859; d. Munich, 12 June 1923).

German composer. He studied at Mannheim, Heidelberg, Cassel and Leipzig. In his military career he attained the rank of major-general in 1911, and when war broke out in 1914 he was attaché to the German Embassy at St. Petersburg.

Chelius's chief works include: opera, 'Haschisch' (produced Dresden, 1897, under the pseudonym of S. Berger), a one-act piece which was very successful on German stages; opera 'Die vernarrte Prinzess' (Wiesbaden, 1905); opera 'Magda Maria' (libretto by Max Treutler) (Dessau, 1920); Requiem and Psalm CXXI for chorus and orchestra; symphonic poem 'Und Pippa tanzt' (from Gerhart Hauptmann's drama), 1922; pianoforte pieces, songs, etc.

A. L.

<sup>1</sup> Given at Drury Lane, London, 4 June 1833, as 'The Students of Jena'.

<sup>2</sup> Chelard's own 'Macbeth' was included in the repertory of that season (4 July 1832).

<sup>3</sup> See Berlioz, 'Voyage musical', Letter iv.

**CHELLE, William** (b. ? , 1498; d. ?).

English musician. He was a secular chaplain at Oxford, where he supplicated for the B.Mus. degree on 14 Dec. 1524, and was admitted on 3 Apr. 1525.<sup>4</sup> In 1525 he copied a theoretical treatise by John Tucke, written c. 1500 (B.M. Add. MSS 10,336) in New College, Oxford, and in 1526 another collection (Lambeth MSS 466). In the latter year he was appointed lay-vicar of Hereford Cathedral, and in 1532 he was promoted to be prebendary. Owing to his musical attainments he was made precentor under Queen Mary in 1554, continuing in office till 1564, when he was deprived for recusancy by Bishop Scory.

W. H. G. F.

**CHELLERI (Keller, Kelléri), Fortunato** (b. Milan, June 1690; d. Cassel, Dec. 1757<sup>5</sup>).

Italian composer of German descent. He was the son of a German named Keller and the pupil of his mother's brother, Francesco Maria Bazzani, *maestro di cappella* at Piacenza Cathedral. According to Gerber his first opera, 'Griselda', was produced at Piacenza in the Carnival of 1707-8, but the libretto of that 'Griselda' (in the Bologna Liceo) mentions Albinoni as the composer. Chelleri's name appears for the first time in 1715, in the librettos of two operas produced at Ferrara ('La caccia in Etolia') and Venice ('Alessandro fra le Amazoni') respectively. These were followed by about six or seven other operas, given in northern Italy, chiefly at Venice, until 1721 or 1722. In the latter year he left for Germany and seems to have first gone to Heidelberg, as two librettos suggest, the one undated but bearing his name (oratorio 'Il cuore umano'), the other dated 1722, not mentioning his name, but identical with his 'La caccia in Etolia' of 1715. In May or June of the same year (1722) he was appointed conductor at the prince-bishop's court at Würzburg, where he stayed for two years and a half. He gave up this post on 20 Nov. 1724, and from 1725 until his death he was court conductor to the Landgrave Frederick I of Hesse-Cassel, succeeding Ruggerio Fedeli.

Chelleri's journey to London took place in 1726, according to Gerber, and he stayed for ten months, publishing before his return to Cassel a volume of 'Cantate e arie', which he dedicated to the 3rd Duke of Queensberry (Charles Douglas). In 1731-34 he visited Stockholm (Landgrave Frederick had since 1720 also been King of Sweden), but held no official appointment there; some instrumental

<sup>4</sup> Oxf. Reg. i, 136.

<sup>5</sup> Gerber, followed by other lexicographers, says that he was born at Parma in 1688; but he is called 'Milanese' by the editors of Allacci's 'Dramaturgia', by Quadrio and in several librettos, and according to the church registers at Cassel he was buried on 14 Dec. 1757 aged 67 years and six months.

music preserved at Uppsala is no doubt a relic of that period. Other symphonies and overtures, some cantatas and duets, and various pieces of church music are to be found at Brussels, Munich, Dresden, also in the B.M. and in the Count Schonborn collection at Wiesenheid in Franconia. An oratorio for 5 voices, 'Dio sul Sinai', dated 24 Mar. 1731, is extant at Dresden.

Most of Chelleri's operas have disappeared; the first act of 'L' innocenza difesa' (first produced probably at Florence in 1721<sup>1</sup>), which he revived at Cassel on 23 Jan. 1726, is in the library of that town, and the Berlin score of an opera 'Judith, Gemahlin Ludewigs des Frommen', performed at Hamburg in 1732, contains, besides recitatives and 3 German airs by Telemann and 3 Italian airs from Handel's 'Lotario', 25 numbers by Chelleri, from 'L' innocenza difesa'. Seven airs from his 'Arsacide' (Venice, 1721) are at Munich.

**CHELTENHAM FESTIVAL.** A festival of orchestral music promoted by the Corporation of Cheltenham. It began with three concerts given by the London Philharmonic Orchestra at Cheltenham Town Hall in June 1945 and five talks by Arthur Bliss, Mosco Carner, Scott Goddard and Ralph Hill. Modern British music was a special feature, and Arthur Bliss, William Walton and Benjamin Britten conducted works of their own.

This first venture was in the nature of an experiment, and it was only its success which decided the Corporation to make the Festival an annual event. In July 1946 the L.P.O. was conducted by Malcolm Sargent and Edmund Rubbra, E. J. Moeran and Michael Tippett were newly invited to conduct their works, a critics' forum was held under the chairmanship of Arthur Bliss, and a new lecturer was Alec Robertson. A revised version of Britten's piano Concerto received its first performance. In June-July 1947 the Hallé Orchestra of Manchester played under John Barbirolli, Alan Rawsthorne and Ian Whyte were added to the composer-conductors and Frank Howes to the lecturers, C. B. Rees presiding over the critics' forum.

The Festival's scope was further enlarged in 1948 (28 June-10 July), when three concerts were given by the Hallé Orchestra and both chamber music and stage performances were added to the programme. There were four chamber concerts of old and modern music, one of music for chamber orchestra and seven performances by the English Opera Group, which gave Britten's version of 'The Beggar's Opera' and his own 'Albert Herring'. At the orchestral concert first world performances were given of Arthur Benjamin's

Symphony No. 1 and Alan Rawsthorne's violin Concerto. At one of the chamber concerts William Wordsworth's third string Quartet was heard for the first time anywhere. Stanley Baylis, James Denny, Granville Hill and Dymley Hussey newly joined the critics' forum. Excursions into the Cotswolds and the Wye Valley were arranged.

The Festival has since continued on similar lines.

**CHEMINEAU, LE** (Opera). See LEROUX. Chenevière, Jacques. See Aubert (L., 'Forêt bleue', lib.).

**CHÈNG.** See SHÈNG.

**Chénier, André.** See Giordano ('Andrea Chénier', opera). Koechlin (2 songs) Martelli ('Chrestomathie', choral work) Méhul (choruses for 2 tragedies).

**CHENU, P.** See PIETAIN (3).

**CHERBULIEZ, Antoine-Élisée** (b. Mulhouse, Alsace, 22 Aug. 1888).

Swiss musicologist. He comes of a French-Swiss family, but settled in eastern Switzerland and does nearly all his work in German. He first studied engineering, taking a diploma in 1911 and doctorate in 1914. His musical training he received at the Conservatories of Zurich and Strasbourg. From 1913 to 1916 he studied under Reger at Meiningen and Jena, and during 1916 he worked in Berlin with Siegfried Ochs. In 1921, back in Switzerland, he became musical director at Chur. The University of Zurich appointed him lecturer in 1923 and honorary professor and director of the Musicological Seminary in 1932. In 1938-48 he was president of the Schweizerischer Musikpädagogischer Verband. In 1950 he was nominated Professor-extraordinary.

The fruits of Cherbuliez's activities are to be found in the important contributions he has made to musical scholarship in general and to Swiss musicology in particular. His book 'Die Schweiz in der deutschen Musikgeschichte' (1932) is the first comprehensive account of Swiss musical history, and a later one, 'Geschichte der Musikpädagogik in der Schweiz' (1944) offers an historical survey of Swiss music-teaching from its beginnings to the present day. He also wrote a number of biographies of composers, including J. S. and C. P. E. Bach, Handel, Chopin, Grieg, Verdi and Tchaikovsky, and translated W. H. Reed's book on Elgar and Alec Robertson's on Dvořák into German. Apart from the two works already named, the following important writings may be mentioned:

'Gedankliche Grundlagen der Musikbetrachtung', dissertation (1925).

'Das schweizerische Festspiel mit Musik' (1925).

'Zwilling, Zwick und der Kirchengesang' (1926).

'Schweizer Landschaft im Spiegel der schweizerischen Musik' (1928).

<sup>1</sup> Not at Milan in 1711, as was formerly assumed.

- 'Deutsche und romanische Schweiz', in Adler's 'Handbuch der Musikgeschichte' (1890).  
 'Pestalozzi's Anregungen auf dem Gebiet der Musikpädagogik und der Volksmusik' (1933).  
 'Zur Kontroverse über die Herkunft von Ludwig Senfl' (1933).  
 'Das Gesangbuch Ambrosius Blaurers und die Chronologie der Gesangbücher des 16. Jahrhunderts' (1933).

**CHERN JENDOR.** See CHINESE MUSIC (MODERN).

**CHERNG MAWYEUN.** See CHINESE MUSIC (MODERN).

**CHERNIAVSKY, Mishel** (b. Uman, Prov. of Kiev, 2 Nov. 1893).

Russian violoncellist. He is known largely through the trio formed with his brothers. He studied with Vershilovich in St. Petersburg, with Sulzer in Vienna and in London with Popper and Herbert Walenn. When only seven years old he played before Nicholas II; in his boyhood also he received the praise of Saint-Saëns. In 1901, with his brothers Leo (b. Uman, 30 Aug. 1890) and Jan (b. Uman, 26 June 1892), he formed the Cherniavsky Trio and toured the world. He has played with success in five continents. T. W. G.

**CHERRY RIPE** (Song). See HORN (C. E.).

**CHÉRUBIN** (Opera). See MASSENET.

**CHERUBINI, (Maria) Luigi** (Carlo Zenobio Salvatore) (b. Florence, 14 Sept. 1760; d. Paris, 15 Mar. 1842).

Italian composer belonging mainly to the French school. He was the son of a Florentine musician attached to the Teatro della Pergola. In the Preface to his autograph Catalogue<sup>1</sup> he says that he began to learn music at six, and composition at nine; the first from his father, the second from Bartolommeo and Alessandro Felici, and after their death from Bizzarri and J. Castrucci. His first work was a Mass and Credo in D major for four voices and accompaniment, and by the time he was sixteen he had composed 3 Masses, 2 Dixits, a Magnificat, a Miserere and a Te Deum, besides an oratorio, 3 cantatas and other smaller

works. In 1777 or 1778 the Grand Duke of Tuscany, afterwards Emperor Leopold II, granted him an allowance to study under Sartu at Venice. There Cherubini remained for four years, thoroughly acquiring the old Italian contrapuntal style and gaining proficiency in polyphonic writing. The compositions given in the Catalogue under 1778 and 1779 are all antiphons written on *canti fermi, alla Palestrina*. With the early part of 1780, however, this stops. His first opera, 'Quinto Fabio', was written during that summer and produced at Alessandria, and for the next eight years operas and other dramatic music seem to have engaged almost his entire attention, as the list at the end of this article shows.

In 1784 he was invited to London and wrote four Italian operas for the King's Theatre, but without success. He also added six airs, including "For tenderness formed", to Paisiello's 'Marchese Tulipano', and treated similarly other operas then on the stage in London. He was much noticed by the Prince of Wales and held the post of Composer to the King for one year. In July 1786 he left London for Paris, where he seems to have remained for the whole of the next year, very much feasted and liked. In Feb. 1788 he brought out his thirteenth opera, 'Ifigenia in Aulide', at Turin.

PARIS.—After that he took up permanent residence in Paris. His first work produced at the Opéra was 'Démophon', to Marmontel's libretto, 5 Dec. 1788. In this opera he broke loose from the light vein of the Neapolitan school and laid the foundation of the grand style which he afterwards developed. Meanwhile he was fully employed. Léonard, Marie Antoinette's hairdresser, had obtained permission to found an Italian Opera, and Cherubini received the entire musical direction of it. During the years 1789–92 he conducted the so-called "Bouffons" at the Théâtre de Monsieur in the Tuileries, the operas being by Anfossi, Paisiello, Cimarosa and other Italians, besides writing a great number of separate pieces in the same style for insertion into these works. At the same time he was eagerly pushing on in the path opened by 'Démophon'. A first act of 'Marguerite d'Anjou' was written in 1790 and the rest remained unfinished; but on 18 July 1791 he brought out 'Lodoïska'. The effect produced by his new style, with its unusual harmonic combinations and instrumental effects, was both startling and brilliant. 'Lodoïska' was followed by a series of operas in which he advanced still farther, the first being 'Médée' and 'Les Deux Journées' (known as 'The Water-Carrier' from its German title of 'Der Wasserträger'). But though he was successful with the public, his pecuniary position was anything but satisfactory. When the Conservatoire de Musique

<sup>1</sup> The Catalogue referred to here and elsewhere in this article was compiled by Cherubini himself, with an interesting Preface, and published after his death by Botté de Toulmon under the title of 'Notice des manuscrits autographes de la musique composée par feu M. L. C. Z. S. Cherubini, Paris, chez les principaux éditeurs de musique', 1843. It has been reprinted by Bellas in his 'Memorials'. A still more complete catalogue is in Q-L.

was founded in 1795 he was appointed one of the three Inspecteurs des Études, an appointment by no means commensurate with his genius and artistic position, chiefly no doubt because of Napoleon's dislike of him, a dislike which the emperor took no pains to conceal. Cherubini's nature, at all times grave, not to say gloomy, became visibly depressed under these circumstances, and he began to lose all pleasure in his profession. In 1795 he married Mlle Cécile Tourette, a step not likely to diminish his financial embarrassments. He therefore willingly accepted an offer to write an opera for the imperial theatre in Vienna.

VISIT TO VIENNA.—He arrived in the Austrian capital early in July 1805 and there made acquaintance with Beethoven, who esteemed Cherubini above all the writers for the stage then living, and whose vocal music was much influenced by him. What Cherubini thought of Beethoven's music at that time is not so clear, though there is evidence that he much admired him later. He was present at the first performances of 'Fidelio', but beyond his remarks that no one could tell what key the overture was in, and that Beethoven had not sufficiently studied writing for the voice, nothing is known. "Il était toujours brusque", was his one answer to inquiries as to Beethoven's personal characteristics.<sup>1</sup> The 'Wassertrager' was performed shortly after Cherubini's arrival and 'Faniska' produced on 25 Feb. 1806. But it was a poor time for operas in Vienna. The war between Austria and France broke out immediately after his arrival; Vienna was taken on 13 Nov., and Cherubini was soon called upon to organize and conduct Napoleon's *soirées* at Schonbrunn.

THE LATER PHASE.—On his return to France his mind became so much embittered as to affect his health. While he was living in retirement at the *château* of the Prince de Chimay, his friends entreated him to write some sacred music for the consecration of a church there; for a long time he refused, but at last set to work secretly, and surprised them with the Mass in F for three voices and orchestra (1809). With this work a new period opens. It is true that both in 1809 and 1810 we find operas, that in 1813 he wrote 'Les Abencérages' and even so late as 1833 'Ali Baba', but the fact remains that after 1809 sacred music was Cherubini's main occupation. Besides a number of smaller sacred pieces for one, two, three or more voices, with orchestra, organ or quartet, the Catalogue contains:

<sup>1</sup> 4 masses, in F ma., D mi., A♭ ma., and the 'Messe solennelle' in C ma. (14 Mar. 1816); 'Messe des morts' (Requiem) in C mi. (1817); the 'Messe solennelle' in E ma. (1818); that in G ma., and a Kyrie (both 1819);

that in B♭ ma. (Nov. 1821); a Kyrie in C mi. (13 Sept. 1823); the Coronation Mass for 3 v. (29 Apr. 1825); and lastly the Requiem in D ma. for men's voices (24 Sept. 1836).

During the hundred days Napoleon made him Chevalier of the Legion of Honour, shortly after, under Louis XVIII, he was elected member of the Institut, and in 1816 was appointed jointly with Lesueur "musician and superintendent of the King's Chapel", with a salary of 3000 francs. Thus almost at once did honour, position and income all fall upon him. In 1822 he became director of the Conservatoire, and instructional works, the 'Solfèges pour l'examen de l'école', fill the Catalogue during the next few years. The 'Cours de contrepoint et de la fugue', which was published in 1835, was largely the work of Halévy. Nor are these years barren in instrumental works. In 1815 the Philharmonic Society of London, then recently formed, offered him the sum of £200 for a symphony, an overture and a vocal piece, and at their invitation he paid a fifth visit to England. He arrived in Mar.; the Symphony (in D major) was finished on 24 Apr. and played on 1 May. It was afterwards (in 1829) scored as a Quartet. The overture was performed at the concert of 3 Apr. and another manuscript overture on 29 May. In addition to these the Catalogue shows.

A Funeral March for full orchestra (Mar. 1820); a march for 'Faniska' (15 May 1831); 6 string Quartets, viz. in E♭ ma. (1814), in G ma., from the Symphony, with a new Adagio (1829), in D ma. (31 July 1834), in E ma. (12 Feb. 1835), in F ma. (28 June 1836), in A mi. (22 July 1837); and a string Quintet in E mi. (28 Oct. 1837). In addition to the works mentioned above he wrote two operas in conjunction with other composers: 'Bayard à Mézières', with Boieldieu, Catel and Isouard, in 1814, and 'Blanche de Provence' in 1821, to celebrate the baptism of the Duc de Bordeaux, with Boieldieu, Paer, Berton and Kreutzer; also a great number of canons for two, three or more voices. The catalogue contains in all 305 numbers, some of them very voluminous, besides a supplementary list of 30 works omitted by Cherubini, as well as 18 volumes (some of them of more than 400 pages) of music by various Italian writers, copied out by the great composer himself, a practice which he admits having learned from his old master Sarti.

THREE PERIODS OF COMPOSITION.—Cherubini's artistic career may be divided into three periods. The first, 1780-91, when he was writing motets and masses in a *cappella* style and operas in the light Neapolitan vein, may be called his Italian period. The second operatic period opens with 'Lodoïska', though the beginning of the change is apparent in 'Démophon' (1788) in the form of the concerted pieces, in the entrances of the chorus and the expressive treatment of the

<sup>2</sup> See Schindler's 'Beethoven', I, 118.

orchestra. 'Lodoïska', however, shows an advance both in inspiration and expression. 'Médée' and 'Les Deux Journées' form the climax of the operatic period. In the former the sternness of the characters, the mythological background and above all the passion of Medea herself, must have seized his imagination and inspired him with those poignant accents of grief, jealousy and hatred in which 'Médée' abounds. But it is impossible not to feel that the interest rests mainly in Medea, that there is a monotony in the sentiment and that the soliloquies are tedious; in a word, that in spite of all its force and truth the opera will never command the wide appreciation which the music as such deserves. The 'Deux Journées' forms a strong contrast to 'Médée' and is a brilliant example of Cherubini's versatility. Here the sphere of action is purely human, simple, even plebeian, and it is impossible not to admire the art with which Cherubini has laid aside his severe style and adapted himself to the minor forms of the arietta and *couplet*, which are in keeping with the idyllic situations. The finales and other large movements are more concise, and therefore more within the range of the general public, and there is an ease about the melodies and a warmth of feeling not to be found elsewhere in Cherubini. Cherubini's influence on Beethoven's 'Fidelio' is evident in this work, which is a "rescue opera" of the same type and indeed by the same librettist (Bouilly) as its direct French literary model, Gaveaux's 'Léonore'.

The third period, that of his sacred compositions, dates, properly speaking, from his appointment to the Chapelle Royale in 1816, though it may be said to have begun with the F major Mass (1809), which is important as being the first sacred work of his mature life, though it is inferior to that in A major and especially to the Requiem in D minor. The three-part writing in the Mass in F seems scarcely in keeping with the broad outlines of the work, and the fugues are dry and formal. That in A, also for three voices, is concise, vocal and eminently melodious. The Requiem in C minor is at once his greatest and most famous work. The Credo for eight voices a *cappella* is an astonishing instance of command of counterpoint, and shows how perfectly he could adapt it to his own individual thoughts. It is probable that he intended it to be considered as a study, for only two numbers were published during his lifetime, the concluding fugue "Et vitam", and an elaborately developed *ricercar* in eight parts with one chief subject and three counter-subjects, in which all imaginable devices of counterpoint are employed.

THE MUSIC.—Cherubini's pure idealism resisted the faintest concession to beauty of

sound as such and subjugated the whole apparatus of musical representation to the idea; the serious, not to say dry, character of his melody, his epic calmness—never overpowered by circumstances, and even in the most passionate moments never exceeding the bounds of artistic moderation—these characteristics were hardly likely to make him popular, especially at a time of revolution. His dramatic style was attractive from the novelty of the combinations, the truth of the dramatic expression, the rich harmony, the peculiar modulations and brilliant instrumentation, much of which he had in common with Gluck; but his influence on French opera was only temporary. No sooner did Boieldieu and Auber appear than Cherubini's severer muse, dwelling in a realm of purer thought, dropped her hold on the public. His closest tie with the French school arose from the external accident of his connection with the Conservatoire, where he formed practically all the important French composers of the first half of the 19th century. In Germany his works met with more enduring appreciation. One of the first things Mendelssohn did after he felt himself safe in the saddle at Düsseldorf was to revive 'Les Deux Journées' and to introduce the C major Mass in the church. Six months later he brought forward one of the Requiems, and when he had to conduct the Cologne Festival in 1835 it was to Cherubini's manuscript works that he turned for something new and good. A reference to the Index of the Leipzig A.M.Z. will show how widely and frequently his works were once performed in Germany.

Cherubini's portrait by Ingres is in the gallery of the Louvre, Paris. He left one son and two daughters, the younger of whom was married to Hippolyte Rossellini of Florence.

A Cherubini Society was formed in London in Nov. 1948, with Willem Mengelberg as President, with the object of making private gramophone recordings of works by that master. The founder and director is Michael G. Thomas. A.M., adds.

CHERUBINI SOCIETY. See p. 200, ii.

CHEST OF VIOLS. A set of six viols, properly matched in size, power and colour, used for chamber performance particularly in 16th- and 17th-century England. It usually consisted of two trebles, two tenors and two basses; occasionally of two trebles, three tenors and one bass, the bass being

properly twice as long in the string as the treble. These sets of viols, thus duly proportioned, were often made by the old English makers. They were carefully fitted into a "chest", which seems to have been a shallow vertical press with double doors. Tudway, in a letter addressed to his son, printed in Hawkins (ch. 144), describes it as

a large hutch, with several apartments and partitions in it, each partition was lined with green bays to keep the instruments from being injured by the weather.

Hawkins quotes an advertisement, dated 1667, of two "chests of viols" for sale, one made by John Rose in 1598, the other by Henry Smith in 1633. "Both chests", says the advertiser, probably referring to the instruments, but possibly to the hutches, "are very curious works." In a well-known passage in 'Musick's Monument' (p. 245) Mace says of the "Press for Instruments", which forms a conspicuous part of the furniture of his elaborately designed music room:

First see that it be conveniently large, to contain such a number as you shall design for your use, and to be made very close and warm, lynn'd through with bayes, etc., by which means your instruments will speak lively, brisk and clear. . . . Your best provision, and most complete, will be a good chest of viols, six in number, viz. two basses, two tenors, and two trebles, all truly and proportionably suited. . . . Suppose you cannot procure an entire chest of viols, suitable, etc., then thus endeavour to pick up, here or there, so many excellent good odd ones, as near suiting as you can, every way, viz. both for shape, wood, colour, etc., but especially for size.

Mace's press for instruments includes, besides the "chest of viols", a pair of violins, a pair of "lusty full-sized theorboes" and three "lusty smart-speaking" lyra-viols, the whole constituting "a ready entertainment for the greatest prince in the world". The principle of the "chest of viols" is found in the quartets and quintets of violins which were occasionally made by the Cremona makers. E. J. P.

The chest of viols remains of practical importance for its own music<sup>1</sup> and has been revived in modern times for that purpose, the pioneer in this field being Arnold Dolmetsch and his family circle from the 1890s. The differences between the viols and the violins are not necessarily visible at a casual glance, since the outline of the viols varies considerably and sometimes actually resembles that of the violins in external appearance. Even where this is the case, however, the tone remains perfectly distinct, provided that the essential characteristics are preserved. These are thinner wood, lighter construction, thinner strings, lighter tension. Fundamentally a violin is neither more nor less than a heavier, tenser viol; but this distinction is musically of the utmost importance, for the light viol produces free vibrations where the heavy violin produces intense vibrations.

To draw the best tone from a good viol is

just as hard as to draw the best tone from a good violin, and it is unfair to judge either except in the hands of a fine master, equipped with an authentic technique. But when heard, the true tone of the viol will be found, in comparison with violin tone, more limited in dynamic range, neither more nor less expressive and more edgy.

The most typical chamber music of the viols is elaborately contrapuntal. In order to bring out the counterpoint naturally and distinctly a tone is needed neither too assertive nor too ready to blend. The tone of the complete chest of viols is rich, warm and homogeneous throughout its entire compass; but it is also transparent and unusually distinct in its several elements. Where on a string quartet the melodic lines will be somewhat inclined to merge into chords, on a chest of viols each part will remain outlined apart from its fellows. That is because the tone of the viol is sufficiently edgy to stand out individually. For its own music this is a virtue with which we cannot dispense.

The same virtue is associated with a further feature common to much of the chamber music of the viols. This is the texture resulting from distributing the parts comparatively evenly throughout the total available compass. The modern string quartet consists of two treble instruments, one alto and one bass, the true tenor violin having become obsolete at an early date. The scoring most typical of the violin family corresponds with this fact, of which it was presumably the cause. The upper parts lie mostly high and close together; the bass is separated from them by an interval which tends to be disproportionately wide. Such scoring makes for clarity and brilliance; but it is not typical of the viol family, where the true tenor register is usually filled as fully as the treble and alto registers. The constant crossing of the treble parts makes for brilliance of another kind; but the total effect would be heavy in the extreme were it not that the transparency of the true viol tone lightens and clarifies the thick scoring of the lower registers.

An important detail contributing to this transparency is the presence on all members of the viol family of adjustable gut frets. Since the hard gut is interposed between the soft finger end and the fingerboard, stopped notes acquire much of the sharpness and clarity of open strings, without sacrificing the additional expressiveness gained from the *vibrato*, as described by Mace, Jean Rousseau and other early authorities. Properly fitted, the frets are no impediment to technique.

The general technique of the viol conforms to the same musical characteristics as have been described. The position on the knee of the smaller sizes and between the legs in the

<sup>1</sup> See CONSORT OF VIOLS.

case of the bass combines with the underhand bowing to encourage an even disposition of accent at all parts of the bow, as opposed to the regular alternation of accented and unaccented beats most natural to the violins. There is no gravitational reinforcement of down bows, and there is no muscular differentiation at either end. Since contrapuntal music tends notoriously to irregular accentuation almost entirely independent of metre, these technical considerations contribute still further to the aptness of the chest of viols for its own musical purposes, and to its indispensability now that these purposes are once again in question.

It is worth remarking that the true soloist of the family of viols is less the treble than the bass member, the viola da gamba, which owing to its typical lightness of construction and stringing possesses a more flexible and reposeful tone in its uppermost register than the cello, just as, for the converse reason, the treble violin possesses a more singing and substantial tone in its uppermost register than the treble viol.

**CHESTER, J. & W., LTD.** English music-publishing firm, established as a music shop and lending library at Brighton in 1860. In 1915, not long after the outbreak of the first world war, the firm was bought by Otto Marius Kling, a son of the Genevan band-master and teacher Henri Kling, who had been manager of the London branch of Breitkopf & Härtel, which, as the property of enemy aliens, had to be closed down. Before long the firm established its London headquarters at 11 Great Marlborough Street, W.1, the Brighton house becoming a mere branch that was eventually sold. As a retail house the firm at first specialized in Russian publications, for which it held a general agency, and in modern French music, and it gradually established a reputation by the distribution of foreign music in general. The lending library was greatly enlarged and, except in the department of orchestral and chamber music, circulated an exclusively modern stock.

Publishing was at once started on as large a scale as war-time conditions would allow and in a spirit of international enterprise. Among the composers then eminent or later to become so with whom the firm entered into contracts were Stravinsky, Falla, Bantock, Malipiero, Goossens, Palmgren, Ireland, Jongen, Lord Berners, Poldowski, Bax, Casella and others. A small periodical, 'The Chesterian', was started in Nov. 1915, mainly as a publishing bulletin; but in 1919 G. Jean-Aubry was appointed editor and the magazine, while continuing to work in the interest of the Chester editions, began to publish articles by a distin-

guished international team of writers. The second world war interrupted its run in 1940, but it was revived as a quarterly in June 1947.

J. & W. Chester became a limited company in 1920. Otto Kling remained managing director until his death in 1924. He was succeeded by his son Harry, who died in 1936, when the directorship fell to W. A. Chenery, who had been the firm's devoted secretary and adviser ever since its establishment in London. On Chenery's death in 1937 he was succeeded by the present managing director, R. D. Gibson, who had been a partner almost from the first. Under Gibson's management the house turned greater attention to British composers than it had done before. Among the more recent are E. J. Moeran, Lennox Berkeley, York Bowen and Antony Hopkins.

E. B.

**CHESTER MUSICAL FESTIVAL.** The first festival was held on 16, 17, 18 and 19 June 1772, under the management of Orme, the cathedral organist, with Dr. William Hayes as conductor. The 'Chester Courant' for 23 June of that year says:

On Tuesday, Thursday & Friday last, were performed in the Broad Isle of the Cathedral, the celebrated Oratorios of 'MESSIAH', 'SAMSON', and 'JUDAS MACCHABAEUS', before a most polite and numerous audience. The several performers filled their respective Departments with spirit and execution, and the amazing powers of the two Miss Linleys conspired to render the Entertainment so great and excellent as can be expected, or ever was produced from the human voice.

On Wednesday Evening a Concert of Select Musick was performed in the Exchange Hall, where amongst other very capital pieces, Mr. Linley, Junr., distinguished himself as one of the greatest masters of the Violin which this nation has produced.

A masked ball was held at the Exchange, on the Thursday night, and was conducted "with the greatest elegance and decorum". Although apparently successful, it is remarkable that this festival of 1772 is not mentioned in any work on Chester, and so completely had the memory of it died out, that a correspondent writing to the 'Chester Chronicle' on 5 Oct. 1821 states that from all the information he had been able to collect "the First General Festival of Oratorio Music was held in 1783". This, as we have seen, is erroneous, and the festival of 16 to 19 Sept. 1783 was the second held at Chester. The committee, encouraged by past experience, extended the festivities, and the following exhausting programme was gone through: 'Messiah', 'Jephthah', 'Judas Maccabeus' (in the Cathedral), 'Acis and Galatea' and a miscellaneous concert in the County Hall, as well as assembly balls on Tuesday, Thursday and Friday evenings; a fancy dress ball on Wednesday evening; a public breakfast (with catches and glees) on Saturday morning. The musical portion was directed by Knyvett and led by Cramer. Among the performers were Koczwara (the composer of 'The Battle of Prague'), John

Ashley (the celebrated bassoon player) and Crosdill, the cellist

Some idea of making the festival triennial now began to manifest itself, and the third meeting was held Sept. 1786, with the same number of concerts, cathedral performances, public balls, etc. The oratorios given were 'Messiah' and 'Joshua', and the Handel Festival Selection, as performed in Westminster Abbey at the Commemoration of 1784, was reproduced. Handel's 'L' Allegro' was also given at the evening concerts. The singers included Mrs. Billington and Rubinelli, and Mrs. Siddons acted during the week at the Theatre Royal. For the first time the organ and orchestra were erected at the west end of the Cathedral nave — an arrangement which was continued until 1829 and reverted to again in 1891.

The triennial arrangement, however, fell to the ground, and 1791 saw the fourth Chester festival — one important feature being the substitution for the morning concert of a fourth day's performance in the Cathedral, where 'Messiah', 'Samson' and two Handel selections were given. The vocalists comprised Mara, Mrs. Crouch (Miss Phillips), Michael Kelly and Harrison. Owing to the disturbed state of affairs at home and abroad it is scarcely surprising that no other festival was held until 1806 — when the usual week's festivities took place. The Cathedral performances included 'Messiah' (with Mozart's additional accompaniments for the first time) and, as a complete novelty, Haydn's 'Creation'. The vocalists included Mrs. Billington, Mrs. Dickens, Harrison and Bartleman. The orchestra consisted of most of the leading players of the day, including Lindley and Dragonetti. Greateorex, the organist of Westminster Abbey, presided at the pianoforte and organ, and conducted the festival, which was under the patronage of the Duke of Gloucester.

1814 saw the sixth festival, beginning on 27 Sept., and the performance contained a curiosity:

A new occasional Oratorio, compiled chiefly from 'JUDAS MACCABEUS', in which will be produced 'THE BATTLE', by Raymond.

The vocalists included Angelica Catalani, Mrs. Salmon, Braham, Kellner and Bartleman. Greateorex conducted and Cramer led the orchestra, which again included Dragonetti and Lindley. Of such importance was the festival that it caused the postponement of the Oswestry races.

The seventh festival took place in 1821, 'Messiah' being given on the first day and selections from 'The Creation', 'Judas Maccabeus', 'Joshua' and Mozart's 'Requiem' later. The vocalists included Mrs. Salmon, Miss Stephens, Signora Camporese,

Braham, Swift, Rolle and Kellner. The orchestra was led by Cramer.

The eighth festival was held in 1829. The works performed included 'Messiah' and selections from 'Judas Maccabeus', 'Joshua', 'Jephthah', 'Solomon', 'Israel in Egypt' and 'The Creation'. The principal vocalists were Malibran, Miss Paton, Mrs. Knvyett, Braham and Phillips. The orchestra was led by F. Cramer and Mori, and Greateorex again conducted. This was the last of the old series of Chester festivals.

Fifty years later they were revived by a two-days' festival (the ninth) held in the Cathedral on 23 and 24 July 1879, under the management of the Rev. C. Hylton-Stewart, Cathedral precentor, and Dr. J. C. Bridge, the Cathedral organist, the latter of whom conducted. This was so successful that the festival was expanded to three days for the tenth meeting in 1882 and was held triennially up to 1900, the sixteenth and last.

Among the works specially written for these festivals are several by the conductor, J. C. Bridge; a Psalm, 'By the Waters', Oliver King; Cantata, 'The Soul's Forgiveness', Sawyer; and overtures by E. H. Thorne and Sir Frederick Bridge.

In addition to the standard works of the great composers many of their lesser-known works were included, such as

Organ Concerto and 'Concertante' for stringed instruments, Handel; the 'Funeral and Triumphal Symphony' and selection from 'Childhood of Christ', Berlioz; 'Journey to Emmaus', Jensen, Symphony 'The Earthly and the Divine', Spohr, Oratorio 'The Deluge', Saint-Saëns, etc., while many works such as Verdi's Requiem, Tchaikovsky's 'Pathetic' Symphony and selections from Wagner's 'Parsifal' were performed for the first time in an English cathedral

**CHEVÉ (or Galin-Paris-Chevé) SYSTEM.** A method of teaching part-singing and sight-reading, much used in France, is thus called, from the names of its founder and chief

promoters. Its essential features are two: first, the use of the principle of "tonic relationship", the learner being taught to refer every sound to the tonic, and secondly, the use of a numeral notation, the figures 1, 2, 3, etc., serving as the written symbols for the several sounds of the scale. *Do* (*ut*) = 1, *Re* = 2, etc. The following is an example of 'God save the King' thus written in two parts:

A dot under a figure shows that it is in a lower octave, a dot above a figure in a higher. The zero shows a rest; a thick dot, as in the second bar above, continues the preceding sound. The varying lengths of sound are shown by a stroke or strokes above the figures, as in the second and fourth bars. The numerals are treated only as visual signs; the names sung are the old sol-fa syllables. The use of the numerals is to keep the positions of the sounds in the scale impressed on the learner's mind, and thus help him to recognize and sing the sounds.

This figure notation is used only as introductory to the ordinary musical notation. The system has been the subject of much controversy in France, but it has made considerable way and was first authorized by ministerial resolution for use in the Écoles Publiques of France on 23 July 1883, though only in the elementary course. In 1905 it was adopted in the programmes of the Écoles Normales. But the programmes of 1922 pass this system over in silence. The instructions ('Journal Officiel' 22 June 1923) only recommend the usage of a simplified notation as a means of aural training. The system was adapted for English use by M. Andrade and G. W. Bullen.

The idea of using numerals in the way above shown is best known to the general world through the advocacy of Jean Jacques Rousseau. Pierre Galin (1786-1821), who first developed the plan practically, was a teacher of mathematics at Bordeaux. Aimé Paris (1798-1866), one of his most energetic disciples, was educated to be a barrister, but devoted his life to musical propaganda. He added to this system a special nomenclature, since adopted into the Tonic Sol-fa system, for teaching time.

Émile Chev  (1804-64) was a doctor and married a sister of Paris. His 'M thode  l mentaire de la musique vocale', a complete exposition of the system, has a curious title-page. The title is followed by the words "ouvrage repouss  [in large capitals]   l'unanimit  9 avril, 1850, par la Commission du Chant de la ville de Paris, MM. Auber, Adam, etc. etc.", and below this is a picture of a medal "D cern e Juin 1853   la Soci t  Chorale Galin-Paris-Chev " for "lecture  

premi re vue" and other things, by a jury composed of Hector Berlioz and other musicians (6th ed., 1856). R. B. L., adds.

See also Tonic Sol-fa.

**CHEVILLARD, (Paul Alexandre)**  
**Camille** (b. Paris, 14 Oct. 1859; d. Chatou, Seine-et-Oise, 30 May 1923).

French conductor and composer. He was the son of the distinguished cellist (Pierre) Alexandre Chevillard (b. Antwerp, 15 Jan. 1811; d. Paris, 29 Dec. 1877), who became famous for the brilliance and accuracy of his execution, for his teaching at the Paris Conservatoire (from 1860) and for the foundation, in 1835, of the Soci t  des Derniers Quatuors de Beethoven, one of the oldest institutions of the kind in France and one of the most important. Camille was at first a pianoforte pupil of Georges Mathias at the Conservatoire (2nd prize, 1880) and afterwards followed his own instincts as a composer, without definite teaching. Chevillard's works are remarkable for a style at once personal, solid and refined; they include orchestral and chamber music, pianoforte pieces and songs, as well as a set of incidental music in manuscript.

In 1887 he assisted Lamoureux in the first performances of Wagner's 'Lohengrin' in Paris, and was his substitute in 1897-99, and on many other occasions. On Lamoureux's death in 1899 Chevillard succeeded him in conducting the concerts given under his name and soon earned a high reputation as a conductor of the classics, especially Beethoven, Schumann, Wagner and Liszt. Rolland ('Musiciens d'aujourd'hui') gives him the credit of having first drawn the attention of the Paris public to Russian music, while he complains of Chevillard's lack of sympathy with the native modern school. His manner of conducting was strong, precise and careful, with more communicative warmth than that of his predecessor. He also did much for chamber music by founding the Trio Chevillard-Hayot-Salmon in 1895.

Madame Chevillard, a daughter of Lamoureux, translated Weingartner's pamphlet on the symphony since Beethoven.

## CATALOGUE OF WORKS

### INCIDENTAL MUSIC

Music for E. Schur 's play 'La Roussalka', prod. Paris, Th  tre Nouveau, 23 Mar. 1903.

### ORCHESTRAL WORKS

- Op.  
6. 'Ballade symphonique' (1889).  
7. 'Le Ch ne et le roseau', symph. poem (1890).  
10. 'Fantaisie symphonique' (1893).

### CHAMBER MUSIC

1. Quintet for 2 vns., viola, cello & pf. (1882).  
2. Quartet for vn., viola, cello & pf. (1883).

- Op.*  
3. Trio for vn, cello & pf. (1887).  
16. String Quartet (1897-98)

## ONE INSTRUMENT AND PIANOFORTE

4. 4 Pieces for viola (1887).  
6. Vn. Sonata (1892).  
11. 'Quatre Petites Pièces' for cello (1893).  
15. Cello Sonata (1896).  
18. Allegro for horn (1905).

## PIANOFORTE MUSIC

5. 'Thème et variations' (1888).  
9. 'Étude chromatique' (1893).  
14. 'Impromptu' (1896).  
— 'Feuille d'album' (1904, supp. for 'Musica').  
— 'Thème varié' (1905, for 'Manuscripts-Auto-graphes').

## SONGS

12. 'L'Attente' (Marie de Moriana)  
(1895)  
13. 'Chemins d'amour' (C. Fuster) (also orchestrated).  
(1896)

**CHEVREUILLE, Raymond** (b. Watermael, 17 Nov. 1901).

Belgian composer. He studied under Gabriel Minet and François Rasse at the Brussels Conservatoire and then taught himself. He became professor at the school of music of St.-Josse-ten-Noode and was also engaged for balance and control by the I.N.R. His works include:

- Ballet 'Cendrillon' (1946).  
'Le Fléau', scène lyrique, for chorus & orch. (1930)  
'Le Cantique du soleil' for chorus & orch. (1940).  
'L'Éléphant et le papillon' for chorus & orch. (1941).  
'La Dispute des orgues' for chorus & orch. (1941).  
'Petite Suite' for orch. (1931)  
'Mouvements symphoniques' for orch. (1938).  
Symphony (1939).  
Pf. Concerto (1937).  
Cello Concerto (1940).  
Vn. Concerto (1941).  
Concerto for 3 woodwind insts (1943).  
'Jean et les Amgays' for voice & orch. (1934).  
'Évansons' for voice & orch. (1942).  
'Saisons' for voice & orch. (1943).  
'Symphonie des souvenirs' for voice & orch. (1944)  
6 string Quartets.  
String Trio.  
Pf. Trio.  
Pf. Quartet.  
'Musique liliputienne' for 4 flutes (1942)  
Quartet for cellos (1942).  
2 Songs with stig. 4tes (1933).  
'Ballade' for cello & pf. (1941).  
Sonatina for pf. (1943).  
Suite for pf.

**CHIABRANO, family.** *See* CHABRAN.

**Chiabrera, Gabriele.** *See* Caccini (G., 'Rapimento di Cefalo', lib.). Calzanti ('Dammigella', song). Gagliano (M., prologue for Guarini's 'Idropica'). Monteverdi ('Idropica', lib.; 13 madrigals). Orlandi Santi ('Amore d'Acide di Galatea', lib.).

**Chiari, Pietro.** *See* Tracitta ('Serve rivali', lib.).

**CHIARINI, Pietro** (b. Brescia, c. 1715; d. Cremona, ?).

Italian composer. He lived at Venice at least until 1744 and then became *maestro di*

*cappella* at Cremona. He wrote 5 serious operas, all but one of them for Venice ('Argenide', 1738; 'Achille in Sciro', 1739; 'Statira', 1741; 'Artaserse', Verona, 1742; and 'Mende e Selinunte', 1744) and several intermezzi of which two deserve special mention, as they have often been erroneously attributed to Pergolesi: they are 'Amor fa l'uomo cieco', given with Chiarini's 'Artaserse' at Verona and Genoa in 1742, and 'Il geloso schernito' (Venice, 1746, given with Michieli's serious opera 'Zenobia').

Chiarini was a friend of Goldoni, who wrote for him in 1741 the libretto of 'Statira' and at the same time revised for him the text of Tommaso Mariani's intermezzo 'La contadina astuta', set to music by Pergolesi in 1734. To this revision, called 'Il finto pazzo' and performed with 'Statira', new arias were added, most of which were almost certainly set by Chiarini. Then later in the same year Goldoni undertook a further, more thoroughgoing revision of 'Il finto pazzo', retaining almost all the arias but giving them a new setting of his own invention. This was 'Amor fa l'uomo cieco', the musical content of which consisted of three numbers by Pergolesi, one by Latilla and (probably) four by Chiarini. New recitatives must have been provided by Chiarini, who may thus be regarded as the principal composer. While the music written by Chiarini for 'Amor fa l'uomo cieco' is lost, that of 'Il geloso schernito' is extant in two scores bearing Pergolesi's name (Berlin and Hamburg) and one bearing Chiarini's (Paris Conservatoire). It has been included in Pergolesi's 'Opera Omnia' (1940-1942), revived under his name (1944) and republished separately in vocal score (1947) in New York. That the intermezzo was wrongly attributed to Pergolesi and is in fact Chiarini's work has been proved by Frank Walker.<sup>2</sup>

Apart from the operas and intermezzi Chiarini wrote a Christmas oratorio at Venice (1744). His last known work is a further intermezzo, which was produced at Cremona in 1754 ('La donna dottoressa'). A. L.

**CHIAVETTE** (Ital. = little keys or clefs). A device, now obsolete, by which the notes could be kept within the limits of the stave by moving the clefs up or down. In notating music written for unaccompanied voices there is no obligation to indicate the exact pitch; and as pre-17th-century musicians were restricted as to the number of key-signatures at their disposal, and were, moreover, hampered by a prejudice against transposing the modes, the range of their voice parts was sometimes compelled into an appearance of being abnormally

<sup>1</sup> Libretto printed in Goldoni's 'Opere teatrali', 1794.

<sup>2</sup> *See* M. & L., Vol. XXX, No. 4, Oct. 1949, pp. 312-315

high or low. In order to accommodate these unusual ranges to the eye, and to avoid using leger-lines, the clefs of the voice parts were, if the range were high, moved down from their normal position on the staff; if low, moved up.

The ordinary position of the clefs was called the *chiavi naturali*; and both the acute and grave positions were called the *chiavi trasportati*, but the term *chiavette* (called by Morley in the 'Plaine and Easie Introduction' "the high key") was generally taken to mean the high-range transposition of the clefs.

Transpositions of a fifth could also be made. It should be observed that the transpositions affect *each* voice part, and affect it systematically; a single clef in the acute or grave position, while the others are in their normal places on the staff, merely has reference to the range of that particular voice part.

It has been suggested that the system of the *chiavi* was connected with the plagal or authentic character of the modes or their transpositions, but there is considerable evidence against this theory. Palestrina's 'Missa Papae Marcelli' in mode XIV (plagal), and his 'Missa Dies Sanctificatus' in mode VII (authentic), are both written in the *chiavette*, and though the clef transpositions of a fifth might indicate that the mode was transposed, the clef transpositions — equally common — of a third would be of no use for such a purpose.

There is no reason to suppose that the pitch at which the music was sung corresponded with the pitch of the *chiavi*. Indeed, in many works written in the *chiavette*, for example the Taverner-Tye motet 'O Splendor' (Bodl. MSS Mus. Sch. c. 1-5), this would be practically impossible.

s T. W.

**CHICA.** See CALINDA.

**CHICAGO.** As a centre of musical life Chicago is one of the most important cities in the U.S.A.

**CHICAGO SYMPHONY ORCHESTRA.**—This orchestra, the third oldest symphonic body in the United States, has been in the forefront of the nation's major orchestras since 1891 and made an international reputation for first performances as well as the presentation of classical works. Only the New York Philharmonic and the Boston Symphony Orchestras are older in years of continuous existence.

The orchestra owes its origin to Theodore Thomas, who gave a series of concerts at Chicago when he was still leader of a New York orchestra which made annual tours. The first Thomas concert at Chicago was given in 1869, when the city was only 34 years old as a municipal corporation. Leaving New York in 1890, Thomas in 1891 founded the Chicago Orchestra, so called for 15 years. It then became the Theodore Thomas Orchestra until 1912, when the present name, Chicago Symphony Orchestra, was adopted.

Thomas was conductor until his death on 4 Jan. 1905, and Frederick A. Stock, who was then his assistant, became musical director and conductor. He too died in harness on 20 Oct. 1942. Désiré Defauw followed Stock and served for four seasons. After Defauw's resignation in 1947, Artur Rodzinski was appointed fourth musical director and conductor. At the beginning of the 1947-48 season, moreover, Tauno Hannikainen, formerly conductor of the Helsingfors and Duluth, Minn., orchestras, joined the Chicago Symphony Orchestra as assistant conductor. Like Rodzinski in his position as the fourth musical director and conductor, Hannikainen is the fourth assistant conductor in the orchestra's history. His predecessors were Stock, Eric DeLamarter and Hans Lange.

The orchestra is maintained by the (Chicago) Orchestral Association, a non-profit-making corporation also formed in 1891 and now consisting of 60 members from whom 15 trustees are elected. Officers are nominated by the trustees. The association owns the Orchestra Hall, facing Lake Michigan, in which the home concerts are given. This hall, with a seating capacity of 2,582, was built in 1904 with funds raised by public subscription.

The functions of the Chicago Symphony Orchestra are on a scale not surpassed by those of any similar organization. In addition to Tuesday, Thursday and Friday subscription concerts, it gives two annual series of concerts for young people, popular concerts on Saturday evenings, furnishes Milwaukee, Wis., with a concert season of 10 Monday evenings, makes extensive annual tours to various cities in the United States and Canada, gives weekly programmes over the radio and maintains the Civic Orchestra, a student training-organization for players for its own and other comparable orchestras.

A rich heritage was stored up for the Orchestra by Thomas and Stock during its formative years. It was sometimes said of Thomas that he made the works of modern European composers known at Chicago before they were known in Europe. Stock followed the Thomas policy and also presented many new works by American composers. He originated the concerts for young people in 1920 and in the same

year organized the Civic Orchestra, both then being innovations in the musical world.

The Civic Orchestra, the only institution of its kind maintained by a major orchestra, gives only three or four public concerts each season, but has trained players who are now members of symphony or comparable orchestras in cities throughout the country. Upwards of 60 members of the present Chicago Symphony Orchestra came from its ranks, including John Weicher, the Orchestra's leader.

An immense musical library, enlarged from one assembled by Thomas before he founded the Orchestra and added to year by year, is owned by the Orchestral Association.

On taking over the direction of the Orchestra, Rodzinski immediately completed plans for symphony seasons interspersed with opera on a broader scale, while conforming with the previous policy of noted guest conductors and distinguished soloists, both vocal and instrumental. A youthful soloist, selected by audition, is a feature of most of the concerts for young people.

Each summer the Orchestra, under guest conductors, fills a six-weeks' engagement known as the Ravinia Festival, at Ravinia Park, a semi-outdoor pavilion north of Chicago, usually starting about 1 July and sponsored by the Ravinia Association founded in 1936. The Orchestra has a large pension fund built up by benefit concerts and gifts.

**CHICAGO CIVIC OPERA COMPANY.**—Formed in 1910 as the Chicago Grand Opera Company, chiefly from the forces previously drawn together by Oscar Hammerstein, this organization was given its present name in 1910. Andreas Dippel was its first manager (1910-1913), with Cleofonte Campanini as chief conductor. Campanini carried on the management until 1915, when, the original organization having become bankrupt, a new one was formed with the name of Chicago Opera Association, Campanini remaining as general director and with Herbert M. Johnson as business manager. Until his death, in 1919, Campanini was the most influential factor in the enterprise. In 1920 he was succeeded as executive director by Herbert M. Johnson, with Gino Marinuzzi as artistic director. Mary Garden was general director for the season 1922-23. Giorgio Polacco followed as artistic director with Herbert M. Johnson as manager. Except for a break in 1914-15, regular seasons have been presented at Chicago and performances have been given in other cities. The Company owes much to the benefactions of Mr. and Mrs. Harold McCormick. Its seasons have included a large number of new works which have become celebrated.

**THE CHICAGO NORTH SHORE FESTIVAL ASSOCIATION** of Evanston, Illinois, was organized in 1908 to consolidate work previously

undertaken by the musical clubs of Evanston and Ravenswood and the school of music in North Western University. It gives a series annually of excellent concerts, usually six in number, in which choral music is prominent. A festival choir, varying in size from 600 to 1100 voices, and a children's choir of 1500 voices drawn from schools are among the forces conducted by P. C. Lutkin. Many large choral works, including modern French, English and American ones, have been given. A competition for a prize of 1000 dollars for the best symphonic composition by an American composer is held annually by the Association.

**THE CHICAGO MUSICAL UNION**, though not the first, was perhaps the most important of the early choral societies of Chicago. It began its activities with a performance of 'The Creation' in 1857. It was first conducted by C. M. Cady; then, from 1860, by A. L. Coe, and in 1863 by Hans Balatka. It flourished till 1865.

**THE APOLLO MUSICAL CLUB** was organized in 1872 through the efforts of Silas G. Pratt and George P. Upton. Originally a male choir after the model of the Apollo Club of Boston, it was expanded into a mixed choir in 1875. Its early conductors were A. W. Dohn (1872-74) and Carl Bernstein (1874-75), but its development to a position of leadership is primarily due to its third conductor, William L. Tomlins (1875-98) and to Harrison M. Wild, who succeeded him. Under these the highly efficient choir of some 250 singers has given a large repertory of the greater choral works. Among many others it gave the first performance in America of Elgar's 'Dream of Gerontius' (1903).

**THE CHICAGO MENDELSSOHN CLUB**, founded in 1894, is a male-voice choir directed by Harrison Wild.

**THE CIVIC MUSIC ASSOCIATION OF CHICAGO** was founded in 1913 with the object of encouraging the study and understanding of music throughout the community. It has accomplished excellent work in providing music for the people by giving concerts in the small parks, playgrounds and other civic centres of the city; but its most notable accomplishment has been the organization in 1920 of the Civic Orchestra, discussed above. The Association has been active, too, in the training of children's choruses and in the fostering of community singing.

**THE CHICAGO MUSICAL COLLEGE** was founded in 1867 by Florenz Ziegfeld and was incorporated in 1877. Ziegfeld remained its active head for nearly 50 years. In 1916 Felix Borowski became president and Carl D. Kinsey manager. The teaching staff numbers over 100 and the annual enrolment of students is over 4000. The college occupies its own building at 64 E. Van Buren Street; its

faculty has always been notable for ability, and from time to time guest-instructors have been engaged. (See also LIBRARIES)

THE AMERICAN CONSERVATORY was founded in 1886 by John J. Hattstaedt.

**CHICKERING.** The firm of Chickering & Sons claims to be the oldest house of pianoforte makers in the U.S.A. still existing and the first to have obtained any prominence. According to information supplied by Chickering, the first pianoforte made in America was upon an English model, probably one of Broadwood's. It was made by Benjamin Crehorne, of Milton, U.S.A., before the year 1803. From that year the construction of American pianofortes was persistently carried on, but without any material development, until a Scotsman named James Stewart, afterwards known in London through his connection with Collard & Collard, gave an impetus to the American home manufacture. Stewart induced Jonas Chickering (1798-1853) to join him, but two years later Stewart returned to Europe, when Chickering was left upon his own account.

The year given as that of the actual establishment of the Chickering firm is 1823. Two years after this, Alpheus Babcock, who had served his time with Crehorne, contrived an iron frame for a square pianoforte, with the intention to compensate for changes of temperature affecting the strings, for which he took out a patent. Whether this was suggested by an improvement with the same object patented in London in 1820 by James Thom and William Allen or was an independent idea is not known, but Babcock's plan met with no immediate success. However, this attempt at compensation laid the foundation of the modern equipoise to the tension in America as Allen's did in England. Jonas Chickering produced a square pianoforte with an iron frame complete, except the wrest-pin block, in 1837. From 1840 this principle was fostered by the house of Chickering and applied to grand pianofortes as well as square, and it has since been generally adopted everywhere. In 1908 the firm was absorbed into the American Pianoforte Company.

A. J. H.

**CHIERISY, ?** (b. ?; d. ?).

French (?) 15th-century composer. His 'Patrem omnipotentem', preserved at Oxford (Bodl. Can. misc. 213) is published by van den Borren (see BIBL.). It is remarkable as a liturgical composition set in two parts throughout. Its "Amen" is a canon in three parts.

E. D. (ii).

BIBL.—BORREN, C. VAN DEN, 'Polyphonia Sacra' (Nashdom Abbey, 1932).

DANNEMANN, E., 'Die spätgotische Musiktradition in Frankreich und Burgund vor dem Auftreten Dufays' (Strasbourg, 1936).

**CHIH CHENG, Lao.** See CHINESE MUSIC (piece quoted), p. 246.

**CHILCOT, Thomas** (b. ?; d. Bath, Nov 1766).

English organist and composer. He was organist of the Abbey Church at Bath from 1733 until his death and was the first master of Thomas Linley. He produced 'Twelve English Songs, the words by Shakespeare and other celebrated poets' (1745), two sets of harpsichord concertos (1756) and other works.

W. H. H.

**Child, Harold.** See Vaughan Williams ('Hugh the Drover', lib.; 1 part song).

**CHILD, William** (b. Bristol, 1606, d. Windsor, 23 Mar. 1697).

English organist and composer. He received his musical education as a chorister of Bristol Cathedral under Elway Bevin, the organist. He is usually said to have taken the degree of B Mus. at Oxford in 1631, but the date on his exercise (see below) is 1639. In 1632 he was appointed one of the organists of St. George's Chapel, Windsor, jointly with Nathaniel Giles, in place of John Mundy, and in the same year one of the organists of the Chapel Royal in London.

In 1643, when the whole establishment was expelled, Child is said to have retired to a small farm and to have devoted himself to composition, the anthem 'O Lord, grant the King a long life' dating from this time. On the Restoration, probably in its very year, 1660, he was appointed Gentleman of the Chapel Royal and one of the king's private musicians. He was present at Charles II's coronation on 23 Apr. 1661. On 8 July 1663 he proceeded D.Mus. at Oxford, his exercise being an anthem which was performed in St. Mary's Church on 13 July. He died at Windsor in the ninety-first year of his age and was interred in St. George's Chapel. His gravestone is near the present entrance to the organ loft.<sup>1</sup>

Child published in 1639, in separate parts, engraved on small oblong copper plates, a work entitled

The first set of Psalmes of in voyces, fitt for private chappells, or other private meetings with a continuall Base, either for the Organ or Theorbo, newly composed after the Italian way.

It consists of twenty short anthems for 2 trebles and a bass, the words selected from the Psalms. This work was reprinted with the same title in 1650 and was again reproduced, from the same plates, in 1656, but with the title changed to

Choise Musick to the Psalmes of David for Three Voices, with a Continuall Base either for the Organ or Theorbo.

His other published works consist of 'Divine Anthems and vocal compositions to several pieces of Poetry', Catches in Hilton's 'Catch

<sup>1</sup> The inscription on this stone is given in West's 'Cathedral Organists'.

that Catch can' (1652) and Playford's 'Musical Companion' (1672) and some compositions in 'Court Ayres'. There is also a catch by Child, 'Let poets ne'er puzzle' (B.M. Add. MSS 29291/9b), which is described as "an epitaph on Ralph Amner", a Dance Suite in E minor for 3 viols and consisting of Prelude, Pavan, Air and Courante (Add. MSS 31423), and another for 3 viols with a continuo part for the harpsichord, written when he was organist of Windsor and including Allemande, Courante, Air and Sarabande (Add. MSS 18940-4).

Child gave £20 towards building the Town Hall at Windsor and bequeathed £50 to the corporation to be applied in charitable purposes. His portrait, painted in 1663 shortly after taking his doctor's degree, was presented by him to the Music School at Oxford. An amusing story of a bargain made by Child is thus told in the Chapter Records:

Dr. Child having been organist for some years to the king's chapel in K. Ch. ands time had great arrears of his salary due to him, to the value of about £500, which he and some of our canons discoursing of, Dr. C. sited [sic], and said he would be glad if anybody would give him £5 and some bottles of wine for; which the canons accepted of, and accordingly had articles made with hand and seal. After thus King James a coming to the crown, paid off his Brs. arrears; wch. much affecting Dr. Child, and he repining at, the canons generously released his bargain, on condition of his paving the body of the choir wth. marble, wch. was accordingly done, as is commemorated on his gravestone.

The 20 Psalms published in 1639 (also contained in Add. MSS 34289) are as follows:

'Blessed is the man.'  
'Heare me, when I call'  
'Helpe me, Lord.'  
'How long wilt thou forget me.'  
'I will give thanks.'  
'In the Lord put I my trust.'  
'Lord, how are they increased.'  
'Lord, who shall dwell.'  
'O Lord, my God.'  
'O Lord, our Governour.'  
'O Lord, rebuke me not.'  
'O that the salvation were given.'  
'O that my wayes.'  
'Praise the Lord, O my soule.'  
'Ponder my words, O Lord.'  
'Preserve me, O God.'  
'Save me, O God.'  
'The fooles hath said'  
'Why doth the Heathen.'  
'Why standest thou so far off'

Besides these, the following compositions by Child exist in various manuscripts:

#### SERVICES, ETC.

Whole Service in D major ("Sharp Service") (including V., T.D., J., K., C., M., N.D.). P.H.; Add. MSS 30478-9 (Tenor cantors part only); Harl. 7338 (score).

Whole Service in C major (V., Bcte, J., C., Sanctus, Gloria, M., N.D., Cantate, Misereatur). Add. MSS 17784/176b (Bass part only).

Whole Service in A minor. Add. MSS 17784/168 (Bass part only).

Whole Service in E♭ major. Add. MSS 17784/148 (Bass part only).

Whole Service "in E sharpe" major. Add. MSS 17784/144b (Bass part only).

Whole Service "in C fa ut" major (T.D., J., K., C., Sanctus, Cantate, Misereatur). Add. MSS 17784/141 (Bass part only).

Whole Service "in F fa ut" major (T.D., J., K., C., Cantate, Misereatur). Add. MSS 30933/42 (score); Add. MSS 31404/10b (organ score).

Whole Verse Service in E major Harl. 7338/76-85 (score).

Evening Service in C minor, "Flat service for Verses" (M., N.D.). Ch. Ch. 1227 (organ score); Ch. Ch. 1220-4 (Alto, Tenor and Bass parts only).

Service in E minor (T.D., J., K., C., M., N.D.). Ch. Ch. 523, 1002 (scores).

Second Service in G major (Bcte, J., K., C., M., N.D., Cantate, Deus Misereatur). Ch. Ch. 1002 (score).

Verse Evening Service in A major Add. MSS 17784/163 (Bass part only); Harl. 7338 (score).

Verse Evening Service in B♭ major. Add. MSS 17784/162 (Bass part only); Harl. 7338 (score).

Verse Evening Service "in E la mi" major. Add. MSS 30933/26 (score).

Verse Evening Service in D minor. Harl. 7338/42 (score).

Verse Evening Service in A minor (M., N.D.) Ch. Ch. 1227 (organ score), Ch. Ch. 1012 (Bass part only).

Morning and Evening Service in F major (T.D., J., Sanctus, Cantate, Misereatur). Harl. 7338/30b (score).

Morning and Evening Service, "in Gamut". Add. MSS 31404/38b (organ score).

Evening Service in F major. Harl. 7338/87-89b (score).

"Flat Service in C fa ut" major. Add. MSS 17784/161 (Bass part only).

Short Service "in D sol re" major (J., Sanctus, Gloria). Add. MSS 17784/160 (Bass part only); Add. MSS 30933/26 (score).

Kyrie and Creed "for Morley's Service". Ch. Ch. 1220-4 (Alto, Tenor and Bass parts only).

Sanctus in B♭ major. Add. MSS 6324/149b (score).

Magnificat in Gamut. Add. MSS 30933/93 (score).

Sanctus and Gloria. PH.

Latin Te Deum and Jubilate ("made for the Right wor. Dr. Cosin") PH.

#### ANTHEMS

'Allmighty God, which hast knitt.' Harl. 4142/1b (words only).

'Behold how good and joyfull.' Add. MSS 17784/19b (Bass part only).

'Blessed be.' Durh.; Add. MSS 17784/36b (Bass part only).

'Bow down thine ear.' PH.

'Give the King thy judgments.' PH.; Add. MSS 17784/23b (Bass part only).

'Glory be to God on high' (a 8). Add. MSS 30478-9 (Tenor part only); Add. MSS 33293/112 (score).

'Hear me, O God.' Tenb. O.B./250.

'Heare, O my people.' Durh., PH.

'Holbe, Holbe, Holbe' Harl. 4142/9 (words only).

'I am the resurrection.' PH.

'If the Lord himself had not been on our side.' "An anthem of thanksgiving to God for having put an end to the great Rebellion in 1641 by the restoration of the Royal family." Harl. 7338 (organ score); Add. MSS 17784/31b (Bass part only).

'I heard a voice.' St. G. Ch.

'I will be glad and rejoice' (verse anthem). Add. MSS 17784/11b (Bass part only).

'Let God arise' (verse anthem). Add. MSS 17784/20b (Bass part only).

'Lord, who shall dwell' (verse anthem). Ch. Ch. 1220-4 (Alto, Tenor and Bass parts only).

'My Heart is fixed' (verse anthem). Add. MSS 17784/53b (Bass part only).

'My soule trulie waiteth.' Harl. 4142/15b (words only).

'O Almighty God' (collect for All Saints' Day). PH.

'O clap your hands.' Durh.; Add. MSS 30478-9 (Tenor part only); Add. MSS 17784/36b (Bass part only).

'O clap your hands' (verse anthem). Add. MSS 17784/32b (Bass part only).

'O God, wherefore art thou absent.' PH.

'O how amiable' (verse anthem). Add. MSS 17784/54b (Bass part only).

'O let my mouth be filled.' PH.; Add. MSS 17784/27 (Bass part only).

'O Lord God, the Heathen are come into thine inheritance' (a 5) ("composed in the year 1644 on the occasion of the abolishing The Common Prayer

- and overthrowing the constitution both in Church and State"). Harl. 7338 (score); Add. MSS 17784/61 (Bass part only).
- \* O Lord, grant the King a long life' ('at the Restauration'). Harl. 7338 (score); Add. MSS 17784/33b (Bass part only); Durh. G 17/103
- \* O Lord, grant the King a long life' (verse anthem). Add. MSS 17784/50b (Bass part only); Durh. C 2/198
- \* O Lord, how long.' Add. MSS 17784/61 (Bass part only).
- \* O Lord, thou hast searched me out' PH. 37/G 9 (Bass cantoris part only).
- \* O praise the Lord of Heaven.' Tenb. O.B., Add. MSS 17784/28b (Bass part only).
- \* O praise yee the Lord' (a 5) ('... upon the Restauration of the Church and Royal Family in 1660'). Harl. 7338 (score).
- \* O pray for the peace.' Durh., Add. MSS 17784/32 (Bass part only).
- \* O sing unto the Lord' Add. MSS 17784/21b (Bass part only); Add. MSS 30478-9 (Tenor part only).
- \* O worship the Lord' Harl. 4142/21b (words only)
- \* Praise the Lord, O my soul' (full anthem). Harl. 7338 (score); Add. MSS 17784/32b (Bass part only)
- \* Praise the Lord, O my soul' (verse anthem). Add. MSS 17784/56 (Bass part only).
- \* Sing unto God, O ye kingdoms.' Harl. 4142/25 (words only).
- \* Sing we merrily' (a 8) ('... being part of his Exercise at Oxford for the Batchelour's degree in Musick in the year 1639') PH., Harl. 7338 (score), Add. MSS 17784/29b (2 parts only).
- \* The Earth is the Lord's' (for 3 basses). Add. MSS 17820/82 (score); Add. MSS 17784/16b (Bass part only).
- \* The King shall rejoyce.' Add. MSS 17784/51b (Bass part only)
- \* The Lord is onlie my support.' Add. MSS 17784/27b (Bass part only)
- \* The Spirit of Grace grant us.' Harl. 4142/28b (words only).
- \* Thou art my King, O God.' Add. MSS 30478-9 (Tenor part only); Add. MSS 17784/22b (Bass part only).
- \* Turn thou us.' PH.; Add. MSS 17784/53 (Bass part only).
- \* What shall I render.' PH.; Harl. 4142/31b (words only).
- \* Ye sons of Sion' (Xmas hymn a 2). Ch. Ch. 365 (score).

## MOTET

- \* O bone Jesu' (a 4). Add. MSS 33235/100b (score); Ch. Ch. 14 (score).

## CHANTS

- Dr. Child's 'Windsor Chant' in foure parts for the Psalms of David. Add. MSS 17784/177b (Bass part only).
- Chants also in Add. MSS 17841/45 and Add. MSS 37027.

W. H. H. & J. M. (ii).

## CHILDREN OF DON, THE (Opera).

See HOLBROOKE.

**CHILDREN'S CONCERTS.** Orchestral concerts for children were introduced into England in 1922 by Robert (now Sir Robert) Mayer, a man of business, who, together with his wife (Dorothy Moulton), financed the scheme as an experiment in musical education. Similar concerts in America had long passed out of the stage of experiment, and Mr. Mayer acknowledged his indebtedness to the American example by inviting Dr. Walter Damrosch to conduct the second of the three concerts of his initial season held in London, the first being conducted by Dr. (now Sir) Adrian Boult. The new departure was to give a pro-

gramme lasting only about 1½ hours, of first-rate though not necessarily simple works lending themselves to musical explanation, which the conductor offered to the young audience during the various items.

The Mayer concerts were started at the Central Hall, Westminster, and were gradually extended to additional centres in greater London as well as principal towns in Yorkshire and at Newcastle-on-Tyne. By 1938 twenty-seven centres had been formed, and the movement had reached over a million boys and girls. This expansion has been principally due to the efforts and financial support of the founders. Sir Robert Mayer received his knighthood in 1939.

From 1923 until war broke out Dr. (now Sir) Malcolm Sargent became prominently associated with the movement, his particularly successful way of talking to the children being most helpful to the cause. The expansion brought in other well-known conductors, so that by 1938-39 seven conductors with six different orchestras were engaged. Meanwhile similar concerts were organized by Birmingham on an impressive scale and by other municipalities. After being suspended during the second world war the concerts were resumed in 1945 by Sir Robert and Lady Mayer, who also edit for their youthful audiences the periodical 'Crescendo' and hold both teachers' and young people's conferences.

Stimulated in part by their example and in part by that general increase in musical interest which was so marked a feature of the war years, local authorities in different parts of the country, headed by the L.G.C., Middlesex, Birmingham, Bournemouth, Middlesbrough, Nottingham and many others, now provide concerts in schools or during school hours, with free admission for school children. Similar concerts were also started in London in 1943 by Ernest Read, the pioneer of the Senior and Junior London Orchestras. While the Mayer, Read and other concerts are orchestral and given in public, many others are on a smaller scale and given in schools. The latest available statistics of children's concerts given during one year give the following picture:

Full orchestral	281
Chamber and similar orchestras	521
Chamber-music combinations	2001.

To co-ordinate these individual and public efforts, an Advisory Council for the Encouragement of Music for the Young was formed in conjunction with the Ministry of Education, under the chairmanship of Sir Robert Mayer and the vice-chairmanship of the Chief Music Inspector to the Ministry. It is the aim of those concerned to develop not only intelligent listening, but active

participation in the making of music, and this attack on our modern malady of passivity may prove one of the most valuable contributions the movement has to make. The fruits of an early introduction to the profoundest joys which music has to offer are already evident in many members of the present adult generation, and will be more so as the movement progresses still further.

R. D

**CHILE.** The following are the chief musical institutions in Chile, all at Santiago.

**FACULTAD DE BELLAS ARTES.**—Founded on 31 Dec. 1929, as a result of the law which reformed the Universidad de Chile, giving it autonomy and incorporating the study of the arts with university degrees. The Facultad de Bellas Artes replaced the old Dirección General de Educación Artística which was dependent on the Ministerio de Educación. In this way the control of Chilean artistic activities passed to the autonomous University, and although still coming officially under the State, became technically and administratively independent. These circumstances have brought about a rapid and remarkable development of the arts in the Chilean republic, thanks to the self-governing status of the University. The Facultad de Bellas Artes includes music and the plastic arts, and directs the schools of art and music as well as the institutes for spreading the knowledge of these arts.

The Facultad is composed of an assembly of those professors who hold official university professorships in the various dependent schools, and they are obliged by law to elect a Dean by secret vote every three years to represent them on the governing council of the University. There have been the following Deans so far: Ricardo Latcham (1930-31), Armando Carvajal (1931-32) and Domingo Santa Cruz (1932-33-36-39-42-45), who is also the present Dean (1954). Further to the Dean, a Secretary from among the professors is also elected for a period of three years.

Dependent on the Facultad de Bellas Artes are: the Conservatorio Nacional de Música with its two sections, one for the study of musicology and composition and the other for instrumental and vocal studies; the Instituto de Investigaciones Musicales; and the Instituto de Extensión Musical which organizes the symphony concerts, chamber music concerts, ballet, etc., as a branch of its musical activities. In its branch of the plastic arts are: the Escuela de Bellas Artes; the Escuela de Artes Aplicadas; and the Instituto de Extensión de Artes Plásticas which organizes the exhibitions of the Salón Oficial and other similar activities.

The Facultad de Bellas Artes, like many other analogous corporations of the University was divided in 1948 into two faculties: Ciencias y Artes Plásticas and Ciencias y Artes

Musicales. These carry on separately the same activities that were in the hands of the corresponding sections of the united Facultad.

**INSTITUTO DE INVESTIGACIONES MUSICALES.** (See Facultad de Bellas Artes and Facultad de Ciencias y Artes Musicales).—This organization, founded in Jan 1947, has as its object the development of musical investigation in all its fields: musicology, musical pedagogy, research into musical history and folk music, and to promote the study and performance of little-known music, etc. The Instituto is directed by the musicologist Vicente Salas Viu and is dependent on the Facultad de Ciencias y Artes Musicales of the Universidad de Chile. Address: Agustinas 620, Santiago de Chile.

**ESCUELA DE DANZAS.** (See Instituto de Extensión Musical).—Founded in 1941 by the Instituto de Extensión of the Universidad de Chile with the object of promoting the study of dancing and choreography. The Escuela de Danzas was organized by three ex-members of the Ballet Jooss: Ernst Uthoff as Director, and Lola Botka and Rudolph Pescht as instructors. The school has formed a ballet whose best successes so far have been 'Coppélia', 'Drosselbart' and 'Josephslegende'.

**ASOCIACIÓN NACIONAL DE COMPOSITORES, CHILE.**—Founded at Santiago on 8 Aug 1936, with the object of "drawing all Chilean composers together, stimulating their artistic production and making known their works, and to contribute to the development of musical interchange with other countries especially those of the Americas". The composers who took part in the creation of the Asociación formed the musical vanguard of Chile, and many of them had taken part either directly or indirectly in the reform of the Conservatorio Nacional de Música in 1928. The first directorate was composed of Pedro Humberto Allende (President), Domingo Santa Cruz (Secretary) and Samuel Negrete (Treasurer). These were followed by Carlos Isamitt, René Amengual and Alfonso Letelier, who remained till 1947. Since then the President has been Alfonso Leng, the Secretary Juan Orrego-Salas, the Treasurer Pedro Núñez, and the directors are Enrique Soro and Domingo Santa Cruz. At the end of 1947 the Asociación Nacional de Compositores, Chile, was recognized as a branch of the I.S.C.M., and its members were invited to participate in the Festival of the following year at Amsterdam.

**ASOCIACIÓN DE EDUCACIÓN MUSICAL.**—Founded at Santiago in 1945 as a branch of the "Music Educators' National Conferences". The principal purpose of the Chilean Asociación is the study of problems inherent in musical education with the object of finding a national solution for them. It is an independent organization which works for the improvement of artistic culture in general and

for a greater spiritual solidarity through the sharing of teaching experiences and ideas. It unites practically the whole of the music-teaching field in the country, and in its directorate are to be found representatives of the principal branches of education in which musical activities participate: kindergartens; primary schools, both state and private; secondary schools, both state and private; teacher's training-colleges; university colleges (Conservatorio Nacional de Música), private conservatories; popular schools for artistic education; technical and administrative institutes related to musical activities; private instrumental teachers, composers; critics and journalists, etc. It publishes, as an organ for interchange, the monthly informative pedagogical bulletin 'Educación Musical'. It maintains regional committees for musical activities in all the main provincial centres, and has working contacts with institutes and professors in all the neighbouring countries (Peru, Bolivia, Uruguay, and Argentina).

**INSTITUTO DE EXTENSIÓN MUSICAL**—Established by law No 6696 of the Republic of Chile on 2 Oct. 1940, this State Institute, dependent on the Universidad de Chile, controls all the nationalized musical activities of the country. The Instituto is financed by a portion of the general entertainment tax, and is destined to maintain regular symphony concerts, chamber music, choirs, ballet and opera, as well as to encourage music-making and composition all over the country. The vast programme assigned by law to the Instituto has been carried out to a great extent during the first eight years of its existence. On being established the Instituto founded the Orquesta Sinfónica de Chile (conductors Armando Carvajal and Victor Tevah) after public auditions throughout the country. In 1941 it founded the Escuela de Danza and its Ballet with professors brought to Chile from the Ballet Jooss; and soon after were created the Cuarteto Chile and the Sección Música de Cámara. Together with these it established a Departamento para la Extensión Musical Educacional y Popular. It also founded the 'Revista Musical Chilena' (1945), and in 1947 started the encouragement of musical composition by a system of prizes for works and annual festivals of Chilean music.

The law which established the Instituto in 1940 made it a self-governing corporation in spite of its having been generated within the Universidad de Chile. A further law (26 Aug. 1942) incorporated it in the Universidad del Estado and it became one of the services of the Facultad de Bellas Artes, and now of the Facultad de Ciencias y Artes Musicales.

The work which the Instituto de Extensión Musical has achieved so far constitutes a very important step in the musical history of Chile,

not only because its musical activities have received the generous support of the state, but also because its government was placed in the hands of the musicians themselves, and with sufficient independence to enable them to undertake a systematic cultural work without having to conform to the imperative exigencies of commercial concert agencies. At the head of the Instituto is a directive committee composed of eleven musicians, of whom six are composers. The work of the Instituto consists in organizing, each year, the complete season of symphony concerts (May-Aug.), the opera season (Sept.-Oct.), the Chilean music festivals and popular concerts, both indoors and out (Nov.-Jan.) and provincial tours (Mar.-Apr.). During these seasons the symphonic activities include chamber music, ballet and choral concerts, engaging such outside bodies as the Coro Polifónico de Concepción (conductor Arturo Medina). The Instituto has engaged such conductors as Fritz Busch, Erich Kleiber, Eugene Ormandy, Hans Kindler, Juan José Castro, Jascha Horenstein, Hermann Scherchen, Paul Paray, Gregor Fitelberg, Jean Martmon, etc.; such composers as Oscar Lorenzo Fernández, Aaron Copland, Manuel Ponce, Heitor Villalobos, Camargo Guarnieri, Héctor Tosar, etc., such soloists as the Chileans Claudio Arrau, Rosita Renard, Herminia Raccagni, Hugo Fernández, and others like Segovia, Menuhin, Uninsky, Malcuszensky, Adolfo and Ricardo Odnoposoff, Bernard Michelin, etc. The present director of the Instituto is Domingo Santa Cruz.

**SOCIEDAD BACH**—This started as a choral society founded by a group of students from the various faculties of the Universidad de Chile in 1918 (Domingo Santa Cruz, Guillermo Echenique, Luis Vergara, Ricardo Canales, Carlos Humeres, José Ovalle and Wenceslao Vial), who dedicated themselves to the performance of a *cappella* polyphonic music. The Sociedad Bach was converted, in 1923, into a large body which formed a mixed choir, started the music magazine 'Marsyas' and opened a conservatory. It then launched out on a large-scale plan designed to transform the musical atmosphere in Chile by means of polemics in the press, representations to the authorities and concerts of all sorts dedicated to old choral music, the works by J. S. Bach and contemporary music. As the Sociedad Bach started its activities at a moment when politically, socially and culturally Chile was ripe for all kinds of reforms, its influence increased rapidly until soon it found itself established at the head of Chilean musical life, having left even the official authorities behind. The Sociedad Bach gave first performances in Chile of a large number of Bach's works, performances which, like that on 12 Dec. 1925

of the 'Christmas Oratorio', had an extraordinary effect on the public. The Sociedad Bach not only made known medieval music and the polyphony of the Renaissance, but its lectures, courses and publications mark the real beginning, in Chile, of the study of musical history as well as the appreciation of modern music. The Sociedad lasted till 1933, when it was considered that it had fulfilled its purpose and that the State should take over its work. It was thanks to the proposals made by the Sociedad Bach that the study of the arts was incorporated in the University, that the State decided to encourage and support music, that the Conservatorio was completely reformed in 1928 when the directors of the Sociedad took charge of it, that the Facultad de Bellas Artes was founded in 1929 and that the Asociación Nacional de Concursos Sinfónicos was founded, in which, in its turn, originated the Instituto de Extensión Musical. The founder and prime mover of the Sociedad Bach was Domingo Santa Cruz.

**CONSERVATORIO NACIONAL DE MÚSICA.**—This was founded by the President of the Republic of Chile, Manuel Bulnes, on 26 Oct. 1849. Its first director was Adolphe Desjardins. This school of music, at first attached to the Cofradía del Santo Sepulcro, was intended to train instrumentalists and singers both for the church and for the stage. The Conservatorio rapidly took shape under the direction of one of the outstanding musicians of the early Chilean Republic, José Zapiola, an instrumentalist, composer and fearless musical critic of his time. During the 19th century the Conservatorio was mainly a school for instrumentalists, with elocution classes for those wishing to take up a theatrical career. It went through many vicissitudes and had many directors, among whom those worthy to be remembered are Moisés Alcalde Spano and Johann Harthan. In 1892 the educational reforms inspired by the Chilean historian Diego Barros Arana resulted in the conversion of the Conservatorio into an institute with university status. Now the best Chilean musicians, together with foreigners — mostly Italians who had come to Chile with opera companies — combined to form an instrumental tradition of great value to the country. During the present century the Conservatorio has been directed by such eminent Chilean musicians as Celerino Pereira, Enrique Soro (1918–29), Armando Carvajal (1928–42), Samuel Negrete (acting 1940, actual 1942–47) and the present director René Amengual (1954). The Conservatorio Nacional de Música was dependent on the Ministry of Education till 1929 when, as one of the university schools for higher education, it passed under the Facultad de Bellas Artes of the Universidad de Chile. At present it comes

under the Facultad de Ciencias y Artes Musicales. Most of Chile's leading musicians have passed through the Conservatorio.

**ASOCIACIÓN NACIONAL DE CONCIERTOS SINFÓNICOS.**—Founded in 1931 as an entity, collateral to the Universidad de Chile, destined to the work of providing Santiago with symphony concerts, the Asociación organized the seasons from 1931 to 1938. It formed its own orchestra, most of whose players later became members of the Orquesta Sinfónica de Chile, once the Asociación had become the Instituto de Extensión Musical. The Asociación's concerts were conducted by Armando Carvajal, who introduced a large number of works of all kinds and periods — as well as Chilean music — to an ever-increasing public. Theo Buchwald, Victor Tevah and others also conducted concerts. The Asociación was dissolved in 1938 when the Instituto de Extensión Musical came into being. N. F.

**BIBL.**—PEREIRA SALAS, EUGENIO, 'Las orígenes del arte musical en Chile' (Santiago, 1941).

SALAS VIV, VICENTE, 'La creación musical en Chile' (Santiago, 1951).

**CHILESOTTI, Oscar** (b. Bassano, 12 July 1848; d. Bassano, 20 June 1916).

Italian musical antiquary. He was at the University of Padua, where he graduated in law, subsequently attaining high rank as an amateur cellist and flute player, and a musical theorist. His life was devoted to the revival of old music, and he edited a valuable 'Biblioteca di rarità musicali', containing:

- Vol.*  
 I. Dances from books of the 16th century.  
 II. Pichi's 'Balli d'arpicordo' (1621).  
 III. G. Stefani's 'Affetti amorosi' (1624).  
 IV. Marcello's 'Arianna'.  
 V. Orazio Vecchi's 'Arie, canzonette e balli' (1590).  
 VI. G. Frescobaldi's 'Partite'.  
 VII. J. B. Besard's 'Arie "de court" del Thesaurus Harmonicus'.  
 VIII. 'Musica del passato', lute dances, 16th–18th centuries.  
 IX. 'Madrigali, . . . del cinquecento dalle opere di J. B. Besard'.

Mention must also be made of his edition (1881) of L. Roncalli's 'Capricci armonici' (1692), of his translations of various collections of lute music from the tablature and of such historical and critical work as 'I nostri maestri del passato' (1882); 'Di G. B. Besardo . . .' (1886); 'Sulla lettera critica di B. Marcello contro A. Lotti' (1885); 'Sulla melodia popolare nel secolo xvi'; and some Italian translations from Schopenhauer. He was a regular contributor to the 'Gazzetta musicale di Milano'.

J. A. F.-M.

**CHILPÉRIC** (Opera). See HERVÉ.

**CHILSTON, ?** (b. ?; d. ?).

English 15th-century theorist. He was the author of a short treatise "of musical proportions and of there naturis and denominations", written in English about the middle of the 15th century and included in the famous

manuscript from the monastery of the Holy Cross at Waltham, which once belonged to Thomas Tallis and is now among the treasures of the B.M.<sup>1</sup>

Nearly the whole of this treatise is printed in Hawkins's 'History of Music', II, 229. The writer, in common with all medieval theorists, treats the science of music as a branch of applied mathematics:

Numbers may be referred to length and breadth of earth or of other measure that belongeth to Geometry, or they may be considered as they be number in themselves and so they belong to Arithmetic, or they may be referred to length and shortness and measure of musical instruments, the which cause highness and lowness of voice, and so they belong to harmony and to craft of music.

Harmonic progression is illustrated by the ratio of the fifth and the octave:

Diapason, *i.e.* proportio dupla is the most perfect accord after the unison. Between the extremities of the Diapason, *sc.* the treble and the tenor, will be given a middle that is called the Mean, the which is called Diapente, *i.e.* sesquialtera to the tenor and Diatessaron, *i.e.* sesquitercia to the treble. Therefore that manner of middle is called Medietas Armonica. Sequitur exemplum: a pipe of six foot long with his competent breadth is a tenor in diapason to a pipe of 3 foot with his competent breadth: then is a pipe of 4 foot the mean to them twain, diatessaron to the one and diapente to the other, as thou shalt find more plainly in the making of the Monochord that is called the Instrument of Plain-song

Immediately preceding this treatise in the manuscript is:

a lull tretise according to the first tretise of the sight of the Descant, and also for the sight of Counter and for the sight of the Countertenor and of Faburdon.

The first treatise referred to is that of Lionel Power, which is fully described by Burney and Hawkins. We are left in doubt whether the supplementary treatise is the work of Power or of Chilton. The earlier portion of it appears in almost identical language in MS Bodl. 842, where it is headed "Opinio Ricardi Cutelle de London". J. F. R. S.

See also Descant. Faburdon.

**CHIME.** See CHANGE-RINGING.

**CHIME-BELLS** (Lat. *cymbala*; Old Eng. *cymbals*, *chymme-bells*, *clokarde*). Small bells, either of the usual shape or like hemispherical gongs, arranged in order and suspended in a frame over the performer's head or placed on a stand in front of him. They were sounded by being struck with a single hammer or with two, one in each hand. The number of bells varies from 4 to 9 in a single set; in the larger sets, requiring two performers, there are as many as 13 or 15. Illustrations are frequent in English manuscripts from the 11th to the 15th centuries (see PLATE 48, Vol. VI, p. 538); a continental 13th-century illustration ('Cantigas de Santa Maria', Madrid) shows seven bells in a low frame with cords, bearing notelabels attached to their clappers and pulled by a seated musician (see PLATE 33, Vol. IV, p. 496, No. 3).

Dunstan, who died in 988, excelled on the psaltery, lyre and in "touching the cymbals".

<sup>1</sup> MS Lansdowne, 763.

He is said to have made a set of chimes for Canterbury. These chimes were frequently used with the organ, and Aelred, Abbot of Rievaulx in the 12th century, strongly denounces not only the groaning of the bellows and the roar of the organ pipes, but "the noise of the cymbals". "Why", he asks, "such organs and so many cymbals in the church?" Probably the mixture-stop known as the cimball (*Zimbel*) found in later days in the organ was an attempt to reproduce the brilliancy of the bell-chimes.

A treatise by Theophilus, a monk of the 11th century, is printed by Rimbault in his 'History of the Pianoforte', which minutely describes the casting and tuning of these little bells. Probably owing to its bell-like effect the name cymbal was in later times applied to the psaltery and then to the dulcimer; from the psaltery it passed to the keyed psaltery, the clavicymbal or harpsichord. F. W. G.

See also Glockenspiel

**CHIMES.** The origin of this word is obscure but is connected with the Latin *cymbalum* and the German *Zimbel* — a small bell struck with a hammer. "A chime" may mean either (1) a diatonic set of bells, sometimes including the augmented 4th and the minor 7th, and so making it possible to modulate into the dominant and sub-dominant of the key, respectively; or (2) a series of musical sounds or tunes played mechanically or otherwise on such a set of bells. From the point of view of construction a chime and a carillon are essentially the same thing. The difference lies in the number of bells — anything less than two octaves being reckoned a chime.

Chimes were first played by hand. The different hours of the day were originally announced in the same way. Chime mechanism was invented soon after the advent of weight clocks. When these clocks were first made mechanical figures were used to strike the quarter-hours on bells. Representations of men clad in suits of mail were commonly used; they were called "jacks", a name derived from the Latin *jaccomarchiadus* — a man in a suit of armour. Probably the quarters were first sounded by a "jack" on a single bell and later by two "jacks" on two bells, the notes of which were a 2nd, 3rd, 4th or 5th apart. Such quarters are known as "ding-dong" or "ting-tang", and from their introduction to the present time have been more extensively used than any others.

Ancient chime mechanism was very simple, consisting of a weight-driven barrel, generally made of wood, into which pins were driven as they are into the barrel of a musical box. The pins in the chime barrel pulled down levers; the levers were connected by wires to hammers which they lifted and released; and, in falling, the hammers struck the bell from the outside.

In such a mechanism the barrel had to do all the work. In England it was used to play melody only. It was satisfactory so long as no more than a regular succession of notes of equal length played at a moderate speed, such as a hymn-tune, was required. When more elaborate airs, consisting of notes of different time-values, were set on the chime barrel, their unequal demands made the speed of the barrel irregular, with the result that one bar was played at a quicker or slower rate than another, producing a most unmusical effect.

The first important improvement made on the old mechanism was by Messrs. Lund & Blockley. The general principles were good, but certain parts were too weak to bear the strain of the heavy driving-weight used. Further improvements were made by Messrs. Gillett, of Croydon, who installed their first machine at Boston Parish Church in 1868. Its particular advantage was in the division of the mechanical operations. The mechanism was still weight-driven, but the barrel released the action of the hammer levers by means of spring triggers, so that the demand on it was reduced to a minimum. Messrs. Smith & Sons of Derby also designed a chime machine which differed from Messrs. Gillett's principally in the subdivision of the driving power, each hammer or set of hammers being driven by an independent weight which could be adjusted to secure accurate time in the playing.

In 1923 Messrs. Gillett & Johnston introduced an electro-pneumatic system of tune playing for chimes and carillons. In this a small motor-driven compressor supplies air at a pressure of about 30 lbs. per sq. in. Simple units comprising cylinder, piston and lever are mounted on a common air-receiver base and the levers are attached to the vertical wires from the crank action in the belfry, this being connected, in turn, to the clappers *inside* the bells. The air flows into each cylinder through a valve controlled by an electro-magnet and a powerful blow is struck on the corresponding bell each time a low tension electric circuit is closed. This ensures quicker striking and a far greater volume of sound from each bell than can be obtained by action with the hand or foot, especially where heavy bells are concerned. In playing these, human effort is frequently assisted by some such system as that described above.

About 1923 an automatic apparatus for tune playing, operating on electro-pneumatic principles, was also perfected in the Loughborough bell-foundry of John Taylor & Co. The pioneer work of this firm in tuning bells on a harmonic basis is mentioned in the article *CHANGE-RINGING* and it found a natural development in the construction of carillons and so in the mechanism for chimes. Their automatic device for the playing of

tunes employs negative pressure, *i.e.* a vacuum system, and instead of the compressors and pistons of Gillett & Johnston's system a vacuum pump is used in conjunction with electro-magnets and pneumatic valves which control "pull units" operating the bell wires.

With the adoption of these methods of striking, the tune-playing mechanism is much smaller and more compact than the old-fashioned weight-driven tambour (pin-barrel) with which this account began. In Gillett & Johnston's later instruments electrical contacts are closed by pins projecting from a motor-driven brass barrel. These pins are easily adjusted, and the barrels, each of which represents a tune, are made readily interchangeable to give a variety of programmes. In Taylor's system the playing mechanism is controlled by music rolls like those used with the standard player-piano and, being operated through the vacuum system, the rolls do not wear.

It is also possible by either method to play the bells through contacts added to the keys of an ivory keyboard and in some cases they are played from one of the manuals of an organ console by drawing a stop.

Gradual developments have also been taking place in the purely mechanical chiming of bells. The old tambour or pin-barrel continues to be used, but its use has become practically confined to the mechanical playing of changes.

The tone of a stationary bell is considerably improved if it is struck on the inside by a clapper and not on the outside by a hammer, the reason being that gravity acts against a quick recoil by the hammer but tends to help the recoil of the clapper. In clocks chiming on bells hung to swing, the old-fashioned outside striking cannot be avoided, but where the bells are fixed it is the practice of both the firms whose systems have been described to employ methods of striking by the clapper in clock chimes.

**CONTINENTAL METHOD.**—The chime mechanism generally used on the Continent is the same in principle as that originally used in England; but it is constructed on a much larger scale, having so much more to do in playing long pieces of music in three or more parts. The music for the automatic carillon is just as elaborate as that played by the carillonist, and requires much the same consideration as to its most effective arrangement. The melody is often played throughout in octaves to give greater definition to the most important part; but this result is achieved at the price of some dissonances due to clashes between the upper partial tones.

**QUARTER CHIMES.**—In England the uniform plan of the music for quarter chimes is to increase the length of the chime as the hour proceeds, *e.g.* Westminster Quarters, 4, 8, 12 and

16 notes. This is not followed to any great extent on the Continent, however.

**CHIME TUNES**—The earliest mention of any tune played by chimes is in the will of John Baret (1463), who in addition to leaving money to repair the chimes of the Parish Church of Bury, Suffolk, expressed a wish that they should play "Requiem aeternam" at stated times to his memory. In Abbot Parker's Register there is a copy of an agreement between the Abbot of Gloucester and Thomas Loveday, dated 1572, in which the latter

hath covenanted and Bargaynd with the Abbot to repayre the Chyme gonge upon eight belles and upon two ymynes that is to say "Christe Redemptor Omnium" and "Chorus horre Jerusalem", well-tunablen and wokemanly by the Feast of All Saynts next ensueing for which the said Abbot promyseth to pay the said Thomas Loveday four marcs sterlinge at the fynnisshment of his said repayre.

In 1553 an indenture between the king's four "missioners" and the Bishop of Worcester and Gloucester shows that "the said Communion have redelyvered unto the Dean and Chapter one Great Bell whereon the Clock stryktue and eight other bells whereupon the Chyme goithe". Chime tunes gradually increased in popularity until in the 18th century every church of importance possessed a clock with quarter chimes and chime tunes.

No tune should ever be selected for chimes which requires, for its rendering in correct form, more bells than are available. The mutilation of well-known melodies is greatly to be deprecated; and it is difficult to understand how people will listen a whole lifetime to such distortions without complaint. The British national anthem has been burlesqued more than any other well-known tune.

The following are the best-known English quarter chimes:

(1) **CAMBRIDGE QUARTERS** (commonly called Westminster Quarters).—The mechanism for playing these quarters was first erected in St. Mary's Church (the Great), Cambridge, 1793-94.

In their proper form (a ring of 10 bells would provide the requisite notes) the hour bell should be the octave of the third bell of the quarter chimes. They are frequently played on 6- or 8-bell rings; but musically these are very unsatisfactory, as in both the hour bell—Nos. 6 and 8 respectively—leaves an incomplete effect on the ear.

The notes of the quarter chimes are:

The history of these quarter chimes is interesting, although the statements regarding it are the hearsay evidence of Amps of Cambridge, who related the particulars in his correspondence with Dr. Raven in 1861. Raven's 'Church Bells of Cambridgeshire', pp. 105 and 106, states:

About the time of these improvements Dr Jowett was Regius Professor of Laws and Dr. Randall Regius Professor of Music, and Crotch and Pratt, then mere lads, were his pupils. Dr Jowett was an expert mechanic... He appears to have been consulted by the authorities of the University and to have taken Crotch into his counsels. The latter may be credited with the idea of taking the phrase of four notes from the fifth bar of the opening symphony of Handel's "I know that my Redeemer liveth" and, by a system of variations not unworthy of Fabian Stedman, expanding it "into this musical chime". It was said by Pratt that when the chimes were first heard they were thought so strange that they were nicknamed "Jowett's Hornpipe". Very few except those who had known Crotch were aware that he had anything to do with their composition.

It is doubtful whether the initial phrase was borrowed from Handel, but although Crotch had left Cambridge some five years before the chimes were put up, it is highly probable that he was responsible for the arrangement and variation of the notes that constitute the now famous quarter chimes, which were in use for over half a century before they attracted any attention.

They were first copied at the Royal Exchange, London, in 1845. The groups of four notes were not changed, but the sequence was altered, and the arrangement was no improvement on the original. In 1859-60 they were copied correctly at the Houses of Parliament, and it was after this that they became popularly known as "Westminster Quarters".

"Cambridge Chimes", so called, on domestic clocks are frequently met with. They are merely ringers' changes on 8 bells, and are often exactly the same as those which do duty for "Whittington Chimes".

(2) **MAGDALEN CHIMES**, Oxford, erected in 1713, unique and fascinating on account of their indefinite rhythmic progression:

(3) **CARFAX CHIMES**, Oxford, arranged by John Smith, clockmaker, Derby. They were first erected at Freshwater in 1895 and called Tennyson Chimes; copied at Oxford, 1898; also at Uppingham and Maralin; and now known as Carfax Chimes:

(4) WHITTINGTON CHIMES.—In their oldest form these chimes were played on six bells and based on the ancient tune, 'Turn again, Whittington', to be found in Durfey's 'Wit and Mirth; or Pills to Purge Melancholy':

The earliest reference to the tune is in Shirley's 'Constant Maid', Act II, Scene ii. "Six bells in every steeple, And let them all go to the city tune, 'Turn again, Whittington'" (1640). It is with Bow Church that the Whittington tradition is connected. If the chime was played by the clock, it must have been in existence before the great fire of 1666, as the six-bell tune has not been played since that date. In 1905 Stanford wrote a new set of quarter chimes based on the old tune and using the *twelve* bells then in the tower.

Whittington Chimes, commonly so called, are to be found exclusively on domestic clocks and vary considerably as to the notes played. The different "runs" are merely ringers' changes on a specified number of bells.

(5) GUILDFORD CHIMES, composed by George Wilkins, organist of St. Nicholas Church, Guildford, were first set up in Holy Trinity Church, Guildford, 1843; copied at Chard, Bournville, Irthlingborough, Macclesfield, Northleach and Stratton:

(6) BEVERLEY MINSTER CHIMES, arranged by Rev. Canon Nolloth, D.D., in such a way that the different length and ending of each

strain should make it easy to distinguish the particular quarter it indicates. The full compass of the ten bells is employed and anything like a tune avoided. They are the longest quarter chimes in the British Isles and were put up in 1902:

To this list of six well-known chime-tunes, one modern example may be added, viz.:

(7) COBH CHIMES, composed in 1948 for the clock of St. Colman's Cathedral, Cobh (Queenstown), Eire, by Staf Gebruers, the Cathedral organist and carillonneur, and here reproduced by his permission. These chimes, based on a hymn-tune well known in Ireland to the words, "Jesus, my Lord, my God, my All, how can I love Thee as I ought?", show how modern chime mechanism facilitates the use of notes of unequal lengths. The hymn-tune is played for the fourth quarter:

**CHIMNEY FLUTE.** See ORGAN STOPS.

**CHIN-REST.**—In the 18th century the violin was generally held on the right side of the tailpiece, a method to which Tartini himself is believed to have adhered. Geminiani (1687-1762), however, already recommended the modern method of laying the chin against the left side of the tailpiece, and as early as 1803 we find Spohr heartily disapproving of the old method. Writing of the then best violinist in St Petersburg, Franzel junior, who descended from the conservative Mannheim school of violin playing with its Tartinian principles, Spohr observes: "His posture displeased me. . . . He still holds the violin in the old manner, on the right side of the tailpiece, and must therefore play with his head bent. . . ." It was Spohr who introduced the chin-rest for the violin and viola.

The modern method of holding the instrument<sup>2</sup> on the left side has made possible our high standards of left-hand technique, and no doubt the chin-rest has had a share in the emancipation of the left hand, strengthening as it does the lower jaw's and collar bone's grip on the instrument, thus giving the left hand the greatest possible freedom for its changes of position. Without the chin-rest, moreover, the part of the instrument which is in touch with the lower jaw is not only damaged by friction and perspiration (as can be easily seen on old violins), but also debarred from vibration in tone-production; thus a violin or viola sounds more powerful with a chin-rest than without. At the same time, it must not be assumed that the chin-rest is without disadvantages; many violinists, including Carl Flesch and Norbert Brainin (the leader of the Amadeus Quartet who has grown from the Flesch school) have deplored the loss of direct contact between head and instrument.

Another implement whose purpose, advantages and disadvantages resemble the chin-rest's is the cushion which the long-necked player is obliged to place between the back of his instrument and his body in order to avoid drawing up the left shoulder and hence impairing his left-hand technique. Again,

<sup>1</sup> This quotation slightly improves upon the only existing English translation of Spohr's Autobiography.

<sup>2</sup> According to an interesting and highly plausible hypothesis of Carl Flesch, the modern method may also have played a decisive part in the development of right-hand technique: "When we try to-day . . . [to hold our chin against the right side of the violin] we find that we play more lightly on the high strings and more heavily on the low ones; furthermore, that the power of the tone is doubled for our own ear and becomes unendurable in the long run. How were our predecessors able to support such a condition? In all probability by producing a minimum of tone. This explains the fact that the small, sweet-toned Amati models were preferred to the larger-form Stradivarius and Guarnerius types up to the beginning of the nineteenth century."

however, intimate contact between body and violin is thereby impeded, and in order to make the cushion unnecessary, the so-called "Prague" chin-rest — a raised chin-rest — is used by some violinists, while others, among them Flesch himself, have not found it possible to accustom themselves to it. Though various chin-rests and cushions have been designed, the ideal solution has yet to be found; meanwhile many a player, Fritz Kreisler for instance, leaves his jacket unbuttoned and turns back its left lapel, thus creating an artificial cushion.

**CHINESE MUSIC.**<sup>3</sup> **TRADITION.**—In the western world Chinese music is little known and its principles are little understood. Modern culture is much at variance with the atmosphere in which the Chinese musical system emerged and finds itself defective when confronted with a study of its problems. The ancient Chinese writer Lu Pu-We expressed himself<sup>4</sup> "able to speak of music only with a man who has grasped the meaning of the world". Why was this? It was because the Chinese regarded music as an image of the universe. "Music expresses the accord of Heaven and Earth"<sup>5</sup> and "produces the harmony between men and spirits".<sup>6</sup> Its object was not to please the senses, but to convey eternal truths and help to prepare man to receive those truths. For it was firmly founded on the principles of that natural philosophy which underlies the great native religions of China.

Western writers on Oriental music generally confine themselves to what they regard as strictly musical considerations. It cannot be too strongly emphasized that no western student can hope to understand the foundations of Oriental music by adopting this course. To understand the limb, he must look at the body. And here also we shall study the deeper foundations of Chinese music as the Chinese themselves have done. We shall attempt to reconstruct their traditional attitude.

Seeking, then, more precisely the nature of the cosmic harmony referred to in the above quotation, we learn that "between Heaven and Earth there is perfect harmony, and since 3 is the symbolic numeral of Heaven

<sup>3</sup> Acknowledgments are due to the following for help of various kinds: Mr. J. Davies (Music Librarian of the B.B.C.), Mr. Colin Lucas and Miss D. M. B. Riggall.

<sup>6</sup> 'Shu Ching' ('Book of History').

and 2 that of the Earth, sounds in the ratio  $3/2$  will harmonize as Heaven and Earth".<sup>1</sup> As in other Oriental traditions, number plays an important part in the Chinese world picture. We are further told that "Music stems from measure"<sup>2</sup> Number, as the underlying basis of weights and measures, intimately linked the latter with musical science. The tube giving the foundation-tone of Chinese music was indeed used as the standard of capacity and length, and of all weights and measures.<sup>3</sup> So close was the connection that the Imperial Office of Music (Yue fu) became affiliated to the Office of Weights and Measures.

Music was also considered to be the foundation of government which, since all things were one, had similarly to be an image of the laws of Heaven. It was, above all, important to achieve harmony and order in the material world. "Under the effect of music, the five social duties are without admixture, the eyes and the ears are clear, the blood and the vital spirits are balanced, habits are reformed, customs are improved, the empire is at complete peace"<sup>4</sup> The political influence of music has had a lasting effect on far-eastern thought. Transmitted to Japan during the T'ang dynasty, we find the idea still reflected in the work of a 17th-century Japanese teacher.<sup>5</sup> The conception was by no means confined to the Far East, and it shows remarkable points of similarity with that found among the Egyptians and put forward by Plato<sup>6</sup> in Greece. Chinese musical tradition reflected many views that were once widely held in the ancient world.

Thus far it is with the order of heaven and with government upon earth. But archetypal man was also an effigy of the cosmos. "He who sings becomes straight and displays his moral influence and, when he himself comes into motion, Heaven and Earth respond, the four seasons are in Harmony, stars and planets are orderly, life is sustained in all beings."<sup>7</sup> Confucius prescribed ritual and ceremonial to regulate man's outward behaviour, music to order his inner spirit. The music of the noble-minded man he distinguished from that of the vulgar-minded man, and the ritual music *Shao* he found so beautiful that "for three months he was unconscious of the taste of meat".<sup>8</sup> This music, beautiful in form and good in influence,

Confucius contrasted with that of *Wu*, which was beautiful in form but not good in influence.<sup>9</sup> In Chinese thought the moral effect of music was no small part of its achievement; it was the primary test of its stature. It may be significant that the Chinese word for music (*Wu*) has the same graphic symbol as the word for serenity (*do*).

Chinese legends are full of descriptions of music which has magical effects on nature and man. The modes, themselves being images of various aspects of nature, were believed to have real effects. One music, invented by demons and spirits, after raising a tempest destroyed the terrace of the palace of Prince Ping Kung and led to his illness and death<sup>10</sup>, while another was powerful enough to cause the "descent of the ancestors".<sup>11</sup> By means of his zither (*ch'in*), the music master Wen of Cheng was able to control the elements and the course of the seasons.<sup>12</sup> But Wen could not play the *ch'in* thus until he had reached the music in his own heart.

From the foregoing we can see that the Chinese have not philosophized about their music as we do in the West to-day: rather have they evolved their musical system to enshrine and illustrate their natural philosophy and give permanent embodiment to its principles. In the best traditional Chinese music nothing is arbitrary, nothing accidental: in detail, as in principle, all is subordinated to image and symbol.

Western writings frequently assert that Chinese music has developed within a relatively narrow field. The question immediately arises: from what standpoint can it be said to be narrow? From the somewhat partial standpoint of modern western music this might actually appear to be so; but the epithet "narrow" pales before the majestic conception of a music built as an image of the universe, an image, moreover, to which the best efforts of a great civilization have been continuously directed for several thousands of years. It is further asserted that, because of its link with symbolism, Chinese music has made little progress. Even overlooking that western opinion constantly mistakes change for progress, in a world where change is the law it is surely the more remarkable that for such long aeons of time China has been able to hold to those principles which have a permanent place in nature. Despite the vicissitudes of time, destruction, wars, foreign influences and independent experi-

ment, all has been assimilated or rejected and guided back by her persistent natural philosophy as by a hidden hand.

**HISTORY.**—The Chinese ascribe the origins of their music to the mysterious legendary era (3rd millennium B.C.) whose emperors are represented as having founded each a musical system and an empire. The names of the "emperors", in reality signifying not persons but whole periods in Chinese history<sup>1</sup>, refer also to the metaphysical principles on which these empires and musical systems were founded.<sup>2</sup> The Chinese word *Fu*, found both in the name of the Emperor *Fu Hsi* and in that of his musical system *fu-lai*, has been equated with the root *Bod* or *Boud* which, since remote antiquity, is found in Asiatic terms referring to divinity and wisdom, as in *Buddha*.<sup>3</sup> Thus in legendary times we already find that close connection between divine order, musical harmony and government which has been so important throughout Chinese history.

**Period of Fu Hsi** (from c. 2852 B.C.).—The legendary era begins with the Emperor *Fu Hsi*, first of the Wu Ti or Five (Divine) Rulers, founder of the monarchy and "inventor" of music. His music was variously called either *fu-lai*<sup>4</sup> (to "help to occur") or *li-pen* (to "establish the foundation")<sup>5</sup>. He was the reputed first author of the source-book of Chinese philosophy and traditional metaphysics whose principles have guided the Chinese musical theorists throughout the centuries.<sup>7</sup> He is said to have introduced the first Chinese zithers (*ch'in* and *se*) and the globular flute (*hsüan*); and to the mythical female sovereign *Nu Wa*, in some way related to him, is attributed the ancient reed mouth-organ (*shêng*). *Fu Hsi* was followed by *Shên-nung* (the second divine ruler, c. 2737 B.C.), whose music was known<sup>8</sup> as *fu-t'o*<sup>9</sup> or *hsia-mou*.

**Period of Huang Ti** (from c. 2697 B.C.).—Chinese music found its first definitive basis under *Huang Ti*, "the Yellow Emperor" and third divine ruler. *Huang Ti*'s music was known as *Hsien-Chih*<sup>10</sup> ("all pervading

influence"<sup>11</sup> or "universal kindness"<sup>12</sup>). His system of the *Huang Chung* (foundation tone) and the 12 *lu* (cycle of fifths for transposing) has remained fundamental in Chinese music until the 20th century. A legend describing its origin (*see below*, Theory) suggests that it came from a western people. The locality *Ta-Hia* has recently been identified<sup>13</sup> as the country of the Tochars, a people who had lived on the south-eastern border of the Gobi desert at least since the 13th century B.C., acting as agents between eastern and western civilizations. The name of the ancient Chinese flute, *ti*, connected with the *Ch'iang* people, a tribe who lived west of the Chinese border, is also found in the Sumerian vertical flute, *ti-gi*.<sup>14</sup>

There are further some remarkable parallels between music in ancient China and ancient Greece (*see above*, Tradition; *see below*, Theory).<sup>15</sup> The system of *Huang Ti* stems from the same root as the (much later) Pythagorean cycle of fifths (*see below*, Theory). From many considerations it is tempting to anticipate the early home of the principles of Chinese music as lying somewhere in the Persian and Mesopotamian region.

Of the music of the next two emperors (*Shao-Hao*, fourth divine ruler, c. 2597 B.C., and *Chuan-Hsiü*, fifth and last divine ruler, c. 2573 B.C.) little is known, but the music of the Emperor *Yao* (2357–2256 B.C.) was known as *Ta-tchang*<sup>16</sup> ("great splendour"<sup>17</sup>).

**Period of Shun** (2255–2206 B.C.).—Ideas attributed to the legendary Emperor *Shun* concerning the psychology of music, its moral value and function in the ideal state<sup>18</sup>, have exerted a profound and continuous influence on Chinese thought. *Shun* fixed the symbolic correspondences of the five notes of the scale, which, as it were, acquired social values (*see below*, Theory, Table II). He divided musical instruments into eight classes in accordance with the natural philosophy of *Fu Hsi* (*see below*, Instruments). He invented the "pan-pipes" (*p'ai hsiao*) and introduced the 5-stringed zither (*ch'in*).<sup>19</sup> His music was known as *Ta-Shao*<sup>20</sup> ("great harmony" or "the succession to the dynasty"<sup>21</sup>). The saying is attributed to him that "poetry is the expression of earnest thought, singing is the prolonged utterance of that expres-

sion . . .".<sup>1</sup> Shun is also said to have first introduced dancing into ceremonial. Shun was the last of the pre-dynastic rulers, and with the end of his period we reach the beginning of the dynastic era and verge upon historical times.

*Hsia Dynasty* (2205-1766 B.C.).—Following tradition, the Emperor Yu (2205-2198), founder of the first dynasty, created a musical system for his dynasty. This he called *Ta-Hsia*. The term has been interpreted<sup>2</sup> "Music of the Dynasty of Hsia", but this cannot be a literal translation, since the word *Ta*, occurring in several other names of musical systems, both dynastic and pre-dynastic, means "great". It is, moreover, interesting to note that *Ta-Hsia* is also the name of the locality whence Ling Lun brought the first definitive Chinese musical system (see above, Period of Huang Ti).

*Shang Dynasty* (1766-1122 B.C.).<sup>3</sup>—A Chinese ode dated 1135 B.C. mentions the drum (*ku*) and bells (*chung*). Another ode written before 1122 B.C.<sup>4</sup> testifies to the use in sacrificial rites of dancing with orchestral accompaniment. The earliest known Chinese instruments to have been excavated and preserved—a bone globular flute (*hsuan*) and sonorous stones—have been dated to this dynasty.<sup>5</sup>

*Chou Dynasty* (1134-249 B.C.).—If surviving evidence concerning the previous dynasties seems scant, we now reach a more fruitful period, the period of the great religious philosophers Lao Tse (c. 604-517 B.C.), founder of Taoism, and Kong Tse ("Confucius", 554-479), founder of Confucianism and an important figure in the history of Chinese music. Confucius is pictured<sup>6</sup> as a skilful musical performer, but his importance lies above all in his exalted conception of the practical part which music could play in the ritual of living—a conception which has had a lasting influence on Chinese music through the ages. Confucius also edited the classics of Chinese literature (philosophy, history and poetry) which are important early sources for information on music. These works are collections and compilations of earlier documents written during the Shang and Chou dynasties, and modern scholarship has not been able to improve upon Confucius's own statement that he was "a transmitter, not a maker, one who knew and loved the ancients".<sup>7</sup> Of these works the 'I Ching' ('Book of Changes') treats of the metaphysical principles behind music and all things; the 'Shi Ching' ('Book

of Odes') contains poems written c. 1600-c. 585 B.C., making numerous references to musical performances; the 'Shu Ching' ('Book of History') goes back as far as the music of the legendary Emperor Shun, and the 'Li Chi' ('Record of Rites'), in an important chapter known as the 'Yo Ki' ('Memorial of Music'), treats specifically of music in philosophy, theory and ritual.

During the latter part of the dynasty the important musical writer Lu Fu-Wei (c. 320 B.C.) produced his 'Shi Ch'un Ts'iu', said to be the earliest actual writing on Chinese music still extant. The imperial court had already gigantic orchestras, and noblemen, according to their influence and importance, maintained considerable bands. References are made to almost all the important Chinese instruments of music found in later times. Poetry, music and dance (or gesture) variously combined in the ritual of the great seasonal festivals where agricultural and marriage rites were celebrated, and which were instituted in remotest antiquity. In such ceremonies we may look for the origins of Chinese drama which, at first instituted for ritual and instructional purposes, only later became diversions at the court and in noble houses.

*Ch'in Dynasty* (221-206 B.C.), *Burning of the Books*.—Ancient music from as early as the 3rd millennium B.C. was still to be heard in the time of the Chou, for Confucius spoke of the ritual music *Shao* (the ancient *Ta Shao* of the Emperor Shun).<sup>8</sup> And the Chou had on its own account been a great period in Chinese history. Music had come to occupy so important a place in life that it led, so it was said, to the neglect of practical affairs. With a desire to redress the balance or, as some authors believe, egotistically desiring that all culture should date from his time, the Emperor Shi Huang Ti ordered in 212 B.C. the destruction of all books, music and instruments. Chinese historians still refer to this fanatic as the "Destroyer of Books" and to his period as the "Burning of the Books".

*Han Dynasty* (206 B.C.-A.D. 220).—The great music master Chi is reported as saying that he "scarcely remembered anything about music but the noise of tinkling bells and dancers' drums". That practical destruction had been great there is little doubt. But the Han was no less a great period of restoration. Concealed books were brought out, monuments examined and instruments excavated. A complete stone-chime was discovered in a pool where it had been thrown, and from this model new chimes were made. Already in 200 B.C. the scholar Tsan-Yen-Shian was expounding a system of 64 notes founded on traditional philosophy (see below, Theory).

<sup>8</sup> *Ibid.*, III, xxv.

Under the Emperor Wu (141-87 B.C.) was founded the Imperial Office of Music (*Yue fu*) to establish and preserve correct pitch, supervise ceremonial, foreign, aristocratic and folk music, and keep an archive of national melodies; and there existed some spectacles called *kido-ti-ti* (plays of doubt and concourse). Later, about 40 B.C., the scholar King-Fang expounded his important systems of 53 notes and 60 notes (*see below*, Theory).

When, during the late or eastern Han (A.D. 25-220), the Chinese Empire reached a peak of power, adding to itself much of eastern Turkestan, new instruments came from the West, including a new form of the short lute (*p'i-p'a*).<sup>1</sup> Buddhism, first introduced into China from India A.D. 61-62, brought its own form of chant, and Buddhist monks, who adopted the Chinese zither (*ch'in*), applied to it the Indian *gamakas* (ornaments), which brought a more elusive style into Chinese music.

*The Six Dynasties* (220-589).—After the destruction in 384 of the Turkestan kingdom of Kutch, China imported the Persian harp *cank* under the name of *k'ung hu* and several kinds of drums and cymbals.<sup>2</sup> Theoretical experiment continued: the astronomer Ho-Tcheng-Tien (370-447) essayed a system of equal temperament, and T'sien Yü-che (under the Emperor Sòng Wên-ti, 425-53) expounded a system of 360 notes (*see below*, Theory). Under the Emperor Yung-Ming in 485 dancing became an official part of the Confucian ceremonies, and the Emperor Ou-ti (502-49) developed the early spectacles, which now took the form of *pé-ké* ("hundred diversions"). In the year 586 a Turkish princess, marrying the Chinese Emperor Wu-ti (560-578), took to China with her a musician of Kutch named Su-ch'i-p'o who played the Turkomanian short lute (*barbat*, cf. Chinese *p'i-p'a*) and introduced the 7 modes of his country, which had names of probable Persian origin.<sup>3</sup> In 581 the court was entertaining the "Seven Orchestras", which included ensembles from Kaoli, India, Buchar, and Kutch. The last had twenty performers, mostly of western instruments. The court delighted in foreign national music and maintained foreign orchestras as permanent institutions. In its turn Chinese music in the 5th century found its way to the Korean court and thence, in the 6th century, to Japan.

*Sui Dynasty* (589-618).—Under the Sui Emperors bands and musicians came to the Chinese court from Bukara, Samarkand, Kashgar and Kutch. In China the historian Lieou-Tcho (543-610) made a further but

somewhat unsuccessful experiment towards equal temperament (*see below*, Theory).

*T'ang Dynasty* (618-906).—The orchestras of ancient China appear now to have reached their greatest splendour. Ground-plans survive showing a place for the conductor. In the time of the Emperor Ming Huang (713-756) there were at the court six "standing" and eight "sitting" orchestras (some 500 to 700 members in all) indoors, and a vast outdoor ensemble of 1346 men. An 8th-century painting<sup>4</sup> depicts part of the female court orchestra performing before the emperor. The court musicians (instrumentalists and singers) and dancers were provided by the first Imperial Academy of Music, called *Li Yuên* (Garden of Pear Trees, A.D. 714), which is important in the history of Chinese music, drama and dance. Poets were very productive of music poems and for the composition of descriptive pieces adopted the short lute (*p'i-p'a*). The Chinese Empire, expanding to the borders of Persia and the shores of the Caspian Sea, from now onwards became still more open to cultural influences from Middle Asia. Meanwhile, during the 7th century, Chinese ceremonial music, which had previously reached Japan through Korea, now found its way direct to Japan.

*The Five Dynasties* (907-60).—Wang-Fo (d. 959) propounded a new theory of notes (*see below*, Theory, Temperament).

*Sung Dynasty* (960-1297).—This period, together with the T'ang dynasty (*see above*) is regarded as representing the classical period of Chinese music, which flourished as much in its theory as in its practice. T'sai Yuên-t'ing propounded a theory of 18 notes (*see below*, Theory, *Extensions of the Transposing System*) and important experiments were done on new scales, including 9-note scales (*see below*, Theory, *The Nine-Note Scales*). A more popular "theatre" grew up alongside that of the court, but in this music was rather less important than it had been hitherto.

*Yuan (or Mongol) Dynasty* (1280-1368).—The Mongol conquest enriched the music of China. The Mongol emperors on the whole encouraged native music and musicians, but also introduced new instruments and new scales of their own (*see below*, Theory), with new and simpler notation. Chinese drama took a new lease of life, and the ensemble known as *Yuan-k'ün* (the music of the Mongol dynasty) contained three elements: declamation, song and pantomime. Drama, now rapidly reaching its classical period, settled down into the two styles, northern (which predominated at first) and southern (more important later), which, broadly speaking, remain fundamental to-day (*see below*, Music-Drama).

<sup>4</sup> Heinz Trefzger, 'Das Musikleben der Tang-Zeit' ('Simca', XIII, 1938), p. 68.

*Ming Dynasty* (1368–1644).—The new influences of the previous dynasty became absorbed and somewhat modified. Music became far more important in drama. Prince Tsai-Yu (1596), who found an exact formula for equal temperament, left valuable works on Chinese musical history and theory. During this dynasty Roman church music found its way into China with the building of churches there, and European missionaries published musical treatises in China. Matteo Ricci's work on the clavicembalo appeared under the reign of the Emperor Chên-tchong (1573–1619).

*Ch'ing Dynasty* (1644–1912).—Under the new emperors western musical influence grew apace. Pereira and Pedrini became professors of music at the imperial court; Pedrini built instruments for the Chinese; Père Amiot published his famous work on Chinese music.<sup>1</sup> In the 18th century the *shêng* (reed mouth-organ) was known in St. Petersburg and may have played some part in the development of the organ in Europe, and more instruments reached China, including a new form of the "foreign" zither (*yang-ch'in*). Towards the middle of the 19th century the classical drama reached a very low ebb and the modern (more popular) drama took origin; Chinese music had for some time been suffering a serious decline. Emperors made various attempts to restore the ancient splendour, but music tended to fall away from its position as a great spiritual and political force into a noisier, cheaper, more imitative and more popular place. Musicians consequently lost their former status. Latterly amateurs are mostly finer musicians than the professionals, who belong chiefly to the unlettered classes. The year 1912 saw the foundation of a republic and the end of the imperial house which had ruled China and fostered her music for several thousand years.

*Modern Trends*.—During the Ch'ing Dynasty western music was still not appreciated in China.<sup>2</sup> From the early 20th century, however, the decline of native music has been greatly accelerated by the acceptance of western music by the Chinese themselves. Many Chinese of the now passing generation obtained their musical education in Europe and returned to China to write and teach there. To-day western orchestras are to be found in China; western artists tour there; westerners are among the teachers of music in universities and schools. There are still composers who see the future of Chinese music in their own instruments, but many of

the younger generation, educated by European musicians in China, are striving to create a national school of music while using so-called "international instruments". Western technique is apparent in their compositions, but from the strictly theoretical point of view they are in many cases trying to combine two different systems of musical sound—the cyclic and the divisive (*see below*, Theory)—which are from their nature incompatible in this way.

Very little of the old music can now be found. Few play the old instruments and still fewer are learned in the theory of their art. The old court ritual music is gone and its traces can be found in living forms only in Japan; the splendid court and temple orchestral music of former days finds an echo only in the *gamelan* (orchestra) of the East Indies; the music of poets and philosophers is almost entirely gone. Chinese music has left its influence throughout the East, but there remains in China herself little more than the popular music and some forms of the music-drama.

During the same recent period the contacts between the Chinese and Western musicians have also influenced the latter, though only superficially. Chinese principles have hardly been absorbed into the West, which for the most part has been more interested in the expression of exotic musical "colour".

It may be that China will, in the long run, as she has many times done before, absorb the new influences without losing her own tradition entirely, but it must be admitted that the change which has overtaken Chinese music in recent times is more radical than any that occurred before. For now there is general acceptance of those musically anarchic ideas which the Chinese resisted for so long (*see below*, Theory, *Temperament*). With the apparent abandonment of the ancient foundations, and, as the old philosophers virtually predicted, the life and form of the ancient civilization has gone and with it the last of the ancient eastern empires, the only one to have survived into modern times.

**THEORY.**—The origin of the Chinese musical system, traditionally assigned to the 3rd millennium B.C. (*see above*, History), is recounted in an important legend which is here given in a version from the 3rd century B.C.

Emperor Huang Ti, so legend says, one day ordered Ling Lun (his minister) to make pitch pipes. Ling Lun went from the west of the Ta-Hsia and came to the north of the Yuan Yu mountain. Here he took bamboos from the valley Hsia Hi, selected those the internodes of which were thick and even, and cut them between two nodes. . . . He blew them and made their tone the starting-note *huang chung* of the scale. He blew them and said: "That's right". Then he made twelve pipes. Since he heard the male and the female bird Phoenix sing at the foot of the Yuan Yu mountain, he accordingly distinguished twelve notes. He made six out of the singing

<sup>1</sup> Joseph Amiot, 'Mémoire sur la musique des Chinois, tant anciens que modernes' ('Mémoires concernant l'histoire, les sciences, les arts . . . des Chinois, par les missionnaires de Pékin', Vol. VI, Paris, 1780).

<sup>2</sup> Cf. Amiot, *op. cit.*; van Aalst, *op. cit.*, p. 6.

of the male Phoenix, and also six out of the singing of the female Phoenix, which all could be derived from the main note *huang chung*.<sup>1</sup>

*The Foundation Tone.*—The *huang chung* ("yellow bell")<sup>2</sup> which emits the note *kung* (ancient) or *ho* (modern) is the starting-note of the scale and the foundation of Chinese music. It is conceived simultaneously as a sacred eternal principle (probably as an image of the divine will) and as a note of definite pitch. The foundation tone was also traditionally regarded as the actual basis of the state. It was vitally important to find the correct foundation tone for each dynasty: "If the *Kung* is disturbed, then there is disorganization, the prince is arrogant".<sup>3</sup>

In addition to its cosmogonic, musical and political functions, the *huang chung* was further regarded as the standard of capacity and length, and indeed of all weights and measures.<sup>4</sup> The traditional length of the "original" *huang chung* was one Chinese foot of 9 ins., a metrical basis which was followed during the Chou dynasty. The inch was equal to 9 lines, so the length of the tube was 81 lines. A line was further the dimension of a large millet grain, and the length, diameter and capacity of the *huang chung* were thus also defined by numbers of millet grains.

The earliest division has, however, not

voice when he spoke without passion.<sup>6</sup> For the last dynasty the note of the principal fixed instruments suggested the *huang chung* as being D of pitch 601.5 c.p.s.<sup>7</sup> F has also been adopted,<sup>8</sup> and, although there is no certain practical foundation for it, it happens to be convenient to use it here.

*The Twelve-Note Transposing System.*—The study of nature had led the Chinese to appreciate the cyclic motion of all natural events: the repeating cycles of the planets, of the earth's seasons, of day and night.<sup>9</sup> Since Chinese philosophy required that music should be an image of natural order, music's fundamental note (and scales based upon it) had itself to move conformably to each month and each hour. In other words the key-note had to be transposed. The basis for the division of the year into a cycle of 12 months and for the division of the day and night into a cycle of 12 hours<sup>10</sup> was the duodenary division of the zodiac.<sup>11</sup> Hence the Chinese instituted a system of 12 related notes, traditionally correlated with the 12 moons and 12 hours, 12 signs of the zodiac<sup>12</sup>, 12 allegorical animals and so on. The ancient Chinese names of these pitch notes (*lu*)<sup>13</sup>, with their English equivalents and some traditional correlations are here shown:

TABLE I  
THE TWELVE *lu* (TRANSPOSING NOTES)

No.	Chinese name of <i>lu</i>	Probable Meaning		Note (Western Convention)	Moon	Hour
		<sup>14</sup>	<sup>15</sup>			
XII	Chung-lu	mean tube	younger <i>lu</i>	A <sup>♯</sup>	4	9
XI	Wu-i	not terminated	imperfect	D <sup>♯</sup>	9	7
X	Chia-chung	pressed bell	fastened bell	G <sup>♯</sup>	2	5
IX	I-tse	equalizing rule	equal rule	C <sup>♯</sup>	7	3
VIII	Ta-lu	greatest tube	great <i>lu</i>	F <sup>♯</sup>	12	1
VII	Tui-pin	luxuriant vegetation	beneficent fecundity	B <sup>♯</sup>	5	11
VI	Yung-chung	answering bell	bell of the echo	E	10	9
V	Ku-hsi	old purified	ancient purification	A	3	7
IV	Nan-lu	southern tube	hi of the south	D	8	5
III	T'ai-t'u	great frame	great tip of the arrow	G	1	3
II	Ling-chung	forest bell	wooden bell	C	6	1
I	Huang-chung	yellow bell	yellow bell	F	11	11

always been followed. During the Han dynasty the division was decimal, and the bamboo was replaced variously by jade and copper, which were more permanent. The official length has in fact varied between approximately 20 (Chou) and 34 centimetres (Ming).

The musical pitch of the original *huang chung* remains unknown, although one version of the Ling Lun legend<sup>5</sup> adds that this pipe reproduced exactly the pitch of Ling Lun's

The 12 *lu* are, in the Ling Lun legend, represented as notes "which all could be derived from the main note *huang chung*".

<sup>6</sup> Having regard to the Chinese connection between *huang chung*, emperor and divine will (which the emperor represents), it is tempting to see in this legend an echo of the doctrine of the *logos* or creative word.

<sup>7</sup> Van Aalst, *op. cit.*, p. 13.

<sup>8</sup> Amiot, *op. cit.*  
<sup>9</sup> Evidence of the Chinese connecting musical sound with natural cyclic motion comes unexpectedly from a Chinese writer (cited by Amiot) who attributes the idea of the first musical sound to the rolling waves of the Yellow River.

<sup>10</sup> The Chinese hour is double the western hour.

<sup>11</sup> For a possible mathematical origin of the zodiacal division itself see below, p. 227, Note 4.

<sup>12</sup> 'Shu Ching' ('Book of History'), Pt. II, Bk. iv, ch. i.

<sup>13</sup> The literal meaning of the word *lu* is discussed below.

<sup>14</sup> Van Aalst, *op. cit.*, pp. 9-10.

<sup>5</sup> Cited by Amiot, p. 68, n.

How were they so derived? According to one account<sup>1</sup> the Emperor Huang Ti is said to have arranged the 12 *lü* according to the *pa-kua* or eight mystical symbols of the earlier legendary Emperor Fu Hsi. The principle behind these symbols is known and their graphic representation survives<sup>2</sup>, but their application to the 12 *lu* is not readily evident. According to another explanation, "Music expresses the harmony of Heaven and Earth"<sup>3</sup> and "since 3 is the symbolical numeral of heaven and 2 that of the earth, sounds in the ratio 3/2 will harmonize as heaven and earth"<sup>4</sup>. That is, starting from the fundamental, the notes were calculated in accordance with the simplest possible interval next the octave (2/1), namely the fifth (3/2), which is early interpreted as a pure fifth.<sup>5</sup> The result is a cycle of 12 notes related by fifths, whose relative vibration ratios may be expressed by the geometrical series: 1, 3/2, (3/2)<sup>2</sup> . . . (3/2)<sup>11</sup>.<sup>6</sup> This series is essentially identical with the Pythagorean cycle of fifths of the Greeks.

It will be seen that this cycle of fifths extends over several octaves. In order to make the 12 notes generated by the fifths commensurable it was necessary to find a means of relating them consecutively within the octave, just as the cycle of the 12 months existed within the greater cycle of the year. An ancient text on the *lü*<sup>7</sup> written by a Chinese historian of the 2nd century B.C. gives the following method: "To the three parts of the generator should be added one part to form the upper generation; from the three parts of the generator should be taken off one part to form the inferior generation". In other words the second pipe is lengthened from the first by 1/3; then since the second pipe in turn becomes a generator, the third is shortened from the second by 1/3, and so on in alternation, i.e., an alternate progression of descending fourths (3/4, "superior generation") and ascending fifths (3/2, "inferior generation").<sup>8</sup> If the first step be taken as an ascending fifth, we get, according to one arrangement, the following scheme:

<sup>1</sup> Cited by van Aalst, *op. cit.*, p. 6.

<sup>2</sup> See below, Instruments.

<sup>3</sup> "Yo Ki" ("Memorial of Music").

<sup>4</sup> "Li Chi" ("Record of Rites"), ch. xvi.

<sup>5</sup> Lü Pu-Wei, *op. cit.*

<sup>6</sup> One source states that the pipes were cut according to the triple progression of numbers: 1, 3, 9, 27, 81 . . . , i.e., a series of 12ths. See P. Perny, "Dictionnaire français-latin-chinois", App. ch. xiv.

<sup>7</sup> By Se-ma Ts'ien, see E. Chavannes, "Les Mémoires historiques de Se-ma Ts'ien" (Paris, 1895), III, 636.

<sup>8</sup> This interpretation is universal; but the above passage would also be consistent with an interpretation meaning a cycle of fifths ascending from F and a cycle of fourths descending from the same F. Cf. below, Instruments, No. 36, p. 236, Note 3.

The six odd-numbered notes were from the beginning called *lü* ("rules"). The six even-numbered notes were at first called *thōng* (companions) or *kyen* (intermediaries), and later *lū* (helpers). The two series so formed were thus in some way, regarded as separate entities. Finally both series—that is all 12 notes—came to be known as *lu*, which we can conveniently call "pitch notes", a designation that comes nearest to their functional meaning.

Arranged within the octave, the *lu* now appear as follows (the numerals indicate the cyclic order of generation):

	8	10	12	2	4	6
F	F#	G	G#	A	A#	B
1	3	5	7	9	11	

The *lü* were further arranged at three different octave levels: (a) acute or "half-*lü*", which were an octave above the (b) middle or ordinary "*lu*", which in their turn were an octave above the (c) grave or "double-*lu*".

The stepwise arrangement gives the appearance of a western chromatic scale, and some writers actually speak of this as the "Chinese chromatic scale". It cannot be too strongly stressed that the 12 *lu* have never constituted a scale in the melodic sense: they form a *transposing* "scale" only, whether for the fundamental note already discussed or for the melodic scales to be described later. This is confirmed by the structure and use of Chinese instruments based on the 12 *lü* (e.g. stone chimes, bell chimes, panpipes). In fine, the hierarchical order of the *lu* remains the cyclic order, the order of their generation.

The arrangement of the *lü* in two series, odd and even, and the way in which this is arrived at by ascent and descent, is directly connected with that portion of the legend which states that, of the 12 notes, Ling Lun "made six out of the singing of the male Phoenix, and also six out of the singing of the female Phoenix". One version of the legend indeed states that the male Phoenix sang his notes in ascending progression and that the female Phoenix sang hers in descending progression. The full significance of this connotation can only be grasped by turning to Chinese cosmogony. According to tradition<sup>9</sup> in the beginning *Wu-chu* (the original-one)<sup>10</sup> begat *T'ai-chi* (the line), which divided the original one into two *yi* (principles) that were supplementary and concordant: the *Tang* (light) and the *Yin* (dark)<sup>11</sup>, from the interplay of which comes everything in the world,

<sup>9</sup> "I Ching" ("Book of Changes").

<sup>10</sup> Corresponding to the undivided "primordial chaos" of many traditions.

<sup>11</sup> The terms *yang* and *yin* mean literally the "light side" and "dark side" of a mountain.

including its music.<sup>1</sup> The chief attributes<sup>2</sup> of these principles are: *Yang*—male, positive, perfect, active, ascending; and *Yin*—female, imperfect, negative, passive, descending. In the system of the 12 *lu* six are known as *yang lu* and the other six which alternate with them as *yin lü*.<sup>3</sup> The two sets of *lu*, male and female, were kept apart on the various musical instruments based upon them: one set lies below the other in the stone chimes and bell chimes; in the panpipes which represent the phoenix the pipes representing the two sets lie to either side of the centre of the instrument; and it is probable that they were also originally separate in that other phoenix instrument, the reed mouth-organ (*shêng*).

This cosmogonic link between note relationships is at the root of the principles of harmony in Chinese music. It explains why, for the most part, only the simplest and most perfect harmony is found. The only harmony permissible in Chinese music is that founded on the combination of opposite cosmogonic principles. Broadly speaking, only the intervals of a fourth and a fifth are used; the intervals of a third and sixth are scarcely found in Chinese religious music (and rarely to be met with in popular music either).

So far we have calculated the *lü* only up to the twelfth, i.e. the cycle has been taken only to the eleventh fifth. If we take the 13th note (12th fifth) we find, as the Chinese found, that measured from F (as fundamental) it is the note E $\sharp$ , that is, a note 7 octaves (or by the above method of inferior and superior generation, one octave) distant from the original generator *plus a slight interval in excess*. Mathematically expressed:  $(\frac{3}{2})^{12} = (2/1)^7$  by 531,441/524,288 (= 81/80 approx.). This slight interval was known to the Greeks and is familiar to us to-day as the "comma of Pythagoras". Musically speaking, the important fact is that the 12th fifth completes the cycle<sup>4</sup> and begins the cycle all over again, but on a slightly higher level. In other

words, it *renews the fundamental note*. Like the cycles of celestial bodies, or of the earth's year, we have not a closed circle, but a spiral moving towards the *ever new*, and on this principle all Chinese music is traditionally based. The progression of the *lu* is in fact itself a cycle. And this may indeed be the key to understanding the phoenix<sup>5</sup> of the legend, for in the mythology of many nations the phoenix is the bird which, after a certain length of time, *arises from its own ashes*.

*The Five-Note Scale*.—Thus far the system of Huang Ti (or Ling Lun), which has always formed the primary framework of Chinese music. The most important application of it has been the gapped pentatonic (five-note) scale which is the most ancient, most significant and most persistent of all Chinese scales. It is referred to in the classics, was clearly in use long before their time and remains fundamental in Chinese music to-day, as well as being found in many other parts of the world, where it may have been diffused at a very early period.

We have the authority of a 2nd-century B.C. historian to the effect that "the five notes (of the pentatonic scale) correspond to the (first) five *lu*"<sup>6</sup>, that is, in our convention, to the notes F G D A. Arranged in step-wise order within the octave, these sounds give the cyclic scale: F G A C D, of which the D and A are sharper than the corresponding degrees of a divisive scale<sup>7</sup> built on the same notes:

Scale:	F	G	A	C	D	(F)
Cyclic intervals:	9/8	9/8	32/27	9/8	32/27	
Divisive intervals:	9/8	10/9	6/5	10/9	6/5	

Although these two degrees of the cyclic scale are higher only by a comma (81/80) than their divisive or harmonic counterparts, the sound and effect of the cyclic scale are in fact absolutely different, and when the two scales are played side by side this difference is easily perceptible by the trained ear. The Chinese scale has an unmistakable sense of that *renewal* referred to in the above section on the 12-note transposing system.

The notes of the pentatonic scale were embodied in tubes of corresponding length. Starting from the standard (Chou dynasty) pipe-length of 81 lines, the five pipes stood in the relationship 81, 54, 72, 48 and 64 (alternate ratios of 2/3 and 4/3). These numbers, like the numbers 2 and 3 of which they are ultimately composed, had cosmological significance in Chinese culture. They went to make up the number of finer threads within

<sup>1</sup> Further concerning the ways in which these principles combine see below, Instruments.

<sup>2</sup> The *yang* and *yin* are probably comparable with the Sanskrit *linga* and *yoni*: respectively male (pertaining to being) and female (pertaining to matter).

<sup>3</sup> The alternation of generation is found also in the Jewish cosmogony of the *Kabbala*. According to this ancient work God created the world in ten *sephiroth* or utterances. The first *sephira*, which was androgynous, begat the nine following *sephiroth* in successive generations, male and female in alternation. See, for instance, J. F. C. Fuller, 'The Secret Wisdom of the Qabalah' (London, 1937).

<sup>4</sup> The natural duodenary division of sound and the duodenary division of the zodiac is too remarkable to pass unnoticed, especially in view of the deliberate connection between the two in the present context. Although the zodiacal division is generally assumed to have been arbitrary, the Chinese (and other ancients) speak of the musical foundation of celestial order and, whatever their conception may have included, there is no reason to rule out the possibility of a quite literal meaning.

<sup>5</sup> Some further legendary material on music and the phoenix is given by F. H. Martens, *op. cit.*, pp. 534-38.

<sup>6</sup> See-ma Ts'ien, see E. Chavannes, *op. cit.*

<sup>7</sup> I.e. the theoretical five-note scale of just intonation which derives from the nearest simple harmonic ratios to the fundamental tone. This is the pentatonic scale which, in its tempered form, is used by western composers.

the strings of some musical instruments<sup>1</sup> and 81, 72 and 54, it is worth noting, are adhered to in the number of flagstones forming the floor of the Altar of Heaven in Peiping.<sup>2</sup> Here we have the suggestion of a cosmo-connection between musical and architectural proportions which has also existed at various times in Europe, even as late as the Renaissance.<sup>3</sup> The number 5 was fundamental in Chinese philosophy, and much symbolism exists behind the five notes of the scale: in the classics these are linked with the 5 virtues — benevolence, righteousness, propriety, knowledge and faith<sup>4</sup> — and with several other categories of 5 which have here been collected from various sources<sup>5</sup>:

based on the cycle of fifths and have seen its connection with the zodiac. We have also discussed the five-note scale which is transposed as it moves in relation to this framework, noticing at the same time its connection with the five (primitive) planets. The musical system of the five-note scale transposing in the natural twelve-note cycle of fifths is strangely reminiscent of the celestial system of the five (primitive) planets moving in the twelve regions of the zodiac. In Chinese philosophy the two ideas are obviously very closely connected. This musical system, backed by natural philosophy, has remained the principal canon of Chinese musical theory through the ages. Upon this basis almost all subse-

TABLE II  
THE FIVE NOTES AND THEIR SYMBOLIC CORRESPONDENCES

Category	Note				
	<i>Kung</i>	<i>Shang</i>	<i>Chiao</i>	<i>Chi</i>	<i>Yu</i>
Political	Emperor or Prince	Ministers	Loyal Subjects	Affairs of State or Public Works	Produce or Material Things
Season	—	Autumn	Spring	Summer	Winter
Element	Earth	Metal	Wood	Fire	Water
Colour	Yellow	White	Blue	Red	Black
Direction	Centre	W.	E.	S.	N.
Planet	Saturn	Venus	Jupiter	Mars	Mercury

The correspondences of notes with seasons is paralleled in many epochs and among many nations, e.g. ancient Irish<sup>6</sup>, ancient Greeks and Babylonians.<sup>7</sup>

The five notes and their symbolic correspondences underlie the form and tuning of various instruments: the legendary Emperor Shun is said<sup>8</sup> to have "invented" a five-stringed *ch'in* (zither), whose five strings he harmonized with the five elements, colours, planets and directions. A remarkable legend testifies to the control of the elements and seasons by the sounds of the strings of the *ch'in*. The sound of the fifth string (*Kung* or tonic) is shown as harmonizing all the other notes; it stands, as it were, on a different dimensional level from these, just as in space the centre is generically different from N., S., E. and W. This same idea finds expression in the single apex lying above the centre of a four-pointed base in the massive pyramids built in ancient times in China, Egypt and Central America alike.

We have now treated the twelve-note transposing system (of Huang Ti or Ling Lun)

qucent Chinese theory has been built, and it will be seen from what follows that other systems which have attained to any degree of importance in China are but extensions of this primary system (the cyclic system) or have preserved close connection with it. Together with the Pythagorean system, which presents other aspects of it, it remains one of the root musical systems of the world. Another great system, the divisive system, found in Indian and other music including western, based on the arithmetic/harmonic relationships (and not primarily on cyclic or geometric relationships) has been little used in China.<sup>9</sup>

*The Seven-Note Scale.*—This scale has never been nearly so important in Chinese music as the five-note scale; the infixed semitone has been regarded as too sensual.<sup>10</sup> A seven-note scale has nonetheless long formed an accepted part of Chinese musical theory. Records disagree as to the period when it was first used.<sup>11</sup> Probably already known in certain Chinese folk music, the seven-note scale was officially adopted in the Chou dynasty, c. 1116 B.C., for the new ritual music of that period. From a notation which sur-

<sup>8</sup> 'Li Chi', ch. xvi.

<sup>9</sup> For its use in juxtaposition with the cyclic system, however, see below, Instruments, No. 35 (*ch'in*).

<sup>10</sup> See C. S. Keh, 'Die koreanische Musik' (Strasbourg, 1935), p. 39.

<sup>11</sup> The usual western assumption is that the 5-note scale evolved out of the 7-note scale. This is unsupported by any evidence.

vived the Burning of the Books it is possible to reconstruct this scale as follows:

## CHOU DYNASTY SCALE

The names and positions of the five original notes are the same as those for the pentatonic scale. The positions of the two new notes (here shown in black as B and E) show them as related to the 6th and 7th *lu* respectively; the seven notes were in fact regarded as deriving from the first seven *lu*. The names of the new notes, *pien-chih* and *pien-kung*, mean "altered" *chih* and "altered" *kung*, or possibly "changing into" *chih* and "changing into" *kung*. The *pien*-notes were thus considered auxiliary, a fact which is frequently emphasized in Chinese writings. In practice they were used as passing notes.

Although it is extremely rare, there are Chinese tunes in which the seven notes are all of primary importance. That the scale was at some period used in this way seems possible, for it had seven modes.

*Metamorphosis of the Five- and Seven-Note Scales*—Notwithstanding various experiments, the five-note scale with two auxiliary degrees, first introduced during the 12th century B.C. during the Chou dynasty, remained the principal scale of Chinese music up to the end of the Sung dynasty (13th cent. A.D.). It thus remained supreme for more than 2000 years. This scale has, as we have seen, an augmented fourth for its fourth degree. After the conquest of China by the Mongols and the foundation of the Yuan dynasty (A.D. 1280), a new seven-note scale was introduced from Central Asia by Kublai Khan. This scale had on the contrary a perfect fourth for its fourth degree. It was, so far as the order of steps went, like the western major scale, but its temperament was cyclic.<sup>1</sup> The Mongol scale was f', g', a', b $\flat$ ', c', d'', e''(f''). The Chinese and Mongol scales thus coincided at all steps except the fourth. The divergence at this step was resolved by combining the two scales into one single eight-note scale<sup>2</sup>, which officially became the new foundation of Chinese music—an event which Chinese authorities regard as important. The Yuan dynasty scale thus was f', g', a', b $\flat$ ', b $\sharp$ ', c'', d'', e''(f'').

The Yuan dynasty had in all probably

seventeen different scales, each with its proper expression, but the above scale is traditionally known as the Yuan scale. Starting from the Yuan scale, the Ming dynasty (1368–1644) omitted the notes causing semitonal steps (in our convention A, B and E), thus arriving at the following five-note scale, which now assumed a central position in the Chinese musical system. The Ming dynasty scale was f', g', b $\flat$ ', c'', d''(f'').

In reality the new scale turns out to be a mode of the original pentatonic, and about this time we find that certain scales which are other modes of the pentatonic were in practical use. The pentatonic scale had in all five modal forms.

At a later period of the Ming dynasty, or according to some authorities in the Ch'ing dynasty (1644–1912), two auxiliary degrees were again introduced. The result resembled the original Mongol scale, except that two of the seven degrees were not full degrees but only auxiliary degrees. The new scale is thus in reality a mode of the original (Chou dynasty) seven-note scale described above. The Ch'ing (or Ming) dynasty scale is f', g', (a'), b $\flat$ ', c'', d'', (e''), (f''). In this form the Chinese scale exists to the present time. The two auxiliary degrees (A and E), theoretically admitted, are used in practice with the greatest discretion. They are found only occasionally in ritual music, somewhat more frequently in the folksongs of some provinces of China<sup>3</sup> and Indo-China.<sup>4</sup>

*The Nine-Note Scales*.—Although the five-note and seven-note scales have occupied the central place in Chinese music, especially the five-note scale, there have been more complex scales in use at various periods. From the notations of the musician Chiang Kuei, still extant in the official history of the Sung dynasty<sup>5</sup>, it is clear that the scale was enlarged to nine notes<sup>6</sup>, in which the two additional notes were auxiliary in relation to the others. Some of the auxiliary notes were chosen from the 12 *lu*, but the exact pitches are not specified.<sup>7</sup> That Chiang Kuei was not alone in using these more complicated scales is indicated by a famous music book of the Ch'ing dynasty.<sup>8</sup> They are probably the most complex scales which Chinese music has ever reached, although they appear to have had little influence in the long run.

*Extensions of the Transposing System*.—Thus far we have seen the cycle of 12 *lü* as a trans-

<sup>1</sup> See J. Yasser, 'A Theory of Evolving Tonality' (New York, 1932), p. 35, n.

<sup>2</sup> J. H. Lewis, 'Foundations of Chinese Musical Art' (Peking, 1936), p. 73.

<sup>3</sup> The perfect fourth may imply a divisive or harmonic element in an otherwise cyclic scale; cf. the Greek 7-note scale of Pythagoras, which is also believed to have come from Central Asia.

<sup>4</sup> See van Aalst, *op. cit.*, p. 15, n. 1, for original reference.

<sup>5</sup> For their occurrence among the Annamites see Gaston Knosp, 'Mercur Musical', III, No. 9, pp. 898–956.

<sup>6</sup> For references see Lewis, *op. cit.*, p. 38.

<sup>7</sup> A fact usually unnoticed and indeed denied by western authorities (but see Lewis, *op. cit.*, pp. 69–71).

<sup>8</sup> Lewis, *op. cit.*, pp. 75–76, makes a partial reconstruction of some nine-note scales.

<sup>9</sup> Sheng Lu T'ung K'ao, see Lewis, *op. cit.*, p. 78.

posing system for the five-note scale and other scales. It is obvious, however, that this system was, both mathematically and musically, imperfect or rather incomplete, because the cycle of the 12 *lu* permits of the transposition of the scale into only eight keys that still preserve all their intervals in perfect proportions. Only the first 8 of the 12 *lǚ* can be taken as tonics. Assuming F to be the first, the last four, namely C#, G#, D# and A#, cannot be so taken. For instance, if C# be taken as tonic for a five-note scale, the other four notes should be G#, D#, A# and E#. While the first three of these exist, and give correct cyclic intervals, the fourth note, E#, does not exist in the scheme of the 12 *lǚ*; the note F has to be used instead, making the interval A#-F a fifth that is too narrow by a comma.

For a time such equivalents were used, but only as a matter of expediency. Realizing the imperfection, however, the Chinese have throughout the ages carried out numerous experiments in an effort to solve the problem. The more important of these will now be discussed.

The system of 64 *lu* (of the scholar Tsian-yen Shiao, c. 200 B.C.) continues the number of sounds related by fifths as far as the sixty-fourth sound (64 sounds within the octave). Using sixty of these as starting-points, it became possible to postulate sixty perfect keys, i.e. sixty different transpositions of the five-note scale for use over a period of five years ( $5 \times 12 \text{ months} = 60$ ).<sup>1</sup>

The system of 53 *lu* (of the scholar King-Fang, c. 40 B.C.) contained 53 notes within the octave. The difference between the first sound and the fifty-fourth being scarcely perceptible to the ear, this cycle permits of the transposition of the pentatonic scale in all 53 keys without noticeable departure from the structure in the last four keys. This system has the virtue of giving a natural division of the octave into 53 commas, a division of sound which is clearly perceptible to the trained ear. In relation to the cycle of 12 *lu*, the cycle of 53 *lǚ* represents the next (or inner) cycle of the division of sound.

The system of 60 *lǚ* (also attributed to King-Fang) divided the octave into 60 parts. This important system was based on analogy with the *pa-kua* or eight mystical trigrams which, united two by two, form 64 distinct combinations.<sup>2</sup> Among the natural analogies of this system is the equation:  $12 \text{ lǚ} \times 5$  (number of elements) = 60 *lǚ*. At first officially adopted, this system was later abandoned as too complicated.<sup>3</sup>

The speculations of King-Fang took cognizance also of the seven-note scale. "Because there are 12 *lu* and 12 scales similar to the standard scale (of 7 notes), there are 84 systems, of which 60 are for the principal modes and 24 for the complementary modes." The 84 systems also receive mention in the report of Wang-Fo (d. 595): "Among the 12 *lǚ*, 7 sounds (degrees) are taken successively which make a scale. . . . For each scale there are 7 systems: in total 84 systems on which are based the melodies, sung or played."<sup>4</sup>

The system of 360 *lǚ* (of T'sien-Yo-che<sup>5</sup>, under the Emperor Sóng Wên-ti, 425-53) expounded the theory of the progression of the *lǚ* as far as the 360th (cf. 360 days), that is, as far as the third cycle of the division of sounds (12 fifths and 53 fifths between the first and second cycles respectively). This system remained purely theoretical.

The system of 18 *lu* (of T'sai Yüên-t'ing, Sung dynasty), replacing the former system of 360 sounds, consisted of the 12 original *lǚ* (of Ling Lun) as principles and 6 altered *lǚ* (from the system of King-Fang).

*Temperament.*—So much for the systems based upon natural laws in their special application as the laws of sound. Parallel with these attempts have been others which, sacrificing an ideal for man's convenience, have contented themselves with compromise. All these attempts have virtually been in the direction of "equal temperament". This temperament is designed to dispense with the comma, i.e. to overcome the slight difference between the F and E#, or first and thirteenth notes in the cycle of fifths. This it seeks to achieve by dividing up the comma among the twelve notes, thus making the scale based on the *lǚ* into an equally tempered chromatic scale.

There are some indications that such a system, now lost, was known long before the Burning of the Books (c. 212 B.C.).<sup>6</sup> This system was probably only theoretical, for there is no evidence of ancient instruments tuned in equal temperament. Later attempts were made by Ho-Tcheng-Tien (A.D. 370-447), who according to Chinese scholars "did violence to figures", Luon-Tcho (543-610) and Wang-Fo (d. 959). But all these attempts ended in slightly inaccurate figures. Finally, in the 16th century, Prince Tsai-Yu<sup>7</sup>, after having "meditated for days and nights before the light of truth was revealed to him", found the exact formula for the

<sup>1</sup> See E. Faber, "The Chinese Theory of Music" ('China Review', 1875), p. 388.

<sup>2</sup> For these symbols see below, Instruments.

<sup>3</sup> The 60 *lǚ* of King-Fang with their names, intervals and relationships are listed by Danielou, 'Introduction to the Study of Musical Scales' (London, 1943), pp. 77-82.

<sup>4</sup> Cf. the "84 circulations" of ancient Persian music.

<sup>5</sup> In his treatise 'Lu-Lü-Sin-chu' ('The New Treatise on the Lü').

<sup>6</sup> Van Aalst, 'Exposé de la musique des Chinois' ('L'Echo musical', Brussels, 12 Oct 1890).

<sup>7</sup> 'Lu-Lü-Ching-I' ('The Precise Meaning of the Lü'), 1596.

equally tempered tuning of the 12 *lü*. In adopting this system he changed the endless spiral of perfect fifths into a closed circle of equal but imperfect intervals, thus precluding any possibility of renewal. Yet it is interesting that no old Chinese instrument has ever been found in this tuning and neither are modern instruments tuned in this way. Despite the place of honour usually accorded to Chinese equal temperament in western commentaries, the system was evidently not very much used

Hsi.<sup>2</sup> These the Chinese believe to be the expression of all the basic permutations and combinations of existence. The eight classes of instruments represent these eight aspects of existence.<sup>3</sup> These classes are, through their materials, correlated not only with the *pa-kua*, but also (through these symbols) with the points of the compass, the seasons and the elements or phenomena of nature. This co-ordination, attributed to the Emperor Shun, is called *pa-yin* and may be collected thus <sup>4</sup>:

TABLE III  
THE EIGHT TRADITIONAL CLASSES OF CHINESE MUSICAL INSTRUMENTS

No.	<i>Kua</i> = (symbol) Name Sign	Substance of Instrument	Example of Instrument <sup>5</sup>	Compass Point	Season	Element or Phenomenon of Nature
1	<i>Ch'ien</i> ≡≡≡	stone	sonorous stone (chime)	NW.	Autumn—Winter	Heaven
2	<i>Tui</i> ≡≡≡	metal	bell (chime)	W.	Autumn	dampness
3	<i>Li</i> ≡≡≡	silk	zither	S.	Summer	fire
4	<i>Chên</i> ≡≡≡	bamboo	panpipes	E	Spring	thunder
5	<i>Sun</i> ≡≡≡	wood	tiger box	SE.	Spring—Summer	wind
6	<i>K'ian</i> ≡≡≡	skin	drum	N	Winter	water
7	<i>Kên</i> ≡≡≡	gourd	reed mouth- organ	NE.	Winter—Spring	mountain
8	<i>K'un</i> ≡≡≡	earth	globular flute	SW.	Summer—Autumn	Earth

in practice. In any case, after the downfall of the Ming dynasty in 1644, the official musical authorities of the new dynasty (Ch'ing) rejected the principle of equal temperament and in 1712 definitely reverted to the original cyclic intonation derived from the twelve natural fifths of Ling Lun. Thus the most ancient canon still formally exists to-day. In practice, however, through the now general acceptance of western music in China (see above, History), the old system is largely forgotten and confused.

INSTRUMENTS. — Chinese civilization has created and preserved a large variety of musical instruments remarkable for their beauty of tone and form. They are traditionally grouped into eight different classes (the "eight sounds").<sup>1</sup> This grouping is, not as in the West according to the form or method of sound-production, but according to the substance from which the instruments are made. The classification rests on a very strange philosophy. As already seen, all things in nature are regarded as combinations of two opposite and complementary principles, *Tang* and *Yin*. These principles, respectively symbolized by an unbroken line — and a broken line — —, are combined in 8 different forms or trigrams, which are known as the *pa-kua* or eight symbols of Fu

Here it is more useful to list the instruments under the familiar western categories, but the traditional Chinese classification<sup>6</sup> can, if desired, be reconstructed from the individual descriptions and with the aid of the following table which, broadly speaking, shows the link between the two classifications:

TABLE IV  
WESTERN CLASSIFICATION OF CHINESE MUSICAL INSTRUMENTS

Western Category	Chinese Category
I. Idiophones	1, 2 (mostly) and 5
II. Membranophones	6
III. Aerophones	4, 7 and 8 (and trumpets from class 2)
IV. Chordophones	3

Only one Chinese class corresponds to chordophones, and these are, in fact, of little

<sup>1</sup> For earliest sources expounding the system of the *pa-kua*, with commentary, see 'The I Ching', the Richard Wilhelm translation, rendered into English by Cary F. Baynes, 2 vols. (London, 1951).

<sup>2</sup> The *pa-kua* are sometimes found depicted on Chinese musical instruments. For illustrations of temple bells see R. W. Marks, 'The Musical Instruments of Ancient China', M.Q., XVIII, No. 4 (Oct. 1932), fig. 6, between pp. 598 and 599.

<sup>3</sup> Data for a fuller co-ordination, including parts of the body, allegorical animals, etc., are contained in Confucius, 'The Ten Strokes of the Wings' (quoted by Matignon, 'La Voie métaphysique', Paris, 1905, new ed., Paris, 1936), p. 168.

<sup>4</sup> The numbers of these instruments in our catalogue below are respectively: 1 (2); 3 (4); 35 and 36; 21, 11; 16-20; 22; 28.

<sup>5</sup> For a traditional classification see van Aalst, 'Chinese Music' (Shanghai, 1884), pp. 47-83.

<sup>6</sup> 'Shu Ching' ('Book of History'), Pt. I, Bk. i, ch. iv and v; Pt. II, Bk. iv. ch. i.

importance in religious and ceremonial music (with the important exception of the zithers), though they are frequently encountered in popular music. Similarly membranophones constitute only one class and are of relatively little importance. The chief place is occupied, as in the Far East generally, by aerophones and idiophones.

Developed instruments undoubtedly existed in China long before those in Europe. Zithers and panpipes, and even lutes, appeared at an early date. But in the history of musical culture the three outstanding Chinese instruments, which no other cultures had at corresponding periods, are the reed mouth-organ, stone chime and bell chime. A great many of these instruments are already mentioned in the Chinese classics, and the ever close link between Chinese philosophy, music theory and practice has meant that they have, in their forms and chief features, changed but little over very long periods of time. Only in the instruments in popular use do we find departures from these principles, and then to a lesser extent than might be supposed.

The instruments remain symbolic of various aspects of Chinese philosophy in their form, dimensions and decorations. Thus the *ch'in* (long zither) being played represents the accord of heaven, earth and man mentioned earlier; and both the *shêng* (reed mouth-organ) and *p'ai-hsiao* (panpipes) represent the phoenix in whose notes Chinese music is said to have originated.

The musical disposition and tuning is traditionally in full accord with the theory (see above, Theory).<sup>1</sup> Some instruments represent the foundation tone (e.g. sonorous stone, No. 1; bell, No. 3); some are founded on the five- (or seven-) note scale (e.g. *ch'in*, zither, No. 35), while others represent the whole system of the 12 *lu* (stone chime, No. 2, bell chime, No. 4; panpipes, No. 21; *shêng*, No. 22). The idiophones, tuned (as rarely in the West) to definite pitches, permit of a timbre having a special charm for the Chinese, whose music lays so much stress on single notes (see below, Ritual Music).

Well over 200 types of instruments found in China have been described in recent times. The following list notices only the more important of these, whether in general use or nearly or wholly obsolete.<sup>2</sup> Traditional measurements are given in Chinese feet and Chinese inches unless otherwise stated or indicated by the context.

<sup>1</sup> Owing to the change of the foundation tone in different dynasties, however, there has been some confusion in practice.

<sup>2</sup> Further measurements, details and variety of forms will be found especially in the works (see Bibl.) of van Aalst, Amiot, Courant, A. C. Moule and Soulié. For further archaeological and historical data see the works of Fernald, Marks and Sachs. For their functions and use see below, Practice.

I. *Idiophones*. (a) *Stones*.—(1) *t'ê-ch'ing*, sonorous stone. A plate of jade or black calcareous stone cut in the shape of an obtuse-angled L and suspended in a frame by a cord which is attached to a hole bored in its apex. Of the two arms (2.25 and 1.8 ft. respectively) the longer is struck with a heavy stick or hammer to produce a clear, deep note, 3 octaves below the *huang-chung*. The last dynasty prescribed 12 *t'ê-ch'ing*, one corresponding to each of the *lu* (hence one for use in each month). Used on all formal occasions, latterly only Confucian

(2) *piên-ch'ing*, stone chime. 16 sonorous stones (of the type of No. 1) of uniform size (long arm 1.8 ft., short arm 1.35 ft.), but differing thickness, suspended each by a yellow silk thread in two equal rows on a large rectangular frame. Tuned to the 12 *lü* and first 4 double *lu*, the upper row of 8 (*yin lu*) forming separate series of notes separated by a tone. Struck by a small felt hammer Confucian (formerly also imperial) ceremonies. It answers the bell chime (No. 4). The number of stones varied under the different dynasties: Han, 19; Liang, 21; Wei, 24; Northern Chou, 14; Ming, 24; Chin, Sung, Ch'ü and Sui, 16. Formerly the relative sizes of the stones varied, and their shape was once curvilinear. The *fang hang* is a metal imitation introduced by a (probably) Turkish orchestra into China in the 7th century A.D.

(b) *Bells*.—(3) *po-chung*, single bell, suspended from a large ornamental frame. Struck with a wooden hammer. Corresponds to the single sonorous stone (No. 1), which answers it at the Confucian ceremonies. There are 12 bells tuned on the 12 *lü*, for use according to the season. The measurements of the first bell (*huang-chung*) are: length 3.6 ft., widest diameter 2.25 ft. The cross-section has been successively quadrangular (ancient—cf. Egypt, Ireland); elliptic (Chou dynasty); circular (16th cent., Ming dynasty) and oval (18th cent., Ch'ing dynasty).

(4) *piên-chung*, bell chime. 16 bells of equal size and diameter, but different thickness and weight, suspended in two rows of 8 in a frame, struck by a small felt hammer. Tuned as No. 2 (stone chime), which answers it. The number and (as described under No. 3) shape of the bells has varied under different dynasties.

(5) *wei-shun*, monkey bell (obsolete). Instrument of the Chou dynasty, almost balloon-shaped, suspended on a frame by a knob shaped like a monkey (*wei*).<sup>3</sup> Height 1.35 ft.,

<sup>3</sup> In rainy weather the monkey hangs from the branches of trees by putting the two tufts of its tail into its nostrils to form a circle, and from this the Chinese are said to have derived the idea of suspending their bells. See van Aalst, 'Chinese Music' (Shanghai, 1884), p. 56.

diameter 1.1 ft. (upper) and 8.3 ins. (lower). Its tongue was an internally suspended cluster of small round bells, the sound being exceedingly shrill. Used at the Temple of Ancestors.

(6) *to*, handbell. Almost cylindrical, with clapper of either (a) wood<sup>1</sup>: to assemble people for the publication of edicts, and used by civil dancers, or (b) metal<sup>2</sup> used by military dancers and in the army as a signal for silence and attention. Important in the Chou dynasty, it is now used only by Buddhist priests in prayer.

(7) *shun* (popularly *ch'ing*), resting-bell. A heavy basin of bronze, of variable size, struck on its thick edge by a wooden hammer to give a full clear tone. Used at religious ceremonies where, with the open side up, it is put into a kind of silk purse richly ornamented with costly fish scales.

(c) Gongs.—(8) *lo*, gong. Flat, bossless, bent-back shallow rim, pierced with two holes through which passes a yellow silk cord for holding the instrument in the hand. Struck with a copper mallet. Chiefly a popular instrument and used as a signal on civil and military occasions. Not used in imperial worship, but employed in Buddhist temples to call the attention of the sleeping gods. The numerous gongs of China, diameter varying from 2 ins to 2 ft., also include the *kan*, similar to No. 15, but larger and with deeper rim, *t'ong-ku*, a small bossed instrument; *t'ong-tyen*, small, with shallow rim; *teheng*, shallow, basin-shaped, held by metal clasps in a circle of wood; *yang*, a disc of shallow bulging form.

(9) *yun-lo* (also *yun-ngao*), gong chime. Nine little gongs or bronze discs, all about 4 ins in diameter but of different thicknesses, each attached by four silk cords to a wooden frame, in which they form three rows. Struck by a felt hammer. Frequently a tenth gong (never played) is present above the middle gong of the top row. To-day it is very difficult to find any gong chimes with an orderly tuning. Used (1) at court, mainly on joyful occasions; (2) in the Confucian temple, but only for the "Guiding March", (3) for form's sake, sometimes in wedding and funeral processions, where hired coolies strike it indiscriminately.

(d) Cymbals.—(10) *po* (or *t'ong-po*), cymbals. Of bronze, with flat (or slightly upward-curving) rim and large central boss, pierced with a central hole where a cord passes to hold the cymbals together. Marriages, burials, theatre. There are both small and large forms, the latter reaching a considerable width (nearly 2 ft.) in the lama temples. Chinese sources attribute the origin of the cymbals to India, Tibet and the Turkish peoples.

(e) Wood Percussion Instruments.—(11) *yu*, tiger (tiger-box). A musical instrument carved out of wood to represent a tiger (3.6 ft long, 1.8 ft. wide, 1 ft. high) crouching on a rectangular pedestal. Twenty-seven teeth (divided into three series) run along its back like a saw. Struck by a bamboo wand of which one half is handle, the other being split into 12 or 24 switches. Used in Confucian ceremonies where, at the end of each strophe, the attendant strikes it three times on the head and rapidly passes his bamboo wand along its dentated back. It is said that in the dying sound of the tiger an initiate experiences the mystery of Tao, the spiritual path of life.

(12) *mu-yi*, wooden fish (cf. Japanese *mo kugyo*). An offshoot of the slit drum, but to-day shaped somewhat like a human skull. Of various sizes up to a foot in diameter, it is carved from a piece of camphor wood and lacquered gold and red. It is hollowed out through a small ventral slit, and the craftsmen carve a small ball, imprisoned, but free to move inside the cavity. Suspended, or placed on a cushion or stand, the "fish" is struck with a heavy pointed stick. Used by priests (Taoist and Buddhist) to mark time in the recitation of prayers. In the 2nd cent. B.C., the *mu yu* is believed to have been used in praying for rain in the autumn. The fish (as a water animal) is connected with prayers for rain, but also with the rites of death and resurrection. The ball moving inside recalls resurrection myths such as the biblical tale of Jonah and the whale. The oldest surviving specimens have a piece of fruit carved in the mouth—the penny for the journey of the dead which still survives in the slice of lemon placed in the mouth of a fish served up at the present day. The "fish" has no eyelids: it symbolizes wakeful attention.<sup>3</sup> The *mu yu*'s near relative, the "Korean temple block", has, under the name of "Chinese temple block", found its way into the western dance band.

(13) *chu* (formerly *k'iang*), trough. Of square form, set up on a base; larger at the top (open) than at the base (closed), hence its side walls slope outward. Length of each side: 2.4 ft. (top) and 1.8 ft. (bottom); height: 1.8 ft. The interior is painted yellow, the sides blue, red, black and white. It is adorned with landscapes and figures of symbolical animals as follows:

Side facing:	E	W	S	N	base
Animal:	dragon	tiger	phoenix	tortoise	serpent-spirit

It is struck by a hammer (*ts'ui*) which, limited to a pivot inside the box on the bottom, is reached by the hand through a large hole in one of the sides. The trough has the form of an ancient grain measure, and traditionally

<sup>1</sup> Soulié, *op cit*, p 98, mentions a bell made of wood, with wooden clapper

<sup>2</sup> See Sachs, *Hist. Mus. Inst.*, pp 175-76.

the hammer is said to strike the bottom of the trough, a practice which seems to link it with ancient agricultural rites.<sup>1</sup> Some descriptions mention the striking of bosses on three or on all four sides. Used in Confucian ritual, where it gives two sounds at<sup>2</sup> or three sounds before<sup>3</sup> the beginning of each strophe.

(14) *shou-pan*, percussion clapper. Made of slabs of the red wood *huai*, 1.35 ft. long, 0.3 in. thick; breadth 2.5 ins. (lower end) and 2 ins. (upper end). The words of the hymn are engraved upon the instrument, and at each word it is struck against the palm of the hand. Confucian. This replaces the obsolete percussion clapper *ch'ung tu* (12 small bamboo strips fastened together by a strap) which was used by temple singers in the singing of sacred poems engraved on the strips. A bunch of bamboo strips was the ordinary form of book and at the sacrifice to heaven the clapper was said to commemorate the invention of writing.

(15) *p'ai-pan* (or *pan*), percussion clapper. A popular instrument consisting of two slabs of the red wood *huai*, attached by a silk cord, on which a third slab is struck to beat time. A form of the *pan* has recently been introduced into western dance bands under the name of "Chinese wooden block".

II. *Membranophones* (drums).—The drum in China is of an extraordinary number of varieties and sizes, varying from a few inches to several feet. These instruments, and the various names which they have possessed at different periods, almost defy classification. They include hourglass drums, kettledrums (probably of Islamic origin), barrel drums (probably ultimately of western Asiatic origin) and other forms. Important drums include:

(16) *ying-ku*, drum, c. 3 ft. high and 2 ft. diameter, richly ornamented, suspended in a frame and beaten on the upper surface by two sticks. Confucian.

(17) *tsu-ku* (or *ying ku*), barrel drum, horizontal, large, but not quite so large as No. 16, supported by a pedestal. Confucian.

(18) *po-fu*, barrel-drum, small, horizontal. Length 1.4 ft., diameter 7 ins. It rests on a table 1 ft. high. Held on the knees of the player, it is beaten with the hands. Confucian. Originally this drum was filled with rice hull and thus was in origin a grain drum (cf. Asia and North American Indians). Probably the earliest drum in China.

(19) *t'ao-ku*, barrel drum, horizontal, 1 ft. long and 1 ft. across, supported by a handle which passes through the barrel. When the drum is twirled, two balls, suspended by strings from the barrel, strike the drumheads.

Confucian (and itinerant vendors). Anciently ritual *t'ao-ku* were composed of two or more drums on a handle or a cluster of small drums hung together on a frame.

(20) *pan-ku*, flat drum, small, skin-covered top (diameter of head, c. 6 ins.) and hollow bottom, resting on a wooden tripod. Popular orchestras, accompaniment of ballads.

III. *Aerophones*. (a) Polycalamous.—(21) *p'ai-hsiao*, "panpipes".<sup>4</sup> A set of 16 vertical flutes (stopped bamboo tubes) arranged in raft form on a wooden frame, more or less carved and ornamented. The tubes are of equal diameters but different lengths. The blowing ends are all level and project above the frame, the other ends being stepped down from each side as they approach the centre of the instrument. At different periods the arrangement has been different—either (a) with the largest pipes in the centre or (b) with the pipes arranged in a single continuously stepped row. The 16 pipes correspond to the 12 *lu* and 4 grave *lü*, giving the same notes as the bell chime and stone chime. The number of pipes has varied<sup>5</sup> and in very early times there were 12 tubes. These corresponded to the 12 *lu* of which this instrument was an obvious outgrowth (a 12-pipe form survives in the *kuan-tsi*), it was thus probably at first a set of pitch-pipes and the forerunner of the holed vertical flute, and possibly also of the *shêng* (reed mouth-organ, No. 22).<sup>6</sup> A theory of origin in a series of pitch pipes (see No. 27) is necessary to explain the fact that the pipes are arranged in two series, male and female, to the left and right of the central point of the frame. This is reminiscent of the two phoenixes of the Ling Lun legend (see above, Theory), male and female<sup>7</sup>; traditionally the sounds of the *p'ai hsiao* represent the voice of the phoenix, and the form of its frame (possibly, however, not introduced until the Mongol dynasty c. 1300) represents this bird with wings outstretched. One of the names of the instrument is *fong hsiao*. Confucian ritual.

(22) *shêng* (Japanese *shô*), free-reed mouth-organ. The character *shêng* is made up of the radicals of "bamboo" and to "produce". Legend says that this instrument was made

<sup>4</sup> An accepted but inappropriate term, for Pan was a Greek god, and the Chinese instrument existed before the Greek syntax.

<sup>5</sup> There are also several varieties. For instruments with 12, 17, 21, 22 and 23 pipes see Soulié, *op. cit.*, p. 66.

<sup>6</sup> Tradition, however, attributes the *shêng* to the female sovereign Nü Wa, who preceded the Emperor Shun, traditional inventor of the *p'ai hsiao*, by some 700 years.

<sup>7</sup> The Cuna Indians of Panama have two sets of panpipes connected by a loose cord and called "man and wife"; when played, these are placed in parallel, so that a male note can be accompanied at the distance of a fifth. A similar instrument is known to-day in Bolivia (cf. ancient Peru), but the associated halves are played by separate players (see Sachs, *Hist. Mus. Inst.*, pp. 197-98).

<sup>1</sup> See Sachs, *Hist. Mus. Inst.*, p. 175.

<sup>2</sup> Van Aalst, *op. cit.*, p. 74.

<sup>3</sup> Soulié, *op. cit.*, p. 86; Sachs, *Hist. Mus. Inst.*, p. 175.

in imitation of the bird Phoenix with its body, head and wings (or tail). Certainly the form of its three main parts—windchest, mouthpiece and pipes—is otherwise unaccountable. The name of the large variety, *fong cheng*<sup>1</sup>, further witnesses the connection (*feng* = phoenix). The instrument is primarily associated with Confucian ceremonies, but *shêng* are carried (and were formerly played) at weddings and funeral processions—occasions connected (like the phoenix) with the idea of rebirth. They never appear in popular orchestras.

One of the most ancient instruments in China, and traditionally attributed to the legendary female sovereign Nu Wa, the *shêng* is first mentioned in the Chinese classics (odes of c. 1100 B.C.); the earliest known picture is on a votive stele of A.D. 551 in the University Museum, Philadelphia<sup>2</sup>; the most beautiful existing specimen is preserved in the Shosoin (museum of 7th-century Chinese art treasures) at Nara in Japan.<sup>3</sup>

Of the three parts of the *shêng* (a) the windchest or air chamber consists of gourd (*p'ao*) or calabash (latterly of lacquered wood hollowed in the same shape); (b) the mouthpiece or neck, formerly long and slender, is to-day short and stubby, and is sometimes tipped with ivory; (c) the pipes are latterly usually 17 in number. The older dictionaries<sup>4</sup> distinguish two types of *shêng*: (a) *ch'ao* (bird's nest), a larger type with 19 pipes, and (b) *ho* (concord), a smaller type with 13 pipes. The number of pipes has varied in different periods. Of the 17 pipes of the present *shêng* 13 speak and 4 are mute. Five different pipe-lengths have been distinguished.<sup>6</sup> The pipes are arranged symmetrically according to height, the two largest (16-20 western ins.) being in the middle (front and back), the others descending like steps to the short ones at the sides. They are bound together at the level of the shortest pipes. At their lower end, closely packed together, the pipes are inserted into holes around the rim of the windchest. Each pipe has two main openings: (a) a sidehole at the lower end inside the windchest; through this passes freely a thin metal reed or tongue ("free reed"), whose tip is slightly loaded with wax; (b) a hole just above the rim of the windchest (*i.e.* outside it), stopped by the player's finger to produce a note. Some of the pipes have a third opening (rectangular slit) near the top end. When present, this last opening determines the effective (sounding) length of the pipe.

<sup>3</sup> Reproduced by Marks, facing p. 598, fig. 2.

<sup>4</sup> 'Erh Ya', written by a pupil of Confucius;

<sup>5</sup> Shuo-wên, A.D. 100.

<sup>6</sup> *Shêng* is in fact a generic name.

<sup>7</sup> Van Aalst, 'Chinese Music', 1884, p. 79.

The *shêng* is tuned according to the *li* (a further link with the phoenix), but latterly there are differences in detail, *e.g.* duplication of notes<sup>7</sup>, there usually being eleven different notes in all.<sup>8</sup> The melodies drawn from this arrangement are pentatonic. The melody is sometimes accompanied by other notes which often lie above it (*cf.* No. 35 below), the simple harmonies (fourths, fifths and octaves) appropriate to any given note being indicated on the pipes by the makers<sup>9</sup>.

In playing, the performer slants the pipes over towards the right shoulder (ancient illustrations suggest a vertical position), holding the bowl of the instrument in the left hand. The playing is by suction as well as by blowing, and players, getting inflammation of the lungs, are said not to live longer than forty years.<sup>10</sup>

(b) Flutes.—(23) *ti* (to-day usually *ti-tzu*), a transverse flute, the common or popular flute of China (theatre orchestras, marriage and funeral processions, etc.). A bamboo tube (bound round with waxed silk, and sometimes ornamented with tassels) pierced with 8 holes (6 fingerholes, 1 blown across and 1 covered with a paper membrane). The *yu-ti* imitates the *ti* in marble. The *lung-ti*, "dragon flute", is a Confucian form of the *ti* adorned with a dragon's head and tail, a form of decoration not permitted to ordinary instruments.

(24) *ch'ih*, transverse flute of bamboo, the oldest in history and the original transverse flute of China, now obsolete. Apparently existed in right-handed and left-handed forms.<sup>11</sup> It was once blown in the middle. Medievally one end was "stopped". Holes: 5 + 1 (medieval) or more (later). Length: 16 ins.<sup>12</sup> Chinese transverse flutes also include: *ch'iang-ti* (shepherd's flute); *hêng-ti* (transverse flute); *ch'ang-ti* (long flute); *tuan-ti* (short flute). In all recent associations the word *ti* refers to transverse flutes, though anciently *ti* referred to vertical forms. A western origin is probable, and the Sumerian vertical flute was called *ti-gi*.

(25) *yo* (formerly *yueh*), short vertical flute, 3-holed (more recently 6-holed in China, though the Korean *yak* is still 3-holed). Its name *yo* means literally "stalk, foot, measure" in reference to the old Chinese foot whose length, corresponding to the *huang chung* or foundation tone, the instrument embodied

<sup>7</sup> *Cf.* Courant, *op. cit.*, pp. 161-63; Eastlake, 'The "Sho" or Chinese Reed Organ' ('China Review', Hong Kong, XI, 1882-83); Hermann Smith, 'The World's Earliest Music' (London, n.d.), pp. 200-6.

<sup>8</sup> Van Aalst, 'Chinese Music' (1884), p. 82, gives the lowest note as being about 902 c.p.s.

<sup>9</sup> See A. C. Moule ('Journal of the North China Branch of the Royal Asiatic Society', 1906); J. Yasser, *op. cit.*, pp. 74-76.

<sup>10</sup> Eastlake ('China Review', Aug. 1882).

<sup>11</sup> Fernald, *op. cit.*, p. 425.

<sup>12</sup> 'Erh Ya', (c. 400 B.C.); Prince Tsai Yü (16th cent.).

(9 $\frac{1}{2}$  English ins.). At one time it was played for dancing<sup>1</sup> but later became a wand which ritual dancers merely carried and waved in the left hand. Musically the *yo* is obsolete.

(26) *hsiao* (or *tung hsiao*)<sup>2</sup>, vertical flute (wrongly trans. "panpipes"). An obsolete bamboo pipe made like No. 25, except that the top is closed by a knot of bamboo in which is cut a notch joining that in the side of the instrument. This makes it intermediate between the whistle flute and the simple vertical flute. The early *hsiao* of the Chou dynasty had this form. About 22 ins. long; 5 plus 1 holes. Confucian. The *yu-hsiao* imitates the *hsiao* in marble.

(27) *kuan*<sup>3</sup>, literally "pipe" made up of the radicals for "bamboo" and "official" (wrongly "double pipe"), a notched pitch-pipe without fingerholes. Obsolete, one of the earliest Far Eastern wind instruments. Tuned to one of the 12 *lŭ*. A set of 12 such pipes was the basis of the *p'ai hsiao* ("panpipes", see No. 21).

(28) *hsian*, globular flute. Virtually the only old instrument belonging to the earth class (see above, Table III), this consists of a cone (elliptic in section) of baked clay (reddish yellow) or porcelain, shaped like an egg but with its upper end pointed and its lower end cut off so as to make a flat base: ornamented with dragons and clouds. Number of holes: earliest forms, 2 or 3; by 11th century, 8; latterly usually 6 or 7 (one at the apex for blowing, 3 or 4 in front, 2 behind). There are at least two different tunings. The melodies are pentatonic, though the notes present are more numerous. The timbre resembles the vowel sound *oo*, rather like that of the European globular flute which, under the name of *ocarina*, first appeared in Italy about 1860. Confucian.

(c) Oboes.—(29) *so-na* (S.W. *so-la*), conical oboe (wrongly, "clarinet"). Its name connects it with the Persian *surna*, which may have found its way into China through Turkestan. A wooden pipe with 7+1 holes terminated at one end by a copper bell and at the other end by a small reed mouthpiece. The scale varies with the maker, but its fundamental has been described<sup>4</sup> as approximately 902 c.p.s. Very popular. Marriages, funerals, yamen orchestras. The *k'ai-ti* is a smaller form of the instrument.

(30) *kuan* (*kuan-tzi*, or *lou kuan*; Japanese *hichiriki*), oboe<sup>5</sup> (wrongly, "clarinet"). A

tube (of hard wood, bone or horn) about 8 ins. long, pierced by 7+1 or 7+2 holes, and terminated by a long double reed. Chiefly weddings and funerals.

(d) Trumpets.—(31) *ta-t'ung-kyo* (popularly *hao-t'ung*, Japanese *dokaku*), cylinder trumpet (about 3 $\frac{1}{2}$  ft. long) which is rested on the ground. Mouthpiece shallow and broad-rimmed; the body has no bell, but the tube slides telescopically into a long wide cylinder of wood covered with copper, of copper only (smaller military type) or of iron.

(32) *syao t'ung kyo* (popularly *la-pa*), long trumpet (c. 4 ft.), formed of two or three telescopic tubes, with bulging rings marking the beginning of each section. The uppermost tube carries the mouthpiece, the lowest is expanded into a sizable bell. Chiefly military, also used by knife-grinders. Longer specimens are used by the lamas, and the name *la-pa* connects this trumpet with Mongolia and Tibet (cf. Persian *la-bek*).

(33) *cha-chaio*, hooked trumpet, a variety of No. 32. Of various sizes. Wedding processions.

(34) *hai-lo* (Japanese *hora*), conch horn or shell trumpet. Held by inserting the hand into the natural opening of the shell. Used chiefly by soldiers, watchmen, boatmen, etc., it has the same function as the bugle in Europe. Also found among Buddhist priests. The Chinese instrument must have originated in India, where alone the shell of the conch (*Xancus pyrum*) is found.

IV. Chordophones. (a) Zithers.—(35) *ch'in*, quasi-fretted long zither (wrongly, "lute", "harp", "psaltery"), instrument of the Chinese intellectual autocracy. The word *ch'in* means literally to "prohibit", in reference to its power to check evil passions, rectify the heart and guide the actions of the body. There is a whole literature in Chinese devoted to the instrument, including treatises on its notation and performing technique<sup>6</sup>, and a wealth of extraordinary allegories and legends. To judge from the tradition assigning its original 27-stringed form to the legendary ruler Fu Hsi, the *ch'in* is one of the most ancient instruments of China. Many forms exist or have existed<sup>7</sup>, having from one single string up to 20 strings, and a 13-stringed form is preserved in the *koto* (or *kin*) of Japan. The 5- and 7-stringed forms have been most common, both being first depicted in the Han dynasty in the famous Wu Tombs.<sup>8</sup> The 5-stringed form, attributed<sup>9</sup> to the pre-dynastic Emperor Shun, is now obsolete in

<sup>1</sup> 'Shi Ching' ('Book of Poetry'), Pt. II, Book vi Ode iv.

<sup>2</sup> The full name of this instrument is *feng huang hsiao*, "phoenix flute", though it is called simply *hsiao* in ritual. See Fernald, p. 424.

<sup>3</sup> Not to be confused with the modern oboe of the same name. See No. 36.

<sup>4</sup> Van Asiet, 'Chinese Music' (1884), p. 73.

<sup>5</sup> Not to be confused with the obsolete flute of the same name. See No. 27.

<sup>6</sup> For technique and references see below, Chamber Music.

<sup>7</sup> For various forms and archaeological data see Soulié, *op. cit.*, pp. 40-41, Fernald, *op. cit.*, pp. 411-15.

<sup>8</sup> E. Chavannes, 'Mission archéologique dans la Chine Septentrionale' (Paris, 1913), No. 117, stone slab (5-stringed) and No. 122, bas-relief (7-stringed).

<sup>9</sup> 'Li Chi' ('Record of Rites'), ch. xvi.

China, but may survive in the Japanese *go kin*. The 7-stringed form was official for the last dynasty, though this has rarely been heard latterly except in the temple of the Ju-Chiao or Confucian "Sect of the Learned".

The seven silk strings are longitudinally stretched over a narrow, slightly convex soundboard, whose concave underside is closed by a flat base. The base usually has four small feet. The body tapers slightly towards the rounded lower end. The strings are held by nuts on the under side of the wider end and pass through holes in the body to reach the upper surface, thence they pass over a bridge, run the length of the board and converge slightly at the lower end; passing round this, they come to be fastened to the adjustable tuning-pegs of jade or wood.

The dimensions and form, and the number of strings of this instrument, all have their connections in nature. The top (soundboard) is rounded like the firmament (heaven); the bottom is flat like the ground (earth); and the instrument is played by man. Thus performance on the *ch'in* symbolizes the accord of the triad heaven-earth-man previously mentioned.

The traditional length was 366/10 Chinese ins. (3.66 ft. = about 4 English ft.), associated with the maximum of 366 days in the year, and width 6.6 Chinese ins. (about 8 English ins.). Both dimensions are divisible by 3, which thus links them with the cosmic harmony. In the soundboard are two round or oblong holes: the dragon mouth (8 ins.), to play on the eight winds, and the phoenix mouth (4 ins.), to imitate the four seasons.

The seven strings represent the seven days of the week<sup>1</sup> or the seven celestial bodies<sup>2</sup> (the former five strings represented the elements and connected the elements with the seasons). Under the lowest or melody string there are thirteen studs (quasi-frets) which represent the twelve moons and the intercalary moon.

The constructional materials of the instrument are also important: the strings are of silk, the studs of metal, the nuts of marble or jadestone, and the soundboard is of wood. These are four of the eight classes of material deemed fundamental (see above, Table III).

The tuning is in accordance with the

Position of stopping (number of stud): Vibration ratio (relative to open string): Scale:	Nut	i	ii	iii	iv	v	vi	vii	viii	ix	x	xi	xii	xiii	Bridge
	1	8/7	6/5	5/4	4/3	3/2	5/3	2/1	5/2	3/1	4/1	5/1	6/1	8/1	—
		C	D	E <sub>b</sub>	E	F	G	A	C	E	G	C	E	G	—

season. In the basic tuning the seven strings were formerly tuned to the cyclic pentatonic scale in the form C.D.E.G.A C D<sup>3</sup>, with the

two highest notes thus repeating the two lowest. The more recent official tuning is also based on the pentatonic scale, but in the following form<sup>4</sup> (the actual pitch of the fundamental is approximately western cello D, but transposition to C is here used for convenience).

String No.	I	II	III	IV	V	VI	VII
Pitch.	C	D	F	G	A	C	D
Vibration ratio:	9/8 32/27 9/8 9/8 32/27 9/8.						

The number of silk threads in a given string varied, that is, the weight of the string varied, with the self-same ratios which subsist between the actual notes<sup>5</sup>

String Number of threads	I	II	III	IV	V	VI	VII
Successive ratios between numbers of threads	108	96	81	72	64	54	48
	9/8	32/27	9/8	9/8	32/27	9/8	

The weight of a string, however, is not the only factor determining its pitch. Modern acoustics recognizes three such variables: length, weight and tension. As the *ch'in* strings are all of the same length, the actual variables are here reduced to two, namely weight and tension. Knowing the traditional relative weights of the strings, it is thus possible to calculate the relative tensions necessary to tune these strings of equal length to their prescribed pitches. Traditional figures of this kind (the number of threads to a string, etc.) are usually dismissed as being "purely symbolic", but (not excluding the strong likelihood of symbolic connections) the relation between weight and tension has a very definite bearing on timbre, and, since timbre is conspicuously important in Chinese music (see below, Ritual Music), it is more than likely that in the tuning of the *ch'in* this was taken into account by the Chinese.

Thus far we have an instrument of seven strings tuned in a *cyclic* scale, the pentatonic. Of these seven strings six (Nos. II-VII) are used to accompany the lowest or melody string (No. I). The melody string produces different notes by being stopped opposite to any one of the 13 different studs. Stopping by this method produces the following *divisive* or *harmonic* scale.

The complete scale appears to extend over three octaves. The notes produced by stop-

<sup>4</sup> Courant, *op. cit.*, p. 64, quoting from official Chinese sources.

<sup>5</sup> The 10th century A.D. Arab theorists tuned the 4-stringed lute (*'ūd*) by a similar principle.

<sup>1</sup> *Passim*.

<sup>2</sup> Courant, *op. cit.*, p. 164.

<sup>3</sup> Van Aalst, *op. cit.*, p. 61.

ping the string on one side of the centre stud, however, are produced as harmonics; the notes on one side of the centre stud (No. vii) hence duplicate those on the other side, but with a different timbre. Thus the studs, used in much the same way as frets, are disposed, not as frets usually are, unilaterally from one end of the string towards the opposite end, but symmetrically from the centre of the string (or soundboard) towards the two ends.

The scale produced by stopping the melody string includes not only the familiar minor third, major third, fourth, fifth, major sixth and octave, but also the septimal (or maximum) tone of ratio 8/7, not found in western music. Comparing the vibration ratios of the melody string successively stopped (*divisive* intervals) with those of the seven strings taken as a whole (*cyclic* intervals), we find that they have the same tonic, fourth, fifth and octave, but differ in their major thirds (5/4, 27/16), minor thirds (6/5, 32/27) and whole tones (8/7, 9/8).

The combination of the *divisive* principle with the *cyclic* principle on the *ch'in* is of particular interest, because these two systems have apparently always been found irreconcilable by theorists. Historically, moreover, the two systems are associated with different civilizations: the *divisive* with the Indian, Babylonian and western, the *cyclic* with the Chinese and Pythagorean Greek. Since both systems have their foundation in nature they must surely find connection in a larger system of which they are but parts.

(36) *sē*, unfretted long zither (wrongly, "lute", "lyre") of 25 strings.<sup>1</sup> This sweet-toned instrument, used in Confucian ceremonies (being proper to sacrifices of equinox) and in the accompaniment of poetry, is mentioned in all the classics alongside No. 35:

Loving union with wife and children  
Is like the music of *sē* and *ch'in*.

In general form the *sē* is like the *ch'in*, but its tail slants somewhat downward from its body. Its largest size is 81 (= 3<sup>4</sup>) ins. It is said to have had 50 strings at the time of its invention (by Fu Hsi), but legend<sup>2</sup> informs us that when a certain Miss Su was one day performing in the presence of the Emperor Huang Ti, the strains of the *sē* impressed him so deeply that he forthwith ordered the number of strings to be reduced by half.

Traditionally each string consists of 243 (= 3<sup>5</sup>) silk threads. Each is raised on a movable triangular bridge. The bridges are coloured, each group of five having its traditional shade: blue, red, yellow, white and black. In recent times only the first ten strings have movable bridges. Tuning varies

with the month and the rites celebrated. One tuning is heptatonic, another pentatonic. In a form of the latter the 25 strings are divided into two series of 12 by the central string; the "interior" series being associated with the imperfect *lū* (*yin*, female), the "exterior" series with the perfect *lu* (*yang*, male). The strings are played, two at a time, an octave apart (first with fourteenth, second with fifteenth, and so on).<sup>3</sup>

(37) *tseng* (cf. Japanese *sō-no-koto*), zither, usually of 14 strings (sometimes 12 or 13).<sup>4</sup> Smaller than No. 36, but similarly played in double notes. Used at imperial receptions and on festive occasions. Legend relates that in the Ch'in dynasty two brothers, striving to play the *sē* at the same time, broke it in half and that each half was called *tseng*. Others maintain that it was invented by General Mong t'yen (d. 209 B.C.) who built part of the great wall of China.

(38) *yang ch'in*, literally "foreign zither", related to the Persian *santir*, in its modern form migrated to China about or before A.D. 1800.<sup>5</sup> A rectangular, trapezoidal or oval box about 2 ft. long, 1 ft. broad and 4 ins. high. Over and through two bridges are stretched several sets of strings (2, 3 or 4 strings to each note). In the form with 16 sets, 8 sets pass over one bridge and through the holes of the other bridge; the other 8 vice versa. Soundboard protected by a lid. Played with two light strips of bamboo. Accompanies songs and ballads with the fiddle and lute.

(39) *la ch'in* (or *ya tch'eng*), bowed zither. Still found in northern China. Hollow wooden body shaped like one half (longitudinal bi-section) of a truncated cone. Ten pairs of silk strings<sup>6</sup> are stretched lengthwise over the rounded front and are regulated by iron pegs. Tuning pentatonic.

(b) Harp.—(40) *k'ung hu*, harp, vertical angular type, of 22 strings, which originated (both instrument and name) in the Persian harp *canak* (25 strings), being imported into China through eastern Turkestan in the 4th century A.D. or perhaps as early as the 2nd century.<sup>7</sup> The harp has never been important in the Far East, where the native zithers early became well established.

(c) Lutes.—(41) *p'i-p'a* (cf. Japanese *biwa*), four-stringed short lute (sometimes "balloon guitar"). An offshoot of the western Asiatic

<sup>1</sup> This method would appear to be in line with an alternative possible interpretation of an ancient passage concerning the generation of notes, already referred to. See above, Theory, p. 226, Note 8.

<sup>2</sup> For several varieties see Soulié, *op. cit.*, p. 45; Courant, *op. cit.*, p. 176.

<sup>3</sup> Farmer, 'Journal of the Royal Asiatic Society', Apr. 1934, p. 384, says that a similar instrument called *seny* was known in China at least as early as the 11th century.

<sup>4</sup> Courant, *op. cit.*, pp. 180-81, mentions 14 strings.

<sup>5</sup> See Courant, *op. cit.*, p. 176.

<sup>6</sup> For several varieties, including instruments with 19, 23 and 27 strings, see Soulié, pp. 44-45.

<sup>7</sup> 'Erh Ya', c. 400 B.C.

lute.<sup>1</sup> An important popular instrument; accompanies ballad singing. It was also adopted by poets during the T'ang dynasty. About 3 ft. long and 1 ft. wide (smaller in early times), the body is pear-shaped, its back being rounded but shallow, its front flat and covered with the soundboard. Two crescent-shaped soundholes appear between the plectrum band and the neck, though rarely in modern instruments. The fingerboard has four adjacent convex frets and, more recently, there are 6 to 13 further frets on the soundboard. The four silk strings, traditionally representing the four seasons, are attached (lower end) to a cross-ledge on the soundboard, but do not run beyond it, and (upper end) are tied to lateral pegs. The usual tuning is  $c'a'b'e''^2$  and the notes obtainable extend in the stepwise scale  $c'f'g'a'b'c'd''^3$  . . . to  $e'''$ . The instrument, held upright on the thighs, is played with bare fingers (original method) or a plectrum (since T'ang dynasty). The left hand stops the strings with much *vibrato*, pulls them, crosses them and so on, while the right, by using the fingers in rapid succession, can produce a kind of *tremolo*. Usually several strings are played together to give either drones or chords. There are said to be over twenty different kinds of technique. The  $p'i-p'a$  is not mentioned in the classics and is absent from the sculptures of the Han dynasty. Earliest mentioned in the 2nd century A.D.<sup>3</sup>, it first appears on Chinese sculptures of the 6th century, and the oldest surviving specimen dates from the 8th century. At least a dozen varieties are known<sup>4</sup>, having variously 2, 4, 5, 6, 7, 8, 12 or 13 strings. These include the *yun how*  $p'i-p'a$ , part of whose neck is carved in the form of a cloud, whence its name, *yun how*, "harmony of the clouds".

(42) *san hsien* (popularly *hsien tsu*, cf. Japanese *shamisen*, formerly *jamisen*), long lute of three strings ("three-stringed guitar"). The name *san hsien* means "three strings", and since the instrument is the counterpart of the Persian *sa-tar* (a word also meaning "three strings"), a western Asiatic origin is probable. The body (redwood) is small (about 7 ins. long), shallow, heavy and variously square or rectangular with rounded angles, or cylindrical. Covered with snake skin on both faces, it is pierced by a long neck (redwood) about a yard long. The three silken (sometimes metal) strings are tuned by lateral pegs (two on one side, one on the other), and are usually plucked with a heavy plectrum (occasionally by the fingers). Tunings:

Do-fa-do, Do-sol-do, Do-re-la. Popular among street ballad singers.

(43) *yueh ch'in* (Japanese *gekin*). Flat lute of four strings. Used with Nos. 41 and 42 to accompany ballads. Now rare. This instrument is popularly called "moon guitar"; for *yueh*, "moon", refers to the round shape of the body. The body has flat surfaces; the soundboard is of wood, the neck is short (latterly) and has 10 frets; the peg box has lateral pegs. The silk (sometimes copper) strings tuned in unison pairs a fifth apart, played with a plectrum. The variety known as *shuang ch'in* has an octagonal body and medium-length neck.

(d) Fiddles (bowed lutes).—(44) *hu ch'in*, two-stringed fiddle. Popular. The body is a small cylinder (bamboo, sometimes wood or a half-coconut or even copper) a few inches long, the upper end (covered with lizard or snake skin) serving as a soundboard, the lower end being left open; the body is diametrically pierced by the handle like a spit. No fingerboard. Tuning usually a fifth. The bow (right hand) is attached to the instrument since its hair passes between the strings. The left hand stops the strings and constantly uses *vibrato* and *portamento*. Possibly introduced into China from Central Asia (after A.D. 900), since *hu* is one of the names that the Chinese gave to the Turkish *Uighurs*.

There are numerous forms of fiddle in China, all of which, to judge from their names and construction, probably go back to a common origin. Varieties with rear pegs, skin soundboard and strings looped to the handle by a cord include the bamboo cylindrical-bodied (a) *tan ch'in* (body diameter *c.* 2 ins.) and (b) *hui hu* (diam. *c.* 1 in.), and the hexagonal wooden-bodied (c) *erh hsen* or *erh hu* (very popular) and (d) *su hu*. Varieties with lateral pegs, wooden soundboard and strings passing over a ledge at the upper end of the stick include the coconut-bodied (e) *hu hu* (body fits over opening) and (f) *ti-ch'in* (body fits into opening of half-coconut), and the pear-shaped-bodied (g) *ta hu ch'in*. Of these forms (a), (b) and (c) have two strings; (e) three strings; (d) and (f) four strings.

NOTATION.—China has possessed musical scripts for pitch representation for (probably long) upwards of 2000 years. These fall into three main classes: tonal notations, tablatures and neumes. In all these types the symbols, written in descending columns, are read from right to left. Rhythm and time values are indicated (if at all) by means of an additional notation.

*Tonal notation*<sup>5</sup>, indicating exact pitches, has

<sup>1</sup> Farmer, "Journal of the Royal Asiatic Society", Apr. 1934, p. 328, sees  $p'i-p'a$  as the probable phonetic spelling of Persian *barbaq*.

<sup>2</sup> For Chinese references see Courant, *op. cit.*, p. 177.

<sup>3</sup> In the work called "Feng su T'ung".

<sup>4</sup> See Soulié, *op. cit.*, pp. 47 and 49.

<sup>5</sup> For tables and examples see Levis, *op. cit.*, chap. vi and *passim*; Soulié, *op. cit.*, chap. iii; Courant, *op. cit.*, pp. 156-57, van Aalst, *op. cit.*, pp. 14-24.

always held the first place in China, probably because of the importance of individual notes of definite pitch (e.g. on stone chime and bell chime). For instrumental music the notation symbols are the literary characters of the first syllables of the names of the 12 *lu*. The chief forms are: (i) the ancient characters; (ii) the Sung dynasty characters<sup>1</sup>; (iii) the simpler "modern" or Mongol dynasty characters. For the short lute (*p'i-p'a*), pipes and vocal music the signs are those of the names of the scale degrees, there being three chief forms: (i) the ancient characters for the 5-note scale; (ii) the ancient characters for the 7-note scale, five of which are identical with the preceding; (iii) the simpler "modern" or Mongol dynasty characters.<sup>2</sup> The octave position is usually not indicated, though sometimes in sacred music a head note indicates the *lu* to which the fundamental should be tuned.

*Tablature* (for zithers and flutes) indicates, not the exact pitch of the notes, but the finger position and also, especially for the zithers, the details of technique: graces, momentary sharpening and other devices.<sup>3</sup> The tablature of the Japanese zither *koto* (derived from the Chinese zither *ch'in*) proves to be a Chinese transcription of the Sanscrit notation symbols used in India<sup>4</sup>, in whose *gamakas* the graces of the Chinese *ch'in* originated (see Han Dynasty *above* and Chamber Music *below*).

*Neumes*.—A rudimentary system, indicating the main melodic outline and closely connected with language in music-poems, exists for melodies where the curve is more important than the pitches of the notes individually. The basic system of neumes numbers three (of musical significance). Their names, movements, symbols and mnemonic positions on the fingers of the hand<sup>5</sup> are as follows:

TABLE V

Chinese Name	Type of Movement	Symbol	Finger Mnemonic
shang <i>p'ing</i>	rising level		tip of forefinger 3rd phalanx of forefinger
ch'ü	falling		tip of ring finger

An alternative circular notation is also in use for the basic melodic movements.<sup>6</sup>

<sup>1</sup> Hsia Ch'êng Ch'ou ("Yanching Journal of Chinese Studies", No. 12, Dec. 1932).

<sup>2</sup> For the actual symbols of all these forms, tabulated for comparison, see *Levis, op. cit.*, p. 91.

<sup>3</sup> For detailed information and analysis see Soulié, *op. cit.*, pp. 30-41, and cf. van Aalst, *op. cit.*, pp. 60 ff.

<sup>4</sup> Hertz-Trefzger, "Das Musikleben der Tang-Zeit" ("Sinica", XIII, 1938).

<sup>5</sup> The three basic classes of neumes and mnemonic use of the fingers find parallels in Babylonia, India, Egypt, Greece, Byzantium and Palestine, and have a near relative in the familiar musical hand of the European Guido d'Arezzo (d. 995).

<sup>6</sup> *Levis, op. cit.*, p. 93.

*Notation of Time and Rhythm*.—Time values and rhythms are, like dynamics, usually left to instinct and tradition.<sup>7</sup> There are, however, certain systems of signs which are added to the tonal notation or tablature. 4-time is the only time admitted in Chinese musical theory (it is very different in practice), and a small circle placed beside a note indicates the fourth beat of a bar; this divides up the composition in a way similar to that of the western bar-line. The first, second and third beats are also sometimes indicated by dots. By extension a dot can indicate a crotchet, two dots a minim and three dots a semi-breve<sup>8</sup>, but the system is not standardized and usually occurs only in manuscripts.<sup>9</sup>

*PRACTICE*.—The musical practice of China will be considered in five different classes. (a) ritual music (Confucian and imperial); (b) chamber music (of philosophers and poets); (c) music-drama; (d) minstrelsy (of street and concert hall); (e) folk music. The Chinese distinguish classes (a) and (b) as classical music, that is, as music which substantially follows the principles laid down in official Chinese musical theory (see *above*). Apart from some surviving forms of the music-drama, the remaining forms are regarded as popular.

(a) *Ritual Music*.—This has until recent times flourished in the Confucian temples and at the imperial court. The music of the latter, wholly extinct in China (and now also in Korea), may still occasionally be heard in Japan. The orchestra of the Japanese imperial household gave an annual public concert in Tokyo at which some of the ancient Chinese music could be heard.<sup>10</sup>

Confucianism has long been the religion of the Chinese lettered class. There is a temple in every prefecture and sub-prefecture where, in the dark hours of the morning ending at sunrise, great ceremonies have been held in honour of Confucius twice a year. In the temple at Peking the service was formerly attended by the emperor, who was the chief of the *Ju-Chiao* or Confucian "Sect of the Learned".

The actions of the emperor, the words of the hymns, the number of musicians, their positions and their instruments, and all the minutiae of the ritual were fixed by ceremonial law. Both within and without the temple the various musicians were ranged. Within, on the east and west sides, were the six singers (who in two groups of three faced each other), and players of the zithers, *shêngs* and small

<sup>8</sup> Example in van Aalst, *op. cit.*, p. 19.

<sup>9</sup> For some further symbols see *Levis, op. cit.*, pp. 95-96.

<sup>10</sup> Tcherepnin, "Music in Modern China" (M.Q., XXI, 1935, p. 393).

drums Without were the bells and bell chimes, stones and stone chimes, flutes and larger drums. And on the marble terrace the 36 dancers were grouped 18 on the west and 18 on the east, each group being headed by a leader carrying a banner to guide their movements:

has eight lines of four syllables each. More varied poetical and musical forms are also found in the old court ritual. A "Song in Honour of the Emperor"<sup>4</sup> consists of two metrical verses (each of heptasyllabic lines) alternating with an apparently non-metrical orchestral prelude, interlude and postlude.

As the emperor entered the temple the traditional "Guiding March" (*Tao Yin*) (Ex. above)<sup>1</sup> was played by 14 instruments, 10 of which played the melody in unison: 2 *shêng* (reed mouth-organs), 2 *ti-tzu* (transverse flutes), 2 *hsiao* (vertical flutes), 2 *yun-lo* (gong chimes) and 2 *iou-kuan* (oboes); the remaining 4 playing a rhythmical figure: 2 drums and 2 *shou-pan* (sets of percussion clappers). This music is very generally believed to be upwards of 3000 years old.

The important hymn to Confucius (Ex. below)<sup>2</sup> was sung after the emperor had arrived at the shrine. Several of the ancient hymns survive, but since they are fundamentally very similar, it is possible to find their main features in this notable example:

During stanzas II, III and IV of the hymn to Confucius the dancers<sup>3</sup> perform a dance in three cycles, assuming during each stanza 32 different positions. These positions<sup>6</sup> are based on the calligraphy of the words of the poem; the calligraphic symbols are really the neumes of the words and hence repeat the shape of the inherent melody of the words.<sup>7</sup> The equipment of the ritual dancer is described in an ode of the 7th century B.C.:

In my left hand I grasp a flute [yo]  
In my right hand I hold a pheasant's feather [k].<sup>8</sup>

It is still the same to-day, except that the flute has become a mere stick or wand and the feather—anciently three feathers bound together in the form of a trident—a single feather.

There are three main elements: words, music and dance. "Poetry expresses the idea; song regulates the sounds, dance enlivens the attitudes: these three have their principle in man's heart, and it is only later that musical instruments lend their help."<sup>3</sup> This triad was found of old in the dance songs of the ancient seasonal festivals (see below, Folk Music), a source to which Confucian ritual doubtless owes much.

The hymn to Confucius is a hymn of sacrifice. Its six stanzas concern receiving the approaching spirit (I), sacrificial offerings (II, III and IV); removal of offerings (V); escorting the spirit back (VI). Each stanza

Just as dance and speech were related through calligraphy, so music and speech were related through tone.<sup>9</sup> Each of the six stanzas has its own melody. To each word (syllable) there is a sustained note. These long equal notes are very characteristic of Chinese ritual melody; the individual notes seem to be more important than the shape

<sup>4</sup> Laloy, *op. cit.*, p. 91 (words) and p. 123 (music).

<sup>5</sup> 18 (9 couples) according to Courant (*op. cit.*, 140, No. 9); 36 according to van Aalst, *op. cit.*

<sup>6</sup> 11 of which are illustrated by van Aalst, *op. cit.*, pp. 31-32.

<sup>7</sup> This same calligraphy was also connected with painting, for the melodic neumes were the basis of the brush strokes of calligraphy and painting. For various connections between poetry, music, calligraphy and painting see Levis, 'Foundations of Chinese Musical Art' (Peking, 1936) pp. 191-94.

<sup>8</sup> Shi Ching, I, iii, Ode xii.

<sup>9</sup> At one period (Shen Yueh, 441-573) the tones of Chinese speech were even used as the basis of an independent melodic art. See further Notation (above) and Chamber Music (below).

<sup>1</sup> After van Aalst, 'Chinese Music', 1933 ed.  
<sup>2</sup> After van Aalst, 'Chinese Music' (Shanghai, 1884). For full music and words see pp. 27-31, for translation, pp. 34-35.

<sup>3</sup> 'Yo K'i' ('Memorial of Music') in 'Li Chi' ('Record of Rites')

of the melody itself. This quality is partly inherent in the nature of the pentatonic scale. But it is also especially connected with the developing timbre which the successive entries and ornaments of the different instruments combine (with the voices) to produce:

Thus the instrumental accompaniment is of the greatest importance in the total effect. The example above<sup>1</sup> shows, in short score, the first four notes of a Confucian hymn. The voices are supported in unison by the bells and wind instruments; the former include the bell chime (*p'ien-ch'ing*) from which the singers take their note, the key being according to the moon during which the ceremony is held (see above, Theory). The zithers (*sî* and *ch'in*) and the reed mouth-organ (*shêng*) play in simple harmony. To this must also be added: (a) the stone chime (*p'ien-ch'ing*) which, in relation to each note, is struck after the other instruments to "receive the sound and transmit" it to the next note; (b) the large bell (*t'ê-chung*) which sounds the first note of each verse; (c) the large drum (*ying ku*) struck three times at the end of each verse; (d) another large drum (*tsu ku*) from the opposite side of the terrace struck six times at the end of each verse, giving two beats in answer to each of the three beats of the *ying ku*; (e) the tiger-box (*yu*) which is struck at the end of the hymn three times on the head, and its wand subsequently passed rapidly along its serrated back. When all the instruments played together the timbre must have reached a subtlety and complexity unknown to the West. The ancient orchestras of the imperial court reached even larger dimensions.

There were no simultaneous harmonies but the very simplest<sup>2</sup>, and these were of relatively late introduction. The sonorities of music so exceptional in timbre would indeed be obscured by further harmony, which would seem crude as compared with the inner harmonies already so richly present.

<sup>1</sup> After G. E. Moule, 'Notes on the Half-yearly Sacrifice to Confucius' ('Journal of the China Branch of the Royal Asiatic Society', 1899-1900).

<sup>2</sup> Concerning the use of harmony in Chinese music see further Theory (above), *ch'in* (above), Instruments, No. 34, and minstrelsy (below).

The instrumental accompaniment had further a rhythmical significance: it helped to define the duration. To each long note of the voices in the present example the zithers count 16 beats<sup>3</sup> and the organ (*shêng*) is said to add one inhaling half-

tone followed by one exhaling half-tone.<sup>4</sup>

The total musical result of a Chinese classical hymn, performed in its proper surroundings, was unusually dignified and impressive, and to extraordinary subtlety it united remarkable clarity. Ideally, it was the tonal expression of Confucius's maxim that "the noble-minded man's music is mild and delicate, keeps a uniform mood, enlivens and moves. Such a man does not harbour pain or mourn in his heart; violent and daring movements are foreign to him."<sup>5</sup>

(b) *Chamber Music*.—The instrument characteristic of philosophers and scholars has been the zither called *ch'in* (see above, Instruments, No. 35), whose principles are deeply rooted in natural philosophy. Numerous compositions survive, some from ancient times.<sup>6</sup> Our next example<sup>7</sup>, 'Yi lan' ('Ah! the rainbow') is attributed by Tshai Yong (2nd cent.) to Confucius (554-479 B.C.).<sup>8</sup> (See opposite.)

This zither music is unusually delicate and elusive. Chords are rarely heard, although the left hand can accompany on a separate string. The music is characteristically a succession of single notes. This much the philosopher's music has in common with the ritual orchestral music, but it has also subtleties of its own unknown in the latter. The hands of the player, used separately and together, can stop, glide, tap, draw the string towards or away from the player and so on, to give a

<sup>3</sup> Sachs, 'Rise of Music in the Ancient World' (London, 1944), p. 45, cites 32 beats.

<sup>4</sup> *Ibid.*, p. 145.

<sup>5</sup> R. Wilhelm.

<sup>6</sup> Courant (*op. cit.*, pp. 167-73) transcribes several zither compositions from an important Chinese treatise of 1876 (see Courant, p. 211, No. 103).

<sup>7</sup> Quoted by Courant, *op. cit.*, 170-71, and taken from the treatise mentioned in the previous footnote. In Courant's notation the signature includes three sharps and one flat (E $\sharp$ ), corresponding to a certain classical tuning of the zither, but here the signature of four sharps is given so as to make the sound immediately intelligible to the ear.

<sup>8</sup> See Courant, *op. cit.*, p. 165 and n. 8.

wide range of musical inflections. These include open and stopped notes, harmonics, *portamenti*, beats and *vibrati*, there being not less than 26 varieties of *vibrato*.<sup>1</sup> Much of this technique, traceable to the *gamakas* of Indian music, reached China through Buddhists during the 1st century A.D. (Han dynasty), and produced a music very different from the precise, measured Chinese music of pre-Han times.

The poets created two different classes of music: (1) instrumental compositions on poetic ideas and (2) sung poetry.

The purely instrumental compositions came much into evidence during the T'ang dynasty when the *p'i-p'a* was taken up by the poets, who applied to it a technique in many respects resembling that previously given to the zither by the Buddhists. Many pieces are believed to have survived from this period, including 'Moonlight on the Hsün Yang River' by Yu Che-nan (558-638) and 'The Last Battle of Hsiang Yu' by Wang Wei (699-759). This music has a pictorial and evocative power unbelievable to those who had never heard it.

The song-poetry is based on the traditionally close connection between music and the Chinese language. The great number of Chinese words derive from relatively few monosyllables. A single monosyllable, according to its inflection and stress, can convey upwards of 150 meanings. The change in meaning of a syllable is due chiefly to the direction of its melodic movement. In other words, music determines its meaning. The three (or four) basic neumes of melodic movement already described (*see above*, Notation), combined with different starting-pitches and differences in stress can in this way give a large number of combinations. Chinese is thus a tone language with primary emphasis on melody, and a deliberate art of melody

and a table co-ordinating these, with their symbolic relations, survives<sup>2</sup> from the Liang period of the Six Dynasties. We learn from the official history (music section) of the Sung dynasty that "it is inherent in their very nature that the seven musical notes [*i.e.* of the scale] should be matched in harmony with the four linguistic neumes". If the musical melody goes against the right inflections of the voice, the meaning becomes unintelligible.

Vocalized poetry (with instrumental accompaniment) was in the ascendant as early as the Han dynasty. It was sung in chorus in court and temple as part of ritual, but later acquired a popular character. Some forms became a traditional element of the Chinese theatre, where they may still occasionally be heard to-day. Musical notations of Chinese chamber music survive from early periods.<sup>3</sup>

(c) *Music-Drama*.—From the earliest times music has played some part in Chinese drama and dance (*see above*, History). When the classical drama originated during the Yuan (Mongol) dynasty (14th century), its two styles each had their own type of music. The northern style (*Tsa chü*), classical or strict, was characteristically accompanied by the flute; the southern style (*Hsi Wen*), more free, was supported by the accompaniment of the lute. During the Ming dynasty, music came to play a still more important part in the drama. It was towards the close of this dynasty that actresses were excluded from playing parts, and societies of women were (until as late as 1911) kept separate from those of men; men consequently became expert in playing female parts, and thus began that strange falsetto singing which is a feature of Chinese classical drama. Chinese vocal style is in any case by preference high-pitched and nasal, and, like their music for stringed instrument, characterized by continuous *portamenti*.

exists for both poetry and music. "Without poetry there can be no music" is a dictum found in many Chinese treatises. The phonetic elements of Chinese have been systematically related to the musical sounds,

Some classical pieces survive to this day<sup>4</sup>, and the northern and southern styles still exist,

<sup>1</sup> See table in Levis, *op cit.*, App. I (pp. 210, 211).

<sup>2</sup> For an example from the Sung dynasty see Levis, *op cit.*, p. 168.

<sup>3</sup> See R. H. van Gulik, 'The Lore of the Chinese Lute' (Tokyo, 1940).

<sup>4</sup> An excerpt from the famous 'P'i-p'a-chi' ('History of the Lute') is recorded on Parlophone record M.O. 102. Orchestra: flute (H-tzu), long lute (*san hsen*), percussion clappers and gong.

but the classical drama declined seriously about the middle of the 19th century. At this time the modern drama took origin. The modern drama is of a far more popular nature, and the music consists chiefly of airs and ballads (*see below*, *Minstrelsy*). It is more akin to opera than to the western "straight" play, but also has an element of the circus about it, since acrobats too have their place. The music continues throughout, supporting and binding together: (1) the declamation, (2) the songs (sung only by principal characters at the most emotional moments), which as it were pick up the vocal line, and (3) the pantomime. The orchestra consists variously of flutes (*ti-tzu*), lutes, fiddles, oboes (*so-na*), trumpets; percussion clappers, cymbals and gongs (to mark the cadences). There is no scenery, and the meaning is conveyed through the conventions of costume and mimicry and, in skilful hands, through the inflections of song.

(d) *Minstrelsy*.—Small bands of musicians parade the streets, appear in the concert-halls and are hired for various functions. Their

(*ti-tzu*) and small flat drum (*pang-ku*). The oboe (*so-na*) is popular, and sometimes the "foreign zither" (*yang ch'in*) is added. The short lute (*p'i-p'a*) is more favoured as an accompaniment in the south. Such bands sometimes take part in marriage and funeral processions, when marches are played.<sup>2</sup> On such occasions the hooked trumpet (*sha-chiao*), cylinder trumpet (*hao-t'ung*) and gong-chime (*yun-lo*) are also used.

(e) *Folk music*.—Chinese folk music is similar in scope to that of other nations. Wherever work is going on it is done rhythmically and with rhythmical sounds (the shoemaker's hammer and even the chauffeur's horn) and often enough with a sort of rhythmic recitation.<sup>3</sup> The coolies have definite chants and the farmers, carpenters, masons and boatmen all sing at their work. There are some attractive lullabies (e.g. 'The Purple Bamboo'<sup>4</sup>) and numerous patriotic and political songs.<sup>5</sup> Interesting is the song imitating instrumental sounds, a type not unfamiliar in Hebridean music. The following Chinese example<sup>6</sup> is called 'The Feng Yang Drum'.

The musical notation is presented on three staves. The top staff is labeled 'STANZA' and 'Voice'. The middle staff is labeled 'REFRAIN'. The bottom staff shows the instrumental accompaniment with the notes 'Drr Piak, Drr Piak, Drr Piak, Drr Piak Piak Yeu Drr Piak Piak Piak, Ik Piak.' written below it. The notation includes various musical symbols such as treble clefs, key signatures, and rhythmic markings.

members, men and women drawn from the lower classes and often blind, are musically more or less untutored. The music they sing and play—the only music the visitor to China normally hears—consists of popular songs and ballads whose words allow us considerable insight into Chinese domestic life (e.g. 'Dame Wang'; 'The Haunts of Pleasure'; 'Oh mamma! you understand me well').<sup>1</sup> Some of these pieces originated in the popular plays.

The tunes are chiefly pentatonic, and they are rhythmical. The instrumentalists who accompany the voice and provide interludes all play the same basic melody in unison, but each embellishes it in his own way: anticipation, delay and ornament combine to produce a heterophony of decidedly harmonic character. Moreover, the repetition of the melody itself is never exact: there are slight but perpetual variations.

A typical band consists of two flat lutes (*yueh ch'in*), long lute (*san hsien*), one or two fiddles (*erh hsien*, *hu ch'in*), transverse flute

Note especially the "nonsense" words of the refrain. Many of the melodic phrases (e.g. those in the second<sup>7</sup> and fourth<sup>8</sup> bars) are very characteristic of Chinese popular melody. The rites of private life still have their songs, e.g. 'Love's Lament in Mid-Autumn', mid-autumn being the traditional season for family reunion.

Some of the most interesting aspects of Chinese folk music may be sought in the songs which once formed a part of the ritual of the ancient seasonal festivals. These festivals were the occasions of contests of dance and song. Choirs of boys and choirs of girls gathered at the junctions of rivers and challenged one another by singing antiphonal poems—sequences of *distichs* (each half of the distich usually consisting of eight words)—accompanied by gestures. This grouping by sexes and the alternate singing (antiphony) were said to symbolize the alternate rhythm of the

opposed and complementary principles of the universe: *Yin* and *Yang*.<sup>1</sup> These concurrently active forces lay at the root of the Chinese conception of time, and the festivals, held at the intervals between the seasons<sup>2</sup> (at which sexual and marriage rites took place), were regarded as times of reunion of the two principles in the world. At one festival<sup>3</sup> two companies of musicians played one after the other and then both played together.<sup>4</sup> Thus originated many Chinese folksongs and dances, others being composed in the royal palaces, to be sung later for reforming morals.<sup>5</sup> And in the villages many of them have stayed. We learn that when the Emperor Shun wished to ascertain whether the government were right or not, his musicians "took odes of the court and ballads of the village to see if they corresponded with the five notes".<sup>6</sup> The original connection in China between folk music and civilization is more readily apparent than it is in many other countries to-day, where there are no written records to testify to it. And in much of Chinese folk music, no less than in other Chinese music, can still be discerned the guiding hand of the natural philosophy of this remarkable civilization.

P. C. H.

COMMUNAL SONGS OF THE PRESENT DAY. —With the Japanese occupation of Manchuria in 1931 a wave of intense patriotism swept over the Chinese student body, finding expression for the first time in China's history in unison songs. The most famous name from this period of the early 1930s is that of Nieh Eel, a Yunnanese who wrote a number of occupational songs: the 'Road Builders' Song', the 'Bricklayers' Song', the 'Longshoreman's Song', the 'Pioneers' Song', and most widely known of all, 'The March of the Volunteers' (now the national anthem). In the year of Nieh Eel's death (1935), Liou Liangmo began the organization of unison choruses, so that by the time of the Japanese invasion in 1937 there were centres of community singing all over China, particularly in the Eastern Provinces. The habit of singing in groups is something quite new to China, as indeed is the practice of singing in western style ("from the stomach" — as the Chinese describe it). Falsetto singing and the forced voice-production of the Chinese stage were,

until that period, the only methods practised. Since then schoolchildren, the army and the police have had constant practice in singing in the western style, inasmuch as they sing the national anthem twice daily. This was recently the Party Song of the *Gwomundaang*, composed in 1928 by Cherng Mawyeun, and provides an example of the modification of Chinese musical feeling by contact with western music, and more particularly by contact with those universal destroyers of non-western musical culture, the harmonium and the mouth organ. Ironically both derive from the Chinese mouth organ, the *sheng*!

CHINESE MUSICIANS OF TO-DAY. —In a short survey such as this it is impossible to make more than brief mention of a few outstanding personalities in the Chinese musical world of the present day. The vastness of the country prevents musicians from knowing more than their own circle of acquaintances, except in rare instances. Then again there is a gulf between those trained exclusively in the Chinese tradition and those trained in western music. Finally, it is undoubtedly the case that many of the finest musicians in the classical tradition are hidden away in remote parts of the country with little or no contact with the westernized Chinese. In preparing the notes which follow, an attempt has been made to prevent their becoming a record of personal contacts by collecting the impressions of various persons and groups competent to give an opinion. The writer is particularly indebted to Lu Shannmin (Mrs. A. Tcherepnin) and a group of Chinese musicians working in Paris for the benefit of their views. It is necessary to stress, however, that the names mentioned are those known to him or to some group; it is impossible to make nation-wide comparisons in a country so large as China where communication between one region and another is still difficult. At least it can be said that the people mentioned here are all outstanding in their immediate circle; but there are doubtless many others of equal distinction whose names do not appear.

*Performers on, and Composers for, Chinese Instruments.* —The name of Jar Fuhshi is bound to occur in any account of Chinese music. As founder and editor of 'Junyu', a handbook of *chyn* players and research on the *chyn*, he takes a leading part in the life of the Zither Fraternity. He is a fine scholar and an incomparable performer. Interest in the problems of temperament led him to collaborate with Professor Ding Shilin, formerly director of the Institute of Physics of the 'Academia Sinica', in the construction of a justly tempered *shau* which can be played in concert with the 7-stringed zither. He has recorded a number of zither tunes for the

<sup>1</sup> M. Granet, 'Festivals and Songs of Ancient China', trans. E. D. Edwards (London, 1932), p. 147. Further see above, Instruments.

<sup>2</sup> Cf. the Confucian temple ceremonies (whose music is described above, see Ritual Music), held at the winter solstice (a sacrifice to heaven) and summer solstice (a sacrifice to earth).

<sup>3</sup> Granet, *op. cit.*, p. 173 and n. 2.

<sup>4</sup> Cf. the method of beating the drum called *po-fu* (see above, Instruments, No. 18) in the Confucian ceremonies: right hand, left hand, both hands. The symbolism is surely identical.

<sup>5</sup> For translations of such poems from the 'Shi Ching' ('Book of Poetry'), with a valuable commentary, see Granet, *op. cit.*

<sup>6</sup> 'Shu Ching' ('Book of History').

Music Section of the Library of Congress at Washington.

Shyu Yuanbair is an expert in Chinese connoisseurship, a painter specializing in orchids and rocks, a skilled maker of zithers, a composer of zither tunes, a virtuoso performer famed for his refined and authoritative finger technique. Pei Tieshya, now a venerable old man, is known throughout China as a fine performer and as the envied possessor of two dated zithers of the T'ang dynasty, made by the Lei family in 723. The writer has heard him play 'Yang Chuen', one of the tunes from the earliest Ming treatises, reputedly of great antiquity.

In addition to Yang Tzaypyng, an outstanding performer on the *jeng* is Jenq Yingsuen, an official of the Bureau of Rites and Music.

The *pyibar* attracts many fine performers. These include Professor Ju Ing of the National Conservatory of Music at Nanking—living representative of the Lii tradition of the Ching dynasty, the late Professor Liou Fuh of Peking University, who left a number of compositions, and Yang Dahjiun. Unlike many performers in the Chinese tradition, Yang is well-read in western music; he has added a number of works of virtuoso quality to the *pyibar* repertory. Liou also left a number of compositions for the *ellhuu* and was himself an outstanding executant on this instrument. His tradition is maintained at the National Conservatory of Nanking by Chern Jenndor.

The best performers on the *sheng* and *shau* are usually to be found in Taoist monasteries. Among amateurs Sheu Boryou has a high reputation for his playing of the cross flute, *dyi*.

Of nine names of performers of *jingshih* well-known in China mention may be made of Mei Lanfang. Now (1950) approaching sixty, he can yet portray that quintessential femininity which, from the attentions it prompted, both in Chinese and foreign admirers, in his earlier years, is said to have caused no little embarrassment, to himself as to Mrs. Mei, who, for a lifetime, has supervised her husband's wardrobe and *maquillage*.

*Vocalists in the Western Tradition and Performers on and Composers for Western Instruments.*—Some slight impression of the rarity of Chinese performers on western instruments and of vocalists in the western tradition may be obtained from the following figures for pianists, violinists, flautists and vocalists of concert standing: seven pianists of whom four have received training abroad; seven violinists of whom four have received training abroad; two flautists, one of whom is teaching abroad; eight singers of whom four have studied abroad. One of the most important figures, as performer and composer, is Maa Sytsong,

a violinist trained at the Paris Conservatoire, who has written two Symphonies, a symphonic poem, a violin Concerto, a Quintet, a Sonata for violin and pianoforte, a number of songs and choral works. Nine composers of songs in the western manner have acquired some reputation in China. Among these the name of Jaw Yuanrenn deserves special mention. Professor Jaw is a distinguished philologist, and the aptness of his melodies to their words is generally admired. Four composers have produced orchestral works, five have written chamber music and five have produced operettas, cantatas or choral works. In all, fourteen names are held worthy of mention as those of serious composers in the western style.

Of the very small amount of pianoforte music by modern Chinese composers that the writer has seen the opening of 'Shepherd's Pastime' by Lao Chih-Cheng (*sic*)<sup>1</sup> shows promise:

but the rest of the work is not at the same level. Both opening and closing sections of 'Buffalo Boy's Flute' by Rodin Ho (*sic*)<sup>2</sup> are not without charm, but there is little to be said for the middle section. The last eight bars are quoted here:

<sup>1</sup> Lao, Chih Cheng, 'Shepherd's Pastime' (Peiping, 1935).  
<sup>2</sup> Ho, Rodin, 'Buffalo Boy's Flute' (Peiping, 1935).

The melodies of Liu Shea-An (*sic*)<sup>1</sup> are pleasing, but the accompaniments are disappointingly weak. L. P.

**CHINESE PAVILION (Chinese Crescent, Chapeau chinois, Turkish Crescent, Jangling Johnny).** An instrument producing sounds of indeterminate pitch consisting of a pole with several transverse brass plates of crescent or other fantastic form and generally terminating at the top with a conical pavilion or hat, whence its several names. On all these parts a number of very small bells are hung, which the performer causes to jingle by shaking the instrument, which is held vertically, up and down. (See PLATE 35, Vol. IV, p. 504, No. 4.) The Chinese Pavilion was used in military bands. v. de p.

See also Glockenspiel, Janissary Music

**CHINNER, Norman** (b. Malvern, S. Australia, 7 Aug. 1909)

Australian organist and conductor. He studied at the Elder Conservatory at Adelaide, where he won an organ scholarship in 1927. He was appointed conductor of the Australian Broadcasting Commission's Adelaide Wireless Chorus, deputy conductor of the Adelaide Orchestra and conductor of the Adelaide Philharmonic Society. He has given first performances of many important British works, by Bantock, Britten, Dale, Dyson, Vaughan Williams, etc. R. D.-S.

**CHINZER, Giovanni** (b. ? , c. 1695 ; d. ? , c. 1750).

Italian composer. His name points to a German or perhaps Swiss origin. Very little is known about his life. L. Neri's records that he played the trumpet in the Opera orchestra at Lucca in 1735, and on the title-pages of his later Paris publications he is described, among other things, as "Professore di Tromba". He probably lived mainly at Florence between 1731 and 1742, for he wrote operas for the small Teatro di Via del Cocomero there and, in the libretto of his last opera, 'Atalo' (Venice, 1742), as on the title-pages of his published works, is called "Giovanni Chintzer di Firenze". There is no foundation for the statement that he settled either in Paris or in London, since it is based on the mere fact that instrumental works of his (symphonies, sonatas, trios and divertimenti) were published in those cities. But his music must have enjoyed a certain reputation outside Italy, for he was one of the composers from whose works Vivaldi partly selected the score for the centenary celebration of the Amsterdam Schouwburg in 1737. Apart from the instrumental works mentioned, some manuscript church music is also extant. One single air from his opera 'Temistocle' (performed at Pisa in 1737) is in the B.M. The National Library, Vienna, has a volume (MS 17716) of 'Arie diverse' by Chinzer, dedicated to Maria Theresa of Austria, "Grand Duchess of Tuscany"—dating, therefore, from some time after 1737, when the last Medici grand duke died. It includes an aria, "Ah, mi dividon l'anima", elsewhere attributed to Pergolesi and included in his collected works.

**CHIOZZOTTO.** See CROCE (GIOVANNI).

**CHIPP, Edmund Thomas** (b. London, 25 Dec. 1823 ; d. Nice, 17 Dec. 1886).

English organist and composer. He was the eldest son of the harpist and drummer Thomas Paul Chipp (1793-1870), well known as the player of the "Tower Drums" in London. Edmund became a chorister in the Chapel Royal and studied the violin under Nadaud and Tolbecque. In 1843-45 he was in the queen's private band, and he became known as an organist of some repute from his holding the post of honorary organist at Albany Chapel, Regent's Park, in 1843-46. In 1847 he succeeded Gauntlett at St. Olave's Church, Southwark, a post he resigned on being elected organist to St. Mary-at-Hill, Eastcheap, in 1852. On W. T. Best's retirement from the Panopticon in 1855 Chipp was chosen to succeed him as organist, an appointment he retained until the closing of that institution. He was invited to become organist to Holy Trinity, Paddington, where he remained from

1856 until his appointment as organist of the Ulster Hall, Belfast, in 1862. He took the degree of Mus B. at Cambridge in 1859 and of Mus D. in 1860. In 1866 he was appointed organist to the Kinnaird Hall, Dundee, and also to St. Paul's Church, Edinburgh. In Nov. of that year both appointments had to be resigned, as he was appointed organist and Magister Choristarum to Ely Cathedral.

The works composed by Chipp are the oratorio 'Job', 'Naomi, a Sacred Idyl', much church music, a book of 24 Sketches and various minor works for the organ, songs, etc.

**Chirico, Giorgio da.** See SAVINIO (brother)

**CHIROPLAST.** See LOGER.

**CHISHKO, Oles.** See TCHISHKO.

**CHISHOLM, Erik** (b. Cathcart, Glasgow, 4 Jan. 1904)

Scottish organist, conductor and composer. He studied composition under Tovey at Edinburgh University, and in 1934 took the Mus. Doc. degree there. After touring Canada he returned to his native Glasgow, where he held an organist's appointment and taught privately. During his Glasgow days he founded the Active Society for the propagation of modern music and was thus the means of bringing nearly every composer of note to Scotland. In 1930 he became conductor of the Glasgow Grand Opera Society, in which position he gave performances of many rarely heard works, including Mozart's 'Idomeneo' and 'La clemenza di Tito', Berlioz's 'The Trojans' and 'Benvenuto Cellini', and the Scottish composer William Moonie's opera 'The Weird of Colbar'. In 1945 he went to South Africa, having been appointed Professor of Music at the University of Capetown.

Chisholm's works include an opera, 'The Isles of Youth'; 4 short operas, 'Simoon' (after Strindberg), 'Dark Sonnet' and 'Before Breakfast' (after Eugene O'Neill), and 'The Inland Woman' (Mary Lavin); ballets 'The Forsaken Mermaid', 'The Earth Shapers' and 'The Pied Piper of Hamelin'; 2 Symphonies, 'The Tragic' and 'Ossian', overture 'The Friars of Berwick', orchestral fantasy 'The Adventure of Babar' (after Jean de Brunhoff), 'Ceol Mor' dances and Concerto for orchestra; 2 pianoforte Concertos (the second based on Hindustani themes), violin Concerto (first performed, Edinburgh Festival, 1952), 'Straloch Suite' for pianoforte and strings; double Trio for wind and strings; 6 Sonatinas, 24 Preludes and 'The Edge of the Great World' for pianoforte.

M. L.

**CHISSELL, Joan (Olive)** (b. Cromer, 22 May 1919).

English writer on music, teacher and critic. She was educated at Manor School, Sheringham, and studied music at the R.C.M. in

<sup>1</sup> 'Storia della musica in Lucca' (Lucca, 1879).

London from 1937 to 1942. In the latter year she became a lecturer in music for the extramural departments of Oxford and London Universities, and in 1947 she was appointed to the music staff of 'The Times', to which she regularly contributes penetrating and well-balanced criticism. She is the editor of the R.C.M. Magazine and teaches the pianoforte in the junior department of that institution. She also broadcasts occasionally.

Joan Chissell's chief literary work so far (1953) is her book on Schumann contributed to the 'Master Musicians' series, admirable both as a biography and as a critical study on an extended scale. She also contributed a chapter on that composer's concertos to the Penguin book 'The Concerto' (1952) and another on Benjamin Britten's concertos to a symposium published in 1953. She further wrote for the biographical section of Odham's Encyclopedia and has contributed numerous reviews of music and books on music to periodicals such as 'Music & Letters', 'Musical Times', etc.

E. B.

**CHITARRONE** (Ital. augmentative of *chitarra*). A theorbo, or double-necked lute of great length, with wire strings and two sets of tuning-pegs, the lower set having twelve and the higher eight strings attached, the unusual extension in length affording greater development to the bass of the instrument. (See PLATE 42, Vol. V, p. 432, No. 5). It was the favourite instrument used for accompanying the voice in the new monodic style of the early 17th century. One of its greatest exponents was Kapsberger.

The Italian *chitarra* was not strung with catgut like the Spanish guitar, but with wire, like the German cithar and the old English cittern. The *chitarrone*, as the suffix implies, was a large *chitarra*; and the Italian instrument called by this name is a theorbo with a longer neck, strung with wire. In Italy the instrument is sometimes called *arciuuto*; but the German authorities, Praetorius (1619) and Baron (1727), call it *chitarrone*. Both the *chitarrone* and the arch-lute were employed in Italy in the late 16th and early 17th centuries with the *clavicembalo* and other instruments to accompany the voice, forming a band, the nutty, slightly bitter timbre of which must have been very sympathetic and agreeable. Lists of these earliest orchestras are extant, notably one that was got together for the performance of Monteverdi's 'Orfeo' in 1607, in which appear two *chitarroni*. A very fine specimen of this interesting instrument is in the South Kensington Museum in London. The length of it is 5 ft. 4 ins. It is inscribed inside "Andrew Taus in Siena, 1621".

**Chkalor, Valery.** See Koval (oratorio on C.).

**CHLADNI, Ernst (Florens Friedrich)** (b. Wittenberg, 30 Nov. 1756, d. Breslau, 3 Apr. 1827).

German acoustician. At the college of Grimma he studied law and medicine, apparently uncertain to which to apply himself. At Leipzig in 1782 he was made doctor of laws, but he soon abandoned jurisprudence to apply himself exclusively to physical science. The imperfect nature of the knowledge of sound in his day soon attracted his attention, and he determined to devote himself to its investigation. His researches on the vibrations of round and square plates, bells and rings, were published as early as 1787. These led him to devise his well-known experiments for showing the modes of vibration of metal or glass plates by scattering sand over their surfaces, which were set in vibration by bowing. The sand arranged itself along the nodal lines where there was no motion.

**CHLONDOWSKI, (Hlond) Antoni** (b. Polish Silesia, 1884).

Polish composer. He studied music at Ratisbon and entered the Church. After his return to Poland he founded a school for organists at Przemyśl (near Lwów). His compositions, chiefly religious, are written in the simplest way to enable the less skilled village organists to play and the small choirs at village schools to sing music within their capacities. In 1913 he published a textbook on harmony.

C. R. H.

**CHLUBNA, Osvald** (b. Brno, 22 July 1893).

Czech composer. In 1914-15 he studied composition under Janáček at Brno and in the Master Class in 1923-24. In 1919-35 he was a teacher at the Brno Conservatory and was also occupied in finance. His early work was mystical and melancholy, but gradually he found a firmer attitude towards life. At the same time he managed to get rid of the influence of Debussy and also of Richard Strauss, and attained a personal style, strengthened his structural abilities and fully developed his sense of rich orchestration. Up to 1948 he had composed over 70 works: 6 operas, 4 cantatas, of which a cycle called 'České vzkříšení' ('Czech Resurrection') is one of the most important, inspired by the historic sufferings of the Czech nation during the German occupation; he also composed 5 symphonies, 4 symphonic poems, 3 concertos accompanied by orchestra, numerous works for chamber orchestra, charming pieces for pianoforte and organ, many partsongs and song cycles for solo voice and piano or orchestra, etc. He also writes expert and reminiscent articles for various periodicals.

Chlubna's principal works are the following:

- Opera 'Pomsta Catullova' ('Catullus's Revenge') (Jaroslav Vrchlický), Op. 4, prod. Brno, 30 Nov. 1921.  
 Opera 'Aladina and Palomid' (Maurice Maeterlinck), Op. 16, prod. Brno, 31 May 1925.  
 Opera 'Nura' (O. Dymov), Op. 31, prod. Brno, 20 May 1932.  
 Scenic mystery 'V den počátku' ('In the Day of the Beginning') (A. Hartley), Op. 43, prod. Brno, 24 Jan. 1936.  
 Opera 'Freje pana z Heslova' ('The Libertine Squire of Heslova') (Stroupežnický), Op. 50, prod. Brno, 28 Jan. 1949.  
 Cantata 'České vzkříšení' ('Czech Resurrection'), Op. 55, 58, 59, prod. Brno, 7 Mar. 1946.  
 'Symfonie života a lásky', I ('Symphony of Life and Love', No. I), Op. 24 (1927).  
 'Symfonie Brněnská', II ('Brno Symphony', No. II), Op. 65 (1946).  
 Symphonic poem 'Ze strání, hor a lesů' ('From Slopes, Mountains and Forests'), Op. 40 (1934).  
 Viola Fantasy, A mi., Op. 44 (1936).  
 Pf. Concerto, D mi., Op. 46 (1937).  
 Cello Concerto, F mi., Op. 47 (1938).  
 Nocturnes for pf., Op. 36 (1933).  
 Prelude, Toccata and Fugue for pf., Op. 37 (1933).  
 3 Preludes for pf., Op. 42 (1935).  
 Passacaglia for organ, Op. 41 (1934).  
 Song cycles  
 'Se smrti hovoří spící' ('A Sleeper talks with Death') (O. Brezina), Op. 7 (1918).  
 'Z těžkých chvil' ('Grim Moments') (K. Kapoun), Op. 48 (1938).  
 'Chvalozpěvy osvobozené' ('Liberated Songs of Praise'), Op. 46 (1945), etc.

**CHOCOLATE SOLDIER, THE** (Operetta). See STRAUS (OSCAR).

**CHOICE OF HERCULES, THE.** A "musical interlude" for solos and chorus, words from Spenser's 'Polymetis', music by Handel, partly adapted from his 'Alcestis'. Autograph in Royal Library (B.M.) — begun 28 June 1750, finished 5 July 1750, but last chorus added later. Produced at Covent Garden Theatre in London on 1 Mar. 1751.

**CHOIR** (old spelling **Quire**). (1) The part of the church east of the nave, in which the services are celebrated. The term is now generally restricted in England to cathedrals and abbey churches, "chancel" being used for the same part of a parish church.

(2) The body of singers or other ministers occupying the choir and participating in the services of the church.

(3) Any body of singers, not necessarily ecclesiastical. In this sense the term is synonymous with "chorus".

(4) Divisions of a body of singers into sections, as when a work is written for 2, 3, 4 or more choirs.

(5) Divisions of the orchestra according to instrumental timbre, as strings, woodwind and brass. This last use of the term choir is more frequent in America than in England.

**CHOIR ORGAN.** See CHAIR ORGAN.

**CHOJNACKI, Łukasz** (b. ?; d. Łódź, 27 Mar. 1682).

Polish musician. He was a monk and organist at the Cistercian Monastery of Łódź.

C. R. H.

**CHOJNACKI, Roman** (b. Warsaw, 1 Aug. 1880; d. Warsaw, 1938).

Polish writer on music. He was educated at the Warsaw Conservatory and acted first as teacher of theory there, and later as editor of the 'Przegląd muzyczny' ('Musical Review'), a magazine which contributed much to musical culture in Poland. After 1918 he acted as general manager of the Warsaw Filharmonia.

C. R. H.

**CHOLLET, Jean-Baptiste (Marie)** (b. Paris, 20 May 1798; d. Nemours, 9 Jan. 1892).

French tenor singer. He was taught singing and the violin at the Paris Conservatoire in 1804-16, and in 1814 gained a solfeggio prize. In 1815, the Conservatoire having been closed owing to political events, he became chorus singer at the Opéra and the Italian and Feydeau theatres. From 1818 to 1825 he played in the provinces, under the name Dôme-Chollet, the quasi-baritone parts played formerly by Martin and others. In 1825 he played both in Brussels and at the Opéra-Comique, Paris, and in 1826 he obtained an engagement at the latter, where, having adopted the tenor repertory, he remained until 1832. His principal new parts were in operas by Hérold and Auber, *uz. Henri* ('Marie'), 12 Aug. 1826, in which he made his first success by his singing of the song 'Une robe légère'; Fritz, in 'La Fiancée', 10 Jan. 1829; the hero, 'Fra Diavolo', 28 Jan. 1830, and the title-part of 'Zampa', 3 May 1831. He then sang with great success at Brussels, The Hague, etc.

From 1835 to 1847 Chollet was again at the Opéra-Comique, being most successful in new operas by Hérold ('L'Éclair') and Adam ('Postillon de Longjumeau'), etc. He directed the Hague Theatre for a time, being appointed chapel master to the king during his stay in Holland. In 1850 he played with Mitchell's company at the St. James's Theatre in London, as Lejoyeux (Halévy's 'Val d'Andorre'), in which he made his début on 7 Jan. 1850, and in some of his well-known parts. He was well received, on account of his easy, gentlemanly and vivacious acting, and his command both of humour and pathos, which atoned for loss of voice. In 1852-54 he sang at the Théâtre Lyrique in Paris, without success, and soon after retired. His farewell benefit took place at the Opéra-Comique on 24 Apr. 1872, when Roger appeared in a scene from 'La Dame blanche', and Chollet himself as Barnabé in the celebrated duo from Paer's 'Maître de chapelle' with Mlle Ducasse, the favourite,

then singing "Dugazon" parts at the above theatre.

**CHOMIŃSKI, Józef Michał** (b. Ostrów nr. Przemyśl, 24 Aug. 1906).

Polish musicologist. He was educated at the University of Lwów under Chybiński, where he obtained the Ph.D. degree. He is secretary of the Editorial Committee of the 'Kwartalnik Muzyczny' ('Musical Quarterly') and he is also a member of the Musicological Commission of the Polska Akademia Umiejętności (Polish Academy of Science and Letters). He published several books and articles, among which the following should be mentioned:

'The Imitative Technique in the 13th & 14th centuries' (1934).

'Szymanowski, Stravinsky and Schoenberg' (1936).

'The Evolution of Contemporary Harmony' (1937).

'Methods of Teaching Musical Forms' (1946).

'Studies of Works by Szymanowski' (1936 & 1948).

'The Problems of Contemporary Harmony' (1948).

**CHOPIN** (Opera). See OREFICE (G.).

**CHOPIN, Fryderyk Franciszek (Frédéric François)** (b. Żelazowa Wola nr. Warsaw, 1 Mar. 1810<sup>1</sup>, d. Paris, 17 Oct. 1849).

Polish pianist and composer of French descent. He was the son of Nicolas Chopin (b. Marainville, Vosges, 15 Apr. 1771), who came of purely French stock. Research has failed to establish any connection between these Chopins and a Pole of the name of Szop who is said to have emigrated to Lorraine in the first half of the 18th century. On the contrary, this peasant family, with its recurring names of Nicolas and François, seems to have been long established in the Vosges, and one can only speculate on the reasons which led Nicolas Chopin to seek his fortune in Poland in 1787 at the age of sixteen. After leaving France the young man appears to have broken completely with his past and later to have kept from his children all knowledge of their humble French relations, the last of whom died in 1845. A single letter, dated 15 Sept. 1790, from Nicolas Chopin to his family in Lorraine has survived. It reveals that he was taken to Poland by one Weydlich, the steward of Count Pac, a Polish nobleman who had property near Nancy, and that he kept away from France in order to avoid conscription in the revolutionary army. He identified himself fully with his new country, mastered the language and developed a patriotism which was a powerful influence in the life of his children, particularly of Fryderyk who, although he refused to abandon his

French name, remained sensitive on the point of his Polish nationality.

Nicolas Chopin's first employment was as a clerk in a Warsaw tobacco factory, but the Polish revolt of 1794 brought this livelihood to an end, and the young man was enrolled in the National Guard, rising to the rank of captain. When the rising was finally quelled he began to earn his living as a French tutor in various noble households and in 1802 was engaged by the Skarbek family of Żelazowa Wola. While in their service he met and married (2 June 1806) Tekla-Justyna Krzyżanowska (b. 1782), a well-educated but poor relation of the Skarbeks. Four children were born: Ludwika (1807); Fryderyk Franciszek, Isabella (1811) and Emilia (1813). In Oct. 1810 the family moved to Warsaw, where Nicholas Chopin became a teacher at the new Lyceum (High School) and later held subsidiary teaching-posts to eke out his modest income. Occupying a roomy dwelling near the University and High School the Chopins were able to take a few boarders, and some of these, e.g. Julian Fontana (1810-69), became Fryderyk's friends for life.

**EARLY YEARS.**—The boy received a very sound general education both at home and at the Lyceum, where he was a pupil from 1823 to 1826. His parents took care that nothing should interfere with his regular studies, and he showed himself an intelligent and industrious pupil. In later years Chopin felt the advantages of this solid foundation, of which so many child prodigies (notably Liszt) have been deprived in the race to win fame and money. As a child he was extraordinarily precocious—he was writing verses by the time he was six—and his musical gifts soon made it clear that he was destined to become "Mozart's successor". His natural aptitude for the keyboard was such that the lessons of Adalbert Zywny, an unpretentious violinist, composer and pianist who taught him between 1816 and 1822, were almost superfluous. Zywny's chief merit as a teacher lay in the fact that he kept the boy's exuberant facility within bounds and imposed a discipline upon it, the discipline of Bach and the Viennese masters. As a pianist Chopin was practically self-taught, a circumstance to which may be attributed his lack of slavish reverence for tradition in his approach to the pianoforte. His inventiveness and ingenuity were never inhibited by professorial pedantry. "The mechanism of playing took you little time", his father wrote, "and your mind rather than your fingers were busy."

During the period of the lessons with Zywny Chopin was constantly improvising at the pianoforte, and a number of his boyish compositions have survived: a short Polonaise in G minor (publ. 1817), two others (in B♭ major

<sup>1</sup> There is ample evidence to show that at the time of Chopin's baptism (23 Apr. 1810) a mistake of exactly one week was made when his birth-date was recorded in the parish register as 22 Feb. 1810. There are, however, no valid reasons for assuming that he was born on 1 Mar. 1809.

and A♭ major), and a 'Contredanse' in G♭ major — already, instinctively, the pianist's favourite, "black-note" key. At this time also the aristocratic salons of Warsaw began to be open to the young prodigy, and thus from his earliest days Chopin was brought into contact with that elegance, refinement and distinction which answered to the innate requirements of his temperament. In 1817 a March of his was performed by the Grand Duke Konstantin's military band, and a year later (23 Feb. 1818) "Mr Schoppin" made his first appearance at a public concert, playing a concerto by Gyrowetz. In Jan. 1820 Angelica Catalani heard him play and gave him a gold watch with an inscription. During his three years at the High School Chopin continued his music studies privately with Józef Elsner, director of the Warsaw Conservatory, and the first results of this systematic instruction in harmony and counterpoint appeared in his Op. 1, the Rondo in C minor, published in June 1825, a few days after Chopin had publicly performed a Moscheles pianoforte concerto and improvised on the Aeolopantaleon, a kind of piano-organ. His skill on this instrument brought him the distinction of demonstrating the qualities of a rival mechanism, the Aeolomelodicon, to the tsar, who presented him with a diamond ring.

That the boy was not spoiled by his success is shown by his 'Szafarnia Courier', letters in the form of a newspaper which he and his sister compiled during their holidays in the country. In these playful letters may be seen, too, the first indications of Chopin's interest in the Polish folk music which he heard at first hand from the peasants. The sketches of some of his best mazurkas go back to these early days, e.g. Op. 7 No. 4 (1824) and Op. 17 No. 4 (1825). After his final school examinations (July 1826) Chopin visited the Silesian spa of Duszniki (Reinertz) and while there gave two concerts at the *Kurhaus* for the benefit of two orphans. On his return to Warsaw he became a full-time music student under Elsner at the Conservatory. The three-years' course, lasting until July 1829, was thorough and comprehensive. Two years were to be spent on musical theory, harmony and counterpoint, while the last year would be devoted to practical exercises in composition. Judging by the type of exercises turned out by his classmates — "masses, trios, quartets, fugues, sonatas, vocal compositions for chorus and orchestra" — it can be seen that Chopin had the opportunity to become proficient in every branch of composition. It is doubtful, however, whether he took full advantage of the instruction that was available, for we find him in later life (1841) turning to Cherubini's text-books for guidance and

even trying his hand at writing a fugue.<sup>1</sup> Chopin's heart was in the pianoforte, and all efforts to direct his energies into other paths, or indeed to confine them within the classical "forms", were vain. His first Sonata, Op. 4 (1827), written under Elsner's eye, provides an example of what happened when he was kept to the text-book: the work is unrecognizable as his. On the other hand the true Chopinesque qualities appeared as soon as the youth was allowed to follow his natural bent and could compose for himself as executant works like the 'Là ci darem' Variations, Op. 2, or the early Nocturnes in C minor and E minor. Fortunately Elsner soon realized that he had to deal with an exceptional talent — "musical genius, etc.", is his description — and did not attempt to impose his will or his own tastes on his pupil. He had secret hopes that Chopin would one day compose the great Polish national opera that all were waiting for, but there he completely misjudged his man.

Chopin's first contact with the larger musical world was made early in 1828 when Hummel visited Warsaw, and he was not slow to follow the example of Hummel's elegant style in his concertos and rondos. Later in the year he went to Berlin in the company of a Professor Jarocki, who was to attend a scientific conference. On this occasion Chopin saw, but dared not approach, Mendelssohn and was able to hear serious music like Handel's 'Ode on St. Cecilia's Day', which he had no chance of hearing in Warsaw, where Italian opera of the Rossini school was the staple fare. It is worth noting that the young man, although far from strong physically, suffered no ill effects from the fatiguing stage-coach travel; so far there was no sign of the pulmonary weakness which was to strike him down before he was forty. He was of slender and graceful build, and gifted with a perfect control of every movement that showed itself in a score of ways — in his pianoforte playing, his exquisite musical handwriting, his skill as a caricaturist and his quite extraordinary powers of mimicry.

Chopin acquitted himself with distinction in the final examinations at the Conservatory in July 1829 and was now free to seek experience and, if possible, fortune abroad. He had exhausted the resources of Warsaw, and a visit of Paganini had shown him what achievements still lay beyond his reach. Anticipating necessity, his father had applied to the government in Apr. for a travelling scholarship for his son, but the appeal was coldly turned down. The noble families of Warsaw encouraged him and flattered him by their attention, but made no move to help him

<sup>1</sup> This exercise ought never to have been published. The pianist Janotha gave it to the world furnished up with an absurd "concert ending".

financially. His first trial of strength was made in Vienna, whither he went to arrange for the publication of the most presentable of his youthful compositions. On 11 Aug. he made a successful début at the Karntnertor Theatre, playing his *Variations Op. 2* and his 'Krakowiak' Rondo Op. 14. The public was impressed by his brilliant performance of these and even more by his improvisation on a Polish folk tune, an exotic novelty for the Viennese. A second concert on 18 Aug. confirmed his success, and when he returned to Warsaw he knew that it would be but for a breathing-space before undertaking a lengthy tour through Germany and Italy. The striking effect of such of his music as had been marked by a frankly Polish character, e.g. the 'Krakowiak' Rondo and his improvisation on the wedding song 'Chmiel',<sup>1</sup> and his meetings with other virtuosi, had directed Chopin's thoughts towards composing works which would exploit both this national colouring and his own specialized pianoforte style. Thus during the remainder of his stay in Warsaw he was mainly occupied with his two pianoforte concertos, in F minor and E minor, in each of which the last movement is based on a Polish dance-form of the kind that had aroused enthusiasm in Vienna. At the same time he began giving shape to his new ideas in the realm of pianoforte technique, and the first of his *études* date from this period.

The moment of his departure was repeatedly postponed owing to the political troubles which preceded the widespread European revolutions of 1830; but another cause of Chopin's indecision was his infatuation with a young singer, Constantia Gladowska, like himself a student of the Conservatory. He himself stated that it was under the influence of this juvenile passion that he composed the slow movement of the F minor Concerto and the slight Waltz in D♭ major, Op. 70 No. 3. It is certain, however, that many other works which were only published later were the result of the exaltation produced by this romantically secret attachment.

This was one of the happiest periods of his life, notwithstanding the expressions of Byronic despair which occur in some of his letters. He lived in the stimulating society of young Polish poets and artists, all filled with ardent patriotism and revolutionary fervour, who looked upon him as one of their future hopes, and the general goodwill was particularly evident when, on 17 Mar. 1830, he gave his first considerable concert at the National Theatre. Advance press notices had prepared the public for something unusual, and Chopin's performance of his F minor Concerto and the 'Fantasy on Polish Airs' created such a furore that the concert had to be repeated

five days later, this time the 'Krakowiak' taking the place of the Fantasy. The happy combination of national rhythms with brilliant virtuosity made an instant appeal to the susceptible audience, even if the young man's purely musical achievement in his Concerto (played piecemeal) could not be appreciated by all. That the feeling behind the music was shared by the public is clear from the following extract from a notice of the concerts:

More than once these tones seem to be the happy echo of our native harmony. Chopin knows what sounds are heard in our fields and woods, he has listened to the song of the Polish villager, he has made it his own and has united the tunes of his native land in skilful composition and elegant execution

Chopin was beginning to assume in Polish eyes the position of a rising national composer.

After an inconspicuous appearance on 8 July 1830 when he played his newly published *Variations, Op. 2*, he gave his final concert in Warsaw on 11 Oct., the chief item being the second pianoforte Concerto, in E minor. The concert was successful, but found somewhat less echo in the press. On 2 Nov. he left Warsaw for Vienna, where he hoped to confirm the impression previously made and begin at length to earn something by his music. His friends wished him god-speed in a cantata, sung as he mounted the stage-coach, but there is no truth in the often repeated story of how a goblet filled with Polish earth was given to him at his departure—that legend arose from an error of his biographer Karasowski. An unhurried journey with stops at Wrocław (Breslau), Dresden and Prague brought him on 22 Nov. to Vienna, where he remained until the following July. This was a period of disappointment and frustration during which he made headway with neither public nor publishers. He played twice, on 4 Apr. 1831 and 11 June (this latter date recently confirmed by the discovery of a handbill), but entirely failed to repeat his former success; the novelty of his performance had worn off, and the impresarios had not for the young "professional" the same enthusiasm as they had shown for the rather naïve amateur who had played without fee in 1829. However, these eight months were rich in musical experiences, especially as regards chamber music and opera, and Chopin had also the satisfaction of noting that he was perfectly capable of measuring himself with pianists like Thalberg, who was turning the heads of the Viennese at this time. He composed little: apart from the 'Grande Polonaise', Op. 22, together with some songs and occasional pieces, only the first sketches of the B minor Scherzo, Op. 20, and the G minor Ballade resulted from this marking-time in Vienna. The journey to Italy having been made impossible by the general political turmoil, he at length set out for "London passing

<sup>1</sup> See POLONAISE, where this is quoted in music type.

through Paris"—Paris it was to be for the rest of his life. During a halt at Munich (28 Aug.) he played his E minor Concerto, and he was at Stuttgart when he learnt of the capture of Warsaw by the Russians, an event which threw him into despair and, it is said, produced the C minor Study, Op. 10 No. 12. A week later he was in Paris.

**MUSICAL STYLE.**—So much has been written, and with so little foundation in fact, regarding the influence which his contemporaries—Bellini, Liszt, even Berlioz—are said to have had on Chopin after his arrival in France that it is advisable at this point to consider what stage he had reached and what music he actually had to his credit by Sept. 1831. Leaving on one side a number of mazurkas, songs and polonaises, published after his death, Chopin had composed, in order of importance, the twelve Studies, Op. 10, nine of his Nocturnes, two Concertos, the first two sets of Mazurkas, his Trio and concert pieces with orchestral accompaniment, and had begun the first Ballade and Scherzo. What is more significant is that in these early works are to be found practically all those features which give his music its characteristic, "Chopin-esque" quality. He had already taken from John Field and from Polish composers like Ogiński, Kurpiński and others the little that he was ever to take, and the folk music of Poland had made its profound and indelible impression upon his musical personality, providing him with an inexhaustible store from which he drew at leisure. With him the word "development" cannot be applied as it may be in the case of composers like Beethoven or Wagner, at least not until the very end of his career, when works like the 'Polonaise-Fantaisie' and the cello Sonata seem to be about to usher in a hitherto unsuspected Chopin. It is rather a question of the elaboration and refinement of musical data inherent in his peculiar genius from the earliest days. There are things in his 'Barcarolle' (1845) that might have come straight from the E minor Concerto (1830), and turns of melody in his B minor Sonata (1844) which are to be observed, in a more naïve form, in his earliest compositions. Similarly with his pianoforte style. His later works shed most of the mere glitter of his first virtuoso pieces, but his whole technical approach to the instrument was securely defined by 1831 in the concertos and first book of studies. Once he had found what he himself described as his "manner", Chopin seemed inaccessible to outside influence. The art of singing on the pianoforte, mainly exhibited in music of the nocturne type, he had acquired in Warsaw long before he knew anything of Bellini. He too had felt the impact of Paganini long before he was brought into contact with Liszt's for-

midable virtuosity. From Mendelssohn and Schumann he learnt nothing. It is certain that when he came to Paris in Sept. 1831 Chopin was *himself*, even if he doubted himself, and no influence save that of his idol Bach (with hints from Cherubini) can be detected in the second half of his career (1831-1849). A glance at the chronological catalogue at the end of this article will reinforce the refutation of the claim that Bellini and others had their share in Chopin's later progress.

**PARIS.**—Chopin's beginnings in Paris were uncertain. He felt somewhat like a provincial at first amid the whirl of the romantic movement, then in full swing, and modestly thought of taking lessons with Kalkbrenner, the doyen of Parisian pianists. But when he had recovered from the first impact of Paris he saw that this would be a waste of time, and he was not afraid to declare his ambition to create for himself "a new world of music", even though Kalkbrenner assured him he could not do this, as he had not mastered the "old school". His poetic playing and the unusual charm of his personality at once brought him many friends in literary and musical circles, and his first concert, given on 26 Feb. 1832, firmly established his position, especially when the influential critic Fétis stated that he found in his works (the F minor Concerto and the Variations, Op. 2)

if not a complete renewal of pianoforte music, at least a part of that which we have so long sought in vain, namely an abundance of original ideas of a kind to be found nowhere else.

From this time Chopin became a notable figure in the musical life of Paris. Liszt, Berlioz, Hiller, Bellini and Meyerbeer were his admiring friends, and when he had the early good fortune to be patronized by the Rothschilds he obtained the *entrée* to the highest circles and his material security was assured. He soon became the most fashionable pianoforte teacher, and the considerable income he derived from his lessons (an occupation in which he positively took pleasure!) enabled him to give up the distasteful struggle to maintain himself as a public performer. Chopin was quite unfitted both by temperament and physique for the career of a virtuoso. He was of extremely slight build, with blue-grey eyes, fair hair and distinguished features. His natural, innate preference for all that is refined and aristocratic found full satisfaction in the Paris of Louis-Philippe. Yet with all his refinement there was another side to him, and in his letters to his Polish intimates he revealed moods of fury, intolerance and even coarseness which a mask of politeness and bland reserve hid from the wider circles of his acquaintance. It was a foregone conclusion that a talent such as his, addressing itself to

the listeners' finest sensibilities, would never be able to win that massive popularity which his rivals Liszt and Thalberg could, when necessary, wring by sheer force from ignorant and uncultivated audiences. Hence Chopin's public appearances, infrequent enough during his first years in Paris, became rarer still as time passed and he found that he could acquire fame and money without them. It is indeed curious to reflect that the history of pianoforte playing offers no other example of such a legendary reputation being built up on the strength of a mere thirty or so public performances, which is the sum-total of Chopin's appearances on the platform during his whole career.

His first Paris concert, which was by no means the financial failure it has commonly been held to be, was the only one in which he was the principal performer until he gave private recitals in 1841, 1842 and 1848. He took part in an important charity concert on 20 May 1832, playing the first movement of the F minor Concerto without any striking success, and on 3 Apr. and 15 Dec. 1833 he appeared with Liszt, Hiller, the Herz brothers and others in works for more than one pianoforte. On 7 Dec. 1834 he was heard in the 'Romance' from his E minor Concerto at Berlioz's concert at the Conservatoire, and on 4 Apr. 1835 he came to grief, as regards a brilliant popular success, when he performed the complete work at a concert for the benefit of the Polish refugees, at which Habeneck conducted, Nourrit sang and "all Paris" was present. This unhappy occasion was not fully redeemed on 26 Apr., when he played the 'Andante spianato and Polonaise', Op. 22, at Habeneck's benefit concert. In 1836 and 1838 he appeared once or twice in the part of second pianist at concerts given by Liszt and Alkan, and in the Mar. of the latter year went to Rouen to play the E minor Concerto in order to help his compatriot Orlowski. After this he was silent, so far as the general public was concerned, for ten years, until his second visit to England in 1848. It is unlikely that he was as perturbed at his inability to impress large audiences as some biographers, notably the Princess Sayn-Wittgenstein, writing under Liszt's direction, have made out.<sup>1</sup> His retirement from the platform coincided with the rise of his fame as a composer, and it was as such that he soon preferred to be regarded. Heine, in his 'Lutetia' (Letters from Paris, c. 1840) stresses this point and congratulates Chopin on being so far above the struggling crowd of virtuosi whose antics exasperated and bored the musical public.

For intimate companionship in a foreign

country Chopin naturally turned to the Polish refugees who had made their way to Paris after the disastrous revolt of 1830. He became a member of the Polish Literary Society and kept in touch with both artistic and political happenings. The story of his friendships can be read in the dedications of his works<sup>2</sup>, taking into account two highly significant omissions — Maria Wodzińska and George Sand. It is wrong to suppose that he was totally absorbed by music and "rarely read a book": enjoying the acquaintance of Musset, Balzac, Heine, Delacroix, Mickiewicz and the rest, he was at the very centre of the romantic movement, without, however, necessarily sharing the views of those who were overthrowing the traditional conceptions of art. Many brilliant women figured in this society, among them the ultra-romantic Princess Belgioioso and Countess Delfina Potocka, a singer, with whom he formed a lasting friendship and to whom he dedicated his F minor Concerto and later a waltz.<sup>3</sup> His relations with other musicians did not entirely depend upon his liking or disliking their music. He detested Berlioz's works, yet admired the man, and shared Mendelssohn's cordiality without becoming enthusiastic over his music. His friendship with Liszt was essentially superficial. Differences of temperament and one glaring indiscretion on Liszt's part soon turned their early intimacy into a merely polite acquaintance. For Schumann, to whom he owed the doubtful honour of being placed with Pantaloon and Columbine in a musical charade ('Carnaval', Op. 9), he had little real respect. Compelled, in 1838, to dedicate something to Schumann, he altered "friend" to "Mr." Robert Schumann when offering him the Ballade in F major. Schumann had indeed saluted him with "Hats off gentlemen, a genius!" on the publication of his Variations, Op. 2, but the young man's words

<sup>1</sup> See Catalogue at the end of this article.

<sup>2</sup> For over fifty years suggestions have been made that the relationship between the two was more than a cordial friendship, and that a certain mysterious "correspondence", if published, would reveal Chopin in the part of a violent and totally uninhibited lover. No such correspondence exists or has existed. A number of papers (some are merely fragments), which have never been produced for inspection by those competent to judge of their authenticity, have formed the basis of these rumours. The "originals" were conveniently destroyed during the second world war, but the writer of the present article has had access to a complete transcript of these papers, and from overwhelming external and internal evidence — for one thing, the confusion of times, persons, places and facts — has no hesitation in stating that he believes them to be spurious, a poorly disguised assemblage of facts and notions taken from various books on Chopin, with the addition of well-worn legends. The pronouncements on music attributed to Chopin are feeble and incoherent, the rest of the matter merely revolting. It is to be deplored that certain extracts from this material have been published as serious documents. The episode may be considered closed by the suicide later in 1949 of the person responsible for the appearance of this "correspondence". She poisoned herself on being pressed to produce evidence.

<sup>3</sup> The fable of Liszt's prose writings has lately been probed. It is almost certain that he did not write a word of the book on Chopin published under his name.

counted for next to nothing in Germany at that time. Of greater practical value was his encouraging Clara Wieck to play Chopin's works at her concerts, thus allowing the German public to hear how this difficult new music should sound.

The pieces which Chopin published during his first two years in Paris were chiefly those he had brought from Poland. The few works he composed at this time seem to have aimed at satisfying the Parisian taste for something showy — the Rondo, Op. 16, a 'Grand Duo' on themes from Meyerbeer's latest success, 'Robert le Diable', the 'Variations brillantes', Op. 12, on Hérold's 'Ludovic' and the 'Boléro', Op. 19. He began a third Concerto, but all that remains of it is to be found in the 'Allegro de concert', Op. 46. After a barren period his true genius reasserted itself, and the completed G minor Ballade and second set of Studies, Op. 25, set him forward again along his proper path. With the exception of a Berlin critic, Ludwig Rellstab, who at first attacked him on account of his originality but later recanted, the serious musicians of France and Germany welcomed Chopin's music enthusiastically, and it became a point of honour with pianists to add his mazurkas and nocturnes to their repertory. In England, too, after a brief but vicious campaign in 'The Musical World', his worth was recognized. Indeed the hostile reviews of 'The Musical World' pay unintentional tribute to Chopin's outstanding position:

It is impossible to deny that he occupies a foremost place among the piano-forte composers of the present day. In Paris . . . his admirers regard him as a species of musical Wordsworth, inasmuch as he scorns popularity and writes entirely up to his own standard of excellence . . . the Parisians regarded him as a demigod.

In May 1834 Chopin visited Aachen for a Rhineland musical festival and was welcomed by Ferdinand Hiller and Mendelssohn; afterwards he made an excursion to Dusseldorf. During the summer of 1835 he had his last meeting with his parents at Carlsbad. They remained together a month and then went to Tetschen for a visit to the Thun-Hohenstein family. There on 15 Aug. he wrote out the first version (later modified) of his Waltz in A♭ major, Op. 34 No. 1, and after his parents had returned to Poland he made his way to Dresden, where he accidentally renewed his acquaintance with the Wodziński family whose three sons had boarded with the Chopins while they were schoolboys at the Warsaw Lyceum. The boys' sister, Maria Wodzińska, was now an attractive girl of sixteen, and Chopin, who had last seen her as a child, fell straightway in love. Besides being dark and pretty she was a good pianist, and Chopin felt that he had at last found his ideal. The memory of this week at Dresden is preserved in the well-known 'Valse d'adieu', Op. 69 No. 1, which

Chopin gave to Maria shortly before his departure for Leipzig on 26 Sept. At Leipzig he was introduced to Schumann and Clara Wieck by Mendelssohn, and the stir caused by his visit is echoed in the latter's letters to his sister. Chopin was much impressed by Clara's playing of his own music.

Back in Paris, his head full of Maria, he composed during this autumn the first two studies of Op. 25, of which the second, in F minor, is said to have been intended as a "musical portrait" of the young lady — an unconvincing story when one considers the original *Præsto agitato* marking on a manuscript dated 27 Jan. 1836. Maria's parents and a redoubtable uncle had raised no objections to the young people's evident liking for each other, but when Chopin fell so seriously ill during this winter that the Warsaw papers carried announcements of his death, the father and uncle became alarmed. The mother was more indulgent and allowed Chopin to see Maria again at Marienbad and Dresden in the summer of 1836. She even connived at a secret engagement (9 Sept.). However, Chopin's continually faltering state of health, although there was as yet no definite indication of consumption, obliged her to give way to pressure from her menfolk, and in 1837 the idea of a marriage was quietly dropped. The girl herself had no voice in this decision.

Chopin had seen Schumann and Clara Wieck again at Leipzig and had played to them among other things an incomplete version of his second Ballade, which did not find its final shape until 1839.<sup>1</sup>

In July 1837, by which time it was clear that his engagement to Maria Wodzińska was a dead letter, Chopin paid his first visit to England in the company of Camille Pleyel, head of the French firm of pianoforte makers. His music was already being published by Wessel & Co. in their 'Albums des Pianistes de Première Force' and the like, usually accompanied by fanciful titles which the English taste of the moment demanded and which the composer himself strongly condemned. He spent a fortnight there seeing the sights and the country around London, but he kept so far from the musical world that it was rumoured that he was very ill. This was not so. He was only once induced to play — at John Broadwood's house in Bryanston Square. On his return to Paris he found himself more and more drawn into that liaison with the novelist George Sand which altered the whole course of his life.

<sup>1</sup> A complimentary note which he sent to Clara Wieck at this time became associated in the Heyer Collection with the MS of the A♭ major Polonaise, Op. 53, thus leading some writers to suppose that the work had been composed and given to Clara in 1836. This is an error: the note has no connection with the Polonaise.

He had first met Aurore Dudevant<sup>1</sup>, ("George Sand") in the autumn of 1836, when she had asked Liszt, with whom she was already well acquainted, to bring Chopin to see her at the house of the Countess d'Agoult. His first impression was not at all favourable, and he declined an invitation to join her house-party at Nohant (near Châteauroux) during the summer of 1837. But a period of depression following the Wodzińska episode, in which he composed the famous Funeral March that later formed the basis of his B♭ minor Sonata, passed away as he yielded to Mme Sand's undoubted powers of fascination, and under the stimulus of a passion such as he had never yet experienced his musical imagination was aroused to a state of maximum tension, a tension which was to be almost constantly maintained for the next nine years. The early summer of 1838 saw the pair established as lovers. To avoid the unpleasant consequences which threatened them from the jealousy of a rival (the playwright Mallefille) and to give Chopin the chance to pass the coming winter quietly in a warm climate they resolved to seek peace, health and leisure at Majorca. They arrived there with George Sand's two children on 8 Nov., and for a time, in spite of difficulties in finding lodgings, all was well. Chopin, as soon as he could (28 Nov.), set himself to his main "holiday task", the completion of his twenty-four Preludes which had been begun several years before and for which the opus number 28 was reserved, Opp. 29-34 being already in print. Unfortunately Chopin, in his eagerness to benefit by the pure air, strained himself in fighting one day against a violent wind and gave a fatal impetus to the consumption which had long overshadowed him. His illness aroused suspicion and fear among the local population, and the party were obliged to take refuge in the deserted monastery of Valldemosa, six miles from Palma. There the manuscript of the Preludes was completed, a week after Chopin's Pleyel upright pianoforte had been at length delivered to him, and the Scherzo Op. 39 and Polonaise in C minor, Op. 40, were begun. Since their arrival in Nov. George Sand and Chopin had suffered endlessly from the bad weather and from the primitive conditions in which they had to live. As soon as the rains ceased and Chopin was somewhat restored they left Majorca (13 Feb. 1839) and returned to the Spanish mainland. They spent a week with one Don Vincente Pujol de Pastor at Arenys-de-Mar, a seaside

place about twenty miles from Barcelona, after which George Sand and her *caballero pianista* sailed for Marseilles. There they remained, with one brief excursion to Genoa, until the end of May. The summer of 1839 was passed in quiet at Nohant, where Chopin made a seemingly complete recovery from the Majorca ordeal. In truth his health was irrecoverably undermined, but he gained from George Sand's affection and care a sense of security and a peace of mind which speeded the maturing of his genius. This new epoch in his life was ushered in by works like the B♭ minor Sonata, the Nocturne in G major, Op. 37 No. 2, the Impromptu in F♯ major, all composed during this first sojourn at Nohant. From now until 1846, with the exception of 1840, the summer months were spent at Nohant, not entirely in retirement, for visitors like Eugène Delacroix and Pauline Viardot sometimes accompanied Chopin thither and afforded relief from the company of the plebeian guests whom George Sand, with socialistic enthusiasm for her "artisan poets", invited to her house. In Paris Chopin lived in luxurious seclusion at 16 Rue Pigalle (1841-1842) and at 9 Square d'Orléans (1842-49), and in his placid existence few outstanding events are to be noted: his performance, with Moscheles, before the French royal family in Oct. 1839, his lucrative private concerts of 1841 and 1842, and the death of his father and a visit from his sister Louise in 1844. Although he kept himself apart from the active musical world, he even jeopardized his health in maintaining assiduously his contacts with the aristocratic salons, and brought upon himself the reproaches of Polish compatriots like Mickiewicz, who lamented to see him spending his time in circles where his merits as an original composer were less highly valued than his pianoforte playing, his improvisations and his ever-welcome exhibitions of mimicry. His position in Paris was unique: no other practising musician had quite the same standing, and it is likely that he often sacrificed himself to the demands made upon him by the Rothschilds, Stockhausens and other influential families. His chief source of income continued to be his lessons, for which he demanded high fees such as only wealthy pupils could afford. He was well paid for his compositions, but these were few in comparison with what he might have produced had he been less scrupulous with regard to the final perfection of all he wrote. As the inroads of his malady, with its consequent effect upon his hypersensitive nerves, made Chopin less and less accessible to the world at large, his aloofness from his fellow-musicians was often wrongly attributed to pride. He was always ready to support new talent when it came to his notice; for example we find

<sup>1</sup> In 1907 another spurious document purporting to reveal Chopin's private life was foisted on the musical world with a certain degree of success. This was 'Chopin's Diary', a collection of sentimental fragments mainly relating to "Aurore" and compiled either by Jeanette Lee, an American novelist, or Helena Wiesen-thal, who was responsible for the publication.

him subscribing to the publication of César Franck's Trios Op. 1 in 1841, and he never failed to help visiting musicians from Poland.

The relative smallness of Chopin's output during these years — for instance, one work only (Op. 58) in 1844, after very little in 1843 — is not to be attributed to any lack of ideas, but to his method of working. He found it impossible to concentrate while in Paris and could compose only at Nohant during the summer. His struggles to decide upon final details has been described by George Sand with the inevitable romantic embroidering. She states in her *'Histoire de ma vie'* that he would spend weeks on a single page, tearing his hair, and then at last return to the first version that had occurred to him. This is mere exaggeration, and his manuscripts show no signs of such extraordinary efforts. When circumstances demanded it he could compose with speed and sureness of touch: the C# minor Prelude, Op. 45, was written in a moment. What he did find intolerable was the actual labour of writing his music down, and it is noteworthy that after his faithful copyist, Julian Fontana, left for America at the end of 1841, Chopin's output at once slowed down, since each manuscript had to be copied thrice for publishers in different countries. It has also been thought that he preserved his manuscripts for long periods before giving them to the publishers. This was the case at the beginning of his career, but when his reputation was established he could dispose of his work with ease. His posthumous works (from which one must exclude the Sonata Op. 4 and "Swiss Boy" Variations which were offered for publication in 1829) consist of pieces which he had no intention of ever giving to the world.

The love affair with George Sand which began in 1838 soon cooled down into a comradeship in which Chopin was the most enthusiastic partner. By 1846 a new and disturbing element had appeared: the novelist's son and daughter, Maurice and Solange, were now grown up and revealed traits of character and conduct fully in keeping with their irregular and indisciplined upbringing. Chopin, wrapped up in his music and confident of George Sand's unalterable affection, was slow to adapt himself to the changed circumstances. His presence in the family became hateful to Maurice Sand, who made his mother aware of the strain which this liaison was imposing on them all. She made no definite attempt to rid herself of Chopin, and her novel *'Lucrezia Floriani'*, begun early in 1846, in which Chopin figures as "Prince Karol", is no more than a picture of the situation as she saw it at that moment. It was the sordid intrigues accompanying the marriage of Solange Sand to the sculptor Clésinger

in May 1847 that brought about the final separation. In the squabbles between Solange and her husband on the one hand and George Sand and Maurice on the other Chopin was used as a mere pawn by the unscrupulous daughter. He took her side and refused to accept George Sand's conditions for a renewal of their friendship. Finding him obstinate, and feeling herself to be the victim of a plot, she made no serious attempt at reconciliation.<sup>1</sup> In this complicated psychological drama no one has the right to assign praise or blame to the chief actors.

His break with George Sand marks the beginning of the last stage in Chopin's career. From this moment he began to let slip his precarious hold on life, his health failed rapidly and he lost all further interest in composition. His last works, Opp. 63-65, had been handed over to the publishers just before the final separation. On 16 Feb. 1848 he gave his last concert in Paris, and the exceptional atmosphere of that evening — the hall and stairs decorated with flowers, the audience carefully selected — was intensified by forebodings of revolution and of the end of Louis-Philippe's reign. Chopin played with Alard and Franchomme in a Mozart trio (K. 496) and then performed the last three movements of his Sonata for pianoforte and cello and also his *'Berceuse'* and *'Barcarolle'*.

The revolution which broke out in Paris a week later brought Chopin's lessons to an end and obliged him to accept a long-standing invitation to England from his wealthy Scottish pupil, Miss Jane Stirling. He arrived on 20 Apr. 1848 and was at once a centre of interest. He was taken up by fashionable society and played at Lady Blessington's and other great houses. On 15 May he was heard by Queen Victoria at a *sourée* given by the Duchess of Sutherland at Stafford House. These private appearances prepared the way for his first public concert, given at the house of a former pupil, Mrs. Sartoris (Adelaide Kemble) on 23 June. It was followed by a second, on 7 July, at Lord Falmouth's house in St. James's Square. In such circumstances Chopin could afford to make light of an invitation to play at one of the Philharmonic Society's concerts. It is to be remembered that during all this time he was desperately ill, dragging himself from one festivity to another, meeting all the literary and artistic celebrities, and leading such a life as would have exhausted many a normally healthy person. His playing was but a shadow of what it had been, but still preserved its clarity and elegance. At the end of the London

<sup>1</sup> Her celebrated letter of dismissal, which Chopin gave to Solange, has lately (1950) been recovered and confirms that the reasons for the break were those stated here.

season he went to Scotland for rest and fresh air, but the need to earn money obliged him to play at Manchester (28 Aug. 1848) and later at Glasgow and Edinburgh. His letters of this period are those of a man sick and weary, longing to get back to Paris in spite of the kindness showered upon him at the country seat of Lord Torphichen, Jane Stirling's brother-in-law. At the beginning of Nov. he returned to London and played for the last time in public at a concert and ball given for the benefit of Polish refugees on 16 Nov. at the Guildhall. This was an inauspicious but not absolutely tragic occasion: the concert took place *before* the ball, and Chopin had no complaints to make about his audience. On 23 Nov. he returned to Paris, incapable thenceforth of composing or giving the lessons on which his income depended. Fortunately the Stirlings came to his aid with a money gift of which he accepted 15,000 francs. The summer of 1849 he spent at Chaillot, where Jenny Lind visited him and sang, and in the autumn he moved to his last abode, 12 Place Vendôme. His sister Louise and other Polish intimates were with him when he died at two o'clock on the morning of 17 Oct.<sup>1</sup> Owing to the elaborate arrangements for the performance of Mozart's Requiem at the Madeleine Church the funeral did not take place until 30 Oct. Chopin was buried at the cemetery of Père-Lachaise, and a monument to him by Clésinger was unveiled on 17 Oct. 1850. It was on this latter occasion that some Polish earth was strewn on the grave; we have seen that there is no truth in the story of Chopin's having brought a cup of Polish soil with him when he left Warsaw in 1830.

PIANIST AND COMPOSER.—The two aspects of Chopin's musical personality — pianist and composer — are so closely interrelated as to be inseparable. His achievement as a creator of music is bound up with his exceptional contribution to the art of pianoforte playing. He laid the foundations for a style of pianism which, developed by Liszt, lasted throughout the 19th century and seems to have played itself out in the pianoforte writing of Rakhmaninov. The distance covered by Chopin from the starting-point of his Rondo, Op. 1, to the 'Barcarolle', Op. 60, is enormous, taking us from the naïveties of the early 19th century to the threshold of impressionism. In between he gave a striking display of what varieties of rhythm, melody and richly coloured sonorities could be evoked from what had been a somewhat stagnant instrument.

It was lucky for Chopin that in the matter of

pianoforte playing he was largely left to his own devices, free from the discipline imposed in western European conservatories, and his exploration of the possibilities of the keyboard was uninhibited. It was the striking originality of his handling of the pianoforte, as shown in his early concertos, nocturnes and studies — an originality less obvious to a later generation — that first focussed attention on him in Paris. Liszt and others were not slow to take the hints offered.

Chopin's pianistic invention was closely related to the improvements in the instrument itself — the wider ranges of tone, extension of the keyboard, refinements in action — and much of his novelty turns out on examination to be an inspired elaboration of the simpler art of his less adventurous predecessors, Field, Cramer, Hummel and others. It is in his use of the pianoforte as a means of creating those impressions which are lamely described by the words "atmosphere", "colour", "suggestion" that Chopin is a great originator. His fertile invention of glittering, kaleidoscopic passage-work in which every resource of mechanical dexterity is exploited, his delicate and fanciful ornamentation based on the *fioriture* of Italian opera; his skill in realizing on a percussive instrument a *cantabile* style which turns to profit the very features of the pianoforte that have generally been regarded as its defects — these are merits which justify Chopin's reputation in the history of pianism. His own playing has become legendary. It was marked by perfect cleanness and integrity of execution, warmth and temperament which never got out of hand, discreet *rubato* and, over all this, an indefinable poetry of conception and touch. He was well described by Mendelssohn as a "truly perfect virtuoso": difficulties did not seem to exist for him. His hands were small but capable of great extension, and since he had no scruples about using unorthodox fingering he could attain perfect smoothness of execution in widespread chords and intricate passages. Chopin would frequently pass the fourth finger over the fifth or slide the same finger over several adjacent notes. He preferred a low seat at the instrument, keeping the elbow level with the white keys. When in good health he was capable of playing with great energy, but his wretched physical state often obliged him to conceal his later lack of power by employing every device of shading from *pianissimo* to *mezzo-forte*, so that by comparison the absence of a true *forte* might pass unnoticed. It was not from choice that Chopin played thus, and the modern pianist is not entitled to employ such a trick when performing his works. On the other hand extreme violence or indeed any other kind of exaggeration, whether of tempo, rhythm (the famous *rubato*) or "expression",

<sup>1</sup> There is good reason for believing that the well-known request for his body to be opened lest he should be buried alive was written not by Fryderyk Chopin but by his father, before his death at Warsaw in 1844.

was repugnant to him. He had no thought to achieve those grandiose orchestral effects which Liszt and his school sought to draw from the reluctant instrument. In spite of his great personal standing as a virtuoso, Chopin had little real influence as a teacher — the principal occupation of most of his life. The reason for this lies in the character of his *clanthe*. His pupils were mostly young ladies of the French aristocracy, and the few who were professional musicians were not of a calibre to maintain the prestige of Chopin's "school". After his death legend and artifice took the place of a genuine handing-down of such a method as he had evolved.<sup>1</sup>

From the first years of his career Chopin was conscious of the true nature of his gifts, and he presents an example of that rare type of artist who deliberately concentrates his energies on a single and limited field of activity, regardless of the opinions and pressure of those around him. Such outside influences as he submitted to made themselves felt while he was still a boy. Their mark was permanent, but from his twenty-first year Chopin's mind was practically sealed against outside impressions. These influences can be briefly specified:

(1) In the development of his art of singing on the pianoforte, the Italian opera of Rossini and his kind. One must exclude Bellini from the list of those who had a particular influence on Chopin; anything "Italian" in Chopin had been acquired before the Pole made the acquaintance of Bellini's music. That he should have been fond of Bellini's work was natural: it appealed to a taste already formed.

(2) In matters of musical form, in his earlier work, the example of Hummel, Field and their school.

(3) The national music of Poland whose special characteristics of rhythm and harmonic colouring unceasingly obtruded themselves on Chopin's musical imagination.

(4) The less obvious but real effect of his continual study of Bach, coupled with his later interest in the academic teaching of masters like Cherubini (from about 1840).

Apart from this Chopin may be called a free agent, left to his own devices and unaffected by the current "romantic" theorizing of his time, in spite of the fact that he was highly romantic in his private outlook. He kept himself aloof from "the movement", having little sympathy with its revolutionary tendencies and indeed feeling positive abhorrence of the bohemianism and exhibitionism of its representatives. In the moderation and chasteness of its outward form his music is "classic", although animated by that intense

personal feeling which is a keynote of romanticism. At times Chopin could be disconcertingly unromantic over some of his music which his contemporaries found full of the picturesque — a good example is the 'Berceuse', composed in 1843 as a little set of Variations and offered for publication under that name; it was his friends who gave the piece a romantic name.

Chopin is no mere miniaturist, yet it is clear that his best work is to be found within frameworks settled by his own fancy rather than by the demands of comprehensive musical design. Hence his ballades, scherzos, preludes, polonaises and mazurkas — forms which the composer fashioned for himself — represent more satisfactory achievements than do his large-scale works. Of his sonatas that in B $\flat$  minor, Op. 35, has the merit of extraordinary conciseness both of aim and realization, but the B minor Sonata, Op. 58, well illustrates the general truth of the following criticism written by a clear-sighted contemporary (1843) which may still serve to fix Chopin's position in the larger musical world:

He cannot be a thoroughly great composer because he lacks the first requisite of greatness — viz., the power of continuity. He cannot, moreover, be classed among the common herd since he is eminently an original thinker and is blessed with an inexhaustible invention and a deep well of new and touching melody. Chopin is incapable of producing a symphony or an overture — that is to say, a good symphony or overture — because though he has fancy enough to supply admirable materials, he has not sufficient development of the organ of consistency — the bump of epicism, it may be called — to enable him to demonstrate, carry out, amplify and complete his original notions. His concertos, *par exemple*, are remarkable for this deficiency. Brilliant and effective though they are, they stop short of greatness in their lack of continuous feeling. The subjects are all excellent, but they fail to give a colouring to the whole. The entire work is not a consequence of the first idea. . . . Therefore Chopin is incapable of a large and profound work of art. But on the other hand, in composition of less important aim — in fantasies of all kinds, where the fancy may sport, unrestrained by the shackles of form — Chopin's rich fund of ideas, his pleasant fancy, his melancholy humour, his fresh and fluent melody, his elegant graces, his piquant *remplissage*, his poetical and passionate colouring are displayed to consummate advantage, and place him far apart from the herd of composers of this or any other age.<sup>2</sup>

It is of interest to note that this writer of 1843 dismisses as "piquant *remplissage*" Chopin's highly original harmonic procedures which exercised a decided influence on later romantic music. Chopin's gifts in this direction were but slightly governed by theoretical study and analysis; his harmonic originalities and audacities were the result of direct aural exploration at the keyboard, the end of a search for that which would satisfy his sensitive harmonic perception and his demand for a special atmosphere and colouring. With a fine Pleyel grand under his hands Chopin identified himself with the instrument. He experimented confidently and without restriction, and in so doing he went farther than has been generally realized along the road which

<sup>1</sup> In 1898 Natalia Janotha published some notes purporting to be Chopin's sketches for a 'Method of Methods'. Her text bears little resemblance to the actual contents of the scraps of paper left by Chopin which have lately been published by Alfred Cortot.

<sup>2</sup> 'The Musical World', London, 17 Aug. 1843.

took music away from the classical diatonic system. Thanks to his great reputation in France and Germany as one of the vanguard of the "moderns" (in contrast to Mendelssohn and his followers), he exercised a notable if indirect influence, which made itself felt mainly through Liszt and Schumann; and in works like the E $\flat$  minor Study, Op. 10 No. 6, the second Prelude of Op. 28, the finale of the B $\flat$  minor Sonata, the Prelude Op. 45 and mazurkas such as Op. 56 No. 3, in C minor, one may observe the "prophetic" Chopin, anticipating the chromaticism of 'Tristan', the richer texture of Brahms or the exotic moods of the Russian nationalists.

Mention of "nationalists" brings a reminder that Chopin is to be counted among the first of these. Poland's unhappy situation as a proud nation obliterated from the map fired her poets and artists with an uncommon ardour. The nation could survive only in her culture, and Chopin at first instinctively and later consciously took his share of the burden assumed by Mickiewicz, Slowacki and the other Polish romantics. His polonaises (culminating in Op. 53, in A $\flat$  major, and the 'Polonaise-Fantaisie') enshrine the memories of past splendours and heroism. In them Chopin achieves a combination of noble energy and expressive pathos fitting his lofty theme. His mazurkas, on the other hand, reflect with infinite variety the less strenuous, homely aspects of the Polish scene. In them Chopin, notwithstanding his long associations with French culture, easily takes leave of the West and transports himself into a quasi-Oriental atmosphere in which western notions of melody and harmony have not their accustomed validity. In his later mazurkas he could with complete artistry unite the basic forms of folk music with every refinement of academic writing — e.g. the canon at the end of Op. 63 No. 3.

The ballades, the scherzos, the 'Fantaisie' in F minor and the 'Barcarolle', Chopin's most extended works in forms wholly elaborated by himself, show his unique qualities at their best. They reveal his perfect understanding of the nature of the pianoforte, his gift for conceiving melodies which are inseparable from the instrument and for weaving a rich and many-voiced texture of sound, and his capacity for creating on his own lines musical structures which make their mark first by their absolute musical qualities, only secondly by their emotional impact, and least of all by any "title" or romantic programme that can be attached to them. It is here, if ever, that Chopin is original and masterly. His shorter pieces, such as the studies, nocturnes, preludes and waltzes, are distinguished by a happy concord between their dimensions, form and musical content. They are full of

careful workmanship, even where (as in some of the nocturnes and waltzes) the actual musical material is of slight significance. It is this characteristic scrupulousness and integrity that must earn Chopin the respect of musicians even if they do not happen to be susceptible to the almost universal appeal made by his passionate and mysterious music.

EDITIONS.—The popularity and compactness of Chopin's work has led to an endless multiplication of editions, each vying with the others in presenting a text larded with marks of "expression", additional fingerings and "improved" readings. It has been commonly supposed that Chopin's own inconsistencies were to blame for the confusion in these various editions; but although he was careless at times he was not guilty to the extent alleged by those editors who have profited by the state of uncertainty. The editions of Klindworth, Schultz, Mikul and others are not without merit, but they have been more concerned to set forth the editors' private opinions than to establish a pure text. In 1932 Édouard Ganche, taking advantage of a set of French first editions which had belonged to Jane Stirling and which Chopin had partly looked over, brought out the 'Oxford Original Edition of Chopin'. The word "original" could not here have its strict meaning, since Miss Stirling's copies were by no means always first editions. However, the intention was a laudable one, and it was unfortunate that the authority of this edition should have been weakened by some unaccountable editorial lapses on the part of the editor, who had insufficient access to Chopin's manuscripts and chose to rely on some very doubtful sources. In 1949 there began in Poland the publication of a Polish National Edition, issued under the name of Paderewski, although much of the revision and collation of manuscripts was done by Ludwik Bronarski and Joseph Turczyński. For this the most complete collection of Chopin's manuscripts ever assembled has been utilized and the musical world may at length see an edition which represents Chopin's intentions as closely as may ever be realized.

A. H. (iii).

#### BIBLIOGRAPHY

A complete bibliography of Chopin appeared in Polish at the end of 1949 — 'Bibliografia Chopina' by Bronisław Edward Sydor. This records everything published on Chopin since 1818, a total of nearly 9000 items.

**CHOPIN INTERNATIONAL COMPETITION FOR PIANISTS.**—Organized on the initiative of Jerzy Żurawlew, this competition has been held in Warsaw every five years since 1927. Pianists who desire to enter for it must produce a certificate stating that they have finished a course at a high school of music or a conservatory and that they are between sixteen and thirty-two years of age. There are three stages in this contest: (1) general elimination; (2) semi-finals in the presence of an audience; (3) finals. The prizes are high: at the last Competition, for instance, held in 1949, the first prize amounted to 1 million zlotys, an equivalent of £929.

In the first competition, which took place in 1927, 26 pianists representing 9 countries contested.

First Prize—Lev Oborn (U.S.S.R.).  
Second Prize—Stanisław Szpanalski (Poland).  
Third Prize—Róża Etkins (Poland).  
Fourth Prize—Gregor Ginsburg (U.S.S.R.).

Second competition (1932): 93 pianists representing 19 countries.

First Prize—Alexander Uninski (France).  
Second Prize—Imre Ungar (Hungary).  
Third Prize—Bolesław Kon (Poland).  
Fourth Prize—Abram Lufer (U.S.S.R.).

Third competition (1937): 105 pianists representing 21 countries.

First Prize—Jakob Zak (U.S.S.R.).  
Second Prize—Rosa Tamarkina (U.S.S.R.).  
Third Prize—Witold Małcużyński (Poland).  
Fourth Prize—Lance Dossor (England).

After the second world war the fourth competition took place in Warsaw (the centenary of Chopin's death). 65 pianists representing 17 countries contested.

First Prize (doubled and awarded jointly)—Halina Czerny-Stefańska (Poland) and Bella Davidovich (U.S.S.R.).

Second Prize—Barbara Hese-Bukowska (Poland).  
Third Prize—Waldemar Maciszewski (Poland).  
Fourth Prize—George Muravlov (U.S.S.R.).

**CHOPSTICKS.** A childish little tune in waltz time played on the pianoforte by children with the sides of the forefinger of each hand, sometimes accompanied with simple tonic-and-dominant harmony by a second player:

The two fingers represent the sticks with which the Chinese eat their food.

There is a set of variations for pianoforte duet (3 or 4 hands at will) by Russian composers, where the tune takes a different form in 2-4 time:

The second player requires a considerable degree of skill, the variations having a fairly elaborate lower part, often displaying rhythmic ingenuity. The contributors to the set, which was published in 1880, were Borodin, Cui, Liadov and Rimsky-Korsakov. Liszt took a fancy to these pieces, and when the second edition appeared he contributed a variation of his own.

The tune is called 'Côtelettes' (cutlets) in France and 'Koteletten Waltzer' in Germany.

E. B.

**CHORAGUS.** A titular functionary in the University of Oxford, who derives his name from the leader of the chorus in the ancient Greek drama (*χορηγός*). In the year 1626 William Heather, desirous to ensure the study and practice of music at Oxford in future ages, established the offices of Professor, Choragus and Coryphaeus, and endowed them with modest stipends. The Professor was to give instruction in the theory of music, the Choragus and the Coryphaeus were to superintend its practice. The ordinances of Dr. Heather say:

Twice a week is the Choragus to present himself in the Music School and conduct the practice, both vocal and instrumental, of all who may choose to attend.

The instruments to be used by the students at these performances were furnished out of Heather's benefactions; provision was made for obtaining treble voices, and everything requisite to the regular and practical cultivation of music as one of the academic studies appeared to have been devised. Yet Heather must have had certain misgivings as to the future of his institutions, for he enacts that

if no one shall attend the meetings in the Music School, then the Choragus himself shall sing with two boys for at least an hour.

Little as Heather asked of posterity, he obtained still less.<sup>1</sup> The practices ceased; the instruments were dispersed, and their remnant finally broken up by the authorities as old lumber; and no Choragus has either conducted or sung in the Music School within the memory of man. Latterly the Choragus was charged, along with the Professor, with the conduct of the examinations for musical degrees, but this duty no longer exists, and even the name and office of the Coryphaeus have become extinct. The emolument of the office, derived in part from the above-mentioned endowment, in part from fees paid on examination, amount in all to an insignificant total.

C. A. F.

**CHORAL FANTASY.** The familiar name of Beethoven's 'Fantasia', Op. 80. It is principally a work for pianoforte solo, with the orchestra gradually assuming partnership and a chorus joining in at the end. Though planned some years earlier, it was put together somewhat hurriedly to provide a brilliant ending to the concert on 22 Dec. 1808, at which the sixth and fifth Symphonies were first performed. The words were written to order, it is not certain by whom. At the first performance Beethoven opened the piece with an improvisation; the published opening fantasy was written a year later. The second section of the piece is a series of variations on the melody of Beethoven's song 'Gegenliebe'.

W. M.

**CHORAL HARMONIC SOCIETY.** The members of this London amateur society met at the Hanover Square Rooms for the practice of concerted vocal and instrumental music. In 1837 J. H. B. Dando was the leader, Holder-ness the conductor and H. Bevington the organist. The programmes usually included a glee or madrigal with symphonies, overtures and vocal solos.

C. M.

**CHORAL HARMONISTS' SOCIETY.** An association of amateurs in London devoted to the performance of great choral works with orchestral accompaniments. The first meeting

was held at the New London Hotel, Bridge Street, Blackfriars, on 2 Jan. 1833 and the subsequent ones at the London Tavern until the last concert, 4 Apr. 1851, twelve months after which the Society was dissolved. It had a full orchestra (containing, in 1838, 14 violins, 6 violas, 3 cellos, 3 basses, with complete wind) and chorus. The solo singers were professionals — Clara Novello, Charlotte Birch, Charlotte Dolby, J. A. Novello, etc. Its conductors were V. Novello, Lucas, Neate and Westrop; leader J. H. B. Dando. The programmes were excellent. Among the works performed were Beethoven's Mass in D (1 Apr. 1839 and again 1 Apr. 1844), Haydn's 'Seasons', Mendelssohn's 'Walpurgisnacht', etc.

The Choral Harmonists were a secession from the City of London Classical Harmonists, who held their first meeting on 6 Apr. 1831 and met alternately at Farn's music shop, 72 Lombard Street, and the Horn Tavern, Doctors' Commons. T. H. Severn was conductor and Dando leader, and the accompaniments were arranged for a septet of strings. Among the principal works thus given were Weber's 'Oberon', Spohr's Mass in C minor and 'Die letzten Dinge', a selection from Mozart's 'Idomeneo', etc. The name "City of London" was intended to distinguish it from the Classical Harmonists, a still older society, meeting at the Crown and Anchor Tavern, Strand, of which Griffin and V. Novello were conductors.

C. M.

**CHORAL SYMPHONY.** The conventional name by which Beethoven's ninth Symphony, in D minor, Op. 125, is generally known. The work was composed in 1817–23 and first performed at the Kärntnertor Theatre in Vienna on 7 May 1824, at a concert given by Beethoven himself. The first performance outside Vienna was given under Sir George Smart by the Philharmonic Society, London, in Mar. 1825, from a manuscript copy. (The Symphony was published in 1826.) Other early performances were given at Frankfurt o/M. in Apr. 1825, at the Lower Rhine Festival at Aachen in May 1825 (without the scherzo) and at Leipzig (Gewandhaus) in Mar. 1826.

Beethoven had long wished to set Schiller's Ode to Joy ('An die Freude', 1785) to music, for it accorded with his views on the rights and destinies of mankind. The *Freude* is universal brotherhood and worship of an all-loving deity that dwells above the stars. Beethoven's decision to attach the ode to the Symphony as a choral finale seems to have come at a late stage in the composition of the work; details in the sketch-books of the period are taken as evidence that as late as June or July 1823 he was contemplating an instrumental finale, and that his intention may have been to use the theme he after-

<sup>1</sup> At the festival held at Oxford in 1926, to commemorate the tercentenary of Heather's foundation, the music practice, under the Choragus, was revived.

wards developed into the fifth movement of the Quartet Op 132.

Schiller's ode consists of eight stanzas of eight lines, each followed by a four-line chorus. Beethoven used stanzas 1, 2, 3 and choruses 1, 3, 4, separating the choruses from their stanzas and choosing his own order (Thus the section "Seid umschlungen, Millionen", which occurs late in the setting, is chorus 1.).

The choral finale is one of the problem-pieces of the world's music. In it Beethoven abandons his sovereignty of instrumental music; the master of order and style engages in a composition that is neither orderly nor stylish; the world, however impressed or thrilled by the result, finds it inopportune and disturbing, and seeks to discern the motives for so strange an adventure. Did Beethoven's obsession with the ode thrust it upon the Symphony? The more acceptable view is one that sees the problem as arising from within the Symphony itself. After composing the three orchestral movements (it is surmised) Beethoven felt that no instrumental music could bring the work to its proper culmination. Symphonic writing had come to the end of its ground; the sequel had to be some kind of break-through into extra-symphonic territory. The best vehicle for such an excursion was a choir with a great human theme to sing. No music of the stamp of cantata or oratorio would meet the case; the final stage must be an escapade, free and ungoverned, as of a force unchained. Nothing could fit the prescription better than Schiller's ode, as Beethoven handled and discharged it. That fitness to an extreme need is the vindication of Beethoven's fourth movement — that, and one of the world's greatest tunes.

A week before he died Beethoven sent to Moscheles, in London, a letter of thanks for the Philharmonic Society's benefaction. He appended the following metronome speeds for the Society's guidance:

I. Allegro ma non troppo, un poco maestoso	♩ 88	Allegro assai	♩ 80
II. Molto vivace	♩ 116	Alla marcza (B $\flat$ )	♩ 84
Presto	♩ 116	Andante maestoso (G)	♩ 72
III. Adagio molto e cantabile	♩ 60	Adagio divoto	♩ 60
Andante moderato	♩ 63	Allegro energico	♩ 84
IV. Finale, presto	♩ 96	Allegro ma non tanto	♩ 120
Allegro ma non troppo	♩ 88	Prestissimo	♩ 132
		Maestoso	♩ 60

<sup>1</sup> Beethoven's intention was that a bar of the trio should equal two bars of the scherzo. Conductors are aware of the absurdity of trying to double this pace; but they are still influenced by the misprint to the extent of greatly increasing the speed.

<sup>2</sup> It is worth while noting that the word "Choral", as now restricted to the melodies of German metrical hymns, really originated in a misunderstanding of what Walther meant when he spoke of Luther as having called the "deutscher Choralgesang" into life. What both Luther and Walther meant by "Choralgesang" was the old *cantus choralis* or plainsong of the Latin Church, which Luther himself wished to retain; and his merit

consisted in the adaptation of the chief parts of the Latin hymns to German words, his work in this respect corresponding to Marbeck's 'Book of Common Prayer Noted' in England. All the older Lutheran church musicians, such as Lucas Lossius and Michael Praetorius, used the words "Choral" and "Choralgesang" in this sense of the old plainsong melodies to the graduals, sequences and antiphons, whether sung to Latin or adapted to German words. It was only when German metrical hymns gradually superseded in common use the other choral parts of the service that the name "Choral" in course of time became restricted to the melodies of these hymns.

W. M.  
BIBL.—CARSE, ADAM, 'The Choral Symphony in London' (M. & L., XXXII, 1951, p. 47).

**CHORALE** (Fr. and Ger. *Choral*). A choral song (*cantus choralis*) of ecclesiastical use, whether (a) the choral plainsong (*cantus planus*, *cantus firmus*) of the Roman office or (b) the Protestant church hymn (*Kirchenlied*; *Chorgesang*).

The form "Choral" was adopted for the 4th edition of this Dictionary, no doubt on the ground that "Chorale" is not English, and C. Sanford Terry, in his various writings on Bach, also made a special point of dropping the final "e". But "Choral" as a noun is no more English than "Chorale" and has the disadvantage of being liable to confusion in certain contexts with the normal English adjective "choral". The substantive is French and German, and there is no point in substituting a foreign word for an artificial one. The latter, "Chorale", has at least the advantage of being a term standing for one particular thing.<sup>2</sup>

**THE GREGORIAN CHORALE.**—In Roman use the chorale represented the *concentus* as distinguished from the *accentus* or intonation of the Collect, Epistle, Gospel, prayers and other portions of the office — *Preface*, *Paternoster*, etc. The Gregorian chorale, generally sung by more than one voice (hence *choral*) in proximity to the altar, was essentially a Mass-song (*Messegesang*) treating, usually, a Bible text: of 630 Mass-songs in a 10th-century Codex at St. Gall, more than 430 are from the Psalms, 160 from other parts of the Bible; only 25 are non-

biblical. To the category of chorales belong the *Intritus*, *Offertorium*, *Communo*, sung by the choir; the *Tractus* (*cantus tractus*), *Gradual* (*responsorium graduale* or *gradale*), *Alleluia*s, sung by a voice or voices distinct from the choir between the Epistle and Gospel; and the *Ordinarium Missae*, i.e. the *Kyrie*, *Gloria in excelsis*, *Credo*, *Sanctus*, *Benedictus*, *Agnus Dei* and *Sequences* (*prosa*), sung by the choir. There developed also a large corpus of Latin hymns and antiphons for the Church seasons and hours—Julian (p. 547, see Bibl.) enumerates more than 500 in English medieval use. Sung by the clergy and choir, they were as little intelligible to the passive congregation as the Mass itself. But in Germany, as elsewhere, short vernacular hymns were early admitted into public worship and, after their refrain, were called "Kirleison", "Leison" or "Leichen". They were the earliest congregational hymns and consisted of a stanza or stanzas prefixed to the *Kyrie eleison* or *Christe eleison*, ejaculations which had passed from the Greek into the Latin Church, especially for festival use. The oldest of them dates from the end of the 9th century; the first of its three stanzas reads:

Unsar trohtin hat farsalt sancte Petre giwalt  
Daz er mag gnerjan zeimo dingenten man.  
Kyrie eleison! Christe eleison.

Other rare examples of pre-Reformation popular hymnody are: the Easter 'Christ ist erstanden', the Whitsuntide 'Nun bitten wir den heiligen Geist', the Christmas 'Gelobet seist du, Jesu Christ', the Trinity 'Das helfen uns die Namen drei', the Good Friday 'Gott ward ein Kreuz geschla'n' and the intercessory 'Mitten wir im Leben sind'. Their abnormal liturgical use is suggested by the conjecture (Koch, I, 208, see Bibl.) that the second of those named was sung by the congregation while a wooden dove or a living bird was released from the roof of the church. Another opportunity for congregational utterance was afforded by the post-gradual *Alleluia* sung at Easter. The Christmas mystery plays also invited vernacular hymns—e.g. the Latin-German 'In dulci jubilo' and 'Ein Kind geboren zu Bethlehem' ('Puer natus in Bethlehem'). The best Latin hymns, too, were frequently translated—e.g. the *Te Deum*, *Gloria in excelsis*, *Veni creator spiritus*, as well as the *Credo*, *Paternoster*, *Sanctus* and some of the Psalms. Hence, when Luther set himself to provide the apparatus of congregational praise, he was able to draw upon a tradition of ecclesiastical song and a fund of popular hymnody. Between Otfrid of Weissenburg (9th century) and 1518 upwards of 1,440 German vernacular hymns were written. Yet throughout the medieval centuries church music was almost exclusively the province of the choir and clergy. The Reformation gave a voice to the laity, but

without immediately destroying the choir's monopoly.

THE PROTESTANT CHORALE.—As signifying a congregational hymn, the German word *Choral* came into general use in the second half of the 16th century, at a period when the principles of melodic symmetry and rhythm were being grasped, when, too, steps were first taken to transfer the *cantus planus* from the tenor to the descant in the interests of congregational singing. The chorale was the peculiar interest of the Evangelical (Lutheran) Church. The Reformed (non-Lutheran) bodies, deeming the Psalter the sole inspired manual of church praise, disapproved of original hymns as a detail of public worship and consequently condemned their communities to musical infertility.

Luther, steeped in and esteeming the music of the ancient Church, was himself the first Evangelical hymnist, the Ambrose of the Reformation, who equipped the Protestant liturgy with the apparatus of choral song. His materials were fourfold: (1) official Latin hymnody; (2) pre-Reformation popular hymns; (3) secular folksong; (4) original hymns.

1. Official Latin Hymnody. Of the Latin hymns, with (for the most part) their adapted melodies, which the Evangelical Church took over, the following are the most familiar:

- 'Allein Gott in der Hoh' sei Ehr' (*Gloria in excelsis*), by Nikolaus Decius.
- 'Also heilig ist der Tag' (*Salve festa dies*).
- 'Christe, der du bist Tag und Licht', by Wolfgang Meusel, or 'Christe, du bist der helle Tag' (*Christe qui lux es et dies*), by Erasmus Alber.
- 'Christum wir sollen loben schon' (*A solus ortus cardine*), by Luther.
- 'Christus, der uns selig macht' (*Patris sapientia, veritas divina*), by Michael Weise.
- 'Da Christus geboren war' (*In natali domini*).
- 'Der du bist drei in Einigkeit' (*O lux beata trinitas*), by Luther.
- 'Der Tag der ist so freudenreich' (*Dies est laetitiae*).
- 'Erhalt uns, Herr, bei deinem Wort' (*Sit laus, honor et gloria*), by Luther.
- 'Herr Gott, dich loben wir' (*Te Deum laudamus*), by Luther.
- 'Jesus Christus, unser Heiland, der von uns' (*Jesus Christus, nostra salus*), by Luther.
- 'Komm, Gott, Schöpfer, heiliger Geist' (*Veni Creator Spiritus*), by Luther.
- 'Komm, heiliger Geist, Herre Gott' (*Veni Sancte Spiritus*), by Luther.
- 'Nun komm, der Heiden Heiland' (*Veni redemptor gentium*), by Luther.
- 'Verleih' uns Frieden gnädiglich' (*Da pacem, domine*), by Luther.
- 'Was fürcht'st du, Feind Herodes, sehr' (*Hostis Herodes impie*), by Luther.
- 'Wir glauben all' an einen Gott' (*Credo in Deum patrem omnipotentem*), by Luther.

To these must be added many Psalm versions and paraphrases of Holy Scripture.

2. Pre-Reformation Popular Hymns. Realizing the strength of their appeal, Luther and his colleagues appropriated many popular medieval hymns, rewriting or expanding their words and adapting their melodies. This process of *Verbesserung* was natural in a Reformation which was itself a gigantic act of correc-

tion. Hans Sachs (1494-1576), for instance, "christlich verandert und korrigiert" the pre-Reformation "Dich Frau vom Himmel ruf' ich an" to 'Christum vom Himmel ruf' ich an'. Luther described his 'Jesus Christus unser Heiland' as John Hus's hymn *verbessert*; while the antiphon 'Regina coeli' of Lossius was adopted as "correctum per Herm. Bonnum". Sacred folksong attached thus to the service of the Evangelical Church provided the following hymns or melodies or both:

- The Christmas 'Gelobet seist du, Jesu Christ' and 'In dulci jubilo'.
- The Passiontide 'Da Jesus an dem Kreuze stund' and 'O du armer Judas'.
- The Easter 'Christ ist erstanden', 'Christ lag in Todesbanden' and 'Freu' dich, du werthe Christenheit' (whose melody was also set to 'Es ist das Heil uns kommen her').
- The Trinity 'Christ fuhr gen Himmel'.
- The Whitsuntide 'Nun bitten wir den heiligen Geist'; as well as 'Dies sind die heiligen zehn Gebot', 'Gott der Vater wohn uns bei', 'Gott sei gelobet und gebenedet' and 'Mitten wir im Leben sind'.

3. Secular Folksong. Already in the 15th century Heinrich von Laufenberg had written religious parodies (*contrafacta*) of secular ditties. Luther was not less sensitive to the value of popular art as a contributor to the apparatus of religion; the Calvinist Church also, owing to the paucity of material at its disposal, was compelled to borrow freely. In their action, however, the early Lutheran compilers were moved also to purify popular art by substituting — to quote a Frankfort title-page dated 1571 — "geistige, gute, nutze Texte und Worte" for the "bose und argerliche Weise, unnutze und schampare Liedlein" in popular use. Thus the hymn 'Ach Gott, thu' dich erbarmen' received its melody from the secular 'Frisch auf, ihr Landsknecht alle'; 'Durch Adams Fall' from the Pavia song; 'Freut euch, freut euch in dieser Zeit' from 'So weiss ich eins, das mich erfreut'; 'Helft mir Gott's Gute preisen' and 'Von Gott will ich nicht lassen' from 'Ich ging einmal spazieren'; 'Herr Christ, der einig Gott's Sohn' from 'Ich hort' ein Fraulein klagen'; 'Hilf Gott, das mirs gelinge' from (?) 'Könnt ich von Herzen singen'; 'Ich dank dir, lieber Herre' from 'Entlaubt ist uns der Walde'; 'Ich hab' mein Sach Gott heimgestellt' from 'Ich weiss mir ein Röslein hübsch und fein'; 'In dir ist Freude' from an Italian dance-measure, 'A lieta vita'; 'Nun freut euch, lieben Christen g'mein' from a melody heard and noted by Luther, 'Wach auf, wach auf, du schone'; 'Nun horet zu, ihr Christenleut' from 'Und wollt ihr horen neue Mär'; 'O Christe Morgensterne' from 'Er ist der Morgensterne'; 'O Haupt voll Blut' and 'Herzlich thu mich verlangen' from 'Mein G'mut ist mir verwirret'; 'O Welt ich muss dich lassen' from 'Inspruck ich muss dich lassen' (Isaac); 'Vom Himmel hoch da komm ich

her' and 'Vom Himmel kam der Engel Schaar' from 'Aus fremden Landen komm ich her'; 'Wacht auf, ihr Christen alle' from a Netherlandish folksong, 'Waer is mijn alder liefste'; 'Warum betrubst du dich, mein Herz' from 'Dein g'sund mein Freud'; 'Was mein Gott will' from the French 'Il me souffit de tous mes maux'; and 'Wenn wir in höchsten Nothen sein' from (?) a French folksong.

4. Original Hymns. Among the writers whose work enriched evangelical hymnody Luther stands pre-eminent. Between 1523 and 1543 he wrote 38 pieces, the majority of them translations, revisions or enlargements of pre-Reformation material. His original, or mainly original, hymns are 8 in number:

1. 'Christ lag in Todesbanden' (1524).
2. 'Christ unser Herr zum Jordan kam' (1543).
3. 'Ein neues Lied wir heben an' (1524).
4. 'Erhalt uns, Herr, bei deinem Wort' (1542).
5. 'Jesus Christus unser Heiland, der den Tod' (1524).
6. 'Nun freut euch, lieben Christen g'mein' (1523).
7. 'Vom Himmel hoch da komm ich her' (1535).
8. 'Vom Himmel kam der Engel Schaar' (1543).

It is a testimony to their virility, as it is to the conservatism of German hymnody, that all but two (No. 3 *supra* and 'Für allen Freuden auf Erden' [1538]) of Luther's hymns are still in German use. Seventeen of them received original tunes in the hymn-books in which they first appeared:

1. 'Ach Gott vom Himmel sieh' darein' (1524).
2. 'Aus tiefer Noth schrei ich zu dir' (1524).
3. 'Ein neues Lied wir heben an' (1524).
4. 'Ein feste Burg ist unser Gott' (1535).
5. 'Es spricht der Unweisen Mund wohl' (1524).
6. 'Es wollt uns Gott genädig sein' (1524).
7. 'Jesaia dem Propheten' (1526).
8. 'Jesus Christus, unser Heiland, der den Tod' (1524 and 1535).
9. 'Jesus Christus, unser Heiland, der von uns' (1524 and also 1535).
10. 'Mensch, willst du leben seliglich' (1524).
11. 'Mit Fried' und Freud' ich fahr' dahin' (1524).
12. 'Nun freut euch, lieben Christen g'mein' (1524 and 1535).
13. 'Sie ist mir lieb die werthe Magd' (1545).
14. 'Vater unser im Himmelreich' (1539).
15. 'Vom Himmel hoch da komm ich her' (1539; not the secular melody [1535] already referred to).
16. 'War Gott nicht mit uns diese Zeit' (1524).
17. 'Wohl dem der in Gottes Furcht steht' (1524).

What share Luther himself had in their composition cannot be stated positively. Johann Walther (1496-1570) and Konrad Rupff, his predecessor as cantor at the Saxon court, assisted the reformer at Wittenberg in 1524. But Luther concerned himself directly in their task, a fact established by the manuscript of a discarded melody by him (Zahn, No. 2562, *see* Bibl.) for his 'Vater unser im Himmelreich'. The virile melody 'Ein feste Burg', if reminiscent of Gregorian material, is generally attributed to him. 'Jesaia dem Propheten' discloses a similar borrowing (from the *Sanctus*). Zelle (pp. 11, 64, *see* Bibl.) suggests that 'Nun komm, der Heiden Heiland' and the melody of M. Weisse's 'Nun lasst uns den Leib begraben' are also Luther's compositions.

THE EARLIEST HYMN-BOOKS.—The second and third quarters of the 16th century represent the productive period of Lutheran hymnody. More than 200 books published in that period contain the rugged, objective hymns of the Reformation set to melodies as direct and massive, for the most part, as themselves. Edited by Walther, the earliest of them—the so-called 'Achtliederbuch'—was published at Wittenberg in 1524 under the title 'Eitlich christlich liden Lobgesang, und Psalm, dem rainen wort Gottes gemess . . . in der Kirchen zu singen'. It contained four melodies ('Nun freut euch, lieben Christen g'mein', 'Es ist das Heil uns kommen her', 'In Gott gelaub' ich das er hat' and 'In Jesus Namen heben wir an') set to four hymns by Luther, three by Paulus Speratus (d. 1551), his assistant and one by an anonymous writer. A larger book, 'Enchiridion oder eynd Handbuchlein . . . geistlicher Gesenge, und Psalmen, rechtschaffen und kunstlich vertheuscht', was published at Erfurt in a duplicated edition in 1524, probably under the direction of Justus Jonas (d. 1555) and Johannes Lange. The two editions contained 16 melodies set to 25 hymns—the eight of the 'Achtliederbuch', 14 others by Luther, one each by Justus Jonas, Erhart Hegenwalt and Elisabetha Cruciger (d. 1535), the wife of Luther's favourite pupil.

Simultaneously with or soon after the publication of the 'Enchiridion' Walther issued from Wittenberg (1524) the first hymn-book, to which Luther contributed a preface. Repeatedly reissued and enlarged, his 'Geystliche gesangk Buchleyn' contained 35 melodies set to 32 hymns (24 by Luther) and 5 Latin texts. Besides the writers already mentioned, Michael Stuefel (1486-1567) and Johannes Agricola (1492-1566) each contributed a hymn. Walther's five-part (*Discantus*, *Altus*, *Tenor*, *Bassus*, *Vagans* or *Quantus*) settings of the melodies were designed, as Luther remarked in his preface, to attract youths from the "Buhlieder und fleischlichen Gesange" to "etwas Heilsames". Five years later (1529) Joseph Klug published at Wittenberg for Luther, who added a new preface, his 'Geistliche Lieder. Auff's new gebessert zu Wittenberg', an enlarged collection of hymns and melodies of which no copy has survived. On the evidence of a later (1535) edition it appears to have contained 50 German hymns, 29 of them by Luther, with others by Hans Sachs (1494-1576), Adam of Fulda (1493-1558), Johann Kolross (d. 1558) and other writers already named. The last hymn-book published under Luther's supervision was the 'Geystliche Lieder. Mit einer neuen vorrhede D. Mart. Luth.', printed in two parts by Valentin Babst at Leipzig in 1545. The collection contained 101 German hymns, including all of Luther's. Other contributors to it, besides some of those

already mentioned, were Matthaus Greiter (d. 1550 or 1552), Wolfgang Dachstein (d. c. 1561), Adam Reissner (1496-c. 1575), Johannes Schneising (d. 1567) and Michael Weisse (d. 1534).

Melodies grew in number less rapidly than hymns. But Zahn (Vol. VI, *see* Bibl.) distinguishes nearly 200 new tunes in the hymn-books of 1524-45. Surveying the whole century the notable composers are: Joachim von Burck (? 1541-1610), Sethus Calvisius (1556-1615), Wolfgang Dachstein (d. c. 1561), Nikolaus Decius (d. 1541), Johann Eccard (1553-1611), Wolfgang Figulus (c. 1520-91), Bartholomaeus Gesius (1556-1613 or 1614), Matthaus Greiter (d. 1550 or 1552), Nikolaus Herman (? 1485-1561), Johann Kugelmann (d. 1542), Joachim Magdeburg (b. 1525), Philipp Nikolai (1556-1608), Cyriakus Schneegass (1546-97), Nikolaus Selnecker (1528-92), Johann Spangenberg (1484-1550), Melchior Vulpus (d. 1616), Johann Walther (1496-1570) and Luther himself.

LATER DEVELOPMENT.—The Lutheran revolution did not immediately substitute congregational for professional singing. Composers continued to place the *canto fermo* in the tenor in four- or five-part settings for the choir, leaving to the congregation restricted opportunities to participate. As in the pre-Reformation period, congregational hymns were sung in unison without accompaniment, vocal or instrumental. But before the 16th century ended, the first step was taken to release the chorale from the traditions of the motet and to admit the congregation to associate with the choir in singing it. Lukas Oslander (1534-1604), a Protestant minister, published at Nuremberg in 1586 his 'Funfftig geistliche Lieder und Psalmen', a collection of (for the most part) old melodies, whose *cantus*, however, he removed from the tenor to the descant, in order "das ein gantz christliche Gemein durchauss mit singen kan", supposing that the clearer definition of the melody would encourage the congregation to do so. Inadequate as it was—for a small choir could afford inadequate support to a congregational melody—Oslander's innovation was repeated by later editors: Johann Rhaw (partly) in 1589, Rogier Michael in 1593, Sethus Calvisius and Johann Eccard in 1597, the *Eisleben Gesangbuch* of 1598 (all but eleven melodies), the Ratisbon compilation in 1599 ("Mit 5 Stimmen also gesetzt, dass jederman den Choral und bekandte Melodey jedes Gesangs ungehindert wol mit singen kan"), the Nuremberg hymn-book of 1608, Georg Quitschreiber's Jena collection of 1608 and Hans Leo Hassler's 'Kirchengesang' of 1608, whose melodies were "simpliciter gesetzt" to promote their congregational rendering.

The ultimate substitution of a descant for a

tenor melody was also due to the weakening of the Netherlandish contrapuntal tradition and the penetration of the Italian melodic style into Germany in the 17th century, a development of which Hans Leo Hassler (*d.* 1612) and Heinrich Schutz (1585–1672) were pioneers. It is significant that already in 1591 Adam Gumpeltzhaimer had published at Augsburg his ‘Neue teutsche geistliche Lieder’, three-part settings (*cantus*, tenor, bass) “nach art der Welschen [*i.e.* Italian] Villanellen”. In the half-century that followed, the Italian concerto invaded the precincts of Lutheran hymnody, revolutionizing the treatment of the chorale, which composers began to offer to the public under the title of ‘*Harmoniae*’, ‘*Cantiones sacrae*’, ‘*Geistlicher Harfenklang*’, ‘*Rosetulum muscum*’, ‘*Rosengartlein*’ and so forth. The concerto, however, was essentially non-congregational, while the choir of the period was inadequate to afford the harmonic support which effective congregational singing required.

On the other hand the organ, a newly perfected instrument, was available for that service, while the introduction of figured bass (*continuo*) aided the organist to underprop the melody and decided the victory for the descant over the tenor. The earliest important hymn-book of the 17th century — Johann Hermann Schein’s (1586–1630) ‘*Cantional*’ (1627) — added a figured bass to its melodies for the use of “organists, instrumental players and lutenists”. The organ decisively assumed the responsibility which the choir was unable to fulfil, when in 1650 Samuel Scheidt (1587–1654), the Halle organist, published his ‘*Tabulatur Buch*’ containing 112 settings of 100 melodies to serve as accompaniments of congregational singing.

For distinguishing the separate stanzas of the hymns, Scheidt may be regarded as the father of the chorale cantata, and no less as the founder of Germany’s organ school, which built itself upon the chorale and thereby was happily diverted from mere virtuosity. From Scheidt onwards German organists developed their technique upon the chorale, treating it either in free counterpoint with the melody as the *cantus firmus* (*praefambulum*) or in canonic variations or fugally. Pre-eminent in this art were Michael Praetorius (1571–1621), Johann Christoph Bach (1642–1703), Johann Michael Bach (1648–94), Johann Pachelbel (1653–1706), Diderik Buxtehude (1637–1707), Georg Böhm (1661–1733), Johann Adam Reinken (1623–1722), Johann Gottfried Walther (1684–1748) and Johann Sebastian Bach (1685–1750). In modern times the full revelation of Bach’s grandeur has brought the organ and chorale again into association in a literature which, among others, Hubert Parry (1848–1918) in England, Johannes Brahms (1833–

1897), Sigfrid Karg-Elert (1877–1933) and Max Reger (1873–1916) in Germany, have enriched.

German composers in the 17th century, on the whole, were less successful in writing fine melodies than in arranging the treasures of the past to satisfy the taste of their period. The most notable of them are Michael Praetorius, Melchior Franck (1573–1629), Johann Michael Altenburg (1584–1640), Heinrich Schutz, Johann Hermann Schein, Johann Schop (*d.* 1664 or 1665), Johann Crüger (1598–1662), the finest melodist of the century, Heinrich Albert (1604–51), Andreas Hammer-schmidt (1612–75), Johann Rosenmüller (1619–84), Christoph Runge (1619–81), Georg Neumark (1621–81), Peter Söhren (*d.* 1692 or 1693), Jakob Hintze (1622–1702), Johann Rudolph Ahle (1625–73), Johann Georg Ebeling (1637–76), Gottfried Vopelius (1645–1715) and Joachim Neander (1650–80). Zahn enumerates upwards of 450 hymn-books published in the 17th century. In addition to Schein’s (1627) already mentioned, the most important of them are: Johann Crüger’s ‘*Newes vollkömliches Gesangbuch*’ (Berlin, 1640), his ‘*Praxis pietatis melica*’ (Berlin, 1648 [3rd ed.]), the Crüger-Runge hymn-book (Berlin, 1853) and Gottfried Vopelius’s ‘*Neu Leipziger Gesangbuch*’ (Leipzig, 1682). The publication of local hymn-books was very general in the latter part of the century.

POETRY OF THE CHORALE.—Viewed as poetical literature, the chorale passed in the 17th century through the testing experience of the Thirty Years’ War (1618–48), a period of unrelieved and universal gloom whose agony found a relief in “*Kreuz- und Trostlieder*” and a hymnody subjective, sincere, devout. Paul Gerhardt (1607–76), the principal hymnist of the century, is second only to Luther in popularity, and in fertility his superior. The second half of the century culminated in the Pietistic revival led by Philipp Jakob Spener (1635–1705), a reaction from the formalism of official Lutheranism which, however, except in Bohemia and Moravia, never developed into organized dissent. Of hymn-writers, to the earlier period belong Johann Michael Altenburg (1584–1640), Johann Heermann (1585–1647), Martin Rinkart (1586–1649), whose ‘*Nun danket alle Gott*’ (1636) voiced the people’s relief at the conclusion of the devastating war, Georg Weissel (1590–1635) and Paul Flemming (1609–40). In the second half are notable, besides Gerhardt, Christian Keimann (1607–62), Johann Rist (1607–67), Johannes Olearius (1611–84), Johann Franck (1618–1677), Georg Neumark (1621–81), Johann Georg Albinus (1624–79), Louise Henriette of Brandenburg (1627–67), Gottfried Wilhelm Sacer (1635–99), Emilie Juliane of Schwarzburg-Rudolstadt (1637–1706), Salomo Liscow (1640–89) and Christoph Tietze (1641–1703).

THE FINAL STAGE.—The change which passed over the spirit of German hymnody in the 17th century was reflected consequently in its melody. The rugged, rhythmic tunes of the Reformation, so congregational in their simplicity and directness, were dispossessed by unmetrical, aria-like tunes, and even by dance rhythms. At Halle, the centre of Pietism, Johann Anastasius Freylinghausen published (1704) the classic 'Gesangbuch' of that school. It contained nearly 700 hymns, set to 174 melodies, with figured bass. Nearly half (82) of the tunes were new; only five represented the 16th century and the traditions of Luther. Pietism, indeed, connoted for the chorale the end of its creative period, a fact strikingly illustrated in the case of Bach. Spitta (I, 367) has dispelled the illusion that he contributed tunes to Freylinghausen's 'Spiritual Hymn-Book', though there are countless proofs in his Passions and cantatas that he had much in common with a literature so intimate and warm. Also he contributed to Schemelli's 'Gesangbuch' (1736) melodies for three hymns included in Freylinghausen's collection—'Dir, du Jehovah, weil ich singe', 'Eins ist not, ach Herr dies eine' and 'Wie wohl ist mir, O Freund der Seelen'. But they are typical of all his compositions in this form. Unapproachable in his treatment of the ancient melodies, as his preference for them is patent, Bach wrote original hymn-tunes (e.g. No. 42 of the 'Christmas Oratorio') of the aria type and, if they cannot be said to be wholly uncongregational, they distinctly lack the characteristics of an effective congregational hymn.

It does not follow from the presence of chorales *simpliciter stilo* in Bach's cantatas and oratorios that he desired them to be sung by the congregation, though his orchestration of them strongly suggests that they were so sung. But his art and the chorale are inextricably associated. His earliest compositions were chorale studies for the clavier or organ. All the famous hymn melodies in common use he enriched with matchless harmonies. They are rarely absent from his cantatas and oratorios. Their stanzas and their melodies inspired the work of his maturest genius. His organ technique was developed upon them, and they are the theme of the bulk of his music for that instrument. It would appear, as Spitta (III, 107) comments, that Bach was impelled to connect the chorale with all his work for the service of God and to display it in its fullest brilliance. So complementary are they that Bach and the chorale together fell under the ban of 18th-century Rationalism, awaiting the 19th-century revival which restored them to repute. It is not merely a coincidence that Philipp Spitta, who first interpreted the resuscitated Bach, was the son of the author of

'Psalter und Harfe', through whom Evangelical hymnody recovered the spirit of which Rationalism had deprived it. C. S. T.

**CHORALE CANTATA.** A type of German church cantata, cultivated mainly by J. S. Bach, but also by some of his forerunners, in which the words as well as (usually though not invariably) the tune of a chorale are used. The melody may appear only in the concluding choral setting of the hymn, or it may be worked into one or more of the preceding numbers, particularly the opening chorus. The words may be simply those of the hymn, treated verse by verse as chorus, recitative and aria by turns, or they may be partly or wholly paraphrased in order to form more suitable texts, for recitatives and arias in particular. In some cases verses entirely different from those of the hymn may be interpolated.

The following numbers of Bach's preserved church cantatas are chorale cantatas: 1-3, 5, 7, 10, 16, 26, 33, 41, 62, 91, 94, 101, 111, 113-116, 121-27, 133, 135, 139, 177, 178, 180.

**CHORALE-VARIANTS, TRADITION-AL.** The Protestant chorales in Scandinavia, which have maintained an independent existence within the congregations in the rural districts, particularly among the musically well-endowed, and have been evolved according to primitive musical laws, used side by side with the versions printed in the authorized chorale-books. These melodies deviate in essentials

from the printed sources from which they were originally derived. In many cases the original melody can be identified only with difficulty, if at all. Thus we are faced with the outcome of a popular activity in composition, which may either be due to the influence of any single, authoritative musical personality in the congregation or may comprise the result of a process of transformation with whose various stages and laws we are but little acquainted. The textual foundations of the Scandinavian chorale-variants are divergent, inasmuch as the pietistic element seems to play a more prominent part in the Danish, Norwegian and Finnish psalm-tunes than it does in those of Sweden and the old Swedish settlements in Esthonia, where the official psalm-book of the national church constitutes the basis.

The work of collecting the variants was initiated in Finland in the 1830s, but was not organized until the 1890s, by Ilmari Krohn.<sup>1</sup> In Norway it was started by L. M. Lindeman in 1848, was continued in the 1890s and is still being carried on.<sup>2</sup> In Denmark melodic variants to Kungö's Gradual (1699) were noted down by the folklorist E. Tang Kristensen in the 1860s, and since then further notes have been taken and phonographic recordings made on the Farø Islands, and elsewhere, by E. Gruner-Nielsen and others. In Sweden the work of transcribing was begun in the 1880s by J. Enninger, but the collections themselves were inaugurated by Nils and Olof Andersson during the journeys they made between 1910 and 1931, and were printed in 'Svenska Låtar', 1921-40. Chorale-variants on the island of Nucko (off the Esthonian coast) were recorded by phonograph in 1921 and published in 1945, and others of the same kind on Runö (Gulf of Danzig) were recorded by gramophone in 1938 and published in 1939.

The singing of the official melodies by the peasants in their own particular manner is distinguished by the following characteristics:

(1) Tunes of chorales which are comparatively luxuriant in both text and melody tend to be substituted by a melodic formula.

(2) The melody may conform to the "neumatic" group-style (in the Gregorian sense of the term), in that each syllable is sung to two or three notes, whereas the original melody is syllabic throughout. This melodic group-style is due primarily to the untrained singer's need of supporting and transitional notes, and also, to a lesser extent, to his predilection for elaborating the melodic line. In this respect the similarity between the liques-

<sup>1</sup> Collections printed in 'Suomen kansan sävelmiä', 1904 f.

<sup>2</sup> Single examples in 'Norske Bygder', 1921-37; larger collections in O. M. Sandvik's 'Østerdals-musikken', 1944, and 'Folkemusikk i Gudbrandsdalen', 1948.

cent neumes of Gregorian chant and the abundant, *portamento*-like gliding-notes of the variants is particularly striking.

(3) The tonality of the variants is reminiscent, to a greater or lesser degree, of that of the ecclesiastical modes; those with a minor tinge (Dorian, Phrygian, Aeolian) being of far more frequent occurrence than those with a major tinge (Lydian, Mixolydian, Ionian).

(4) Certain definite intervals (chiefly sevenths, but also thirds and sixths in the minor mode; and, in the major mode, exclusively fourths) differ from those of the tempered scale of art-music. "Indefinite" intervals of this type imply a sense of tonality other than that of modern times.

The rise of traditional chorale-variants is probably due in the first instance to the Scandinavian peasantry's love of singing the chorales, heard and learned by them in church, in their own homes or while they worked on their farms, at sea and in the forests. This led to a gradual transformation of the melodies. Moreover, as many of the smaller, more isolated congregations had no organs in their churches, even as late as the 19th century, and as their choirmasters were themselves not always competent to interpret the official versions of the melodies, or were obliged to conform to the congregation's distinctive manner of singing, the traditional variants have been enabled to survive until the present day.

A counterpart to these traditional variants may be found in Switzerland in the melodies from the 'Consolaziun dell' olma devotiusa' sung by the Rhaeto-Romanic inhabitants of the Canton of Grisons.<sup>1</sup>

<sup>1</sup> Cf. 'Rätöromansche Volkslieder', 'Schriften der Schweizerischen Gesellschaft für Volkskunde', Vol. XXVI, 1945.

**CHORDING.** A word of recent origin, used to express the distribution of notes within a chord, whether clustered or spaced out. It is as important an element now of orchestration as it was of vocal writing in the 16th century. Since it may redistribute the upper partials, there is a point where it merges into tonality.

A. H. F.-S.

The word is used also for the quality of intonation in performance, where the production of chords in tune or out of tune depends on the singers, or the players of instruments without fixed intonation.

E. B.

**CHORDS, ANALYSIS OF.** See HARMONIC ANALYSIS, ADDENDA, Vol. IX.

**CHORISTERS.** See CATHEDRAL MUSIC.

**CHORLEY, Henry F. (Fothergill)** (b. Blackley Hurst, Lancashire, 15 Dec. 1808; d. London, 16 Feb. 1872).

English journalist, author and art critic. The only approach to systematic teaching in music which he ever received was from J. Z. Herrmann, afterwards conductor of the Liverpool Philharmonic Society. He frequented all the performances within reach, and his notes of these in his journal bear witness to the steady growth of his judgment. In Sept. 1830 he made his first appearance in the columns of 'The Athenaeum', and shortly after he was received upon its staff. He then settled in London and continued to write for 'The Athenaeum'. At the same time he attempted composition in other branches of literature — novels, dramas, biographies and poems. Among these may be mentioned:

- 'Sketches of a Seaport Town' (1834).
- 'Conti, the Discarded' (1835).
- 'Memorials of Mrs. Hemans' (1836).
- 'The Authors of England' (1838).
- 'The Lion, a Tale of the Coterie' (1839).
- 'Pomfret' (1845).
- 'Old Love and New Fortune' (1850), a five-act verse play.
- 'The Lovelock' (1854).
- 'Roccella' (1859).
- 'The Prodigy' (1866).
- 'Duchess Eleanor' (1866).

Chorley dramatized G. Sand's 'L'Uscoque', set to music by Benedict as 'Red Beard'. Besides translating many foreign librettos<sup>2</sup>, he wrote the original word-books of one version of 'The Amber Witch' (Wallace, 1861), of 'White Magic' (Biletta, 1852), of 'The May Queen' (Bennett), 'Judith' and 'Holyrood' (Leslie), 'St. Cecilia' (Benedict), 'The Sapphire Necklace' and 'Kenilworth' (Sullivan), and words for many songs by Meyerbeer, Goldschmidt, Gounod, Sullivan, etc. He will be best remembered, however, as a musical critic. Within a year of his joining the staff of 'The Athenaeum' he had that department

<sup>2</sup> Auber's 'Haidée' and 'Domino noir', Cimarosa's 'Matrimonio segreto', Gluck's 'Orfeo' and 'Iphigénie en Tauride', Gounod's 'Faust' and 'Mireille', Mendelssohn's 'Son and Stranger', Mercadante's 'Elena Uberti', Meyerbeer's 'Dinorah'.

entrusted entirely to him, which he did not give up till 1868. His two published works containing the deliberate expression of his opinions on the subject of music are 'Modern German Music' (1854) — a republication, with large additions, of his former work 'Music and Manners' — and 'Thirty Years' Musical Recollections' (1862; modern edition, ed by Ernest Newman, New York and London, 1926). Beside these may be mentioned his 'Handel Studies' (1859) and 'National Music of the World' (edited by H. G. Hewlett after Chorley's death, and published 1880).

**CHORON, Alexandre Étienne** (b. Caen, 21 Oct. 1771; d. Paris, 28 June 1834).

French writer on music, publisher and composer. He was a good scholar before becoming a musician. He began the study of music without assistance, but afterwards received lessons from the Abbé Roze and the Italian Bonesi. Highly gifted by nature, he soon acquired great knowledge in mathematics, languages and every branch of music, and published his 'Principes de composition des écoles d'Italie', 3 vols., (Paris, 1803) and 'Principes d'accompagnement des écoles d'Italie' (Paris, 1804), in which he introduced Sala's practical exercises on fugue and counterpoint, Marpurg's treatise on fugue, many exercises from Martini's 'Esemplare' and a new system of harmony of his own. The work cost him much time and money.

In 1805 Choron became a music publisher; he brought out many fine works by the best Italian and German masters. In conjunction with Fayolle he then undertook the publication of his 'Dictionnaire des musiciens', 2 vols., 8vo (Paris, 1810-11).

Though devoted to his scientific studies and hampered with an unsuccessful business, Choron could not resist the temptation of trying his powers as a composer and gave to the public 'La Sentinelle', a song long popular and introduced in many French plays. In 1811 an opera, 'Nadir et Salyha', was produced at Cassel. But his great scheme was his 'Introduction à l'étude générale et raisonnée de la musique', a capital book, which he left unfinished because his necessities obliged him to devote his time to teaching music and to accept the post of Directeur de la Musique des Fêtes Publiques, which he held from 1812 to the fall of Napoleon.

Under Louis XVIII he had the charge of reorganizing the precentorship of the cathedrals. He was appointed director of the Académie Royale de Musique (Opéra) in Jan. 1816, but, the appointment having been rudely

revoked in 1817, he founded a school for the study of music, which was supported by the Government from 1824 to 1830 under the title of Institution Royale de Musique Classique et Religieuse, but declined rapidly when deprived of external aid. It was taken up later by Niedermeyer under the name of École de Musique Religieuse Classique.

The premature death of Choron may be attributed to disappointments and difficulties after the fall of Charles X. This learned musician and very kind-hearted man composed a Mass for three voices, a 'Stabat Mater' for three voices and a number of hymns, psalms and other vocal pieces for the church; but his best titles to fame, after the works already mentioned, are his translations and editions of Albrechtsberger's works, his 'Méthode concertante de musique à plusieurs parties' (Paris, 1817), his 'Méthode de plain-chant' (1818), his 'Manuel complet de musique vocale et instrumentale, ou Encyclopédie musicale', which was published by his assistant Adrien de La Fage in 1836-38 (6 vols and 2 vols. of examples), and several other didactic treatises, which contributed greatly to improve the direction of musical studies in France. In fact Choron may be considered as a pedagogue of genius, and he had the credit of opening a new field to French musical educationists and research workers. Scudo, in his 'Critique et littérature musicales' (Paris, 1852), gives a vivid picture of Choron as director of his school of music.

**CHORTON.** See PITCH, STANDARD.

**CHORUS** (x) (from Gr. *χορός*; Fr. *chœur*; Ger. *Chor*; Ital. *coro*). (1) Any body of singers, originally in the drama, subsequently in works of the oratorio type derived from drama, whose performance is of a massed as opposed to a solo kind. The word is equally applicable whether such singers sing in unison or in polyphony.

(2) A composition or part of a work written for such a body.

(3) In the 17th and 18th centuries the word was commonly used to denote the concerted conclusion of duets, trios, etc. Thus *Coro* in the scores of Handel's operas.

(4) The refrain of a song, or the part repeated by all available singers. x. c. c.

See also Choir.

**CHORUS** (2). The name in medieval Latin for the Crot, Crwth or Crowd. A manuscript of the 11th century written in England (B.M. Tib. c. vi.) gives an illustration of the "chorus" and informs us that it was made of wood and had four strings, while Aimeric de Peyrac in the 14th century states that they were arranged in two pairs and tuned a fourth

apart. Another 11th-century illustration of this bowed crwth is in the University Library, Cambridge (MSS Ff. 1.23), where it is shown without a fingerboard and played at the shoulder: the fingerboard appears in a 13th-century manuscript of English workmanship (B.M. Add. MSS 35,166).

Owing to the fact that this Latin name is given at times to a primitive form of bagpipe (as in Gerbert's 'De cantu et musica sacra'), the antiquity and popularity of the bagpipe in Scotland and Wales at the end of the 12th century has been strongly upheld; for Giraldus Cambrensis, writing at that time, states that the "chorus" was in general use in both these countries. But he is evidently alluding to the crot or crwth, however appropriate the name "chorus" may have been to the bagpipe when the drone or two drones were added to that instrument in the 13th and 14th centuries. F. W. G.

**Chottin, Alexis.** See Berber Music

**CHOUDENS FILS.** This important Paris music-publishing business was founded in June 1845 by Antoine de Choudens, at whose death, in 1888, his son Paul (*d.* Paris, 7 Oct. 1925) succeeded him. The publications of the firm, which began with an anthology of over 200 vocal pieces called 'I canti d'Italia', include most of the works of Berlioz, Gounod, Reyer, Lalo, Bruneau, Offenbach, Audran and others.

G. F.

**CHOUQUET, (Adolphe) Gustave** (*b.* Le Havre, 16 Apr. 1819; *d.* Paris, 30 Jan. 1886).

French musical man of letters. He wrote the verses for a great many choruses and songs. From 1840 to 1856 he taught in New York. He contributed for a number of years to 'La France musicale' and 'L'Art musical', giving occasional musical articles to 'Le Ménestrel' and the 'Gazette musicale'; but his chief works are 'Histoire de la musique dramatique en France, depuis ses origines jusqu'à nos jours' (Paris, 1873) and 'Le Musée du Conservatoire National de Musique' (Paris, 1875), two works containing original views and much information. Chouquet was made keeper of the museum of the Paris Conservatoire in 1871, and he made large additions to it. He published the catalogue of the museum in 1875.

G.

**CHRISMANN, Franz Xaver** (*b.* ?, 1725; *d.* Rottenmann, Styria, 20 May 1795).

Austrian secular priest and organ builder. He worked chiefly in Upper and Lower Austria and in Styria. His name first appears in connection with a monster organ at the monastery of St. Florian, near Linz, begun in 1770, but left unfinished in consequence of a quarrel with the provost. The fame of this organ, which became associated with that of Bruckner, spread far and wide, though it was not completed till 1837. He also built organs

at the abbey Spital-am-Pyhrn and in the Benedictine monastery at Admont; both were destroyed by fire. The latter he considered his best work. Mozart and Albrechtsberger were present in 1790 at the opening of an organ built by Chrismann in the church of Schottenfeld, one of the suburbs of Vienna, and both pronounced it the best organ in Vienna. Though little known, it is still in existence, and in spite of its small dimensions the workmanship is admirable, particularly the arrangement and voicing of the stops. Chrismann died in his seventieth year, when engaged upon an organ for the church of the small town of Rottenmann, where there is a monument to his memory. C. F. P.

**CHRISTIE, John.**

**CHRISTIE, Winifred** (*b.* Stirling, 26 Feb. 1882).

British pianist. She studied music at the R.A.M. in London under Oscar Beringer for the pianoforte and Stewart Macpherson for composition. She received the F.R.A.M. and toured extensively in North and South America as well as in Europe, with the exception of Russia and Spain. Having married the composer and inventor Emanuel Moór in the U.S.A., where she lived for many years, she played exclusively on the Moór Double Keyboard Pianoforte after 1926, brilliantly exploiting its technical possibilities, not only by her performances in a large number of European and American musical centres, but also by making arrangements of Bach and Handel for it and producing a book of 'Technical Exercises' in collaboration with her husband.

After the second world war Mrs. Christie Moór returned to England, settling in London and devoting her energies, with the help of Miss Dorothy Lawton, to the establishment of a music library, for which she set aside the sum of £10,000. The difficulties of housing and organizing a lending-library intended to be of use to borrowers everywhere in Great Britain, however, proved invincible without some sort of official aid, and it was not until the Westminster Public Libraries offered to house the collection in the Buckingham Palace Road Public Library that the Central Music Library came into being in Oct. 1948. It contains a specimen of the Emanuel Moór Double Keyboard instrument. E. B.

**CHRISTMANN, Johann Friedrich** (b. Ludwigsburg, 10 Sept. 1752; d. Heutingsheim nr. Ludwigsburg, 21 May 1817).

German clergyman, composer, pianist, flautist and writer on the theory of music. He was educated at Tübingen and in 1783 was appointed Lutheran minister of Heutingsheim. His great work, 'Elementarbuch der Tonkunst', is in two parts (Speyer, 1782 and 1789) with a book of examples. He was joint editor of the Speyer 'Musikalische Zeitung', in which, among other articles of interest, he detailed a plan (Feb. 1789) for a general dictionary of music. This scheme was never carried out. He was also a contributor to the 'Musikalische Zeitung' of Leipzig. Christmann composed for voice and pianoforte, and with Knecht arranged and edited a valuable collection for the Duchy of Württemberg, entitled 'Vollständige Sammlung . . . Choral-melodien'. Many of the 266 hymns were his own composition. He was a friend of Vogler.

M. C. C.

**CHRISTMAS ORATORIO** (Ger. *Weihnachtsoratorium*). A sequence of 6 church cantatas by Bach for the various holy days of Christmastide. The words are written and compiled by Picander and Bach himself, and the series was composed in 1734.

**CHRISTO, Estevão de** (b. Torres Novas nr. Lisbon, ?; d. Thomar, 1613).

Portuguese composer. He was a monk in the monastery of Thomar in 1559 where he arranged and edited music for processions and for Holy Week, for general use in Portugal. His 'Processionale' was printed at Coimbra in 1593; his 'Liber Passionum' at Lisbon in 1595. The latter was provided with a preface by the celebrated composer Duarte Lobo, but was afterwards found to be incorrect. The 'Introdução facilíssima e novíssima do canto fermo' attributed to him was probably the work of Vicente Lusitano.

J. B. T.

**CHRISTO, Luiz de** (b. ?, Lisbon, 1625; d. Lisbon, 7 Sept. 1693).

Portuguese organist and composer. He was a monk of the Carmelite order. His works include Passions according to the four Evangelists (for 4 voices), 'Lições [?] lectiones' de defunctos, motets and *vilhancicos*.

J. B. T.

**CHRISTOPHE COLOMB** (Opera). See MILHAUD.

**CHRISTOPHER, Cyril** (Stanley) (b. Oldbury, Worcestershire, 23 June 1897).

English organist and composer. He was a private pupil for the organ of C. W. Perkins, Alfred Hollins and G. D. Cunningham, and for composition of Kitson and Bairstow. Among the degrees he took are the F.R.C.O. (1929), the B.Mus. (1935) and the D.Mus. (Dunelm, 1940). He has been organist and

choirmaster at Carr's Lane Church, Birmingham, since 1930 and University lecturer there for the Board of Adult Education since 1947. He was also chorus master of the B.B.C. Midland Region (1927-30) and music master at King Edward's Grammar School (1944-45), as well as conductor of the Dudley Madrigal Society (1921-26) and other choirs, and still conducts the Oratorio Choir of the Free Churches of Dudley (from 1942). He has also appeared as solo organist at orchestral concerts and with the Birmingham Bach Club, and gives organ recitals periodically.

The following are Christopher's chief works, some published, others in manuscript:

#### CHURCH MUSIC

- 'Save us, O Lord', motet for S.S.A.T.B. (1934).
- 'Blessed are they that mourn', motet for S.S.A.T.B. (1936)
- 'Grieve not the Holy Spirit', motet for S.S.A.T.B. (1936).
- 'Thou wilt keep him in perfect peace', anthem for S.A.T.B. (1936).
- 'Bread of the world', anthem for S.A.T.B. (1937)
- 'Let all the world in every corner sing', anthem for S.A.T.B. (1937).
- 'Out of the Orient crystal skies', carol for S.S.A. (1938)
- 'Corde natus', anthem for soprano & S.A.T.B. (1947).
- 'Veni Emmanuel', anthem for soprano & S.A.T.B. (1947).

#### CHORAL WORKS

- 'A Hymn of Nature' (ode by Robert Bridges) for soprano, baritone, chorus & orch. (1940).
  - 'The New Heaven', cantata for soprano, baritone, chorus & organ (1948).
- Also numerous part-songs for unison, mixed, women's and men's voices.

#### ORCHESTRAL WORKS

- Symphony, C mi, for stgs. (1930).
- 'Festival Overture' (1935).
- 'Variations and Fugue on an Old English Tune' for stgs. (1935).
- 2 Tone-Poems (1936)
  1. Midsummer Night.
  2. The Lone Shore.
- 'Symphonic Prelude' (1940).

#### CHAMBER MUSIC

- 2 Fantasies for clar., vn. & pf (1939).
- Quartet, D ma, for vn., viola, cello & pf. (1941).

#### VIOLIN AND PIANOFORTE

- Sonata in one movement (1937).

#### PIANOFORTE MUSIC

- 'Playtime Pieces', 3 miniatures (1926).
- 'Conversations', 6 two-part studies (1938).
- 3 Concert Preludes (1938).
- Rosemary's Book, 5 pieces (1938).
- 'Tone Stanzas', 3 pieces (1938).

#### ORGAN MUSIC

- 'Scherzo-Caprice' (1935).
- 3 Chorale Improvisations (1946)
  1. Canzona on an Ancient Irish Hymn Melody.
  2. Pastorale on the Tune 'Surrey'.
  3. Voluntary on a Tune by Orlando Gibbons.
- 'Fantasy-Prelude' (1946)
- Rhapsody on a Ground (1946).
- 'Toccata-Carillon' (1946).

#### SONGS

- 5 Songs (1937)
  1. Réverie (Christina Rossetti).
  2. Music, when soft voices die (Shelley).
  3. Love's Philosophy (Shelley).
  4. The Parting (John Donne).
  5. Echoes (Tennyson).

E. B.

**CHRISTUS.** (1) Mendelssohn's unfinished oratorio, the completed portions of which were first performed at the Birmingham Musical Festival on 8 Sept 1852.

(2) Liszt's second oratorio performed in Budapest in 1873, in celebration of the jubilee of the composer's career.

**CHRISTUS AM ÖLBERGE** (Beethoven).  
See MOUNT OF OLIVES.

**CHROMATIC.** A word derived from the Greek *χρωματικός*, the name of one of the ancient tetrachords, the notes of which were formerly supposed to be similar to the scale known as "chromatic" in later times.

(1) Instruments are said to be chromatic when throughout the whole or a substantial part of their compass they can be made to produce all the semitones.

(2) In melodic and harmonic analysis the term chromatic is generally applied to notes marked with accidentals which are abnormal to the scale of the key in which the passage occurs. Hence a note which is chromatic with reference to a particular key may cease to be chromatic if a suitable modulation occurs at the same time. This is also true of chords which are chromatic in this sense. The exact application of the word chromatic will therefore depend on the view which is taken of the true definition of key in the chosen context. Thus in the following example from John Danyel ('Chromatic Tunes', 1606) the first part of the melody is chromatic:

So in the broad sense is the character of the whole harmonic structure, with reference to the prevailing key of G minor. But if the incidental modulations, to C minor, F major, and so forth, are taken into particular account, then no one of the notes of the melody is actually chromatic at the moment of utterance. Ambiguity of this kind is very frequent in what is commonly called chromatic harmony, though in the music of the classical period, when the definition of keys was strongly emphasized, there is usually no difficulty in using the term chromatic with fair consistency.

The following melody from Mozart's "Prague" Symphony is highly chromatic:

So is the following passage from Beethoven's Sonata in B♭ major (Op. 106), the section of the slow movement quoted being in the key of D:

G. D.

**CHROMATIC HARP.** See HARP.

**CHROMATIC INTERVALS.** See INTERVALS.

**CHROMATIC SCALE.** The scale of twelve semitones, which is the fundamental scale of all the music of western civilization. Since permanent values were given to all the traditional intervals of pitch, the chromatic scale has included all the notes available in our notation, and has also coincided with the notes produced by instruments which have a fixed mechanism. It therefore represents a technical limit beyond which variations of pitch have no recognized place in our musical system.

The notation of the chromatic scale has never been altogether consistent, owing to the fact that the accidentals employed were originally related to the more variable intervals which preceded equal temperament. Thus for every note in the chromatic scale there are now, admitting double sharps and double flats, at least two forms of notation. Moreover, composers have tended to become less concerned with the theoretical basis of notation, with the result that simplicity in writing or reading has often been the only reason for a particular choice of method. With reference to the key of C the following is theoretically consistent:

The choice of notation here follows the traditional analysis of classical harmony, and similar relations to other keys can be deduced by regarding each sound respectively as representing, in the chosen key, the tonic, minor second, major second, minor third, major third, perfect fourth, augmented fourth, perfect fifth, minor sixth, major sixth, minor seventh and major seventh. It is clear, however, that the use of natural signs would be largely avoided if sharps in ascending, and flats in descending, were more frequently chosen. Practical convenience of this kind has led many composers to prefer this latter method.

G. D.

See also Equal Temperament. Harmony. Mode. Neo-Modal. Scale. Tonality.

**CHROMATICISM.** A consistent historical tendency towards scalar and harmonic expansion, which takes the form of bringing into ordered relation to a given system elements that were originally chromatic and

external to it. There were, even in the rigid technique of the ecclesiastical modes, contingencies in which a foreign note might be introduced, but it was not until classical tonality made the major and minor scales the exclusive pivots around which all developments had to be grouped, that chromaticism became a marked feature of melodic and harmonic evolution. The fundamental position of the chromatic scale as a limit of expansion no doubt reinforced this tendency, and in a comparatively short time there was no element in it which had not found a more or less formal relation to the prevailing melodic and harmonic values. The examples already given under the heading *CHROMATIC* will be sufficient to show how far this tendency had progressed up to the period of Beethoven. The 19th century took for granted the ground already gained, and proceeded to knit these chromatic features ever more closely into the classical fabric. From chromaticisms that were comparatively unaccented, as in the following from Wagner's 'Tannhauser':

the step was made to harmonies in which the prevailing colour, was unmistakably chromatic. The following example is reduced from Wagner's 'Tristan und Isolde':

At the same time melody, which had heretofore moved somewhat circumspectly with reference to chromatic notes, began to treat them with marked freedom, as in the following, which is also reduced from 'Tristan':

And this freedom in the incorporation of chromatic material has been steadily pursued by Wagner's successors.

In analogous fashion, chromaticism in the sense defined is a feature in the neo-modal and other non-classical systems which contemporary music is in process of exploring. Whether such systems are derived from the past or are

modern inventions of modal type, they are rarely used rigidly. All kinds of progressions which are chromatic with reference to the chosen system are incorporated freely, and at least one of these modern modes, the whole-tone scale, is itself inherently chromatic in derivation. The combination of tonalities also involves, from the traditional point of view, an increasingly chromatic attitude towards the elements of music, and all these technical expansions, whatever their derivation, serve to encourage the tendency under discussion. The expansion of any scale or mode may indeed achieve, as the classical system has achieved, a chromaticism which is complete to a degree.

There is, however, a still more radical view of the structure of music which is discernible in some of the features of 20th-century work, and which seems to point to a logical end towards which all expansions might theoretically converge. This is the adoption, more or less acknowledged, of the chromatic scale itself as a homogeneous musical medium. In extreme form this would be pure chromaticism. Considered from such a point of view, all the various scales, with their respective melodic and harmonic values, to which music has hitherto attached itself, become stages in the approach towards what is undoubtedly an all-inclusive system. The chromatic scale is in fact the final arbiter as to what shall be music, and this has been true both in theory and practice ever since equal temperament in tuning fixed our system of intervals. There is therefore a certain logical appeal in a theory that would accept chromaticism without reservation, and attempts have been made to write in this medium, all the traditional values being modified or ignored. It cannot be said that there is as yet any aesthetic evidence that the method is more than an intellectual abstraction, but the following passage from Arnold Schoenberg's Op. 11 may be taken as embodying in comparatively simple terms the extreme point of view:

BIBL.—FICKER, R. VON, 'Beiträge zur Chromatik des 14. bis 16. Jahrhunderts' (S.M.W., Vol. II).

G. D.

**CHROSTKOWSKI, Albert, jun.** (b. Secemin, 15 May 1627; d. Warsaw, 1670).

Polish musician. He was organist to the royal court in Warsaw.

C. R. H.

**CHROTTA.** See CRWTH.

**CHRY SANDER, Friedrich** (b. Lubtheen, Mecklenburg, 8 July 1826, d. Bergedorf nr. Hamburg, 3 Sept. 1901).

German musical scholar. He studied at the University of Rostock, lived for some time in England and later on his own estate at Bergedorf. His biography of Handel, standing evidence of his studies, remains incomplete.<sup>1</sup> In detail and historical research it is still the groundwork for all subsequent study of Handel's history, although certain details have since received correction and its view of Handel's abstract importance as a musician must be accepted with reservation. He represents him not only as the culminating point of a previous development, and the master who perfected the oratorio, but as the absolute culminating point of all music, beyond whom further progress is impossible. While holding these views Chrysander was naturally a declared opponent of all modern music; he was also partial, if not unjust, in his criticisms of the older masters, not excepting J. S. Bach.

Besides these biographical studies Chrysander edited Handel's complete works for the German Handel-Gesellschaft. His laborious collations of the original manuscripts and editions, his astounding familiarity with the most minute details and his indefatigable industry combine to make this edition a work of the highest importance, at once worthy of the genius of Handel and honourable to the author. In continuation of his task of popularizing Handel's works in Germany, after the completion of the undertaking, Chrysander issued several of the oratorios with suggested abridgements such as are required at the present day, and with the addition of many cadenzas from old copies. Some so treated are 'Hercules', 'Deborah', 'Esther' and 'Messiah'.

Among other writings by Chrysander may be mentioned two admirable treatises, 'Über die Molltonart in Volksgesängen' and 'Über das Oratorium' (1853); also 'Die Jahrbücher für musikalische Wissenschaft', in 2 vols. (Leipzig, 1863-67); and finally a number of articles in the 'Allgemeine musikalische Zeitung' of Leipzig (which he edited from 1868 to 1871, and again from 1875 to its cessation in 1882), violently criticizing the productions of the modern school.

Of the highest importance in musical literature was the 'Vierteljahrsschrift für Musikwissenschaft', undertaken with Philipp Spitta and Guido Adler, which appeared

<sup>1</sup> Breitkopf & Härtel, Leipzig: Vol. I, 1898; Vol. II, 1860; Vol. III, part 1, 1867.

between 1885 and 1895. He also published some excellent editions of Bach's 'Klavierwerke', 4 vols. with preface (Wolfenbüttel, 1856) and Carissimi's oratorios 'Jephte', 'Judicium Salomonis', 'Jonas' and 'Baltazar', which appeared in his collection 'Denkmäler der Tonkunst' published at Bergedorf. Complete editions of the works of Corelli (ed. Joachim) and Couperin (ed. Brahms) began in the same series. As a supplement to the Handel edition five works were reissued from which Handel had appropriated ideas or portions: No. 1 was the 'Magnificat' of Erba; No. 2 the 'Te Deum' of Urio (previously published in the 'Denkmäler'); No. 3 a Serenata by Stradella; No. 4 a book of duets by Clari; No. 5 Gottlieb Muffat's harpsichord pieces, 'Componimenti musicali'.

A. M., adds.

See also Denkmäler. Handel-Gesellschaft

**CHUECA, Federico** (b. Madrid, 5 May 1846, d. Madrid, 20 June 1908).

Spanish composer. He received a good education and spent his vacations with a street band which he had organized for the amusement of himself and his friends. A set of waltzes for orchestra, 'Lamentos de un preso', attracted the attention of Barbieri, who was conductor of the Sociedad de Conciertos, and their success in performance decided Chueca to adopt music as a career. He produced a large number of delightful one-act operas, including 'Pobre Chica', 'El caballero de Gracia', 'La gran vía' (with Valverde), while 'Cadiz' (two acts also written in collaboration with Valverde) has a charm and lightness of touch comparable with that of Barbieri, Sullivan or Offenbach. Chueca is the typical composer of the period of modern Spanish history known as the Restoration. His mind was steeped in the popular street-songs of his country and he had the happy knack of composing the kind of music which Madrid audiences liked to hear. 'Cadiz' and 'Caramelo' are Andalusian in feeling, 'La alegría de la huerta' is Murcian, while the third act of 'La caza del oso' is built on tunes from the Asturias.

J. B. T.

See also Valverde (collab. in 'Gran vía').

**CHURCH, John** (b. Windsor, ? 1675; d. London, 6 Jan. 1741).

English composer. He received his early musical education as a chorister of St. John's College, Oxford. On 31 Jan. 1697 he was admitted a Gentleman of the Chapel Royal and on 1 Aug. following was advanced to a full place, vacant by the death of James Cobb. He also obtained in 1704 the appointments of lay vicar and master of the choristers of Westminster Abbey, still retaining his post in the Chapel Royal. He is buried in the south cloister of the Abbey.

Church composed some anthems and

services (Tudway Collection, MSS, R.C.M., B.M., Ch. Ch., etc.). His service in F major appears in Ouseley's 'Cathedral Music' (1853); he also wrote many songs and was the author of an 'Introduction to Psalmody', published in 1723. The editorship of 'Divine Harmony', an important collection of the words of anthems used in the Chapel Royal (1712), has been frequently ascribed to Croft, but Davey<sup>1</sup>, on the evidence of Thomas Ford's manuscript in the Bodleian Library at Oxford, considers it to have been the work of Church.<sup>2</sup>

Richard Church (1699-1776), cousin of John, was organist of Christ Church and later of New College, Oxford. W. H. H., adds.

### CHURCH, MUSIC OF THE EARLY.

**I. THE HISTORIC BACKGROUND.** *Religion, Ethics and Music.*—The music of early Christianity has as many aspects as that movement itself. As the Christian religion eventually combined elements of Judaism, of near-eastern paganism and of Greek culture, so also did its music. It took its departure from the Synagogue, but gradually added new and often heterogeneous elements of different origin, until the nuclear stock was all but vanished. Such heterogeneous forces, however, could not have been synthesized without hard internal struggles within the body of the early Church. Already during the first centuries music, a seemingly harmless ornament of worship, became a rather controversial subject, as the result of a belief held universally in the world of antiquity—the so-called ethos-doctrine. This doctrine maintained that every tune, sung or played, expresses a more or less definite emotion and, what is more, that it is capable of evoking the corresponding emotions in the souls of the listeners. Hence religion, and the concept closest to it, ethics, were directly affected, for better or worse, by the various styles of music then popular, and the Church was often quite articulate in its reaction. This may explain why in early Christianity both the forms of music and its rendering constituted a serious and often disputed issue.

*Temple or Synagogue?*—Since the greatest of the Apostles, Peter, Paul and James, attended the service of the Temple<sup>3</sup>, it might be assumed that they transmitted this manner of worship to their disciples and the other proselytes. Such an assumption, however, would be fallacious. Not only Jesus himself, but certainly St. Paul, to name only the main exponent of the Gentile Church, were more or less indifferent towards the resplendent and minutely regulated liturgy of the Temple with its sacrifices and Levites' orchestra.

Their antagonism to the Temple's hereditary aristocracy was too strong, while they themselves and their plain countrymen respected only the Kingdom of Heaven. The small local synagogues with their unceremonious, almost intimate atmosphere were the birth-places of Christian liturgy. Probably folkish songs of these rural synagogues were chanted by the early Christians, in and even outside the Holy Land, where possibly songs of the surrounding nations were also heard.

As long as the Judeo-Christians remained but one of the numerous Jewish sects, they continued the musical traditions of their forefathers. Yet, this symbiosis came to an end when the Jewish Christians, after the martyrdom of St. James, fled in a body to Pella in the Transjordan. Since this secession all but coincided with the beginning of the fatal siege of Jerusalem in A.D. 67, it was generally condemned by the Jewish zealots as treachery. Shortly thereafter the liturgy of the Synagogue added a prayer against the Judaeo-Christians, and therewith the final break between Judaism and Christianity was foreshadowed.

*Musical References in Early Christian Literature.*—If we look for observations on music in the earliest documents of the Church, we must distinguish between (a) the three synoptic Gospels, (b) the genuine Pauline epistles and (c) the Book of Revelation. The Acts of the Apostles and the Johannine literature as well as other epistles of the primitive Church are not referred to here, either for chronological reasons or simply for lack of significant remarks on music.

**II. MUSIC IN THE NEW TESTAMENT.**—(a) *The Gospels.*—The synoptic Gospels contain very few references to song or other music, and each of these instances falls into the category of Jewish folklore or ritual. In Matth. ix, 18-26, where the healing of Jairus's daughter is described, the preparations for the girl's funeral seem to be in full progress. Jesus, however, drives away the pipers (*auletes*) and the throng (ix, 23), and then revives the maiden. In Christ's time and even two centuries later it was a general Jewish custom to hire a minimum of two *halilim* (pipers) and

one wailing-woman for a funeral. Even the poorest man was required to do this when his wife died. It was not a religious command, to be sure, but part of "good manners".<sup>1</sup>

Of greater consequence for the later Christian liturgies are the passages Matth. xxvi, 27 and 30 (= Mark xiv, 26). The former verse refers to the chanted blessing over the wine on the eve of Passover; the second to the singing of the *Hallel* (Pss. CXIII-CXVIII, Ps. CXXXVI), which in those times concluded the Passah meal. It is not necessary here to point out the significance of the traditional eulogy over the wine, nor of the chant of the *Hallel*, which in most Christian liturgies has been distributed over the entire Easter week.

(b) *Paulinic Literature*.—In St. Paul's epistles we already find regular doxologies, usually at the epistle's end; moreover, the Apostle demands that the "Amen" should be responded, and that the Lord be glorified with "psalms, hymns and spiritual songs" (Col. iii, 16; Eph. v, 19). It is not quite clear what these categories stand for. Some scholars understood "hymns" to be the *cantica* of the Old Testament, while another school of thought considers this term a mere synonym of "psalm". Nor is the expression "spiritual songs" (*Oda Pneumatikai*) more comprehensible. But in this case we are at least confronted with three clearly articulated interpretations. The first school connects the "spiritual songs" with the spontaneous outbursts of the charismatically blessed—thus construing these songs as a musical parallel of the "speaking in tongues" (Acts ii, 4; xi, 46; I Cor. xiv, 1-25), the *glossolaly* of the primitive Church. This is not too probable a conjecture, for Paul was by no means fond of the phenomenon of *glossolaly* and would not easily have brought himself to champion its musical implementation. A second theory interprets the "spiritual songs" as hymns freely and spontaneously composed under the profound religious experience of the *Agape*. The third explanation considers them as melismatic chants without words, or with very few at best. If this be the correct hypothesis, one would have to regard these "wordless hymns" as the forerunners of the great *jubilis* or *alleluia* chants that St. Augustine praised as the summit of religious ecstasy. Indeed, there did exist a tradition of wordless chants in contemporary Judaism, which makes this theory appear rather plausible.

(c) *The Book of Revelation*.—While the musical remarks of Paulinic literature follow more or less the pattern set by the contemporary Synagogue, the extensive musical fantasies in the Book of Revelation are doubt-

less modelled after the practice of the Temple. Thus, chap. iv contains definitely idealized visions of its ritual. The twenty-four elders remind us of the twenty-four ranks of the Levites, the following description of the apocalyptic animals of Is. vi and Ez. i, and the subsequent Thrice-Holy was a regular part of the Temple's liturgy. The opening of the sealed book (v, 1) alludes to the lesson and the incense, and the prayers are all ancient legacies of the Temple, including the hymns, the instruments and the doxologies (v, 13; xv, 3-4). It is generally assumed to-day that the Book of Revelation contains an old Jewish stratum that was incorporated, together with new christological ideas, into the New Testament. Yet its Temple, although clearly patterned after that of Jerusalem, is placed in Heaven, and thus has to be considered an idealized reflection of the earthly sanctuary after its destruction in A.D. 70. It will be useful to remember the lavish use of instrumental music in the Book of Revelation, since Christianity had begun to dispute its admissibility by about 150.

The Christian centres crystallized during the 2nd and 3rd century. In Syria it was especially at Antioch and Edessa, the cradles of Gentile Christianity, that the new worship was diligently cultivated. A later development was Egyptian Christianity with Alexandria as its centre, and still later the Christian rites of Armenia, strongly influenced by Judeo-Christian practices. In Rome the Christian community was rapidly growing, whereas Byzantium flourished only after the time of the Emperor Constantine (257-? 337). Hence the growth of Christian chant may best be followed in the primary four centres: Syria, Egypt, Armenia and Rome.

III. FORMS AND PRACTICES OF RENDERING.—Whether or not the passage of Pliny's letter to the Emperor Trajan alludes to alternate singing ("carmen Christo quasi deo dicere secum invicem"), there is hardly any doubt that towards the end of the 2nd century the musical practice of Syrian Christians consisted of (1) Psalmody, (2) Antiphony, (3) Responses and (4) recently composed hymns, many of which were considered heretical or at least controversial; this held especially true for those of Bardaisan and his son Harmonios. Only small fragments of these poems have

<sup>1</sup> Cf. Josephus, 'Bellum Judaicum', Book III, chap. ix, 5, where many pipers and wailing-women were hired upon the rumour of his own death.

come down to us, and nothing of their music.

Psalmody, directly taken over from the Jewish practice, seems to have broken into the world of antiquity like an irresistible and elemental force. To understand this fully we must bear in mind that Hellenistic music, of which some highly interesting pieces have survived, was syllabic (one note to each syllable). This syllabic principle resulted in a rather rigid attitude to the metre of a poem. Psalmody, on the other hand, was non-metrical, very flexible, and usually marked the end of a verse by little melismatic flourishes; later these melismas grew and became the main element of the so-called "ornate psalmody", of which the Gregorian and the Armenian graduals contain pieces of enchanting beauty. Two musical examples will clarify the psalmodic structure. The first gives strict, plain psalmody; the second renders the same text in ornate psalmody:

Ex.1 Plain Psalm-Tone. (Liber usualis, p 650)

The second illustration is a gradual; this term is derived from the *Psalmi graduum* (Pss. CXX-CXXXIV) in imitation of certain psalms of the Temple that were sung on the stairs by the Levites. Later the *ambo* was placed before the Christian altar, a structure of two or three steps, from which the gradual was being chanted by the psalmists and responded to by the choir or the congregation. Our two illustrations come from a more recent stratum of Gregorian chant; nonetheless they show how the same text can be rendered

as a plain psalmody and as an ornate chant, rich in melismatic passages.

The term "antiphony" itself indicates no more than that two choirs sing alternately, or that there is a kind of mixed choir, comprising men as well as boy choristers. Apart from Old Testament passages that mention this practice, it is Philo who first clearly describes this type of rendering in his 'De vita contemplativa', referring to the Jewish sect of Therapeutes in Alexandria. In spite of the acceptance of the rabbinic aversion from female singing ("The voice of woman leads to licentiousness") by St. Paul (1 Cor xiv, 34), we occasionally hear of women's choruses in Syria in the middle of the 3rd century. There was usually sharp opposition to such indulgence, yet even St. Ambrose strove to mitigate the Apostle's prohibition by stressing the ideal of uniform community-singing with female participation (in Ps. I, Patr. Lat., xiv). The incipient monasticism with its rigorous segregation of men and women championed separate male and female choirs. This type of separate nuns' choir is often documented, most interestingly in the famous 'Peregrinatio Etheriae Silviae' (late 4th cent.).

The responsive rendering required a precentor, to whom the choir responded. The practices of both antiphony and response represent remnants of the Jewish legacy to the Church; the individual forms that developed out of them, the antiphon and the responsorium, are very often free of Jewish traces and show an autonomous growth in the various countries. In order to demonstrate the abolition of Judaizing practices, the Christian chroniclers Socrates (b. c. 380) and Theodoret of Cyprus (d. 458) attributed the invention of antiphonal singing to the monks Flavian and Diodor of Tarsus, or even to St. Ignatius, Bishop of Antioch (d. 107!). Both claims have long been refuted on historical grounds, since we know from Syrian writers of the 2nd or 3rd century, especially from Ephraem, that they used a practice that was, through the Scriptures, familiar to everybody in the Near East.

*The Question of Instrumental Music.*—It is much more difficult for us to appreciate fully the controversy that raged between the 2nd and the 6th centuries concerning the use of musical instruments in worship. Clearly, the old ethos doctrine here played an important part, especially for the Hellenistic authors. How far Judaism's prohibition of all instrumental music (issued shortly after the destruction of the Temple) had influenced the course of events is hard to determine. It seems, though, that up to the 3rd century Judeo-Christian opinions were still heeded by the Church.

In the development of early Christianity

one may discern two antithetic trends: one that tended to remain in close contact with the outside world and the problems of life, and another that saw the ideal in strict asceticism and negation of the world. The climax of this latter tendency was reached in the monasticism of the Near East. The two trends even co-existed for a short time, as long as it was necessary, for political reasons, to be indulgent to passing notions or regional traditions. Hence the Book of Revelation presupposes instrumental music; so does the (probably spurious) Epistle of St. Ignatius to the Ephesians. The same holds true of Ps.-Justin (Patr. Gr., vi, 1354), Clement of Alexandria and numerous other Church fathers. Even certain epitaphs seem to bear witness to the use of instruments in worship, as Leclercq tries to demonstrate in his interpretation of an Egyptian Christian inscription from El Doukeleh.

On the other hand sharply disapproving voices are not lacking either. Ps.-Cyprian, St. Augustine, Gregory Nazianzenus, Diodor of Tarsus and Theodoret of Cyrrus were the leaders of the anti-instrumental group. The result is known: with the victory of the monastic-ascetic trend instrumental music was prohibited until near the end of the first millennium. Formally the prohibition, as expressed in the anonymous 'Quaestiones et Responsiones ad Orthodoxos' and the Apostolic Constitutions, became legal. Was it really enforced? We constantly hear of violations of these laws, certainly more than of obedience to them. Nevertheless, from official worship instruments were excluded.

IV. FURTHER DEVELOPMENT IN THE NEAR EAST.—During the first three centuries of Christianity Antioch and Alexandria were the rival centres of the East, while Rome, the capital of the empire, was of the utmost significance for the West. Both heterodox and orthodox movements arose in Syria and Egypt; and it is interesting to note that the first radical departures from the Jewish as well as from the Catholic traditions resulted in heretical hymns. In Syria Bardaisan and his son Harmonios, who represented gnostic

ideas, attracted such large groups and so much attention that St. Ephraem had to fight heretic beauty with orthodox beauty—"standing amidst the daughters of the covenant" (novices) and "teaching them the hymns, he assembled them in church on Sundays, feasts and memorials of martyrs". Half a century before his time the heretical bishop Paulus of Samosata (c. 230-90) had done likewise, and in a very spectacular manner. Unfortunately only small fragments of these hymns have come down to us, and their texts are anything but reliable.

We fare better in Egypt: there the great Church father Clement of Alexandria (c. 150-? 215) composed several hymn-like poems and the famous 'Hymn on Christ', probably the earliest formal Christian poem. In addition to his poetic and didactic interests he seems to have been a real lover of pure music. Thus he made numerous observations about the music of the Alexandrian community, frequently in a critical manner. One of these remarks, in which he remonstrates against Hellenistic chromaticisms in Christian chants, quotes the praiseworthy example of Jewish psalmody, which he describes as similar to the Greek "tropos spondeiakos". Since we know this mode through Plutarch and Aristides Quintilianus, it was possible to reconstruct the basic mode of this early Judeo-Christian psalmody. Elsewhere the present writer has traced its occurrence in Gregorian, Byzantine and Synagogue chants. However, the foremost concern of Clement and his scholarly contemporaries was the connection of music with ethics, a fundamental problem of the whole Near East.

*The Oxyrhynchos Hymn.*—Another important document of the Egyptian Christians is the so-called 'Oxyrhynchos Hymn', a fragment of a religious song written in Greek musical notation and consequently decipherable. It was discovered and published in 1922 by the Egypt Exploration Society ('Oxyrhynchos Papyri', pt. xv), edited by B. P. Grenfell and A. S. Hunt.

Of the various transcriptions—which differ only in relatively trifling points—we quote Besseler's interpretation:

Ex. 2

• (πρ)υ • τα νη • ω •

σι • γά τω μηδ' • δα • τρα φα •

ε • σφο • ρά λει • πέσθων • • • πο • τα •

All marvellous creations of God . . . shall not be silent, nor shall tarry the light-bearing stars . . . All roaring rivers shall praise our Father and Son and Holy Ghost, all powers [spirits] shall join them: Amen, Amen! Power and praise . . . to the sole giver of all good, Amen, Amen! (Trans., E. W)

Although the fragment was written in Greek (about the end of the 3rd century) and makes use of Greek vocal notation, new elemental forces of definitely Oriental origin can be discerned in it. The Greek syllabic style is partly abolished, and the music contains some typical melismas of old Syrian and Jewish chant, especially noticeable in the closing doxology and the four Amens. In general, melismatic and psalmodic chant began to supersede the syllabic-metrical singing of the classical Greek tradition.

*Problem of Magic Vowels.*—Chronologically and geographically very near to this hymn, but ideologically far removed from it, are the Egyptian documents of gnostic origin that speculate on the magic and musical value of the vowels. Even the alchemists seem to have taken a hand in these gnostic-musical fantasies, as witness the remarks of Zosimos of Panopolis (now Akhmim in Egypt). Ever since

the 1890s numerous scholars have attempted to evaluate Zosimos's observations in a concrete musical analysis. Their conclusions are, however, not too convincing. If these magic and alchemistic papyri can at all be considered as acceptable musical evidence, they demonstrate at best no more than the centuries-long striving towards a systematization of tonality in accordance with certain ethical principles. Indeed, they may be viewed as rather confused antecedents of the later theory of modes.

No notated documents are known to us between the 'Oxyrhynchus Hymn' in Greek notation and the earliest Gregorian and Byzantine neumes that appear first in the ecphonetic accents or signs in the early lectionaries of the late 6th century. During the three intermediate centuries the civilization of classic antiquity had been swept away by the hordes of barbarian tribes, which had, in turn, been set in motion by the great migrations of the era. It must be added here that up to the 3rd and 4th centuries Oriental Christianity was inexorably hostile to Greek and Roman culture.

V. NOTATION AND MODALITY.—The history of notation of Christian chant and the principles of modality are—at least for the first six or seven centuries—inextricably interwoven. Of the various reasons for this fact we shall only mention the outstanding ones: the note-for-note notation of the Greeks had been replaced by the ecphonetic notation, out of which grew first the neumes and finally our modern notation. Early neumes as well as ecphonetic signs failed to represent individual notes, but indicated whole phrases or motifs. Unless the specific mode is indicated for each piece—a rare case in early notation—one sign may represent, for instance, the phrase g-d'-c'-b-e-f as well as f-c'-b-b-a-b-d-b-c-b, which, on account of the different positions of the semitones, makes a considerable difference. Yet not even the intervals were unequivocally notated before the introduction of staves, and up to the 8th century musicians hardly

dreamt of such innovations. Moreover, the ecphonetic notation had to be adjusted to the various languages and syntaxes, since one of its functions was to provide the reader with a punctuation for correct phrasing. Hence the ecphonetic systems diverged very far from each other after the 6th century. They originated in a common area, probably in eastern Syria, during the late 5th century. The Roman, Byzantine, Armenian, Hebrew and Syrian churches all made use of this primitive notation. Recently the greatest authority in this field, Prof. Carsten Høeg, has succeeded in approximately transcribing ecphonetic notation into our system. Here is an example of his transcription (Gen. i, 1-4, after the 'Codex Sinaiticus', viii):

The ethnic character of the various notations also influenced the modes in which the notated texts were chanted, thus constituting another diverging element in the intricate relations between modality and notation.

*The System of Eight Modes (Octoechos).*—All ancient churches, that is to say, the Roman, the ancient Syrian, the Byzantine, the Armenian and the Coptic, claim a common system of eight tones, or modes, called *Octoechos*. Yet there is no clear identity between Roman and Armenian, or between Syrian and Coptic *Octoechoi*, in spite of strenuous efforts on the part of some scholars who strove to demonstrate a basic uniformity. To-day, at any rate, it does not exist, if it ever did. The ideology and theory certainly show a common source, but in the actual practice there are

few traces of this theoretical homogeneity. The reason for this lies not only in the differing developments of the language-bound notation of the various countries, but also in the growing influence of folkloristic forces that made their inroads into basic psalmody, and in the course of time and through the turbulent political upheavals in East and West all but blotted out the once universal traditions.

Much as the organization, the scheme and the practical implementation of the *Octoechos* may differ to-day, however, there can be no doubt about its structural and systematizing power in the various ecclesiastical orbits. The earliest passages where the *Octoechos* is mentioned by name are the 'Plerophorai' of Yohanan Ruphos of Maiouma, a monastery of southern Palestine. The document was written between 515 and 531. The text relates an anecdote of an Egyptian monk and his stern abbot's disapproval of antiphons, *Octoechos*, *troparia* and other musical accessories of worship; it is contained in the 'Patrologia Orientalis', Vol. VII, pp. 180 ff.

As the present writer has pointed out elsewhere, the system of the *Octoechos* presupposes a certain calendarial-musical combination and can be traced back to the Psalter, where the term "upon the eighth mode" already occurs in the superscriptions of Pss. VI and XII. Moreover, the number eight for hymn-modes occurs very early and probably goes back to the ancient Hittites, that is, to the second millennium B.C.

Originally the musical *Octoechos* (the collection of hymns and poems by Severus of Antioch and Paulus of Edessa bears the same name, thus constituting the literary *Octoechos*) must have comprised the eight psalm-tones of the early church. While they still exist in all churches, though in widely differing traditions, they represent the typical way of Oriental composition, using and organizing ever-recurring melodic patterns. Centuries later some of these patterns were incorporated into a system of scales, constructed by musico-mathematical speculation. This development from the modal pattern to the note-by-note organization, as represented by the scale, was a triumph of the organizing genius of the Occident. Yet it must be clearly understood that originally, and even now in many cases of old liturgical music, a scale is by no means identical with a mode; in most cases the "modal scale" is no more than an artificial construction that endeavours to arrange the notes of a mode in an orderly way.

VI. NEW FORMS IN EAST AND WEST. — It is hardly possible to expound the gradual development of Christian music without constant reference to matters liturgical. A few explanatory remarks will thus be necessary. The full text of the Mass was not completed until the 12th century, on the other hand, we know of various liturgies without the Eucharist of relatively early times. Such liturgies would—in a loose way—correspond with present-day offices, vespers, etc. The anniversaries of the local martyrs or saints, too, played a great and often obnoxious part in the first five or six centuries of the Church, since they replaced, for the mob, the forbidden saturnalia and other licentious festivals of the pagan period, which was by no means completely forgotten. Especially the vigils of such anniversaries were at times hardly distinguishable from orgiastic cults of the heathen, and the churches had to intervene time and again to prevent outright relapses into paganism.

*The Beginning Synthesis of Oriental and Occidental Forces.*—A glimpse into the history of liturgy will elucidate this point. As more and more laymen began to arrogate clerical privileges to themselves Canon 15 of the Synod of Laodicea (between 343 and 380) rules that appointed psalmists are alone permitted to officiate regularly and that only scriptural texts are to be chanted. This was a preventive measure against the troublesome heretic hymns. Canon 9 of the First Council of Toledo (400) forbids the singing of antiphons or similar extra-canonical pieces by "consecrated virgins or widows" in their houses, in the absence of a priest or bishop. Such stern laws were amply justified, for we hear that these "singing circles" frequently deteriorated into extremely profane entertainments. On the other hand we encounter the famous chant of the *Kyrie Eleison* already in the 'Peregrinatio' of Etheria Silvia during her visit to Jerusalem (end of 4th cent.). Her travelogue also alludes to other Latin and Greek sacred songs, among others to the vesper hymn 'Bright light, full of holy splendour' (*φῶς ἁγρόν*), which seems to have been known also to the Apostolic Constitutions (VII, 48). In

contrast with Jerusalem, whence she reports, Rome was ultra-conservative: until the end of the 8th century no hymns found entrance into the formal liturgy there.

*The Hymn Forms.*—And yet the new hymn forms arose almost simultaneously in Syria, Byzantium, and in the Latin orbit (northern Africa, Gaul, Spain, Italy), though resulting in entirely different conceptions, according to the specific genius of the respective country. The common element of all these hymns is, as St. Ambrose sees it, the praise of God in song. We may add "in metrical poetry". For it is metre in the modern sense which distinguishes the hymn from a Biblical canticle or a simple acclamation like *Kyrie Eleison* or *Gloria in excelsis*.

Before the new hymns conquered the churches they had already conquered the hearts and homes of the population. It is especially St. John Chrysostom who praises the privately sung hymn that "soothes children through their mother's chant, comforts travellers on their solitary roads, helps the worker in the vineyard as well as the sailor . . ." (Patr. Gr., IV, in Ps. XLI).

Thus the new metrical hymn slowly gains its legitimate place in the liturgy, all official decrees notwithstanding. The East was its most enthusiastic champion. The Syrian forms of the *Sugyatha*, *Rish-golo* and *Madrasha* were the models for Byzantium and Armenia. The *Sugyatha* is a kind of metrical dialogue, the *Rish-golo* is a hymn with a pattern stanza, which is strictly followed, metrically and musically, by the subsequent strophes, and the *Madrasha* may be described as a sacred ballad or a poetic homily. In these forms we notice a synthesis of the syllabic Hellenistic and the more melismatic Jewish style:

#### SYRIAN *Sugyatha*

(After Dom Jeannin, 'Mélodies liturgiques syriennes').

#### Ex 4. *Presto*

6 stanzas following this model strophe

The Byzantine Church, mostly dependent upon Syrian ideas and forms, shaped the counterparts of the aforementioned Syrian

hymns, of which the Byzantine *Kontakion* corresponded with the Syrian *Sugyatha*, and the *Hirmos* with the *Rish-qolo*. Another typically Byzantine hymn-form is the *Canon* of odes. Since this last type evolved only after the seventh century, we shall not discuss it here. We quote only a part of the famous Good Friday hymn "Hote to stauro" ("When to the cross they nailed the Lord"), probably written during the seventh century by Sophronius, Patriarch of Jerusalem. We here follow E. Wellesz's transcription:

BYZANTINE TROPARION, "HOTE TO STAURO"

Ex. 5

'Ο . . . τε . . . τῷ σταυ . . .  
 . . . ρῶ προσ - ῖ - λω - σαν πα -  
 ρά . νο . . . μοι τὸν κύ - ρι - ον  
 τῆς δό - ξης. ἰ - βό - α πρὸς αὐ .  
 τοὺς . τί ὁ - μᾶς ἰ - λύ - πη . σα,  
 ἡ ἐν . τί - νι παρ - ὀρ - γη - σα . .  
 etc.

In the Latin liturgy outside Rome the most interesting hymns are those composed after the 5th century, obviously imitating the pattern of St. Ambrose. The 'Te Deum', to-day attributed to Nicetas of Remesia (*d.* after 400), is of somewhat earlier origin and, like some other hymns, shows Oriental features. Structurally it recalls the Syrian *Madrasha*, melodically it resembles ancient Jewish chants:

Ex. 6

(a)  
 Te De - um lau - da - mus,  
 te Do - mi-num con - fi - te - mur,  
 etc.  
 tu — rex glo - ri - ae — Chri - ste.

(b)  
 Sh' ma Yis - ra - el, A - do - nai, etc.  
 me - o - de - cha — ha - yom —  
 — al le - va - ve — — cha —

Translation. Hear, o Israel, the Lord, our God, is one!  
 . . . (Thou shalt love Him) with all thy might . . .  
 (which I command thee) this day, . . . shall be upon  
 your heart.

Henceforth the path of hymnody is clearly indicated in the three main centres of Christianity. And in spite of the ethnic divergences that became more and more pronounced in the styles of liturgical music in the various countries, there were rather intimate connections and relations between these centres. We know, for instance, that St. Hilary of Poitiers (310-67), one of the first hymn-writers of the West, was familiar with Oriental chant through his exile in Phrygia. We know, too, that St. Paula, the contemporary of Jerome, learned the chant of the psalmody in Palestine, "So that she was able to chant the Psalms in Hebrew" (Jerome, Ep. 108, in Patr. Lat., xxi, 902). Augustine and Ambrose knew the African as well as the Italian chant, and Pope Damasus brought to Rome Syrian and Jewish Christians as cantors. Yet, during the 5th and 6th centuries it is no longer possible to maintain the idea of a homogeneous Christian chant; even the liturgies themselves by now differed widely from each other.

Only one more great innovation was made before Gregory the Great began to organize the chant of the Latin orbit: the introduction of the antiphon.<sup>1</sup> The true and original forces that created this form are not entirely known to us. It seems, though, that the antiphon owes its dominating place in the Roman and Syrian liturgies to the monasticism which enthusiastically championed the cause of this new form.

**Conclusion.**—Before the great synthesis of the Latin tradition was achieved under or after Gregory the Great, the eastern Churches had made themselves more or less independent of Rome and had evolved their own congenial forms and tunes.<sup>2</sup> Their chant assimilated more and more of the folksongs of their immediate environments and lost most traces of age and authenticity. Especially Arabic and, later, Turkish elements all but effaced the original structure. The age of the universal Church and its music had passed by then, surviving the collapse of the Roman Empire by hardly more than a century.

**CHURCH-MUSIC SOCIETY, THE.** An association inaugurated in London on 20 Mar. 1906, at a meeting held at the Church House, Westminster, with the object of facilitating

The selection and performance of the music which is most suitable for different occasions of Divine Worship, and for choirs of varying powers.

Its organization consists of a president, vice-presidents, treasurer, one or more secretaries, a council and executive committee, all of whom are elected annually. The 19th annual report (1925) gives a list of about 1000 members who are of three classes: (1) Life Members (a donation of not less than £5), (2) Ordinary Members (annual subscription 5s.) and (3) Associates (organists, choirmasters, parochial clergy, etc., who are asked to pay only for postage of literature).

The Society does much useful work of an advisory kind: it arranges lectures, practices and courses of study in church music, and has published a Choral Service Book, many occasional papers and a valuable series of reprints of old church music for parish choirs. Sir Sydney H. Nicholson was chairman of the executive until 1930, and the Lady Mary Trefusis, with others, was the first honorary Secretary.

The directly educative part of the work which this Society was formed to do in 1906 was taken over and carried on in a more far-reaching manner by the School of English Church Music from 1928 onward. An advisory committee of the Church-Music Society continues to give considerable assistance to the S.E.C.M. in the selection of suitable music for parish churches. It provides notes on the subject for the quarterly journal, 'English Church Music', and those notes are issued regularly to the society's own members. On the death of Lady Mary Trefusis her place as honorary Secretary was filled by Miss Eleanor Gregory, who had been associated with her in the work of the society from the beginning. Nicholson remained on the committee after his retirement until his death. He

was succeeded by H. C. Colles, who remained in office till his death in 1943. On the death of Mr. John Talbot (1937), who had been honorary treasurer from the beginning, the Hon. Robert Trefusis, brother-in-law of Lady Mary, accepted that post. The society continues its publications both of musical reprints and pamphlets. Its official address is S.P.C.K. House, Northumberland Avenue, London, W.C.2.

**CHVÁLA, Emanuel** (b. Prague, 1 Jan. 1851; d. Prague, 28 Oct. 1924).

Czech critic and composer. He studied the pianoforte with Gainer and Celestin Muller, and theory with Josef Foerster and Fibich; he also occupied himself to some extent with composition. In 1878, Josef Sládek persuaded him to write on musical questions for his publication 'Lumir', and it is in this direction that he has done the greatest service to Czechoslovak art, contributing also important articles to 'Dalibor', 'Politik', 'Národní politika' (1880-1921) and other journals. His criticism is sound and free from exaggerated chauvinism. A series of essays in German, entitled 'Ein Vierteljahrhundert böhmischer Musik' (1862-87), helped to introduce the works of his compatriots to a wider public.

Chvála's compositions include songs and partsongs — many in the folk style; pianoforte pieces; a Romance and little Suite for violin; string Quartets in D minor and C minor, a Trio in G minor and a Quintet in B♭ major; a concert overture in C, a Sinfonietta, 'Impressions of Spring' and a tone picture, 'Wake-night', considered the most successful of his compositions. He also proved himself an opera composer: 'Záboj' (libretto by Jaroslav Vrchlický), composed in 1906-7, was produced in Prague on 9 Mar. 1918. Chvála filled an important official position as inspector-general of a great railway company.

R. N., rev. G. Č.

**CHWATAL, Franz Xavier** (b. Rumburg, Bohemia, 19 June 1808; d. Soolbad, Elmen, 24 June 1879).

Bohemian-German pianist and composer. He was music teacher at Merseburg from 1832 and from 1835 at Magdeburg. He produced drawing-room pieces for the pianoforte to the number of 200 or more and two pianoforte methods.

J. A. F.-M.

**CHWATAL, Joseph** (b. Rumburg, Bohemia, 12 Jan. 1811; d. Merseburg, ?).

Bohemian-German organ builder, brother of the preceding. He founded an organ

factory at Merseburg under the name of Chwatal & Sohn, which brought out several small improvements in organ action.

J. A. F.-M.

**CHYBIŃSKI, Adolf (Eustachy)** (b. Cracow, 29 Apr 1880, d. Poznań, 31 Oct. 1952)

Polish musicologist. He studied classics and philology at Cracow University, piano-forte with Drozdowski and harmony with Szopski till 1902, when he went to Munich. There in six years (1902-8) he completed his studies in both philology and music, the latter including counterpoint and composition under Thuille. His other teachers were Kroyer, Lipps, Sandberger and Wolfflin. With a dissertation on 'Material for the History of Time-Beating' he obtained a doctor's degree in 1908. In 1912 he became a teacher (unpaid) at the University of Lwów, where five years later he was promoted to the post of lecturer and finally nominated Professor of Musicology in 1921. After his return to Poland he spent nearly all his time teaching harmony, counterpoint and history of music in the Polish schools of music. In 1924 he was elected to membership of the Arts Council of the Polish State. During the second world war he held the post of professor at the State Conservatory of Lwów and in 1945 he moved to Poznań as Professor of Musicology at the University. Among the distinctions which were conferred upon him should be mentioned the Order of Polonia Restituta (3rd class) in 1929, the Gold Medal of Merit in 1938 and the State Prize (1st class) in 1951.

In 1950 the P.W.M. at Cracow published 'A Symposium in Honour of Prof. Chybiński', the articles in which were contributed by his most distinguished pupils.

Chybiński educated a whole generation of Polish musicologists and musicians who to-day occupy the highest positions at the Polish universities and schools of music. He was one of the pioneers of musical research, now recognized as the greatest authority on music in Poland. Among his publications (in Polish and German), mainly on the history and ethnography of Polish music, numbering over 400, the following should be mentioned:

(In Polish)

- 'Chopin and Delacroix' (Lwów, 1907).
- 'Bogurodzica and its Relations to Musical History' (Cracow, 1907).
- 'The Inter-relation between Polish Music and Music of the West in the 15th and 16th Centuries' (Cracow, 1908).
- 'Wagner's "Meistersinger"' (Warsaw, 1908).
- 'Material for the History of the Chapel of Roratis' (Cracow, 1910-11).
- 'Musical Instruments of the Polish Peasants in Podhale' (1924).
- 'G. G. Gorczycki' (Lwów, 1928).
- 'M. Mielczewski's Concerts' (1928).
- 'The Warsaw Organ Tablature of the 17th Century' (1936).

- 'M. Karłowicz. a Study of his Life and his Music', 2 vols. (Cracow, 1948).
- 'Wacław of Szamotuły' (1948).
- 'Słownik muzyków dawnej Polski' ('A Dictionary of Musicians in Ancient Poland') (Cracow, 1948-49). (In German)

- 'Dietrich Buxtehude' (N Z M, 1907).
- 'Über die polnische mehrstimmige Musik des 16. Jahrhunderts' (Leipzig, 1909).
- 'Polnische Musik und Musikliteratur des 16. Jahrhunderts' (Leipzig, 1910-12)

He was also the editor of the 'Kwartalnik Muzyczny' ('Musical Quarterly') and the 'Rocznik Muzykologiczny' ('Musicological Year-Book'), a member-correspondent of the International Folk Music Council in London, as well as the chairman of the Society for the Publication of Polish Music including the 'Monumenta Musicae Sacrae in Polonia'. In 1948 he was appointed editor of a very large publication (10 vols.) entitled 'The Analysis of all Chopin's Works'. At the time of his death he was completing a 'History of Polish Music' in two volumes (15th to 18th centuries). He was buried at Poznań on 4 Nov. 1952 at the expense of the Polish State.

G. R. H.

**CHYLIŃSKI, Andrzej** (b. ? , c. 1600; d. ?).

Polish composer. He was a Franciscan monk and in 1630-35 held the post of *Praefectus muscorum* at the Church of St. Anthony at Padua. Of all his works only one remains: 'Canones XVI (idem ad diversa rectis contrariisque motibus toti in toto et toti in qualibet parte, Auctore R. P. F. Andrea Chilinscio Polono Ord. Min. Con. S. Francisci Magistro Musicae et in Almo Patavni D. Antoni Templo Musicorum Praefecto), Antverpiae, in Officina Plantiniana Balthasaris Moreti, MDCXXXIV'. In this work Chyliński displayed endless skill and surpassing mastery in the handling of a single theme in every variety of treatment, somewhat in the manner of Bach's 'Art of Fugue'.

G. R. H.

**CIACCONA.** See CHACONNE.

**CIAIA (Ciaja), Azzolino Bernardino della.** See DELLA CIAIA.

**CIAMPI, Francesco** (b. Massa, c. 1695; d. ? Rome, after 1735).

Italian composer. As his first opera, a setting of Zeno's 'Teuzzone', was produced at the ducal theatre of his native town in the Carnival of 1717, he must have been born earlier than 1704 (the year usually given). According to the titles mentioned in various librettos he was a member of the Accademia Filarmonica of Bologna, *maestro del concerto* to the Duke of Massa and *virtuoso* to the Duke's brother, Cardinal Camillo Cybo in Rome. After 'Teuzzone' Ciampi wrote four more operas, 'L' amante ravveduto' (Bologna, 1725), 'Ciro' (Milan, 1726), 'Onorio' (Venice, 1729) and 'Demofonte' (Rome, 1735); all others attributed to him in books of reference are Vincenzo Legrenzio Ciampi's.

He also composed an oratorio, 'L'assunzione della Beatissima Vergine', sung at the Collegio Clementino, Rome, in 1734, and some other music for the church, of which a 'Salve Regina' is preserved in Vienna. Burney had once possessed a Miserere and a Mass by Ciampi which, he claimed, "are inferior to no productions of the kind" that he had seen.

The score of 'Onorio' is in the B.M.

A. L.

**CIAMPI, Marcel (Paul Maximin)** (b. Paris, 29 May 1891).

French pianist and teacher. He studied at the Paris Conservatoire with Lous Diémer and was awarded the first prize for pianoforte playing in 1909. He followed up this success by a brilliant career as a pianist, playing with the chief Parisian orchestras, at the Promenade Concerts in London, at the Concertgebouw in Amsterdam and with the Philharmonic Orchestras of Brussels, Warsaw, Prague, Sofia and Athens. He has also appeared with Casals, Enesco, Thibaud and other well-known artists.

For many years now Ciampi has devoted himself to teaching, and he was the only teacher of Hephzibah Menuhin. He founded a pianoforte school in Paris, with several branches in the French provinces and abroad. He published six Studies for the pianoforte, and is a member of the Examining Body of the Conservatoire. In Apr. 1938 he presided over the Concours Brailowski at Liège and in May 1938 over the Concours Ysaye in Brussels. He is an officer of the Legion of Honour and of the Belgian Order of Leopold.

A. H. (1).

**CIAMPI, Vincenzo Legrenzio** (b. ? Piacenza, ? 1719<sup>1</sup>; d. Venice, 30 Mar. 1762).

Italian composer. He studied first at Piacenza and later probably at one of the Neapolitan conservatories. Ciampi first made his name as a composer of Neapolitan comic operas, the earliest of them, 'Da un disordine nasce un ordine', being produced when he was only eighteen at the Naples Teatro dei Fiorentini in the autumn of 1737. There followed 'Beatrice' (Teatro Nuovo, Carnival 1740), 'Lionora', written in collaboration with Logroscino (Nuovo, winter 1742), 'Flaminia' (Nuovo, spring 1743), 'Arminio' (Nuovo, 1744) and 'L'amore ingegnoso' (Fiorentini, autumn 1745).

According to his biographer, Carlo Anguissola, Ciampi's next work was 'Arcadia in Brenta', produced at Piacenza in 1746

and followed there in 1747 by 'Bertoldo, Bertoldino e Cacasenno'. There is no proof, however, that these performances at Piacenza took place, and Anguissola probably here followed Fétus, who knew nothing of Ciampi's Neapolitan career and considered 'Arcadia in Brenta' and 'Bertoldo' his first works. Modern opinion doubts even whether 'Arcadia in Brenta' was ever set to music by Ciampi. The work of that title performed at Venice in 1749, which Anguissola attributes to Ciampi, was actually by Galuppi. However that may be, Ciampi at about this time evidently sought a wider field than was offered by Naples. In 1747 he was at Palermo, where his *opera seria* 'Artaserse' was produced under his own direction, and in the next few years a number of his works were successful at Venice, including an oratorio 'Betulia liberata' in 1747, another *opera seria* 'Adriano in Siria' (Teatro San Cassiano, Carnival 1748) and some comic operas with texts by Goldoni. 'Bertoldo, Bertoldino e Cacasenno' (Teatro San Moisè, Carnival 1749, the first authenticated performance), 'Il negligente' (San Moisè, autumn 1749) and probably also the intermezzo 'La favola dei tre gobbi' (San Moisè, Carnival 1749). Of these 'Bertoldo' later became very well known under the title 'Bertoldo in Corte' and through Favart's parody 'Ninette à la cour' (Paris, 1755) exercised considerable influence on the development of French comic opera.

In the autumn of 1748 Ciampi went to England as *maestro* to a company of Italian singers who had at first great success in London with comic operas from their Venetian repertory. These included 'Gli tre cicisbei ridicoli', generally ascribed to Ciampi himself, in which occurred a version of "Tre giorni son che Nina", formerly attributed to Pergolesi. This led Barclay Squire and others to decide that Ciampi was actually the composer of this song, but this is extremely doubtful. The libretto of the London performance of 'Gli tre cicisbei', in the British Museum, states that the music was by the Milanese composer Natale Resta.<sup>2</sup> Comparison with the libretto of the earlier Venetian performances of Resta's opera shows that "Tre giorni son che Nina" was added, probably by Ciampi, for the London revival. There is no character called Nina in the opera, and it seems fairly certain that Ciampi appropriated the tune, which he had probably heard in his youth at Naples, and arranged for a second verse to be added, to give the song some con-

<sup>1</sup> Some doubt exists about Ciampi's origin and date of birth, first given by Fétus (1st ed.). No documentary confirmation has yet been discovered. In the librettos of his first operas, as well as in those of some of the operas produced in London under Ciampi's own direction, he is described as a Neapolitan, which would normally mean that he was born somewhere in the old Kingdom of Naples. It is possible that he preferred to be known as a Neapolitan for professional reasons.

<sup>2</sup> The authorship of "Tre giorni" is not really established. Barclay Squire made no such exclusive claims for Ciampi as others since have made on his authority. The situation is that Riemann-Einstein says Rinaldo di Capua wrote it because Spitta thought so, Grove (4th ed.) says Ciampi wrote it because Barclay Squire thought so, and Schmidt says Pergolesi wrote it because Radiciotti thought so.

nection with 'Gli tre cicisbei'. In any case, there is no opera of this title by Ciampi.

Except for a visit to Brussels in the summer of 1749, this Italian company remained in England for several years. Burney says that in Nov. 1749 they quarrelled with their manager, Signor Croza, and withdrew to a smaller theatre, where Ciampi's 'Il negligente' was performed. In 1750 they had little success. Ciampi's 'Adriano in Siria' had only six performances and a new opera 'Il trionfo di Camillo' only two. It seems likely that Ciampi settled in England for about eight years, for another new work of his, 'Didone', was produced in London in 1754, and a considerable amount of his instrumental music was brought out by English publishers between 1751 and 1756. He was, however, certainly back at Venice towards the end of 1756, and in the Carnival season of 1757 he had three different operas produced at three different Venetian theatres: 'La clemenza di Tito' at the San Moisè, 'Catone in Utica' at the San Benedetto and 'Il chimico' at the San Samuele. Later operas include 'Arsinoe' (Teatro Regio, Turin, 1758, also performed in London in the same year), 'Gianguir' (Teatro San Benedetto, Venice, Carnival 1760), 'Amore in caricatura' (Teatro Sant' Angelo, Venice, Carnival 1761) and 'Antigona' (Teatro San Samuele, Venice, 1762).

From 1760 to 1762 Ciampi was *maestro* of the Venetian Ospedale degli Incurabili and composed several Latin oratorios for his girl pupils. His death is reported in the 'Nuova Gazzetta Veneta' of 2 Apr. 1762. He had an apoplectic fit after the rehearsal of an opera — probably 'Antigona'.

Burney says that "he had fire and abilities" but no genius. His comic operas were the most successful, but 'Didone' is said to contain beautiful music.

Ciampi's instrumental music includes 12 sonatas for two vns. & bass, Opp. 1 and 2 (Johnson, London, 1751-52); 6 sonatas for vn. & bass, Op. 5a (Leclerc, Paris); 6 sonatas for harpsichord (Walsh, London, 1755 [?]); 6 concertos in six parts, for stgs. & bass, Op. 6 (Walsh, 1754); 6 concertos for organ or harpsichord, Op. 7 (Walsh, 1756). **CIANCHETTINI.** Bohemian-Italian-English family of musicians.

(1) **Veronica Rosalie Cianchettini** (born **Dussek** [Dušek]) (b. Časlava, Bohemia, 1779; d. London, 1833), pianist and com-

poser. She studied the pianoforte under her father from infancy. In 1797 she joined her brother, J. L. Dussek, in London, where she married Francesco Cianchettini. She was a successful teacher and composed two concertos and several sonatas for the pianoforte.

(2) **Pio Cianchettini** (b. London, 11 Dec. 1799; d. Cheltenham, 20 July 1851), pianist and composer, son of the preceding. At the age of five he appeared at the Opera House in London as an infant prodigy. A year later he travelled with his father through Holland, Germany and France, where he was hailed as the English Mozart. By the age of eight he had mastered the English, French, German and Italian languages. In 1809 he performed a concerto of his own composition in London. Angelica Catalani appointed him her composer and director of her concerts, and frequently sang Italian airs which he wrote to suit her voice. He published a cantata for two voices and chorus to words from Milton's 'Paradise Lost', music to Pope's 'Ode on Solitude', 'Sixty Italian Nottunes' for two, three and four voices, and other vocal pieces. He was also editor and publisher of a book of canons by Martini, as well as of the scores of many symphonies and overtures by Mozart and Beethoven.

(3) **Veronica Elisabeth Cianchettini** (b. London, ?; d. ?), pianist, sister of the preceding. M. C. C.

**CIARAMELLA.** See ZUFFOLO.

**CIBBER, Catherine.** See SHORE.

**Cibber, Colley.** See Ballad Opera. Carey (H.), 'Provoked Husband' [with Vanbrugh, songs]. Charke (son-in-law), 'Finger ('Love makes a Man', act-tunes). Leveridge ('Woman's Wit', songs). Paisible ('Love's Last Shift' & 'She would', inc. m.). Pepusch ('Myrtillo', do). Purcell (5, inc. m. for 3 plays). Schubert (song). Weldon (11, songs for 'She would').

**CIBBER, Susanna Maria** (born **Arne**) (b. London, Feb. 1714; d. London, 30 Jan. 1766).

English singer and tragic actress. Her voice developed early and was presumably first trained by her brother, Thomas Augustine Arne, who was four years older than she, and who became one of the most successful singing-teachers of the age. On 13 Mar. 1732 she made her début in the title-part of 'Amelia', music by J. F. Lampe and libretto by Henry Carey, at the Haymarket Theatre, and on 17 May of the same year she sang Galatea in the pirated version of Handel's 'Acis and Galatea' staged at the same theatre by her father in collaboration with Carey, Lampe and J. C. Smith. Waltz was the Polyphemus, and it is possible that he gave Susanna some lessons in the Handelian style. Her performance was admired; the author of a pamphlet, 'See and Seem Blind', asks: "Is not this odd, I say, for an English Tradesman's daughter to spring up all of a sudden to rival the selected singers of Italy?" Perhaps the most "odd" feature of her success, both then and later, was the

fact that her voice was small and unimportant, in an age of splendid voices. It must be remembered, however, that her early appearances were in small theatres. The next year, 1733, she sang in her brother's setting of Addison's 'Rosamond' at Lincoln's Inn Fields.

The success of 'Rosamond' was probably the direct cause of the brother and sister's being engaged at Drury Lane. In 1734 Susanna married the actor Theophilus Cibber, son of Colley Cibber, actor and poet laureate. The marriage was not a success. She appeared chiefly in her brother's musical after-pieces until her début as a tragic actress in Aaron Hill's 'Zara' on 12 Jan. 1736 showed unmistakably where her genius lay. Her great parts were to be Cordelia, Constance, Desdemona and Monimia, but for some years she did not devote herself solely to tragedy. In 1736 also occurred a famous dispute with Kitty Clive, from whom she vainly tried to wrest the part of Polly in 'The Beggar's Opera'. A few years later she achieved her ambition, and the pathos of her Polly was always remembered by those who saw her in the part.

A notorious action was brought by her husband in 1738 against a gentleman named Sloper, and it may have been on account of the gossip this aroused that she left the London stage for a while. No other scandal was ever associated with her name, and she seems to have been liked and respected both as woman and artist. Among those who visited her home were Quin, Handel, Burney and Garrick.

In 1741-42 she was in Dublin, where she and Quin were joint stars at the Augier Street Theatre, and where she sang in the first performance of 'Messiah' on 13 Apr. 1742. She probably sang "He shall feed His flock" throughout as a solo in the key of B $\flat$ , and she was also allotted the soprano air "If God be for us"; but it was her singing of "He was despised" which made the deepest impression on her hearers and caused Dr. Delany to make the famous remark: "Woman, for thus thy sins be forgiven thee!" Burney said of her singing of this air that "by a natural pathos and perfect conception of the words, she often penetrated the heart, when others, with infinitely greater voice and skill, could only reach the ear". Not long after the first performance of 'Messiah' Arne and his wife arrived in Dublin. On 21 July Mrs. Arne and Mrs. Cibber sang "favourite songs and duettos" by Arne, Handel and Hasse for Mrs. Arne's benefit.

The following season Mrs. Cibber returned to London, where she was engaged at Covent Garden. As a tragic actress she went from strength to strength, but she also continued to sing in public; during the Lenten season of

oratorios she sang both in 'Messiah' and in 'Samson'. The part of Micah in 'Samson' is said to have been composed expressly for her, as also that of Daniel in 'Belshazzar', and that Handel prized the special qualities of her singing is shown by his writing to Charles Jennens in the summer of 1744 that he had "some hopes" she would sing for him. But after 1746 or thereabouts she gave herself up entirely to the stage. (Many of the plays in which she appeared had incidental songs, as was the practice in those days, and she did not altogether renounce singing.)

It is important not to think of her singing-voice in terms of a 19th- or 20th-century contralto, with a rich, full tone and great power. Indeed, it seems doubtful if the 18th century appreciated or cultivated what we now regard as the typical female contralto *tumbe*. The male alto was still very popular, and there were some famous alto *castrati*. We have no idea of the *tumbe* of Mrs. Cibber's singing-voice, except that it was "sweet" and "plaintive", but the description of her speaking-voice as "high-pitched" hardly suggests a true contralto. It seems more likely that she was a mezzo-soprano, or even a "short" soprano. It is clear from some of the music written for her that she had good low notes, however. Her range seems to have been from the note a to g" in her young days, but she may have lost her upper notes as she grew older, since Daniel in 'Belshazzar' does not go above d". The volume of her voice was inconsiderable — "a mere thread", according to Burney — but she had considerable flexibility and was evidently well schooled in florid singing.

Mrs. Cibber is buried in the north cloister of Westminster Abbey. M. S. (ii).

GICONIA<sup>1</sup> (Cigogne), Johannes (Jean) (b. Liège<sup>2</sup>, ?; d. ?).

<sup>1</sup> The name may have been Latinized from Oonjevaar = stork.

<sup>2</sup> In some of his MSS "de Leodio" is added to his name.

Walloon 14th–15th-century theorist and composer. He is probably identical with a canon of Saint-Jean l'Évangéliste at Liège nominated prebendary by Pope Urban V on 10 Nov. 1362. At any rate in 1389 he was at the head of a delegation chosen to settle a difference between the people of Rosière and the chapter of Saint-Jean. He still reappears in Liège documents in 1401 and 1404, so that his removal to Padua must have taken place after the latter year. He then lived in northern Italy until 1411 and was a canon of Padua and of Venice, as is implied by the texts of his motets.

That Ciconia ranks as the most remarkable composer in northern Italy in the period between Landini and Dufay could be gathered from the number of manuscripts containing compositions of his, even if there were no other proof. He makes use of the traditional French device — the isorhythmic system — and of imitations in the Italian style, as the following example will show:

Occasionally he even employs the tonic-dominant effects which were to become so constructive in the history of European music.

The Ferrara library possesses the manuscript of his treatise 'De proportionibus musicae', dated 1411; copies are at Pisa and Florence, and part of it was reprinted by La Fage (*see* Bibl.). 'Nova musica' (4 vols., MS copy) is at Bologna and 'Incipit praephatio nove musicae' (5 vols.) at Florence.

Of his compositions 7 pieces of the *ordinarium missae*, 10 motets (4 of them isorhythmic) and 6 chansons are preserved at Bologna (Lic.

Mus. 37 & Bibl. Univers. 2216), Padua (Bibl. Univers. 684 & 1475), Parma, Paris (Bibl. Nat. n.a. frç. 4379), Rome (Vat. Urb. lat. 1419), Warsaw (Krasinski MS 52), Domodossola (Calvario MS 14), Modena (Lat. 568), Oxford (Bodl. Can. misc. 213), Trent (87-92) and Lucca (fragment). Modern reprints of works by Ciconia were published by Riemann and Wolf and in D.T.Ö (*see* Bibl.). E. D. (11).

Polish conductor. He studied music in Rome. From 1751 till his death he was the director and conductor of the band at the court of Prince Radziwiłł at Nieświcz.

C. R. H.

**CIFRA, Antonio** (b. Rome, 1584; d. Loreto, 2 Oct. 1629).

Italian composer. He was not a priest, as is usually stated. On 27 June 1594 he entered the chapel of San Luigi de' Francesi, Rome, as a choirboy and remained there until at least Aug. 1596. He was also probably a pupil of the *evrato* Girolamo Rosini. About 1605 he was appointed, for a period of some two years, musical director of the Roman Seminary, and in 1608-9 he held a similar post at the German College. By 28 Oct. 1609 he had left Rome to become choirmaster of the Santa Casa, Loreto, but he returned in Mar. 1622 to take up similar duties at St. John Lateran. There he remained probably until 23 June 1626, when he went back to his post at Loreto, to retain it this time until he died. Casimiri, who did much research on Cifra, regarded as a legend the oft-repeated statement that about 1625 Cifra was in the service of the Archduke Charles of Austria.

Cifra was one of the most prolific composers of his time in both modern and traditional styles, and of both sacred and secular music.

More than any other composer he liked to write songs on fixed basses such as the *romanesca* and *ruggiero*. He is warmly praised by Liberati in his letter to Ovidio Persapegi (Rome, 1685, p. 25). That he was an erudite and elegant musician is shown by the fact that Martini inserted an 'Agnus Dei' of his, as a specimen of good work, in his essay on counterpoint. He himself published a large quantity of his masses (1619 and 1621), motets, madrigals and psalms, in Rome and Venice. After his death Antonio Poggioli of Rome published a volume containing no less than 200 of his motets for 2, 3, 4, 6 and 8 voices. The title-page of this book contains a portrait of him taken in his forty-fifth year.

Cifra is among the "masters flourishing about that time in Italy", of whose works Milton sent home in 1638 "a chest or two of choice music books".<sup>1</sup> Among the other masters were Monteverdi, Marenzio, Vecchi and Gesualdo. It is interesting that all except Monteverdi had been dead some years and that, if Milton is any guide, polyphonic music must still have been popular in 1638, since none of these masters took anything like an exclusive interest in monodic music, and some none at all.

It may be conjectured that Henry Lawes got from a volume of Cifra's music, sent home by Milton, the 'Tavola' which he set in his 'First Book of Ayres and Dialogues' published in 1653 and written some years earlier, the 'Tavola' being that of Cifra's 'Scherzi ed arie' (1614). Lawes's 'Tavola' consists of a setting of all the 1- and 2-voice song-titles in Cifra's book except 'Tempo fu ch' io', plus the title of the 4-voice song 'Così a mia vita', with the direction "a tre voci" used as a repetitive cadence. No other titles of 3- and 4-voice songs are used.

**CIKKER, Ján** (b. Banská Bystrica, Slovakia, 29 July 1911).

Slovak composer. In 1930-35 he studied composition under Křička at the Prague Conservatory and in 1935-36 under Novák

in the Master Class there. He also studied conducting under Weingartner in Vienna in 1936-37. Having finished his studies he became a teacher in 1939 and afterwards was appointed professor at the Bratislava Conservatory in 1942. At first various outside influences predominated in his early works for chamber orchestra, pianoforte, voice and orchestra, but he soon found his own way of expression in which he blends temperamentally the spirit of folk music and Slovak songs with a flexible modern technique. His Concertino for pianoforte and orchestra had a considerable success abroad and particularly his symphonic poem 'Boj' ('A Fight') at the Prague Festival in 1946.

His chief works are the following:

Cantata 'Cantus filiorum', Op. 17 (1940).  
Symphonic poem 'Léto' ('Summer'), Op. 19 (1941).  
Symphonic poem 'Boj' ('A Fight'), Op. 21 (1941).  
Symphonic picture 'Ráno' ('The Morning'), Op. 24 (1945).  
Slovak Suite for orch., Op. 22 (1943).  
Concertino for pf. & orch., Op. 20 (1942).

G. Ö.

**CILEA, Francesco** (b. Palmi, Calabria, 26 July 1866; d. Varazza, 20 Nov. 1950).

Italian composer. He was the son of Giuseppe Cilea, an advocate, and his mother's maiden name had been Felicità Grillo. Although he was passionately devoted to music from his earliest years, he received no regular instruction until, at the age of nine, he was fortunate enough to enlist the sympathy of Francesco Florino, the friend of Verdi and librarian at the Conservatory of Naples. Florino strongly recommended his parents to devote him to a musical career, and the boy was sent a year later to a liceo-convitto at Naples, where he devoted himself ardently to the study of the pianoforte. In 1881 he entered the Conservatory, where he studied the pianoforte with Beniamino Cesi and counterpoint and composition with Paolo Serrao. In 1889, while still there, he produced his first opera, 'Gina', a work in three acts, to a libretto by Enrico Golisciani. Its success was so marked that Sonzogno, the publisher, commissioned the young composer to write another opera in three acts, 'La Tilda', which was produced at the Teatro Pagliano, Florence, on 7 Apr. 1892, and was received with much favour.

Cilea continued to write much for the pianoforte and in 1894 produced a Sonata for cello and pianoforte. In 1897 his 'L' Arlesiana', an opera in four acts (reduced to three in 1898), founded upon Alphonse Daudet's famous drama, was produced at the Teatro Lirico, Milan, on 27 Nov. The music was charming, and the composer's clever use of folk tunes was much admired, but the libretto was poorly constructed and the opera was not very successful. It was, however, the work in which Caruso made his first great success.

In 1896 Cilea was appointed professor at the

<sup>1</sup> Phillips's 'Memoir'.

Reale Istituto Musicale at Florence, where he remained until 1904. His next opera was 'Adriana Lecouvreur', written to a libretto drawn by Arturo Colautti from Scribe's well-known play. This was produced at the Teatro Lirico, Milan, on 6 Nov. 1902. 'Adriana' first carried his fame beyond the Alps. It was given in London, at Covent Garden, on 8 Nov. 1904, and in many other countries. Though not conspicuous for dramatic power, it is a work of decided charm and accomplishment. The lighter scenes, in particular, are very cleverly handled, and show welcome signs of the genial influence of Verdi's 'Falstaff'. A later opera, 'Gloria', written to a libretto by Colautti, was produced with emphatic success on 15 Apr. 1907, at the Teatro alla Scala, Milan.

**CIMA, Giovanni Paolo** (b. Milan, ?; d. ?).

Italian 16th–17th-century organist and composer. His collections of motets, *ricercari* and *concerti ecclesiastici* were published at Milan between 1598 and 1622. He was organist of Milan Cathedral in 1609. Among his most interesting works is the 'Partito de Ricercari, & Canzoni alla Francese' (1606), containing 7 *ricercari* (one on a 4-note *ostinato*), 16 *canzoni* and an appendix of rules for tuning keyboard instruments. This appendix includes 2 short *ricercari*, only 10 bars long, which are successively transposed upwards through 12 semitones. The notation used for the transpositions is exceedingly curious.

R. T. D.

**CIMA, Tullio** (b. Ronciglione nr. Rome, c. 1597; d. ?).

Italian singer and composer. He was a choirboy at the Lateran Chapel in Rome until 1612, when his voice broke. He became a pupil of Abondio Antonelli. In 1625 he was *maestro di cappella* at the Roman Seminary; in 1659 he entered his name as a contestant for the post of *maestro di cappella* at the Cathedral of Orvieto, but was unsuccessful. He must have graduated LL.D. before 1648. He composed a considerable amount of church music.

R. T. D.

**CIMADORO, Giovanni Battista** (b. Venice, 1761; d. Bath, 27 Feb. 1805<sup>2</sup>).

Italian composer. He was successful in introducing the monodrama, after the style of Rousseau, into Italy. The Accademia dei Rinnovati at Venice performed his 'Ati e Cibebe' in the spring of 1789, and 'Pimmallione' and 'Il ratto di Proserpina' followed in 1790. 'Pimmallione' in particular was very

<sup>1</sup> In England he used the abbreviated form Cimador.

<sup>2</sup> Place and date of his death (not so far recorded in musical dictionaries) are given in 'The Gentleman's Magazine', LXXV, 290.

successful, not only in Italy but in the whole of Europe, and became a favourite concert piece for singers male and female; Marianna Sessi sang Cimadoro's setting as late as 1836.

Some time after 1791 Cimadoro settled in London. Haydn records in his diary that on 2 Aug. 1794 he visited Bath together with Mr. Aster and "Mr. Cimadoro, a young violin virtuoso and composer". Anna Morichelli chose his 'Ati e Cibebe' for her benefit at the Haymarket Theatre on 14 May 1795 and Vigenoni sang 'Pygmalion' on 8 June 1797; on that occasion most of the music was published by Corri, Dussek & Co. (which disposes of the oft-repeated legend that Cimadoro "had burnt the score and renounced composition for the future"; apart from the printed selection there are several manuscript copies extant in different libraries).

In 1805 Cimadoro was still in London, associated with Monzani as a publisher.<sup>3</sup> They brought out that year 'Five Duettings per camera'. For two soprano voices, composed by Domenico Cimarosa. The pianoforte accompaniment by J. B. Cimadoro.

Cimadoro is said to have arranged Mozart symphonies for flute and strings, but if he did so they cannot now be traced. He wrote accompaniments for several vocal numbers from Mozart's operas and these were published, as were some other minor vocal and instrumental works. A Concerto for double bass (with three string parts) is in the B.M.

A. L.

See also Monzani (for C.'s publishing activities).

**CIMAROSA, Domenico** (b. Aversa, Naples, 17 Dec. 1749; d. Venice, 11 Jan. 1801).

Italian composer. He was the son of poor working people and received his musical training at the Conservatorio Santa Maria di Loreto at Naples. He attended the celebrated school for eleven years (1761–72) and acquired a thorough knowledge of the old Italian masters under Manna, Sacchini and Fenaroli. In 1772 he produced his first opera, 'Le stravaganze del conte', at the Teatro de' Fiorentini, Naples, which was so successful as to give him at once a place among composers. From that date till 1780 he lived alternately in Rome and Naples, and composed for the two cities some 15 operas, 'L' Italiana in Londra' (Rome, 1778) among the number. Between 1780 and 1787 he was busy writing as the acknowledged rival of Paisiello, who, up to that time, had been undisputed chief of Italian operatic composers. His operas were also performed abroad, not only in London, Paris, Vienna and Dresden, where an Italian opera existed, but elsewhere, through translations. To this period belong 'Il pittore parigino' (1781), 'Il convito' (1781), 'La ballerina

<sup>3</sup> See MONZANI.

amante' (Naples, 1782), 'L' Olimpiade' (1784), 'Artaserse' (1784) and 'L' impresario in angustie' (1786).

In 1787 Cimarosa was invited to St. Petersburg as chamber composer to Catherine II, and there he wrote, among a great number of cantatas and other vocal and instrumental works, two operas, 'Cleopatra' and 'La vergine del sole' (1789). Some years later, at the invitation of Leopold II, he succeeded Salieri as *Kapellmeister* to the Austrian court, and it was in Vienna that he composed his most celebrated work, 'Il matrimonio segreto' (1792), a masterpiece of its kind, which at the time roused an extraordinary enthusiasm, and is almost the only work by which Cimarosa is at present known. So great was the effect of its first performance that at the end the emperor had supper served to all concerned and then commanded a repetition of the whole.

Cimarosa's engagement in Vienna terminated by the emperor's death (1792). Salieri once more became *Kapellmeister*, and in 1793 Cimarosa returned to Naples, where he was received with every kind of homage and distinction; 'Il matrimonio segreto' was performed fifty-seven times running, and he was appointed *maestro di cappella* to the king and teacher to the princesses. From his inexhaustible pen flowed another series of operas, among which may be specified 'I Traci amanti' (1793) and 'Le astuzie femminili' (1794), and the serious operas 'Penelope' (1794) and 'Gli Orazi ed i Curiazi' (1796).

His last years were troubled by a melancholy change of fortune. The outbreak of revolutionary ideas carried Cimarosa with it, and when the French republican army marched victoriously into Naples (1799) he expressed his enthusiasm in the most open manner. He was imprisoned on 9 Dec. 1799 and after his release he was intent on leaving Naples.<sup>1</sup> He set out for St. Petersburg, but died at Venice, leaving half finished an opera, 'Artemisia', which he was writing for the approaching Carnival. It was universally reported that he had been poisoned, and in consequence the government compelled the physician who had attended him to make a formal attestation of the cause of his death.

Besides his operas Cimarosa composed several oratorios, cantatas, masses, harpsichord sonatas, etc., which were much admired in

their day. His real talent lay in comedy — in his sparkling wit and unfailing good humour. His invention was inexhaustible in the representation of that overflowing and yet naive liveliness, that merry, teasing loquacity which is the distinguishing feature of the genuine Italian *buffo* style; his chief strength lies in the vocal parts, but the orchestra is delicately and effectively handled, and his ensembles are masterpieces, with a vein of humour which is undeniably akin to that of Mozart. It is only in the fervour and depth which animate Mozart's melodies, and in the construction of the musical scene that Cimarosa shows himself inferior to the great master. His serious operas, in spite of their charming melodies, are too conventional in form to rank with his comic operas, since taste has been so elevated by the works of Mozart. Cimarosa's invention is simple, but always natural; both his form and his melody are always in keeping with the situation.

A bust of Cimarosa, by Canova, was placed in the Pantheon in Rome.

Diaghilev's production of 'Le astuzie femminili' (Paris and London, 1920), in a highly decorative version, marked the beginning of a revived interest in Cimarosa and the opera of his time. 'Il matrimonio segreto' was revived, in a new English version by Reginald Gatty, at the Birmingham Repertory Theatre in 1921 and at the Court Theatre in London in 1928.

An edition by Felice Boghen of 32 harpsichord sonatas by Cimarosa was published in Paris in 1926.

'Giannina e Bernardone.'	Filippo Livigni.	Venice, Teatro San Samuele, Nov. 1781.	
'Il convito'	Livigni.	Venice, Teatro San Samuele, 27 Dec. 1781	
'La ballerina amante'	Cesare Augusto Casini	Naples, Teatro dei Fiorentini, summer 1782.	
'L' eroe cinese.'	Metastasio	Naples, Teatro San Carlo, 13 Aug. 1782.	
'Circe.'	Perelli	Milan, Teatro alla Scala, 26 Dec. 1782.	Revived (Pavia, 1796) as 'Amor di Circe con Ulisse'.
'Chi dell' altrui si veste presto si spoglia.'	Palomba.	Naples, Teatro dei Fiorentini, Carnival 1783	Also a 1-act version, 'Nina e Martufo'.
'I due baroni di Rocca Azzurra.'	Palomba.	Rome, Teatro Valle, Feb 1783	
'Le gare degli amanti.'	?	Nice, spring 1783	
'Oreste.'	Serio.	Naples, Teatro San Carlo, 13 Aug. 1783.	
'La villana riconosciuta.'	Palomba.	Naples, Teatro Fondo, autumn 1783	Revived (Madrid, 1792) as 'La pastorella riconosciuta'.
'I matrimoni impen-	?	{ Rome, Teatro Valle, Carnival, 1784.	The same work. The score had lost its title-page and the second title was invented by a librarian
'La bella Greca'			
'L' apparenza inganna, o sia La villeggiatura'	Lorenzi	Naples, Teatro dei Fiorentini, spring 1784.	
'La vanità delusa'	Carlo Goldoni.	Florence, Teatro della Pergola, June 1784.	Revived (Paris, 1805) as 'Il mercat di Malman-tile'.
'L' Olimpiade.'	Metastasio.	Vicenza, 10 July 1784	
'I due supposti conti, ossia Lo sposo senza moglie.'	Angelo Anelli.	Milan, Teatro alla Scala, 10 Oct. 1784.	
'Artaserse.'	Metastasio.	Turin, Teatro Regio, 26 Dec 1784.	With adds. by M. A. Portugal, Lisbon, 1 Feb. 1801
'Il marito disperato [or geloso]'	Lorenzi.	Naples, Teatro dei Fiorentini, Carnival 1785.	Revived (Naples, 1805) as 'L' amante disperato'.
'La donna sempre al suo peggior s' appiglia.'	Palomba.	Naples, Teatro Nuovo, autumn 1785.	
'Il credulo [deluso].'	Giuseppe Maria Diodati.	Naples, Teatro Nuovo, Carnival 1786.	
'Le trame deluse.'	Diodati.	Naples, Teatro Nuovo, Sept. 1786.	

Title	Libretto	Production	Remarks
'L' impresario in angustie.'	Diodati.	Naples, Teatro Nuovo, Oct. 1786	
'Valodimiro.'	Boggio	Turin, Teatro Regio, Jan. 1787.	
'Il fanatico burlato.'	Saverio Zini.	Naples, Teatro Fondo, spring 1787.	
'Cleopatra.'	Ferdinando Moretti.	St. Petersburg, Court Opera, 7 Oct. 1789.	
'Le vergine del sole' ('Idalide').	Moretti.	St. Petersburg, Court Opera, 6 Nov. 1789.	
'Il matrimonio segreto.'	Giovanni Bertati, based on Colman & Garrick's 'The Clandestine Marriage'.	Vienna, Burg Theatre, 7 Feb. 1792.	
'Amor rende sagace'	Bertati	Vienna, Burg Theatre, 1 Apr. 1793.	
'I Traci amanti.'	Palomba.	Naples, Teatro Nuovo, 19 June 1793.	
'Le astuzie femminili.'	Palomba.	Naples, Teatro Fondo, 16 Aug. 1794.	
'Penelope.'	Diodati.	Naples, Teatro Fondo, 26 Dec. 1794.	
'L' impegno superato.'	Diodati.	Naples, Teatro Fondo, 21 Nov. 1795.	
'I nemici generosi' ('Il duello per complimento').	Petrosellini.	Rome, Teatro Valle, 26 Dec. 1795.	
'Gli Orazi e Curiazi'	Antonio Simone Sografi.	Venice, Teatro La Fenice, 26 Dec. 1796	
'Achille all' assedio di Troia.'	?	Rome, Teatro Argentina, Carnival 1797.	
'L' imprudente fortunato.'	?	Rome, Teatro Valle, Carnival 1797	
'Attilio Regolo'	?	Reggio, Carnival, 1797	
'Artemisia regina di Caria'	Marcello Marchesini.	Naples, Teatro San Carlo, 25 June 1797.	
'L' apprensivo raggrato.'	Diodati.	Naples, Teatro dei Fiorentini, autumn 1798.	
'Artemisia.'	"Cratisto Jamejo" (Giovanni Battista Colloredo).	Venice, Teatro La Fenice, 17 Jan. 1801.	A different work from 'Artemisia' of 1801 Revived (Padua, 1808) as 'Il matrimonio raggrato'.

Scores are also preserved of 'La contessina', 'I matrimonio per industria', 'L'avviso ai maritati', and several more titles of doubtful authenticity are mentioned in various sources

## CANTATAS

1775. 'Il giorno felice' (with Gnecco).  
 1782. 'Le tue parole o padre', *componimento drammatico* (for the birth of the dauphin).  
 1789. 'Angelica e Medoro' (with Millico, performed in Vienna).  
 1788. 'Atene edificata' 'La felicità maspettata'.  
 1791. 'La sorpresa.' 'La serenata non preveduta'.  
 1794. 'Il trionfo della fede'.  
 1799. Cantata for the return of King Ferdinand IV of Naples.

Two more cantatas (? identical with two of the preceding) are preserved at Brussels (including characters named Deifile, Rodope and Corebo) and Munich (Ombra, Genio and Enrico).

## ORATORIOS

- 'Giuditta', 1780; 'Absalon', 1782; 'Il trionfo della fede', 1794; 'S. Filippo Neri'; 'Il sacrificio d' Abramo'; 'Iefte'.

## MISCELLANEOUS WORKS

- 'Missa pro defunctis', performed at St. Petersburg in 1787 and various other masses and psalms, motets and other music for the church. Many airs, cavatinas, solfeggi, &c. Some instrumental, incl. harpsichord, sonatas.

**CINCINNATI.** This important city in the State of Ohio has been an active musical centre since the foundation of the biennial musical festival in 1873, described below. A number of efforts, important in the musical history of the U.S.A., led up to this event.

The story begins, logically, with the first of the German *Sängerfeste*, which have been held periodically in different cities of the U.S.A. since 1849. German societies devoted to male-voice choral singing existed in the large cities of the Atlantic coast before they did in the Ohio valley, but the first union of such societies for festival purposes took place at Cincinnati in 1849. It was an extremely modest affair, the choir numbering only 118 singers, and only one concert being given; but as a result of the meeting the North American *Sängerbund* was formed, and its festivals soon grew to such enormous dimensions that it became necessary to erect temporary halls for their accommodation. In 1870 one of these festivals was given in the city which had seen their birth. Nearly 2000 singers participated, and the merchants of the city, desirous of having a building spacious enough to accommodate a textile fabrics exhibition, aided the *Sängerfest* officials in the

erection of a large hall, and after the festival preserved it for exhibition purposes.

At this period Theodore Thomas used to visit the larger cities of the middle West with his symphony orchestra. When at Cincinnati one day in the spring of 1872, the project of holding a national festival of the singers of the U.S.A. in the convenient Exposition Hall was broached to him. The plan was not essentially different from that of the German festivals which had prompted it, except that it was to be a meeting of mixed choirs, the English language was to be used and the orchestral feature was to be lifted into prominence.

**CINCINNATI MUSICAL FESTIVAL.**—A committee was formed, a guarantee fund collected and an invitation issued "to the Choral Societies of America", describing the projected festival, and stating its object to be

to elevate and strengthen the standard of choral and instrumental music, and also to bring about harmony of action between the musical societies of the country, and more especially of the West.

Thirty-six societies, representing 1250 singers, accepted the invitation. Some of the acceptances came from cities many hundred miles distant, but the majority were from Cincinnati and the cities and towns of Ohio. Twenty-nine societies were present at the first general rehearsal. The festival was held on 6-10 May 1873. The choir numbered about 1000, the orchestra 108, with Thomas's band as a nucleus, and the principal works performed were Beethoven's choral Symphony, Handel's *Dettingen Te Deum* and scenes from Gluck's *'Orpheus'*. The festival aroused much popular enthusiasm, and steps were at once taken for a second meeting two years later, the most important being the formation of the Cincinnati Biennial Musical Festival Association, a corporate body that has conducted the business affairs of all the festivals since. The second festival, held in 1875, was followed by a movement aiming at the permanence not only of the festivals but also of their home. The wooden building which had housed the German *Sängerfest* of 1870 was replaced by a substantial and beautiful hall with wings constructed to serve exhibition purposes, a gift to the city made by Reuben R. Springer, a retired merchant, and other public-spirited citizens. The hall was provided with a magnificent organ (at the time of its construction one of the half-dozen largest in the world). The erection of this building compelled the postponement of the third festival in 1878, but public interest had been so worked up that with expenses amounting to \$55,595 there was yet a profit from the festival of over \$32,000, nearly one-half being given by the Festival Association to the fund then being raised for the organ, the building of which had been undertaken by a special organization. The plan of uniting

societies in the festival was now abandoned and the singers were organized into a permanent choir, whose affairs are all managed by the Festival Association. In 1880 this choir contained over 600 voices, but since 1890 it has numbered about 400.

With the single exception noted above, the festivals have been held regularly every two years in May. Thomas continued to conduct until 1904. He was succeeded by van der Stucken, 1906-12; Ernst Kunwald conducted the festivals of 1914 and 1916; Eugène Ysaÿe that of 1918. He again took charge of the festival in 1920. For the next one, held in 1923 in order to coincide with the fiftieth anniversary of the date of the founding of these concerts, Frank van der Stucken was persuaded to return. Among other things this festival witnessed the dedication of the reconstructed organ in Music Hall. Frederick Stock, assistant to Theodore Thomas in the early days of the festivals, succeeded van der Stucken in 1929. In 1931 Eugene Goossens became musical director, a post he held until his departure for Australia in 1949.

The programmes have ranged widely, including with most of the great choral classics new works by such composers as Elgar, Pierné and Wolf-Ferrari, as well as occasional works by native composers. In recent years it was the desire of the trustees to introduce choral works by modern European and American composers. The most notable of these have been Honegger's *'King David'* in 1929, William Walton's *'Belshazzar's Feast'* in 1933, Zoltán Kodály's *'Psalmus Hungaricus'* in 1935, Nathaniel Dett's *'The Ordering of Moses'* in 1937 and excerpts from James G. Heller's oratorio *'Watchman, What of the Night?'* in 1939. The programmes of the 1939 festival also included a *'Magnificat'* for soprano solo and children's chorus by the German-American composer Hermann Hans Wetzler. The trustees long ago abandoned the idea of retaining English as the language in which the works were to be sung, as stated above. The concerts are commonly referred to as "May Festivals".

**CINCINNATI SYMPHONY ORCHESTRA.**—This was organized in 1895, under the aegis of the Cincinnati Orchestra Association, supported by stock-holders and subscribers to a guarantee fund. In the first season there were three series of concerts conducted by Frank van der Stucken, Anton Seidl and Henry Schrädieck. Van der Stucken was then engaged as sole conductor and remained for twelve years, during which period ten afternoon and ten evening concerts were given annually. At the close of the 13th season (1906-7) the Orchestra Association, rather than submit to the dictation of the American Federation of Musicians, disbanded the orchestra. It was reorganized in 1909,

with Leopold Stokowski as conductor, who continued in that capacity till May 1912. In Oct. of that year Ernst Kunwald succeeded him, retaining the post till Dec. 1917. During the rest of that season the orchestra had as guest conductors Walter Rothwell, Victor Herbert, Henry Hadley, Ossip Gabrilovich and Eugène Ysaÿe. In 1918 Ysaÿe was engaged as permanent conductor; he resigned in 1922 and was succeeded by Fritz Reiner, who was re-engaged in 1923 for a period of four years.

The orchestra during Stokowski's time consisted of 77 men, in Kunwald's of 85 and during Ysaÿe's term it was increased to 90. Fourteen pairs of concerts were given on alternate weeks during the season; also twelve popular concerts on Sunday afternoons and four children's concerts and an average of thirty concerts on tour. The orchestra was supported by an endowment fund of \$700,000 bequeathed by Cora Dow in 1915 and by a generous guarantee fund subscribed by citizens of Cincinnati to cover the inevitable annual deficit.

The establishment in 1927 and 1928 of the Institute of Fine Arts for the purpose of administering the Cincinnati Symphony Orchestra and a number of other cultural projects was made possible by a gift of \$1,000,000 by Mr. and Mrs. Charles P. Taft and by the generosity of the Cincinnatians, who subscribed an additional \$2,500,000 as an endowment fund for these projects. During the tenure of Fritz Reiner, which lasted from 1923 to 1931, the orchestra grew in numbers. At one time it comprised more than 100 players. Eugene Goossens, who succeeded Reiner in the autumn of 1931, not only had the bad luck to come to Cincinnati at the economic depression was setting in, but also suffered from ill-health during his second and third seasons. Meanwhile the decrease in income from both endowment and attendance necessitated reducing the size of the orchestra to 84 musicians.

Although the audiences had by no means filled Emery Auditorium, the home of these concerts for more than twenty years, the orchestra moved back again into Music Hall, the original seat of its activities, in 1936. The transfer to a much larger and better hall stimulated interest to such an extent that Cincinnati held records for attendance, and still does. Goossens continued to hold the position of general music director until 1946, when he was succeeded by Thor Johnson.

**CONSERVATORY OF MUSIC.**—The Cincinnati Conservatory was started in 1867 by Clara Baur and directed by her until her death in 1912. Her niece, Bertha Baur, then carried on the institution. The instruction is arranged in five grades from juvenile to "master"

courses. The staff numbers about 75, students from 1200 to 1500. A students' orchestra has been an important feature in the training. In 1930 the Institute of Fine Arts assumed charge of the Conservatory, with Frederic Shailer Evans as director of music. Upon his retirement in 1932 he was succeeded by Herbert Witherspoon, who resigned at the end of one season. John A. Hoffmann became dean of the faculty in 1933 and director of music in 1937.

**CINDERELLA** (Rossini). See CENERENTOLA.

**CINELLI** (It.). One Italian name for the cymbals, another being *piatti*.

**CINEMA MUSIC.** See FILM MUSIC.

**CINEMA ORGAN.** The current colloquial abbreviation for Cinematograph or Kinematograph Organ. The instrument, also called the Theatre Organ<sup>1</sup>, belongs entirely to the 20th century, for it was about the year 1900 that "moving pictures", with their continual flicker, ceased to be just a "turn" at a variety entertainment. The great improvement in projection apparatus made it possible for moving pictures to become the main entertainment, and so they were housed in so-called "palaces" of their own.

At first, of course, the films were silent, but it was soon found that music helped to overcome the dull sensation occasioned by merely watching a "moving picture".<sup>2</sup>

Small bands, more often merely an instrumental trio consisting of a pianoforte, violin and violoncello, and most often a pianoforte alone supplied this music, although a much more comprehensive orchestra occasionally found its way into the larger picture theatres, especially in the U.S.A. When the idea of continuous performance took root there had to be brief periods of relief for the band, which were generally filled in with music given by a second pianist. This sounded distinctly thin, especially in comparison with a fairly complete orchestra, and the need was felt for an instrument which would afford much greater variety, both in colour and power. Hence the introduction of the organ into the cinema some little time before the first world war.

These early instruments were in reality little church organs with a slightly modified tonal scheme and voiced, so it was said, "orchestrally". Frequently they were merely little church organs tonally ruined, for there is a vast difference between attempting to voice an organ "orchestrally" and designing, building and voicing an orchestral organ.

<sup>1</sup> This name is somewhat confusing, since there are organs in theatres, especially opera-houses, which resemble church organs and are indeed used to reproduce their sounds.

<sup>2</sup> See FILM MUSIC.

After a time drums and other effects came to be added, often with very doubtful success, due largely to the comparatively low wind pressure and tubular pneumatic action employed. Nevertheless, these instruments were a great improvement on the pianoforte relief, if too much was not demanded of them.

In a few instances genuine large church or concert organs were installed, splendid in their way, but quite unsuitable for the rendering of the kind of music required. Several organ builders, however, had installed specially designed instruments, such as those in the Tower Cinema, Peckham (Norman & Beard, 1914), London Opera House (Jardine Smith, 1917) and the magnificent instrument by Compton at the Shepherds Bush Pavilion, built in 1924. In the meantime, Robert Hope-Jones having migrated to America, his "Unit Orchestra", as he not inaptly called this particular type of extension organ, was perfected there. It was closely followed in England by the admirable work of John Compton, and by several firms in America. The Wurlitzer Company adopted and developed the Hope-Jones "Unit Orchestra" under its own name. A little later the "Christie Unit Organ" came into being, manufactured by Messrs. Wm. Hill & Son and Norman & Beard.

The first Wurlitzer Hope-Jones "Unit Orchestra" installed in England was erected at the Picture House, Walsall, in 1925, the second at the Palace, Tottenham, and the third at the New Gallery Cinema, Regent Street, London. It was from here that Reginald Foort, F.R.C.O., gave the first theatre organ radio broadcast in 1926. By that time the value of the theatre organ for special solo interludes and as a box-office attraction had come to be realized.

A great deal of misconception still exists concerning the cinema organ. The present writer was once asked quite seriously how much larger a certain cinema organ was than the organ in Liverpool Cathedral. When informed that the instrument in question contained a smaller number of pipes than that of a moderately sized neighbouring church organ, the enquirer was amazed. The grand organs in our cathedrals, larger parish churches and greater concert halls possess a sublimity and a solemnity for which the cinema has little use. The theatre organ, on the other hand, is a highly specialized machine, originally designed to accompany films and to provide entertainment. It is indeed an entertainment instrument *par excellence*, containing much wonderful mechanism, and in its own way much wonderful tone. Showmanship is important, and the console and organist can generally be raised and lowered

during actual performance. Moreover, the covering of the highly decorative console is frequently made of translucent material through which changing coloured lights illuminate the structure. These, like the stops themselves, are generally controlled by stop-keys (see ORGAN, Fig. 28, top right-hand).

The average cinema organ is quite a small instrument, having only about ten extended ranks of pipes. These, however, are specially scaled, and voiced on comparatively heavy wind pressure, frequently amounting to 10 inches or more. In addition to the pipe-work, this kind of instrument is lavishly supplied with percussion stops (Glockenspiel, Drums, etc.) and also with special film noises and effects. These latter appear under the generic name of "Traps". Most theatre organs are housed in two or occasionally three main chambers. These are situated either over the arch of the proscenium, on one or both sides of the screen, or under or at the back of the stage. The latter is a most unfortunate position. In addition, further subsidiary chambers are occupied by the blower and generator for the action current and by the relay contact mechanism. The main chambers are in fact swell chambers, for one side of each consists of electro-pneumatically operated swell shutters controlled by balanced pedals at the console.

The cinema organ is a "unit" instrument, i.e. every rank of pipes is a separate unit, not tied to any particular keyboard. Further, each rank is extended upwards and often downwards, in order that it may be utilized at any desired pitch and played independently from any or all keyboards. The Salicional rank from the scheme given below, for example, contains 109 pipes instead of the normal 61 required for the 8 ft. register in the ordinary organ. In the theatre instrument it is extended downwards to 16 ft. pitch by 12 pipes and upwards three octaves by 36 pipes to complete the compass for use in 4, 2 $\frac{3}{4}$ , 2 and 1 ft. pitches. It is made available under the following names and pitches:

On the Pedal	Salicional Bass	16 ft	} One unit of 109 pipes
On the Great	Contra Salicional	16 ft.	
	Salicional	8 ft.	
	Salicet	4 ft.	
On the Accompaniment	Salicional	8 ft.	
	Salicet	4 ft.	
	Salicet Twelfth	2 $\frac{3}{4}$ ft	
On the Solo	Contra Salicional	16 ft	
	Salicional	8 ft.	
	Salicet	4 ft.	
	Salicetina	2 ft.	
	Silverette	1 ft.	

Thus from one rank of 109 pipes no fewer than twelve separate registers are obtained by extension and borrowing. The latter is called "duplexing" in America.

Just as the separate units of pipes are made available in several pitches on the several manuals and pedals, so the melodic percussions

are also made playable. For instance, the Chimes can be played from all manuals and pedal, both by first and second touch; yet there is only one set of chimes consisting of 36 tubular bells. Neither are the rhythmic percussions duplicated. The Triangle, for

example, can be sounded in a number of ways; but there is only one triangle.

The following scheme demonstrates in one instrument the advanced practice of the several greater builders. It is a little above the average in size:

## PEDAL ORGAN (26 Stops)

	<i>Fl.</i>		<i>Fl.</i>		<i>Fl.</i>
1. Acoustic Bass	32	10. Principal	4	19. Triangle (tap)	
2. Tibia Bass	16	11. Bombarde (synthetic)	32	20. Bass drum (roll)	
3. Salicional Bass	16	12. Diaphone	16	21. Diaphone	16

9. Octave tibia	4	23. Tuba clarion	4	36. Chinese block (roll)	
10. Octave viole	4	24. Clarion	4	37. Chimes	
11. Celestina	4	25. Vox Humana	4	38. Xylophone	} and Touch
12. Flute twelfth	2½	26. Orchestral oboe	4	39. Glockenspiel	
13. Salicetina	2	27. Xylophone	4	40. Triangle (tap)	
14. Tibia piccolo	2				

## ACCESSORIES

5 combination toe pistons for pedal organ stops.  
 10 double-touch thumb pistons for great organ stops.  
 10 double-touch thumb pistons for accompaniment organ stops.  
 10 double-touch thumb pistons for solo organ stops.

N.B.—First touch gives a manual combination. The second touch a suitable pedal combination All pistons are adjustable at switchboards.

3 reversible thumb pistons for pedal couplers.  
 Double-touch cancellation for stop-keys of each department.

Balanced swell pedal for chamber A.<sup>1</sup>

Balanced swell pedal for chamber B.<sup>1</sup>

Balanced stop crescendo pedal.<sup>1</sup>

Sforzando pedal (full organ effect).

5 tremulants, 1 ventral switch to each unit rank

## SPECIAL EFFECTS

(Controlled by stop-keys)

Surf — Hail — Aeroplane — Bird — Police whistle — Train whistle — Steamboat whistle — Horse's Hoofs.  
 Coloured lighting effects on console (7 stop keys)

## EFFECTS

(Controlled by thumb pistons)

Fire gong — Klaxon horn — Tambourine — Tom-tom.

## EFFECTS

(Controlled by toe pistons)

Crash cymbal — Cymbal roll — Bass drum roll (1st touch).  
 Crash cymbal (2nd touch) — Snare drum (1st touch, tap; 2nd touch roll).  
 Bass drum tap — triangle roll.

Manual compass CG to c<sup>4</sup>, 61 notes; pedal CCG to F, 30 notes.

Total number of stop-keys, 163, total number of pipes, 965 (approx).

Melodic musical percussions, 4, drums and others, 6; traps (noises), 11.

The pipe units of the above scheme may conveniently be tabulated as follows:

12 UNITS AVAILABLE AT THE PITCHES GIVEN BELOW ON

Located in Chamber	Unit Rank	Number of Pipes	Pedal	Great	Accompaniment	Solo

\* Also separately playable on second touch.

A general description of the pipes of the organ, and an explanation of the mechanism, together with illustrations, will be found under the heading ORGAN. The chief difference between the pipes of the cinema organ and those of the ordinary instrument is that in the former they are more extreme in scale. Most of the large-scaled pipes are very wide and the small-scaled pipes are often very narrow. Indeed, the Tibia Clausa is the largest in scale in the entire family of organ pipes, the 16 ft., and where present, the 32 ft. extension octaves requiring very considerable space. Frequently, too, the mouths of the large-

<sup>1</sup> With luminous indicators.

scaled pipes are cut up higher (or more widely opened) and the upper lips are often leathery, heavier wind pressure, of course, being employed.

THE ACTION.—The flexibility and rapidity of response demanded from the mechanism of the theatre organ necessitates electro-pneumatic or direct electric action. As every individual pipe or percussion, and even some "effects", have to be playable from any keyboard (often as members of stops of different pitches), every such pipe, percussion or "effect" must have its own independent action and magnet. This is accomplished by placing the pipes on "unit" windchests. A

simplified diagram of the Wurlitzer type of "unit" windchest is here shown in section :

FIG. 1

When in use the chest is charged with wind which enters the interior of the small motor bellows MB, in the direction of the arrow between the poles of the magnet, passing armature valve AV and thence along the small channel to MB. If, therefore, the circuit of the magnet is completed, this will raise armature valve AV, thereby closing the supply of wind from within motor bellows MB, and opening the port below (unlettered). The wind pressure, acting upon the outer surface only of MB, will close that motor. This, by means of the attached projection, will operate the square lever L, which will draw open valve V against spring S, thus admitting wind to the pipe above. On release of the key the electrical circuit of the magnet is broken, AV is released and so re-admits wind pressure to the interior of MB. The pressure being equalized both within and without that motor bellows, pipe valve V is closed by spring S, aided by the wind pressure. This action is extraordinarily prompt and reliable. For the larger pipes the windchest action is generally a variant of that shown for the large pedal pipe in the double-page diagram included in the main article on the ORGAN. The smallest pipes in the extreme treble are frequently controlled by direct electric action of the type illustrated in the ORGAN article, Fig. 25.

Double or second touch is an important feature in the cinema organ. By this means

many stops and effects can be brought into use by depressing the manual or pedal key beyond the normal or first touch against a strong spring. Each of these effects is controlled by its own stop-key, thus further increasing the immense number which a lavish exploitation of the extension system and wholesale borrowing of units entails.

As every pipe and every effect has its own individual magnet, any one of which can be energized from an unlimited number of electrical circuits, it necessarily follows that, to prevent short-circuiting with dire musical results, every circuit must be kept separate and distinct. This means that for every stop or effect controlled by each individual key, or other console device, an independent contact has to be provided. Even in a cinema organ of moderate size the number of contacts amounts to several thousands, and these are generally made of precious metal or rich alloy. For example, each of the sixty-one notes of the solo manual in the scheme given above would require no fewer than forty separate contacts, a total of 2440 in all. For obvious reasons it would be impossible to operate these contacts directly at the keys; in fact only a few contacts for couplers, etc., are made by the keys themselves. One main contact is connected by cable to an electric or electro-pneumatic relay apparatus which simultaneously makes or breaks every contact required by each key. The relay contacts are wired individually to multiple contact switches controlled by the stop-key action. These make or break the entire group of sixty-one contacts for each manual stop, and thirty or thirty-two for each pedal stop. From every multiple stop-contact a cable is assembled which proceeds to one or more junction boards, or "Test Blocks" as Hope-Jones not inaptly called them. Every circuit is exposed on these boards and can be tested with "live" wires and crocodile clips provided for the purpose. From these test blocks individual cables are assembled, which proceed direct to the magnets for each "unit" or "effect".

PERCUSSIONS AND TRAPS.—The tonal or melodic percussions found in the cinema organ include the following :

#### *Resonated Metal Bars*

Organ Harp.  
{ Glockenspiel.  
{ Orchestra Bells.  
Celesta.  
{ Chrysogloitt.  
{ Vibraphone.  
Cannon (Synthetic).  
Resonating Gongs (so called from the shape of the resonators).

#### *Resonated Wooden Bars*

Marimba Harp.  
Xylophone.

#### *Metal Tubes*

Chimes.

Actual Instrument  
Pianoforte (Horizontal or Upright).

Bells  
Carillon (real).  
Sleigh Bells.

The non-melodic or rhythmic percussions include:

Bass Drum. Tap and Roll.  
Snare Drum. " "  
Triangle. " "  
Cymbals. Crash and Roll.  
Chinese Block.  
Gourd.  
Tom-Tom.  
Castanets, etc.

It must not be imagined that the percussions of a cinema organ are inferior or toy instruments. On the contrary, they are often of the highest quality. The drums, cymbals and triangles are the genuine *gran cassa e piatti* and *triangolo* of the orchestra, and are usually available on the second touch of both manuals and pedals. They are often controlled by special toe pistons in addition. Competently manipulated, they give the impression of a separate instrumentalist. The general working principles underlying the mechanism of both melodic and rhythmic organ percussions, and of some of the traps and effects also, is illustrated in Fig. 2, which depicts in section the mechanism for one note of the chimes (Tubular Bells):

FIG. 2

When in use, chest CH is charged with heavy-pressure wind. This passes the primary

valve PV and enters pneumatic motor M, thus equalizing wind pressure within and without that motor. If the appropriate chimes stop is on, and the particular key is depressed, the circuit of the magnet is completed along wires WW. The back end of armature lever AL promptly rises lifting the primary valve PV and so closes the wind pressure from within motor M and opens the exhaust below PV. Wind pressure now acting on the large outer surface only of M, closes that motor, thereby opening valve V and closing exhaust valve EV above. Instantly the heavy-pressure wind enters and expands the hammer motor HM, bringing the attached hammer shaft HS up to the bumper B. The hammer shaft is really a strong flat spring which, bending slightly, allows the hammer-head to strike the tube or chime T with considerable force. The position of bumper B is so carefully adjusted that when the flat spring HS straightens the hammer head is held just clear of the tube, thus allowing it to vibrate freely. When the key is released, the circuit is broken and armature lever AL is also released. PV descends, thereby admitting wind to the interior of motor M. Pressure is again equalized within and without that motor, and valve V is closed by the wind pressure aided by the external spring S. This also opens exhaust valve EV, and the hammer motor HM is closed by the spiral spring (unlettered).

Damper action, after the style of that in the pianoforte, but on a larger scale, is fitted to certain organ percussions by some makers.

Great ingenuity is displayed in the design of the various forms of apparatus which produce off-stage effects, spoken of as "Traps". These include sounds intended to represent

Surf; Wind; Hail; Fire Alarm; Siren; Electric Bell (real); Bird Call; Horse's Hoofs; Various Whistles; Aeroplane, Crockery Smash, etc., etc.

The last-named is a cleverly devised electro-pneumatic crane which literally drops metal plates onto a metal surface below. It is amazingly realistic in effect. Since the arrival of the "talkies", however, these traps have been little used.

Purely electrical tone generators have been successfully introduced into a number of cinema organs to produce chimes and a variety of solo effects, and to amplify the vibrations of single violin or violoncello strings. The former has been accomplished by the Compton "Electrone" in England, and the latter by a French invention going under the name of "Radiotone".

Electrical amplification of the tones of the cinema organ has been used very effectively in many acoustically difficult buildings. A complete small electrophonic cinema organ has also

been produced by the Compton Co under the title "Theatrone". The Wurlitzer Co. are also engaged upon an electrophonic theatre organ.

The larger cinema organs, of which quite a number exist, contain much really fine legitimate organ tone, and it is not the makers' fault if this is all too rarely used. By judicious registration, in the hands of a competent organist, they are quite capable of rendering the great organ classics, or even of being used for accompanying a cathedral service, but the player would have to be an artist of understanding. In a few instances actual 32 ft. pitch is included. Several of the larger Compton installations possess Polyphone Basses going down to EEEE, and there are one or two 32 ft. Diaphones in Wurlitzer and Compton theatre organs. The full-length 32 ft. reed in the Christie instrument at the Odeon, Marble Arch, London, should also be mentioned. Again it may be surprising to find occasionally an ethereal Unda Maris which, owing to the excellence of the swell shutters can be "faded out" until it is the merest whisper, only just audible. The "unit" system provides a vast array of stop-keys. These are not intended for mere show, though unquestionably valuable for showmanship, but they render the console somewhat bewildering to the ordinary church organist.

The cinema organ never seems to have become as popular on the Continent as in America and England. A few German firms have manufactured it, also one or two French and Dutch organ builders. Several of the greater organ builders in America have built theatre organs, some on more orthodox lines.

Though it is not the largest unit organ, the one built by the Kimball Co. of Chicago in the Roxy Theatre, New York, is perhaps the most remarkable. This palatial edifice has been called the "Cathedral of Picture Theatres". As originally planned, it was to have five consoles, to be played by a quintet of organists! Before erection, however, the number of consoles was reduced to three. Of these the central one is the master console. It comprises five manuals and pedals and over three hundred stop-keys. The two outer consoles are each of three manuals and pedals and chiefly control the units representing the brass and woodwind families respectively. Thus the three organists have at their command eleven manuals and three pedal claviars. Unfortunately the great artistic possibilities of this idea were never fully explored, partly perhaps owing to the perfection attained by the "talkies".<sup>1</sup>

THE MUSIC OF THE CINEMA ORGAN.—It is indeed lamentable that the music demanded from the cinema organist by managements is only too often cheap and tawdry. Frequently it is associated with songs of a sickly sentimentality that has fostered an abuse of the tremulant and a paucity of registration dominated by the Vox Humana and Tibia, and other meretricious effects. Managers have a habit of insisting that this is the kind of thing the public demands, forgetting or choosing to overlook that picture-going audiences do not know what they want, but accept what they are given and imagine it must be good if it is played to so large a public. Many cinema organists, however, take their work seriously and would gladly give finer and more worthy music, to which their instruments would readily and adequately respond. With the advent of the "talkies" a great deal of improvisation, sometimes of a very high order, became unnecessary.

Organs of the cinema type are often used for concert performance and broadcasting, in which case they are called Theatre Organs. Skilled players have developed a special type of virtuosity, combined with a great deal of showmanship. This has its deplorable side, but tribute should be paid to Firmen Swinnen and others in America; to Reginald Foort and Quentin Maclean in England, to the latter's followers, such as Norman Cocker, Kevin Buckley and a number of others. With the vast audiences of the cinema and the still greater company of listeners over the radio, the 20th-century secular organ offers truly great opportunities. The pity is that they are so often missed. R. W.

CINTI-DAMOREAU, Laure (Cintie Montalant) (b. Paris, 6 Feb. 1801; d. Paris, 25 Feb. 1863).

French soprano singer and composer. She was admitted into a vocal class at the Paris Conservatoire on 28 Nov. 1808. Engaged at the Théâtre-Italien in secondary parts at the age of eighteen, Mlle Cinti, as she now called

<sup>1</sup> A complete specification of this remarkable instrument, together with photographs of this and other important installations, will be found in 'The Cinema and Theatre Organ' (see Bibl.) by the present writer, as well as a full description of the pipes, percussions, traps and mechanism, illustrated by numerous diagrams.

herself, made her first appearance as Cherubino in Mozart's 'Figaro'. She played the part with great charm and grace, but it was not till 1821 that she attempted principal parts. In 1822 she was engaged by Ebers for the London opera, at a salary of £500. She created little sensation, however, and returned to Paris, where she soon began to take a higher place. The arrival of Rossini was a fortunate event for her. She made her début at the Opéra on 24 Feb. 1826, in Spontini's 'Fernand Cortez', and her success was complete. Rossini wrote for her the principal female parts in the 'Siège de Corinthe' and 'Moïse', which contributed to her reputation. In consequence, however, of some misunderstanding with the management, Cinti left the theatre abruptly in 1827, and went to Brussels, where she excited the greatest enthusiasm. Concessions having been made, she returned to Paris; but, before leaving Brussels, she was married to Damoreau, an unsuccessful actor.

In Paris Cinti-Damoreau remained at the Opéra till 1835, when she joined the Opéra-Comique (1836-42). Auber wrote for her such works as the 'Domino noir', 'L'Ambassadrice' and 'Zanetta'. She retired from the stage in 1843, sang again in London in that year, and made a tour with the violinist Artôt in the U.S.A., also in 1843, then appeared at The Hague, at Ghent in 1845, in St. Petersburg, and in Brussels in 1846. In 1834 she had been appointed professor of singing at the Conservatoire in Paris; this place she resigned in 1856 and retired to Chantilly.

Cinti-Damoreau published an 'Album de romances' and a few separate pieces. She also wrote a 'Méthode de chant', dedicated to her pupils. Her son died at an early age, after distinguishing himself by some vocal compositions; and her daughter, a singer, married J. B. Weckerlin. J. M.

**CIPHERING.** The audible escape of wind from organ pipes due to a fault in or damage to the mechanism.

**CIPRANDI, Ercole** (b. ?, c. 1738; d. ?, after 1790).

Italian tenor singer. Nothing is known of his Italian career before his first appearance in London on 9 Nov. 1754, when he sang Danaos in the 'Ipermestra' by Hasse and Lampugnani at the King's Theatre. He then appeared in several other parts until Apr. 1755, and returned nine years later, first appearing as Massimo in the pasticcio of 'Ezio' on 24 Nov. 1764. He sang during that season until Apr. 1765 and again in that of Nov. 1765 to May 1766. Burney found him at Milan in 1770, as fine a singer as ever.

J. M., adds. A. L.

**CIPRIANI, Lorenzo** (b. ?; d. ?)

Italian 18th-century singer. Nothing is known of his life in Italy. He made his first appearance as a *buffo* singer in London, at the Pantheon, on 22 Sept. 1791, as Don Alfonso Scoglio in Guglielmi's 'La bella pescatrice'. A capital sketch-portrait of him in that part was drawn by P. Violet and engraved by C. Guisan, a pupil of Bartolozzi's. On 16 June following he played Valerio in Paisiello's 'La locanda'. This was revived in Feb. 1792, and he had sung two other parts in between. After his appearance in the same composer's 'La discordia fortunata' on 31 Mar. 1792 he left London.

**CIRCULAR CANON.** A canon whose theme ends in a key a semitone above that in which it begins, so that after twelve repetitions it has passed through all the major or minor keys.

**CIRILLO (Cirilli), Francesco** (b. Grumo Nevano nr. Naples, 4 Feb. 1623; d. ?).

Italian singer and composer. At the age of about twelve he was sent to study music in Rome, perhaps under Virgilio Mazzocchi, *maestro di cappella* at St. Peter's. In 1646 there was founded in Rome a company called the Accademia dei Febi Armonici, which enjoyed the particular protection and favour of the Spanish ambassador, the Count of Ognatte. Cirillo was one of the original members of this company and was associated with it as singer and composer all his life.

The Count of Ognatte was sent to Naples to suppress Masaniello's rising in 1648 and remained there as viceroy. He was very much interested in music and in 1651 ordered the reconstruction of the partially destroyed Teatro San Bartolomeo and also the conversion into a theatre of a building in the gardens of the royal palace. The Febi Armonici, including Cirillo, were then called from Rome to introduce opera to the Neapolitans. A version of Monteverdi's 'L'incoronazione di Poppea', with alterations and additions probably by Cirillo, was the first opera to be heard in the city. Among other works produced in the following years 'Arianna' in 1653 may have been by Cirillo himself. When the Count of Ognatte was replaced as viceroy towards the end of 1653 the Febi Armonici lost their chief patron among the nobility and decided to transfer their activities to the public stage of the Teatro San Bartolomeo. 'Orontea, regina d'Egitto' (libretto by Cicognini, originally set

by Cesti in 1649), performed in 1654, is the earliest opera written for Naples of which the score is extant. This score (in the library of the Naples Conservatory) bears Cirillo's name, the libretto states that the work had been "arricchita di nuova musica da Francesco Cirillo"; it remains dubious whether some of Cesti's music was not retained.

Cirillo was married in June 1654 to a Roman girl of fifteen, Caterina Senardi. A new opera by him, 'Il ratto d' Elena' (libretto by Gennaro Paoletta, music lost), was performed by the Febi Armonici at the Teatro San Bartolomeo in 1655. The composer survived the terrible plague epidemic at Naples in 1656 and in 1662 revised and added to Cavalli's 'Alessandro vincitor di se stesso' and Ferrari's 'Principe giardiniere', when those works were revived at the royal palace. Scores of Cirillo's versions of both operas survive in the library of the Naples Conservatory.

The Febi Armonici reappeared at Naples in 1668 and performed a new opera, 'L' amor della patria', by an unknown composer, who may have been Cirillo. F. W. (11).

**CIRO IN BABILONIA** (Opera). See ROSSINI.

**CIRO RICONOSCIUTO** (Opera). See METASTASIO.

**CIRRI, Giovanni Battista** (b. Forlì, c. 1740; d. ?).

Italian composer. He was the son of Ignazio Cirri, *maestro di cappella* at Forlì. Little is known about his life except that he lived in England for a long time and was appointed music master to the Duke of Gloucester, brother of George III. He returned to Italy some time before his death.

Cirri's works include cello Concertos (Op. 9), string Quartets (Op. 17), Quartets for flute, 2 violins and continuo (Op. 10), Quartets for 2 violins, cello and continuo (Op. 13), Trio Sonatas (Op. 4), string Trios (Op. 18), Duets for 2 cellos (Op. 8), cello Sonatas (Opp. 3, 5, 7, 11, 15) and 12 organ Sonatas (Op. 1). E. B.

**CIRULLO, Giovanni Antonio** (b. ?; d. Andria, ?).

Italian 16th-17th-century composer. In 1607-9 he lived at Andria. He wrote 6 books of madrigals, and 3 madrigals appeared in Phalèse's 'Il helicone' in 1616.

E. v. d. s.

**CIS** (Ger.). The German term for C#, that for Cb being Ccs. G.

**CISNEROS, Eleonora de** (born Broadfoot) (b. New York, 1 Nov. 1878).

American mezzo-soprano singer. She studied in Italy and Paris after appearing as

one of the maidens in 'Die Walkure' at the Metropolitan Opera House, New York. Her successful career in Italy started at the Teatro Regio Ducal, Turin, in 1902, with Amneris, her best part. Possessing a voice of unusual power and compass, and a striking stage appearance, she excelled especially in modern heroic parts, ranging from Brunnhilde, Ortrud, Venus and Delilah to Herodias and Clytemnestra. The last-named she sustained in the first Italian performance of Strauss's 'Elektra' at the Teatro alla Scala, Milan, in 1909, and she similarly created there the part of the Countess in Tchaikovsky's 'Queen of Spades' in 1906. Altogether she sang at sixteen opera-houses in Italy in about seven years, besides taking part in the Verdi centenary at Parma.

Cisneros first sang in London, at Covent Garden, in 1904 during the autumn season conducted by Campanini, under whom she also appeared at the Manhattan Opera House, New York, in 1906-8, earning emphatic success in various parts. Subsequently she was heard in London for several (chiefly autumn) seasons, besides touring extensively in Europe and visiting Australia with the Melba Opera Company in 1911. Married in Havana in 1901, she brought her active career to a close in 1916. H. K.

**CITHER**. See CITTERN.

**CITHER VIOL**. See VIOLA D' AMORE.

**CITKOWITZ, Israel** (b. Russia, 6 Feb. 1909).

American composer of Russian origin. He was taken to the U.S.A. as an infant and became an American citizen. He studied music with Aaron Copland and Roger Sessions in New York, and from 1927 to 1931 with Nadia Boulanger in Paris. His string Quartet was performed at the first Festival of Contemporary American Music at Yaddo (Saratoga Springs, N.Y.) in 1932. Of several articles he contributed to musical periodicals one is probably the first essay on Heinrich Schenker to appear in English ('Modern Music', Nov. 1933). In 1939 he was appointed teacher of counterpoint and composition at the Dalcroze School of Music in New York.

The following are among Citkowitz's works:

#### UNACCOMPANIED CHORAL MUSIC

'The Lamb' (1936).  
'Songs of Protest' (1936).

#### CHAMBER MUSIC

String Quartet (1932).  
'Andante tranquillo' for strg 4tet (1932).  
Song Cycle (Blake) for voice & strg. 4tet (1934).

#### PIANOFORTE MUSIC

Passacaglia (1927).  
Sonatina (1929).

#### SONGS

Song Cycle (James Joyce) (1932).  
Song Cycle (Robert Frost) (1936).

N. B., adds.

**CITOLE.** A medieval ancestor of the Cittern, fig-shaped in outline, with a flat back and four wire strings. It was usually played with a plectrum. Several literary sources, both English and continental, mention it in the 14th and 15th centuries and it appears frequently in carvings and paintings of this period. No example of the instrument or of its music has survived. R. T. D.

See also Cittern.

**CITTERN** (Fr. *cistre*, *sistre*; Ger. *Cither*; Ital. *cit[e]ra*). A fig-shaped instrument of the guitar family, with a flat back sloping towards the belly and, most commonly, four pairs of wire strings tuned *b g d' e'* (France and England) or *a g d' e'* (Italy). The first two courses were of brass, the remainder of steel. Its strings were plucked with the fingers, though for a short time in the 17th century there seems to have been a fashion for using a plectrum or quill instead. Its music was written in lute tablature.

Descended from the medieval Citole, it was very popular in western Europe from the end of the 15th to the early 18th century. The English Guitar continued the cittern's general shape, though not its tuning, into the early 19th century. Its popularity was no doubt due to its cheapness, ease of playing and convenient size. Tinctoris describes its characteristic re-entrant tuning and wire strings as early as 1480 or so. Its earliest surviving music, a handful of pieces in the Mulliner Virginal Book (B.M., Add. MS 30513) and some continental printed books, dates from 1550 to 1560. During the next 100 years many tutors and books of music for the cittern were published, all now of great rarity. In the 16th century various attempts were made in Italy and elsewhere at constructing archcitterns with five to seven courses of strings over the fingerboard and six or seven diapasons, but none was wholly successful, and very little music exists. The Hamburg *Cithrinchen*, about half the size of a normal cittern, was an equally unsuccessful experiment. Descriptions and illustrations of citterns will be found in Praetorius and Mersenne. R. T. D.

Bibl.—DART, R. T., 'The Cittern and its English Music' (*Galpin Society Journal*, I).

See also Citole. English Guitar.

**CITY GLEE CLUB.** Founded in 1853 in the City of London as successor to the much older Civil Club, which dated back to the reign of Charles II, this club remains one of the most active of the glee-singing institutions. Its original meeting-place was the New Corn Exchange Hotel (Mark Lane), whence it removed to the London Tavern (Fenchurch Street) in 1878, remaining there until its destruction by enemy action in the second world war. The Club's present headquarters are at St. Ermin's Hotel, Caxton Street, West-

minster. Monthly meetings for the singing of glees, madrigals, etc., are held during the winter months, the singers being for the most part members of the choirs of Westminster Abbey, St. Paul's Cathedral and the Chapel Royal. The membership of the club is limited to 200 and the club possesses a valuable library of music and has assiduously maintained the special character of its musical meetings in the pleasant atmosphere of the smoking-concert. A president is elected annually with other officers, all honorary, the present secretary being B. N. Purdie. The Lord Mayor of London is the honorary president. H. C. C., adds.

**CITY MUSIC SOCIETY.** A musical association formed in London which began its activities with a series of lunch-time concerts at the Guildhall School of Music in the autumn of 1942; and thereafter, despite all war-time difficulties, midday recitals were given each season. Mainly but not exclusively patronized by City workers they proved so popular that they were maintained after the war and increased in number, so that weekly concerts now take place throughout most of the year. Established musicians and newcomers, chamber-music teams and soloists are heard in fair proportion. Since Oct. 1947 the recitals have been given at the Bishopsgate Institute, where facilities for obtaining light refreshments are provided. Financial assistance has been received from private persons and, for the last few years, from the City of London Corporation.

In 1948 the Worshipful Company of Goldsmiths invited the Society to organize a series of chamber concerts and recitals to be held in the Company's Livery Hall and generously guaranteed a proportion of the expenses. This series, too, was so widely appreciated that the Goldsmiths' generosity and hospitality were continued, and the annual series of three spring and three autumn concerts in the beautiful Goldsmith's Hall is now a regular and exceptionally delightful feature of London's musical life.

The Society encourages private music-making and makes arrangements for its members to meet for practice. Many people have assisted in the work of this thriving Society, but its success is primarily due to the initiative and enthusiasm of its Chairman, Ivan Sutton. J. R.

**CLABON, Christophorus.** See KLABON, KRZYSTOF.

**CLAGGET, Charles** (b. Waterford, 1740, d. ? c. 1795).

Irish violinist and inventor. He is said to

have been leader of the orchestra at the theatre in Smock Alley, Dublin, from 1762 to 1764, and at Crow Street Theatre Royal there in 1764-68.<sup>1</sup> He conducted at Liverpool (1771-1773) and at Manchester (1773-75). Going to London in 1776, he devoted his attention to the improvement of various musical instruments. In Dec. 1776 he took out a patent for "Improvements on the violin and other instruments played on finger boards", which he asserted rendered it "almost impossible to stop or play out of tune". In Aug. 1788 he took out another patent for "Methods of constructing and tuning musical instruments which will be perfect in their kind and much easier to be performed on than any hitherto discovered". Among his inventions were the following:

(1) A new instrument called the Teliochordon, in form like a pianoforte, but capable of being put much better in tune, for the grand pianoforte or harpsichord divide every octave only into thirteen<sup>2</sup> parts or semitones, whereas on this instrument every octave can be divided into thirty-nine parts or gradations of sound, for any finger-key will, at the pleasure of the performer, produce three different degrees of intonation.

He represented that by this instrument all thirds and fifths could be highly improved, and what is called the "woulfe" entirely done away with.

(2) A method of uniting two trumpets or horns, one in D and the other in E $\flat$ , so that the mouthpiece might be applied to either instantaneously, thereby getting the advantage of a complete chromatic scale.

(3) Tuning-forks with balls or weights for the more easy tuning of musical instruments.

(4) A new instrument composed of a proper number of these tuning-forks or of single prongs or rods of metal fixed on a standing board or box and put in vibration by finger-keys. Or a celestina stop made by an endless file<sup>3</sup> might be applied, producing the sounds on these forks or prongs as it does on the strings.

(5) Tuning-keys of a form which rendered them steadier and easier to use than others.

(6) A better method of fitting the soundpost of a violin to its place.

Clagget was also the inventor of the "Aiuton, or, Ever-tuned Organ, an instrument without pipes, strings, glasses or bells, which will never require to be retuned in any climate". Of this instrument and others he published a descriptive account under the title of 'Musical Phenomena'. He kept his collection of instruments at his house in Greek Street, Soho, which he called "The Musical Museum". About 1791 he exhibited them publicly at the Hanover Square Rooms. On 31 Oct. 1793 Clagget gave what he termed an "Attic Concert" at the King's Arms Tavern, Cornhill, several of the pieces being played on or accompanied by the various instruments invented or improved by him. The performance was interspersed with 'A Discourse on Musick', the object of which was professedly to prove the absolute necessity of refining the harmony of keyed instruments and to insist

that Clagget's inventions had effected that object. In the course of this address a letter from Haydn to Clagget, dated 1792, was read, in which the great composer expressed his full approbation of Clagget's improvements on the pianoforte and harpsichord. The 'Discourse' was published with the word-book of the concert, and to it was prefixed a well-engraved portrait of Clagget, who is described beneath it as "Harmonizer of Musical Instruments", etc. etc. He is represented with a violin bow in his right hand, and in the left one of the sounding-bars of his "Aiuton".

BIBL.—LAWRENCE, W. J., 'A Forgotten Irish Musical Genius' ('The Irish Rosary', Vol. XXIV, 1920).

CLAGGET, Walter (b. ? Waterford, c. 1741; d. ? 1798).

Irish composer, ? brother of the preceding. The two Claggets appear to have been in Edinburgh in their teens, as may be gathered from the following work: 'Six Duets for Two Violins, intended to Improve and Entertain Practitioners, by Messrs. Clagget' (Edinburgh, c. 1760). Walter possibly left for London shortly after this, for his Op. 2 is entitled 'Six Solos and Six Scots Airs with Variations for the Violin or Violoncello with a Thorough Bass for the Harpsichord, London, Printed for the Author' (c. 1763). Then there is a "new song" from his pen entitled 'If Fortune when smiling could make us amends' (London, J[ohn] P[reston], c. 1780), and about ten years later there appeared 'A Set of Twenty-four Duets for two German Flutes, Oboes, or Violins, made from the most celebrated airs in the English Operas, and Haydn's Works . . .' (London, Preston & Son, c. 1790). Meanwhile he had joined the Royal Society of Musicians, his application being dated Feb. 1784. In this he tells us that he had followed the profession of music since he was seven years of age and was then forty-two. He played "on a great variety of instruments, viz. the Violin, Violoncello, Tennon, Double Bass, Oboe, German Flute, Clarinet, etc.". He was sponsored by Robert Munro. It is also interesting to learn from this application for membership that he played at Covent Garden Theatre during the winter at a weekly salary of £2 : 0 : 0, and in the summer at "the theatre in the Haymarket" for £2 : 8 : 0 a week. The last to be heard of him is in another Scottish item — he may have settled in Edinburgh again — entitled 'A New Medley Overture Consisting entirely of Scots Tunes and Thirty Six of the most Favorite Scots Airs . . . all With Variations for two Violins, or two German flutes and a Violoncello: also Adapted for the Piano Forte . . . Edinburgh, Printed for the Author' (c. 1795).

H. G. F.

<sup>1</sup> It is possible that these appointments have been wrongly connected with Charles Clagget and may have been held by Walter Clagget. <sup>2</sup> Actually twelve.

In May 1767 his comic opera 'The Power

of Sympathy, or The Innocent Lovers' was given at Dublin, and in Dec. 1770 he wrote new accompaniments for a production of Garrick's 'Cymon' there. Clagget also wrote music for an operatic farce, 'The Cabinet of Fancy, or Evening's Exhibition' (London, Haymarket Theatre, 1780), and for a pantomime, 'The Dumb Cake, or The Regions of Fancy' (London, Covent Garden, 1787).

**CLAPISSON, Antoine Louis** (b. Naples, 15 Sept. 1808; d. Paris, 19 Mar. 1866).

French violinist and composer. He was violinist in the Paris Opéra in 1832-38 before he became a composer, was appointed professor of harmony at the Conservatoire and published a great many romances and songs that exhibit an easy vein of melody. He was made a Chevalier of the Legion of Honour in 1847 and a member of the Institut in 1854. The collection of old musical instruments made by him he sold to the French government in 1861, and it is now included in the museum of the Conservatoire. But Annibale dei Rossi's splendid spinet, ornamented with precious stones, was bought from Clapisson for the Victoria and Albert Museum in London.

The following is a list of Clapisson's operas:

- \* *La Figurante, ou L'Amour et la danse* (lib. by Scribe and Dupin, 3 acts), Paris<sup>1</sup>, Opéra-Comique, 24 Aug. 1838.
- \* *La Symphonie, ou Maître Albert* (Saint-Georges, 1 act), Opéra-Comique, 12 Oct. 1839.
- \* *La Perruche* (Dupin and Dumanoir, 1 act), Opéra-Comique, 28 Apr. 1840.
- \* *Le Pendu* (Courcy and Carmouche, 1 act), Opéra-Comique, 25 Mar. 1841.
- \* *Frère et mari* (Polak and Humbert, 1 act), Opéra-Comique, 7 July 1841.
- \* *Le Code noir* (Scribe, 3 acts), Opéra-Comique, 9 June 1842.
- \* *Les Bergers trumeaux* (Dupeuty and Courcy, 1 act), Opéra-Comique, 10 Feb. 1845.
- \* *Gibby la cornemuse* (Leuven and Brunswick, 3 acts), Opéra-Comique, 19 Nov. 1846.

<sup>1</sup> All productions in Paris, unless otherwise mentioned.

- \* *Don Quixotte et Sancho* (after Cervantes, 1 act), Opéra-Comique, 11 Dec. 1847.
- \* *Jeanne la folle* (Scribe, 5 acts), Opéra, 6 Nov. 1848.
- \* *La Statue équestre*, 1850, not performed.
- \* *Les Mystères d'Udolphe* (Scribe and Delavigne, 3 acts), Opéra-Comique, 4 Nov. 1852.
- \* *La Promise* (Leuven and Brunswick, 3 acts), Théâtre-Lyrique, 16 Mar. 1854.
- \* *Dans les vignes* (Beauplan and Brunswick, 1 act), Théâtre-Lyrique, 31 Dec. 1854.
- \* *Le Coffret de Saint Domingue* (Dechamps, 1 act), Salle Herz, 1855.
- \* *Les Amoureux de Perrette* (1 act), Baden-Baden, 1855.
- \* *La Fanchonnette* (Saint-Georges and Leuven, 3 acts), Théâtre-Lyrique, 1 Mar. 1856.
- \* *Le Sylphe* (Saint-Georges, 2 acts), Opéra-Comique, 7 Aug. (not Nov.) 1856.
- \* *Margot* (Saint-Georges and Leuven, 3 acts), Théâtre-Lyrique, 5 Nov. 1857.
- \* *Les Trois Nicolas* (Scribe, Lopez and Luneu, 3 acts), Opéra-Comique, 16 Dec. 1858.
- \* *Madame Grégoire* (Scribe and Bousseaux, 3 acts), Théâtre-Lyrique, 8 Feb. 1861.
- \* *La Poularde de Caux* (Leuven and Prilleux, 1 act with Gevaert, Gautier, Poise, Bazille & Mangeant), Palais-Royal, 17 May 1861.

The plots are generally poor, and many of the pieces were unsuccessful. In fact 'La Perruche', 'La Promise' and 'La Fanchonnette' are the only three which gained more than the usual amount of public favour. There is, however, much good music in 'Gibby', 'Le Code noir' and several others.

G. C., adds. A. L.

**CLAPP, Philip Greeley** (b. Boston, Mass., 4 Aug. 1888).

American composer and educationist. Both his parents were enthusiastic music-lovers and gave great care to their son's musical education. He was taught the pianoforte and theory by J. P. Marshall, the violin by Jacques Hoffmann and continued his studies at Harvard University, receiving the B.A. in 1908 *magna cum laude*, and a year later the M.A. The following two years Clapp spent in Europe as Sheldon Fellow of Harvard University, working mainly at the British Museum in London and at Stuttgart, where he studied composition with Schillings. On his return he acquired the degree of Ph.D. from Harvard with a thesis on 'Modern Tendencies in Musical Form'. He had the privilege, while Karl Muck was conducting the Boston Symphony Orchestra, of receiving constant advice from Muck with regard to composition, interpretation and musical pedagogy. During that time he held various teaching posts at Harvard and other institutions. In 1915-19 he was director of music at Dartmouth College (Mass.) with leave of absence for service as band leader with the 73rd Artillery, A.E.F. in France during the first world war. In 1919 he became professor and head of the music department at the State University of Iowa at Iowa City, which position he still holds. He has greatly contributed to the cultural life of this city. Under his direction the University symphony orchestra and chorus have given many festival productions of unknown compositions. In recognition of this pioneer work Clapp was awarded

in 1940 the Bruckner Medal of Honour and in 1942 the Mahler Medal of Honour by the Bruckner Society of America.

Clapp's musical style is not ultra-modern; he himself suggests its description as "eclectic". His works include an opera on Shakespeare's 'The Taming of the Shrew'; twelve symphonies (No. 6 'Golden Gate Symphony'; No. 9 'The Pioneers', commissioned for the Chicago Century of Progress Exposition; No. 10 'Heroic Symphony'; No. 12 'The Rime of the Ancient Mariner'); four symphonic poems; a Concerto for two pfs. and orch.; 'Chant of Darkness', a cantata for chorus and orch. to words by Helen Keller; various chamber works; choral compositions, and songs. K. G.

**CLARI, Giovanni (Carlo Maria)** (b. Pisa, 27 Sept. 1677; d. Pisa, 16 May 1754).

Italian composer. He studied music at Bologna under Colonna, of whom he may be considered to have been one of the best pupils. He was *maestro di cappella* at Pistoia about 1712, at Bologna in 1720 and at Pisa in 1736. During the 18th century he enjoyed a considerable vogue in England, as the numerous manuscripts there testify. A selection of his vocal duets and trios with continuo was published in London between 1740 and 1747, and a similar selection with pianoforte accompaniment by Mirecki was published by Carli of Paris in 1823. But the first edition of the duets was published by Silvani of Bologna in 1720. These compositions are also to be found in manuscripts, of which one volume, 'Duetti e terzetti a diverse voci', once the property of Charles Wesley, is now in the Euing Collection, Glasgow University. It has a fly-leaf inscription testifying to the composer's fame:

Alanseli, and all the Antient singers had much veneration for these Chamber Duettes and Pacchioroti [sic] had great pleasure in Performing them. The celebrated Sacchini taught them to His first pupils among whom was Lady Clarges. Many are in the manner of HANDEL's Italian Duettes, and many of them equal though nothing can exceed that eminent Composer.

Several of the themes were in fact used by Handel, and a selection from 'Theodora' is published as Supplement No. 4 to the Chrysander edition of Handel's works. Charles Avison's manuscript copy 'Divine Musick del Clari' in the Music School, Oxford, contains some of the duets with sacred texts in English substituted for the Italian secular words.

These duets and trios are written in the form habitual at the time in Italian secular cantatas, the different sections connected by ritornellos for the continuo, and are fugal in character. Clari's style is noted by an abundant use

of chromatic passages and the juxtaposition of major and minor thirds. Avison's opinion of these compositions is recorded in a manuscript note in a volume in the Fitzwilliam Museum, Cambridge: "If pleasing Subjects — pathetic Airs — and the Truth of Harmony and modulation characterise a good music, the Compositions of Clari stand fair for a lasting Reputation".

Of his larger works there is a manuscript 'Stabat Mater' in C minor for 4 voices and strings both in the B.M. and in the Fitzwilliam Museum, Cambridge. The orchestral parts show considerable sensibility in the portrayal of the words. There are Masses in D minor for 4 and 5 voices and strings in the Fitzwilliam, and the B.M. has the Kyrie and Gloria, dated Pistoia 1725, of the one for 4 voices. Novello's 'Fitzwilliam Music' contains 23 compositions by Clari from various sacred works. There is a fuller catalogue of his works in Q.-L. His only opera, 'Il savio delirante', was written for Bologna, 1695. He wrote 11 oratorios after 1715, mostly for Pistoia. S. T. W. (ii).

**CLARI, OR THE MAID OF MILAN.** Opera in 3 acts by Bishop. Libretto by John Howard Payne, based on Marmontel's story 'Laurette'. Produced London, Covent Garden Theatre, 8 May 1823. 1st perf. abroad, New York, 12 Nov. 1823. The piece contains the song 'Home, sweet home', treated in various ways as a kind of "theme song".

**CLARIBEL.** See BARNARD, CHARLOTTE.

**CLARIBEL.**

**CLARIBEL FLUTE.** See ORGAN STOPS.

**CLARINET** (1) (Fr. *clarinette*; Ger. *Klarinette*; Ital. *clarinetto*). A woodwind instrument played with a single beating-reed made in many sizes and tonalities.

The following description defines the scheme on which all clarinets are based; but the length of the tenor, bass and contrabass clarinets, treated separately at the end of this article, make certain modifications of the mechanism necessary. Some of these are noticed as they occur.

**COMPONENT PARTS.**—In essentials the clarinet consists of a cylindrical tube terminating at the upper end in a mouthpiece, at the lower in a bell. For convenience it is usually made in five separate parts — mouthpiece, barrel or tuning-socket, upper or left-hand joint, lower or right-hand joint and bell.<sup>1</sup> The various parts are fitted together with tenon-and-socket joints, the tenons being corked to ensure an airtight connection. Occasionally upper and lower joints are made in one piece, which in

<sup>1</sup> The conventional position of the hands, left above right, became fixed as soon as more than two keys were fitted. The oboe carried duplicate E $\flat$  keys and double touchpiece to the central C key well into the 18th century. "Left-handed" clarinets with the mechanism reversed are occasionally found.

some cases facilitates the application of the mechanism and allows material of uniform grain or texture to be employed. In tenor and bass clarinets the barrel is replaced by a curved metal crook. Fitted together an orchestral clarinet in B $\flat$  measures 26 ins.

To examine the components more closely: the mouthpiece is chamfered on the upper side to go conveniently between the player's lips, while the underside is flat and slotted to admit air into the resonator. Over the slot lies the reed secured by a metal ligature. The reed is a light strip of cane (*Arundo donax*) some 2 $\frac{1}{2}$  ins. in length thinned down towards the tip. It lies upon the player's underlip and is given freedom to vibrate by a gradual curving away of the flat table towards the end of the mouthpiece. The length and exact formation of the curve and the size of the chink between the end of the reed and the tip of the mouthpiece are of paramount importance and have no small influence on quality of tone and accuracy of intonation. To preserve correctness of curve and facing, mouthpieces are now usually made of ebonite. Formerly cocus or a similar hardwood was employed. It is still not uncommon among German players, many of whom prefer twine to the metal ligature for securing the reed. Plexi-glass or plastics may be a serious rival to ebonite, but crystal and ivory have nothing but their appearance to recommend them.

The upper and lower joints carry the tone-holes and mechanism. The number of holes varies according to the system of fingering. At least 20 are needed for a true chromatic scale. Seven of these are covered directly by the fingers; the others are controlled by key-work. Tone-holes are often deeply undercut at their junction with the bore for purposes of tuning. The practice if used with moderation is helpful to flexibility; but if carried to excess it is damaging to crispness of tone. The mechanism is fashioned from German silver, highly polished or silver-plated, less frequently of silver. The keys, formerly forged by hand from wire, now forged or cast in dies, are mounted between pillars screwed into the wood and kept open or closed by flat tapering springs or needle-springs of steel. Extensive use is made of rod-axles, rods pivoted at the ends on point-screws, which have keys attached to them at right angles, a practice borrowed from the flute.<sup>1</sup> This gives a quick responsive action.

The nature, dimensions and minute accuracy of the bore within the tube are of vital importance. This is the heart of the instrument. To say it is cylindrical is a convenient general statement, but not entirely accurate. It has not, of course, the conicity of oboe or

bassoon; on the other hand it diverges more from the cylindrical than does the flute. It may be said that the clarinet is seldom cylindrical for more than two thirds of its total length. In many modern instruments the mouthpiece is slightly conical; in all the lower end of the right-hand joint is coned out considerably to meet the flared bell. An examination of a number of instruments gives 14.85 millimetres (.585 ins.) as a mean average for the cylindrical portions of clarinets in B $\flat$  and A, broadened out to 60 mm. (2.362 ins.) at the end of the bell. Reduction in the diameter of the bore lowers the pitch and favours the harmonics at the expense of the fundamental, while enlargement sharpens the whole and, if carried to excess, renders certain higher harmonics almost unplayable.

Preservation of the dimensions of the bore in their original accuracy is essential to correctness of intonation; the material of which the tube is made is thus plainly of importance, and for other reasons, too — good tone and the convenience of the player. Walls of too soft or of too dense a wood destroy all brilliancy of tone; much of the player's energy will be dissipated in maintaining its intensity or in keeping it up to pitch. Boxwood, Jamaican or Cuban cocus, ebony have all been employed, but the many varieties of African blackwood (*Dalbergia melanoxylon*; Fr. *ébène*) or grenadilla are now preferred. Ebonite had a considerable vogue near the end of the 19th century, especially in England, but is now reserved for instruments exposed to extremes of temperature. Metal has never found lasting favour. Brass clarinets introduced by Halary of Paris in 1818, revived by Sax of Paris and Distin of London and by some Viennese makers in the 1840s and 1850s, have recently made another bid for favour, but have again been rejected by the serious musician. Metal and ebonite will go just so far and no farther in expressiveness. Flexibility and building-up of tone can be obtained more easily from wood.

ACOUSTICAL SYSTEM.—In its working the clarinet presents a typical example of a coupled system. The components are mouthpiece and reed — the sound-generator — and the air-column within the tube. Sounds of varying pitch are produced (1) by shortening or lengthening the air-column by opening or closing lateral holes, (2) by the extensive use of harmonics. The sound of the reed is harsh and unmusical, and is never heard, unless the tightness of the coupling is broken by a leaky connection or the imperfect occlusion of a tone-hole. It is completely controlled and stabilized by the air-column. The dominance of reed by air-column is shared by the clarinet with other instruments, but it differs most sharply from them in other important respects. In spite of its not unimportant divergence

<sup>1</sup> See Carse, 'Musical Wind Instruments' (1939), p. 56. The term "rod-axle" is borrowed from this work.

from the cylindrical, the clarinet behaves as a stopped cylindrical pipe in overblowing to the odd harmonics and in sounding in its fundamental register notes an octave lower in pitch than would be expected from the length of tube employed. Thus two-foot *c'*, the lowest note of the flute, requires only twelve inches of sounding-length in the clarinet.

The property of overblowing in twelfths leads to great complexity in fingering and construction. A brief examination, with a C clarinet as a norm to save transposition, will make this clear. With all fingerholes covered, (six on top of the instrument and one behind for left thumb), and an open key depressed by the right little finger, *f* is sounded.<sup>1</sup> As the fingers are raised one by one the fundamental scale of F major is developed, some semitones being obtained by the opening of closed keys. With all fingers removed except the right thumb which supports the weight of the instrument the "open" note *g'* is heard. The third harmonic now comes into play, the emission of the harmonics which follow being encouraged by a small hole bored just beneath the barrel and closed by a key manipulated by the left thumb. This key, commonly called the "speaker", produces when opened an antinode within the tube and raises the fundamental by a twelfth. Thus bottom *f* becomes *c''*, *g* becomes *d''*, and so on. By the raising of fingers and of closed keys another octave is obtained till *c'''* is reached. But plainly a gap has been left between *g'* and *c'''*. This has to be bridged (1) by two closed keys for *g#'* and *a'* worked by the left first finger, while *b#'* is obtained by the simultaneous opening of the *a'* key and the speaker, (2) by the piercing of a tone-hole and the addition of a key just above the bell to supply the missing *b#'*. So the clarinet has of necessity two extensions, one at the bottom, the other at the top, of its fundamental register, extensions, further, which are in continual, not occasional use. The mastery of the bridge notes, technically known as the "break", throws much additional duty on the left hand, and forms the greatest initial difficulty in learning the instrument. With *c#'''* D. J. Blaikley considered the natural scale of the instrument to end. Certainly, on departing from this point the fingering becomes highly complex, but at least another octave is obtainable. Here the operative harmonics are the 5th (seventeenth), and for some of the highest notes the 7th (flat twenty-first) and the 9th (twenty-third). Of the many fingerings available for this last octave—a modern tutor gives as many as thirty-seven—the player selects the best for tone and intonation, putting facility of execution last.

COMPASS.—The compass, then, of the clari-

net is three octaves and a sixth, 45 notes in all, from (written) *e* to *c'''*. An extension downwards to *c* added by Anton Stadler, Mozart's Viennese clarinetist, survives only in the basset-horn and occasionally in the bass clarinet. A key for low *eb*, first devised by William Gutteridge and shown in his patent of 1824, was later adopted by Adolphe Sax. It is sometimes fitted to modern B $\flat$  instruments to allow A clarinet parts to be played upon them. Some players consider the bell-note and its twelfth improved by this extension and fit it solely for this purpose.

REGISTERS.—The compass is commonly divided into four registers: chalumeau, intermediate or throat, middle or clarinet, and extreme. Each has a characteristic tone-colour determined largely by the predominance in it of certain upper partials. Formerly these were assigned to the odd series alone, but recent analysis has revealed the presence to an unsuspected extent of even partials, possibly induced by the conicity of the bell and the lower right-hand joint.<sup>2</sup> This analysis was conducted by Dayton C. Miller, who made a number of sound-waves of clarinet tone with the phonodeik, see PLATE 61 (Vol. VII, p. 980). By harmonic analysis of these he determined the average intensities of the vibrations corresponding to the partial tones and demonstrated the great significance of the 8th, 9th and 10th harmonics. To these more recent research has added the 11th and 12th. It has revealed, too, that the harmonic structure varies from semitone to semitone within the same register, from instrument to instrument, and from player to player. Only a few salient points can be noticed here, with the reminder that different as the registers may appear to be in colour, all shade off into each other without abruptness.

The chalumeau extends from *e* to *e'*. Here the odd partials are strong, the 3rd, 7th and 9th in particular. The lower even harmonics are negligible while the 8th and 10th are particularly strong. The result is a hollowness in the harmonic structure with vibrant reediness of tone, particularly in *forte* passages.

The intermediate register, comprising the so-called "throat-notes" from *f'* to *b#'*, is considered by eminent authorities the least interesting part of the compass; composers are counselled to avoid it. It is surprising, nevertheless, how many important passages converge upon these unfortunate notes. Here the tone is mainly fundamental with little harmonic enrichment, but properly controlled

<sup>1</sup> Also possibly by the slight conicity of the mouth-piece and barrel in some clarinets and by secondary vibrations of the reed. D. J. Blaikley had detected the presence of even partials in the 1870s by means of Helmholtz resonators. His analysis was necessarily only qualitative, since he lacked the apparatus to make it quantitative.

<sup>2</sup> Notes are given in the fundamental, not by their twelfths.

by lips and fingers no notes yield to these in sensitiveness. Further, their neutral tone-colour joins most happily the dark sombre chalumeau and brilliant clarinet register.

The latter, ranging from  $b'$  to  $c''$ , is distinguished by a clear, even tone, at once noble and expressive. Here the fundamental is more intense than in the chalumeau; of the odd partials the 3rd, the 9th and the 11th are particularly strong, of the even the 12th is by far the most intense.

In the extreme register from  $c\sharp'''$  to  $c''''$  the fundamental is generally much weaker than in the preceding. Some of the even partials are on the other hand more telling. The result is a hard, clear tone, incisive, but not necessarily strident. It is invaluable for certain orchestral effects and much affected by modern composers.<sup>1</sup>

**CHARACTERISTICS.**—In determination of tone-colour and the particular timbre associated with certain instruments some modern acousticians allot an important function to the formant. This is a region of resonance due to the material of which the tube is made and to its own free vibrations. It is reasonable to suppose that harmonics lying within this area will be substantially reinforced. These are stated to be  $g'''$  and  $b\flat'''$  in the case of the clarinet. The theory is plausible, but awaits fuller investigation.

Closely linked with timbre is expressiveness. No other wind instrument can approach the clarinet's phenomenal control of dynamics, and this control is no less impressive in the deeper-toned than in the soprano instruments. Other characteristics are fluency and flexibility equalled only by the flute. Monotony and any tendency to cloying are avoided by the variety of articulations at the player's disposal.<sup>2</sup> No instrument demands or is more responsive to subtle and sensitive phrasing.

**MECHANISM AND FINGERING.**—The modern clarinet is made with two systems of fingering: the "old" or "simple" and the Boehm system. The former might more fitly be called the German, since it is employed all but exclusively in Germany and Austria and in countries where German musical influence prevails. It is based on the 13-key instrument invented by I. Müller in 1812. The model perfected by Oehler of Berlin has from eighteen to twenty-one keys, six rings, and may be pierced with as many as twenty-seven tone-holes.<sup>3</sup> The Boehm clarinet might be called more aptly the French, since it was invented

by H. Klosé and A. Buffet of Paris in 1844. It was an entirely redesigned instrument with some mechanical refinements borrowed from T. Boehm's first flute, which Buffet had just remodelled. Hence the name; Boehm himself had nothing to do with the clarinet. The standard model has twenty-four tone-holes, six rings and seventeen keys. This number may be raised to twenty by the addition of the low  $E\flat$  and additional trill-keys. The Boehm has been used exclusively in France for more than a century, in Belgium for more than fifty years, and its use spread rapidly in England, Italy, Spain and America in the early 20th century.

A summary comparison suggests that a more fluent technique is possible with the Boehm clarinet owing to the more comfortable position of the fingers as well as to the many duplicate fingerings it provides. Speaking quite generally, the Boehm player circumvents difficulties by numbness of mind, by selecting the most convenient among several possible fingerings; the old-system player by numbness of finger in sliding from key to key. Mechanically both systems are complicated, but the keys of the Boehm being largely mounted on rod-axes are a little quicker and more positive in action. In tone there is little difference between the two, certainly less than between the old conical and the modern cylindrical flutes or between the Heckel and the Buffet bassoons. The hypersensitive ear might detect a not unpleasant veiled quality in certain notes of the Oehler arising from the greater number of closed keys and "forked" fingerings still in use; the same ear might detect a more "open" quality in the tone of the Boehm, which might tend to hardness with a less-than-careful player. There is little more in it than that; much more resides in the taste of the artist and in the school in which he has been trained.

**INTONATION**—The clarinet is still short of perfection in intonation. How could it be otherwise with a 2-ft. tube, required to produce 45 notes ranging in pitch from 4-ft. to 3-in. tone from 24 tone-holes? Most of these holes serve as vents for at least two different notes, some for three or four, so that it is seldom possible to improve one note by adjusting the size or position of its tone-hole without impairing another.<sup>4</sup> With the chalumeau register in perfect tune some twelfths will be flat, since theory demands a slightly different position of the speaker for each note of the

<sup>1</sup> Composers of the classical period seldom take the clarinet above  $g''$ . Modern musicians write freely up to  $b'''$  and  $c''''$ .

<sup>2</sup> The subject is well treated in C. Forsyth's 'Orchestration'. Whether the use of vibrato is legitimate or not is still a question of debate.

<sup>3</sup> German makers manufacture Boehm clarinets, however, and Ernst Schmidt of Mannheim has made some notable improvements in the mechanism.

<sup>4</sup> A note is sharpened by enlarging or undercutting the tone-hole through which it speaks. Both methods shorten the air column. An instrument may be raised in pitch throughout its compass by extending the cone at the end of the bore or by very slight enlargement of the bore. Conversely a note is flattened by lessening the size of the tone-hole or the rise of the key above it. Enlargement of the bore at certain points only is known as "chambering".

scale, a demand which cannot be met in practice. Further, the speaker has to provide in conjunction with the *a'* key a full and sufficient *b♭*. The maker does what he can, and a good maker can do much by careful sizing of tone-holes and regulation of key-work, by a judicious choice of mouthpiece—a vital factor—and by chambering the bore; but some demands will still be made upon the player's lips and fingers.<sup>1</sup>

Some small faults of intonation, then, must be accepted as inevitable. Pitch is a different matter. Here responsibility is divided between maker and conductor. It is the maker's duty to see that the instrument he produces is made exactly to pitch at an agreed temperature, not a whit above or below; the conductor's to tune his orchestra by the clarinet, since of all the woodwind it is the most susceptible to rise and fall of temperature and the least alterable by adjustment of the tuning-socket without serious damage to its general intonation. Mechanically no important improvement has been made for fifty years or more. It is long overdue, especially in an age which no longer relies on scrupulous hand-work. The general design of the key-work is more satisfactory than the working out of mechanical details. A player has a right to expect his mechanism to be noiseless, to be durable and to be securely mounted on straps screwed to the wood, as on the flute.

**TRANSPPOSITION.**—The clarinet has almost from its invention been built as a transposing instrument. The inadequacy of its mechanism made this a necessity throughout the classical period and well beyond the middle of the 19th century. With well-developed technique and greatly improved instruments the practice survives, for two reasons, it would seem: (1) the complexity and technical difficulty of the modern score, (2) the choice of tone-colour offered to the composer by clarinets of different size and tonality. In this connection no composer shows more discrimination than Richard Strauss. In the 'Rosenkavalier' he scores for clarinets in *E♭*, *D*, *C*, *B♭* and *A*, as well as for a basset-horn and a bass, and in 'Die Frau ohne Schatten' for the same family with the noticeable entire omission of the normal *A* and *B♭* instruments. Presumably *C* clarinets are here preferred for a tonal reason. Mahler shows hardly less fastidiousness.

**THE CLARINET FAMILY.**—(1) *Piccolo* or *Octave Clarinets.*—The clarinet in high *A♭* is the only surviving member of this group, a military instrument still regularly used in continental bands. It is unknown in England

and America. C. Sachs, quoting A. Tosoroni's 'Trattato pratico di strumentazione' (1850) adds *ottavini* in *C*. An early specimen in high *B♭* by Raingo of Mons survives in the Brussels Conservatoire Museum (No. 167).

(2) *Sopranino Clarinets* in *G*, *F*, *E*, *E♭* and *D*.—Those in *G* and *E* mentioned by several 18th-century writers are obsolete. The clarinet in *F* has had a long career in German military bands; Beethoven and Mendelssohn wrote for it. Once popular in England, it was superseded early in the 19th century by the instrument in *E♭*. The latter is a valuable and permanent member of the military band, and is used not infrequently in the orchestra for special effects, notably by Berlioz, Mahler, R. Strauss, Stravinsky and Ravel. The tone is mordant and incisive, but in the hands of an experienced player not unpleasant. A less legitimate use of it is to replace the clarinet in *D*, now all but unknown west of the Rhine. This is one of the oldest members of the family, having been used by Gluck, J. C. Bach, Grétry, Cherubini, Liszt and Wagner, and more recently by Mahler and Richard Strauss. It was much used in England during the 18th and early 19th centuries. It is warmer in tone than the *E♭* and blends well with strings. Parts for *D* and *E♭* will be written respectively a tone and a minor third below the key of the piece.

(3) *Soprano Clarinets.*—The clarinet in *C* is the only non-transposing member of the family. Many of the early 2-key instruments were in this pitch. West of the Rhine it is obsolete. It has crispness of tone, but lacks the mellowness of the lower-pitched instruments and the fire of those just above it. Its replacement by the *B♭* clarinet in scores of the classical period is no doubt legitimate; it is less so in some of the works by Smetana, Dvořák, Mahler and Strauss, where its incisive matter-of-fact tone-colour is obviously intended. With Strauss it was an especial favourite. Its use in 'Die Frau ohne Schatten' has already been noticed; it occurs again in 'Friedenstag', 'Daphne' and 'Capriccio', associated in each case with clarinets in *B♭* and *A*, with the bass clarinet and in the two latter with a basset-horn in addition.

The normal orchestral instruments have long been pitched in *B♭* and *A*, the best tonalities, where sweetness and brilliancy replace the hardness of some of the higher and the tendency to sadness and monotony of some of the lower instruments. The tone of the two is virtually indistinguishable in the concert-room. The *B♭* clarinet removes two flats, the *A* three sharps from the key-signature, and the parts are written respectively a tone and a minor third above the strings. Another soprano clarinet, pitched in *B♭*, was used by Mozart in 'Così fan tutte' and 'Idomeneo'

<sup>1</sup> An instrument with a bore of 15 mm. and a cylindrical mouthpiece will give almost perfect twelfths, but some of the higher harmonics, notably the fifth, will be uncertain, and some of the extreme notes will tend to be sharp.

and survived in Paris till the 1830s<sup>1</sup>, but has long been obsolete.

The Clarinette d'amour (Ger. *Liebesklarinette*; Ital. *clarinetto d'amore*) would seem to belong rather to the higher- than to the lower-pitched instruments, and is therefore noticed here. It is possibly a development of the "grande clarinette" in G mentioned by V. Roeser (1764), Francœur (1772), Laborde (1780) and others, and was made in considerable quantities in Flanders, Germany, Switzerland and Italy in the fifty years between 1770 and 1820. It was a straight-bodied instrument fitted with a *Liebesfuss* or pear-shaped bell of cor anglais type, and often with a short metal crook to carry the mouthpiece. It was pitched in G, less often in A $\flat$  or F. The bore is small in proportion to its length, so the tone is veiled and plaintive. It would seem to have been intended more for solo than orchestral use.<sup>2</sup> Clarinets in G have recently been revived by Heckel of Biebrich. The instrument seems to have been little used in England.<sup>3</sup>

The family is extended downwards by tenor, bass and contrabass clarinets in several pitches. These are noticed separately at the end of this article.

**COMBINATION CLARINETS**—The use of more than one instrument has always been a burden to the orchestral player. Various expedients have been devised to help him. Among the earliest were joints of varying lengths or *pièces de rechange*. Thus a C clarinet could quickly be changed into the pitch of B $\sharp$  by fitting a longer middle joint<sup>4</sup>, or a B $\flat$  instrument lowered a semitone to A by similar means; not, perhaps, a satisfactory expedient, and calling for great nicety of embouchure to correct obvious faults of intonation. A more scientific solution was provided by Simiot of Lyons about 1827. His instrument, a beautiful specimen of workmanship with many additional keys, is built in B $\flat$  and has a separate upper joint in A. To gain additional length in the lower joint the bell and the portion just above it can be extended by rack and pinion. The result is not entirely happy, since the three finger-holes for right hand still remain immovable; but Simiot's lack of success did not deter other makers from attempting a solution of the problem. Here are a few makers of combination clarinets: Triébert (1847) and Buffet (1862) of Paris,

Jacques Albert<sup>5</sup> of Brussels (1895) and more recently Rampone and Maino & Orsi of Milan. Such instruments can only be monuments of misplaced ingenuity. The mechanism is necessarily highly complicated, and the sliding-tubes of metal on which such instruments depend are obviously deleterious to tone. Further, the weight is excessive.

There is, of course, a far simpler expedient—to play all the parts on the B $\flat$  clarinet extended by a semitone. This practice is far less common than it was some years ago; perhaps the technical difficulty of some modern music has robbed it of its attractiveness.

**HISTORY.**—From the tangle of conjecture which obscures the early history of the clarinet two facts emerge: the name of the inventor and the date of his invention. Both are provided by J. G. Doppelmayr, who in his 'Historische Nachricht der Nurnbergischen Mathematicus und Kunstlern' (1730), speaking of J. C. Denner (1655-1707), a flute maker, says: "At the beginning of the present century he invented the so-called clarinette . . . and finally produced improved chalumeaux". On this statement rests the view generally held by musicologists that the clarinet is less an invention than the development of a simple single-reed instrument already existing in several sizes, used in France and called the chalumeau. It is plainly a reasonable view, if the violence to Doppelmayr's wording be condoned and it is realized that it is founded on inference. Many primitive, idioglot folk instruments survive both in the far and in the near East, where they originated, and in various parts of Europe. The *launeddas* of Sardinia and the *albogaea* of the Basques may be cited as living examples, and it is natural to suppose that some such rude instrument would be developed for serious musical purposes and provided with separate reed and mouthpiece. There are, however, difficulties. No illustration of such an instrument exists before Diderot and d'Alembert's 'Encyclopédie' (1751-67); it was unknown to Mersenne and other 17th-century writers; no undoubted specimen survives in any collection. It may be that the question is merely one of nomenclature; that all surviving 2-key instruments of clarinet type were at first called chalumeaux, and that Doppelmayr expressed himself with less than his usual clarity. At least twenty-five specimens of 2-key clarinets exist (or did exist before the second world war), at least two of them by Denner himself. These must have been made before 1707, since Denner died in that year, and are contemporaneous with the sporadic appearance of a

<sup>1</sup> Brod, the oboe player and maker, supplied a 13-key B $\sharp$  clarinet to the Opéra in 1831. C. Pierre, 'Les Facteurs', p. 378. It was evidently used fairly extensively in France since it was among the tonalities listed by Roeser in 1764 and is mentioned as a current type in a late issue (1830?) of Vanderhagen's tutor.

<sup>2</sup> C. Sachs notes in his 'Handbuch der Instrumentenkunde' (1920), p. 347, that parts for it occur in J. C. Bach's 'Temistocle', produced at Mannheim in 1772.

<sup>3</sup> A rare specimen by Cramer of London, c. 1820, is illustrated in A. J. Hipkins's 'Musical Instruments, Historic, Rare and Unique' (1888; 1921).

<sup>4</sup> At this period the lower or right-hand joint, now made in one, was composed of two short pieces.

<sup>5</sup> J. Albert made the instruments for the Clinton Combination Clarinet Company, of which Sir Arthur Sullivan was chairman. For the names of these clarinets see C. Sachs, *op. cit.*, p. 336.

<sup>6</sup> With reed cut from the material of the tube itself.

number of "chalumeau" parts in music of the period. The first that have been noticed occur in M. A. Ziani's 'Caio Pompilio' (1704), in A. Bononcini's 'Conquista delle Spagne' (1707) and in A. Ariosti's 'Marte placato' of the same year. The series is continued by Keiser, Hasse, Handel, Graupner, Telemann, Zelenka, down to Gluck in his 'Orfeo' and 'Alceste' (Vienna editions) of 1762 and 1767. Most of these parts are distinctly clarinet parts, though of short compass<sup>1</sup>; a few are scored for "basses de chalumeaux" and descend below the range of a soprano clarinet.

If the above orchestral parts were intended for Denner's 2-key clarinet, there is evidence for the short-lived existence of a more primitive instrument. In the catalogue of Estienne Roger, the well-known music publisher of Amsterdam, appended to Félibien's 'Recueil historique' of 1706 there are advertised 'Fanfares et autres airs de chalumeau à 2 dessus' by J. P. Dreux, and further chalumeaux for sale at three florins apiece. In the same publisher's catalogue of 1716, *ante*, appear 'Airs à 2 clarinettes ou deux chalumeaux' by the same composer. Is this the earliest occurrence of the word *clarinette*, and are chalumeaux and clarinets equivalents or alternatives?

It may be suggested as an answer that for the first decade or two of the 18th century two instruments existed side by side, a keyless pipe, sold for three florins, the chalumeau proper, and a more elaborate instrument, heteroglot (*i.e.* with separate mouthpiece and reed) and fitted with two keys, confused with the primitive instrument and often called by its name. Some such confusion seems to have been already in Walther's mind when in his 'Musicalisches Lexikon' of 1732 he described the chalumeau as a small wind instrument with seven holes or as an instrument of boxwood with seven holes on top, one beneath, and two brass keys.

The primitive 2-key instrument by J. C. Denner resembles externally a recorder.<sup>2</sup> It is in three pieces, a broad, cylindrically bored mouthpiece and narrow socket in one, a body with six holes in front and one behind, and a short foot-joint pierced with two small holes side by side.<sup>3</sup> Above the holes for left first finger and thumb are two closed keys covering holes bored diametrically opposite to each other. The bore measuring 13 mm. is carried through without expansion; in fact it narrows

towards the lower end. It is almost identical with four other specimens, two by Klenig, two by Liebau, in the Musikhistoriska Museum, Stockholm (Nos. 141, 142, 139, 143). Denner's vital discovery was the speaker hole, making available the series of twelfths. By some this was considered a rediscovery of a principle already well known to the Greeks.<sup>4</sup> In his instrument the opening of either key singly gives a', of both together b $\sharp$ . The b $\flat$  could be obtained only by manipulation of the embouchure. By 1720 or some years before the thumb key had been moved up towards the socket giving b $\flat$  with both keys open and greater security to the harmonics. This is made clear by F. Bonanni in his 'Gabinetto armonico' (licensed for printing in 1721). He says.

An instrument similar to the oboe is the clarinet. It is two and a half palms long and terminates in a bell like a trumpet three inches in width. It is pierced with seven holes in front and one behind, and there are two other holes opposite to each other, but not diametrically, which are opened or closed by keys pressed with the fingers.

He adds that the tone is deeper than that of the oboe and that no author mentions the name of the inventor. Doppelmayr had yet to write. The dimensions of the bell, it will be observed, had already been increased.

Before the middle of the century the bell had been lengthened and another hole provided, covered by an open key. Thus e replaced f as the bell-note and the missing b $\sharp$  was supplied. No fingering-chart for such a 3-key clarinet exists, and only the 2-key instrument is known to Diderot's 'Encyclopédie'. By the end of the third quarter of the century a closed key for g $\sharp$ , no doubt suggested by the flute, had been added to the lower joint, and probably the long closed f $\sharp$  key for left little finger as well.<sup>5</sup> The instrument was now made in five or six parts: (1) mouthpiece, slightly conical in bore and narrower than formerly; (2) a pear-shaped barrel; (3) left-hand joint with four holes and two keys; (4) right-hand joint with three holes; (5) lower right-hand joint carrying three keys mounted in the wood, and a hole, stopped by right little finger, and bored slantwise through the thickness of the wood to gain necessary flatness of pitch; (6) the bell. The mouthpiece and socket were still sometimes made in one. This was the

<sup>4</sup> Notably by A. A. Howard in his 'The *Ἀλλός* or *tibia*' ('Harvard Studies in Classical Philology', Vol. IV, 1893). The crux is the exact meaning of *ὑπερύψ*, which Howard takes to be a speaker hole, covered or uncovered by a sliding band. Théodore Reinach, on the other hand, in Daremberg & Saglio's 'Dictionnaire des antiquités grecques et romaines' (1919, s.v. *tibia*) emphatically rejects the theory, assigning an entirely different meaning to the word in question.

<sup>5</sup> The 4-key clarinet is described in the Supplement (1776) to the 'Encyclopédie', where it is mentioned that a player with a 6-key instrument had just passed through Berlin. Both g $\sharp$  and f $\sharp$  keys are found on a 5-key instrument by Collier of London, dated 1770, in the Keighley Museum.

<sup>1</sup> Possibly because they were normally played by oboists, who could not be expected to acquire a new and difficult technique.

<sup>2</sup> Munich, Bayerisches Nationalmuseum, 20, facsimile Brussels, Musée du Cons., 911.

<sup>3</sup> The device of boring twin-holes side by side is found also in the recorder and the oboe. With both holes covered by right little finger and the other fingers in position f would be sounded; with one twin hole uncovered by a rolling of the fingertip f $\sharp$  would result.

clarinet known to Mozart. This subdivision was necessary to accommodate the already mentioned *pièces de rechange* to change tonality. Surviving specimens of 2- and 3-key instruments are usually pitched in D, C or B $\flat$ . The A clarinet would seem to be a later introduction, though one 3-key specimen (Brussels, 913) is preserved.

The tone of these primitive instruments must have been very imperfect, especially with the broad mouthpiece and reed coupled to the narrow bore at first in vogue. The 2-key ivory D clarinet by Scherer (R.C.M., Donaldson coll.) is an exception. Here the 14 mm. bore is better proportioned to reed and mouthpiece, and the tone is fuller and more open. Mattheson (1713)<sup>1</sup> speaks disparagingly of chalumeaux with their "wailing symphony" and Walther's statement (1732) that the clarinet "sounded from afar like a trumpet" sounds little more promising.

Makers of 2- and 3-key clarinets, in addition to those already mentioned, were Lindner, Scherer, Willems, Oberlender, Rottenburgh of Brussels, Boekhout, Walch of Berchtesgaden and G. N. Kelmer.

With all its imperfections Denner's invention was gradually accepted as a new voice. Outside Germany it was more often known as clarinet than chalumeau. In the early 1720s J. A. J. Faber included a C clarinet in a Mass now lost, but formerly preserved in Antwerp Cathedral.<sup>2</sup> In Italy, as we have seen, it was known at least as early, and parts for two clarinets are included in three of Vivaldi's concertos (F. XII Nos. 1, 2 & 14). These are developed and effective parts ranging from g to c''' evidently intended for the 2-key instrument, since the missing b $\flat$ ' and doubtful accidentals are studiously avoided. In the first and second works the two clarinets are associated with oboes, strings and cembalo; in the third, 'Per la solennità di S. Lorenzo', flutes and a bassoon are added. The writing is mainly diatonic in *clarino* style, with short semiquaver scale passages, rapid triplets and easy trills. In the 1740s J. M. Molter was composing for it. Two concertos in A and C for "clarinetto concertato" with accompaniment for strings and harpsichord survive in manuscript. Both are for clarinet in D. The solo part lies entirely in the clarinet and acute registers, ascending frequently to g'''. The writing again is diatonic in *clarino* style — necessarily, since the clarinet could do but little else in its undeveloped state, and the higher registers alone could be forced into tune. In

1739 two "good" clarinetists advertised their presence at Frankfurt o/M., in 1741 "Zwei paar Klarinetten" figure in the inventory of instruments owned by the court of Sayn-Wittgenstein. In May 1742 Mr. Charles "the Hungarian" played solos on the clarinet and "Shalamo" at Dublin. Probably the clarinet was already known in London. Handel had used "chalumeaux" in 1727 to accompany a song in 'Riccardo Primo', and in the Granville manuscript of his 'Tamerlano' (1724) two cornetti are replaced by Clar. 1 $^o$  & 2 $^o$ . It is possible that clarini are intended, but the pensive nature of the song "Par che mi nasca" calls for clarinet rather than trumpet tone. In any case there remains the 'Overture' in his hand for two clarinets and horn preserved in the Fitzwilliam collection at Cambridge.<sup>3</sup>

In 1728 a 'Concerto de chalumeau' had been heard in Paris "avec accompagnemens de la symphonie".<sup>4</sup> It was described as "un instrument qui est fort en usage en Allemagne et imite le hautbois et la flûte à bec".<sup>5</sup> In 1749 clarinets were available for Rameau's 'Zoroastre' and again in 1751 for 'Acante et Céphise'. They were regular members of La Poupelière's orchestra and were played by Gaspard Procksch<sup>6</sup> and Flüger. In Mar. 1755 a symphony by J. Stamitz with clarinets and horn figures in the programme of a Concert Spirituel. In 1764 was published in Paris the first theoretical work on the clarinet, Valentine Roeser's 'Essai d'instruction à l'usage de ceux qui composent pour la clarinette et le cor'.<sup>7</sup>

Carl Barbandt had been advertising concerts of clarinets and horns with kettle drums in London in the mid-1750s, and the same combination figures in the pleasure gardens there some years later. By 1760 Arne was able to call on clarinets for 'Thomas and Sally' and for 'Artaxerxes' in 1762. In 1763 they appeared for the first time at the Three Choirs Festival, Weichsell, an oboist, being one of the players, and in the same year J. C. Bach scored for clarinets in D and B $\flat$  in 'Orione'. Mozart as a child may have heard them for the first time when he visited London a year later. The Oxford Music Room had clarinets and a clarinet concerto as early as 1772, and in 1774 a symphony by Gossec with clarinets was performed there.<sup>8</sup>

<sup>1</sup> Recently edited for practical performance by J. M. Coopersmith and Jan LaRue with the title of 'Sonata in D major' and published by the Mercury Music Corporation, New York.

<sup>2</sup> 'Mercure', Feb. 1728.

<sup>3</sup> The 'Encyclopédie' (1751-67) defined the clarinet as "sorte de hautbois".

<sup>4</sup> Procksch, still active in 1785, was a composer as well. He wrote six sonatas for clarinet and cello, six trios for clarinet, violin and cello, and quartets for clarinet and strings.

<sup>5</sup> J. H. Mee, 'The Oldest Music Room in Europe' (1911), p. 35. No doubt J. and W. Mahon were the players.

<sup>6</sup> In 'Das neu-eroffnete Orchester'.  
<sup>7</sup> F. A. Gevaert reproduces 21 bars from the "Qui tollis" in his 'Nouveau Traité d'instrumentation' (1885), p. 178. The solo contralto is accompanied by 2 flauts travers, clarinet and cembalo or organ. An unusual feature are arpeggios in the chalumeau register descending to f, at that time the bottom note.

In Germany Mannheim led the way with Quallenberg, a Bohemian, Hampel and Tausch the elder in 1758-59 as regular clarinetists. Parts for clarinet were included in the symphonies of K. Stamitz, Beck, Toeschi, Holzbauer and Gossec, but were sold separately and would be played by other instruments when clarinets were not available. Mozart found them at Milan in 1771, but Salzburg did not acquire them till 1777, and Leipzig, Dresden and Berlin even later.

That the clarinet should have taken seventy to eighty years to establish itself in the orchestra and to recruit specialized in place of casual players may seem surprising until it is remembered how badly it compared with the contemporaneous flute and oboe. No doubt its expressiveness recommended it to the Mannheimers, but its beauty of tone was marred by hideous faults of intonation, especially in the chalumeau. This register was particularly weak and toneless; it was in fact seldom used till Mozart, with Stadler to help him, revealed its possibilities. The middle register was better. Here the narrow bore would assist the harmonics, and defects of intonation caused by cross-fingerings would be more easily corrected.

There are indications of great improvements in tone and style in the last quarter of the 18th century, no doubt effected by the rise of virtuosi. Joseph Beer was among the first and greatest of these, and the line is continued by Stadler, Tausch, H. J. Barmann, Hermstedt and others. The German school to which they belong specialized in a soft velvety tone, attributed by Fétis, who was never tired of singing their praises, to the practice of placing the reed on the lower lip and of cultivating the embouchure.

The French school, represented by Michel Yost and X. Lefèvre<sup>1</sup> relied for effect on a hard, voluminous tone and brilliance of execution. Both were pupils of Beer, who was the virtual founder of the Paris school and style. By this school the reed was placed against the upper lip, a practice which persisted in Paris until F. Berr introduced German methods on his appointment to the Conservatoire in 1831, and in England even later.<sup>2</sup>

The increasing demands of virtuosi and composers could not fail to foster mechanical improvements in the clarinet. Simiot claimed to have made 12-key clarinets as early as 1803, and in 1809 Heinrich Barmann, pupil of Tausch and Beer, had a 10-key clarinet by

Griessling & Schlott of Berlin. At the same time Iwan Muller, an itinerant virtuoso on clarinet and basset-horn, was collaborating with French and German makers in further improvements. The result, a clarinet with thirteen keys made by Gentellet of Paris, was submitted to a commission of musicians and players in 1812. Muller's improvements consisted in a rational rearrangement of tone-holes, in assigning a separate tone-hole and key to each semitone, and some improvements in mechanism. He claimed his instrument — he chose the B $\flat$  — as "omnitonique" and as rendering unnecessary numerous *pièces de rechange* or instruments in other tonalities. It was precisely for this reason, the loss of distinctive tone-colour, that his invention was at first rejected. No doubt the number of keys alarmed Lefèvre and other leading players in Paris. Before 1820, however, the new system had been adopted by Gambaro and Berr in Paris, and was making notable progress in Germany, where it was welcomed by Hermstedt, the friend and inspirer of Spohr. In passing a curious anticipation of Muller may be noted, the 13-key bass clarinet by Desfontenelles made in 1807. It is alluded to later.

In England 6-, 8-, 10- and 12-key clarinets were in use during the first quarter of the century. A very ingenious instrument devised by William Gutteridge of Cork about 1824 came to nothing, being far too advanced for the players and makers of the period. The specification, No. 4890 of 1824, repays study. In its most complete form it had 18 keys, and since it was devised as early as 1813, it ran Muller's reconstruction very close in time; in ingenuity it far surpassed it. It tackled boldly at least two problems unsolved by Muller, the difficulty of playing across the break and the manipulation of rapid passages in which the little fingers are employed. The first problem was met by the provision of a small key placed alongside the speaker to give  $b\sharp$  with left thumb alone, the latter by a rational if complicated rearrangement of the keys at the bottom of the instrument and additional levers. Incidentally this latter difficulty was solved only some twenty years later by the Boehm or Klosé-Buffet clarinet. In addition the downward compass was extended by two semitones, an anticipation by some sixteen years of Sax. By this extension, and by using the twelfths of the additional notes, the inventor envisaged greater ease of fingering across the break and a more sonorous  $b\flat$ . The instrument was made by Clementi of London. T. L. Willman, whose fame was European, played on a 13-key clarinet, for which he wrote a tutor in 1826. John Mahon, his immediate predecessor, had been content with six keys. He, too, wrote a tutor in 1803.

In the second quarter of the 19th century

<sup>1</sup> Lefèvre, author of a celebrated tutor, played on a 6-key clarinet almost to the end of his career. He had added the sixth key for  $c\sharp$  about 1790.

<sup>2</sup> Probably till after 1840. Willman (*d.* 1840) seems to have played with the reed uppermost throughout his career. John Hopkinson, in his 'New and Complete Preceptor for the Clarinet', published in the 1840s, states "Foreigners play with it [the reed] downwards, the contrary is practised in England". This embouchure was recommended by Ferdinando Busoni in his *Scuola da Perfezionamento*, Crazz, 1889.

the increasing skill of makers made further development possible. The wooden blocks in which keys were formerly mounted gave place to the modern pillar; ring-keys and rod-axes were borrowed from Boehm's new flute, improved by the Paris maker Buffet, sluggish springs of brass were replaced in steel or by needle-springs, an improvement of the same maker. This general tidying up in mechanical details gave the player a neater and far more responsive instrument. In 1844 H. Klosé, successor to Berr at the Paris Conservatoire, and A. Buffet devised an entirely new clarinet differing from Muller's in several respects. This instrument, described by the inventors as "clarinette à anneaux mobiles" and now generally known as the Boehm clarinet, has already been alluded to<sup>1</sup>.

Muller's model made by Charles Sax and Bachmann of Brussels, by Wunnenberg of Cologne, J. A. Heckel and other German makers, was much improved in detail by Adolphe Sax in the late 1830s, and a few years later by Mahillon and E. Albert, also of Brussels. Sax's contributions to the improvement of the clarinet by the addition of ring keys to the lower joint, of the low *eb* and of the long tenor have been overshadowed by his improvements to brass instruments, by his invention of the saxophone and by the Klosé-Buffet clarinet. They were, however, substantial and provided precious material for Mahillon and E. Albert to develop Belgian clarinets introduced by Wuille in the 1850s were popular in England for more than half a century, setting a standard for neatness of workmanship and accuracy of tuning. Lazarus adopted a 16-key model by Albert in 1862, and a 14-key model was long popular with military musicians. It is still found in occasional use. Virtually obsolete in its 13- or 14-key form, it served as the basis for the Oehler model so largely used in Germany and adjacent countries, where the Boehm clarinet has never been popular.

Many variants of the Muller clarinet have been devised to facilitate technique for those unwilling to adopt the Boehm fingering. Some of the more important may be mentioned. The Barmann model, the creation of Carl Barmann about 1860 was originally made by Ottensteiner of Munich. It is essentially Muller with duplicate keys. It was improved by Robert Stark, a famous clarinetist of Wurzburg, and used by the virtuoso Richard Mühlfeld. The Clinton clarinet, made for the well-known English player George Clinton, by Boosey of London, formerly enjoyed much popularity with English professional players. It is an improvement of the 14-key Muller

model in having a modification of the Barret action, borrowed from the oboe, adapted to the upper joint. The Clinton-Boehm was a later development. It was a Clinton clarinet in essentials with duplicate keys for the little fingers taken from the Boehm instrument. It was on this model that Clinton developed his masterly technique.

The Boehm system remains much as Klosé and Buffet left it. One or two keys have been added to facilitate trills, raising the total number to twenty with seven ring-keys. Manuel Gomez, a Spanish player long resident in London, increased even this number, but his model was personal and never found wider adoption. One modification merits more extended notice, the Romero clarinet.<sup>2</sup> It was more accurately a drastic reconstruction of the instrument incorporating many features of the Klosé-Buffet model. It was designed between 1853 and 1862 by the Spanish player A. Romero y Andía (1815-86) and patented in Oct. 1862, brevet 55768. Attempts to interest Triébert, the oboe maker, and A. Buffet having failed, Romero entrusted his invention to Paul Bié, also of Paris. The result was a miracle of complicated but perfectly executed mechanism. The lower half is plain Boehm, but on the upper-joint the inventor came to the rescue of the overworked left hand. The closed keys for *g#* and *a'* worked by the first finger of the left hand were replaced by open keys. A similar key was provided for *g*, the "open" note. All opened automatically when stronger springs depressing them were released in turn by the three ring-keys on the lower joint. The *b'* replaced *g'* as the "open" note. The improvement in tone, equality, and in facility of execution was most marked and gained the inventor many prize medals and encomiums. The radical changes of fingering, however, and complication of the keywork proved fatal to its wide adoption. By a curious coincidence the manipulation of the closed keys at the top of the instrument by the right hand had attracted the attention of the Brussels maker Mahillon precisely at the same time. Both exhibited clarinets embodying this improvement at the Paris Exhibition of 1867, Mahillon in a simple, Romero in an elaborate form. A similar idea is found in G. H. Child's very ingenious and novel system patented in 1924. It is possible that the last has been seen of complicated systems. None has appeared for twenty years or more, and the modern trend is towards simpler mechanism of proved reliability, to the 17-key rather than to the 20-key Boehm.

PLAYERS.—A list of famous players is

<sup>1</sup> A lucid and succinct description of the mechanism of the Boehm clarinet will be found in A. Carse, 'Musical Wind Instruments', p. 164.

<sup>2</sup> The instrument is illustrated and described in C. Pierre, 'La Facture instrumentale' (1890), pp. 74-76, and in 'The Musical Standard' of 3 Aug. 1878.

appended, grouped by countries of origin. Living players are not included. Those marked with an asterisk are noticed at greater length under their names.

Austria: A & J. Stadler\*, J. & A. Friedlowsky.

Belgium: A. Vanderhagen\*, G. C. Bachmann, A. J. Blaes\*, Wuille, G. Poncetlet, J. Schreurs (resident for many years in the U.S.A.).

Czechoslovakia: W. Farník, F. T. Blatt (author of a well-known tutor), J. Písařovic, J. Sobeck.

England: J. & W. Mahon\*, T. L. Willman\*, H. Lazarus\*, G. A. & J. Clinton\*, J. Egerton\*, C. Fawcett, H. Draper\*, F. Thurston\*.

Finland: B. Crusell\*.

France: M. Yost, M. F. Blasius, X. Lefèvre\*, F. Berr\*, H. E. Klosé\*, F. Dacosta, A. Leroy, C. Rose, P. A. Mimart, H. Paradis, G. Hamelin.

Germany: J. Beer\*, F. Tausch, H. J. & C. Barmann\*, J. G. H. Backofen\*, J. S. Hermstedt\*, J. G. Kotte, J. Faubel, V. Bender, R. Stark, R. Muhlfeld\*.

Italy: B. Carulli, G. B. Gambaro (long resident in Paris), F. Sebastiani, E. Cavallini\*, D. Liverani (introduced the Boehm clarinet into Italy), L. Bassi, G. Labanchi, A. Magnani (author of well-known tutor).

Russia: I. Müller\*.

Spain: A. Romero y Andía, M. Gomez (spent his professional life in England).<sup>1</sup>

**MAKERS.**—These are grouped as far as possible in chronological order. Firms still in active production are marked with an asterisk.

Austria: Merklein (early collaborator with I. Müller), S. Koch, Ziegler, Uhlmann.

Belgium: Tuerlinckx (Mechlin), Ramgo (Mons). The following were all active in Brussels: C. Sax, A. Sax (migrated to Paris), Bachmann, Mahillon, E. Albert and his sons Jacques, J. B. E. J., who all had separate establishments.

Czechoslovakia: Horak (Prague), Kohlert (Kralice)\*.

England: Collier, Müller (18th century); Key, J. & G. Wood, Bilton, Ward, Fieldhouse, Rudall Carte\*, Boosey, Hawkes, Boosey & Hawkes\*, Lous.

France: Amlingue, Baumann, Gentellet, L. Auguste Buffet, jun., Martel, Buffet-Crampon\*, Couesnon\*, Selmer\*, Leblanc\*, all of Paris; Cabart (Ézy)\*; Simiot, Piatet (Lyons).

Germany: Grenser (18th century, of Dresden); Stengel (Bayreuth), Griessling & Schlott (Berlin), Bischoff (Darmstadt),

Oehler (Berlin), Kruspe (Erfurt), Heckel (Biebrich)\*, J. Mollenhauer (Fulda)\*, G. Mollenhauer (Cassel)\*, Adler (Markneukirchen)\*, Schmidt (Mannheim)\*.

Italy: Piana (Milan), Vinatieri (Turin), Manno & Orsi (Milan)\*, Ramponi & Cazzani (Milan)\*, Papeschi (Florence)\*.

U.S.A.: Conn (Elkhart)\*, Penzel-Mueller (N.Y.)\*, L. Cundy-Bettonery (Boston).

**Basset-Horn** (Fr. *cor de basset*, Ger. *Bassetthorn*; Ital. *corno bassetto*). A tenor clarinet pitched in F, with an extension at first diatonic, later chromatic, carrying the compass down to C. In general appearance and mechanism it resembles the orchestral clarinet, it differs in having in place of the tuning-socket a short bent metal crook to carry the mouthpiece and in the out- or up-turned metal bell, which often replaces the downward wooden bell of the other. The weight of the instrument is carried on a sling, so that the right thumb is freed to manipulate the extension or "basset" keys, when these are fitted at the back just under the thumb-rest. Modern practice sometimes places them in front to be controlled by the little fingers, a far less convenient arrangement.

The length of the basset-horn is about 42 ins. Owing to the smallness of the bore in proportion to the length of tube the harmonics speak with peculiar freedom and at least four octaves are obtainable. The tone of the chalumeau is rich, reedy and highly coloured — it reminded E. T. A. Hoffmann of red carnations — of the middle register sweet and string-like, while the extreme notes are fuller and calmer than those of the orchestral clarinet. It lacks one quality — brilliancy. There is in fact more than a hint of lugubriousness about it. No instrument is more suited for accompanying the female voice, but in solos its placid sweetness is apt to cloy, and possibly it was for this reason that Mozart substituted the A clarinet for it in his clarinet Concerto (K. 622), originally intended for the basset-horn.<sup>2</sup> The characteristics it shares with the higher-pitched instruments are agility, flexibility and expressiveness.

Orchestrally it seems doomed to alternating oblivion and revival. In the first half of the 20th century it experienced a revival. This was initiated by Richard Strauss in his 'Elektra', 'Rosenkavalier' and 'Frau ohne Schatten' and has been continued by Holbrooke, and more recently by Converse, van Dieren, Sessions and Flothuis.

When composers make a practice of writing for complete families of woodwind the basset-horn will doubtless play its part in linking the

<sup>1</sup> Not *di bassetto*, as usually written.

<sup>2</sup> It was first used by Mozart in the B $\flat$  major Serenade (K. 361) of 1781. The sketch of the Concerto, which dates from 1789, for basset-horn in G, consists of 199 bars (K. 584).

<sup>1</sup> Manuel Gomez (b. Seville, 30 Aug 1859) pupil of C. Rose at the Paris Conservatoire, introduced the Boehm clarinet to London. He played exclusively on a 22-key B $\flat$  clarinet made by Boosey.

treble and bass clarinets and in filling out the middle register of the latter. Meanwhile its extensive compass and varied tone-colour might well relieve the overworked cor anglais of some of its duties.

**HISTORY.**—The basset-horn was invented at Passau about 1770, not by Horn as is often stated, but by Mayrhofer.<sup>1</sup> This is shown by a very early specimen in the Hamburg Museum which bears the inscription "Ant: et Mich. Mayrhofer inven. & elabor. Passavii". C. F. Cramer writing of the basset-horn in his 'Magazin der Musik' for 1783 adds the information that it had been brought to greater perfection by Theodor Lotz of Pressburg<sup>2</sup>, and that already the name of its inventor was forgotten. Mayrhofer's invention consisted in bringing the tone-holes of a long tube within reach of the fingers, not by adapting suitable mechanism to it, but by contorting the tube itself. The form of a sickle was adopted at first. The bore was excavated in two pieces of wood which were pegged and glued together, and covered with leather for security. Rather later, towards 1800, the body was formed of two straight joints set at an angle of from 90 to 135 degrees by a small central knee-joint of ivory, horn or wood. In the early decades of the 19th century the body was straightened out, the barrel, often of wood, was conveniently curved, and the bell was turned up or outwards, occasionally at right angles. A feature of all early instruments was the *Kasten*, *Kästchen* or *Buch*.<sup>3</sup> This was a small oblong piece of wood containing three parallel lengths of bore connected at top and bottom. It was fitted to the end of the lower joint and carried a widely flared metal bell shaped to go between the player's legs.<sup>4</sup>

The popularity of the basset-horn was largely due to two itinerant virtuosi, Anton David and Vinzenz Springer, who used a 7-key model, pitched in G, with diatonic extension. In 1789, accompanied by Dworschack, a clarinetist, they introduced the basset-horn to London. Fifteen years earlier it had been heard in Paris, where M. Valentin distinguished himself on the "corno-bassetto ou contra-clarinette".<sup>5</sup> It enjoyed some popularity in London, where at the turn of the century John Mahon played a 7-key "Clara voce or corno-bassetto". In 1801 there were two performers at the Covent Garden Opera,

and it was a popular favourite in the hands of Willman between 1820 and 1840, and, rather later, of Maycock, for whom Balfe wrote some telling solos.

But it was in Germany and in Central Europe that it found its spiritual home. Its luscious, sombre tone was exactly suited to the romantic sentimentality of the people. Specimens by more than fifty German makers from Vienna to the Rhine survive to attest its popularity, against one or two apiece by Italy, France and England.

Virtuosi were legion, among them A. and J. Stadler, C. Barmann, J. G. H. Backofen, I. Müller and A. Beerhalter. Among the composers for it were F. Danzi, Chr. Rummel, Backofen, Beerhalter and G. A. Schneider. By 1850 the instrument was dead. Brahms, writing to Clara Schumann in Nov. 1855, could say:

The aria by Mozart was sung by Frau Guhrau with orchestra. To my great joy she was accompanied by two basset-horns which had been obtained with great difficulty. I do not think any instrument blends more perfectly with the human voice.

**Alto Clarinet** (Fr. *clarinette alto*; Ger. *Alt-Klarinette*; Ital. *clarinetto contralto*). This is pitched in F or E $\flat$ , a fifth or sixth below the clarinet in C, the lowest notes sounding A and G. The higher-pitched of the two was long known as the "tenor clarnet" in England. It resembles the basset-horn in general appearance and like it has a short bent metal crook and upturned metal bell. In older instruments both are often made of wood and the bell points downwards. The mechanism is that of the orchestral clarinet and frequently includes two speaker keys, a powerful aid to correct intonation. It has always been treated as a military instrument and has been a fairly regular member of continental military bands from early in the 19th century. In present-day Italian bands as many as four may be employed. The lower-pitched instrument seems generally to be preferred. This had a long and useful career in the English service as well, a career which ill-considered reforms terminated about 1920. Its revival is overdue.

Tonally the "tenor" resembles very closely the basset-horn, and like it should be played with a reed of soprano size. The deeper-pitched instrument, having a wider bore and bigger reed, has a robuster tone, a tone, it may be said, more vigorous and distinguished than that of the saxophone, which has largely replaced it in English military music. This instrument might be of the greatest utility in the orchestra. Berlioz made the suggestion long ago: it still remains to be implemented.

The tenor in F may have been developed from the "grande clarinette" in G mentioned by Laborde, Francœur and others, or from the "clarinette d'amour" by the substitution of a normal for a pear-shaped bell, or

<sup>1</sup> Ho n seems to have been invented to explain the name of the instrument. The name was no doubt suggested by the half-moon shape of the earliest specimens. The error has been perpetuated by H. Lavoie, 'Histoire de l'instrumentation' (1878), p. 123.

<sup>2</sup> Lotz was violist and clarinetist in Cardinal Bathány's orchestra, and played the contra-bassoon at masonic meetings in Vienna.

<sup>3</sup> Possibly borrowed from the Rackett.

<sup>4</sup> A representative series of angled basset-horns is well illustrated on Plate 57 of T. Norlund's 'Musikinstrumentens Historia' (Stockholm, 1941).

<sup>5</sup> 'Mercure de France', Apr. 1774, p. 165.

again from the basset-horn by the removal of the *Kastchen* and basset keys. In 1808 Grenser of Dresden<sup>1</sup> was building such truncated basset-horns, possibly at the instigation of Iwan Muller, who is known to have used a basset-horn of his making and who no doubt would have found the basset keys an out-of-date encumbrance. In any case Muller took full credit for inventing the "clarinette-alto" to himself, if the fitting of the mechanism of his 13-key clarinet to it may be classed as an invention.

**Bass Clarinet** (Fr. *clarinette basse*; Ger. *Bassklarinette*; Ital. *clarinetto basso, clarone*). An instrument of 8-ft tone, pitched an octave below the B $\flat$  clarinet. Bass clarinets were formerly pitched in C and A as well; both are now obsolete. An extension to low E $\flat$  is usual on modern instruments. The metal bell is normally turned up in front to give the bell-note sonority, and a curved metal crook longer than that of the basset-horn carries the mouthpiece. The bass clarinet is usually made of wood, of African blackwood, or occasionally, in Germany, of maple. The use of metal has been revived by some of the Paris makers. It had been employed before by Adolphe Sax and by Losschmidt of Olomouc, in his striking bassoon-shaped model of 1867. The mechanism is that of the modern clarinet with the addition of padded cups to cover the finger-holes and of a second speaker-key near the mouthpiece. This was an invention of A. Sax and comes into operation for all notes above d'' or e''. To facilitate the difficult change from one speaker to the other automatic mechanism is frequently provided.

The compass is that of the ordinary clarinet with some differences of fingering in the extreme register, but notes above g''' are seldom required. The expressiveness and control of dynamics so characteristic of the treble instruments are not wanting; they are, in fact, even more marked.

Two models may be distinguished, the French and the German. The French, a modernization of Sax's bass clarinet of the 1830s, is considerably larger in the bore than the German. The tone is, therefore, rather fuller, especially at the bottom. The Oehler type, often played with a smaller mouthpiece, claims to be more regular in tone, exhibiting less difference in intensity between the middle and low registers. It is not infrequently extended to written d or c.<sup>2</sup> The bell is often added for appearance only, the bottom note issuing from a tone-hole just above it. The weight of the instrument is carried by a sling; the German model often has in addition a foot-peg below the bell.

**HISTORY.**—The first dateable bass clarinet is the "Basse tube" made in 1772 by Gilles Lot of Paris.<sup>3</sup> This may have been preceded by some twenty years or more by a very primitive instrument made from a thick slab of wood with finger-holes bored slantwise through it as in the wing-joint of a bassoon, with separate crook and upturned bell. Three specimens survive.<sup>4</sup> The next attempt was Heinrich Grenser's bassoon-shaped model of 1793.<sup>5</sup> The rise of military bands at this period greatly fostered the building of bass clarinets, which were required to replace the bassoon for their greater robustness of tone. Some of these were doubled upon themselves in the manner of a bassoon for portability, some were extended down to low C in compass. Such were the *Basse guerrière* of Dumas of Paris, c. 1810, the *Basse-orgue* of Sautermeister of Lyons, 1812, the bass clarinet of G. Streitwolf of Göttingen, 1828<sup>6</sup> and the *Gliedbarifono* invented by C. Catterini of Padua and made by Maino of Milan. The latter was intended for orchestral use and was used in opera at Modena in 1838.

A curiously contorted form may be noticed in passing, the flat 5-key serpentine model by N. Papalini of Chiaravalle of which at least five specimens survive in public collections.<sup>7</sup>

The form of the modern instrument is due to Adolphe Sax. From the start he adopted a straight body for his instrument and, rejecting slanting holes, thick-walled tubes and other clumsy expedients, brought the scientifically located tone-holes within reach of the fingers by means of padded cups. In the specification dated 19 June 1838 two types of bell are shown, a straight bell of normal type and an elongated upturned bell when extension of the compass to written c was desired. A straight model with upturned bell, bent wooden socket and thirteen keys had been made as early as 1807 by Desfontenelles of Lisieux. This curious instrument (Paris Conservatoire Museum No. 1136) was long credited with a conical bore and considered for that reason a predecessor of the saxophone, an instrument which it outwardly resembles; but closer examination and trial show it to be a clarinet.<sup>8</sup> A remarkable feature of it is that it has thirteen keys, anticipating Muller's invention by several years. Had this instrument been developed earlier much wastage of effort might have been

avoided. It is far from likely that Sax ever saw it or that he derived much inspiration from Grenser's or Streitwolf's attempts, as has been alleged by his detractors.

Sax had evolved his model in Brussels. His performance upon it — he was a virtuoso bass clarinetist — greatly impressed the leading French musicians when he brought it to Paris a year or two later, and in a very short time it had ousted the Dacosta-Bufferet model<sup>1</sup> from popular favour. The latter had been commended by Fétis in the 'Revue et Gazette Musicale' of 13 Mar. 1834, but in a later issue, 10 Jan. 1841, he pronounced Sax's instrument to be vastly superior in sonority by reason of its larger bore.

The succeeding century has seen only a general improvement of mechanical details and the substitution of Boehm mechanism for the original Muller keywork. Sax made another model, the "clarinette basse recourbée", in the shape of an alto saxophone. In the early 1900s E. J. Albert, the famous Brussels maker, made a singularly neat model on similar lines. He improved greatly on Sax's design, in compactness by the use of a double-coiled crook, in tone by the extensive use of wood in place of metal. This instrument enjoyed some measure of success and might well be revived.

Willman was the first to introduce the bass clarinet to England. In 1836 he accompanied the contralto Mrs. Shaw in a solo especially written for her by Neukomm. The *obligato* part is florid and showy, extending from written *c* to *c''*, sounding of course an octave lower. In 1833 Wood of London had constructed a bass in *C* with an extension to low *B*<sub>♭</sub>.

**Contrabass Clarinet** (Fr. *clarinette contre-basse*, *clarinette pédale*; Ger. *Kontrabassklarinet*; Ital. *clarinetto contrabbasso*, *contra-clarone*). This has been made in various keys; in *F* and *E*<sub>♭</sub>, an octave below the basset-horn and alto clarinet; in *C* and *B*<sub>♭</sub>, an octave below the bass clarinet. The former are sometimes known as "contrabasset-horns" (Ger. *Kontrabassetthorn*). The latter are of 16-ft. tone and require a tube at least 8 ft. in length, or longer, if the usual compass is extended. The first contrabasset-horn was made by G. Streitwolf of Gottingen about 1828. It was shaped like a bassoon, had nineteen keys, including four "basset" keys, and was pitched in *F* or *E*<sub>♭</sub>.<sup>2</sup> It was warmly praised by Fétis and by Spohr. Some fifteen years later Sax followed with his metal *clarinette contre-basse* in *E*<sub>♭</sub>. This appears to have had no success. In the 1880s Albert of Brussels provided an instrument pitched in *F*

for Professor Poncelet's clarinet class at the Brussels Conservatoire. Recently Selmer of Paris has produced a wooden model pitched in *E*<sub>♭</sub> at the suggestion of the American Bandmasters' Association, and in the 1930s Ernst Schmidt of Mannheim announced a Kontrabass-Klarinette in *G* descending to written *d*.

Early attempts to create the true contrabass clarinet an octave below the bass were made by Dumas in his *contre-basse guerrière*<sup>3</sup> and by Wieprecht in his *Bathyphon* of 1839, constructed by Skorra of Berlin and by Kruspe of Erfurt, which had a short life in Prussian military bands. It was pitched in *C*. This interesting instrument was described at length by V. Mahillon in his Catalogue of the Museum of the Brussels Conservatoire.<sup>4</sup> A few years later followed Sax's less successful *clarinette-bourdon*. But the true prototype of all modern attempts was Besson's Pedal Clarinet of 1890-91<sup>5</sup>, upon which M. Bretonneau gave several recitals in London to prominent musicians. Intended primarily for military music it was an ingenious combination of light wood and metal, but the long conically bored metal crook impaired the intonation, and its simple-system mechanism did not commend it to orchestral players. It did, however, figure to some effect in Vincent d'Indy's 'Fervaal'. Recently attempts have been renewed with more success, notably by Heckel, Huller and other German makers<sup>6</sup>, and by Buffet-Crampon and Leblanc in Paris. Metal is now often employed throughout, and in the French instruments Boehm mechanism is fitted. Messrs. Leblanc's model, designed by M. Houvenaghel, is particularly compact. In it two slender members of equal length of thin metal are connected at the bottom by a short "U" bend. The ingenious mechanism in which extensive use is made of rod-axes allows a comfortable position for the fingers, and the stretch is little more than that demanded by the soprano clarnetts. The instrument is extended to written *C* giving, it is claimed, a full chromatic range of 5 octaves from 32 ft. *B*<sub>♭</sub> up. The same makers have produced a sub-contrabass of 32-ft. tone, two octaves below the bass clarinet, made to a similar design.

The contrabass clarinet has won for itself a footing in the largest continental military and

<sup>1</sup> 'Archives des découvertes pendant l'année 1810'.

<sup>2</sup> Vol. I, pp. 216-20. See also C. R. Day, *op. cit.*, pp. 124-25 where it is stated to be pitched in *E*<sub>♭</sub>.

<sup>3</sup> Described at length in 'Orchestral Times and Bandman', Jan. 1892. See also C. Pierre, 'La Factice instrumentale', pp. 77-82, where it is illustrated.

<sup>4</sup> A modern 15-key military contrabass by G. Huller of Schöneck examined by the writer is 8½ ft. in length, has a bore of 29 mm., and is made on the lines of a modern bass clarinet. The crook, 26 ins. in length, is carried down behind the upper member, while the wide spreading bell is carried well up in front of the lower joint. The body is made of thin-walled grenadilla. The instrument rests when required on an adjustable footpeg, is comfortable to finger and requires little more effort in playing than the bass clarinet.

<sup>5</sup> This was a bassoon-shaped instrument pitched in *C*, derived from the *basse guerrière* of Dumas. The famous solo in 'Les Huguenots' is stated to have been played upon it. H. Lavoix, 'Histoire de l'instrumentation' (1878), p. 124.

<sup>6</sup> Berlin Hochschule Museum, No. 87.

factory bands, in the orchestra its appearance has been infrequent. In addition to d'Indy's 'Fervaal' (1897) it figures in Weingartner's 'Orestes' (1902) and in R. Strauss's 'Josephslegende' (1914). In the latter the composer directs that the part is to be played by the D or second A clarinet player, or, when an instrument is not available, it shall be replaced by the double bassoon. Here, indeed, is the crux of the matter: composers do not write for it because the instrument and players of it are seldom available, while players are infrequent for lack of parts to play.

CLARINO (Ital.; med. Lat. *claro*, *claratus*; Eng. *clarion*). Not, as is too often supposed, an instrument, but an instrumental part in old music (mainly 18th-century), usually the treble part in music for several trumpets. It has little to do with the clarinet, except that

when that instrument came into vogue the art of high trumpet playing was dying out and high trumpet parts were sometimes played on the new instrument. It was doubtless for this reason that it received the name of *clarinetto* in Italian, which is the diminutive of *clarino*.

CLARK, Edward. See INTERNATIONAL SOCIETY FOR CONTEMPORARY MUSIC.

CLARK, Frederick Scotson (b London, 16 Nov. 1840; d. London, 5 July 1883).

English organist, composer and teacher, of Irish parentage. He received his earliest musical instruction from his mother (a pupil of Chopin) and Mrs. Anderson. He was soon sent to Paris to study the pianoforte and harmony with Sergent, organist of Notre-Dame, and at the age of fourteen he was appointed organist of the Regent Square Church in London. He next studied under E. J. Hopkins and subsequently entered the R.A.M., where his masters were Sterndale Bennett, Goss, Engel, Pinsuti and Pettit. In 1858 he published a 'Method for the Harmonium', and for a few years was organist at different churches in London.

In 1865 Clark founded a college of music for students of church music and the organ. Soon after this he became organist of Exeter College, Oxford. He graduated B.Mus. in 1867 and was appointed headmaster of St. Michael's Grammar School, Brighton. Six months later he was ordained deacon, and afterwards priest. He next went to Leipzig, where he studied under Reinecke, Richter, etc. When in charge of the English Church at Stuttgart he pursued his musical studies under Lebert, Krüger and Pruckner. In 1873 he returned to London, and in 1875 resumed his connection with the London Organ School. In 1878 he represented English organ playing at the Paris Exhibition. Besides being a remarkable executant on the organ, he had great facility in composition. His works, which amount to over 500, consist principally of small organ and pianoforte pieces, many of which attained great popularity.

W. B. S.

CLARK, Richard (b. Datchet, Buckinghamshire, 5 Apr. 1786; d. London, 5 Oct. 1856).

English composer. At an early age he became a chorister at St. George's Chapel, Windsor, and at Eton College. In 1802 he succeeded his grandfather, John Sale the elder, as lay clerk at St. George's Chapel and Eton

College; these appointments he held until 1811. In 1805 he was appointed secretary to the Glee Club.

In 1811 Clark went to London and obtained the places of lay vicar of Westminster Abbey and vicar-choral of St. Paul's Cathedral, and in 1820 he succeeded Joseph Corfe as a Gentleman of the Chapel Royal. In 1814 he published a volume of the words of the most favourite glees, madrigals, rounds and catches, with a preface containing an account of 'God save the King', the composition of which he there attributed to Henry Carey. A second edition of this work appeared in 1824, but the subject of the popular tune was omitted, Clark having in 1822 published a separate volume assigning its composition to John Bull. He was the composer of a few anthems, chants and glees, and the author of pamphlets on 'Handel and the Harmonious Blacksmith', 'Handel's "Messiah"', the derivation of the word "madrigale" and 'Musical Pitch'.

W. H. H.

See also Ashley (J), controversy on 'God save the King'.

**CLARKE, Douglas** (b. ? , 1893).

Canadian conductor and composer of English birth. He was educated at Christ's College, Cambridge, where he took the degrees of M.A. and Mus.B. He studied composition under Sir Hugh Allen, Gustav Holst and Vaughan Williams. For a time he was conductor of the Cambridge Musical Society, and some of his compositions were performed by the London Symphony Orchestra. He migrated to Canada in 1927 to become conductor of the Winnipeg Male Voice Choir and the Winnipeg Philharmonic Society. In 1928 he organized and conducted the first presentation of Bach's St. Matthew Passion heard on the western plains. In 1929 he was appointed principal of the McGill Conservatory at Montreal, and shortly afterwards became conductor of the Montreal orchestra, an organization supported by wealthy citizens, and Dean of the Faculty of Music at McGill University. He has introduced new works by nearly all the modern British composers to his community and is the composer of a number of choral and instrumental works.

H. C. (ii).

**CLARKE, (James) Hamilton (Smea)** (b. Birmingham, 25 Jan. 1840; d. Banstead, Surrey, 9 July 1912).

English organist, conductor and composer. The son of an amateur organist, he entered the musical profession as organist at St. Brendan's Church, Birr, Ireland (1862), changing to Zion Church, Rathgar, Dublin (1863), where he frequently deputized for (Sir) Robert Stewart at Christchurch Cathedral. In 1864 he went to Belfast as conductor of the Belfast Anacreonic Society and organist of Caremony Church, the same year winning

the first prize offered by the (Royal) College of Organists. After a temporary appointment as organist at Llandaff Cathedral he was appointed organist of Queen's College, Oxford (1866), graduating B Mus. the following year. He spent five years at Oxford, where he also conducted the Queen's College Musical Society. He then went to London as organist of Kensington Parish Church (1871), succeeding Sullivan at St. Peter's, South Kensington (1872). The theatre, which offered him a wider field in the creative sphere, then attracted him, and became conductor at West End theatres including the Opera Comique, Globe, Olympic, Toole's, Comedy, Gaiety, Haymarket and others, and made a provincial tour with the D'Oyly Carte Company. From 1878 he became Irving's conductor and wrote the incidental music to 'Hamlet' (1878), 'Merchant of Venice' (1879) and other plays; but overwork and anxiety brought a nervous breakdown, which compelled him to resign. To recruit his health he went for a time as conductor with touring companies. In 1889 he was appointed conductor of the Victorian National Orchestra in Australia, where he was also inspector of military bands with the honorary rank of captain. Returning home in 1891 he settled down to the old life, writing music for plays, including 'King Lear' (1892) and 'Cymbeline' (1896) for Irving, and becoming the principal conductor of Carl Rosa Opera Company (1893). Once again overwork brought a recrudescence of nervous trouble, which in 1901 drove him to seek refuge in Banstead Hospital, where he remained until his death.

Hamilton Clarke was a man of outstanding ability as a composer, conductor and organist, also an excellent performer on both the violin and clarinet. Some 400 of his works were published. His Symphony in F major was produced at the Albert Hall in 1873 and the Symphony in G minor at the Covent Garden "Proms." in 1879.

BIBL.—BROWN, JAMES A., in 'The Orchestral Times' (1891), pp 42-43.

**CLARKE, Henry Leland** (b. Dover, New Hampshire, 9 Mar. 1907).

American writer on music and composer. He had pianoforte lessons with Ruth Olive Roberts from 1913 to 1924 and studied the violin and organ while at the Thornton Academy in 1919-24. At Harvard University he gained the A.B. in 1928 and the A.M. a year later, and in 1947 he was made a D.Mus. for his dissertation 'John Blow: Last Composer of an Era'. From 1929 to 1931 he studied composition with Nadia Boulanger in Paris, having been awarded the John Harvard Travelling Fellowship, and in 1932 he had lessons with Gustav Holst in London. He spent the years from 1932 to 1936 at Columbia Uni-

versity, also studying meanwhile with Hans Weisse and Otto Luening between 1933 and 1938. He was awarded a grant by the American Council of Learned Societies in 1936. In 1932 he was appointed Assistant to the Music Division of the New York Public Library for four years and for the next two he was a Teaching Fellow at Bennington College. He was Chairman of the Graduate Faculty of Westminster Choir College in 1938-42, and after a year in the American Army he was made Assistant Professor of Composition at Vassar College (1948-49). Since 1950 he has been Assistant Professor at the University of California, Los Angeles, having been a visiting lecturer in 1947-48 and an instructor in 1949-50. In 1952 he was appointed Chairman of the Southern Californian Chapter of the American Musicological Society for a year.

Leland Clarke has written several articles on music, including 'Harmony Really Simplified' ('Columbia Musical Survey', Feb. 1933), 'Folk Art and Cultivated Art' ('The Art Series', Mar. 1938), 'What is a Good Hymn?' ('The Christian Register', Mar. 1944), a valuable essay on Blow, 'John Blow: a Tercentenary Survey' (M.Q., 1949) and 'The Basis of Musical Communication' (Journ. Aesthetics & Art Criticism, Mar. 1952). His compositions include the following: Chamber Opera, 'The Loafer and the Loaf' (1951). 'Confitemini Domino' for chorus *a cappella* (1928). 'Before Dawn' for mixed chorus *a cappella* (1934). 'Eternal Spirit of Truth' for chorus *a cappella* (1949). 'These Things Shall Be' (J. A. Symonds) for chorus *a cappella* (1950). 'Gloria', in the five official languages of the United Nations for chorus & organ (1950). 'Lo, the Winter is Past' for chorus & organ (1951). 'Dona Nobis Pacem' for men's chorus *a cappella* (1951). 'The Fire Bringer' for chorus & organ (1952). 'No Man is an Island' for symphonic band with men's chorus or narrator (1951). 'Monograph' for orch. (1952). Rondo for vn. & pf. (1932). 'Danza de la muerte' for oboe & pf. (1937). 'Dialogue' for clar. & pf. (1948). 'Dilemma' for pf. (1937). 'Voluntary on the Hussite Hymn for organ (1950). 'Emily Dickinson Canons' for soprano & viola (1933). 'Lark' for soprano solo (1936). 'A Woman of Virtue' for contralto, oboe and gong (1937). 'Rondeau redoublé' for baritone, clarinet, cello and trombone (1951). Also songs for voice & pf.

M. K. W.

**CLARKE, Hugh Archibald** (b. Toronto, 18 Aug. 1839; d. Philadelphia, 16 Dec. 1927).

Canadian conductor, educationist and composer. He was the son of James Peyton Clarke, a Scottish organist (1808-77) who, after an active career in Edinburgh, went to Canada to become organist of St. James's Cathedral, Toronto, and was later head of the musical faculty of the University of Toronto. The son, Hugh Archibald, was trained by his father, and in 1859 went to Philadelphia to become conductor of "The Abt", a re-

nowned choral organization of that day. In 1875 he was appointed professor of the science of music at the University of Pennsylvania, and he continued in that post until his death. He composed music for Aristophanes' 'Acharnians' and Euripides' 'Iphigenia in Tauris', and the oratorio 'Jerusalem', as well as chamber music. He was the author of many musical textbooks and companionable books on musical appreciation, including 'Music and the Comrade Arts' (1899) and 'Highways and Byways of Music' (1901). H C (11).

**CLARKE, Jeremiah.** Three English organists, two of whom were also composers. Of these the most important is

**Jeremiah Clarke** (i) (b. ? 1673 or 1674; d. London, 1 Dec. 1707). Nothing is certainly known of the date or place of his birth, but it has been observed that the name of Clarke was that of a Windsor family, some of whom were lay-clerks of St. George's Chapel in the 17th and 18th centuries, and it may be noted that the name of Jeremiah Clarke is carved in the stone arcading of the north aisle of the Chapel, with the date 1683, and that the name was perpetuated there at a baptism of 1722.<sup>1</sup> (See II below.)

As E. H. Fellowes has pointed out, it is not unlikely that the subject of this article was closely related to the Windsor family, which was evidently musical. He began his career as a chorister in the Chapel Royal under Blow and sang treble at the coronation of James II in 1685. In view of this fact it is hardly possible, as has been conjectured, that the stone carving at St. George's could refer to a period when the boy was acting as assistant organist there. His voice was already broken by 26 Apr. 1691, on which date the Lord Chamberlain's records refer to him as "late child of the Chappell". In 1692 he became organist of Winchester College, a post he retained until 1695<sup>2</sup>, when he returned to London as organist of St. Paul's Cathedral. (Wren's new building was then only in process of erection and was not used for worship until 1697.) He was appointed vicar-choral on 6 June 1699 and succeeded his former master, Blow, in the post of almoner and master of the choristers of St. Paul's on 11 Jan. 1703 (not 1693 as stated by all authorities hitherto).

On 7 July 1700 Clarke and his former fellow-pupil, William Croft, were sworn in as Gentlemen-extraordinary of the Chapel Royal, with a joint reversion of an organist's place whenever one should fall vacant, which happened on 15 May 1704 by the death of Francis Piggott, on which Clarke and Croft

<sup>1</sup> See E. H. Fellowes, 'Organists . . . of St. George's Chapel', 1940.

<sup>2</sup> According to the Rolls of Winchester College, where those for 1692-95 bear the words "Organist, Mr. Clarke". (The Rolls were transcribed and published by C. W. Holgate [Winchester, 1899]).

were on 25 May sworn in as joint organists. Clarke shot himself on 1 Dec. 1707 while mentally deranged, and was buried in the New Crypt of St. Paul's on 3 Dec. 1707. There are various references to his death in contemporary printed literature, e.g. Ned Ward, 'The London Spy'; 'The London Terræ Filus', No. V, 1708, which refers to a sudden "conflict of mind" (p. 38) and prints an ode beginning "Who hating discord could not bear The Troubles of a tortur'd mind"; and a broadsheet, 'A Sad and Dismal Account of the Sudden and Untimely Death of Mr. Jeremiah Clarke', which contains the origin of a supposition that he took his life on account of an unhappy love affair. He was unmarried, and there seems to be no trace of a will or grant of administration.

Clarke wrote church music, choral odes, music for the theatre and harpsichord pieces. The list below identifies, for the present, 20 anthems and 2 services. Boyce selected three anthems for his 'Cathedral Music' and Arnold included a 'Sanctus' and 'Gloria in Excelsis' in A minor in his. Among the anthems are compositions celebrating significant events of the times, e.g. 'Praise the Lord O Jerusalem' for the coronation of Queen Anne; 'I will love thee' (distinct from that given by Boyce), performed at St. Paul's, 23 Sept. 1705, "the Queen present for the Victory and Success in Flanders in passing the French lines"<sup>1</sup>; 'The Lord is my strength' upon the Battle of Ramillies, 1706. Clarke's church music is in a style not now considered fashionable; nevertheless a critical consideration of it in the light of present-day scholarship is greatly to be desired. It may be regarded as transitional between the Restoration school proper and the early 18th-century writers.

The same remarks apply to his choral music, which includes the usual type of congratulatory court ode (see list below) and also an interesting 'Song on the Assumption', a kind of sacred cantata with orchestral accompaniment, as well as a work written on the occasion of a great hurricane in the Island of Barbadoes. Clarke was the original composer of Dryden's 'Alexander's Feast' (afterwards set by Handel), though his music has not survived. The words were commissioned by Clarke and his fellow-stewards of the Music Meeting<sup>2</sup>, and the work was performed on St. Cecilia's Day 1697 and at two concerts shortly afterwards.<sup>3</sup> From Dufey's 'Ode on the Union of King and Parliament' he set an extract, "Whilst the French their Arms discover", as a solo

<sup>1</sup> See J. S. Bumpus, 'A History of English Cathedral Music' (1908), I, 199, footnote.

<sup>2</sup> Evidence for this is found in Dryden's Letters, Derrick's Life of Dryden and the half-title of the 1st ed.

<sup>3</sup> See 'The London Gazette', Nos. 3347-48, which latter also mentions "a new Pastoral on the Peace, Composed by Mr. Jeremiah Clarke" — perhaps the ode 'Pay your Thanks'.

song, which was published as a single sheet (1701).

On the title-page of 'A Choice Collection of Ayres for the Harpsichord. . . .' (1700) Clarke is described as "Composer of the Musick used in the Theatre Royal" (i.e. Drury Lane) and seems to have started on his career as a theatre composer in 1696, when he provided songs for Powell's 'Cornish Comedy' and Motteux's 'Love's a Jest'. The dates of his other theatre music are noted in the list below. The music in Motteux's 'The Island Princess' is by several composers, Daniel Purcell, Leveridge, King and Williams, and to Clarke fell the task of setting 'The Four Seasons, or Love in Every Age', which is called "an interlude", but was in fact performed at the end of the last act.

His printed keyboard music is contained in the two publications cited in the list below; a few other pieces survive in manuscript. In this connection it is appropriate to say something about the so-called 'Trumpet Voluntary' arranged for trumpet, organ and drums by Sir Henry Wood and ascribed successively to Henry Purcell and Clarke. Under the name 'Trumpet Tune' it is found without a composer's name in B.M. Add. MS 31465, where it is placed in the midst of a group of harpsichord pieces (likewise without a composer's name, save after the last one of the group) known to be by Henry Purcell. However, it is identical with the piece called 'The Prince of Denmark's March' contributed by Clarke to 'A Choice Collection of Ayres for the Harpsichord' (1700). Sir Henry Wood made his transcription from Add. MS 31465, and thus fell into the somewhat natural error of supposing it to be by Purcell. It is undoubtedly by Clarke, however, and is one of a number of marches for harpsichord which he called after contemporaneous celebrities (The others are 'The Emperour of Germany's March', 'The Duke of Marlborough's March', 'The Duke of Gloucester's March' and 'King William's March'.) All these belong to a popular *genre* of the time — namely harpsichord pieces whose melodies imitate the characteristic idiom of the trumpet, commonly known as "Trumpet Tunes", "Trumpet Minuets", etc.; hence the title by which 'The Prince of Denmark's March' is designated in Add. MS 31465. That tune was included in Gay's 'Polly' in 1729 under the name of 'The Temple'. It has been thought that it may only be an arrangement by Clarke of a well-known tune; but in that connection it would be interesting to know whether that is true of the other marches which have been mentioned. Enough information has come to light<sup>4</sup> to continue to regard as Clarke's a

<sup>4</sup> For additional information see TRUMPET VOLUNTARY.

piece which is so clearly ascribed to him in the collection of 1700.

Nothing is known of Clarke personally, unless some notes by Philip Hayes are taken into account. (His father, William Hayes, studied under Hine, who had been a pupil of Clarke's.) He says that Clarke "was esteemed the most Elegant player of Church Music in the Kingdom", and that "his mind was naturally of a melancholy cast" (Add. MS 33235).

## CATALOGUE OF WORKS

(With references to MS sources)

### I. CHURCH MUSIC

#### (a) ANTHEMS

- 'Blessed is he that considereth.' B.M. Add. 33568
- 'Bow down thine ear.' B.M. Harl. 7340, Tenb. 310, 1021, 1034 & 1176-82.
- 'How long wilt thou forget me' (Boyce). B.M. Add 17819; Ch. Ch. 1234, 1228 & 1275 (organ parts), Tenb. 310, 805 & 1176-82.
- 'I will exalt thee.' Ch. Ch. 1229 (organ part).
- 'I will give thanks.' Tenb. 843, Ely Cathedral.
- 'I will love thee O Lord' (Boyce). B.M. Add 30931, 17840, 17842 and Harl. 7340; Ch. Ch. 1111 (incomplete), Tenb. 310, 705, 1021 & 1176-82
- 'I will love thee' (another anthem). Ch. Ch. 48, Tenb. 310 & 1176-82
- 'I will magnify thee' Tenb. 843, Ely Cathedral.
- 'I will sing unto the Lord.' Fitz. 152 (fragment of organ part)
- 'O be joyful in God all ye lands.' B.M. Add. 17879.
- 'O Lord God of my salvation.' Ch. Ch. 1226 (organ part); Tenb. 607 & 795.
- 'O Lord rebuke me not.' Tenb. 310 & 705.
- 'O Lord we gat not.' Tenb. 797-803 & 1176-82.
- 'Praise the Lord O my soul.' Tenb. 1232 & 1176-82.
- 'Praise the Lord O Jerusalem' (Boyce). B.M. Add. 30932 & Harl. 7340; Ch. Ch. 1228 (organ part); Tenb. 789 & 1034.
- 'The earth is the Lord's.' B.M. Harl. 7340.
- 'The Lord is full of compassion.' B.M. Add. 30932, 17819 & 31821, Ch. Ch. 1235 (organ part), Tenb. 310, 843 & 1176-82; Ely Cathedral
- 'The Lord is king.' Tenb. 1176-82.
- 'The Lord is my strength.' R.C.M. 1032, Tenb. 310, 1020, 1031 & 1176-82; Fitz. 152 (organ part)
- 'This is the day.' Tenb. 797-803 & 1176-82

#### (b) SERVICES

Te Deum and Jubilate in G mi. } St. Paul's Cathedral  
Te Deum and Jubilate in C mi. } Organ Book.

### II. CHORAL WORKS

- 'Alexander's Feast' (Dryden), St. Cecilia's Day 1697 (music not extant).
- 'Come, come along for a song and a dance', on the death of Purcell (after 1695) B.M. Add. 30934 & 31812 (19 cent)
- 'Hark, she's called', Song on the Assumption. Tenb. 1226 (? autograph) & 1175.
- 'Let nature smile', on Queen Anne's Birthday (after 1701). B.M. Add. 31812 (19 cent. imperfect).
- 'Now Albion raise thy drooping head', on his Majesty's happy Deliverance (before 1701). Tenb. 1232.
- 'No more, great rulers of the sky', "Compos'd for ye Gentlemen of ye Island of Barbadoes". B.M. Add. 31432, R.C.M. 1106, Tenb. 1232.
- 'O Harmony, where's now thy power', a song on New Year's Day, 1706. B.M. Add. 31813; Bodl. MS Mus. c. 6.
- 'O tell the world', "Compos'd upon ye Peace of Ryswick, performed at Trinity Lane play house", (1697). Tenb. 1232.
- 'Pay your thanks', upon the Peace concluded at Ryswick (1697). Tenb. 1232.
- 'Welcome, beauty' (occasion not known). B.M. Add. 31813.

### III. INSTRUMENTAL MUSIC

#### (a) INCIDENTAL INSTRUMENTAL MUSIC

- Overture and 10 items of incidental music to Manning's 'All for the better' (1703). Ch. Ch. 3.
- Overture to Sedley's 'Anthony and Cleopatra' (? 1696). R.C.M. 1172.
- Overture and 3 act-tunes to Motteux's 'The Island Princess' (1699). R.C.M. 1172.
- Overture and act-tune to Shakespeare's 'Titus Andronicus' (adapted by Ravenscroft). R.C.M. 1172
- Music for Durely's 'The Virtuous Wife' B.M. (undated MS).
- Music for Durely's 'A Wife for any Man'. B.M., R.C.M. (undated MS).

#### (b) KEYBOARD MUSIC

- 'Choice Lessons For the Harpsichord or Spinett Being The Works of the late Famous Mr. Jeremiah Clarke . . . (London, 1711).
- Six pieces in 'A Choice Collection of Ayres for the Harpsichord or Spinett. . . Composed By . . . Dr. John Blow . . . Mr. Francis Piggott . . . Mr. Jeremiah Clarke . . . Mr. John Barrett . . . & Mi. William Crofts. . . (London, 1700).
- Various MS items (including some in the above) at B.M., R.C.M., Ch Ch & Tenb.

### IV. SECULAR SONGS AND DIALOGUES

There are 27 songs in the printed collections of the time (including those marked \* in the list of theatre songs below) and a further number issued singly (including those marked † in the list of theatre songs).

Those sung in the theatre are as follows

- In Powell's 'Cornish Comedy' (1696) "When maids live to thirty" \* †
- In Motteux's 'Love's a Jest' (1696). "Slaves to London"
- In Sedley's 'Anthony and Cleopatra' (?1696) (unidentified)
- In Settle's 'The World in the Moon' (1697) "Divine Astrea" \* †
- "I see no more to shady coverts." \* †
- "Smile then with a beam divine." \* †
- "Whilst thus our calmer pleasures." \*
- In Durely's 'The Fond Husband' (1697). "The Bonny grey-eyed morn" \* † (Afterwards used in 'The Beggars' Opera').
- In Durely's 'The Campaigners' (1698). "Jockey was a dowdy lad" † (also set by Daniel Purcell).
- In Motteux's 'The Island Princess' ('The Four Seasons' (1699) "Must I a girl for ever be" \* †
- "Now to you ye dry Wooters" †
- "O my poor husband" \* †
- "Tis sultry weather." †
- In Durely's 'The Bath' (1701): "Lord, what's come to my mother" \* †
- In Crawford's 'Love at First Sight' (1704) "The rosy morn looks blithe" \* †
- In Motteux's 'The Amorous Miser' (1705): "While the lover is thinking" \* †

**Jeremiah Clarke (ii)** (b. ?; d. ?), "Organist in Birmingham". He published three volumes of songs and one volume of 'Sonatas for Harpsichord or Piano Forte' with additional string parts, between 1760 and 1791. It is just possible that this was the Jeremiah Clarke baptized at Windsor in 1722 (see (i) above).

**Jeremiah Clarke (iii)** (b. ?; d. Bromsgrove, 1809). He took the B.Mus. at Oxford and was organist of Worcester Cathedral in 1806-7.<sup>1</sup> H. W. S.

<sup>1</sup> Information from West's 'Cathedral Organists' (1921).

**CLARKE, John** (later known as **Clarke-Whitfield**) (b. Gloucester, 13 Dec. 1770, d. Holmer nr. Hereford, 22 Feb. 1836).

English organist and composer. He received his musical education at Oxford under Philip Hayes. In 1789 he was appointed organist of the parish church of Ludlow; in 1793 he took the degree of B.Mus. at Oxford, in the same year he was appointed master of the choristers at St. Patrick's Cathedral and Christ Church, Dublin. In 1794 he succeeded Richard Langdon as organist of Armagh Cathedral, which post he held till 1797.

In 1795 Clarke was given by private grace the degree of Mus.D. in Dublin, and in 1799 the Irish rebellion led him to resign his appointments and return to England, where he soon afterwards became organist and master of the choristers of Trinity and St. John's Colleges, Cambridge. In 1799 he was granted the degree of Mus.D. at Cambridge, *ad eundem* from Dublin, in 1810 incorporated at Oxford. He assumed the name of Whitfield, in addition to his paternal name of Clarke, on the death of his maternal uncle, Henry Fotherley Whitfield, in 1814. In 1820 he resigned his appointments at Cambridge for those of organist and master of the choristers of Hereford Cathedral, and on the death of Hague, in 1821, he was elected Professor of Music at Cambridge, a post he occupied till his death, but retaining that at Hereford until 1832, when he was attacked by paralysis and resigned his cathedral appointments. He is buried in the East Walk of the Bishop's cloister, Hereford Cathedral, where a mural tablet is erected to his memory.

Clarke-Whitfield's compositions consist of cathedral services and anthems (published in four volumes in 1805 and subsequently), an oratorio, 'The Crucifixion and the Resurrection' and numerous glees, songs, etc. He edited a collection of 30 anthems by various composers. Among the many works arranged by him for voices and pianoforte his edition of several of Handel's oratorios and other pieces should be remembered as being the first of that master's works so treated. W. H. H.

**CLARKE, Rebecca** (b. Harrow, 27 Aug. 1886).

English violinist and composer. Of musical parentage, she grew up in an environment of chamber music. She showed early talent and began to play the violin at the age of eight. At the R.C.M. in London she studied composition with Stanford and took up the viola as the basis of her professional career. She played at several of the Classical Concerts, was a member of a quartet consisting of Adila and Jelly d'Aranyi, violins, and Suggia (afterwards May Mukle), cello, besides other combinations. In 1916 she went to America, originally for a season, but remained until the end of the first world war, and for a period after that she

divided her time between the two countries. Permanently settled in London again during the 1920s-30s, she became a member (viola) of two quartet teams: the English Ensemble (pianoforte quartet) and the Pro Musica String Quartet. But she still frequently played in the U.S.A., and on her marriage in 1944 to James Friskin, who had been a fellow-student of hers at the R.A.M. and had long lived in New York, she joined him there.

Rebecca Clarke wrote the article on the viola for Cobbett's 'Cyclopedic Survey of Chamber Music'. As a composer she first attracted attention in the competition connected with the Berkshire (U.S.A.) Festival of 1919, where her Sonata for viola and pianoforte was at first bracketed with the Suite by Ernest Bloch, but placed second by a casting vote. In 1921 she again secured the second place in the same competition with her Trio for violin, cello and pianoforte, and was afterwards commissioned to write another work for the 1923 Festival, which took the form of a Rhapsody for cello and pianoforte. The same year she undertook a journey round the world as a violist.

#### CATALOGUE OF WORKS

Psalms for unaccompanied chorus (1920).  
'Lullaby' and 'Grotesque' for viola & cello (1918).  
Trio for vn, cello & pf. (1921)  
Sonata for viola & pf. (1919).  
'Chinese Puzzle' for vn. & pf. (1922).  
'Rhapsody' for cello & pf. (1923).  
'Midsummer Moon' for vn. & pf. (1924).  
'The Old English Songs' arr. for voice & vn. (1924).  
'Three Irish Country Songs' arr. for voice & vn.  
Psalms for voice & pf. (1920).  
Songs: 'Shy One', 'The Coths of Heaven' (Yeats), 'Infant Joy', 'Down by the Salley Gardens' (Yeats), 'The Seal Man', 'The Cherry Blossom Wand', 'Cradle Song', 'Eight o' Clock', 'The Aspidistra', &c.

E. E., adds.

**CLARONE** (Ital., augment.). The Italian name for the bass clarinet, sometimes also the basset horn.

See also Clarinet.

**CLARSEACH** (Clarseth). See CLAIR-SEACH.

**CLASSICAL**. A term which in music has much the same signification as it has in literature. It is used of works which have held their place as masterpieces in general estimation for a considerable time, and — more loosely — of new works which are generally considered to be of the same type and style. Hence the name has come to be especially applied to works in the forms which were adopted by the great masters of the latter part of the 18th century, such as instrumental works in the sonata form and operas constructed after the received traditions; and in this sense the term was used as the opposite of "romantic" in the controversy between the musicians who wished to retain the old forms and those, like Schumann, who wished music to be developed in forms

which should be more the free inspiration of the composer and less restricted in their systematic development. C. H. H. P.

*See also* Romantic.

**CLASSICAL CONCERT SOCIETY.** This Society came into existence in London after the death of Joachim to continue the series of chamber-music concerts which had been organized by the Joachim Committee. It gave its first concert at the Wigmore (then Bechstein) Hall on 21 Oct. 1908. The programmes followed the same classical pattern for several years and were in the hands of the leading chamber-music players of the day, the Klingler Quartet, Lady Hallé, Fanny Davies, Leonard Borwick, Casals, etc. Later a more eclectic policy was adopted, and a good many works by living composers were introduced. There was an interval during the war years (1914-18), a further series of concerts being given in 1919, 1921 and 1922. N. C. G.

A. ?, songs), Siegl ('Grosse Halleluja', choral work; part songs).

**CLAUSETTI, Pietro** (b. Naples, 2 Jan. 1904).

Italian composer. He took a diploma in Giacomo Orefice's class at the Milan Conservatory. Among his works are a "fable" in 3 acts, 'Ali Babà' (1935), with chamber orchestra, film music, songs for voice and piano-forte, and above all a cantata, 'S. Giovanni Laterano', for chorus and orchestra, first performed at Perugia and revived with much success at the Teatro alla Scala, Milan, in Sept. 1951 under the direction of Victor de Sabata. G. M. G.

**CLAUSS-SZARVADY, Wilhelmine** (b. Prague, 13 Dec. 1834; d. Paris, 1 Sept. 1907)

Czech pianist. She was the daughter of a merchant and received her musical education at the Proksch Institute in Prague. In 1849 she made her first concert tour, attracting great attention both at Dresden and Leipzig (1850). Nevertheless, she lived almost unnoticed in Paris for nearly a year, although Berlioz interested himself much in her favour. She announced a concert, but it was postponed on account of her mother's death. Being now an orphan, she was kindly received by the singer Caroline Unger-Sabater, and in the following year her claims were acknowledged in Paris. Thence her fame spread through Europe. She was in London in 1852 and again in 1871. Her last visit was in 1886. She married (1857) the Hungarian author Friedrich Szarvady. Her repertory consisted mainly of the works of Scarlatti, Bach and Beethoven, and it was upon her interpretation of these that her great reputation was founded. A. M.

**CLAUSSEN, Julia** (b. Stockholm, 11 June 1879; d. Stockholm, 1 May 1941).

Swedish mezzo-soprano singer. She studied at the Royal Academy of Music in Stockholm and later in Berlin. On 19 Jan. 1903 she made her début at the Royal Opera, Stock-

holm, in Donizetti's 'Favorita', and she remained there for nine years. She appeared in London, at Covent Garden, and in Paris, at the Théâtre des Champs-Élysées, in 1914, as a guest from the Royal Opera of Stuttgart. The outbreak of war drove her to the U.S.A., where she made a tour with the Chicago Opera, and she was at the Metropolitan Opera in New York, appearing in the principal mezzo parts, from 1917 to 1932. E. B.

**CLAUSULA.** In the Organum of the late 12th and early 13th centuries sections occur where the very long notes of the tenor (lowest voice) are interrupted by a short section in which the tenor movement is quicker, and almost in step with the other voice or voices. A large number (about 540, to be exact) of these sections have been rewritten in other parts of the manuscripts of the 'Notre-Dame Corpus' in an altered or improved form. These improved forms are known as "substitute-clausulae": they are in two parts except for a very few which are in three.

(Opening of the clausula "go", i.e. the second syllable of *Virgo*, from MS Wolfenbüttel 677, f. 46.)

The lively character of the tune in the upper part of this example is typical of the substitute-clausulae, and is closely similar to that found in the caudae of the Conductus. Its affinities with the melodic and rhythmic language of dance and song music are obvious, but these implications have not yet been fully explored.

The importance of the clausula in the history of music is twofold: (a) it is the oldest known "absolute" polyphonic music, for it has no text and is almost certainly intended for instruments as much as for voices; and (b) it is the cradle of the Motet, for the oldest motets are found to be nothing but clausulae with new, non-liturgical words added to the upper part or parts. A. H.

See also *Ars Antiqua*. Cadence (1). Conductus Motet. Organum.

**CLAVÉ, Anselmo** (b. ?; 1824; d. ?; 1874). Spanish (Catalan) musician. With no great musical culture, but with considerable intuition and practical good sense, he founded

choral societies in various parts of the country, for which he wrote a number of works in the style of choruses of French and Italian opera. These choral societies have had considerable development in Catalonia; and from being groups of men and women who sang mainly by ear they have developed into associations like the Orfeó Català, perhaps the most important musical institution in Spain. J. B. T.

**CLAVECIN** (Fr.). The French name of the harpsichord, derived by apocope from the Latin *clavicymbalum*.

See also Harpsichord Psaltery.

**CLAVECIN MAILLETS.** See PIANO-FORTE.

**CLAVI-ARPA.** See HIDALGO.

**CLAVIATUR CONTRAFAGOTT.** See DOUBLE BASSOON.

**CLAVICEMBAL D'AMOUR.** See CEMBAL D'AMORE.

**CLAVICEMBALO** (Ital.). One of the Italian names of the harpsichord, and the most used. It is derived from *clavis*, a key, and *cembalo*, a dulcimer or psaltery. Other Italian names for this instrument are *gravicembalo* (a phonetic variation caused by the interchange of *r* with *l*) and *arpicordo*, from which comes the English "harpsichord". A. J. H.

See also Cembalo. Harpsichord.

**CLAVICHORD** (Old Ger. & Med. Lat. *clavichordum*; modern Ger. *Clavichord*, Fr. *manicorde*, *manicardon*, *clavicorde*; Ital. *manicordo*; Spa. *manicordio*). In the Romance languages *clavicordo* and similar names generally denote a spinet or harpsichord. (See PLATE 7, Vol. II, frontispiece).

The clavichord is a keyboard stringed instrument in which the tone is produced by means of a metal tangent striking the strings. This, the simplest of all types of action for keyboard instruments, produces a most delicate and beautiful tone-quality, and a well-made instrument has virtues of tone and touch of the highest musical standard, enabling a performer to interpret suitable music with great effect. Thus there are many who would consider the clavichord of all instruments the most beautiful.

The origin of the clavichord is obscure. The earliest detailed description, which also contains diagrams and information on its design and construction, is contained in the manuscript treatise of Arnaut of Zwolle in the Bibliothèque Nationale in Paris (MS B.N. Latin 7295), written about 1425. Fol. 129 of this manuscript gives a perfect plan of a clavichord that has three octaves and one semitone of compass, the highest note being *c'''* and the lowest B. The earliest literary reference to the clavichord appears in the Rules of the Minnesingers drawn up by Eberhard Cersne in 1404, but beyond the mention of the instru-

ment there is nothing here. In England in 1477 William Horwood, master of the choristers at Lincoln Cathedral, was appointed to teach the boys the "clavychord", and the poet Skelton refers to the instrument in 'A comely Caystrowne' (printed c. 1500 by Pynson) in the following words: "Comely he clappyth a payre of clavycordys". There are only a few further references to the clavichord in the 15th century, but we need not conclude that this comparative silence implies that the use of the instrument was excessively rare, and one may be justified in supposing that it was well known throughout Europe by that time, since none of the few references to it treat it as anything but a usual or even common musical instrument. Reverting to the manuscript of Arnaut, it is interesting to observe that at this early date his description and drawing show a perfectly practical and normal instrument, and it is reasonable to suppose that such instruments had been made at least in the generation before Arnaut wrote. While we have no definite evidence, it is by no means unlikely that some kind of clavichord, possibly with a rudimentary keyboard, existed as far back as the 13th century.

The earliest existing specimens are generally Italian and date from the first half of the 16th century; the earliest one which bears a date is in the Metropolitan Museum of Art in New York and is dated 1537, although some doubt has been cast upon its authenticity. A clavichord, unfortunately unsigned and undated, which is probably of German origin and is now in the possession of Mr. Robert Henshaw of Bath, may well be of the same date or earlier still. This instrument is not unlike Arnaut's model and must be a typical example of those made in the very early 16th century in Germany. Generally speaking, we hear very little of the clavichord in any country except Germany from the 16th century onwards. Mersenne, writing in 1636, describes, with a fine engraving to illustrate his text, a large instrument which in some respects may be considered rather conservative in design. There appears to be no surviving French clavichord of this period; nearly all the instruments we still have are of German or Italian origin and date from the 17th century to the time when the clavichord went out of use early in the 19th century. In 18th-century Germany the clavichord was widely cultivated, and from the many examples of this period which survive we are able to know exactly what the instrument was like. The contemporary literature on the subject, however, is so sparse, even in the 18th century, that the enquirer is reduced to studying the history of the instrument by examining the many specimens which languish in the museums of Europe and America; there is at present no

modern work devoted to the subject, and the reader is obliged to consult the various works on musical instruments in general, or upon other keyboard instruments, in order to learn what modern scholarship has to offer.

CONSTRUCTION. — The clavichord exists in only one form, and the very simplicity of its action dictates a constancy of design which allows of no more than minor variations in detail. The case is oblong, like that of a square pianoforte, and the strings are stretched horizontally so as to cross the back ends of the keys. To the right of the keyboard is the soundboard upon which rests the bridge, which is shaped in the usual S form to measure off the correct length of string for each note. The tuning-pins are mounted in a wrest-plank on the right-hand side of the case, the other ends of the strings being hitched to pins which run along the back of the frame, and its left-hand end in the case of a few bass strings. At the farther end of each key is rigidly fixed a small blade of brass called the "tangent", and when the key is depressed this tangent will rise with it and meet the string; in this way the sound is produced, and it is important to note that

the vibrating length of the string is from the point at which the tangent hits it to the bridge: the left-hand end which runs from the point of contact of the tangent to the hitch-pin is damped by means of cloth woven in and out between the strings. When the player releases the key the tangent leaves the string and the cloth, which previously damped only the unused left-hand portion of the string, now influences the vibrating length as well, and silences it immediately. From this method of causing the strings to sound two important features arise, of which the first is this, that a given string may have the tangents of more than one key to play upon it, and provided the tangents met the string at the correct distance from the bridge a different note would be given by each key.

tone PRODUCTION. — This peculiarity of construction meant that clavichords could be made in which one string, or rather one pair of strings, for clavichords always have two strings to a note, could serve for more than one note, and provided the two notes were not required to be played simultaneously this was a perfectly good arrangement. Early clavichords were always made thus, and the system persisted until the middle of the 18th century. A clavichord thus made was known as *gebunden* or "fretted", those with a separate pair of strings for every note being called *bundfrei* or "fretless". The makers ingeniously arranged the notes so bound together in such

a way that no inconvenience would be experienced in playing music written in the usual or common keys. The advantages of making a clavichord *gebunden* are partly simplicity and presumably cheapness, and partly the reduction in tension, which allows a lighter frame and less pressure on the soundboard, and consequently the possibility of a better tone.

The second advantage of the clavichord, which derives from its peculiar construction, is that it is possible to vary the pitch of the note by the pressure on the key: since the tangent is in direct and rigid contact with the strings, a player may press harder and thus increase the tension of the strings and slightly sharpen the note. With a suitable touch a most effective *vibrato* may be obtained, this effect being known in Germany as the *Bebung*. As well as this effect the player can command dynamic light and shade from the quietest of *pianissimo* to, comparatively, a *forte*.

The greatest failing of the clavichord for many tastes is its lack of volume: it can never effectively be used as an accompanying instrument, and its use is restricted to the study and the small intimate gathering. Within its limitations, however, it is an absolutely perfect instrument and has no equal among keyboard instruments for the expressive interpretation of suitable music; and from a purely mundane point of view its very quietness makes it the ideal instrument for study where a louder instrument might be forbidden.

**DESIGN.** — The design of the clavichord is far more subtle than may appear at first sight. The scaling of the lengths of the strings is vital. The strings are all of thin brass wire — those of *c'* about 0.012 in. in diameter, and smaller still in the higher registers. Two factors are critical for both tone and touch: one is the proportion of the length of a key from its front to the tangent where it is pivoted, the other the length of the unused portion of the string to the left of the tangent. A correct gradation of these proportions and lengths is vital if the clavichord is to speak well and feel comfortable to play, and if it is to be responsive to the *Bebung*. The soundboard is also extremely critical: it must be of the right kind of wood, and here the choice can only depend on the maker's experience, and its thickness, which is generally a little under  $\frac{1}{4}$  in., must be carefully considered. The old makers had their own methods in these matters, and even after examining many instruments, good and indifferent, it is hard to draw firm conclusions. There is in the tone-quality of a clavichord, like that of a violin, an elusive element which most recognize but none can define.

**COMPASS.** — The clavichords of the 16th and early 17th centuries were of some  $3\frac{1}{2}$  octaves in compass. Whether the lowest notes were tuned in any kind of "short octave" is

not known for certain, but it is very likely. The German instruments of the latter part of the 17th century were 4 octaves in compass, and by the end of the 18th century instruments of over 5 octaves were being made.

**MAKERS.** — The comparative simplicity of the clavichord has led to its being frequently made by amateurs, both in the past and in our own days, and some antique clavichords have every mark of being made by the talented amateur. The most celebrated of the past must surely be Jacob Adlung (1699–1762) of Erfurt and Jena, an organist and teacher of music and languages, who made, according to his own statement, sixteen clavichords of the best quality. His house was destroyed in the great fire of Erfurt in 1736, and losing his stock of precious woods and his library he never again had the same enthusiasm for his experiments. For posterity, however, he left his 'Musica mechanica organoedi', published in 1768 with footnotes by J. F. Agricola, a book containing much material of interest on other keyboard instruments as well as the clavichord.

Many surviving clavichords are unsigned, but certain German makers of the 18th century are deservedly famous, most famous of all, perhaps, the Silbermanns — uncle and nephew — of Dresden and Strasbourg respectively. The Hamburg family of Hass made clavichords of very great excellence, not only musically but as works of art: they often favoured a style of instrument decorated in red lacquer with Chinese subjects in gold, and retained the floral decoration painted in tempera upon the soundboard, which is more often associated with the Flemish school of harpsichord makers. Hubert of Ansbach made instruments of very great beauty, and among less-known makers may be instanced Carl Lemme of Brunswick and Horn of Dresden.

**REVIVAL.** — Clavichords were made in Germany and Sweden as late as the early years of the 19th century. Then for some fifty years the clavichord was almost forgotten, to be revived again in England in the latter part of the century. A. J. Hipkins was the first to bring it to public notice in England, and some years later Arnold Dolmetsch started to make clavichords and to interest a wider public in them. Almost all modern makers have favoured a rather small model of clavichord of only 4 octaves in compass, which, while sufficient for most music up to and including that of J. S. Bach, is not sufficient for playing that of C. P. E. Bach and his time, which comprehends the last music written for the clavichord at a time when the pianoforte was only just coming into use. While the advantages of portability in a small clavichord are not to be despised, the larger instrument of 5 octaves in compass is a far more useful musical instrument and can be made with more purity and

CLAVICYTHERIUM OR UPRIGHT HARPSICHORD (Italian, 17th century)  
(Metropolitan Museum, New York)

smoothness of tone throughout its compass than a small instrument.

Since the revival of the clavichord, which began at the end of the 19th century, public interest in it has gradually increased, and very noticeably so since the second world war; it seems that the nature of musical life in the 20th century is turning more and more musicians to the cultivation of the delicate and unobtrusive clavichord. Instruments are now made in Germany by several makers, in America by others and in England by at least five professional makers and a host of amateurs.

**SPECIAL TYPES** — Although the standard clavichord is ideal in its simplicity, mention must be made of the pedal clavichord that was not unknown in the 18th century. It would seem that such instruments were made mainly for practising organ music, and they were really three instruments joined together, one for the pedal register and a further pair for the two manuals. Adlung mentions such instruments, and Rejnvaan in his 'Musikaal kunst wordenboek' of 1795 describes one with an engraved illustration.

Perhaps a more interesting development of the clavichord was Gottfried Silbermann's *cembal d'amour* or *cembalo d'amore*, which he invented about the year 1721. In this the normally unused part of the string to the left of the tangent was made to pass over a bridge on a second soundboard and given a separate device for damping. The resulting tone was much like that of a normal clavichord, though somewhat louder and very sweet. So far as is known no example of a *cembal d'amour* survives.

H. G. (11).

**CLAVICHORD PLAYING.** See HARPSICHOORD PLAYING (II) (f).

**CLAVICOR.** A brass valved instrument of tenor pitch invented in Paris by Danays in 1837 and made by the firm of Guichard. The clavicor was used in military bands for some time, first as a substitute for the alto ophicleide, which, unlike the bass ophicleide, seems always to have given trouble. Built in various

pitches from E $\flat$  down to B $\flat$ , the clavicor had three valves, two of them worked by the right hand and one by the left, but from 1840 all three valves were worked by the right hand in the ordinary way. Its bore was rather narrow and it was held up vertically by the performer in front of himself. Although its active life ceased long before the turn of the century, since it was supplanted by the E $\flat$  tenor horn, it was commemorated for some considerable time in Italian military-band nomenclature, in which the E $\flat$  tenor horn part was called *clavicorno in mi $\flat$*  until quite recently. For drawings of an entire family of clavicors see Lavignac, p. 1455.

In England clavicors were made by Pace, and a part for "E $\flat$  Clavicor Solo" is included in some brass-band journals issued in the 1850s.

A. B.

**CLAVICYTHERIUM.** The monkish Latin name for a vertical spinet.<sup>1</sup> There is a valuable specimen of this instrument in the Donaldson Museum belonging to the R. C. M. in London, formerly in the collection of Count Giovanni Correr of Venice. There is no name or date on this instrument, but it can hardly be later than the first years of the 16th century; Viridung gives a woodcut of such an instrument ('Musica getutscht und aussgezogen', Basel, 1511). The keyboard of this specimen has three octaves and a minor third, E to g'', less than Viridung's compass, but we may regard the lowest E as being tuned down to C, according to the "short octave" arrangement. The jacks have plectra of wire, not quill. The upright harpsichord has also been called clavicitherium. There is a fine example in the Metropolitan Museum, New York. Alessandro Kraus, jun., of Florence, issued a pamphlet, in English, describing the very interesting "One-Keyboarded Clavicitherium" in the Kraus Collection (1910), giving a photograph of the instrument.

A. J. H.

The 'Kongl. Svenska Vetenskaps Acad. Handlingar' (July-Sept. 1741) contains the description (pp. 218-20) of Dr. Brelin's "Upright double Clavecin", which is provided with nearly all the strings double the usual length, so that the back portion vibrates in unison with the front part giving the note. There appears to have been a duplicate set of strings at the back of the soundboard, both operated from the same keyboard. In an earlier paper (*ibid.*, July-Sept., 1739, p. 81) this method of stringing is described; also it is stated that no string rests on the bridge itself but is supported by a short brass or iron pin in which a notch is provided to hold the string.<sup>2</sup>

<sup>1</sup> See PLATE 13, Vol. II, p. 328.

<sup>2</sup> See also German trans of both papers: 'Kdoigl. Schwedische Akad. der Wissenschaften. Abhandlungen aus der Naturlehre, Haushaltungskunst und Mechanik', Vol. I, 1739-40, pp. 99-101, and Vol. III, 1741, pp. 251-54.

This method of stringing is a development of Silbermann's "Clavecin d'Amour" already known in Stockholm<sup>1</sup>, and Brehn himself first applied it to the clavier, as this paper of 1739 shows.

The upright double clavecin was provided with eight foot pedals by means of which it was possible to produce *forte* and *piano*, deep or high notes and strong or weak sounds with the greatest speed; and to obtain any volume, from the strongest to the weakest, as the whole or half the strength of the instrument could be damped by means of only one or two pedals. The instrument was so large that it was possible to climb inside it.

R. E. M. H.

BIBL.—MARFURG, F. W., 'Historisch-kritische Beiträge zur Aufnahme der Musik' (Berlin, 1754-60, Vol. II, 1756, pp. 322-24, trans. of Brehn's first paper).

**CLAVIER.** (1) The French name for the keyboard of the organ, pianoforte and kindred instruments (Ger. *Claviatur*, *Klavatur*, *Tastatur*; Ital. *tastatura*).

(2) The German generic name for keyboard stringed instruments. harpsichord, clavichord, pianoforte, etc. It never suggests any particular instrument (e.g. Bach's title 'Das wohltemperierte Clavier' does not suggest that the 48 Preludes and Fugues are to be played on the clavichord particularly, but simply that the work is written for a stringed keyboard instrument and may be performed on whatever instrument the player happens to possess). The familiar translation of the title as 'The Well-tempered Clavichord' is therefore misleading. English has no other word for "clavier", in its older sense, than "keyboard", but for better or worse we may continue to render Bach's title as 'The Well-tempered Clavier'. *Clavier* (modern *Klavier*) always means an instrument in German, never the keyboard (see (1) above).

(3) The term is used occasionally in English in both the French and the German sense, especially the latter, to indicate an unspecified old (pre-pianoforte) keyboard instrument. It has also been applied (more in the French sense) to certain instruments used for technical practice which afford the conditions of pianoforte playing with a minimum of tone, or no tone at all, known as "practice claviers".

J. A. F.-M., adds.

**CLAVIERÜBUNG** (Ger, lit. keyboard practice). A collective work in four parts by Bach containing various compositions for practice on keyboard instruments—harpsichord, clavichord and organ—published in 1731, 1735, 1739 and 1742. It includes the 'Italian Concerto' and "Goldberg" Variations for harpsichord and the 21 "Catechism" chorale preludes for organ. (For full contents

see BACH, Catalogue of Works Organ Works and Clavier Works.)

**CLAVIHARPE.** See DIETZ (C & J. C.).

**CLAVIJO (Clavixo) DEL CASTILLO, Bernardo** (b. ? , c. 1545; d. Madrid, 1 Feb. 1626).

Spanish organist, harpsichordist and composer. He belongs to the 16th-century Spanish organ school at the head of which stands the name of Antonio de Cabezon. In his youth he was in Italy in the retinue of the Duke of Alba, and he lived for many years at Palermo, where, as may be gathered from the State Archives, he was organist at the church of San Pietro in the royal palace (*Cappella Palatina*) from 6 Dec. 1569 to Jan. 1590. During that time he published a collection of 'Motecta ad canendum 4-8 vocum' under the name of "Bernardo Clabixi del Castello in regia Capella sicula organici musici" (Gardano, Rome, 1588).

Back in Spain, he is said to have become professor of music at the University of Salamanca in 1594, retaining the post until 1604, and he was in service in the royal chapel at Madrid. The musical gatherings held at his house in the Spanish capital were famous: the illustrious musician played the harpsichord or clavichord while his daughter Bernardina performed on the harp and friends took the parts for stringed instruments.<sup>2</sup> A *tiento* (prelude) for organ, taken from a manuscript in the Escorial, is published in Vilalba's 'Antología de organistas clásicos'. O. T.

**CLAVIOL.** See SOSTINENTE PIANOFORTE

**CLAVIOLA.** See HARP PIANO.

**CLAVIORGAN(UM).** A rare keyboard instrument which combined harpsichord and organ. There is a specimen in the Victoria and Albert Museum in London, made in England by Ludovic Thewes, dated 1579. The harpsichord has two 8-ft. and one 4-ft. sets of strings. This rests on a stand containing the organ, which has five stops of wood and metal pipes, but as only one pipe remains it is impossible to determine their specifications.

Bedos de Celles, in 'L'Art du facteur d'orgues' (1778), in a chapter headed 'L'Organisation du clavecin ordinaire', describes, with illustrations, a three-manual claviorganum. The two top manuals carried jacks, playing at 8-ft. and 4-ft. pitches, and the bottom manual, which could be coupled at will to the second manual, was the organ keyboard. The organ specification is:

(1) Un bourdon de 4 pieds bouché. (2) Un Prestant (principal) de deux pieds bouché. (3) Un Dessus de 8 pieds ouvert. (4) Un Hautbois dont la Basse sera un Basson.

<sup>1</sup> Communicated by Dr. T. Norlind to the writer in a letter dated 28 June 1933.

<sup>2</sup> Vincente Espinel, 'Historia del Escudero Marcos de Obregon', III, 5. (The novel on which Le Sage based his 'Gil Blas'.)

The bellows of the instrument are in the stool, worked by a pedal protruding for the player's right foot.

Bedos also has a chapter describing 'L' Organisation d'un piano-forté, imaginée & exécutée à Paris par M. Lepine, Facteur d'Orgues du Roi'. A. H. (iv).

**CLAY, Frederic** (b. Paris, 3 Aug. 1838<sup>1</sup>; d. Great Marlow, 24 Nov. 1889).

English composer. He was the son of James Clay, M.P., a very famous whist player and author of a well-known treatise on the game. Frederic was educated in music entirely by Molique, with the exception of a short period of instruction at Leipzig under Hauptmann. He held a post for a time in the Treasury. His compositions were almost wholly for the stage. After two small pieces for amateurs, 'The Pirate's Isle' (1859) and 'Out of Sight' (1860), he made his public début in 1862 at Covent Garden Theatre with 'Court and Cottage', libretto by Tom Taylor. This was followed by 'Constance' (1865), 'Ages Ago' (1869), 'The Gentleman in Black' (1870), 'Happy Arcadia' (1872), 'Cattarina' (1874), 'Princess Toto' and 'Don Quixote' (both 1876). In addition to these Clay wrote part of the music for 'Babul and Byou' and the 'Black Crook' (both 1872), and incidental music for Shakespeare's 'Twelfth Night' and for Albery's 'Oriana'. 'The Merry Duchess' was produced at the Royalty Theatre on 23 Apr. 1883 and 'The Golden Ring' at the Alhambra on 3 Dec. 1883. He also composed two cantatas, 'The Knights of the Cross' (1866) and 'Lalla Rookh' (containing what is perhaps his best-known song, "I'll sing thee songs of Araby"), produced with great success at the Brighton Festival, Feb. 1877, and not a few separate songs.

In all his works Clay showed a natural gift of graceful melody and a feeling for rich harmonic colouring.<sup>2</sup> Although highly successful in the treatment of dramatic music, it is probable that his songs will give him the most lasting fame. 'She wandered down the mountain side', 'Long ago' and 'The Sands of Dee', among others, are poems of great tenderness and beauty, and not likely to be soon forgotten. He was struck with paralysis immediately after the production of 'The Golden Ring'. J. A. F.-M.

See also Mortellari (4, grandmother). Ruddigore (setting of orig. version).

**CLAYTON, Thomas** (b. ?; c. 1670; d. ?).

English composer. He was a member of the king's band in London from 1692 to 1702 and went to Italy for improvement in the latter

year. On his return he associated himself with Nicola Haym and Charles Dieupart in a speculation for the performance of musical pieces at Drury Lane Theatre. Their first venture was 'Arsinoe, Queen of Cyprus', "an opera after the Italian manner, all sung", translated by Motteux and performed on 16 Jan. 1705. Clayton provided the greater part of the music — 23 out of 37 vocal numbers, according to the published 'Songs' — and although the work was little thought of by contemporary critics<sup>3</sup>, it was fairly successful and had 36 performances until 1707. Thus encouraged, Clayton proceeded to set to music Addison's opera 'Rosamond', which was produced on 4 Mar. 1707 and proved a dismal failure<sup>4</sup>, in spite of a very favourable review in 'The Muses' Mercury'. The 'Songs' (42 numbers) were published by Walsh.

According to some accounts Clayton went to Dublin in 1709, in the retinue of Lord Wharton, to establish "opera in the Italian manner" in Ireland as well. Nothing, however, seems to be known about any results of such an attempt. He was certainly living in London in 1711, when 'The Passion of Sappho' and 'The Feast of Alexander' (the first by William Harrison, the second by John Hughes, after Dryden) were performed with music by Clayton at his residence in York Buildings (as stated in the printed libretto, which contains an interesting preface on Italian and English music) on 24 May of that year.<sup>5</sup> The music of these two pieces is lost. There is a record of a revival of the former at the Lincoln's Inn Fields Theatre on 15 Nov. 1718, when Clayton was presumably still alive, but nothing else is known about any further activities of the man who, even if he was no great composer, deserves some credit for reintroducing English opera after the death of Purcell and at the same time preparing the ground for the splendid rise of Italian opera in London. A. L.

See also Dieupart Franceschini (model for 'Arsinoe').

**CLÉ DU CAVEAU.** The title of a large collection of French airs, including the tunes of old songs dating from before the time of Henri IV, old vaudevilles, commonly called *pontneufs*, and airs from operas and *opéras-comiques* which from their frequent use in *comédies vaudevilles* became popular airs (what are called *tambres*). The fourth and last edition of the work, published by Capelle, goes down to 1848; it contains 2350

<sup>1</sup> It has always been alleged that Clayton did no more than use a collection of airs he had brought with him from his journey; yet apparently none of the airs in 'Arsinoe' has ever been traced to any other composer.

<sup>2</sup> Addison's libretto was set to music again by Arne in 1733 and by Arnold in 1876.

<sup>3</sup> See letters in 'The Spectator' of 26 Dec. 1711 and 18 Jan. 1712, advertising the concerts and referring to Clayton's 'Arsinoe'.

<sup>4</sup> See 'London Figaro' for 7 Dec. 1889.  
<sup>5</sup> This is retained as the generously expressed opinion of Clay's greater contemporary, Arthur Sullivan. A modern musician would hardly apply the phrase to Clay's slender talent. H. C. C.

different airs and as many forms or models for couplets

The origin of the title is as follows: Some French song-writers of the 18th century, notably Piron, Crébillon (father and son) and Collé, instituted about 1737 a sort of club, where they dined regularly. Apparently they called their society *Le Caveau*, from the place of meeting, an inn of that name kept by one Landelle in the Rue de Buci, near the Comédie-Française and the Café Procope, where these boon companions finished their evenings. From that time all societies of song-writers have connected themselves as much as possible with this first society, and so the name *Caveau* is synonymous with a club of the same kind. The original society lasted exactly ten years, after which, in 1762, Piron, Crébillon *filz*, Gentil Bernard and others formed a new society which, becoming a "café" of the Palais-Royal, lasted twenty years.

The "*Caveau moderne*" was founded in 1805 by Capelle, the author of the '*Clé du Caveau*', with the help of Grumod de La Reynière, Pus, Armand Gouffé and Philippon de La Madeleine; they met at Balame's in the Rocher de Cancale, Rue Montorgueil. The society lasted till 1816, and in 1825 an effort was made to revive it, but after a year's existence it disappeared, together with another club, "*Les Soupers de Momus*", founded in 1816. In 1834 a new society was founded at Champeaux's under the direction of Albert Montémont, and was called at first "*Les Enfants du Caveau*", and then "*Le Caveau*" only. It no longer exists. Its last publications were '*Le Caveau: recueils de chansons*, 1834-1922' and '*Chansons sur des mots donnés par les membres du Caveau*, 1848-1899', both without music.

A. J. & M. L. P.

**CLEF** (Eng. and Fr., Ger. *Schlüssel*; Ital. *chiave*, from Lat. *clavis*). The only musical character, literally a "key", by which the pitch of a note can be absolutely represented. The clefs now in use are only three: the C clef, , the treble clef, , and the bass clef,  (obsolescent  and almost entirely obsolete ). These respectively represent c', g' and f. Two other clefs, representing d'' and G, have been long obsolete. From the last of these, Γ, the Greek gamma, which represents the lowest sound of the hexachordal musical system, is derived the word *gamut*, still in use. A D clef, indicating the note a third below that to which the bass clef is applied, occurs in a collection of old English motets, etc., by Tallis and others (B.M. Add. MSS., 17,802-3). It stands thus on the stave,  and occurs in the *bassus* part.

The derivation of the modern clefs from the letters F, C and G can be seen in the following

table of the clefs in their various stages of transition:

One or other of these characters, placed on one or other of the lines of a stave, indicates the name and pitch of the notes standing on that line, and by inference those of other notes on lines and spaces above and below it.

The stave which, at various times, has consisted of a greater or lesser number of lines, consists now of five. On any one of these each of the three clefs could be (almost every one has been) placed. In the following examples they occupy the positions in which they are now most commonly found:

Changes of clef during the course of a composition may take place only in the notation of music for certain instruments, as when the viola changes from the C (alto) clef to the G, or the cello and bassoon from the F clef to the C (tenor). But formerly the same licence was allowed in the notation of vocal music, the C clef in particular was frequently moved up or down to correspond with the  *tessitura*  of the voice part, with the object of keeping the notes more or less within the stave.

Only, however, in its relation to the stave of five lines can a clef be said with truth to change its place. On the Great Stave of Eleven Lines the clefs never change their places; but any consecutive set of five lines can be selected from it, the clef really retaining, though apparently changing, its place:

From the above it will be seen that when notes are written "in the tenor clef" (more properly "on the tenor stave") they are written on the 3rd, 4th, 5th, 6th and 7th lines of the "great stave" of eleven; that when written "in the alto clef" they are written on the 4th, 5th, 6th, 7th and 8th lines of this great stave; and when "in the soprano clef" on the 6th, 7th, 8th, 9th and 10th.

The more familiar bass and treble staves

consist severally of the lowest and the highest five lines of the great stave:

In early musical manuscripts two and even three clefs are sometimes found on the same stave:

It would be in no way inconsistent with modern theory, and indeed might be convenient in books of instruction, so to place them as above. S. T. W.

See also Chiavette. Notation. Saint Lambert (invention of new clefs)

**CLEGG, John** (b. Dublin, 1714; d. London, c. 1750).

Irish violinist. He was the son of William Clegg and a pupil of his father and of William Viner, master of the Dublin Castle band. In 1723, when only nine years of age, he performed in London in public a Concerto by Vivaldi and afterwards gained an eminent position in the musical profession, surpassing, according to contemporaneous writers, every other player in England in tone and execution. In 1737 he had a benefit at Crow Street Theatre, Dublin. On 21 Jan. 1744 he became insane and was confined in Bedlam Hospital, where, as Burney relates, "it was long a fashionable, though inhuman amusement, to visit him there, among other lunatics, in hopes of being entertained by his fiddle or his folly". He was discharged as cured on 20 July 1744, but was again admitted on 15 Dec. of the same year. He was finally discharged 13 Oct. 1746. Clegg appears also to have been a composer for his instrument, but no work of his has come down to us. P. D., adds.

**Clemenceau, Georges.** See Fauré ('Voile du bonheur', incid. m.).

**CLEMENS, Clara.** See GABRILOVICH (husband).

**CLEMENS NON PAPA (Jacques Clément or Jacob Clemens)** (b. Ypres, c. 1500; d. Dixmude, c. 1556<sup>1</sup>).

Flemish composer. He may have gained his first musical experience at the cathedral of Saint-Martin at Ypres, and he possibly went to France for further study, for his first published composition appeared there in a collection dated 1539. In 1540 he returned to the Netherlands, settling at Bruges as priest and master

of the children at the church of Saint-Donatien. But on 6 May 1545 his predecessor, Jean de Hollande, resumed the post, and he seems to have gone to Antwerp cathedral.<sup>2</sup> By 1550 he was in Holland, at the cathedral of 's Hertogenbosch, as "singer and composer".

There appears to be no foundation to the repeated assertion that he was at one time *Kapellmeister* to the Emperor Charles V, nor to the over-familiar story that he called himself "Clemens non Papa" to distinguish himself from Pope Clement VII. The sobriquet does not appear until 1546, 14 years after that pope's death, on the title-page of the 'Motecta a 5' published by Susato. It is now known that a poet in holy orders named Clément or Clemens lived at Ypres and was known as "Père Clément" or, in Latin, "Clemens papa." The composer, born at Ypres, must have known him either personally or by reputation, and called himself "Clemens non papa" to avoid confusion.

Ten volumes of his masses were issued in folio size by Phalèse at Louvain between 1556 and 1560, and in 1559 the same publisher issued seven books of his motets. Q.-L. gives a long list of his works.<sup>3</sup> Commer published 43 of his motets, chansons and Flemish psalms ('Collectio Op. Mus. Batavorum'). Clemens is known to have left 15 masses (partly incomplete), 230 motets, 158 3-part canticles, a 'Te Deum' and a large number of chansons. Proske included three motets in his 'Musica divina', and winds up a notice of his life by the following remarks:

He seems to have attempted all the styles then known. He was no slave to counterpoint, but for his time possessed an extraordinary amount of melodies and clear harmony. No one in his day surpassed him for tunefulness and elegance, his melodies are far more fresh and pleasing than those of his contemporaries, and his style is easy, simple and clear. That he often pushed imitation too far and neglected the due accentuation of the text is only to say that he belonged to the 16th century.

W. B. S., rev.

BIBL.—BERNET KEMPERS, K. P., 'Jacobus Clemens non Papa und seine Motetten' (Augsburg, 1928). Z. f. M., 1927, 11-12, pp. 620-27.

**CLÉMENT, Felix** (b. Paris, 13 Jan. 1822; d. Paris, 23 Jan. 1885)

French composer and writer on musical history and archaeology. From 1843 onwards he held various posts as organist and director of church music, ultimately at the Sorbonne. In 1849 he directed choral performances in the Sainte-Chapelle, the outcome of which was the publication of a collection of ancient music

<sup>1</sup> At any rate he published some music there, according to E. G. J. Grégoir ('Galerie biographique des artistes musiciens belges', 1862, p. 199), but as the same writer (in his 'Notice historique sur les sociétés . . . de musique d'Anvers', etc., 1869) omits the name of Clément from his notice of the cathedral choir, the statement in the earlier work may be a mistake.

<sup>2</sup> More than 250 vocal compositions, sacred and secular, were printed under his name in collections of the 16th century.

<sup>3</sup> A motet on his death, by Jacob Vaet, is contained in 'Novum et insignis opus musicum', Vol. I, Nuremberg, 1558.

in that year. His most important published compositions are choruses for Racine's 'Athalie' and 'Esther'. For several years he contributed largely to Didron's 'Annales archéologiques', thus preparing himself for his 'Histoire générale de la musique religieuse' (Paris, 1860), in which are included translations from Cardinal Bona's treatise 'De divina psalmodia' and Formby's 'Gregorian Chant compared to Modern Music'. He edited several books of religious music for the church, such as 'Eucologie en musique selon le rit parisien' (Paris, 1843 and 1851), 'Le Paroissien romain' (Paris, 1854) and 'Chants de la Sainte-Chapelle' (1849). His 'Méthode complète de plain-chant' (2nd ed., 1872) does not contain anything new, but is clear and orderly. His 'Méthode d'orgue' (1874) exhibits a moderate knowledge of thorough-bass and fugue. Clément's compilation, a 'Dictionnaire lyrique', is a list of operas on the plan of Allacci's 'Drammaturgia', compiled from Babault's 'Dictionnaire général des théâtres' and similar works. It is generally reliable for information on French works, but full of errors whenever it mentions foreign operas. Four supplementary parts brought the work down to the year 1881; a second edition of the whole (ed. A. Pougin) appeared in 1897 and a further supplement in 1904. Clément also published 'Les Musiciens célèbres depuis le 16<sup>ème</sup> siècle' (Paris, 1868, 42 portraits) and an 'Histoire de la musique' in 1885. G. C., rev.

**CLEMENT, Franz** (b. Vienna, 17 Nov. 1780; d. Vienna, 3 Nov. 1842).

Austrian violinist, conductor and composer. His father was butler in a nobleman's establishment and at the same time, after the fashion of the period, a member of his master's private band. His father and Kurzweil, the leader of another nobleman's band, were his teachers. Clement began to play the violin when he was only four and in Mar. 1789 made his first successful appearance in public at a concert in the Imperial Opera House. He soon began to travel with his father and in 1790 went to London, where he gave very successful concerts, some of which were conducted by Haydn and Salomon. He also played at Oxford at the second concert given in celebration of Haydn's installation as D.Mus. Having returned to Vienna, he was appointed solo player to the emperor and in 1802 conductor of the newly established Theater an der Wien, which post he retained till 1811. In 1812-18 he travelled in Russia and Germany and in 1818-21 again conducted the opera in Vienna. In 1821 he began to travel with Angelica Catalani, conducting her concerts, and he was also for a short time (about 1816) conductor of the Opera in Prague. He died in poor circumstances.

Clement was not only a remarkable violin player, but an unusually gifted musician. Spohr, in his autobiography, relates that Clement, after having heard two rehearsals and one performance of the oratorio 'The Last Judgment', remembered it so well that he was able, on the day after the performance, to play several long pieces from it on the piano-forte without leaving out a note, and with all the harmonies (no small item in a composition of Spohr's) and accompanying passages; and all this without ever having seen the score. Similarly he was said to have made a piano-forte score of Haydn's 'Creation' from memory, after having heard the oratorio a few times, merely with the help of the book of words, and that his arrangement was so good that Haydn adopted it for publication.

Clement's style was not vigorous, nor his tone very powerful. gracefulness and tenderness of expression were its main characteristics. His technical skill appears to have been extraordinary. His intonation was perfect in the most hazardous passages and his bowing of the greatest dexterity. Beethoven himself bore the highest testimony to his powers by writing especially for him his great violin Concerto. The original manuscript, which is preserved in the National Library in Vienna, bears this inscription in Beethoven's own handwriting.

Concerto par Clemenza pour Clement, primo violino e direttore al teatro a Vienne dal L. v. Bthvn., 1806

Clement was the first who played it in public, on 23 Dec. 1806. It would be difficult to believe, if we had not the programme still to refer to, that at this concert he also performed a set of variations "mit umgekehrter Violine" — with the violin upside down.

He published for the violin 25 concertinos, 6 concertos, 12 studies, a great number of *ars variis* and smaller pieces; for the pianoforte a Concerto; for orchestra 3 overtures, for the stage an opera and the music for a melodrama. All these works are, however, entirely forgotten, and the greater part seem to have disappeared. P. D

**Clement IX.** See Rospigliosi, Giulio.

**CLEMENT (Clemens) I, Johann Georg** (b. Breslau, c. 1710; d. ?).

German composer. He was *Kapellmeister* for over fifty years (from 1735) of the church of St. Johann at Breslau. He was made a knight of the papal Order of the Golden Spur. His numerous compositions for the church comprise 14 masses, 27 offertories, 18 graduals, Te Deums, etc., and a Requiem performed at the funeral of the Emperor Charles VI (1742). None of them has been published. He left two sons, one in Vienna, the other first violin at Stuttgart, 1790, at Cassel, 1792, and after-

<sup>1</sup> Gerber calls him Clementi.

wards *Kapellmeister* at Carlsruhe. The latter adopted the name Clementi. M. C. C.

**CLEMENTI & CO.** After the bankruptcy of Longman & Broderip of London in 1798, Muzio Clementi entered immediately into a fresh partnership with John Longman, at one of the old shops (26 Cheapside), and when Longman, leaving him in 1801, went to another address at 131 Cheapside, Clementi became head of a new firm consisting of himself, Banger, F. A. Hyde, F. W. Collard and D. Davis. The new partnership, at first known as Clementi, Banger, Hyde, Collard & Davis (afterwards shortened into Muzio Clementi & Co., or Clementi & Co.), with additional premises at 195 Tottenham Court Road from about 1806, underwent gradual changes. In 1810 Hyde's name disappears and the firm becomes Clementi, Banger, Collard, Davis & Collard. In 1819 it is Clementi, Collard, Davis & Collard, and in 1822 Clementi, Collard & Collard, while after Clementi's withdrawal in 1830 it finally appears as Collard & Collard, who continued to publish music at 26 Cheapside and 195 Tottenham Court Road until about 1834, when T. E. Purday took over the music-publishing of the firm at 50 St. Paul's Church Yard.

The Clementi firm had great trade and reputation in the manufacture of pianofortes. Clementi's name was doubtless of great weight as a guarantee of good workmanship. Violins and other instruments bear their stamp; they were, besides, music publishers.

**CLEMENTI, Muzio** (b. Rome, 23 Jan. 1752; d. Evesham, 10 Mar. 1832).

Italian pianist and composer. His father, an accomplished craftsman in silver, himself of a musical turn, observed the child's uncommon musical gifts at an early period and induced a relation of the family, Buroni, choirmaster at one of the churches of Rome, to teach him the rudiments. In 1759 Buroni procured him lessons in thorough-bass from an organist, Cordicelli, and after a couple of years' application he was thought sufficiently advanced to compete for an appointment as organist, which he obtained. Meanwhile his musical studies were continued assiduously: Carpani taught him counterpoint and Santarelli singing. In 1764, aged twelve, he had an oratorio, 'Il martirio de' gloriosi Santi Girolamo e Celso' performed in Rome.<sup>1</sup> When barely fourteen Clementi had composed several contrapuntal works of considerable size, one of which, a Mass, was publicly performed and appears to have created a sensation in Rome.

In 1766 an English gentleman, Peter Beckford, M.P., nephew of Alderman Beckford and

cousin of the author of 'Vathek', with some difficulty induced Clementi's father to give his consent to the youth's going to England, where Beckford offered to defray the expenses of his further education and introduce him to the musical world of London. Until 1773 Clementi quietly pursued his studies, living at the house of his protector in Wiltshire. Then, fully equipped with musical knowledge, and with an unparalleled command of the instrument, he descended upon London as a pianist and composer. His attainments were so conspicuous that he carried everything before him and met with a most brilliant, hardly precedented success. From 1777 to 1780 he acted as cembalist, *i.e.* conductor, at the Italian Opera in London.

In 1781 Clementi started on his travels, beginning with a series of concerts in Paris<sup>2</sup>, thence he passed, via Strasbourg and Munich, to Vienna, where he made the acquaintance of Haydn, and where, at the instigation of the Emperor Joseph II, he engaged in a sort of musical combat at the pianoforte with Mozart. Clementi, after a short prelude, played his Sonata in B $\flat$  (Op. 47 No. 2) — the opening of the first movement of which was long afterwards made use of by Mozart in the subject of the 'Zauberflöte' overture — and followed it up with a toccata in which great stress is laid upon the rapid execution of diatonic thirds and other double notes for the right hand, esteemed very difficult at that time. Mozart then began to prelude and played some variations; then both alternately read at sight some manuscript sonatas of Paisiello's, Mozart playing the allegros and Clementi the andantes and rondos; and finally they were asked by the emperor to take a theme from Paisiello's sonatas and accompany one another in their improvisations upon it on two pianofortes. The victory, it appears, was left undecided. Clementi ever afterwards spoke with great admiration of Mozart's "singing" touch and exquisite taste, and dated from this meeting a considerable change in his method of playing: striving to put more music and less mechanical show into his productions. Mozart's harsh verdict in his letters (12 Jan. 1782; 7 June 1783) was probably just for the moment, but cannot fairly be applied to the bulk of Clementi's work. He depicts Clementi as "a mere mechanician, strong in runs of thirds, but without a pennyworth of feeling or taste". But L. Berger, one of Clementi's best pupils, gives the following explanation of Mozart's hard sentence:

I asked Clementi whether in 1781 he had begun to treat the instrument in his present [1806] style. He answered *no*, and added that in those early days he

<sup>1</sup> See Ulderico Rolandi in Riv. naz. di musica, 1926.

<sup>2</sup> The books of Messrs. Broadwood & Son contain the entry at this date, "Shipped a harpsichord and a pianoforte for Mr. Clementi to Paris".

had cultivated a more brilliant execution, especially in double notes, hardly known then, and in extemporized cadenzas, and that he had subsequently achieved a more melodic and noble style of performance after listening attentively to famous singers, and also by means of the perfected mechanism of English pianos, the construction of which formerly stood in the way of a cantabile and legato style of playing.

With the exception of a concert tour to Paris in 1785 Clementi spent all his time from 1782 to 1802 in England, busy as conductor, virtuoso and teacher, and amassing a considerable fortune. He had also an interest in the firm of Longman & Broderip, "manufacturers of musical instruments and music-sellers to their majesties". The failure of that house, by which he sustained heavy losses, induced him to try his hand alone at publishing and pianoforte-making; and the ultimate success of his undertaking, Clementi & Co., shows him to have possessed commercial talents rare among great artists. In Mar. 1807 property belonging to Clementi's new firm, to the amount of £40,000, was destroyed by fire.

Among his numerous pupils, both amateur and professional, he had hitherto trained John B. Cramer and John Field, both of whom soon took rank with the first pianists of Europe. In 1802 Clementi took Field, via Paris and Vienna, to St Petersburg, where both master and pupil were received with unbounded enthusiasm, and where the latter remained in affluent circumstances. On his return to Germany Clementi counted Zeuner, Alex. Klengel, Ludwig Berger and Meyerbeer among his pupils, made the acquaintance of Beethoven (*see* letter to Collard, 22 Apr. 1807) and renewed that of Haydn. During this tour, on 15 Sept. 1804, he married a daughter of J. G. G. Lehmann, cantor of St. Nicholas Church in Berlin, who, after a journey to Italy with her husband, died in childbirth in Aug. 1805. With Klengel and Berger he afterwards went again to Russia. In 1810 he returned to London for good, gave up playing in public, devoting his leisure to composition and his time to business. He was married again in London, on 3 July 1811, to Emma Gisburne.<sup>1</sup>

An educational work of this period of some importance in its day was his 'Introduction to Practical Harmony', originally called 'Clementi's Selection of Practical Harmony, for the Organ or Pianoforte', containing in addition to a treatise on harmony and counterpoint a wide selection of works for keyboard instruments by many masters.<sup>2</sup> He wrote many pianoforte works and above all completed that superb series of one hundred studies, 'Gradus ad Parnassum' (1817), upon which to this day the art of solid pianoforte playing rests. It is

a well-authenticated fact, too, that he had composed between 1786 and 1832 some 20 symphonies of which 12 had been performed in London between 1815 and 1825. After his death, however, the symphonies, which had met with considerable success in England, Germany and in France, disappeared, and no trace of them could be found.

In 1820 and 1821 Clementi was again on the Continent, spending an entire winter at Leipzig, much praised and honoured. A public dinner was given in his honour in London on 17 Dec. 1827. He retained his characteristic energy and freshness of mind to the last. He was married three times, had children in his old age, and shortly before his death was still able to rouse a company of pupils and admirers — among whom were J. B. Cramer and Moscheles — to enthusiasm with his playing and improvisation. He lived to be eighty, and the last years of his life were spent at Evesham, in Worcestershire, where he died. His remains were honoured by a public funeral and deposited in the cloisters of Westminster Abbey.

**INFLUENCE OF COMPOSITIONS.** — Clementi left upwards of 100 sonatas, of which 64 are written for the pianoforte without accompaniment and the remainder as duets or trios — sonatas with violin or flute, or violin or flute and cello; moreover, a Duo for two pianofortes, 6 duets or four hands, caprices, preludes and 'Points d'orgues composés dans le goût de Haydn, Mozart, Kozeluch, Sterkel, Wanhal et Clementi', Op. 19; 'Introduction à l'art de toucher le piano, avec 50 leçons'; sundry fugues, toccatas, variations, waltzes, etc., preludes and exercises remarkable for several masterly canons and, as his lasting monument, the 'Gradus ad Parnassum' already mentioned.

Clementi may be regarded as the originator of the proper treatment of the modern pianoforte, as distinguished from the harpsichord. His example as a player and teacher, together with his compositions, left a deep and indelible mark upon everything that pertains to the pianoforte.

In a smaller way Clementi, like Cherubini in a larger and Dussek in another way, foreshadowed Beethoven. In Beethoven's scanty library a large number of Clementi's sonatas were conspicuous; Beethoven had a marked predilection for them and placed them in the front rank of works fit to engender an artistic treatment of the pianoforte; he liked them for their freshness of spirit and for their concise and precise form, and chose them above all others, and in spite of the opposition of so experienced a driller of pianoforte players as Carl Czerny, for the daily study of his nephew.

The greater portion of Clementi's 'Gradus' and several of his sonatas — for instance the

<sup>1</sup> *See* Licence, St. Pancras.

<sup>2</sup> A full list of the contents appeared in the first and second editions of this Dictionary under the heading PRACTICAL HARMONY.

Sonata in B minor, Op. 40 No. 2; the three Sonatas, Op. 50, dedicated to Cherubini; the Sonata in F minor, Op. 14 No. 3, etc. — have all the qualities of lasting work: clear outlines of form, just proportions, concise and consistent diction, pure and severe style; their very acerbity, and the conspicuous absence of verbiage, must render them the more enduring.

He is the first completely equipped writer of sonatas. Even as early as his Op. 2 the form sketched by Scarlatti and amplified by C. P. E. Bach is completely systematized, and it has not changed in any essential point since. Clementi represents the sonata proper from beginning to end. He played and imitated Scarlatti's harpsichord sonatas in his youth, he knew Haydn's and Mozart's in his manhood and he was aware of Beethoven's in his old age; yet he preserved his artistic physiognomy — the physiognomy not of a man of genius, but of a man of the rarest talents — from first to last.

There is confusion in the various editions of his works, but the classification of the pianoforte solo sonatas at the end of this article will be helpful. For the rest, arrangements are printed as originals, the same piece appears under various titles, etc. The sonatas with accompaniment, etc., are out of print, and no systematic attempt has been made to publish what remains of his orchestral works. The editors of the Senart edition of pianoforte sonatas, Wyzewa and Gastoué, however, considered that a number of those works are transcriptions of orchestral symphonies.

E. D., adds.

**MANUSCRIPT REMAINS.** — At the death in 1917 of Dr. William H. Cummings a number of valuable manuscripts passed into the possession of Dr. Carl Engel, who bought the Cummings collection for the Congress Library at Washington, of which he was librarian.

In 1934 the Washington Library was visited by Alfredo Casella, who then made a close study of the Clementi manuscripts included in the Cummings collection and found, among the 154 pages of sketches and rough drafts, four Symphonies — in C major, in D major, a "Great National" Symphony (probably the last but one to be written by Clementi and composed in 1824) and a last Symphony, in D major. None of these is complete, for, curiously enough, the first movement of every one of them has suffered. The first two were reconstructed by Casella and published, the miniature score showing clearly Clementi's own work and the additions which had to be made.

It should also be remembered that some Clementi autographs are in the B.M. collection, among them part of the first movement of the second of the symphonies in the Washing-

ton library (B.M. Catalogue No. 29321) and a complete first movement in D major corresponding with the fourth and last of the symphonic compositions in the Library of Congress.

A letter addressed to Breitkopf & Hartel by the Collard-Clementi firm in London, which mentions the D major Symphony (No. 2 of the Washington collection) and other documents similarly examined, point beyond doubt to the fact that these symphonies belong to Clementi's best period and to that group of six symphonies in which the never-satisfied composer was engaged for over fifteen years.

The fate of those manuscripts, which had remained unknown from the death of Clementi till the disposal of the Cummings collection, had always been a mystery. The tragic truth was revealed in an article contributed to 'The Choir' in 1929 by Andrew de Ternant, a close friend of Cummings. The article, which was brought to Dr. Casella's notice by the present librarian at Washington, Dr. Oliver Strunk, was of considerable help and told how Cummings had asked the Rev P. Clementi Smith, the composer's grandson, whether any manuscripts of his grandfather were still in his possession. The grandson then remembered that two parcels of manuscripts which included, besides symphonies, sketches for the oratorio 'Daniel', had been casually burnt by a maid who thought them of no value. Some manuscripts, however, were still found in the cellars of the house. It is the greatest good fortune that two of those symphonies have been rescued from undeserved oblivion.

The style of the re-edited symphonies is that of a musician whose life spans the period from the death of J. S. Bach to the ripe romantic era. The spirit is essentially classical, the outcome of disciplined studies and an exceptional command of polyphonic technique and of form. Clementi obviously attempts to revive in his symphonies the classical heritage and to combine it with 19th-century restlessness. It thus happens that, side by side with pages of a Haydnian quality, one finds others which suggest Beethoven and even hint prophetically at Verdi and Brahms.

It should also be mentioned that the scoring of the symphonies reveals a master's touch and that no modification was necessary in preparing the manuscripts for publication, apart from the lowering of the trombone parts, written originally for the alto trombone and impossible on modern instruments.

**CLÉOPÂTRE** (Opera). See BENOÎT (C.). MASSENET.

**CLÉRAMBAULT, César François Nicolas** (b. Paris, c. 1700; d. Paris, 1760).

French organist and composer. He succeeded his father, Louis Nicolas Clérambault, as music-master and organist at Saint-Cyr. A divertissement of his, 'Le Temple de Paphos', was performed at a Concert Spirituel on 13 June 1729 ('Mercure de France'), and in 1731 he published a solo cantata, 'La Coquette'. In 1756 he produced revivals of Racine's 'Esther' and 'Athalie' at Saint-Cyr, the school for which the tragedies had originally been written in 1689 and 1691. He preserved some of the music J. B. Moreau had

<sup>1</sup> Originally Op. 11, republished Leipzig 1805 with a new *Adagio* for No. 1.

written for the plays, but replaced some of the choruses by new pieces of his own composition. W. H. M.

**CLÉRAMBAULT, Louis Nicolas** (b. Paris, 19 Dec. 1676; d. Paris, 26 Oct. 1749).

French composer and organist, father of the preceding. He was a pupil of André Raison, whom he succeeded as organist at the church of Saint-Jacques. He was later organist at Saint-Louis, Saint-Cyr and Saint-Sulpice. He composed five volumes of chamber cantatas (often on subjects from classical mythology), a few miscellaneous cantatas, a book of organ pieces and a book of pieces for the clavier. He also wrote works for the stage, including an allegorical piece 'Le Soleil vainqueur', to celebrate the recovery of Louis XV from an illness. This was first sung at the Opéra on 21 Oct. 1721 and was frequently repeated at the Concert Spirituel. Similar pieces were 'L'Idylle de Saint-Cyr', performed there on 13 Mar. 1745, 'Le Départ du roi', in the same year, and 'Le Retour du printemps', performed at the Jesuit college of Louis-le-Grand on 15 May 1748. The score of the first of these is preserved at Saint-Cyr.

Clérambault's output does not appear to have been prolific; but most of his work that has survived is distinguished by the subtle charm of his mind and the precision of his workmanship. The most important aspect of his music is undoubtedly the solo cantatas, a medium which he seems to have made peculiarly his own. These works combine a carefully balanced lucidity of form with a hyper-refinement of line, in a manner which invites comparison with the church music of Couperin le Grand; indeed the finest of them merit the high compliment of being considered a secular counterpart of Couperin's 'Leçons des Ténèbres'. In both the sophisticated complexities of ornamentation serve to enhance not only the civilized grace but also the human passion of the music.

A somewhat similar quality is noticeable in the organ works, which have been republished

in Guilmant's 'Archives des maîtres de l'orgue'. The fragile elegance of this music does not destroy its relevance to a liturgical function, like Couperin's organ music it achieves a spirituality of feeling which is at once tender and strong. Clérambault is perhaps the last truly significant voice in the classical French organ tradition. His harpsichord music, on the other hand, is less interesting. It cannot escape a certain insipidity and is more affected than affecting. Clérambault needed the human voice, or the naturally polyphonic organ, to bring out the best in him.

W. H. M.

**CLERCX-LEJEUNE, Suzanne** (b. Houdeng-Aimeries, Hainault, 7 June 1910).

Belgian musicologist. She studied at the University of Liège and became *licenciée* (1934) and later doctor (1939) in history of arts and archaeology. In 1941 she was appointed librarian of the Brussels Conservatoire and in 1945 lecturer in musicology at the University of Liège. She resigned the Brussels appointment in 1949 in order to devote herself entirely to her university teaching.

The following are Suzanne Clercx's principal publications:

- 'Henri-Jacques de Croes', 2 parts (Brussels, 1940), rewarded and published by the Académie Royale de Belgique.
- Josse Boutmy, 'Werken voor Clavecimbel' ('Monumenta Musicae Belgicae', Vol. V, Antwerp, 1943).
- 'Grétry' (collection 'Notre Passé') (Brussels, 1944).
- 'Charles van den Borren', in 'Hommage à Charles van den Borren' (Antwerp, 1945).
- 'La Musique instrumentale en Europe du XII<sup>e</sup> au début du XVII<sup>e</sup> siècle', in 'La Musique des origines à nos jours' (Paris, 1946).
- Dieudonné Raick & C. J. van Helmont, 'Werken voor clavecimbel' ('Monumenta Musicae Belgicae', Vol. VI, Antwerp, 1948).
- 'Pierre van Maldere' (Brussels, 1948), rewarded and published by the Académie Royale de Belgique.
- 'Le Baroque et la musique. essai d'esthétique musicale' (Brussels, 1949).
- 'Le XVIII<sup>e</sup> Siècle', in 'La Musique en Belgique' (Brussels, 1951).

She has contributed to 'Revue Musicale', 'Biographie Nationale Belge', 'Revue Internationale de Musique', 'Revue Belge d'Archéologie et d'Histoire de l'Art', 'Revue Belge de Musicologie', 'Revue [française] de Musicologie', etc.

A. L. C.

**CLER'EAU, Pierre** (b. ?; d. ?).

French 16th-century composer. He was master of the boys at the church of Toulon (or ? Toul) in 1554 and died before 1557. He composed masses, motets, '1<sup>er</sup> livre de chansons', '1<sup>er</sup> livre d'odes de Ronsard'. His Mass 'In me transierunt' was re-edited in score by Witt (Ratisbon).

E. v. d. s.

**GLESS, Johann** (b. Hanau, ?; d. ?).

German 16th-century composer. He was called "Magister" and wrote music for the choruses of Scaliger's Latin translation of Sophocles' 'Ajax', performed at Strasbourg in 1587. The choruses are remarkably fine, especially the 8-part chorus with 2 solo voices

and the dance choruses. They have been republished in Arthur Prufer's 'Ueber den ausserkirchlichen Kunstgesang in den evangelischen Schulen des 16. Jahrhunderts' (1890).

E. v. d. s.

**CLEVE, Johannes de** (b. ? Cleves, 1529, d. Augsburg, 14 July 1582).

German tenor singer and composer. He was a singer in the Vienna court chapel in 1563-64, then at the court of Archduke Charles at Graz. He went to Augsburg apparently in 1576. He was a church composer of great merit and wrote 2 books of 'Cantiones sacrae' (1559), 1 book 'Cantiones seu harmoniae sacrae' (1579). In manuscript are masses, motets, canons, etc. A considerable number of his works have been republished in modern editions.

E. v. d. s.

**CLEVELAND.** Several orchestral organizations have existed at Cleveland, Ohio, including that conducted by George Lehmann (1886-89) and one formed under Johann H. Beck in 1889.

**CLEVELAND SYMPHONY ORCHESTRA.**—The Musical Arts Association of Cleveland (incorporated in 1902) established the Cleveland Symphony Orchestra on a permanent basis in 1918. Nikolay Sokolov, engaged then as conductor, remained at that post until 1933. In 1920 Arthur Shepherd was appointed assistant conductor. In the first season the orchestra numbered 55 players, and by the season of 1921-22 it had been increased to 90. Sixteen pairs of concerts (in afternoon and evening) were given in the regular season; also 12 popular concerts, 8-10 children's concerts, 12-15 concerts in the public schools; and on tour outside Cleveland a number that varied in recent years between 48 and 65.

The orchestra is supported by more than 900 annual subscribers to the maintenance fund. In co-operation with the Board of Education of Cleveland two music schools are carried on in high schools of the city by the Musical Arts Association, most of whose teachers are members of the Cleveland Symphony Orchestra. A point is made of inviting annually one or more composers to conduct their own works with the orchestra.

R. A., rev.

The Musical Arts Association became a permanent organization in 1918 through the initiative of Mrs. Adella Prentiss Hughes. The first conductor, Nikolay Sokolov, was succeeded by Arthur Rodzinski, who is the present conductor.

During the normal season of twenty-eight weeks the Orchestra now gives twenty pairs of symphony concerts at Cleveland, certain additional concerts and a series of children's concerts that is attended by some 30,000 children, besides an average of thirty-five concerts on tour through the Middle Western,

New England and Atlantic States and Canada. An annual Music Memory Contest is held towards the end of the season, with adults competing in addition to the children for whom the contest was first arranged.

Up to 1931 the Cleveland Orchestra's concerts were held in the Masonic Hall, which was erected in 1919. Since then they have been held in the magnificent Severance Hall, the gift of John L. Severance in memory of his wife.

The Orchestra is supported by a considerable annual maintenance fund as well as by a permanent endowment, secured in 1929 through a campaign led by the late Dudley S. Blossom.

Until 1933 it was under the management of Mrs. Adella Prentiss Hughes and since that time under that of C. J. Vosburgh. Mrs. Hughes became one of the vice-presidents of the board of trustees and continued her activity as secretary of the Musical Arts Association, in which capacity she had served since its founding in 1915.

Besides exerting a vital influence on the educational and aesthetic life of Cleveland and the territory in which the Orchestra tours, it has given special attention to operatic performances, having presented the American premiere of 'A Lady Macbeth of Mtsensk' by Shostakovich. The Orchestra maintains a Philharmonic Chorus of volunteer singers for the purpose of performing combined vocal and orchestral compositions.

Throughout its history the Cleveland Orchestra has been noted for the special consideration it has accorded to American composition. Works by many American composers have been presented for the first time.

**OTHER ORCHESTRAS.**—The Cleveland Municipal Orchestra Concerts were given in 1913-1915 during the time Newton D. Baker was in office as mayor, and with his encouragement. An orchestra was organized under the direction of Christian Timmer and gave a concert each Sunday. The Hippodrome Theatre (Keith's Circuit) offered the use of its building to the orchestra.

The younger generation of musicians organized in the summer of 1938 the Cleveland Philharmonic Orchestra in order to familiarize themselves with standard orchestral literature. F. Karl Grossman is the conductor.

The Women's Symphony Orchestra, under the direction of Hyman Schandler, further contributes to the music of Cleveland.

**CLEVELAND POPULAR ("POP") CONCERTS.**—These concerts were organized in the first decade of the 20th century by Conrad Mizer, a popular conductor, for the purpose of providing music of a semi-classical and popular nature. The orchestra was conducted on alternate Sundays by Johann Beck and Emil

Ring. The musicians contributed their services for a nominal sum, with a general admission fee fixed at 25 cents. The music library of this organization as well as that of the Municipal Orchestra of a later date came into the possession of the Cleveland Public Library. This music is now available for use by non-professional as well as professional instrumental groups.

**THE CLEVELAND INSTITUTE OF MUSIC.**—The Cleveland Institute of Music was founded in 1920 by a group of public-spirited citizens. Ernest Bloch was appointed musical director of the school in 1920 and held that position until June 1925. Mrs. Franklyn B. Sanders, who held the position of executive director from 1920 to 1925, succeeded Bloch as director in 1926, and upon her resignation from the office in June 1932, Beryl Rubinstein, head of the pianoforte department and Dean of the Faculty, was appointed director. Herbert Elwell, head of the department of composition, was appointed assistant director in Feb. 1935, and Mrs. Sanders was named director-emeritus in 1938. There is an opera school and an orchestra, and the Institute grants degrees in applied music, composition and theory.

**THE CLEVELAND MUSIC SCHOOL SETTLEMENT.**—The Cleveland Music School Settlement was incorporated in 1912 according to a plan outlined by the Music School Settlement.<sup>1</sup> Until 1919, when it became a member of the Welfare Federation, the Settlement was maintained by private subscriptions supplemented by small fees paid by its pupils. Since that time the Settlement has been supported by an annual allocation of funds from the Cleveland Welfare Federation to which student fees are added. Students are charged for lessons according to their ability to pay. M. S.

**CLICQUOT.** French 18th-century family of organ builders.

(x) **Robert Clicquot** (b. ?; d. ?), the first who made the name celebrated, came of an old family living at Meaux. He was maker by warrant to Louis XIV; he worked at the construction of the organ in the chapel at Versailles (1711). He had already established his reputation by the great instruments which he had made in the cathedrals of Rouen (1686-1689), Saint-Quentin (1701-3) and Blois (1704). About 1713 he gave up the direction of his workshops to his son, Jean Baptiste, with whom he made a specification for the enlargement of the great organ in the cathedral at Laon.

(2) **Jean Baptiste Clicquot** (b. ?; d. ?), son of the preceding, executed a great deal of work in repairing the organ at Laon Cathedral (1714-16).

(3) **Louis Alexandre Clicquot** (b. ?; d. Paris, 25 Jan. 1760), brother of the preceding,

<sup>1</sup> See NEW YORK.

was the maker of the organs in the churches of Houdan (1734) and of Chevreuse, Seine-et-Oise. The organ at Houdan has kept its 21 stops in their primitive state until now.

(4) **François Henri Clicquot** (b. Paris, 1728; d. Paris, 1791), son of the preceding, acquired European fame for the quality of his reeds and mixtures. He succeeded his father in 1760 and took Pierre Dallery into association in 1765. His most capable workmen were Lair, Isnard, Laurent, Brachet and Gillier, who collaborated with him in the construction of the organs at the church of Saint-Médard (1767) and of Saint-Gervais (1764-68). The most beautiful organs in the Parisian churches owe their existence to Clicquot: the Jacobins, Rue Saint-Dominique (1771); Sainte-Chapelle (1771); Saint-Nicholas-des-Champs (1776); Saint-Merry (1781); Saint-Sulpice, 32-ft. pedal, 66 stops and 5 manuals (1781); Notre-Dame (1784); Saint-Leu (1786-88). He carried out a great deal of work in the provinces, notably on the organs of Versailles Cathedral (1761); important restorations to the organs of the Cathedral at Nantes (1784), and of Meaux. He began the construction of the organ in the church of Saint-Nicholas-du-Chardonnet in Paris, and of the great organ in the Cathedral at Poitiers, his *chef-d'œuvre*; but he died before this work was completed, and it was his son François who finished them. The organs of Saint-Gervais, of Saint-Nicholas-des-Champs and of Saint-Leu in Paris, those of Nantes and of Poitiers, still preserve the greater part of the original stops by François Henri Clicquot.

**Cliffe, Cedric.** See Benjamin (2 lbs.).

**CLIFFE, Frederic** (b. Bradford, Yorks, 2 May 1857; d. London, 19 Nov. 1931).

English pianist, organist and composer. He received his earliest musical instruction from his father, an amateur cellist. At the age of six he played the pianoforte in a manner far beyond his years, at nine he began to study the organ and at eleven he was appointed organist to Wyke Parish Church, while a year later he is said to have been able to play the whole of Bach's 48 Preludes and Fugues. Meanwhile Cliffe acquired a local reputation by the beauty of his voice. After being appointed organist to a dissenting chapel he was in great demand for "opening" new organs. From 1873 to 1876 he was organist to the Bradford Festival Choral Society, and later, on being elected to the Titus Salt scholarship at the National Training School of Music in London, he studied

under Sullivan, Stainer, Prout and Franklin Taylor.

In 1883 Cliffe was appointed to a pianoforte teaching staff of the new R.C.M., and he remained there as a member of the Board of Professors till his death. He toured as solo pianist and accompanist with Helen Lemmens-Sherrington and others, became in succession organist to Curzon Chapel and St George's, Albemarle St., and to the Leeds Festival under Sullivan as assistant to Spark. In the latter capacity he played in Sullivan's 'The Golden Legend' and for the Festival he arranged and played the organ part in the first performance there of Bach's B minor Mass.

After twenty years of continuous church work Cliffe retired in 1889. He was organist to the Bach Choir in 1888-94 and of the Italian Opera at Drury Lane, Her Majesty's and Covent Garden Theatres about the same time. It was, however, as a composer that he made his greater reputation, and it is curious to note that the work which *par excellence* established that reputation, his Op. 1, a fine Symphony in C minor, was rejected by the Leeds Selection Committee. When it was produced in London by Manns at his own benefit (Crystal Palace, 20 Apr. 1889) it created a very unusual amount of interest.

In 1901 he became a pianoforte professor at the R.A.M. and an examiner for the Associated Board of the R.A.M. and R.C.M.; for them he toured in Australia in 1898, and in 1900 and 1903 he visited South Africa on behalf of the Cape of Good Hope University. He travelled also in America.

The following is a list of Cliffe's principal productions:

'Ode to the North-East Wind' for chorus & orch. (Sheffield, 1905).  
Symphony No. 1, C mi (1889).  
Symphony No. 2, E mi (Leeds, 1892).  
Tone Poem 'Cloud and Sunshine' for orch. (1890).  
Violin Concerto, D mi. (Norwich, 1896).  
'The Triumph of Alcestis', contralto & orch. (Norwich, 1902).

R. H. L.

**CLIFFORD, Hubert (John)** (b. Bairnsdale, Australia, 31 May 1904).

Australian conductor and composer. He was educated at Melbourne High School and the Universities of Melbourne (B.Sc.) and London (D.Mus.). He studied music at the Melbourne Conservatory and the R.C.M. in London. From 1941 to 1944 he was B.B.C. Empire Music Supervisor and since 1944 he has been a professor at the R.A.M. in London. He became Musical Director to London Film Productions in 1946, but resigned in 1950 in order to give more time to creative work, and he is also a lecturer, examiner and adjudicator.

Of his compositions a Symphony, composed in 1940, and music for various films are in manuscript. Among his published works are

four Sketches for Shakespeare's 'As You Like It' for string orchestra; 'A Kentish Suite', published in 1935, and 'Five English Nursery Tunes', published in 1941, for orchestra; and a Serenade for string orchestra, published in 1943. He has also written a text-book, 'The School Orchestra' (London, 1939), which deals with every aspect of its subject and is especially valuable for school conductors. M. K. W.

**CLIFFORD, James** (b. Oxford, 1622; d. London, Sept. 1698).

English divine. He was the son of Edward Clifford, a cook, then living in the parish of St. Mary Magdalen at Oxford. In 1632 he was admitted a chorister of Magdalen College, and so remained until 1642. On 1 July 1661 he was appointed tenth minor canon of St. Paul's Cathedral in London and in 1675 was advanced to the sixth minor canonry. In 1682 he became senior canon. He was also for many years curate of the parish church of St. Gregory by St. Paul's and chaplain to the Society of Serjeants' Inn, Fleet Street. In 1663 Clifford published, under the title of

The Divine Services and Anthems usually sung in the Cathedrals and Collegiate Chours of the Church of England,

a collection of the words of anthems, the first of its kind which appeared in the metropolis. (It had been anticipated in a collection compiled and printed by Stephen Bulkeley at York in 1662, and in a book of

Anthems to be sung . . . in the Cathedral Church of the Holy and Undivided Trinity in Dublin,

printed 1662. The only known copy of this last is in the library of Trinity College, Dublin, it contains the words of 51 anthems and the names of most of the composers.) So great was the success of Clifford's work that a second edition, with large additions, appeared in 1664. To the first edition are prefixed:

Briefe Directions for the understanding of that part of the Divine Service performed with the Organ in St. Paul's Cathedral on Sundays and Holydayes,

and to the second chants for Venite, the Psalms and the Athanasian Creed. The work is curious and interesting as showing what remained of the cathedral music produced before the parliamentary suppression of choral service in 1644, and what were the earliest additions made after the Restoration (1660). Clifford's only other publications were 'The Catechism, containing the Principles of Christian Religion' and 'A Preparation Sermon before the receiving of the Holy Sacrament of the Lord's Supper, preached at Serjeants' Inn Chapel, in Fleet Street', which appeared together in 1694.

Clifford had a younger brother, Thomas (b. Oct. 1633), who was admitted chorister of Magdalen College, Oxford, in 1642 and resigned in 1645. W. H. K., adds.

See also Chant.

**CLIFTON, John (Charles)** (b. London, 7 Nov. 1781; d. London, 18 Nov. 1841).

English conductor and composer. He studied for five years under Richard Bellamy. Later he became a pupil of Charles Wesley and devoted himself entirely to music, resigning an appointment in the Stationery Office which he had held for about two years.

After an engagement at Bath, where he conducted the Harmonic Society, he went in 1802 to Dublin, and in 1816 produced there a musical piece called 'Edwin and Angelina' (after Goldsmith), written in collaboration with Sir John Stevenson, with whom he organized a concert in aid of the sufferers by the Irish famine. In 1816 he invented an instrument called the "Eidomusicon", intended to teach sight-reading. An attempt made in 1818 to bring out his invention in London failed, and he then adopted Logier's system of teaching and remained in London for some time. He wrote numerous glees and songs. He married the proprietress of a London ladies' school at Hammersmith, where he died.

W. B. S.

**CLINGER.** See CLINTO, TEODORO.

**CLINTO (Clinger), Teodoro** (b. Venice, ?; d. Treviso, c. 1602).

Italian composer. He was *maestro di cappella* at Treviso Cathedral in 1592. He composed 'Missarum 6 v. lib. 1' (Venice, 1592); 'Singularia 4 v.'; 'Christi Domini Passiones 3, 4, et 6 v.' (Venice, 1595); and a great amount of church music (in manuscript), including several 'Passiones'. E. v. d. s.

**CLINTON, George Arthur** (b. Newcastle-on-Tyne, 16 Dec. 1850, d. London, 24 Oct. 1913).

English clarinetist. He was the son of a bandmaster and went to London in 1867 on his appointment as solo clarinet in the Queen's Private Band, a position he held till 1900. He was in addition principal in the Philharmonic Orchestra from 1873, and in the Crystal Palace Orchestra from 1874, where he succeeded Papé and appeared many times as a soloist in the Mozart, Weber and Spohr concertos. He was in addition professor at the R.A.M. and at Kneller Hall from 1900 till his death. He was an ardent chamber musician and formed in the early 1890s a society which gave frequent concerts of music for wind instruments, alone and with strings. He did much to improve his instruments, on which he was a particularly brilliant executant, and gave his name to a model which has, in addition to other improvements, the Barret action of the oboe, fitted to the upper joint. This was later elaborated into the Clinton-Boehm system, which has, with the Barret action, some mechanism from the Boehm clarinet adapted to the lower joint. Clinton preferred ebony to wood as a material for his instruments.

Both systems have enjoyed some measure of popularity, the Clinton-Boehm in particular affording much facility for execution. In 1909 he made a very careful revision of F. Berr's method for the clarinet. F. G. R.

**CLINTON, (Francis) Gordon** (b. Broadway, Worcestershire, 19 June 1912).

English baritone singer. He was educated at Evesham Grammar School and at Bromley. In 1935 he won an open scholarship to the R.C.M. in London, where he studied from 1935 to 1938, when he obtained his A.R.C.M. diploma. He was organist at Swanley Congregational Church from 1930 to 1937 and then became vicar-choral at St. Paul's Cathedral until 1946. He served in the R.A.F. for six years during the second world war, receiving a commission in 1943. As a singer he has been a soloist at successive Three Choirs Festivals and in the Delius, Bach and Elgar Festivals in London; also in the performance of Delius's 'Sea Drift' at Beecham's seventieth birthday concert, and has made a number of recordings, including Delius's 'Village Romeo and Juliet' and Bach's St Matthew Passion. He is a professor of singing at the R.C.M. in London and has been conductor of the Whitstable and Tankerton Choral Society since 1946. His singing is remarkable for fine vocal quality and sound voice-production, and his sense of style has revealed itself in a considerable variety of music performed by him.

M. K. W.

**CLINTON, James** (b. Newcastle-on-Tyne, 18 Sept. 1852, d. London, 4 Feb. 1897).

English clarinettist, brother of George Arthur Clinton. He devoted his considerable inventive powers to devising a "combination clarinet" enabling A and B $\flat$  parts to be played on the same instrument, and a few years before his death the James Clinton Combination Clarinet Company was formed, with Sullivan as chairman, to promote the invention. Jacques Albert, the well-known maker of Brussels, produced what were described as perfect models in both Albert and Boehm systems, but the invention failed to interest the public.

F. G. R.

**CLIQUEOT.** See **CLIQUEOT.**

**CLIVE, Catherine** (called **Kitty**) (born **Rafter**) (b. London, 1711, d. Twickenham, Middlesex, 6 Dec. 1785).

English actress and singer. She was the daughter of William Rafter, an Irish gentleman. Displaying a natural aptitude for the stage, she was engaged by Colley Cibber for Drury Lane Theatre (1728-41), and made her first appearance there in Nov. 1728, as the page Ismenes, in Lee's tragedy 'Mithridates'. In 1729 she attracted great attention by her performance of Phillida in Colley Cibber's ballad opera 'Love in a Riddle'. Her personation of Nell in Coffey's ballad opera 'The

Devil to Pay', in 1731, established her reputation and caused her salary to be doubled. On 4 Oct. 1734 she married George Clive, a barrister, but the pair soon agreed to separate. She continued to delight the public in a variety of characters in comedy and comic opera and was engaged by Garrick in 1746 for Drury Lane, until 24 Apr. 1769, when, having acquired a handsome competence and being pensioned by Horace Walpole, she took leave of the stage and retired to Twickenham, where she occupied a house in the immediate vicinity of Horace Walpole's famous villa at Strawberry Hill, until her death. One of the most prominent events in Kitty Clive's career as a singer was Handel's selection of her as the representative of Delilah in his oratorio 'Samson' on its production in 1743. W. H. H.

See also Boyce ('Rehearsal', incid. m.).

**CLOCHES DE CORNEVILLE, LES** ('The Bells of Corneville'). Operetta in 3 acts by Planquette. Libretto by Clairville and Charles Gabet. Produced Paris, Folies-Dramatiques, 19 Apr. 1877. 1st perf. abroad, Madrid (trans. by L. M. de Larra), 1877. 1st in U.S.A., New York (in English), 22 Oct. 1877. 1st in England, London, Folly Theatre (trans. by H. B. Farnie and R. Reece), 23 Feb. 1878.

**CLOCHETTE, LA** (Opera). See **DUNI, HÉROLD.**

**"CLOCK" SYMPHONY.** The familiar name of Haydn's Symphony No. 101, in D major, written in 1794. It is due to the ticking figure of accompaniment in the slow movement.

**GLODIUS, Christian** (b. Neustadt nr. Stolpen, 18 Oct. 1647; d. ? Neustadt, ?).

German musical editor. He was a teacher at his birthplace and compiled a collection of students' songs while at Leipzig University. The manuscript, which is in the Berlin State Library, is described by Wilhelm Niessen, 'Vierteljahrsschrift für Musikwissenschaft', VII, 579, and by C. Blumml, 'Aus dem Liederbuche des Studenten Clodius' (1908).

**CLOSED HORN.** See **ORGAN STOPS.**

**CLOSSON, Ernest** (b. Saint-Josse-ten-Noode nr. Brussels, 12 Dec. 1870; d. Brussels, 21 Dec. 1950).

Belgian musicologist. He was appointed assistant curator of the Museum of Musical Instruments at the Brussels Conservatoire in 1896 and from 1912 to 1935 was professor of musical history there. In 1917 he also became professor at the Mons Conservatory and in 1920 music critic to the 'Indépendance Belge'. As lecturer and critic he has done valuable work and he published an enormous number of articles and numerous books on a great variety

of musical subjects, though he made a special study of Belgian folksong and kindred matters. His work in that direction began with 'Chansons populaires des provinces belges' (1905, 3rd ed. 1920) and includes 'Notes sur la chanson populaire en Belgique' (1913). He also issued several essays on aesthetics in music, notably 'Esthétique musicale' (1921).

Other books of his are the following:

- 'Edvard Grieg et la musique scandinave' (Paris, Brussels & Leipzig, 1892)
- 'Roland de Lassus', (Turnhout & Bruges, 1919).
- 'André-Modeste Grétry' (Turnhout & Bruges, 1920).
- 'Césaire Franck' (Charleroi, 1923).
- 'L'Élément flamand dans Beethoven' (Brussels, 1928); English trans by Muriel Fuller, 'The Fleming in Beethoven' (Oxford, 1936).
- 'Gevaert' (Brussels, 1929)
- 'Richard Wagner' poèmes et textes en prose, choisis et traduits' (Paris, 1934)
- 'La Facture des instruments de musique en Belgique' (Huy, 1935).
- 'La Passion selon Saint Mathieu [Bach]' (Brussels, 1937)
- 'Les Noël wallons', with A. Dautrepoint & M. Delbouille (Paris & Liège, 1938)
- 'Histoire du piano' (Brussels, 1944).

**CLUB ANTHEM.** The familiar name by which is known an anthem composed jointly by John Blow, Pelham Humfrey and William Turner, about 1664, when they were all choristers in the Chapel Royal. It is a setting of 'I will always give thanks'.

**CLUER, John** (b. ? , d. London, 1728).

English music printer and publisher. He appears to have been originally a ballad and chap-book printer early in the 18th century, and to have worked at premises in Bow Churchyard, London, where he can be traced as early as 1715.

Afterwards he issued some of the best engraved and adorned music of his period Cluer, as shown by a type-printed music sheet in the B.M. ('The Pedigree of a Fidler'), claims to have invented some improvements in music type or the setting of it. The passage on the sheet referred to runs:

For the future, all the songs printed by J. Cluer in Bow Churchyard will be set to music, and as he hath invented a neat and quick way of doing the same in the Letter-Press (for the encouragement of music) songs will now be sold by him at a much cheaper rate than usual, etc.

For some unknown reason Handel, who generally employed Walsh as his publisher, granted to Meares and also to Cluer and his successors the right of publication of some of his operas. The first which Cluer had of these was 'Giulio Cesare', published in 1724; but he had previously printed Handel's 'Suites de pieces' in 1720. The other operas are 'Tamerlano', 'Rodelinda', 'Scipione',

'Alessandro', 'Riccardo Primo', 'Admeto', 'Siroe' and 'Lotario'. The first five were also issued, with the voice parts transposed for the flute. The operas have very finely engraved pictorial title-pages.

Among other of Cluer's publications are 'A Pocket Companion for Gentlemen and Ladies', 2 vols., 1724-25, a couple of dainty volumes from copperplates; two quaint packs of musical playing-cards; 'Psalm Tunes' by William Anchors; Twelve Overtures by Handel; and other works Cluer was associated with B. Creak, a bookseller in Jermyn Street, whose name appears in some of the imprints. Thomas Cobb was Cluer's engraver and successor in business, having married his widow about 1730. Cobb assigned and sold the business in 1736 to his brother-in-law William Dickey of Northampton, who had been associated with him in it, and who purchased it for himself and his son Cluer Dickey, who managed it until 1764. After Cluer's death some of the imprints merely gave "at the printing-office in Bow Churchyard".

F. K., rev. W. C. S.

**CLUTSAM, George** (b. Sydney, New South Wales, 26 Sept. 1866; d. London, 17 Nov. 1951).

Australian pianist, critic and composer. He began his career as a pianist, and after considerable travel in New Zealand and in Asia settled in London and became known as an accompanist and then more particularly as a music critic ('The Observer', 1908-18, essays in Mus. T., etc.). The production of a symphonic idyll after Tennyson, 'The Lady of Shalott', by the New Symphony Orchestra in Oct. 1909, and the performance at about the same time of a cantata, 'The Queen of Rapunzel', made him known in London as an accomplished composer, and the production by Beecham on 23 July 1910 of his one-act opera, 'A Summer Night', left no doubt of his ability to write interestingly for the stage. He had already had a provincial production ('The Queen's Jester', 1905) to his credit. In Apr. 1912 another one-act piece, 'After a Thousand Years', was produced at the Tivoli in London and oddly described as "a New Egyptian Miniature Grand Opera". It was in fact an attempt to write a whole opera in dimensions possible for inclusion in a variety entertainment. A more important work, and the last of Clutsum's works to claim importance from the musician's point of view, was the opera 'König Harlekün', based on Rudolf Lothar's play, produced with momentary success at the Kurfürstentheater, Berlin, in Nov. 1912.

After that Clutsum turned to a field of activity which proved more profitable from the material point of view. He collaborated with Hubert Bath in the music to Basil Hood's

'Young England', produced at Birmingham in 1916, and afterwards brought out several musical comedies, including 'Gabrielle', 'Lavender' (both in London) and 'The Little Duchess' (Glasgow, 15 Dec. 1922). In this field his greatest popular success has been 'Lilac Time' (1923), which musically is a potpourri of Schubert and derives from a Viennese popular success entitled 'Das Dreimadlhaus'. A similar and musically no more valuable compilation from Chopin, 'The Damask Rose', came out in London on 17 June 1929.

H. C. C., adds.

**CLUZEAU MORTET, Luis** (b. Montevideo, 16 Nov. 1894).

Uruguayan composer. He studied pianoforte and violin, but is entirely self-taught as a composer. He has played in various chamber-music groups in Uruguay and teaches the history of music at the Instituto Normal of Montevideo. He has also taught various musical subjects at other Montevideo schools and institutes. He has written symphonic and chamber works as well as numerous pianoforte pieces and songs. In 1938 he visited London.

N F.

**COACH HORN.** See POST HORN.

**COATES, Albert** (b. St. Petersburg, 23 Apr. 1882; d. Milnerton nr. Cape Town, 11 Dec. 1953).

Anglo-Russian conductor and composer. His father, born at Bridlington in Yorkshire, was settled in business in St. Petersburg, where he had married a Russian lady. Albert was the youngest of their seven sons. He was sent to England for his education and was at school first in Essex and then at Liverpool. At the latter place he learnt music from one of his brothers, who was an organist there, but he entered Liverpool University as a science student and at length returned to St. Petersburg and entered his father's office. It soon appeared, however, that orchestration was a stronger point with him than book-keeping, and he was twenty years old when arrangements were made for him to enter the Leipzig Conservatory. There he studied the cello with Klengel and the pianoforte with Robert Teichmüller, but the greatest factor in his artistic development was Nikisch and his class in conducting. His appointment by Nikisch to be coach at the Opera of Leipzig started Coates on his practical career, and he first appeared there as emergency conductor in 'Tales of Hoffmann'. This led in 1906 to his securing on Nikisch's recommendation the chief post of conductor to the Elberfeld opera house, where he remained two years conducting a large repertory of works including the German classics, Mozart, Wagner and Strauss. This was followed by a period of conducting at the Dresden Opera, where Coates shared the responsibilities with Schuch. He conducted

for a season at Mannheim, during which time he was invited to conduct 'Siegfried' in St. Petersburg, which led to his appointment as a principal conductor there for five years.

During this important period in his career Coates added to his repertory the large number of Russian works, both of the opera and the concert-room, his performance of which added to his reputation both in Europe and in America. He was in close touch with the leading Russian musicians of the time, especially Scriabin, who imparted to him his ideas on the interpretation of his music and who influenced him strongly in his own style of composition.

Coates first became prominent in England in 1913, when at Covent Garden he shared the Wagner performances with Nikisch with acknowledged success. He had appeared at Queen's Hall in 1910 with the London Symphony Orchestra, but it was not until Apr. 1919, when it was no longer possible for him to continue his work in Russia, whence he escaped with great difficulty, that he signalized his arrival with a series of concerts with the same orchestra and henceforward became one of the regular conductors during a part of the season in London. Beecham engaged him for the season with which Covent Garden was reopened after the 1914-18 war, and subsequently he was responsible for many of the best performances of the British National Opera Company, both at Covent Garden and in the provinces, and he conducted the major part of two festivals at Leeds (1922 and 1925). In Mar. 1926 he conducted a concert performance of Rimsky-Korsakov's 'Kitezh' at Covent Garden. He had given the first stage performance of the work outside Russia at Barcelona in 1925.

In the U.S.A. Coates conducted the Philharmonic Society of New York and also concerts of the Symphony Society, and from 1923 to 1925 he spent part of each season at Rochester, N.Y., as conductor of the Eastman orchestra. His engagements as a guest conductor carried him to most of the principal cities of Europe; in 1925 he undertook some special performances at the Paris Opéra. He held a firmly established position as a master of the orchestra, and excelled in work on a large scale, notably Wagner and the symphonic works of Scriabin. In the late 1940s he settled in South Africa. Despite the distractions inevitable in the career of an international conductor, involving almost incessant travel, Coates was an assiduous composer, although comparatively little of his work has been presented to the public. An opera, 'Assurbanipal' (libretto by the composer's first wife, Russian by Balmont), was set down for performance in Moscow in Jan. 1915, but postponed, and finally abandoned after the

Revolution. An elaborate symphonic poem, 'The Eagle', dedicated to the memory of Nikisch, was given at Leeds in 1925. Some pianoforte pieces have been published. Two operas on typically English subjects have been produced. 'Samuel Pepys' was first given in German at Munich (21 Dec. 1929); 'Pickwick' was given at Covent Garden (20 Nov. 1936) and was the principal novelty in a short season for which Coates was primarily responsible. It aroused considerable interest, but its success was tempered by the fact that, while it was based on one of the most famous characters in English fiction and the setting was skilfully devised to represent the period of 'The Pickwick Papers', those of the audience who were most at home with Dickens found themselves least at ease with Coates. The subject seemed to call for a musical treatment in the tradition of English ballad opera for which Coates's cosmopolitan experience had scarcely fitted him.

H. C. C.

**COATES, Edith (Mary)** (b. Lincoln, 31 May 1908).

English mezzo-contralto singer. She received her musical education at the T.C.M. in London and first appeared at the Old Vic Theatre there at the age of fifteen as a fairy in 'A Midsummer Night's Dream', but soon joined the opera company at that theatre, and since the opening of Sadler's Wells in 1931 has been one of its leading contraltos. She has sung in all some forty operatic parts, and is one of those versatile and tireless artists who have worked hard to see the Sadler's Wells enterprise through its difficult early days. Among her best-known parts are Carmen, Delilah, Amneris, Azucena and Ortrud. In 1937 she took part in the opera season at Covent Garden, and was especially successful as the Mother in Humperdinck's 'Hansel und Gretel'. She scored a great personal success by her full-blooded impersonation of Princess Eboli in the revival of Verdi's 'Don Carlos' at Sadler's Wells in 1938. She has also sung in performances of oratorio.

When in 1946 Covent Garden launched its new venture of opera in English on a grand scale, Edith Coates was engaged as one of the principal artists, and before long she had distinguished herself, with varying success but never without making the impression of an artistic personality, in a variety of mezzo and contralto parts, including Carmen, Azucena, Amneris, "Auntie" in Britten's 'Peter Grimes', the Hostess in 'Boris Godunov', Ortrud, etc. In Dec. 1950 she achieved one of the most remarkable feats of operatic acting in the sensational part of the aged Countess in Tchaikovsky's 'Queen of Spades'.

D. S.-T., adds.

**COATES, Eric** (b. Hucknall, Nottinghamshire, 27 Aug. 1886).

English violist and composer. He first studied violin and composition at Nottingham and then entered the R.A.M. in London with a scholarship as a pupil of Tertis for the viola and of Frederick Corder for composition. He joined the Hambourg String Quartet, with which he toured South Africa in 1907, and then joined successively the Cathie and the Walenn Quartets. In 1912 he became leader of the violas in the Queen's Hall Orchestra under Sir Henry Wood, who at the Promenade Concerts introduced several of Coates's early compositions, light orchestral pieces in which slender material was gracefully and competently handled. Melodically conventional, unadventurous but sometimes piquant in harmony and always safe and effective in orchestration, some of these small works, often in the form of picturesque suites, became very popular and sold largely in pianoforte arrangements, so that by 1918 he was able to leave the orchestra and devote himself entirely to this kind of artistically unimportant but pleasant and profitable kind of composition. Apart from the light orchestral and pianoforte pieces, Coates's works include a number of song cycles with orchestra and numerous songs with pianoforte.

H. C. C., adds

BIBL.—COATES, ERIC, 'Suite in Four Movements', autobiography (London, 1953).

**COATES, Henry (John)** (b. London, 28 Mar. 1880).

English musical scholar and author. He was educated at Sir Walter St. John's Grammar School (1889), the City of London School (1895) and at Cambridge as a Foundation Scholar of Christ's College (1899–1902). He took the B.A. in 1902 and the M.A. in 1930 at Cambridge and the Ph.D. in music at London University in 1937. His musical studies were pursued privately. He was music critic to 'The Daily Chronicle' in 1906–30 and musical adviser to the Gramophone Co. in 1916–33, also editor of 'The Musician' from 1919 to 1921. In 1949 he was appointed a member of the Senate (Faculty of Music) in London University, where he became acting professor in the vacant Chair of Music after the death of Sir Stanley Marchant in 1949. In 1951 he became chairman of the Board of Studies in Music and a member of the Board of Examiners in the same University. In 1931 he was appointed professor of the organ at the G.S.M. and in 1944 a member of the Corporation and Academic Board of the T.C.M.

Coates wrote a volume on Palestrina for the Master Musicians series (1938) and he is a contributor to the N.O.H.M. He has also written for various musical journals, especially on old church composers, and published editions of organ, harpsichord and pianoforte music as well as some songs of his own. E. B.

**COATES, John** (*b* Gurlington nr. Bradford, 29 June 1865; *d* Northwood, Middlesex, 16 Aug. 1941).

English tenor singer. His father, Richard Coates, was choirmaster at Gurlington church, and John sang in this choir at the age of five. Two years later he joined the choir of St. Jude's, Bradford, becoming in due course the chief treble. Owing to the death of his father he had to leave Bradford Grammar School early and go into an office when thirteen. While still engaged in business he sang Valentine in 'Faust' for the Carl Rosa Company at Manchester and Liverpool, but without success. It was as a baritone that in Sept. 1893 he took lessons from Shakespeare, who pronounced his voice a tenor. Getting a hearing from D'Oyly Carte, Coates made an appearance at the Savoy Theatre in 'Utopia Limited' and was forthwith engaged to tour in America with that neglected work by Gilbert and Sullivan. During a second visit to America he sang in 'An Artist's Model', and then followed several years of regular work in musical comedy in London and the provinces.

Convinced that he was a tenor and not a baritone, Coates at length took a bold step, giving up his engagements and studying a variety of tenor parts in private. Starting his career all over again he had a very hard struggle, and it was at this period that he was engaged to bring out Sullivan's 'Absent-minded Beggar' at the Alhambra Theatre, in Nov. 1899. Fortune changed when, in Nov. 1900, he sang in 'The Gay Pretenders' at the Globe Theatre and in the summer of 1901 created the part of Claudio in Stanford's 'Much Ado About Nothing' at Covent Garden. Singing at Leeds in the autumn of the same year, and in Elgar's 'Dream of Gerontius' at Worcester (1902), he was fairly launched as a festival tenor. At the Birmingham Festivals of 1903, 1906 and 1909 he sang the tenor parts in the productions of Elgar's 'Apostles' and 'Kingdom', and Bantock's 'Omar Khayyám'.

As an opera singer Coates had hitherto had more opportunities in Germany than in England, but he was with the Moody-Manners Company throughout the season of 1907-8, singing many important parts. He was next principal tenor in Beecham's season at His Majesty's Theatre in 1910. He was with Beecham again, this time at Covent Garden, in the autumn of 1910, when he sang the chief part in d'Albert's 'Tiefland'. After playing both Siegfrieds in the Denhof performances of the 'Ring' in the provinces in 1911 he went (1911-13) on the Quinlan tour in the United Kingdom, South Africa and Australia, adding Tristan among other parts to his repertory.

At the outbreak of war in 1914, Coates, though much beyond military age, at once

joined the National Reserve. In Nov. 1914 he joined the London University O.T.C. and in Apr. 1915 he was given a commission. He served in France with the Yorkshire Regiment in 1916-19 and was twelve months at the front. Demobilized with the rank of captain, he resumed his professional career in Mar. 1919. After that, apart from a few special appearances as Lohengrin and Don José for the Carl Rosa Company at Covent Garden, he confined his attention to the concert-room, singing everywhere with all his old success, both at festivals and in his own recitals of English songs. In addition to giving programmes of Elizabethan and Tudor music he introduced many new songs by English composers. While his voice was losing some of its former splendour, his taste for the best vocal music of all periods and many countries and his outstanding intelligence as an interpreter constantly gained in range and subtlety, so that even at an advanced age he lost nothing of his success as an artist of superior quality.

S. H. P., adds.

**COB (Cobb), James** (*b.* ?; *d.* London, 20 Aug. 1697).

English composer. He became a member of the Chapel Royal in 1660. He composed songs and catches, contributed to Playford's 'Choyce Ayres' (1679) and to the Catch Club.

E. v. d. s.

**Cobb, James.** See Lanley (1, 4 lbs.).

**COBB, John** (*b.* ?; *d.* ?).

English 17th-century organist and composer. He was sworn in as Gentleman of the Chapel Royal in 1638. He contributed an elegy on the death of William Lawes to the 'Choice Psalmes' (1648) of the Lawes brothers and is therein called "organist of H.M.'s Chapel Royal". During the Commonwealth he supported himself by private teaching. Other examples of his work can be found in various of Playford's publications and in manuscripts at the B.M. and at Ch. Ch., Oxford.

R. T. D.

**COBB, Thomas.** See CLUER, JOHN.

**COBBETT, W. W. (Walter Willson)** (*b.* London [Blackheath], 11 July 1847; *d.* London, 22 Jan. 1937).

English amateur violinist, musical patron and lexicographer. He affords a striking instance of conspicuous services rendered to the cause of music by one who himself practised the art solely as an amateur. A highly successful man of business — as founder and chairman of the company known as Scandinavia Belting, Ltd. — it was humorously remarked of him that he gave to commerce what little time he could spare from music. What is certain is that by his wisely directed and wholly disinterested activities, pursued with inexhaustible enthusiasm throughout a long life, he laid under heavy obligation all who are

concerned with the higher interests of English chamber music.

In that particular branch of the art in which he was especially interested Cobbett's services to the musical community took many forms. A fine violinist himself, he was throughout his life a devoted student of chamber music in the most practical sense — leading his own quartet at weekly meetings continued year after year with unflinching regularity — and from the first he made it his special business to extend the general knowledge and promote the wider appreciation of the kind of music he cultivated.

By the series of Cobbett Competitions which he initiated in the early twentieth century, and by his numerous direct commissions to native composers, he was instrumental in enriching the British chamber-music catalogue with some notable works. The results of the first competition were: 1st prize, William Hurlstone; 2nd prize, Haydn Wood; 3rd prize, Frank Bridge, consolation prize, Josef Holbrooke; two other awards, James Friskin and Waldo Warner. Later prize-winners included, to mention but a few, compositions by York Bowen, Armstrong Gibbs, Herbert Howells, John Ireland, J. B. McEwen, Stanford and Vaughan Williams.

Particular encouragement was given also through the agency of these competitions to the production of short single-movement works of the now well-known "Fantasy" class, which have proved such an acceptable addition to the repertory; while at the R.C.M. and the R.A.M. Cobbett furthered the chamber-music cause in another way by offering a series of annual prizes for the best performances by the students.

In the way of literary propaganda Cobbett was responsible for the issue of a valuable series of Chamber Music Supplements, continued for several years, in connection with 'The Music Student'. Moreover, at about the age of eighty he undertook the production of a comprehensive 'Cyclopedia of Chamber Music' (2 vols., Oxford, 1929). In conjunction with the Musicians' Company of which he was Master in 1928-29, he instituted and endowed an annual Cobbett Medal for services to chamber music, the first (1924) recipient of which was Thomas F. Dunhill and the second (1925) Mrs. Elizabeth Sprague Coolidge.

Cobbett gave many prizes from time to time to the makers of British violins, with the object of raising the standard of their instruments and, in conjunction with the Society of Women Musicians, he provided a free public library of chamber music. He founded with a gift of £1000 a Chamber Music Association under the aegis of the British Federation of Competitive Music Festivals.

To the end of his long life an enthusiastic

performer in private, Cobbett was in his younger days the leader of several orchestras, including for many years that of the Strolling Players Amateur Orchestral Society. He possessed a fine collection of Cremona violins which he delighted in lending to those whom he considered worthy of them. H. C. C.

**COBBOLD, William** (b. Norwich, 5 Jan. 1560; d. Beccles, 7 Nov. 1639).

English organist and composer. He was organist of Norwich Cathedral before 1599, holding the post till 1608, when he became a singing-man in the cathedral, W. Ingloft being appointed organist. He was born in the parish of St. Andrew, Norwich.

Cobbold was one of the ten musicians who harmonized the tunes for

The Whole Booke of Psalmes with their wonted Tunes as they are song in Churches, composed into four partes, published by Thomas East in 1592. He contributed a madrigal, 'With wreaths of rose and laurel', to 'The Triumphes of Oriana' (1601). The only other known compositions by him are another madrigal, 'New Fashions', and an anthem, 'In Bethlehem town', of which some separate parts are preserved in the R.C.M. in London. He is buried on the south side of the chancel of Beccles parish church. His epitaph is quoted in West's 'Cathedral Organists'.

W. H. H.

**COCCHETTA, LA.** } See GARELLI,  
**COCCHETTINA, LA.** } CATTERINA.

**COCCHI, Claudio** (b. Genoa, ?; d. ?).

Italian 16th-17th-century composer. He entered the Order of St. Francis in 1626 in the service of Cardinal Dietrichstein at Olomouc in Moravia; in 1627 he was *maestro di cappella* at Trieste Cathedral, and, after some wanderings, in 1632 held the same post at San Francesco, Milan, where he became an *Accademico arrischiato* with the name of L' Allegro. His known works are: 'Armonici concentus . . .' (Venice, 1626), 'Messe', a 5 v. (1627); 'Ghirlanda sacra' (Milan, 1632). Also some pieces in MS cod. Lechler z v. d. s.

**COCCHI, Gioacchino** (b. ? Naples, c. 1715; d. Venice, 1804).

Italian composer. It is generally stated that he was a native of Padua, but he appears as "Napoletano" on the title-pages of many librettos and published compositions. Nothing is known about his musical upbringing. He was, at any rate, at Naples in 1735, as is indicated on the manuscript of a 'Dixit Dominus' at Munich, and brought out his first opera, 'Adelaide', in Rome in 1743. About 35 other operas followed in the course of the next 15 years, written for Naples, Rome, Venice and other towns. 'La maestra' (Naples, 1747) was his greatest success and was performed for many years all over Europe. Goldoni on several occasions collaborated with Cocchi, who held the post of *maestro di*

*cappella* at the Ospedale degli Incurabili at Venice for some years.

In the autumn of 1757 Cocchi went to London, as composer to the King's Theatre, where he made his début on 8 Nov. with 'Demetrio, re di Siria', a pasticcio in which the overture, the march, the "cavatina a due", the chorus, all the recitatives and 10 airs were composed by him. This was a great success and was given not less than 22 times during the season. 'Zenobia' and 'Issipile' followed early in 1758, 'Attalo' and 'Ciro riconosciuto' (his best work, according to Burney) in 1758-59, and more than a dozen other operas until 1761-62, when John Christian Bach became his successor. Cocchi again conducted at the King's Theatre in 1765, when 'Eumene' and 'La clemenza di Tito' were given under his direction, and emerged once more in 1771 with 'Semiramide riconosciuta', "the music entirely new", but probably new only to London, since this opera — unless he rewrote it — had already been given at Venice in 1757.<sup>1</sup>

Some time during the intervening years Cocchi acted as musical director at Mrs. Cornelys's subscription concerts at Carlisle House. He was also much in demand as a singing-teacher and published several collections of vocal music — 'Canoni, Catches [*sic*], Terzetti e Bacchanali', as one title-page runs — as well as duos for two cellos and other instrumental works. Among his less-known works produced in London should perhaps be mentioned the "grand musical entertainment" celebrating the alliance of George II with Frederick the Great, called 'Il tempio della gloria', given at the King's Theatre on 31 Jan. 1759<sup>2</sup>, and the double cantata 'Le speranze della terra' for the birthday of George III and 'Le promesse del cielo' for the wedding and coronation of George III and Queen Charlotte, produced on 3 June and 19 Sept. 1761.<sup>3</sup> A similar double cantata, 'La vera lode' and 'Il marito coronato', he wrote for the installation of John Fane, seventh Earl of Westmorland, as Chancellor of Oxford University (2 July 1759).

Cocchi returned to Venice in 1773 and seems to have spent the rest of his life in retirement, for nothing is known about his further musical activities. No new opera by him was produced in Italy after 1757 and none of his London works was ever revived there. Unlike most of his contemporaries he wrote but little church music.

A. L.

<sup>1</sup> The score of the original 'Semiramide' of 1757 is preserved in the R.C.M., while some of the songs of the "new" 'Semiramide' of 1771 were published.

<sup>2</sup> Not 20 Feb., as Burney says. Walpole alludes to this entertainment in his letter to H. S. Conway, 19 Jan. 1759.

<sup>3</sup> Not 4 June and 22 Sept. as stated in the libretto 'Le speranze' was repeated for the king's birthday in 1762.

**COCCIA, Carlo** (b. Naples, 14 Apr. 1782; d. Novara, 13 Apr. 1873).

Italian composer. He was the son of a violinist and studied under Fenaroli and Paisiello. The latter procured him the post of accompanist at King Joseph Bonaparte's private concerts at Naples, and encouraged him after the failure of his first opera, 'Il matrimonio per cambiale' (Rome, 1807). Between the years 1808 and 1819 he composed 22 operas for various towns in Italy, and two cantatas, one for the birth of the King of Rome (Treviso, 1811), the other (by a curious irony, in which Cherubini also shared) for the entry of the allied armies into Paris (Padua, 1814). The most successful of these early operas was 'Clotilda', produced at Venice on 8 June 1815.

In 1820 Coccia went to Lisbon, where he composed 4 operas and a cantata, and thence to London (23 Aug.), where he became conductor at the Opera. He discharged his duties with credit and profited by hearing more solid works than were performed in Italy, as he showed in the single opera he wrote for London, 'Maria Stuarda' (1827). He was also professor of composition at the R.A.M. on its first institution. In 1828 he returned to Italy. In 1833 he produced his best opera, 'Caterina di Guise', to a libretto by Felice Romani, at the Teatro alla Scala, Milan, on 14 Feb. He then paid a second visit to England, after which he settled finally in Italy. In 1840 he succeeded Mercadante as *maestro di cappella* at Novara and was appointed Inspector of Singing at the Philharmonic Academy of Turin. His last opera, 'Il lago delle Fate' (Turin, 1841), was unsuccessful.

Coccia wrote with extreme rapidity, the entire opera of 'Donna Caritea' (Genoa, 1818) being completed in six days.

M. C. C.

BIBL.—CAROTTI, GAUDENZIO, 'Biografia di Carlo Coccia, maestro di cappella della cattedrale di Novara' (Milan, 1929).

**COCCIA, Maria Rosa** (b. Rome, 4 Jan. 1759; d. Rome, Nov. 1833).

Italian composer. She won a remarkable degree of contemporary renown, but very few of her works are still in existence. A Magnificat for four voices and organ (Fitzwilliam Museum, Cambridge) is dated 2 Oct. 1774, and soon after that date she underwent an examination by four professors of the Roman Accademia di Santa Cecilia, with such credit that an account of the examination was printed in Rome in 1775, with her portrait and a specimen of her work. In this latter year she seems to have been a member of the Accademia Filarmonica di Bologna, exceptionally, if it were so, since women were not normally admitted. The Cambridge collection already mentioned contains an 8-part 'Dixit Domi-

nus' by her, in which is her portrait and some biographical information. In 1780 was published an 'Elogio storico della signora Maria Rosa Coccia Romana', with letters addressed to her by Metastasio, Martini and Farinelli. A cantata for four voices, dated 1783, is in the Dresden Museum. J. A. F. M.

**COCHLAEUS** (**Cocleus**, real name **Dob-nek**), **Johannes** (b. Wendelstein nr Nuremberg, 10 Jan. 1479; d. Breslau, 10 Jan. 1552).

German ecclesiastic and musical theorist. He was canon of Worms Cathedral. In 1530 he was at the church of St. Victor at Mainz, and finally he was dean at St. Mary's Church, Frankfurt o/M.

Cochlaeus was an ardent opponent of Luther. He taught Glarean and was probably at Cologne soon after 1500. He wrote a treatise, 'Musica', which appeared anonymously and had several editions, until it was published at Cologne in 1507 under his own name (on his taking the degree of M.A.). It was gradually enlarged and eventually appeared at Nuremberg in 1511 as 'Tetrachordum musices', and went into at least six editions between that date and 1526. Of his compositions only two odes for 4 voices of 1512 appear to be known (reprinted in Forkel, 'Musikgeschichte', II, 159, 160).

E. v. d. s.

**COCKS & CO., Robert.** This business was established in London in 1823 by Robert Cocks (b. 1798; d. 7 Apr. 1887) at 20 Princes Street, Hanover Square. It was removed at the end of 1844 to 6 New Burlington Street. In 1868 Cocks took into partnership his two sons, Arthur Lincoln Cocks and Stroud Lincoln Cocks, but at his death Robert M. Cocks became the proprietor, and he carried on the business until Dec. 1898, when he retired and transferred the concern to Augener, who retained the old name.

During the 75 years of its existence the firm issued upwards of 16,000 publications, including many works of solid worth, such as Czerny's composition and pianoforte schools, Spohr's and Campagnoli's violin schools, Albrechtsberger's and Cherubini's treatises on counterpoint, as well as an edition of Bach's clavier works. A periodical, 'The Monthly Miscellany', contained original notices of Beethoven by Czerny. W. H. H. & F. K.

**COCLEUS.** See COCHLAEUS, JOHANNES.

**COCLICO** (**Coclicus**), **Adrien** (**Adrianus**) **Petit** (b. Hainault, 1500; d. Copenhagen, c. 1563).

Flemish composer. The name of "Petit" may be a nickname, for he was very short, having the appearance of a gnome with a beard reaching down to his knees, as may be seen on an engraving of 1552, which also gives an indication of the date of his birth, since it describes him as "agé de 52 ans". He

matriculated at the University of Wittenberg, and was there described as "aus Flandern". He arrived at Wittenberg in 1545. The highly coloured reports he gave of his earlier life, such as that he was at the Papal Chapel in Rome, that he was imprisoned for heresy and that he had lived in various towns of France, are regarded as unreliable; but it is certain that he went to Germany because he had become a Protestant. He taught music privately at Wittenberg, married on 13 Apr. 1546, tried unsuccessfully for a teaching appointment at Stettin and in the autumn of 1547 became singer and composer in the chapel of Duke Albrecht of Prussia at Königsberg. But he was obliged to leave in 1550 owing to a scandal occasioned by the birth of a son borne him by a widow whom he had wished to marry after a divorce that failed to materialize. He went to Frankfurt o/M., where he met his compatriot, the publisher Montanus, who took him to stay with him at Nuremberg and published in 1552 Coclico's 'Musica reservata' and 'Compendium musices'. He opened a school at Nuremberg, at which he taught Italian and French, but is then lost sight of until 1554, when he is found at Wismar. He is said to have gone to England about that time to join the Chapel Royal, but no document exists to prove this. At any rate he was in Germany in 1555, when he arranged the music for the marriage festivities of Duke Johann Albrecht of Mecklenburg, who offered him the post of cantor, which he declined. On 3 July 1556 he entered the chapel of Christian III of Denmark in Copenhagen, where his name last appears in 1562.

**Cocleau, Jean.** See Auric ('Heureux Retour' & 'Aigle à deux têtes', films; 8 songs) Bowles (5 songs). Harrison (L., 'Marriage of the Eiffel Tower', opera). Honegger (2 lib., 6 songs) Markevitch (cantata). Milhaud ('Pauvre Matelot', lib. 'Caramel mou', jazz piece; 4 songs). Poulenc ('Mariés de la Tour Eiffel', collab. in incid. m.; 'Cocardes', voice & chamber m.; 4 songs) Satie (song). Sautget ('Enlants terribles', radio m., 1 song). Stravinsky ('Oedipus Rex', lib.).

**COCX, Jan** (b. East Flanders, c. 1630; d. Antwerp, 24 Oct. 1678).

Flemish priest and composer. He became a chorister at Saint-Bavon on 17 Sept. 1639 and may have become choirmaster at Termonde and organist at Eindhoven later. On 16 Oct. 1666 he succeeded Gaspard Boest as master of the children and musical director at Antwerp Cathedral. In 1670 he composed a solemn Mass dedicated to the cathedral chapter and about the same time he published a collection of 8-part church music, which has disappeared and the title of which is unknown, but which is mentioned in an inventory of printed music made for the church of St. James in 1677. He

may also have been the composer of the 'Ferculum musicum' for 1-4 voices and instruments, published at Antwerp in 1673. Other works of his are mentioned in the catalogue of St. Walburga's church at Oudenarde.

E. B.

**CODA** (Ital. = tail). That which goes by the name in music is very fairly expressed by the word, for it is that part which comes at the end of a movement or piece of any kind, and has to a certain extent an independent existence and object, and though not always absolutely necessary, cannot often be easily dispensed with.

The earliest idea of a musical coda was probably a few simple chords with a cadence which served to give a decent finish to the mechanical puzzles over which so much ingenuity was wont to be expended in old days. For instance, when a number of parts or voices were made to imitate or follow one another according to rigorous rules, it would often occur that as long as the rules were observed a musical conclusion could not be arrived at. Indeed sometimes such things were constructed in a manner which enabled the piece to go on for ever if the singers were so minded, each following the other in a circle. In order to come to a conclusion a few chords would be constructed apart from these rigorous rules, and so the coda was arrived at.

Applied to instrumental music of the classical era this came to be a passage of optional dimensions which was introduced after the regular set order of a movement was concluded. For instance, in a series of variations, each several variation would only offer the same kind of conclusion as that in the first theme, though in a different form; and in the very nature of things it would not be aesthetically advisable for such conclusion to be very strongly marked, because in that case each several variation would have too much the character of a complete set piece to admit of their together forming a satisfactorily continuous piece of music. Therefore it is reasonable when all the variations are over to add a passage of sufficient importance to represent the conclusion of the whole set instead of one of the separate component parts. So it is common to find a fugue, or a finale or other passage at the end which, though generally having some connection in materials with what goes before, is not of such rigorous dependence on the theme as the variations themselves.

Similarly in the other forms of instrumental composition there is a certain set order of subjects which must be gone through for the movement to be complete, and after that is over it is at the option of the composer to enlarge the conclusion independently into a coda. When the sections of a complete movement are very

strongly marked by double bars the word is frequently written, as in the case of minuet and trio, and the corresponding form of scherzos, which are mostly constructed of a part which may be called A, followed by a part which may be called B, which in its turn is followed by a repetition of the part A; and this is all that is absolutely necessary. But beyond this it is common to add an independent part which may be labelled C and is called the coda, serving to make the whole more complete.

In instrumental forms which are less obviously definite in their construction, the coda is not distinguished by name, though easy to be distinguished in fact. For instance in a rondo, which is constructed of the frequent repetition of a theme interspersed with episodes, when the theme has been reproduced as many times as the composer desires, the coda naturally follows and completes the whole. The sonata form of a first movement is more involved, but here again the necessary end according to rule may be distinguished when the materials of the first part have been repeated in the latter part of the second, generally coming to a close; and here again the coda follows according to the option of the composer.

The coda was developed into a matter of very considerable interest and importance by Beethoven. Mozart occasionally refers to his subjects and does sometimes write a great coda, as in the last movement of his Symphony in C major known as the "Jupiter", but most often has no other ostensible object than to make the conclusion effectively brilliant. The independent and original mind of Beethoven seems to have seized upon this last part of a movement as most suitable to display the marvellous fertility of his fancy, and not infrequently the coda became in his hands one of the most important and interesting parts of a whole movement, as in the first movement of the "Adieux" Sonata, Op. 81a, the last movement of the E♭ major Quartet, Op. 127, and the first movement of the "Eroica" Symphony. Occasionally he goes so far as to introduce a new feature into the coda, as in the last movement of the violin and pianoforte Sonata in F major, but it is especially noticeable in him that the coda ceases to be merely "business" and becomes part of the aesthetical plan and intention of the whole movement, with a definite purpose and a relevancy to all that has gone before. Modern composers have followed in his steps.

C. H. H. P

See also Codetta.

**CODAX** (Codaz), Martín (b. ?; d. ?).

Spanish or Portuguese 13th-century troubadour. He was probably a native of Vigo. His music was discovered in 1914 in the binding of a 14th-century manuscript of Cicero's 'De officiis'. It consists of seven poems in the Galician-Portuguese dialect, dating, it is

believed, from the first half of the 13th century. The words of several of the poems had been known before in the early Galician-Portuguese *cancioneiros*, or song-books; they belong to the most primitive types of Peninsular poetry, being parallelistic in form (cf. Psalm CXXXVI, 17, 18) and written in the masculine gender. The neumes of the musical notation are written on a staff of five lines above the words; and though the copyist seems to have been no musician, merely drawing the signs which he saw in front of him (in No. 6 he has forgotten to put them in), it is possible to read the notation of five of the seven songs with a certain probability, as has been done by D. Santiago Tafall.

The music is apparently non-mensural and in free rhythm. The melodies are pronounced to be genuinely Galician in feeling; they have the flexibility and grace of the folksongs still sung by country people in remote districts of Galicia; the tonality, melodic phrases and cadences are those of the songs known as *alalás*. The name "Codax" is probably a nickname; or it may conceivably be a mistake for *Codex*; i.e. "Martin's Codex, or the Book of Martin". (See Pedro Vindel, 'Las siete canciones de amor', facsimile, Madrid, 1915); A. F. G. Bell, 'History of Portuguese Literature' (1922), p. 29. The music is transcribed in *Bul. de la R. Academia Gallega*, XII, 117 (May 1917), and in *M. & L.*, V, I, 29-30 (Jan. 1924). See also R.F.E., II, 3 (July-Sept. 1915).

J. B. T.

**CODETTA** (Ital. = little tail, dim. of *coda*). A structural feature in musical composition which offers no material differences from the *coda* except in dimensions. It is a passage which occurs independently after the set order of a piece is concluded, as, for instance, in the combination of the minuet and trio, or march and trio; after the minuet or march has been repeated a short passage is frequently added to give the end more completeness.

A codetta may occur in a sonata movement at the end of the exposition, to be afterwards reproduced at end of the whole movement, either slightly modified, mainly as to key, or enlarged into a *coda*.

A special meaning, discussed elsewhere<sup>1</sup>, may attach to the term "codetta" in the construction of a fugue. C. H. H. P., adds.

See also *Coda*.

**COELHO, Manuel Rodrigues** (b. Elvas, c. 1583; d. prob. Lisbon, ?).

Portuguese composer and organist. After playing the organ first in his native town, he went to Lisbon in 1603 and in 1604 entered the royal chapel, where he remained until 1633, the year in which he was pensioned, holding the office of *Capellão e Tangedor de Tecla de Sua Magestade* (chaplain and player on key-

board instruments to his Majesty). His only printed works are the 'Flores de musica para o instrumento de tecla e harpa' (published Lisbon, Craesbeeck, 1620), appreciated as early as 1617 by the composer Frei Manuel Cardoso: a collection of 24 *tentos* for organ and 4 *susanas* or *tentos* (described as variations on the plainsong of 'Susana', arrangements of the hymn 'Ave Maris Stella', etc.), the earliest instrumental music printed in Portugal. Coelho created a very personal and Portuguese keyboard style, yet he must also be considered an important link between the Anglo-Dutch and the Spanish schools of keyboard music of his time.

One *tento* by this composer is included in 'Cravistas portugueses', Vol. I, and five are published and reprinted in modern notation as '5 Tentos do P. M. R. Coelho'. s. x.

BIBL.—KASTNER, S., 'Música hispánica o estilo do Padre Manuel R. Coelho' (Lisbon, 1936), 'Cravistas portugueses', Vol. I (Mainz, 1935), '5 Tentos do P. M. R. Coelho' (Mainz, 1936).

**COELHO, Olga Pragner** (b. Manaus, 1909).

Brazilian soprano singer and guitarist. She studied chiefly with Besanzoni and Segovia and started her career in Rio de Janeiro in 1928. Since then she has toured the whole world giving folksong recitals to her own accompaniment and has made a film in Portugal. In 1949 she toured Europe. N. F.

**COELHO, Ruy** (b. Alcacér do Sal, 3 Mar. 1891).

Portuguese critic and composer. He studied in Lisbon under Rey Colaço and in Berlin under Humperdinck. He has an unsteady style, revealing both French and Italian influences, at the same time trying to insist on national elements. Coelho has been music critic of the papers 'Diário de Notícias' and 'Diário da Manhã'. The following are some of his works: operas 'Inês de Castro', 'Belkiss', 'Crisfal', 'Entre giestas', 'Tá-Mar', 'Rosas de todo o ano', and 'Auto da barca do inferno'; ballets 'A princesa dos sapatos de ferro', 'Dom Sebastião' and 'Bailado do encantamento'; oratorio 'Fatima'; symphonies and symphonic poems, suite 'Passeios de estio' for orchestra, 'Rapsodia portuguesa' for orchestra, 'Sinfonietta' for strings; Concerto for pianoforte and orchestra; two violin Sonatas; several sets of songs. He also wrote 'Noites da Mourana' for pianoforte and orchestra for the Emissora Nacional's Gabinete de Estudos Musicais, to which he is attached. J. J. C.

**COENEN, Cornelius** (b. The Hague, 19 Mar. 1838; d. Arnhem, Mar. 1913).

Dutch violinist and conductor. He became conductor of the orchestra in Amsterdam in 1859 and bandmaster of the National Guard at Utrecht in 1860. J. A. F.-M.

<sup>1</sup> See *Fugue*.

**COENEN, Franz** (b. Rotterdam, 26 Dec. 1826; d. Leyden, 24 Jan. 1904).

Dutch violinist and composer. He was the son of a Rotterdam organist and became a pupil of Vieuxtemps and Molique, and became famous as a violin player. He toured in America with Herz, Lubeck and others, and settled in Amsterdam, where he was appointed director of the Conservatory, a post he relinquished in 1895. Among his compositions are a setting of Psalm XXXII, a Symphony, cantatas and quartets. J. A. F.-M.

**COENEN, Johannes Meinardus** (b. The Hague, 28 Jan. 1824; d. Amsterdam, 9 Jan. 1899).

Dutch bassoon player, conductor and composer. He was educated at the Conservatory of The Hague, became a bassoon player in the royal orchestra, was conductor at the Dutch theatre of van Lier, Amsterdam, from 1851, succeeded van Bree as director of the Felix Meritis Society in 1857 and gave up the post in 1865 in order to devote himself to the direction of the music at the Palais voor Volkslyt. He was virtually the creator of the orchestra which became renowned as the "Palais-Orchester"; he retired in 1896. He wrote many cantatas, incidental music to Dutch plays, ballet music, overtures, an opera, 'Bertha en Siegfried', two symphonies, concertos for clarinet and flute respectively, a Quintet for wind instruments and pianoforte, a Sonata for bassoon (or cello), clarinet and pianoforte, etc. J. A. F.-M.

**COENEN, Tilly.** See KOENEN.

**COENEN, Willem** (b. Rotterdam, 17 Nov. 1837; d. London, 19 Mar. 1918).

Dutch pianist and conductor, brother of Franz Coenen (see above). He was doubtless a pupil of his father and attained some distinction as a pianist in America and elsewhere. He settled in London in 1865, made his début at the Covent Garden concerts and frequently played in public. His compositions include an oratorio, 'Lazarus' (1878), pianoforte music and songs. J. A. F.-M.

**COERNE, Louis (Adolphe)** (b. Newark, N.J., 27 Feb. 1870; d. Boston, Mass., 11 Sept. 1922).

American conductor, educationist and composer. He studied at Harvard from 1888 and at Munich under Rheinberger in 1890-93. A symphonic poem on Longfellow's 'Hiawatha' was performed there and in 1894 at Boston. After holding various appointments at Buffalo, N.Y., and Columbus, Ohio, he returned to Germany, where he lived from 1899 to 1902 and completed Rheinberger's unfinished Mass in A minor. In 1903-5 he taught at Smith College, Northampton, Mass., and at Harvard, where he took the Ph.D. with a thesis, 'The Evolution of Modern Orchestration', published in 1908, an important subject disappointingly treated.

Another two years' visit to Germany saw the production of his opera 'Zenobia' (Op. 66) at Bremen in 1905, the first American opera to be heard in Germany, but also the only one of Coerne's stage works to be produced anywhere. Of several educational posts he held after his final return, that at the Connecticut College for Women, New London, was the last.

Coerne's other operas were 'A Woman of Marblehead' (Op. 40), 'Sakuntala', after Kalidasa (Op. 67) and 'The Maiden Queen' (Op. 69). He also wrote incidental music for 'The Trojan Women' of Euripides, overtures and symphonic poems for orchestra; a violin Concerto; a string Quartet; a 'Swedish Sonata' for violin and pianoforte; pianoforte, pieces, songs, partsongs, etc. R. A., adds

**COETMORE, Peers.** See MOERAN.

**CŒUROY, André** (actually Jean Belime) (b. Dijon, 24 Feb. 1891).

French music critic. He was a pupil at the École Normale Supérieure in Paris in 1910-14 and studied music in Germany as a private pupil of Max Reger. In 1920 he founded, with Henry Prunières, the 'Revue Musicale' and was its editor until 1935. For many years he was music critic of 'Paris-Midi', and also of 'Gringore' and 'Beaux-Arts'. He was also general editor of the collections 'Les Maîtres de la musique ancienne et moderne' and 'La Musique moderne'. In all his writings he has been a staunch supporter of modern tendencies in music. Many of his works stress the connection between music and other intellectual pursuits, witness his 'Essais de musique et de littérature comparée' (1923); 'L'Ame musicale de Carl Spitteler'; 'L'Inspiration musicale dans la littérature anglaise du XIX<sup>e</sup> siècle'; 'La Théorie musicale des écrivains romantiques en Allemagne'. He is also the author of a book on jazz, in collaboration with André Schaeffner (1926), and on the gramophone in collaboration with Clarence. He was associated with Robert Jardillier in a 'Histoire de la musique avec l'aide du disque', and in 1930 published 'Le Panorama de la radio'. He has also written a monograph on Weber (1925), 'La Musique française moderne' (1922) and 'Le Panorama de la musique contemporaine'.

Cœuroy translated the works of Heine and wrote French versions of Weber's 'Freischütz' (Opéra, 1926), Wellesz's 'Alkestis' and Schoenberg's 'Gurrelieder'. He has been responsible for librettos and scenarios for, among others, B. Martinů, Auric, Ferroud and F. Lazar. His own compositions include a Trio for viola, clarinet and pianoforte, a 'Quintette minuscule' for strings and clarinet and a prelude and jig for harp and violin.

A. H. (ii).

See also Martinů ('Échec au roi', ballet). Tansman ('I umières', do.).

**Coffey, Charles.** See *Ballad Opera*. Hiller (J. A., adapts of 'Devil to Pay' and 'Merry Cobbler'). Faer ('Poche, ma buone', opera). Philidor (12, 'Diable à quatre', opera). Portugal ('Donne cambiate', opera). Seedo (airs for ballad operas). Standfuss (adapt of do).

**COGAN (Coogan<sup>1</sup>), Philip** (b. Cork, 1748; d. Dublin, 3 Feb. 1833).

Irish composer and organist. He became a choir-boy and afterwards an adult member of the choir of St. Finbar's Cathedral at Cork. In 1772 he was appointed a stipendiary of Christ Church Cathedral, Dublin, but he soon resigned his post. In 1780 he became organist at St. Patrick's Cathedral in the same city, and about the same time he is reputed to have obtained the degree of Mus.D. from Dublin University. He resigned his post at St. Patrick's in 1806, but remained in Dublin as a teacher of music. He was distinguished as a player on the organ and harpsichord as well as by his powers of fugue extemporization.

Among his pupils were Michael Kelly, Michael Rooke and Thomas Moore. Kelly, who took lessons from him about 1777, describes his execution as "astounding".

Cogan's compositions include variations on airs and dances popular in his time, songs, anthems, harpsichord lessons, sonatas for violin and harpsichord, sonatas for pianoforte and two pianoforte concertos. He also wrote two comic operas for Dublin: 'The Ruling Passion' (libretto by Leonard McNally) performed at the theatre in Capel Street on 24 Feb. 1778, and 'The Contract', in collaboration with John Stevenson (libretto by Robert Houlton), Smock Alley Theatre, May 1782, revived as 'The Double Stratagem' at Capel Street, May 1784. In 1788 his six Sonatas, Op. 2 (five of which are for violin and harpsichord and one for solo harpsichord), dedicated to Emily, Duchess of Leinster, were published in London. These were followed by the pianoforte Concerto in G major, Op. 5, published in Edinburgh in 1793, and a second Concerto, in E♭ major, Op. 6, also for pianoforte, was published about the same time. The latter Concerto, together with the six pianoforte Sonatas, Opp. 7 and 8 (three in each set) represent the best in Cogan's output.

Cogan, who lived at all times in good circumstances, is referred to in Michael Kelly's 'Reminiscences' as being "an hospitable worthy fellow, highly esteemed by all his connexions". A large number of his works was dedicated to his patrons and friends, notably the Duchess of Leinster, Mrs. Latouche, wife of David Latouche, the wealthy 18th-century Dublin banker, Lady Clonbrock and Clementi. He was vice-president of the Irish Musical Fund Society (an organization for the relief of distressed musicians) in 1794, when it was incorporated by Act of the Irish Parliament,

and for many years later he was a member of the professors' section of the committee of the Society.

Cogan is buried in Glasnevin Cemetery, Dublin.

G. A. C., A. L. & É. Ó'B.

**COHEN, Alexander** (b. Leeds, 29 June 1884).

English violinist and man of letters. He was educated at Leeds Central Higher Grade School (1897-1901) and University (1905-8). At the latter he took the B.A. in modern languages with first-class honours in 1908 and the M.A. in 1909. Although a brilliant scholar, especially in French literature, he was so much attracted to music as to devote his career to it, and in 1912 he accepted the post of leader of the Scarborough Spa Orchestra. In 1915-20 he was leader of the Leeds Symphony Orchestra and for the first year also of the Harrogate Municipal Orchestra. Meanwhile, in 1909, he had founded the Leeds Trio and the Leeds Quartet, his bent being particularly towards chamber music; and from 1914 to 1920 he provided all the programmes of the Leeds Bohemian Chamber Concerts.

In 1920 Cohen was appointed leader of the City of Birmingham Orchestra, and he has since lived at Birmingham permanently, although he held that post until 1921 only. A good deal of his time was occupied in violin teaching and chamber-music coaching, and in 1932 he founded the Alex. Cohen Quartet, with which he gave a series of exceptionally interesting concerts and broadcasts. His interpretations of Beethoven especially showed profound knowledge and careful study, and he made a point of including unfamiliar works in his programmes, such as Hugo Wolf's early Quartet and the first Quartet by Ernest Bloch. Of the latter composer he is an almost fanatical admirer, and it is due chiefly to his efforts that the Bloch Society was formed, of which he is chairman. He also made an admirable English translation of Edmond Fleg's French libretto of Bloch's 'Macbeth' opera.

As a musician Cohen was mainly self-taught. It is thus the more remarkable that he should have turned away from tempting academic appointments as a literary scholar, such as two lectureships in modern English literature at the Universities of Berlin and Göttingen, to give himself up to music, at which he had to work extremely hard and often under dishearteningly adverse conditions. But he contrived to solve all his problems, technical and aesthetic, to his own satisfaction and to equip himself to give the public the benefit of a sensitive, far-reaching and penetrating musical understanding. His interpretations, being the result of his own thought, not of conventional instruction, are highly individual and have sometimes given rise to

<sup>1</sup> The name appears thus in the Act of Parliament mentioned at the end of this article.

critical disagreement, but no one has ever questioned his sincerity or his intellect. In the field of chamber music he has given more first performances in England of new and neglected works than perhaps any other concert-giver.

Cohen never gave up his literary studies, and it is interesting, if not particularly relevant here, to note briefly that he has translated a vast number of poems by La Fontaine, Baudelaire, Mallarmé<sup>1</sup>, Verlaine and Rimbaud. He has also invented special technical exercises for the left hands of string players which have been commended as a revelation by performers of the greatest eminence.

E. B.

**COHEN, Harriet** (b. London, ?).

English pianist. Educated at the R.A.M. in London (1912-17) and at the Matthay School, she took several scholarships and prizes at the former and was made a professor of the latter in 1922. She played at the Salzburg Festival in 1924 and since then her numerous engagements have included invitations to many continental and American festivals. She has made a speciality of modern British music, and concertos have been written for her by both Bax and Vaughan Williams. She has consistently played Bax's pianoforte music and thereby greatly contributed to its reputation. Much of it is dedicated to her. In 1936 she published a small volume, 'Music's Handmaid', which describes simply her ideas on the interpretation of a number of works in her wide repertory. In Jan. 1938 she was awarded the C.B.E. for "services to British music". In 1948 she injured her right hand, and at the Cheltenham Festival of 1950 she played for the first time Bax's 'Concertino' for the left hand, written for her.

H. C. C., adds.

**COHEN, Jules (Émile David)** (b. Mar-seilles, 2 Nov. 1835; d. Paris, 13 Jan. 1901).

French composer. He was a student at the Paris Conservatoire, where he took first prizes for pianoforte (1850), organ (1852), counter-point and fugue (1854).

Besides holding the office of inspector of music under Napoleon III he was professor at the Conservatoire for thirty-five years and chorus-master at the Opéra for twenty years. He wrote many *opéras-comiques*, such as 'Maître Claude' (1861), 'José Maria' (1866) and 'Les Bleuets', a 4-act opera (produced at the Théâtre-Lyrique, 1867, and in London, at Covent Garden, as 'Estella', 1880, with Patti), etc., and composed choruses for Racine's 'Athalie' and 'Esther' and Molière's 'Psyché' for revivals at the Comédie-Française<sup>1</sup>.

G. F.

<sup>1</sup> His translation of 'L'Après-midi d'un faune' will be found in the second edition of Edward Lockspeiser's book on Debussy in the Master Musicians series (London, 1951).

**COHEN, Louis** (b. Liverpool, 17 Sept. 1894).

English violinist and conductor. He studied music at the Liverpool College of Music and the Royal Manchester College of Music. After serving overseas during the 1914-18 war he became a first violinist in the Hallé Orchestra at Manchester in 1920. Later he formed his own string quartet and in 1932 founded the Merseyside Symphony Orchestra, of which he was the principal conductor. Between 1932 and 1939 he gave a series of Sunday evening concerts at Liverpool which increased the taste for orchestral music in the city. He formed the Merseyside Chamber and String Orchestras in 1936 and gave numerous concerts at Liverpool and throughout a wide area of north-western England. He was also conductor and musical director of the Harrogate Municipal Orchestra from 1934 to 1939, and he has frequently been guest conductor to the B.B.C. and Hallé Orchestras, the L.S.O. and the L.P.O.

When the Merseyside Symphony Orchestra became the Liverpool Philharmonic Orchestra in 1939, augmented with extra players, Cohen became one of its guest conductors. He conducted the Palestine Symphony Orchestra (now the Israel Philharmonic Orchestra) for three seasons in 1945-46 and 1949 and introduced many works by British composers there for the first time. He now conducts orchestral concerts for children under the auspices of the Liverpool Education Committee. M. K. W.

**COHEN, Raymond** (b. Manchester, 27 July 1919).

English violinist, son of the preceding. He began to play the violin before he was three years of age and had his first lessons from his father. Later he attended the Royal Manchester College of Music, where he obtained the Brodsky Scholarship at the age of fourteen, and the following year he joined the Hallé Orchestra as the youngest member it had ever contained. In 1939 he appeared as soloist with that orchestra, playing three concertos in one programme. His career was interrupted by army service in 1940-46, but before he was demobilized he competed in the Carl Flesch International Violin Contest of 1945 and won the award. Since 1946 he has appeared at many important orchestral concerts in a large repertory of some fifty old and new concertos, including such rarely played works as those of Bloch, Busoni, Miaskovsky, Respighi and Roman. He also plays sonatas, including many modern works, with Franz Reizenstein, and introduced Rubbra's Sonata with the composer. He broadcasts regularly and appeared on television with the Mendelssohn Concerto.

Cohen is not only a highly accomplished virtuoso, but an interpreter of considerable

insight, with an appreciation of the different requirements of classical, romantic and modern styles. His performances of the concertos by Elgar, Sibelius and Walton, for example, are outstanding. E. B.

**COHN, Arthur** (b. Philadelphia, 6 Nov 1910).

American violinist and composer. He studied violin and theory at Combs University, Philadelphia, and was a pupil of Jacobinov and Happich. In 1933 he was awarded a fellowship at the Juilliard School where he worked with Rubin Goldmark. He is head of the Music Department of the Philadelphia School for Social Science and Art, and from 1933 to 1943 he was administrator of the Free Library of Philadelphia project for copying living composers' music. In 1940 he was appointed director of the Fleisher Collection of the Free Library.

Cohn has been active as a string player and organizer of chamber-music teams, organizing the Dorian Quartet, and in 1933 the Stringart Quartet, which made a feature of modern music and toured the U.S.A. for five seasons. He was leader of the Philadelphia Civic Orchestra and co-founder of the Chamber Orchestra and Composers Laboratory of Philadelphia.

The following are his more important works:

Incidental music for Christopher Wood's play 'Too late to die', Op. 16 (1935).

'Producing Units' for dance ensemble & pf., Op. 20 No. 1 (1934).

'Trial', satire for dance ensemble & pf., Op. 21 (1934).

'Bet it's a Boy' for lantern slides with pf. 5tet, Op. 38 (1941).

Suite for orch., Op. 3 (1931)

'Five Nature Studies' for orch., Op. 12 (1932).

'Retrospections' for orch., Op. 11 (1933).

4 Preludes for stgs., Op. 27 (1937)

'Four Symphonic Documents', Op. 30 (1939).

'Histrionics' for stgs., Op. 37 (1941)

Suite for viola & orch., Op. 28 (1937)

'Quintuple Concerto' for treble viol., viola d' amore, viola da gamba, bass viol. & harpsichord, with orch., Op. 31 (1940)

Flute Concerto, Op. 37 (1941).

Variations for clar. & stgs. (1945)

String Quartet No. 1 (4 Preludes), Op. 1 (1928).

String Quartet No. 2 (6 Miniatures), Op. 4 (1930)

String Quartet No. 3 ('Conceptions in Bronze'), Op. 7 (1932).

Music for 4 trumpets & 3 trombones, Op. 9 (1933).

String Quartet No. 4 ('Histrionics'), Op. 24 (1935).

Music for Ancient Instruments, Op. 29 (1938).

'Machine Music', Op. 20 No. 2, for 2 pfs

Also instrumental suites and sonatas, smaller works for string quartet, &c.

P. G. - H.

**COICK, Jan.** See GALLUS, JOHANNES.

**COIGNET, Horace** (b. Lyons, 1736; d. Lyons, 29 Aug. 1821).

French amateur composer. He was originally a merchant. Rousseau met him at Lyons in 1770 and was so much impressed by fragments of a comic opera, 'Le Médecin d'amour', Coignet played to him that he asked him to set his lyric scene 'Pygmalion' to music. Rousseau himself contributed only

two out of the 26 *ritournelles* of 'Pygmalion' and so it was chiefly with Coignet's music that this famous earliest *mélodrame*, or monodrama, first appeared privately at Lyons in May 1770, later at the Comédie-Française in Paris on 30 Oct. 1775 and subsequently on every important stage in Europe as well as in New York (1790). On his share in 'Pygmalion' Coignet wrote a letter to the 'Mercure de France' (Jan. 1771). Shortly after his death A. Méhul published Coignet's own account of his meeting and dealings with Rousseau and of the first private performances of 'Pygmalion', in his 'Annuaire nécrologique' (Vol. II, 1822, pp. 122-28) A. L.

See also Baudron. Rousseau.

**COKE, Roger Sacheverell** (b. Derbyshire, 20 Oct. 1912).

English pianist and composer. He was educated at Eton, studying music privately, with Mabel Lander for the pianoforte and with Frederick Staton and Alan Bush for composition. He made his début as a pianist-composer in 1932 and has had many performances of his works since, particularly in the provinces. In 1940 he founded the Brookhill Symphony Orchestra, with which he played a number of his own compositions and numerous neglected works by other composers. His music, which reflects his sympathies for Mahler, Bruckner and Rakhmaninov, is written with considerable accomplishment in a mainly pre-Debussy idiom. His output is considerable, and includes 'The Cenci', an opera, based on Shelley, 3 symphonies, 4 symphonic poems ('The Lotos Eaters', 'Elegiac Ballade', 'Dorian Gray', after Oscar Wilde, and on a painting by Corot), 5 pianoforte Concertos, 2 vocal Concertos for soprano and orchestra, a string Quartet (Op. 66), 2 pianoforte Trios, a pianoforte Quintet (Op. 65), numerous sonatas for violin and pianoforte, cello and pianoforte and pianoforte solo, several sets of variations and a collection of twenty-four preludes for pianoforte, and over 80 songs. Nearly all these works are in manuscript C. M. (iii).

**COL LEGNO** (Ital. = "with the wood"). A term indicating that a passage is to be played by striking the strings of the violin with the stick of the bow instead of with the hair. An effective example of *col legno* bowing will be found in study No. 14 of Woldemar's 'Nouvel Art de l'archet'. It is entitled 'Imitation du Psalterium, par Michel Esser', the latter a violinist who may be assumed to have brought this grotesque trick into use. Three strings are directed to be struck at once, the effect resembling that produced by the dulcimer or the Hungarian cimbalom. P. D. & E. J. P.

**COLASCIONE.** See CALASCIONE.

**COLASSE, Pascal** (b. Rheims, [bapt. 22 Jan.] 1649; d. Versailles, 17 July 1709).

French composer. He learned music as a

choir-boy at St. Paul's, Paris, and later at the Collège de Navarre. As early as 1675 he was on friendly terms with Lully, who in 1677 procured him a position as *batteur de mesure* (conductor) at the Académie Royale de Musique, in succession to Lalouette. Colasse helped Lully with some of his operas, writing out the accompaniments in the choruses and symphonies. In 1683 the office of Surintendant de la Chapelle Royale was divided into four, each official being required to direct the music for only three months of each year, through Lully's influence Colasse obtained the second of these posts. In 1685 Colasse was made composer of the Musique de la Chambre with Lalande, then was created Maître des Enfants de la Musique for life. He gave up the conductorship at the Opéra in favour of Marin Marais in 1687, but continued his connection with the institution as composer. In 1696 he succeeded Lambert as Maître de Musique de Chambre, this post he resigned the same year in order to manage an operatic undertaking at Lille, for which Louis XIV granted a privilege, but on the destruction of the theatre by fire he was allowed to resume his office at court (until 1708). He finally ruined himself in the search for the philosopher's stone.

Colasse wrote a number of motets and published a collection of 'Cantiques spirituels' in 1695; but his energies were chiefly devoted to dramatic composition, operas and smaller works for the stage, a list of which is given below. 'Thétis et Pélée', his most popular work, remained in the repertory for sixty-five years. In it he freed himself from Lully's influence and showed his own talent. Apart from this, Colasse's conception of operatic form is very close to that of his master.

#### LIST OF OPERAS, ETC.

(The names in brackets denote the librettists, all works were produced at the Paris Opéra, unless otherwise stated.)

- 'Achille et Polyxène' (Campistron), 7 Nov. 1687 (begun by Lully, finished by Colasse).
- 'L'Amour et l'Hymen' (La Chapelle), Hôtel de Conty, 1 July 1688.
- 'Thétis et Pélée' (Fontenelle), 11 Jan. 1689
- 'Amarillis' (Pic), score published 1689, apparently not performed.
- 'Enée et Lavinie' (Fontenelle), 7 Nov. 1690
- 'Astrée' (La Fontaine), 25 Nov. 1691.
- 'Ballet de Villeneuve-Saint-George' (Bauzy), Villeneuve-Saint-George, 1 Sept. 1692; Paris, Opéra, Oct. 1692; also called 'Impromptu de Livry' or 'Divertissement de Livry'.
- 'Les Saisons' (Pic), 15 Oct. 1695, music partly from Lully.
- 'Jason, ou La Toison d'or' (J. B. Rousseau), 15 Jan. 1696.
- 'La Naissance de Vénus' (Pic), 1 May 1696; instrumental music partly from Lully.
- 'Canente' (Houdar de La Motte), 4 Nov. 1700.
- 'Polyxène et Pyrrhus' (La Serre), 21 Oct. 1706.

**COLBRAN (Rossini), Isabella (Angela)** (b. Madrid, 2 Feb. 1785; d. Bologna, 7 Oct. 1845).

Spanish mezzo-soprano singer. Her father was Gianni Colbran, court musician to the King of Spain. She received her first lessons in music from F. Pareja of Madrid and from Marinelli, by whom she was taught until Crescentini undertook to form her voice and style. From 1806 to 1815 she enjoyed the reputation of being one of the best singers in Europe. In 1809 she was *prima donna seria* at Milan, and the year after she sang at the Teatro La Fenice at Venice. Thence she went to Rome, and soon to Naples, where she sang at the Teatro San Carlo till 1821. Her voice remained true and pure as late as 1815, but after that time she began to sing out of tune. She was a great favourite with the King of Naples; her name became a party-word, and the royalists showed their loyalty by applauding the singer. An Englishman asked a friend one night at the San Carlo how he liked Colbran: "Like her? I am a royalist!" he replied. On 15 Mar. 1822, at Castenaso near Bologna, she was married to Rossini, who was seven years younger than herself and who eventually left her. With him she went to Vienna and in 1824 to London, when she sang the principal part in his 'Zelmira'. She was then entirely *passée* and unable to produce any effect on the stage; but her taste was excellent, and she was much admired at private concerts. On leaving England she quitted the stage and resided in Paris and Bologna. She was herself a composer and left a few collections of songs. J. M.

**COLE, Benjamin** (b. ? Leeds, ? , d. London, ?).

English 18th-century engraver, printer and publisher of maps and music. His business was at the corner of King's Head Court near Fetter Lane, Holborn, London, from 1738 to 1760. There were several engravers during the 18th century with the name of B. Cole, and it is difficult to distinguish between them. It is probable that the Benjamin here referred to had executed a number of maps, etc., before he turned his attention to music. He may have been the same person as the Benjamin Cole who engraved a view of Trinity Church, Leeds, for Ralph Thoresby's 'Vicaria Leodensis' (1724) and, soon afterwards, a plan of Leeds on which his address is given as St. Paul's Churchyard.<sup>1</sup> His principal engraved musical works are: 'Songs and Duetto's in . . . The Dragon of Wantley . . . by J. F. Lampe' (1738); 'British Melody; or the Musical Magazine', by J. F. Lampe, etc. (1739), which has some of the head-pieces designed by "Sig<sup>r</sup>. Marini"; 'The New Universal Magazine' (1751-59), for

<sup>1</sup> Frank Kidson, 'Some Illustrated Music-Books' ('The Musical Antiquary', July 1912, p. 203)

which Cole engraved some illustrated music pages; and 'Orpheus Britannicus, or the Gentleman and Lady's Musical Museum' (1760), which has head-pieces to each song designed by L. P. Bortard w. c. s.

**COLE, Blanche** (b. Portsmouth, 1851; d. London, 31 Aug. 1888).

English soprano singer. Her début took place in London, in the part of Aminta (Bellini's 'Sonnambula') at the Crystal Palace on 31 May 1869, and thenceforward she established herself as a favourite in English opera. In 1879 she toured with a company of her own, and at various times she was a member of the Carl Rosa Company. She married the pianist Sidney Naylor in 1868.

J. A. F.-M.

**COLEMAN.** English family of musicians.

(1) **Charles Coleman** (b. ?; d. London ?), violist and composer. He was chamber musician to Charles I and wrote the music for 'The King and Queen's Entertainment at Richmond', a masque presented by Prince Charles on 12 Sept. 1636.

After the breaking out of the civil war Coleman took to the teaching of music in London, and was one of those who taught the viol lra-way. He was recommended for the degree of Mus.D. at Cambridge by the committee appointed for the reformation of the University in 1651, and took the degree on 2 July of that year. After the Restoration he was appointed composer to the king in Nov. 1662, with a salary of £40 per annum. He contributed the musical definitions to Phillips's 'New World of Words' (1658). Some of his songs are contained in the several editions of 'Select Muscicall Ayres and Dialogues', 1652, 1653 and 1659, and some of his instrumental compositions are to be found in 'Courtly Masquing Ayres', 1662. He was associated with Henry Lawes, Matthew Locke, Capt. Cooke, George Hudson and his son Edward in the composition of the music for Sir William Davenant's "First Day's Entertainment at Rutland House by Declamations and Musick" ('The Siege of Rhodes') in 1656. He died before 9 July 1664.

Since Simpson mentions "Dr. Colman" in his list of composers ("now deceas'd") of fantasies for viols<sup>2</sup>, we may be certain that it was this Coleman who was the composer of the fairly numerous fantasies for viols surviving under the name in manuscripts, rather than either of his sons. None of them is of outstanding interest, though several are very competent and pleasant, especially the 6-part works.

(2) **Charles Coleman** (b. ?; d. ?; c. 1694), son of the preceding. He was a member of

the royal band after the Restoration. Information as to his existence was advertised for in the 'London Gazette' of 12-15 Apr. 1697.

(3) **Edward Coleman** (b. ?, d. Greenwich, 29 Aug. 1669), singer, lutenist, violist and composer, brother of the preceding. He must have been taught by his father (1) and in turn became a singing-master and teacher of the lute and viol. He composed the music in Shirley's 'Contention of Ajax and Achilles' in 1653. In 1656 he contributed music to the first part of Davenant's 'The Siege of Rhodes' and with his wife took part in the performance at Rutland House, she playing Ianthe, and the little they had to say being spoken in recitative. Upon the re-establishment of the Chapel Royal in 1600 Coleman was appointed one of the gentlemen. On 21 Jan. 1662 he succeeded Nicolas Lanier in the royal band. Some of Coleman's songs are printed in 'Select Muscicall Ayres and Dialogues', 1653, and other of his compositions in Playford's 'Musical Companion', 1672.

Of Mrs. Coleman, who was one of the first women to appear on the English stage, Pepys, who was well acquainted with both her and her husband, writes, under date of 31 Oct. 1665:

She sung very finely, though her voice is decayed as to strength, but mighty sweet, though soft

W. H. H., adds R. D.

**COLERIDGE, Arthur (Duke)** (b. Ottery St. Mary, 1 Feb. 1830; d. London, 29 Oct. 1913).

English amateur musician. He was the son of Francis Coleridge and grand-nephew of the poet Samuel Taylor Coleridge. He exercised a considerable influence on the musical life of his generation. Educated at Eton and King's College, Cambridge (he took scholarships at both), Coleridge was called to the bar and was for fifty-four years an official on the Midland Circuit. He became Clerk of Assize in 1876. His fine tenor voice, his thorough musical accomplishment and his genius for friendship brought him into close touch with musicians of all kinds, and he sang with many famous artists of the day, including Clara Novello and Jenny Lind. With the latter and her husband, Otto Goldschmidt, he was on terms of intimate friendship, from which sprang the inception of the Bach Chorus. Coleridge's foundation of that choir for the production in England of the Mass in B minor was the chief of his public services to music in England. He also lectured on "the life and times" of various great composers, and the illustrations to these lectures, published from time to time with words of the vocal selections, show the wide knowledge and taste of the lecturer.

Late in life Coleridge was instrumental in founding a private society for the study of

<sup>1</sup> Anthony Wood says in his house in Churchyard Alley.

<sup>2</sup> 'Compendium', 1st ed., 1665, ed. of 1732, p. 115

Bach's church cantatas in regular order following the ecclesiastical year. He must be counted among the pioneers of the modern apprehension of Bach in England. H. C. C.

**COLERIDGE-TAYLOR.** British family of musicians.

(1) **Samuel Coleridge-Taylor** (b. London, 15 Aug. 1875; d. London [Croydon], 1 Sept. 1912), composer. He was the son of a Negro doctor of medicine, a native of Sierra Leone, and an English mother. He learnt the violin with J. Beckwith of Croydon and entered the choir of St. George's Church there at the age of ten, becoming alto singer after the breaking of his boy's voice at St. Mary Magdalene's, Croydon. In 1890 he entered the R.C.M. as a student of the violin; but he also studied composition with Stanford and gained a composition scholarship in 1893. From that time his name was prominently before the public, at first by the performance of early compositions at the R.C.M. students' concerts, such as a Nonet and a Symphony, the latter given in St. James's Hall, in 1896, under Stanford's direction. A Quintet for clarinet and strings in F# minor (played at the R.C.M. in 1895) was given in Berlin by the Joachim Quartet (1897), and a string Quartet in D minor dates from 1896. His crowning achievement as a student was the work on which more than any later one his mature reputation rests — the first part of his 'Hiawatha' trilogy, 'Hiawatha's Wedding-Feast' (11 Nov. 1898, at the R.C.M.). It showed that marked individuality which seemed to be peculiarly the product of his mixed race. The second part of the trilogy, 'The Death of Minnehaha', was brought out at the North Staffordshire Festival in the autumn of 1899, and the third, 'Hiawatha's Departure', by the Royal Choral Society in London, at the Albert Hall, on 22 Mar. 1900. In the following May the overture to the whole was heard for the first time. The work, especially its first portion, made a great and — for a time — sustained success which carried the name of Coleridge-Taylor all over the English-speaking world. Festival commissions were a matter of course after it, and each work was received with favour, although neither 'The Blind Girl of Castel-Cuillé' (Leeds, 1901), 'Meg Blane' (Sheffield, 1902), 'The

Atonement' (Hereford, 1903) nor 'Kubla Khan' (Handel Society, 1906) made any lasting impression or could be placed in the same category of spontaneity with 'Hiawatha'. Certain later choral works, notably 'A Tale of Old Japan', attained a wide popular success, but only in so far as they displayed, always on a smaller scale, the qualities of melodic charm, naïvely simple rhythm and glowing orchestral colour which had appealed instantaneously as a treatment of Longfellow's verse. It may not have been, as was thought at first, the ideal treatment, for the composer did not succeed in avoiding the rhythmic monotony of an unvarying and too distinctive poetic metre; but the music was picturesque, memorably melodious, variedly harmonized and well orchestrated. It placed the composer in a category, roughly speaking, with Max Bruch or MacDowell, and had something of the qualities of Dvořák at his most spontaneous but not most inspired.

An important side of Coleridge-Taylor's work was the incidental music written for various romantic plays produced at His Majesty's Theatre. The dramas 'Herod' (1900), 'Ulysses' (1902), 'Nero' (1906) and 'Faust' (1908), all by Stephen Phillips, with 'Othello' (1911), were provided with music by him, which added greatly to the effect of the productions by its masterly handling of strongly individual themes, illustrating the barbaric splendours of the first three with remarkable skill. The use of orchestral colouring was always a great feature of the composer's art, but he was by no means one of those who sacrifice all form and design to effects of colour. In spite of an evident affinity with such music as that of Dvořák, and a tendency to insist on some figure or phrase, his treatment of form is always interesting.

In 1904 he was appointed conductor of the Handel Society, which he brought to a state of satisfactory efficiency. But apart from Coleridge-Taylor's appearances as conductor of his own works at festivals, etc., his career remained uneventful and was chiefly occupied outside his composition with work as a teacher and conductor in the neighbourhood of Croydon, where he lived and died. He paid three visits to America (1904, 1906, 1910) to conduct performances of his music, and his last important composition, the violin Concerto in G minor, was first heard at the Norfolk (Connecticut) Festival organized by Carl Stoeckel. In England he took an active part in judging at competition festivals in many parts of the country, and during the last year of his life he was a member of the teaching staff of the G.S.M.

Coleridge-Taylor married in 1899 Jessie F. Walmisley, a member of a musical family and fellow-student with him at the R.C.M.

## CATALOGUE OF WORKS

Op

## OPERAS

11. 'Dream-Lovers', operetta for 4 voices & orch.  
 26. 'The Gitanos', cantata-operetta for women's voices.  
 72. 'Thelma', opera in 3 acts.

## INCIDENTAL MUSIC

47. 1. 'Herod' (Stephen Phillips) (1900).  
 49. 'Ulysses' (Phillips) (1902).  
 62. 'Nero' (Phillips) (1906).  
 70. 'Faust' (Phillips) (1908).  
 79. 'Othello' (Shakespeare) (1911).

## CHURCH MUSIC

- 'In Thee, O Lord' (1892).  
 — 'By the waters of Babylon.'  
 — 'Break forth into joy.'  
 — 'Lift up your heads.'  
 — 'Now late on the Sabbath Day.'  
 — 'O ye that love the Lord.'  
 — 'The Lord is my strength.'  
 — 'What Thou hast given me'  
 18. Morning and Evening Service, F ma

## CHORAL WORKS

15. 'Land of the Sun', part-song.  
 21. 2 Part-songs for S.S.A.  
 30. 'Song of Hiawatha' (Longfellow) for solo voices, chorus & orch.  
     1. Hiawatha's Wedding Feast (1898).  
     2. The Death of Minnehaha (1899).  
     3. Hiawatha's Departure (1900).  
 43. 'The Blind Girl of Castel-Cuillé' (Longfellow) for mezzo-soprano, chorus & orch. (1901).  
 48. 'Meg Blane' (Robert Buchanan) for mezzo-soprano, chorus & orch. (1902).  
 53. Oratorio 'The Atonement' (1903).  
 54. 5 Choral Ballads (Longfellow) for chorus & orch. (1905).  
 61. 'Kubla Khan' (Coleridge), rhapsody for mezzo-soprano, chorus & orch. (1906).  
 65. 'Endymion's Dream' (Keats), for solo voices, women's chorus & orch (1910).  
 67. 3 Part-songs for S.A.T.B.  
 68. 'Bon-Bon' suite for bar., chorus & orch (1909).  
 69. 'Sea Drift' (Walt Whitman), rhapsody for chorus.  
 73a. Part-songs  
 76. 'A Tale of Old Japan' (Alfred Noyes), for solo voices, chorus & orch (1911).  
 Also various part-songs.

## ORCHESTRAL WORKS

8. Symphony, A mi (1896).  
 33. 'Ballade', A mi. (1898).  
 35. 'African Suite.'  
 38. 'Nourmahal's Song and Dance.'  
 40. 'Solemn Prelude' (1899).  
 41. 'Scenes from an Everyday Romance' (1900).  
 44. 'Idyll' (1901).  
 46. 'Toussaint l'Ouverture', concert overture (1901).  
 47. ii. 'Hemo Dance' (1900).  
 51. 'Ethiopia Saluting the Colours', concert march.  
 52. 'Four Nocturnes' for stgs.  
 63. Symphonic Variations on an African Air' (1906).  
 74. iii. 'Intermezzo.'  
 75. 'Bamboula', Rhapsodic Dance (1911).  
 77. 'Petite Suite de concert.'  
 82. Suite from Hiawatha Ballet Music in 5 scenes.

## VIOLIN AND ORCHESTRA

4. 'Ballade', D mi.  
 14. 'Legend.'  
 39. 'Romance', G ma.  
 80. Concerto, G mi. (1911).  
 Also some works without opus numbers.

<sup>1</sup> The composer's first published work.

## VOICE AND ORCHESTRA

- Op.  
 7. 'Zara's Earrings', rhapsody.  
 42. 4 Songs, 'The Soul's Expression'.  
 81. 2 Songs

## CHAMBER MUSIC

1. Quintet, G mi., for 2 vns., viola, cello & pf.  
 2. Nonet, F mi., for stgs., wind & pf (1894).  
 5. 'Fantasestucke' for stg. 4tet (1895).  
 10. Quintet, F# mi. for clar., 2 vns., viola & cello (1895).  
 13. String Quartet, D mi (1896).

## VIOLIN AND PIANOFORTE

3. 'Suite de pièces' (with pf or organ).  
 9. 2 Pieces.  
 16. 'Hiawathan Sketches'.  
 20. 'Gypsy Suite.'  
 23. 'Valse-Caprice'.  
 28. Sonata, D mi.  
 58. 'Four African Dances'.  
 60. 'Romance.'  
 73. 'Ballade', C mi.  
 Also various pieces without opus numbers.

## PIANOFORTE WORKS

19. 'Two Moorish Tone-Pictures'.  
 22. 'Four Characteristic Waltzes'.  
 31. 'Three Humoresques'.  
 38. 'Three Silhouettes'.  
 55. 'Moorish Dance'.  
 56. 'Cameos', 3 pieces.  
 59. 'Twenty-four Negro Melodies'.  
 64. 'Scènes de ballet'.  
 66. 'Forest Scenes'.  
 71. 'Valse Suite', 6 waltzes.  
 74. i. 'Scenes from an Imaginary Ballet'.  
 74. ii. 'Three Dream Dances'.  
 Also various pieces without opus numbers.

## ORGAN MUSIC

78. 'Three Impromptus'.  
 Also some pieces without opus numbers.

## SONGS

6. 6 Children's Songs.  
 12. 'Southern Love Songs'.  
 17. 'African Romances', 7 songs.  
 24. 'In Memoriam', 3 rhapsodies for low voice.  
 29. 3 Songs.  
 37. 6 Songs.  
 45. 'Six American Lyrics'.  
 50. 'Three Song-Poems'.  
 57. 'Six Sorrow Songs'.  
 74. iv. Songs and part-songs.  
 Also various songs without opus numbers.  
 See also Walmisley.

(2) **Hiawatha Coleridge-Taylor** (b. London, 13 Oct. 1900), conductor, son of the preceding. His most conspicuous appearance as a conductor was at the scenic performances of his father's 'Hiawatha' at the Albert Hall in London, the first of which took place on 19 May 1924. He conducted the ballet in this pageant-opera.

(3) **Avril (Gwendolen) Coleridge-Taylor** (b. London, 8 Mar. 1903), conductor and composer, sister of the preceding. She studied at the G. S. M. in London and published a number of songs. Larger works include 'Wyndmore' and 'Historical Episode' for chorus & orch.; 'Sussex Landscape', 'The Hills', 'To April', 'In Memoriam R.A.F.' for orch.; pf. Concerto; instrumental pieces, &c.

J. A. F.-M. & H. C. C., adds.

**Colette** (*Sidonie Gabrielle Gauthiers-Villars*). See Damase (song). Enfant et les sortilèges (Ravel, lib.). Poulenc (song). Ravel ('Enfant et les sortilèges', lib.). Sauguet ('Julie de Carnelhan', film).

**COLETTI, Filippo** (b. Anagni, May 1811, d. Anagni, 13 June 1894).

Italian baritone singer. He made his début at Naples in Jan. 1835. When he went to London in 1840 his engagement at the old Her Majesty's Theatre — regarded as an attempt to displace an established favourite — led to the Tamburini riots, and in the strangest article ever written about the Opera he was spoken of by Carlyle as a man of great talent, almost of genius. His voice was described by Fétis as a basso-cantante, but Chorley in his 'Musical Recollections' wrote of it as a fine baritone. Coletti made no lasting impression in England, and in his later years, according to Chorley, he sang only in Rome and Naples. In 1880 he published 'La scuola di canto in Italia'. s. H. P., adds.

**Coligny, Admiral.** See ARNOULD.

**COLIN, Pierre Gilbert** (b. ?; d. ?)

French 16th-century composer. He was known by the sobriquet of Chamault. He was chaplain at the Chapel of the Children in Paris in 1532–36 and afterwards became choir-master at the cathedral of Autun. Many of his masses and motets were published between 1541 and 1580, as well as 'Trente Chansons nouvelles à quatre parties' (1543). J. M. (u).

**COLISTA, Lelio.** See CALISTA.

**COLLA, Giuseppe** (b. Parma, 4 Aug. 1731; d. Parma, 16 Mar. 1806).

Italian composer. He seems to have spent some time in Germany, for his earliest recorded work are additional airs for Jommelli's 'Caio Fabricio' at Mannheim in 1760. After his return to Italy he wrote about a dozen operas for Milan, Turin, Genoa, Parma, Venice, etc., of which 'Adriano in Siria' (Milan, 1762), 'Licida e Mopso' (Parma, 1769) and 'Andromeda' (Turin, 1771) are still extant. He was court conductor to Ferdinand of Bourbon, Duke of Parma, and married in 1780 the famous soprano Lucrezia Aguiari ("La Bastardella"), who had sung in his 'Tolomeo' at Milan in 1773 and, according to Burney, performed airs by her (future) husband at her London concerts at the Pantheon, 1775–1777; but there is no foundation for the oft-repeated statement that Colla actually accompanied her to London and elsewhere, especially after their marriage, as Aguiari then retired from the stage and died, at Parma, a few years later. Colla's last recorded work was a birthday cantata for the duke in 1789, 'I geni amici'. He also wrote some church music. A. L.

**COLLA PARTE** (Ital. = "with the part"). A direction denoting that the tempo of an accompaniment is to be accommodated to that of the solo instrument or voice in a rhythmically free passage. Where a voice part is concerned, the words *colla voce* are sometimes used, but this occurs very rarely. G.

**Collaer, Paul.** See BRUSSELS.

**COLLAN, Karl** (b. Idensalmi [Iisalmi], 3 Jan. 1828; d. Helsingfors, 12 Sept. 1871).

Finnish musicologist, writer, librarian and composer. He took the Ph D degree in 1860 with a thesis entitled 'Öfversigt af Serviens historiska folksånger'. He then continued his studies in Germany, France and England (1860–61 and 1862–63). From 1859 to 1866 he was lecturer in German at Helsingfors University and from 1867 to 1871 chief librarian there. He published several scholarly books and textbooks, translated the 'Kalevala' and several other works into Swedish and was one of the first to collect and publish Finnish folksongs. His melodious, intimate songs and choruses are still very popular in Finland, e.g. the 'Vasa March' and the 'Song of Savolax'. A. R.

**COLLANGETTES, Xavier Maurice** (b. Issoire, Puy-de-Dôme, 22 May 1860; d. Békaya, Lebanon, 2 Sept. 1943).

French authority on Arabian musical theory. He was educated at the Collège Sainte-Marie at Riom and at the École préparatoire aux hautes écoles de Sainte-Geneviève in Paris, and he took his bachelor's degree in science (1878) and that of letters (1882). In 1879 he entered the Society of Jesus and became professor at the Collège Saint-François-Xavier at Alexandria. From 1898 to 1934 (save for 1914–18 when the war intervened) he was professor of medicine at the University of St. Joseph at Beyrouth. As a first-rate mathematician and acoustician he was extremely interested in the theory of Arabian music, and was president of the Commission on the Musical Scale at the Congress of Arabian Music, Cairo, 1932. In addition to articles in the musical press, notably the 'Revue Musicale', his best-known contribution is his 'Étude sur la musique arabe' in the 'Journal Asiatique' (1904, IV, 365–422; 1906, VIII, 149–90).

Collangettes edited the Arabic text of the Banū Mūsā (9th-cent.) treatise on 'The Instrument which Plays by Itself' ('Al-álāt illatī tuzammir bināfshihā'), published in 'Al-Mashriq', IX (Beyrouth). It is the oldest known account of a mechanical automatic organ, and has been translated into English by H. G. Farmer in his 'Organ of the Ancients' (1931).<sup>1</sup> H. G. F.

**COLLARD.** This firm of London pianoforte makers is in direct succession, through Muzio Clementi, to Longman & Broderip, music publishers, located at 26 Cheapside, as the parish books of St. Vedast show, as long ago as 1767. Becoming afterwards pianoforte makers they made a good reputation with their instruments in England and abroad, and

<sup>1</sup> See HYDRAULIS.

it is a tradition that Geib's invention of the square hopper or grasshopper was first applied by them. We find Clementi in the early years of the 19th century associated with W. F. Collard (d. 1879) and others. There can be no doubt that the genius of Clementi bore good fruit, but it was F. W. Collard, whose name appears in the Patent Office in connection with improvements in pianofortes as early as 1811, who impressed the stamp upon that make of pianofortes which has successively borne the names of Clementi and of Collard & Collard.

## COLLECTIONS OF INSTRUMENTS.

See INSTRUMENTS, COLLECTIONS OF.

**COLLECTIONS, PRIVATE.** A survey of the history of private collections of music in Great Britain and Ireland shows that the first London sales of such collections, like those of books, were held in coffee houses. The earliest, probably anywhere, is recorded in a mixed 'Catalogue of Ancient and Modern Musick Books, both Vocal and Instrumental', sold (? by Henry Playford) at Dewing's Coffee House, Popes-Head Alley, near the Royal Exchange, on 17 Dec. 1691.<sup>1</sup> The first sale of books from the library of Thomas Britton, the "small-coal man", was at Tom's Coffee House on 1 Nov. 1694<sup>2</sup>, and the books of Thomas Ravenscroft, deceased long before, on 7 Nov. 1709 in the Black-Boy Coffee House.

The earliest British music collection, a small one but in mint condition, is preserved in the library of Samuel Pepys (d. 1703) at Magdalene College, Cambridge. Another very early music library, the collection of Henry Aldrich (d. 1710), went to Christ Church, Oxford. Britton's music was sold on 6-8 Dec. 1714, but no copy of the sale catalogue seems to be in existence; it is, however, reprinted in Hawkins's 'History of Music' (see Bibl.). The music of Richard Goodson, senior (d. 1718) also went to the library of Christ Church. Next recorded, but not preserved<sup>3</sup>, is the music of Cannons (Edgware) belonging to James, first Duke of Chandos (d. 1744) and catalogued in 1720 under J. C. Pepusch's supervision.<sup>4</sup>

The following list gives a selection of private collections (books on music, printed and manuscript music, and music autographs) on sale in London from 1750 to 1950, dispersed or acquired by public libraries. Out of several hundreds of collections on record those listed here are chosen for the importance of their contents or the interest attached to the names of their owners. (For further names the references at the end of this article may be useful.) The collections are arranged, wherever possible, in the order of the years of their owners' deaths.

William Corbett (d. 1748), instruments, 9 Mar. 1751, music sold at an unknown date at his house.  
John Christopher Pepusch (d. 1752), bequeathed partly to John Travers (d. 1758) — sale July 1766 — and partly to Ephraim Kellner — sale 26 Mar. 1763 — (including the later so-called Fitzwilliam Virginal Book), no copy of the sales catalogues known.  
Richard Rawlinson, 1755 to Music School, Oxford University, 1893 to Bodleian Library, Oxford.  
Thomas Gray, the poet (d. 1771), 28 Aug. 1851, Italian opera manuscripts, about 1923 to Walpole Collection of Mr. Wilmarth S. Lewis, Farmington, Connecticut.

<sup>1</sup> This, as well as the other catalogues of sales mentioned below, where not otherwise indicated, is preserved in the B.M.; see Bibl.

<sup>2</sup> There was a second book sale from Britton's library on 24 Jan. 1715; sale catalogue in B.M. and Bodl. Lib.

<sup>3</sup> Eight Handel anthems from the Chandos set went to Cummings (d. 1915) and were last offered by Quincent in Oct. 1919.

<sup>4</sup> C. H. Collins & Muriel I. Baker, 'The . . . First Duke of Chandos . . .' (1949), pp. 134-39.

- Charles Jennens (*d.* 1773), *see* Aylesford (*d.* 1805).
- Robert, Lord Clive of India (*d.* 1774), 1948 on sale at A. Rosenthal, Oxford (Catalogue X).
- Bernard Granville (*d.* 1775), 29 Mar 1912, 37 vols. of Handel manuscript copies, 1915 to British Museum.
- William Gostling, 26-27 May 1777.
- William Boyce, 14-16 Apr. 1779 (catalogue in Mr Gerald Coke's Handel collection, Bentley, Hants).
- Samuel Howard (*d.* 1782), 25 June 1799 (catalogue in Hirsch Library, B.M.).
- Charles John Stanley, 24 June 1786.
- Sir John Hawkins (*d.* 1789), madrigal collection, to Royal Music Library, deposited in B.M., other manuscripts sold in 1843.
- Sir Henry Mackworth (*d.* 1790), to Public Library, Cardiff, presented by Mr Bonner Morgan.
- William (*d.* 1790) and Philip Hayes (*d.* 1797), about 1798 (sale catalogue undated).
- John Christopher Smith (*d.* 1795), Handel's own manuscripts, about 1773 to Royal Music Library, deposited in B.M.
- Joah Bates (*d.* 1799), 20 Dec 1867, printed Handel music to A. H. Mann (*d.* 1929).
- Osborne Wight (*d.* 1800), to Bodleian Library, Oxford.
- Samuel Arnold (*d.* 1802), 14 Apr 1869.
- Francis, sixth Earl of Bridgewater<sup>1</sup> (*d.* 1803), 1917 to Henry E. Huntington, now Huntington Library, San Marino, California.
- Heneage Finch, third Earl of Aylesford (*d.* 1805), Handel manuscript copies from the library of Charles Jennens (*d.* 1773), 13 May 1918 partly to Royal Music Library (deposited in B.M.), partly to Sir Newman Flower, Blandford, Dorset.
- John Reid (*d.* 1807), to Reid Library, Music Department, Edinburgh University.
- Charles Burney books 9 June 1814 and eight following week-days, music 8 Aug. 1814 and six following week-days (catalogues of both sales in B.M., and of the second sale, with prices, in St Michael's College, Tenbury), sale of books on music planned for 24 Aug. 1814, held back and sold *en bloc* in 1815 to B.M.
- Richard, seventh Viscount Fitzwilliam (*d.* 1816), to Fitzwilliam Museum, Cambridge.
- Henry Harrington, 2 July 1816.
- Samuel Webbe, senior, 4 July 1816.
- James Bartleman (*d.* 1821), 20 Feb 1822.
- John Wall Calcott (*d.* 1821), 15 Apr. 1819 (sale catalogue in Univ. Lib., Cambridge) and 16 Apr. 1862.
- Edward Jones (*d.* 1824), 20 Mar 1823 and five following week-days (catalogue in Bodleian Library); of a posthumous sale no catalogue is known.
- James Hook (*d.* 1827), 30 Jan. 1874; manuscripts to A. H. Mann (*d.* 1929), now in University Library, Cambridge.
- Francis Henry Egerton, eighth Earl of Bridgewater (*d.* 1829), Egerton Manuscripts to B.M.
- William Shield, 22 June 1829.
- John Stafford Smith (*d.* 1836), 24 Apr. 1844 (anonymous sale), 27 Aug. 1852 and 17 Aug. 1853.
- Richard John Samuel Stevens (*d.* 1837), 27 Mar. 1872, partly to R.A.M.
- Domenico Dragonetti (*d.* 1846), 182 opera scores in manuscript bequeathed to B.M.; for the rest *see* the sales of Novello's (*d.* 1861) collection.
- Johann Andreas Stumpf (*d.* 1846), 30 Mar 1847.
- William Crotch (*d.* 1847), 20 Feb 1873 and 28 June 1877.
- John Ireland (*d.* 1848), *see* Lennard (*d.* c. 1870).
- William Henry Miller (*d.* 1848), later S. R. Christie-Miller, of Britwell Court, Bucks, 15 Dec. 1919, most of the music to Henry E. Huntington, now Huntington Library, San Marino, California.
- Thomas Moore, the poet (*d.* 1852), 20 Apr. 1874.
- Sir Henry Rowley Bishop, 14 June 1855, and (sale catalogue in Univ. Lib., Cambridge) 6 June 1900.
- William (*d.* 1858) and Charles Edward Horsley (*d.* 1876), 16 Apr. 1862.
- Vincent Novello (*d.* 1861), 25 June 1852 and 3 Sept. 1862.
- Andrew John Wighton (*d.* 1866), to Free Library, Dundee.
- Sir George Thomas Smart (*d.* 1867), 28 June 1860.
- Henry Barrett Lennard (*d.* 1870), 67 vols of Handel manuscript copies (original owner, John Ireland, Dean of Westminster, *d.* 1842), presented 1902 by Francis Barrett Lennard to Fitzwilliam Museum, Cambridge.
- Ignaz Moscheles (*d.* 1870), 23 July 1847.
- Thomas Oliphant, 24 Apr. 1873.
- William Eung (*d.* 1874), to Eung Music Library, Glasgow University.
- Sir William Sterndale Bennett, 26 Apr. 1875 and 15 Oct. 1878.
- Edward Francis Rimbault (*d.* 1876), 31 July-7 Aug. 1877 (sale catalogue in University Library, Cambridge); partly to New York Public Library.
- Alfred Henry Huth (*d.* 1878), sales from 1911 till 1922, 50 manuscripts and printed books bequeathed to the B.M., 500 single-sheet songs to Henry E. Huntington, now Huntington Library, San Marino, California.
- Carl Engel (*d.* 1882), 7 July 1881 and 4 May 1882.
- Sacred Harmonic Society, 28 Nov. 1882, and (sale catalogue in Univ. Lib., Cambridge) 8 July 1889, the main part, however, 1883 to R.C.M.
- Sir Michael Costa (*d.* 1884), 23 June 1891 (sale catalogue in Univ. Lib., Cambridge).
- John Ella (*d.* 1888), to Victoria & Albert Museum, later to R.C.M.
- John Rylands (*d.* 1888), to John Rylands Library, Manchester.
- Sir Frederick A. Gore Ouseley (*d.* 1889), to St Michael's College, Tenbury.
- Herbert Stanley Oakeley (*d.* 1891), to Reid Library, Edinburgh University.
- Jasper Joly (*d.* 1892), 1863 to Irish Academy, later to National Library of Ireland, Dublin.
- Victor Schoelcher (*d.* 1893), 80 vols. of Handel manuscript copies (bought 1856 from Thomas Kerslake, bookseller at Bristol), 1868 to Friedrich Chrysander, 1875 to Staats- und Universitäts-Bibliothek, Hamburg, the other Handel collections, mostly printed music and librettos, 1873 to Conservatoire de Musique, Paris.
- Andrew George W. Kurtz, 5 July 1895.
- Venceslao Hugo Zaverlat (*d.* 1899), 1934 to University Library, Glasgow.
- Sir George Grove (*d.* 1900), to R.C.M.
- Sir John Stainer (*d.* 1901), 5 Dec. 1934.
- Richard Pendlebury (*d.* 1902), 1880 till 1902 to Fitzwilliam Museum, 1926 to Pendlebury Library, Music Faculty, Cambridge University.
- Julian Marshall (*d.* 1903), 25 Apr. 1870 (anonymous sale), 29 July 1884 and 11-12 July 1904; the printed Handel scores and librettos 1876 to Arthur James, first Earl of Balfour (*d.* 1930), 1938 to National Library of Scotland, Edinburgh.
- Thomas William Taphouse (*d.* 1905), 3-4 July 1905; a considerable section to Central Public Free Library, Leeds.
- Ebenezer Prout (*d.* 1909), to Trinity College, Dublin.
- James E. Matthew (*d.* c. 1910), 1907 to Leo Liepmannsohn, Berlin, dispersed.
- Henry Watson (*d.* 1911), 1899 to Henry Watson Library, Manchester.
- William Hayman Cummings (*d.* 1915), 17-24 May 1917, partly to Library of Congress, Washington, and (1918) partly to Nanki Music Library, Tokio.
- Sir Frederick Bridge, 3 July 1924.
- Friedrich Niecks (*d.* 1924), to Reid Library, Edinburgh University.
- Cecil James Sharp (*d.* 1924), manuscripts to Clare College, Cambridge, printed music to English Folk Dance and Song Society (Cecil Sharp House), London.
- Frank Kidson (*d.* 1926), to Mitchell (Public) Library, Glasgow.
- Louis Thompson Rowe (*d.* 1927), 1928 to Rowe Library, King's College, Cambridge.
- William Barclay Squire (*d.* 1927), 7 July 1927.
- Arthur Henry Mann (*d.* 1929), 26 June 1945, partly to University Library, Cambridge, and partly to Mann Library, King's College, Cambridge (*c.* 1930).
- Arthur James, first Earl of Balfour (*d.* 1930), *see* Marshall (*d.* 1903).
- Edward Allen Brotherton, Baron Brotherton of Wakefield (*d.* 1930), partly to Brotherton Library, Leeds University.
- Richard Northcote (*d.* 1931), opera collection, dispersed.

<sup>1</sup> Started about 1600 by Sir Thomas Egerton (*d.* 1617) and considerably increased by his son, John Egerton, first Earl of Bridgewater (*d.* 1649); left by the sixth earl to his nephew, George Granville Leveson-Gower, second Marquis of Stafford, later first Duke of Sutherland (*d.* 1833).

- Sir Edward Speyer (*d.* 1934), sections only, 25 June and 2 July 1940.
- Miss E. A. Willmott (*d.* 1934), 1-3 Apr 1935, but already partly disposed of in 1926.
- John Alexander Fuller-Maitland, 28 Oct. 1936
- Charles Sanford Terry (*d.* 1936), Bach collection, 1937 to R.C.M.; books on music to Music Faculty, Oxford University
- Walter Willson Cobbett (*d.* 1937), to Cobbett Free Library of British Chamber Music (Society of Women Musicians), London
- Lady Dorothea Louisa Ruggles-Brise (*d.* 1937), partly to National Library of Scotland, Edinburgh, partly to Atholl Collection, Sandeman Public Library, Perth.
- Arthur F. Hill (*d.* 1939), 16-17 June 1947.
- Frank Thomas Arnold (*d.* 1940), bequeathed to University Library, Cambridge.
- Edward Heron-Allen (*d.* 1942), to Music Faculty, Oxford University.
- Augustus Hughes Hughes (*d.* 1942), 4 Feb. 1925.
- Alfred H. Littleton (*d.* 1942), 13 May 1918, partly to Music Library, London University
- Henry Cope Colles, 25 Nov. 1943
- Godfrey E. P. Arkwright (*d.* 1944), 13-14 Feb. 1929, 5 Dec. 1944 and 2 Aug. 1945
- Sir Henry Wood (*d.* 1944), 1938 to R.A.M.
- Edwin Evans (*d.* 1945), to Central Music Library, London
- Francis William Galpin (*d.* 1945), 18 July 1946
- Paul Hirsch, 1946 to Hirsch Library, B.M.
- Gerald Cooper (*d.* 1947), bequeathed to Edward J. Dent, given by the latter partly to Central Music Library, London, partly to Fitzwilliam Museum and Fendlebury Library, Cambridge.
- Arthur Henry Fox Strangways (*d.* 1947), to B.B.C. and Central Music Library, London.
- T. W. Bourne (*d.* 1948), Handel collection, bequeathed to Bodleian Library, Oxford.
- Alfred Moffat (*d.* 1950), dispersed by Otto Haas, London, Catalogue No. 20, Oct. 1944, partly to Library of Congress, Washington

**COLLEGE YOUTHS, ANCIENT SOCIETY OF.** This society of bell-ringers was founded in London on 5 Nov. 1637, and derives its name from its first members, Lord Brereton, Lord Salisbury, Lord Dacre, Sir Cliff Clifton and others who met at St. Martin's, College Hill, Upper Thames Street, to practise change-ringing. The church with its ring of 6 bells was destroyed in the Great Fire of London, 1666.

Fabian Stedman was a member of the society, to which he dedicated his 'Campanalogia', published in 1677.

Two other members of this time were Benjamin Annable and John Holt, both accomplished change-ringers and well known as "composers".

The first great performance recorded in the books of the society was at St. Saviour's, Southwark, on the six large bells, in 1684, when the College Youths rang three extents of Minor (2160 changes in all) *without stopping*, the earliest record of so many changes being rung continuously.

For many years during the 18th century the members met at the Paul's Head, Cateaton Street (now Gresham Street), in the City of London. On the anniversary day (5 Nov.) they walked in procession to Bow Church to attend divine service, preceded by their beadle carrying a staff surmounted by a silver bell suspended in a frame of embossed silver bearing the motto: "Intactum sileo: percute — dulce cano".

The society is active to this day.

w. w. s., rev.

See also Change-Ringing.

**COLLEGIUM MUSICUM** (Lat., musical fraternity). An association for the performance of chamber and chamber-orchestral music in various German towns, especially Hamburg and Leipzig, during the first half of the 18th century. Bach was a member of the Collegium Musicum at Leipzig. These institutions were mainly connected with universities — hence no doubt their Latin name — and they have remained a feature of

German universities to the present day. They have also been imitated, like most German musical things, including the terminology, in the U.S.A.

E. B.

### COLLEGIUM MUSICUM ITALICUM.

The name of an association of soloists, founded and directed by Renato Fasano. It has acquired within a short time a splendid reputation, not only in Italy but also abroad, where it has made a number of tours, including France, Britain, Austria, Spain, Switzerland, U.S.A., Canada, Mexico and South America. It was established in Jan. 1948 and gave its first concert in the Church of S. Agostino at Cagliari. It consisted at that time of the following artists: Vittorio Brero, Franco Antonioni, Virgilio Brun, Edmondo Malanotte, Leo Petroni, Renato Ruotolo (violins), Renzo Sabatini, Oscar Crepas (violas, the former also *viola d' amore*), Massimo Anfiteatrof, Benedetto Mazzacurati (cellos), Salvatore Pitzianti (double bass). Others who took part were the flautist Arrigo Tassinari and the pianist Ornella Puliti Santoliquido (also harpsichord). They were all gifted instrumentalists and most of them noted concert soloists.

The guiding principle of the group, which has remained unaltered in spite of various changes in its constitution, is to assemble the best Italian instrumentalists and to take them on concert tours. The Collegium still consists of thirteen players (6 violins, 2 violas, of which one alternates with *viola d' amore*, 2 cellos, double bass, flute or oboe and pianoforte or harpsichord). This body is chosen, according to the exigencies of the repertory or the availability of the artists, from among the following, who are here listed alphabetically: Giannino Carpi, Luigi Ferro, Armando Gramigna, Franco Gulli, Edmondo Malanotte, Fulvio Montanaro, Guido Mozzato, Arrigo Pelliccia, Alberto Poltronieri, Remy Principe, Renato Ruotolo (violins); Renzo Sabatini, Giuseppe Alessandri, Oscar Crepas, Vittorio Facl, Giovanni Leone, Alfredo Sabbadini (*viola d' amore* and violas), Massimo Anfiteatrof, Benedetto Mazzacurati, Antonio Valli (cellos); Salvatore Pitzianti (double bass); Arrigo Tassinari (flute); Renato Zanfini (oboe); Ornella Puliti Santoliquido, Carlo Vidusso (pianoforte and harpsichord).

The repertory of the Collegium consists in the main of works by Italian composers of the 18th century, edited for modern performance, and all the programmes contain almost without exception a work or works by Vivaldi, including some of the least familiar. Among other Italian masters in the repertory are Bonporti, Albinoni, Corelli, Torelli, Tartini, Marcello, Paisiello, Cambini, Pergolesi, Boccherini and Leo.

A brief excursion into the 19th century was a Sonata for two violins, cello and double bass by Rossini, edited by Alfredo Casella. As regards foreign composers, the only one so far (1954) who has been represented in the Collegium's programmes is Bach.

G. M. G.

### COLLES, H. C. (Henry [Harry] Cope)

(b. Bridgnorth, Shropshire, 20 Apr. 1879; d. London, 4 Mar. 1943).

English music critic and author. He was the son of a doctor, Abraham Colles, who practised at Bridgnorth but belonged to a Somerset family. Eager to devote himself to music, he left school at the age of sixteen and entered the R.C.M. in London, where he studied musical history under Parry, the organ under Walter Alcock and counterpoint under Walford Davies. With the last-named, although he was nearly ten years older, Colles struck up a friendship that was to last all through the life of Davies, whose biography Colles wrote in 1942. After three years at the R.C.M. Colles entered for the organ scholarship at Worcester College, Oxford, on the advice of Parratt, and having won it he went up to Oxford, where he graduated in 1902. Hadow, then Dean of Worcester College, discovering an exceptionally fine gift of writing and keen judgment in Colles, advised him to turn his attention to criticism. He thus joined the staff of 'The Times' as assistant music critic under J. A. Fuller-Matland, whom he succeeded as chief critic in 1911.

Colles retained his post on 'The Times' until his death, and although his work was necessarily anonymous, readers learnt not only to recognize it, but also to admire and trust it for its admirable qualities of comprehensive taste, sure and fair judgment, and, above all, perhaps, for an unflinching tact and humanity that tempered even his severest strictures. He was probably unrivalled in the art of keeping his victims unaware of censure while making it perfectly plain to others and in the equally difficult one of coming down heavily on some artistic offender without making him feel small as a person. That his judgment of people was as sound as that of music was also shown by his choice of the assistant critics he attached to himself, Frank Howes (who succeeded him as chief critic) and Dyneley Hussey; and it says very much for him that he could even induce a man twenty years his senior, and a very self-willed critic, A. H. Fox Strangways, to serve 'The Times' under him for a number of years.

By no means all Colles's work was given to a newspaper. He accepted Sir Hugh Allen's invitation to lecture on musical history, analysis and appreciation at the R.C.M., where in fact he admirably taught his own

craft of criticism, so far as it is teachable at all. He became a member of the Board of Professors and joined the Associated Board of the R.A.M. and R.C.M. as examiner, in which capacity he visited Australia and New Zealand in 1939. He also found time to undertake the editorship of the present Dictionary, of which he brought out the third and fourth editions (1927 and 1940), the former an extensive revision, the latter a reprint of the third with corrections and an entirely new supplementary volume.

Colles was as deeply religious as he was musical, and these two devotions found a joint outlet in him in the great and sometimes active interest he took in the Three Choirs Festival (for which he made a special abridged edition of Handel's 'Messiah'), in his chairmanship of the Church Music Society and the School of English Church Music, as well as in St. Michael's College, Tenbury, of which he was a fellow and governor.

In 1932 the University of Oxford conferred a doctorate *honoris causa* on Colles; in 1934 he was admitted an honorary freeman of the Musicians' Company; in 1936 he was made an honorary fellow of Worcester College, Oxford. He was also awarded a medal by the Greek Government for his share in training the Greek artillery in the use of British guns. For he had joined the Royal Artillery during the first world war, serving in Macedonia and attaining the rank of captain. This was one of the few interruptions of his work for 'The Times'. Another occurred in 1923, when he went to America as guest music critic to 'The New York Times'.

Colles left several valuable books on music. The earliest was a monograph on Brahms (1908), on whose chamber music he later contributed a booklet to the 'Musical Pilgrim' series (1933). Perhaps his most original contribution to musical literature was 'Voice and Verse: a Study in English Song' (1928), based on the Grambs lectures delivered by him at Glasgow University in 1927. It deals very interestingly and from various points of view with the principles and practice of setting English words to music. His biography of Walford Davies (1942) has already been mentioned; a text-book of musical history, 'The Growth of Music' (1916), and a short official history of the R.C.M. (1933) must also be noticed. His contribution of a seventh volume to the second edition of the 'Oxford History of Music' (1934), 'Symphony and Drama: 1850-1900', is of considerable importance. A miscellaneous volume of 'Essays and Lectures', containing much valuable matter, was published posthumously (1945); an earlier and much smaller one was 'On Learning Music, and other Essays' (1940).

**COLLET, Henri** (b. Paris, 5 Nov. 1885; d. Paris, 27 Nov. 1951).

French musicologist and composer. He made a special study of Spanish music and published various studies of the subject: 'Le Mysticisme musical espagnol au XVI<sup>e</sup> siècle', 'Victoria', 'Albéniz et Granados' and 'L'Eessor de la musique espagnole au XX<sup>e</sup> siècle'. His compositions include the symphonic poem 'El Escorial', chamber music, songs in the Spanish manner, etc.

**COLLINGWOOD, Lawrance** (b. London, 14 Mar. 1887).

English conductor and composer. He had his first musical education as a choir-boy at Westminster Abbey in London. As a young man he went to Russia, where he worked for a number of years as assistant conductor under Albert Coates at the St. Petersburg Opera. Returning to England after the Revolution he became known as a composer primarily through a symphonic poem, without title, for orchestra, produced by the Patrons Fund of the R.C.M. in London (1920) and awarded publication by the Carnegie Trust. His pianoforte works include two Sonatas, which show the influence of Scriabin to some extent and were published in Russia.

Before long Collingwood began to turn his experience of operatic conducting to account by taking charge of certain operatic performances at the Old Vic. Theatre. By the time Sadler's Wells was opened as a theatre for opera and ballet in consort with the Old Vic. (1931), Collingwood had become principal conductor and was largely responsible for the musical side of the work of building up the permanent repertory. His patient and capable work for the opera was rewarded by the choice of his own 'Macbeth' for production there as the first of the native works of full length to be given. It received its first performance under his direction on 12 Apr. 1934.

The music of 'Macbeth' had been previously heard at a special concert performance given at Queen's Hall on 10 Nov. 1927, and had made a strong impression both by the seriousness of the composer's attitude towards the Shakespearean text and by the originality

of its musical design. Though its fine qualities were not of the kind likely to make such an immediate appeal as to place it definitely in the repertory of what is still necessarily a "popular" opera-house, the several excellent performances given at Sadler's Wells during the season did much to enhance the composer's reputation.

Collingwood retired from Sadler's Wells in 1946, but did not cease to take a keen interest in the theatre's productions. On 16 Apr. 1950 a concert performance was given there of his second opera, 'The Death of Tintagiles', libretto Alfred Sutro's translation of Maeterlinck's tragedy.

*See also Sadler's Wells.*

**COLLINS, Anthony (Vincent Benedictus)** (b. Hastings, 3 Sept. 1893).

English violist, conductor and composer. He entered the municipal orchestra of Hastings in 1910 as a violist and played in various orchestras between then and 1914. In 1920, after four years in the army, he went to the R.C.M. in London, studying violin under Rivarde and composition under Holst until 1925. He joined the L.S.O. and led the violas in that orchestra and at Covent Garden for many years. He resigned in 1936, by which time his conducting and composition began to take up most of his time. He had had previous conducting experience with the Carl Rosa Company, as guest conductor at Sadler's Wells and at various provincial festivals, including that of his native town. His London début, on 20 Jan. 1938, when he conducted his old colleagues the L.S.O. in Elgar's first Symphony, was a great success. He then founded and conducted the London Mozart Orchestra and also conducted other well-known orchestras. He has been living in America since 1939, although still a British subject, and has conducted both at Hollywood, at the Hollywood Bowl Concerts and in New York. He returned to England in 1945 and conducted several E.N.S.A. tours with the L.S.O., L.P.O., Hallé, Birmingham and Liverpool orchestras, and again in 1953 to conduct the L.S.O. He is a staunch supporter of British music and regularly includes at least one work by a British composer in his concerts in New York.

Collins has written a large quantity of music, including some songs, suites, overtures and other light music for orchestra, and some pianoforte arrangements of Schubert and Mozart for four hands. In more serious vein are two Symphonies for strings, two violin Concertos, four short operas, 'Perseus and Andromeda', 'Catherine Parr' (an amusing setting of the play by Maurice Baring), 'The Blue Harlequin' and 'Kanawa', a cantata for solo baritone, chorus and orchestra, 'The

Lay of Rosabelle', and a violin Concerto (Op. 48). His chamber music includes a string Quartet in B $\flat$  major, a Trio for flute, viola and harp and a Quartet for flute, violin, viola and harp. In 1952 his 'Hogarth Suite' for oboe and strings was produced at the Cheltenham Festival.

His first essay in film music was for the film 'Victoria the Great', composed in 1937, in which he used his wide knowledge of the possibilities of orchestral tone to great effect. He has since written music for a number of films, including 'The Rat', 'Nurse Edith Cavell', 'The Courtneys of Curzon Street', 'Odette' and 'Robinson Crusoe' (after Defoe).

**Collins, Cecil.** *See* Rubbra (chorus)

**COLLINS, H. B. (Henry Bird)** (b. Ipswich, 13 June 1870; d. Bromsgrove, 19 Jan. 1941).

English organist and musical scholar. After leaving school at Ipswich in 1888, he went to London to study at the R.C.M. with a Gilstrap scholarship, his master for the organ being Parratt. He left with the A.R.C.M. in 1893, having already taken the F.R.C.O. in 1892. He went to New College, Oxford, where he took the B Mus. in 1895. He had become organist at Tacket Street Congregational church, Ipswich, at the age of seventeen, and during his studentship in London he supported himself by holding a similar post at Christ's Church, Battersea. After a period at St. Margaret's Church, King's Lynn, he was received into the Roman Catholic Church in 1898 and returned to London as organist at the Italian Church, Hatton Garden, where he remained until 1915. Nearly all his leisure was spent copying and collating manuscripts of old church music at the B M., at Oxford, Cambridge, Tenbury and elsewhere, and he began to edit a great deal of it for his own church at first and then for general use. Fifteen of Lassus's offertories edited by him were published at Dusseldorf in 1911, and after that English publishers began to turn their attention to his work, which showed the finest qualities of taste and scholarship.

In Sept. 1915 Collins left for Birmingham, where he became organist at the Oratory, a post he held until his death. There it was largely due to him, and to his colleague, Father Robert Eaton, that the service music maintained a standard worthy of Cardinal Newman's church. It is true that Collins's personal preference went exclusively to the polyphonic masters of the 15th and 16th centuries: he was comparatively indifferent to plainsong and had no use whatever for later and less austere schools. At the same time he was unusually amenable as a man and so conscientious as a musician and a servant of his church as never to be content with an in-

different presentation even of a work for which he did not care.

In 1927 Collins edited for the Plainsong and Medieval Music Society the anonymous Tudor Mass 'O quam suavis', and in 1935 he completed the publication of the Old Hall Manuscript. In 1932-36 he was editor of the magazine 'Music and Liturgy', a quarterly issued by the Society of St. Gregory. For a number of years he lectured on polyphony at the Oxford Summer School and in the evenings took rehearsals of polyphonic music, and he also lectured on Latin church music by early English composers at London and Birmingham Universities.

In his early days Collins turned his attention to composition, but for only a very brief period, during which he produced a few songs and one or two carols. The following old church music was published by him for practical use:

## AICHINGER

- 'Factus est repente', motet
- 'Jubilate Deo', motet in two parts
  1. Jubilate Deo
  2. Laudate nomen ejus

## ANERIO (G. F.)

- 'Christus factus est', gradual for Maundy Thursday and for use at Tenebrae

## ANON (English School)

- 'O bone Jesu', motet for men's voices.

## ARGADELT

- 'Haec dies', antiphon

## BYRD

- 'Assumpta est Maria', motet
- 'Ave Maria', motet.
- 'Ave Regina', motet
- 'Beata es', motet.
- 'Beata Virgo', motet
- 'Beata viscera', motet
- 'Christus resurgens ex mortuis', motet for Easter.
- 'Civitas sancti tui', motet
- 'Confirma hoc Deus', offertory.
- 'Ego sum panis vivus', motet
- 'Non vos relinquam orphanos', motet.
- 'O magnum mysterium', motet.
- 'O quam suavis', motet
- 'O Rex gloriae', motet.
- 'O sacrum convivium', motet
- 'Salve Regina', motet.
- 'Salve sancta Parens', motet.
- 'Senex puerum portabat', motet
- 'Tu es pastor ovium', motet

## CLEMENS NON PAPA

- 'Ascendit Deus', motet
- 'O Maria, vernans rosa', motet.
- 'Vox dicentis: clama', motet.

## CRECQUILLON

- 'Vidit Jacob scalam', motet.

## COOPER (ROBERT)

- 'Gloria in excelsis Deo', motet

## DERING

- 'Quem vidistis pastores?' motet.

## HANDL

- 'Adoramus te Jesu Christe', motet for Passiontide and Holy Cross Day (14 Sept.) (double choir).
- 'Benedictus Dominus Deus Israel.'
- 'Ecce concipies', motet for Advent.
- 'In nomine Jesu', motet.
- 7 Motets for the Common of Saints.
- Resonet in laudibus', Christmas Carol

## HASSLER (H. L.)

- 'Ave maris stella', Hymn at Vespers for Feast of the B.V.M.

## INGENIERI

- 'Lucis Creator optime', Hymn for Sunday Vespers.

## JOHNSON (ROBERT)

- 'Dum transisset Sabbatum', motet for Easter.

## LASSUS

- 15 offertories for 4 voices, 3 books.
- 'Christus resurgens', motet for Easter.
- 'Expectans expectavi', oratory
- 'Justorum animae', motet
- 'Magnificat Primi Toni.'
- 'Magnificat Quarti Toni.'
- 'Magnificat Septimi Toni.'
- 'Magnificat Octavi Toni.'
- 'Salve Regina', motet
- 'Scio enim quod Redemptor', motet.

## LOTT

- 'Salve Regina', motet.

## MARENZIO

- 'Dum esset', motet
- 'O quam gloriosum', motet for All Saints' Day (1 Nov)
- 'Tribus miraculis', motet

## PALESTRINA

- 'Alma Redemptoris Mater', motet
- 'Crucem sanctam subit', motet
- 'De profundis', offertory
- 'Dum compleretur', motet.
- 'Exaltabo te', offertory
- 'Quae est ista?' motet.
- 'Rorate coeli desuper', motet
- 'Salve Regina', motet for double choir.
- 'Surge illuminare', motet for double choir.
- 'Tu es Petrus', motet.

## PHILIPS

- 'Alma Redemptoris Mater', motet.
- 'Ave Regina', motet.
- 'Elegi abjectus esse', motet
- 'O virum mirabilem', (St Francis) motet
- 'Regina coeli', motet.

## SHEPHERD

- The French Mass.
- 'Haec dies', antiphon.

## SORIANO

- 'Ave Regina', motet.
- 'Regina coeli', motet

## TALLIS

- 'Dum transisset Sabbatum', motet for Easter.
- 'In jejunio et fletu', motet
- 'Laudate Dominum', motet.
- 'O salutaris hostia', motet.
- 'Salvator mundi', motet

## TAVERNER

- Plainsong Mass, for men's voices.
- 'The Western Wynde', Mass

## TYE

- 'Omnes gentes plaudite manibus', motet.
- 'Rubum quem viderat Moyses', motet.

## VIADANA

- 'O sacrum convivium', motet for men's voices

## VICTORIA

- 'Duo Seraphim', motet
- 'Ecce Dominus venit', motet.
- 'Ecce Sacerdos', motet.
- 'O quam gloriosum', motet.
- 'O quam metuendus est', motet.
- 'Pueri Hebraeorum', motet.

## WHITE (ROBERT)

- 'Precamur Sancte Domine', Evening Hymn

## WILLAERT

- 'Pater noster', motet.

## WRIGHT (THOMAS)

- 'Nesciens Mater', motet.

Collins himself wrote a setting of 'Deo gratias' and Responses for High Mass.

Apart from published editions Collins had in the course of his career accumulated approximately 2000 works of the polyphonic schools, representing some 170 composers of various countries, but particularly English masters. His transcriptions, for instance, of B.M. Add. MSS 17802-5, Baldwin's MS and Ch. Ch. MSS 979-83 were almost complete, and among the Netherlands masters Clemens non Papa, Grcquillon, Gombert, Lassus and Vaet received particularly close attention.

Among the great Englishmen Peter Philips alone is represented with no less than 63 motets. There are also many minor masters whose very names are forgotten to-day, Ammon, Appleby, Blanks, Cantone, Chañée, Philippe de Duc, Ensall, Hyett, Norman and Reiner being only a few of those worth mentioning as curiosities. These manuscript transcriptions are housed at the Birmingham Oratory.

**COLOGNE.**—The centres of the musical life of Cologne are the Opera and the Gurzenich concert-hall. The opera-house was destroyed by bombing in 1943 and the Opera's present home is the hall of Cologne University. Previous conductors of the Opera included Eugen Szenkar (until 1933) and Fritz Zaun, and the repertory was based on the Wagner and Verdi-Puccini tradition, ventures with new operas were comparatively rare. To-day limitations of the stage of the Opera's temporary home in the University, especially its lack of depth and of all modern stage equipment, put severe restrictions on the company's repertory, the centre of which has now shifted to the production of operas requiring smaller apparatus than performances of grand opera in the traditional style. The intendant of the Cologne Opera is Herbert Maisch, who at the same time is in charge of stage plays; the first conductor is Richard Kraus, and Eugen Szenkar has returned to take charge for part of the season. The Opera, like all German opera companies, receives a substantial subsidy from the municipality. Important first productions include the following operas:

Erich Korngold, 'Die tote Stadt', 1920.  
Walter Braunfels, 'Galatea', 1930.  
Siegfried Wagner, 'Der Heidenkönig', 1933.  
Eugen Bodart, 'Der abtrünnige Zar', 1935.  
Carl Amadeus Hartmann, 'Simplicius Simplicissimus', 1948.  
Benjamin Britten, 'The Rape of Lucretia', 1948 (first performance in Germany).  
Walter Braunfels, 'Verkündigung' (after Claudel), 1948.  
Ernst Křenek 'Tarquinius', 1950.

The Opera orchestra which consists of more than 100 players, gives — like the Gurzenich Orchester — twelve subscription concerts each season under the direction of Günter Wand at the Gurzenich. This historic hall was completely destroyed in 1941 and was rebuilt and

reopened on the occasion of the centenary celebrations of Cologne Cathedral in 1949. Like the Opera, the Gurzenich Orchester is subsidized by the municipality. The Gurzenich concerts are the chief musical events of the season, and some of the concerts are given in conjunction with the Gurzenich choir. The name of Hermann Abendroth was linked with these concerts for many years, and their programmes showed little sympathy towards modern music. The appointment, however, of the young conductor Gunter Wand to the post of Gurzenich *Kapellmeister* brought about a complete change, and much spade work is now being done on behalf of modern music by the inclusion of at least one recent work in almost every programme. The Gurzenich Quartet, the leading chamber-music ensemble at Cologne, consists of the leader and the principals of the string section of the orchestra.

The musical activities of Nordwestdeutscher Rundfunk Köln (Radio Cologne) play an important part in the musical life of the city. The head of the music department is Edmund Ringling; the programmes of this station devote much space to modern music. Radio Cologne possesses a first-rate symphony orchestra of 92 players which gives occasional public concerts in the city, but as a rule tours the industrial areas of the Rhineland and Ruhr. Radio Cologne opens its studios to the public for performances of modern music, which are arranged in co-operation with the Cologne branch of the I.S.C.M.; its chairman is Hans Mersmann.

Other musical societies are the Allgemeiner Caecilienverein, the object of which is the renewal of Catholic church music in Germany, and the Gesellschaft der Kammermusikfreunde.

Choral singing, like everywhere in the Rhineland and Ruhr, has always been a feature in Cologne's musical life, but despite its background of the great cathedral and so many fine churches, the cultivation of sacred music never played a prominent part in it. This has not changed since the war, during which every church in the inner city with the exception of the cathedral was destroyed. Secular singing, however, is in a flourishing state; in the forefront of the many choral associations are the Gurzenich Choir and the Kölner Männergesangverein conducted by Eugen Papst.

With the musicological seminary of the University (Professor Karl Gustav Fellerer) and the Staatliche Hochschule für Musik Cologne is the centre of musical education in western Germany. The president of the Conservatory is Walter Braunfels and the director Hans Mersmann. Among its professors are Amalie Merz-Tunner and A. Glettenberg (singing), O. Schmidt-Neuhaus

and K. H. Pillney (pianoforte), H. Zitsmann (violin) and Gunter Wand (conducting). The Conservatory was founded in 1850 as Rheinische Musikschule and reconstituted as Staatliche Hochschule für Musik in 1925. The number of students is 650, and the syllabus includes courses for Catholic and Protestant church music, for the training of private and school music teachers, and orchestral and operatic classes.

K. W. B.  
**COLOMBA** (Opera). See GRANDJEAN MACKENZIE, RADEGLIA.

**COLOMBANI (Columbani), Orazio** (b. Verona, ?; d. ?).

Italian 16th-century composer. He was a pupil of Porta and became a Cordelier monk and, in music, an eminent contrapuntist. He was *maestro di cappella* at the cathedral of Vercelli from about 1579 and filled the same office in the monastery of San Francesco at Milan in 1584. In 1587 he was at Brescia and Venice; in 1591-92 at Urbino; in 1593 at the church of Sant' Antonio at Padua. Besides 5 collections of Psalms for 5, 6 and 9 voices, and 3 of madrigals, published in Italy (1576-92), there is a 'Te Deum' of his in Lindner's 'Corollarium cantionum sacrarum', and two Magnificats and some madrigals are at Lisbon. One of the Magnificats is in 14 parts. Colombani united with other musicians in dedicating a collection of Psalms to Palestrina (1592).

M. C. C.

**COLOMBE, LA** (Opera). See GOUNOD.

**COLOMBI, Vincenzo** (b. ?; d. ?).

Italian 16th-century organ builder. He built the magnificent instrument at the church of St. John Lateran in Rome, dated 1549.

v. de p.

**COLOMBINI, Francesco** (b. nr. Padua, c. 1573; d. ?).

Italian organist and composer. He was organist at the cathedral of Massa del Principe in 1623-41. He composed a considerable amount of church music, including 3 books of motets, published at Venice and at Antwerp.

E. v. d. s.

**COLONNA, Fabio** (b. Bologna, c. 1567; d. Naples, 1650).

Italian instrument maker. He was the inventor of the "Pentecontachordon", a stringed instrument which divided the octave into 17 parts. He published a description of this instrument in 'La Smbuca Luncea, ovvero dell' instrumento musico perfetto', bk. iii (Naples, 1618).

J. A. F.-M.

**COLONNA, Giovanni Paolo** (b. Bologna, 16 June 1637; d. Bologna, 28 Nov. 1695).

Italian composer. He was the son of Antonio Colonna, a maker of organs, and studied music first with Filippuzzi at Bologna and later in Rome under Carissimi, Abbatini and Benevoli.

He was for some time organist at the church

of Sant' Apollinare in Rome and had become famous as a composer as early as 1659, in which year he was elected organist of San Petronio, Bologna, becoming *maestro di cappella* there on 1 Nov. 1674, as successor to Cazzati. He was four times elected principal of the Accademia Filarmonica (1672, 1674, 1685 and 1691).

Colonna belongs to the front-rank of Italian church composers of his century, and very many of his compositions are preserved in print and manuscript. The following is a list of his published works:

Op

1. 'Salmi brevi', for 8 voices with one or two organs (1681).
2. 'Motetti sacri', for solo voice & two violins (1681).
3. 'Motetti', for 2 and 3 voices (1681).
4. 'Litane con le quattro antifone della B. Virginie', for 8 voices (1682).
5. 'Messe piene', for 8 voices with one or two organs (1684).
6. 'Messa, salmi e responsori per li defonti', for 8 voices (1685).
7. 'Salmi brevi', second book (1686).
8. 'Compieta con le tre sequenze dell' anno', for 8 voices (1687).
- 8 [*inc instead of g*]. 'Sacre lamentationi della settimana santa', for solo voice (1689).
10. 'Messa e salmi concertati', for 3 and 5 voices with instruments (1691).
11. 'Psalmi', third book (1694).
12. 'Psalmi ad vespas', for 3-5 voices (1694).

All these works were published by Giacomo Monti and his successor Pietro Maria Monti at Bologna; other compositions appear in various collections of the period. A great number of masses and other sacred works of every description are extant in manuscript, most of them at the Liceo, Bologna, and at the National Library in Vienna.

Colonna also wrote a number of oratorios, operas and cantatas, performed at Bologna (if not otherwise stated):

#### ORATORIOS

- \* 'Il trionfo della fede' (the *invocazione* only in an oratorio by Francesco Prachista) (17 Mar. 1672).
- \* 'La morte di Sant' Antonio di Padova' (1676).
- \* 'Sansone' (1677).
- \* 'Santa Teodora' (1678).
- \* 'Salomone amante' (16 Mar. 1679).
- \* 'San Basilio' (1679).
- \* 'Il transito di San Giuseppe' (Modena, 1681).
- \* 'Assalone' (Modena, 1686).
- \* 'La profezia d' Eliseo' (Modena, 1686).
- \* 'Il Mosè legato di Dio' (Modena, 1686).
- \* 'La caduta di Gerusalemme' (Modena, 1688).
- \* 'Bettuglia liberata' (1690).
- \* 'Giuliano' (1694).

#### OPERAS AND SIMILAR WORKS

- \* 'L' alloro trionfato', with G. B. Vitali (1672).
- \* 'Le contese di Pallade e Venere sopra il bando d' Amore' (in or before 1674).
- \* 'Pelope e Ippodamia' (1678).
- \* 'Amicare di Cipro' (1692).

His operatic works are lost while of the oratorios the six marked \* above are preserved in manuscript.

A. L.

**COLONNA, Pompeo, Prince of Galliano** (b. ?; d. Rome, 5 Jan. 1661).

Italian amateur poet and musician. He came of a noble Roman family. He was the

composer of a 5-act opera, 'Proserpina rapita' (libretto by Ottaviano Castelli), which was performed at his palace on 5 Jan. 1645. John Evelyn was present at a later performance on 8 Apr. and records the occasion in his *Diary* (Bray's edition, I, 177). The score of the opera was discovered and identified by W. Barclay Squire in the Royal Music Library, B.M. It is one of the very few extant examples of early Roman opera, strongly influenced by Luigi Rossi's 'Palazzo incantato' (Rome, 1642). A. L.

**COLONNE, Édouard** (actually Judas) (b. Bordeaux, 23 July 1838; d. Paris, 28 Mar. 1910).

French violinist and conductor of Italian origin. He began to earn his own living at the age of eight. Later he studied music at the Paris Conservatoire, where he gained the first prize for harmony in 1858 and the same for violin in 1863. He became first violin in the Opéra orchestra (1858-67); about this time he was a member of the *Lamoureux Quartet*, conducted at the *Concerts Padeloup* and at the *Concerts du Grand Hôtel* (1871), and in 1873 established, with the music publisher Hartmann, the *Concert National*. These concerts lasted two seasons, and were first held at the *Théâtre de l'Odéon*, where Franck's 'Rédemption' and Massenet's 'Marie Magdeleine' were performed for the first time; the concerts were subsequently held at the *Théâtre du Châtelet*. In 1874, Hartmann having retired, Colonne endeavoured to form an association among artists which should be patronized by amateurs and the public. In this way were founded the *Concerts du Châtelet* (later the *Association Artistique des Concerts Colonne*), which, though at first unsuccessful, eventually gained a wide reputation.

It was not easy to struggle against the established popularity of the *Concerts Populaires*, conducted by Padeloup, but Colonne had the excellent idea of giving more prominence to works by the younger French composers. He produced several orchestral suites by Massenet, the first and second of which had previously been given at the *Concerts Populaires*, and various orchestral compositions by Lalo, Dubois, Franck, etc.; but the success of the concerts was not fully assured until Colonne, foreseeing a reaction in favour of Berlioz, and incited by the example of Padeloup, in a manner devoted his concerts to that master by producing with great care, and in their entirety, all his works for chorus and orchestra. The enterprise, having quite replaced the *Concerts Populaires* in public favour, became

<sup>1</sup> See PARIS (ORCHESTRAL CONCERTS).

most profitable to all concerned in it and to its director, who in 1880 was decorated by the *Legion of Honour*.

Colonne had before, in 1878, been chosen to conduct the concerts at the *Trocadéro* during the Exhibition. He conducted at the Opéra (1891-93), where he produced Reyer's 'Salammbô', Saint-Saëns's 'Samson et Dalila' and Wagner's 'Valkyrie'. London he visited first in 1896 and last in 1908. On the latter occasion he conducted several *Promenade Concerts* at Queen's Hall. His foreign engagements further included Lisbon and Russia. The reputation he left is that of a highly gifted conductor, full of fire, warmth, subtlety and generosity. His qualities were wonderfully adapted to romantic music, and for that of Berlioz he had a big and justified reputation. The modern French school owes a great deal to his efforts. As a conductor he formed a striking contrast with his contemporary, Lamoureux. If Colonne's performances always struck by their artistic qualities, they were somewhat lacking in care, firmness and clarity.

Colonne's wife, born Eugénie Élise Vergin (b. Lille, 21 Mar. 1854), was a pupil at the Paris Conservatoire and made a successful début at the Opéra, on 4 Feb. 1876, as Eudoxie ('La Juive') and on 3 Oct. 1876 as Zerlina ('Fra Diavolo'), appearing afterwards at the Opéra-Comique and the *Théâtre-Lyrique*. Later she devoted herself to teaching and brought out some excellent pupils.

**COLOR** (Lat. = colour) A musical term used by theorists and composers.

(1) In the 13th century it signified the embellishment of plain melody by various techniques, such as repetition of phrases or imitation (exchange of parts between voices).

(2) In the 14th and 15th centuries *color* had a special meaning in connection with isorhythm. Johannes de Muris thus defines it:

*Color in musica vocatur similitudo figurarum unius processus pluries repetita posito in eodem cantu [color in music is the repetition of an isorhythmic period within the same part].*

In the latter part of the 14th century the meaning changed. The term was then used to signify the repetition of a tune where the notes were identical but not their rhythm, in the sense of *talea*. The fact that the term underwent this drastic change of meaning may be explained by the music to which it was applied, where *color* and *talea* were either identical or where one *color* consisted of several *taleas*. Both terms are important in practice because they are used to describe

the performance of tenor parts in isorhythmic motets, as for instance "Primus color dicitur bis, primo de modo perfecto . . ." or "in qualibet talea antequam pausetur, retro-eatur . . .". The following example, 'Gaude gloriose', from Philippe de Vitry's 'Vos quid admiramini gratissima', is quoted from H. Besseler's 'Die Motette . . .' (see Bibl.).

## 1 COLOR

## 1 TALEA

## 2 TALEA

## 3 TALEA

## 2 COLOR

(3) In mensural notation *color* signified notes written in a differently coloured ink, usually red following Philippe de Vitry's innovations. E. D. (ii).

**COLORATURA** (Ger. *Koloratur*). The word, familiar as a musical term, is not Italian, the proper word for the noun "colouring" being *colorazione*. For the special sense in which "coloratura" is used in English musical terminology, by derivation from German, not from Italian, the proper Italian word is *fiortura*. As far as the accepted word goes, however, it is quite descriptive and useful, and all English musicians know what they mean by it: florid ornamentation in vocal music, known to old schools as *canto figurato*.
